4. Provide insulated ductwork conveying air above ambient temperature (above room temperature) with or without vapor retardant jacket. Where service access is required, bevel and seal ends of insulation.
5. Continue insulation through walls, sleeves, hangers, and other duct penetrations except where prohibited by code.
6. For ductwork exposed in mechanical equipment rooms below 7' or in finished spaces, finish with jacket material.
7. For interior vapor/moisture conveying duct applications, install glass mineral wool insulation unless specifically indicated otherwise on drawings. Install to meet manufacturer's requirements and as required by local code authorities.
8. Ducts installed exposed outside the building:
    a. For exterior applications where insulation is on the outside of the duct, provide insulation with a weather protection metal jacket or double wall construction.
    b. All exposed to weather exterior metallic ductwork exposed or covered with cladding is to be built with a crown or reverse cross break to shed moisture.

C. Installation of Mineral-Fiber Insulation (Blanket or Rigid Type):
1. Secure weld pins to duct using adhesive recommended for ductwork material. Pins shall be installed on a minimum of three sides of each duct to assure proper support. For overhead ductwork - pins are not required on the top of the ducts. For underfloor ducts - pins are not required on bottom side of ducts. For vertical ducts - pins are not required on surface facing wall. Install pins as follows:
    a. On duct sides with dimensions 18 inches and smaller: Place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches on center.
    b. On duct sides with dimensions larger than 18 inches: Place pins 16 inches on center each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing and reinforcement points.
    c. Pins may be omitted from top surface of plenums.
    d. Do not over compress insulation during installation.
    e. Impale insulation over pins and attach speed washers.
    f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
2. Install insulation with a continuous unbroken vapor barrier and insulation butted tight at each joint. Create a facing lap for longitudinal seams and end joints with insulation by removing up to 2 inches from one edge as required to allow stapling. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 6 inch maximum on center. Staples may be omitted when closures are made by machine using heat-sensitive tape. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
    a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.

3. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
4. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6 inch wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches maximum on center.

D. Duct Liner-Insulation Applied on the Interior of the Duct:
1. Adhere insulation to sheet metal with a UL listed adhesive. Adhesive shall be applied to the sheet metal with a minimum coverage of 90%.
2. Secure insulation with mechanical liner fasteners as indicated by SMACNA or manufacturer. Pin length should be as recommended by the liner manufacturer.
3. All exposed edges of the liner must be factory or field coated. Unless factory coated, all transverse edges and longitudinal joints of the duct liner shall be coated. For systems operating at 2,000 fpm or higher, a metal nosing must be installed in all liner facing fan discharge or upstream of the airflow.
4. Repair liner surface penetrations with UL listed adhesive.
5. Duct dimensions indicated on plans are net inside dimensions required for airflow. Increase duct size to allow for insulation thickness.
6. Liner shall be folded and compressed into corners of rectangular duct or cut and fitted to assure a lapped compressed joint. Longitudinal joints should not occur in rectangular duct except at corners.
7. Longitudinal joints shall be coated with adhesive.

3.3 ENCAPSULATING NON-RATED PIPES AND CABLES

A. Where combustible non-fire rated pipes (plastic) and cables are installed in an air plenum space provide one layer of **FRI-E** fire barrier plenum wrap to fully encapsulate the item to comply with ASTM E84 or UL-723.

3.4 DUCTWORK INSULATION SCHEDULES

A. All insulation thicknesses shall meet or exceed latest edition of applicable ASHRAE 90.1, IECC, State Energy Code, Local Energy Code, and State Mechanical Code requirements as noted below. Minimum thermal resistance in range of 4.0 to 4.2 per inch of thickness. Insulation thicknesses are based on glass mineral wool insulation and may be adjusted for equivalent insulation values for materials with superior “K” factors.

B. The installed thickness of duct insulation used to determine its R-value shall be determined as follows:
1. For duct board, duct liner, and factory-made rigid ducts not normally subjected to compression, the nominal insulation thickness shall be used.
2. For duct wrap, installed thickness shall be assumed to be 75 percent (25 percent compression) of nominal thickness.
3. For factory-made flexible air ducts, the installed thickness shall be determined by dividing the difference between the actual outside diameter and nominal inside diameter by two.

C. All air distribution system ducts and plenums, but not limited to, building cavities, mechanical closets, air handler boxes, and support platforms used as ducts or plenums, shall be installed, sealed, and insulated to meet the requirements of the code. Portions of supply-air and return-air ducts conveying heated or cooled air located in one or more of the following spaces shall be insulated to a minimum level of R-8.
   1. Outdoors; or,
   2. In a space between the roof and an insulated ceiling; or,
   3. In a space directly under a roof with fixed vents or openings to the outside or unconditioned spaces; or,
   4. In an unconditioned crawlspace; or,
   5. In other unconditioned spaces; or,
   6. For buildings subject to compliance with the IECC in any location in Climate Zones 5 through 8 the insulation shall be 3” (R-12) minimum thickness for ductwork exterior to the building envelope.

D. TABLE 1: DUCT WRAP INSULATION SERVICE, THICKNESS, AND MATERIAL TYPE REQUIRED.

TABLE 1: EXTERNAL DUCT WRAP INSULATION			
SYSTEM	R-Value (Minimum)	FINISH/JACKET	INSULATION KEY CODE AND REMARKS
Supply and/or return ductwork located outside to the building envelope.	R-8 minimum. For any location in colder Climate Zones 5 thru 8 of the IECC increase thickness to R-12.	Metal jacket or galvanized sheet metal sandwich (double wall). Refer to drawings. Alternate option: pre-insulated duct system, refer to Section 233113 Air Distribution.	**DW-B, RB-A**. Duct wrap or blanket with fabric or FSK jacket is not allowed.
Supply and/or return ducts within building envelope in unconditioned areas, inside shafts and above ceilings.	R-8	FSK or PSK	**DW-A, B, C**
Supply and/or return duct exposed in the atmosphere controlled occupied space.	R-4.2	Black PSK	**DW-C**
Supply or return duct serving the remote 50 ft. (15 m) of exposed ductwork in the atmosphere controlled occupied space.	NA	NA	Except where noted on drawings for acoustical reasons.
Outside air intake ducts within the building envelope.	R-8	FSK or PSK	**DW-A, B**
Exhaust ducts within 10 ft. (3 m) of exterior openings.	R-4.2	FSK or PSK	**DW-A, B**
Adjust insulation thicknesses as required to meet minimum R-Values.			

E. TABLE 2: DUCTWORK RIGID INSULATION AND PLENUM INSULATION SERVICE, THICKNESS, AND INSULATION TYPE REQUIRED.

TABLE 2: RIGID INSULATION AND PLENUM INSULATION			
SYSTEM	THICKNESS (Minimum)	FINISH/JACKET	INSULATION KEY CODE AND REMARKS
Supply and/or return ducts located outside of the building envelope. Use rigid duct board sandwiched between sheet metal layers.	R-8 minimum. For any location in colder Climate Zones 5 thru 8 of the IECC increase thickness to R-12.	Metal jacket or galvanized sheet metal sandwich (double wall). Refer to drawings. Alternate option: pre-insulated duct system, refer to Section 233113 Air Distribution.	**DW-B or RB-A.** Duct wrap or blanket with fabric jacket are not allowed in this application.
Outside air intake ducts	R-4.2	FSK	**RB-A**. Provide aluminum jacket over exterior installations.
Interior Plenums	R-8	FSK	**RB-A**
Exterior Plenums	R-8 minimum. For any location in colder Climate Zones 5 thru 8 of the IECC increase thickness to R-12.	FSK	**RB-A**
Supply, return and relief ducts in mechanical rooms.	R-8	FSK	**RB-A**
Supply and return ducts routed through parking garages.	R-8	FSK	**RB-A**
Roof curb walls used for supply or return air that aren't pre-insulated by manufacturer.	R-8	FSK	**RB-A**

TABLE 2: RIGID INSULATION AND PLENUM INSULATION			
SYSTEM	THICKNESS (Minimum)	FINISH/JACKET	INSULATION KEY CODE AND REMARKS
Roof surface inside roof curb perimeter and around duct penetrations.	R-8 or greater to match roof insulation value	FSK	**RB-A**
Vapor/moisture ducts installed exterior to the building envelope.	R-4.2	FSK	**RB-A.** Provide jacketing on exterior ducts.
Adjust insulation thicknesses as required to meet minimum R-Values.			

F. TABLE 3: ACOUSTIC DUCT LINER SERVICE, THICKNESS, AND INSULATION TYPE REQUIRED.

TABLE 3: ACOUSTICAL DUCT LINER			
SYSTEM	THICKNESS (Minimum)	FINISH	INSULATION KEY CODE
Where indicated for rectangular supply or return ductwork installed in conditioned areas.	R-4.2 unless otherwise noted on drawings	Air stream side mat or other fiber-free facing	**ADL-A**
Where indicated for rectangular supply or return ductwork installed in unconditioned areas without exterior duct insulation.	R-8 unless otherwise noted on drawings	Air stream side mat or other fiber-free facing	**ADL-A**
Supply and/or return ducts located exterior to the building envelope, where indicated on drawing.	R-8 minimum. For any location in colder Climate Zones 5 thru 8 of the IECC increase thickness to R-12.	Air stream side mat or other fiber-free facing	**ADL-A**
Inside supply and return ducts within 20’ of Air Handling Unit connections.	R-8	Air stream side mat or other fiber-free facing	**ADL-A**
VAV terminal unit outlet plenum	R-4.2 unless otherwise noted on drawings	Air stream side shall be fiber-free with resin mat facing, aluminum or mylar liner, or acrylic polymer facing	**ADL-A**
Inside supply air ducts serving air to food service/kitchen areas.	Not allowed	NA	**NA**

TABLE 3: ACOUSTICAL DUCT LINER			
SYSTEM	THICKNESS (Minimum)	FINISH	INSULATION KEY CODE
Healthcare facilities-supply and return ductwork installed in conditioned areas and as indicated on the drawings.	R-4.2 unless otherwise noted on drawings	Air stream side with cleanable mylar or perforated metal facing	**ADL-A**
Healthcare facilities-supply or return ductwork installed in unconditioned areas without exterior duct insulation.	R-8 unless otherwise noted on drawings	Air stream side with cleanable mylar or perforated metal facing	**ADL-A**
Where indicated for round ductwork installed in conditioned areas.	R-4.2	Air stream side mat or other fiber-free facing	**ADL-D**
Where indicated for round ductwork installed in unconditioned areas without exterior insulation.	R-8	Air stream side mat or other fiber-free facing	**ADL-D**
Adjust insulation thicknesses as required to meet minimum R-Values.			

END OF SECTION

SECTION 23 07 19 - HVAC PIPING INSULATION

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 23 0500 - Basic Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. All work to be furnished and installed under this Section shall include, but not necessarily be limited to, providing insulation for the following:
   1. Piping Insulation:
      a. Piping Insulation.
      b. Insulation Jackets.
      c. Removable Covers.
   2. Acoustic piping wrap
   3. Section includes the following HVAC piping systems:
      a. Valves, pumps, air separators, strainers and fittings in insulated piping systems.
      b. Refrigerant hot gas and suction piping.

B. Types of mechanical insulation specified in this Section include the following:
   1. Glass fiber.
   2. Mineral wool.
   3. Closed cell phenolic.
   4. Polyisocyanurate.
   5. Calcium silicate.
   6. Cellular glass.
   7. Flexible elastomeric closed cell foam.
   8. Aerocel.
   9. Insulation jackets.
   10. Removable covers.
   11. Insulation accessories.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Division 22: Plumbing.

B. Section 23 0500: Basic HVAC Materials and Methods.

C. Section 23 2113: Hydronic Piping, Valves and Specialties.

1.04 DEFINITIONS

A. Ambient: The air temperature to be maintained in a conditioned room. Typically, between 70°F and 78°F.

B. Insert: Spacer placed between the pipe support system and the piping to allow for the space required for insulation.

C. Insulation Group (IG): Definition of Insulation Materials and Operating Temperatures.

D. Insulation Shield: Buffer material placed between the pipe support system and the insulation to prevent the insulation material from crushing.

E. Jacket: Protective covering over the pipe insulation; may be factory applied such as “all service jacket” or field applied to provide additional protection; of such materials as canvas, PVC, aluminum or stainless steel.

F. Piping Insulation: Thermal insulation applied to prevent heat transmission to or from a piping system.

G. Vapor Barrier Jacket: Insulation jacket material that impedes the transmission of water vapor.

H. Freezing Climate: Where outdoor design temperature is less than 34°F (1°C), as stated in ASHRAE Fundamentals under 99% column for winter design conditions.

I. Unconditioned Space: any space not directly conditioned by mechanical equipment or maintained to temperature by mechanical equipment.

1.05 INSULATION INDUSTRY DEFINITIONS

A. Third Party Independent Product sustainable certification: Provides independent third-party, Indoor Air Quality (IAQ) certification of products for emissions of respirable particles and Volatile Organic Compounds (VOC's), including formaldehyde and other specific product-related pollutants. Certification is based upon criteria used by EPA, OSHA, and WHO.
   1. UL GREENGUARD
   2. Scientific Certification Systems (SCS)

B. EPA: Environmental Protection Agency.

C. WHO: World Health Organization.

D. ASJ+: All Service Jacket composed of aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with an outer film layer leaving no paper exposed.

E. ASJ: All Service Jacket (no outer film).

F. SSL+: Self-Sealing Lap with Advanced Closure System.

G. SSL: Self-Sealing Lap.

H. FSK: Foil Scrim Kraft; jacketing.

I. FSP: Foil Scrim Polyethylene jacketing

J. PSK: Poly Scrim Kraft; jacketing.

K. FHC: Fire Hazard Classification

L. PVC: Polyvinyl Chloride.

M. Bio based Binder Technology: binder systems based on rapidly renewable bio-based materials; rather than petroleum-based chemicals commonly used in other glass mineral wool insulation materials. Biobased Technology reduces the binder embodied energy by up to 70 percent and does not contain phenol, formaldehyde, acrylics or artificial colors.

N. UL GREENGUARD Gold Certification: Certification criteria, considers safety factors to account for sensitive individuals (such as children and the elderly), and ensures that a product is acceptable for use in environments such as schools and healthcare facilities. It is referenced by the Leadership in Energy Environmental Design (LEED) Building Rating Systems.

O. Recycled Content – Post-Consumer: materials such as bottled glass collected at curbside or other collection sites after consumer use and used in the manufacturing process to create a new product rather than being placed in a landfill or incinerated.

P. Recycled Content – Pre-Consumer (aka Post-Industrial): materials used or created from one manufacturing process which are collected as scrap and placed back into another manufacturing process rather than being placed in a landfill or incinerated.

Q. Polybrominated diphenyl ethers (PBDE) such as Penta-BDE, Octa-BDE and Deca-BDE fire retardants: have been linked to adverse health effects after exposure in low concentrations.

R. UL Classified: UL has tested and evaluated samples of the product with respect to certain properties of the product. UL classifies products to applicable UL requirements standards for safety and standards of other National and International organizations

S. Imperative 11, Red List – requires that manufacturers disclose the ingredients in their products to document they are free of Red List chemicals and materials. The Red List represents the “worst in class” materials, chemicals and elements known to pose serious risks to human health and the greater ecosystem.

T. Underwriter’s Laboratories Environment (UL Environment): offers independent green claims validation, product assessment and certification.

U. UL Environment Claims Validation (ECV): service and label tests a manufacturer’s product and validates that the environmental claims they make in their marketing and packaging materials are factual. This ECV service enables products to qualify for LEED® MR Credit 4 Recycled Content LEED V-4 Building product disclosure and optimization – sourcing of raw materials.

1.06 QUALITY ASSURANCE

A. Codes and Standards: Provide products conforming to the requirements of the following:
   1. American Society for Testing and Materials (ASTM): Manufacture and test insulation in accordance with the ASTM Standards, including:
      a. B209: Specification for Aluminum and Aluminum-Alloy Sheet and Plat.
      b. C165: Recommended Practice for Measuring Compressive Properties of Thermal Insulation.
      c. C168: Provides standard terminology for thermal insulation.
      d. C177: Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.
      e. C195: Specification for Mineral Fiber Thermal Insulating Cement.
      f. C196: Specification for Expanded or Exfoliated Vermiculite Thermal Insulating Cement.
      g. C302: Test Method for Density of Preformed Pipe-Covering-Type Thermal Insulation.
      h. C303: Test Method for Density of Preformed Block-Type Thermal Insulation.
      i. C305: Test for Thermal Conductivity of Pipe Insulation.
      j. C335: Standard Test Method for Steady-State Heat Transfer Properties of Pipe Insulation.
      k. C356: Test for Linear Shrinkage of Preformed High-Temperature Thermal Insulation.
      l. C411: Test for Hot-Surface Performance of High Temperature Thermal Insulation.
      m. C423: Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
      n. C449: Specification of Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
      o. C518: Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
      p. C533:Specification for Calcium Silicate Block and Pipe Thermal Insulation.
      q. C534: Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
      r. C547: Specification for Mineral Fiber Pipe Insulation.
      s. C552: Specification for Cellular Glass Block and Pipe Thermal Insulation.
      t. C553: Specification for Mineral Fiber Blanket-Type Pipe Insulation (Industrial Type).
      u. C592: Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered).
      v. C612: Specification for Mineral Fiber Block and Board Thermal Insulation.
      w. C755: Standard Practice for Selection of Water Vapor Retarders for Thermal Insulation.
      x. C795: Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.
      y. C916: Standard Specification for Adhesives for Duct Thermal Insulation.
      z. C921: Practice for Determining Properties of Jacketing Materials for Thermal Insulation.

aa. C1071: Standard Specification for Thermal and Acoustical Insulation.
bb. C1104: Standard Test Method for Determining the Water Vapor Sorption of Unfaced Mineral Fiber Insulation.
cc. C1136: Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
dd. C1338: Standard Test Method for Determining Fungi Resistance of Insulation Materials and Facings.
ee. C1393: Standard Specification for Perpendicularly Oriented Mineral Fiber Roll and Sheet Thermal Insulation for Pipes and Tanks.
ff. C1617-05: Standard Practice for Quantitative Accelerated Laboratory Evaluation of Extraction Solutions Containing Ions Leached from Thermal Insulation on Aqueous Corrosion of Metals
gg. E84: Test Method for Surface Burning Characteristics of Building Materials.
hh. E119: Test for Fire Resistance.
ii. G21: Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.
jj. G22: Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Bacteria.

2. American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE): Provide and install pipe and duct insulation in accordance with the following ASHRAE Standard:
   a. 90: Energy Conservation in New Building Design.
3. National Fire Protection Association (NFPA): Manufacture insulation in accordance with the following NFPA standards:
   b. 255: Test Methods, Surface Burning Characteristics of Building Materials.

B. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

C. Do not provide materials with flame proofing treatments subject to deterioration due to the effects of moisture or high humidity.

D. Flame/Smoke Rating: Provide composite mechanical insulation (insulation, jackets, coverings, sealers, mastics and adhesives) with flame-spread index of 25 or less, and smoke-developed index of 50 or less, as tested by ASTM E84 (NFPA 255) Method where installed in a return air plenum or in a ventilation intake or mechanical room. In addition, the products, when tested, shall not drip flame particles, and flame shall not be progressive. Provide Underwriters Laboratories, Inc., label or listing; or satisfactory certified test report from an approved testing laboratory to prove the fire hazard ratings for materials proposed for use do not exceed those specified.

E. Corrosiveness: Passes ASTM C1617-05, Standard Practice for Quantitative Accelerated Laboratory Evaluation of Extraction Solutions Containing Ions Leached from Thermal Insulation on Aqueous Corrosion of Metals.

F. Insulation thickness shall be the greater standard of that specified here or the State energy conservation requirements.

G. Sustainable Project Requirements:
   1. Formaldehyde Free: Third party certified with UL Environment or Scientific Certification Systems (SCS) Validation.
   2. Biosoluble: As determined by research conducted by the International Agency for Research on Cancer (IARC) and supported by revised reports from the National Toxicology Program (NTP) and the California Office of Environmental Health Hazard Assessment. Certified by European Certification Board for Mineral Wool Products (EUCEB).
   3. Low Emitting Materials: For all thermal and acoustical applications of Glass Mineral Wool Insulation Products, provide materials complying with the testing and products requirements of GREENGUARD Certification.

1.07 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data and installation instructions for each type of mechanical insulation. Submit schedule showing manufacturer's product number, K-value, thickness, and furnished accessories for each mechanical system requiring insulation.

B. Products containing the following prohibited chemicals for use as flame retardants or for other purposes will not be acceptable when present in quantities greater than 0.1% by mass. Provide a statement with the submittal indicating that no product submitted contains an amount equal to or greater than 0.10% by mass of the following chemicals:
   1. Pentabrominated diphenyl ether (CAS#32534-81-9).
   2. Octabrominated diphenyl ether (CAS#32536-52-0).
   3. Decabrominated diphenyl ether (CAS#1163-19-50).

C. Maintenance Data: Submit maintenance data and replacement material lists for each type of mechanical insulation. Include this data and product in maintenance manual.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver insulation, coverings, cements, adhesives, and coating to the site in containers with manufacturer's stamp or label affixed showing fire hazard indexes of products.

B. Store and protect insulation against dirt, water, chemical, and mechanical damage. Do not install damaged or wet insulation; remove from project site.

1.09 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 23 0500 for additional warranty and Substantial Completion requirements.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Comply with requirements in "Part 3, Table 1: Piping Services, Fluid Temperature, and Insulation Type Required" for application of insulating materials.

B. Products shall not contain asbestos, lead, mercury or mercury compounds if possible. Products shall meet UL GREENGUARD certification standards for low-emitting products.

C. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C795.

D. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

E. Each insulation material has been provided a descriptive key code, such as **PI-A**, to simplify the organization and application of materials in following sub-sections.

F. Thickness of insulation is based on meeting or exceeding the minimum requirement of applicable energy code and/or maximum allowable external temperature in relation to adjacent combustible material or other equipment. Exterior surface temperature shall not exceed 140°F at maximum operating capacity except as noted below for generator applications.

G. Acceptable manufacturers include Knauf Insulation, Johns Manville, Owens-Corning, Armstrong, Pittsburgh-Corning, Trymer, IIG, Certainteed, Halstead, Rubatex, 3M FireMaster, Pabco, Aeroflex, Armacell, Reflectix, Pacor or equal. Manufacturer and insulation types listed below indicate a minimum acceptable level of quality required for each product classification.

2.02 PIPE INSULATIONS (IDENTIFIED BY KEY CODE PI BELOW AND IN TABLE 1)

A. **PI-A,** Preformed Mineral Wool or Fiberglass:
   1. Materials: Mineral wool or fiberglass bonded with a thermosetting resin. Product to be validated GREENGUARD Gold for low VOC's. In addition, pipe insulation to have a validated EPD from UL Environment or Scientific Certification Systems.
   2. Applications: Insulation of piping and fittings with thickness as required by local energy code.
   3. Compliant with ASTM C335, C356, C411, C447, C547, C585, C795, C1045, C1104 E96, and E84.
   4. Compliant with ASTM C547 Type I, 850°F (454°C) or Type IV, 1000°F (538°C).
   5. Thermal conductivity (K-value): 0.24 Btu•in./(hr•ft²•ºF) or less, at 100°F (38°C).
   6. Service Temperature Range: 0°F to 850°F (-18°C to 454°C).
   7. Water Vapor Absorption, % of volume: <5% (maximum) as tested per ASTM C1104.
   8. Vapor Retarder Jacket: Factory applied ASJ or ASJ+ with SSL, white kraft paper interleaving reinforced with glass fiber scrim yarn and bonded to aluminum foil, secure with self-sealing longitudinal laps and butt strips.
   9. Water Vapor Permeance: 0.02 perms maximum.

10. Nominal density is 2.5 lbs./cu. ft., greater.
11. Surface Burning Characteristics: Flame Spread Index ≤25 and Smoke Developed Index ≤50 ratings as tested per ASTM E84.
12. Manufacturers: Knauf #ECOSE Earthwool 1000°, Johns Manville #Micro-Lok or #Micro-Lok, Owens Corning, CertainTeed, Manson or equal.

B. **PI-B,** Flexible Closed-Cell Elastomeric, Neoprene or Polyethylene:
1. Applications: Insulation of piping and fittings with thickness as required by local energy code.
2. Compliant with UL 181, ASTM C411, C518, C534, G21/C1338, G22, D1056 and E84.
3. Service Temperature Range: -297°F to 220°F (-183°C to 105°C).
4. Thermal Conductivity (K-value): 0.28 Btu•in./(hr•ft²•ºF) or less, at 75°F (24°C).
5. Water Vapor Absorption, % of volume: <0.2% (maximum) compliant with ASTM C209.
6. Nominal density is 2.5 lbs./cu. ft. or greater.
7. Surface Burning Characteristics: Flame Spread Index ≤25 and Smoke Developed Index ≤50 ratings as tested per ASTM E84.
8. Seal all seams and joints with contact adhesive or factory self-seal system with lap seal tape.
9. Manufacturers: Armacell #AP Armaflex, Rubatex #K-Flex ECO, Aeroflex #Aerocel or equal.

C. **PI-E,** Rigid Preformed Hydrous Calcium Silicate:
1. Applications: High temperature insulation for piping and equipment and for placement at piping hangers and supports.
2. Compliant with ASTM C165, C302, C356, C447, C533, C665, C1338 and E84.
3. Maximum Service Temperature: 1200°F (650°C).
4. Thermal conductivity (K-value): 0.389 Btu•in./(hr•ft²•ºF) or less, at 200°F (93°C).
5. Nominal density is 14 lbs./cu. ft. or greater.
6. Compressive Strength (block): Minimum of 100 psi to produce 5% compression as tested per ASTM C165.
7. Surface Burning Characteristics: Flame Spread Index =0 and Smoke Developed Index =0 ratings as tested per ASTM E84.
8. Tie Wire: 16-gauge stainless steel with twisted ends on maximum 12” centers.
9. Product must contain corrosion inhibiting chemistry.
10. Manufacturers: Johns Manville Industrial Insulation Group #Thermo-12 Gold or equal.

2.03 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ+: White, polypropylene-coated, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
3. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.

4. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
5. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
6. Vinyl Jacket: White vinyl with a permeance of 1.3 perms (0.86 metric perm) when tested according to ASTM E 96/E 96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.04 JACKETING MATERIALS

A. Field Applied Jackets (For Indoor Applications):
1. All longitudinal seams shall be located on bottom of pipes.
2. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
3. PVC Plastic:
   a. High-impact-resistant, UV-resistant PVC as tested per ASTM C553, C547, C665, C795, C1338, D1784, E96, C1136 and D3679.
   b. One piece molded type fitting covers and jacketing material.
   c. Adhesive: As recommended by jacket material manufacturer.
   d. Color: White.
   e. Thickness: 20 mil (0.5 mm), minimum.
   f. Service Temperature Range: 0°F to 150°F (-18°C to 66°C).
   g. Surface Burning Characteristics: Flame Spread Index ≤25 and Smoke Developed Index ≤50 ratings as tested per ASTM E84.
   h. Manufacturers: Johns Manville #Zeston 2000, Proto #LoSmoke or equal by PIC Plastics, Proto Corporation, Speedline Corporation or equal.
4. Aluminum Jacket:
   a. Comply with ASTM B209/B209M.
   b. Aluminum alloy 3003, 3005, 3105 or 5005 with an H-14 temper.
   c. Thickness: 0.016” thick sheet (minimum).
   d. Finish: Smooth or stucco embossed
   e. Moisture Barrier: 3 mil thick polysurlyn or 3 mil thick polyethylene.
   f. Longitudinal slip joints and 2” laps, die shaped fitting covers with factory attached protective liner. Secure with 3/8” or 1/2” stainless steel bands on 12” centers.
   g. Surface Burning Characteristics: Flame Spread Index ≤25 and Smoke Developed Index ≤50 ratings as tested per ASTM E84.
   h. Manufacturers: Pabco, Childers, RPR, ITW or equal.
5. Canvas Jacket:
   a. Cotton or fiberglass cloth.
   b. UL listed fabric treated with dilute fire retardant.
   c. Lagging adhesive per manufacturer.
   d. Manufacturers: GJC General, GLT Products, Foster #Mast-A-Fab, Childers #Chil-Glas No. 5 or equal.

B. Field Applied Jackets (For Outdoor Applications):
1. All longitudinal seams, on horizontal pipe runs, shall be installed on the bottom of pipes.
2. Secure stainless steel or aluminum jackets with 3/8” or 1/2” stainless steel bands on 12” centers and at each joint.
3. PVC Jacket: Not allowed for outdoor applications.
4. Canvas Jacket: Not allowed for outdoor applications.

5. Aluminum Jacket:
   a. Comply with ASTM B209/B209M.
   b. Aluminum alloy 3003, 3005, 3105 or 5005 with an H-14 temper.
   c. Thickness: 0.016” thick sheet (minimum).
   d. Finish: Smooth, stucco embossed or corrugated surface.
   e. Color: White with surface emittance of 0.8, or greater, per ASTM C1371 for piping and equipment exposed to sunlight.
   f. Moisture Barrier: 3 mil thick polysurlyn or 3 mil thick polyethylene.
   g. Longitudinal slip joints and 2” laps, die shaped fitting covers with factory attached protective liner. Secure with 3/8” or 1/2” stainless steel bands on 12” centers.
   h. Manufacturers: Pabco, Childers, RPR, ITW or equal.
6. Self-Adhesive Aluminum Jacket:
   a. Comply with ASTM D774, C1338, C1371, E96 and D882.
   b. Thickness: 56 mils (minimum).
   c. Multi-ply UV-resistant aluminum foil/polymer laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross-laminated polyethylene film covered with stucco-embossed aluminum-foil facing.
   d. Color: White with surface emittance of 0.8, or greater, per ASTM C1371 for piping and equipment exposed to sunlight.
   e. Weight: 0.3 lbs./sf, minimum.
   f. Service Temperature Range: -15°F to 160°F (-26°C to 71°C).
   g. Manufacturer: Polyguard Products #Alumaguard or equal.
7. Stainless Steel Jacket:
   a. Comply with ASTM A240 and A666.
   b. Stainless steel alloy T-304 or T-316. T-316 shall be used in corrosive environments including close proximity to coast.
   c. Thickness: 0.016” thick sheet (minimum).
   d. Dull Finish: Smooth, stucco embossed or corrugated surface.
   e. Color: White with surface emittance of 0.8, or greater, per ASTM C1371 for piping and equipment exposed to sunlight.
   f. Moisture Barrier: 3 mil thick polysurlyn or 3 mil thick polyethylene.
   g. Longitudinal slip joints and 2” laps, die shaped fitting covers with factory attached protective liner. Secure with 3/8” or 1/2” stainless steel bands on 12” centers.
   h. Manufacturers: Pabco, Childers, RPR, ITW or equal.

C. Removable Covers:
1. Provide removable covers on indoor pumps, valves, air separators, air vent fittings, flanges, strainers, traps, etc., where periodic maintenance or removal of insulation is required.
   a. Pre-molded insulation covers:
      1) Cold Systems: Provide PVC covers over insulated elbows, fittings and flanges.
      2) Cold Systems: Provide flexible closed cell foam or removable cloth insulating blankets for valves, pumps and strainers.
      3) Hot Systems: Provide PVC covers over insulated elbows, fittings and flanges.
      4) Hot Systems: Provide removable cloth insulating blankets on valves, pumps, and strainers.

b. Removable cloth insulating blankets:
   1) Service Operating Temperature: 0-350°F.
   2) Jacket and Liner: silicon or teflon impregnated mineral wool cloth.
   3) Liner Reinforcement: stainless steel mesh cloth.
   4) Insulation: Fiberglass matt or Pacor #Aerogel, 2” thick (minimum) or R-8 equivalent (minimum), and thicker as required by local energy code.
   5) Fastening: 2” Nomex Velcro or 1” straps and stainless steel D-rings or 12-gage stainless steel hooks and stainless steel wire.
   6) Thread: Kevlar/stainless steel thread.
   7) Outdoor Applications: Jacket shall be UV and ozone resistant with Velcro attachment.
   8) Manufacturers: Thermal Energy Products, Coverflex, Thermaxx, Pacor, Unitherm, Advance Thermal, Fit Tight Covers, Alpha or equal.

2.05 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Calcium Silicate Adhesive:
   1. Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 1200°F (10 to 649°C).
   2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Manufacturers: Childers Brand #CP-97, Johns Manville #CalBond Gold, Marathon Industries #290, Foster Brand #81-27, Mon-Eco Industries #22-30, Vimasco Corporation #760 or equal.

C. Cellular-Glass Adhesive:
   1. Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200°F (minus 73 to plus 93°C).
   2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Manufacturers: Foster Brand #81-84 or equal.

D. Phenolic and Polyisocyanurate Adhesive:
   1. Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300°F (minus 59 to plus 149°C).
   2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Manufacturers: Childers Brand #CP-96, Foster Brand #81-33 or equal.

E. Flexible Elastomeric and Polyolefin Adhesive:
   1. Comply with MIL-A-24179A, Type II, Class I.
   2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Manufacturers: Armaflex #520 Adhesive, Foster Brand #85-75, K-Flex USA #R-373, Aeroflex USA, Aeroseal, Armacell, or equal.

F. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
   1. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Manufacturers: Childers Brand #CP-127, Eagle Bridges - Marathon Industries #225, Foster Brand #85-60/85-70, Mon-Eco Industries, Inc.#22-25 or equal.

G. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
   1. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Manufacturers: Childers Brand #CP-82, Eagle Bridges - Marathon Industries #225, Foster Brand #85-50, Mon-Eco Industries, Inc.#22-25 or equal.

H. PVC Jacket Adhesive: Compatible with PVC jacket.
   1. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Manufacturers: Dow Corning Corporation #739, Dow Silicone, Johns Manville #Zeston Perma-Weld, CEEL-TITE #Solvent Welding Adhesive, P.I.C. Plastics, Inc. #Welding Adhesive, Speedline Corporation #Polyco VP Adhesive or equal.

2.06 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
   1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Vapor-Barrier Mastic: Water based for indoor use.
   1. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
   2. Service Temperature Range: Minus 20 to plus 180°F (Minus 29 to plus 82°C).
   3. Vapor Safe Coating: Shall meet requirements of LEED IEQ Low-Emitting Materials. VOC 33 g/l, less water and exempt solvents.
   4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
   5. Color: White.
   6. Manufacturers: Foster Brand #30-80/30-90, Vimasco Corporation #749 or equal.

C. Vapor-Barrier Mastic: Solvent based for outdoor use.
   1. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30-mil (0.8-mm) dry film thickness.
   2. Service Temperature Range: Minus 50 to plus 220°F (Minus 46 to plus 104°C).
   3. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
   4. Color: White.
   5. Manufacturers: Childers Brand #Encacel X CP-40, Eagle Bridges - Marathon Industries #570, Foster Brand #60-95/60-96 or equal.

D. Breather Mastic: Water based for indoor and outdoor use.
   1. Water-Vapor Permeance: ASTM F 1249, 1.8 perms (1.2 metric perms) at 0.0625-inch (1.6-mm) dry film thickness.
   2. Service Temperature Range: Minus 20 to plus 180°F (Minus 29 to plus 82°C).
   3. Solids Content: 60 percent by volume and 66 percent by weight.

4. Color: White.
5. Manufacturers: Childers Brand #CP-10/CP-11, Eagle Bridges - Marathon Industries #550, Foster Brand #46-50, Mon-Eco Industries, Inc. #55-50, Vimasco Corporation #WC-1/WC-5 or equal.

2.07 LAGGING ADHESIVES

A. Adhesives shall be compatible with insulation materials, jackets, and substrates.
1. Comply with MIL-A-3316C, Class I, Grade.
2. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
4. Service Temperature Range: 0 to 180°F (-18 to 82°C).
5. Color: White.
6. Manufacturers: Childers Brand #CP-50 AHV2, Foster Brand #30-36, Vimasco Corporation #713/714 or equal.

2.08 SEALANTS

A. Joint Sealants:
1. Joint Sealants for Cellular-Glass, Phenolic, and Polyisocyanurate.
a. Manufacturers: Childers Brand #CP-76, Marathon Industries#405, Foster Brand #30-45, Mon-Eco Industries, Inc.#44-05, Pittsburgh Corning Corporation #Pittseal 444 or equal.
2. Joint Sealants for Polystyrene.
a. Manufacturers: Childers Brand #CP-70, Marathon Industries #405, Foster Brand #30-45, Mon-Eco Industries, Inc.#44-05 or equal.
3. Materials shall be compatible with insulation materials, jackets, and substrates.
4. Permanently flexible, elastomeric sealant.
5. Service Temperature Range: -100 to 300°F (-73 to 149°C).
6. Color: White or gray.
7. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24). Shall be compliant with requirements of LEED IEQ Low-Emitting Materials.

B. FSK and Metal Jacket Flashing Sealants:
1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250°F (Minus 40 to plus 121°C).
4. Color: Aluminum.
5. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
6. Manufacturers: Childers Brand #CP-76, Eagle Bridges - Marathon Industries #405, Foster Brand #95-44, Mon-Eco Industries, Inc. #44-05 or equal.

C. ASJ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:
1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250°F (Minus 40 to plus 121°C).
4. Color: White.

5. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
6. Manufacturers: Childers Brand #CP-76 or equal.

2.09 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
1. Width: 3 inches (75 mm).
2. Thickness: 11.5 mils (0.29 mm).
3. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
4. Elongation: 2 percent.
5. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
6. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
7. Manufacturers: ABI, Ideal Tape Division #428 AWF ASJ, Avery Dennison Corporation #Fasson 0836, Compac Corporation #105, 3M Venture Tape #1540 CW Plus/1542 CW Plus/1542 CW Plus/SQ or equal.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Width: 3 inches (75 mm).
2. Thickness: 6.5 mils (0.16 mm).
3. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
4. Elongation: 2 percent.
5. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
6. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
7. Manufacturers: ABI Tape #491 AWF FSK, Avery Dennison Corporation #Fasson 0827, Compac Corporation #110 and 111, 3M Venture Tape #1525 CW NT/1528 CW/1528 CW/SQ or equal.

C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Width: 2 inches (50 mm).
2. Thickness: 6 mils (0.15 mm).
3. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
4. Elongation: 500 percent.
5. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.
6. Manufacturers: ABI Tape #370 White PVC tape, Compac Corporation #130, Venture Tape #1506 CW NS or equal.

D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Width: 2 inches (50 mm).
2. Thickness: 3.7 mils (0.093 mm).
3. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.
4. Elongation: 5 percent.
5. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.
6. Manufacturers: ABI Tape #488 AWF, Avery Dennison Corporation #Fasson 0800, Compac Corporation #120, 3M Venture Tape #3520 CW or equal.

2.10 SECUREMENTS

A. Bands:
1. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304, 0.020 inch (0.50 mm) thick, 1/2 inch (13 mm) or 3/4 inch (19 mm) wide with wing seal.
2. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105 or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) or 3/4 inch (19 mm) wide with wing seal.Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application. (Note to Editor: Springs are used for large, 84-inch- (2130-mm-) diameter applications and on applications with rapid changes in expansion and contraction.)
3. Manufacturers: ITW Insulation Systems, Gerrard Strapping and Seals, RPR Products, Inc., Insul-Mate Strapping, Seals, and Springs or equal.

B. Insulation Pins and Hangers:
1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
   a. Manufacturers: AGM Industries #CWP-1, GEMCO #CD, Midwest Fasteners #CD, Nelson Stud Welding #TPA/TPC/TPS or equal.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38-mm) galvanized carbon-steel washer.
   a. Manufacturers: AGM Industries #CHP-1, GEMCO #Cupped Head Weld Pin, Midwest Fasteners #Cupped Head, Nelson Stud Welding #CHP or equal.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
   a. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
   b. Spindle: Copper- or zinc-coated, low-carbon steel, Aluminum or Stainless steel coordinated with application, fully annealed, 12 gauge, 0.106-inch-(2.6-mm-) diameter shank, length to suit depth of insulation indicated.
   c. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
   d. Manufacturers: AGM Industries, Inc. #Tactoo Perforated Base Insul-Hangers, GEMCO #Perforated Base, Midwest Fasteners, Inc.#Spindle or equal.
4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
   a. Baseplate: Perforated, nylon sheet, 0.030 inch (0.76 mm) thick by 1-1/2 inches (38 mm) in diameter.
   b. Spindle: Nylon, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches (63 mm).

c. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
d. Manufacturers: GEMCO #Nylon Hangers, Midwest Fasteners, Inc.#Nylon Insulation Hangers or equal.

5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
   a. Baseplate: Galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
   b. Spindle: Copper- or zinc-coated, low-carbon steel, Aluminum, Stainless steel, fully annealed, as coordinated with application. 12 gauge, 0.106-inch - (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
   c. Adhesive-backed base with a peel-off protective cover.
   d. Manufacturers: AGM Industries, Inc. #Tactoo Self-Adhering Insul-Hangers, GEMCO #Peel & Press, Midwest Fasteners #Self Stick or equal.
6. Insulation-Retaining Washers: Self-locking washers formed from 0.015-inch-(0.41-mm-) thick, galvanized-steel, aluminum or stainless-steel sheet, as coordinated with application with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
   a. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
   b. Manufacturers: AGM Industries #RC-150, GEMCO #R-150, Midwest Fasteners #WA-150, Nelson Stud Welding #Speed Clips or equal.
7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
   a. Manufacturers: GEMCO, Midwest Fasteners, Inc or equal.

C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.

D. Wire: 0.062-inch (1.6-mm) soft-annealed, stainless steel.
   1. Manufacturers: C & F Wire or equal.

2.11 ACOUSTICAL PIPE WRAP

A. Acoustical pipe lagging for noisy pipes. Barrier material shall meet the sound transmission loss and physical properties performance requirements as follows:
   1. Vinyl noise barrier with reinforced foil facing on one side.
   2. Service Temperature Range: -40°F to 220°F (-40°C to 104°C).
   3. Nominal density: 2 lbs./sf or greater.
   4. Surface Burning Characteristics: Flame Spread Index ≤25 and Smoke Developed Index ≤450 ratings as tested per ASTM E84. Not compliant for use in return air plenums without metal jacket.
   5. Sound transmission class: 31
   6. Sound Transmission Loss (dB) Table per ASTM E90:

dB Reduction at each Octave Band Center Frequency (Hz)						
125 hz	250 hz	500 hz	1000 hz	2000 hz	4000 hz	STC
16	22	26	32	35	40	31

7. Manufacturers: Sound Seal #B-20 LAG/QFA-9, Kinetics #KNM-100AL Series or equal.

PART 3 - EXECUTION

3.01 EXAMINATION AND PREPARATION

A. Verify that piping has been tested for leakage in accordance with specifications before applying insulation materials. All piping and ductwork shall be inspected by Owner's Representative prior to installation of insulation. Any insulation applied prior to inspection shall be removed and new insulation applied at no additional cost to Owner. Notify Owner's Representative five (5) working days prior to insulation installation.

B. Verify that all surfaces are clean, dry and free of foreign material.

3.02 INSTALLATION

A. General:
1. Install materials in accordance with manufacturer's recommendations, building codes and industry standards.
2. Remove and replace any insulation that has become wet or damaged during the construction process.
3. Pipe fittings, valves, pipe flanges, pumps, strainers, gauge fittings, etc., shall be insulated to the same insulation thickness as adjoining piping and as required by local energy code. All support points, joints and fittings shall be insulated for continuous insulation coverage with no gaps or voids.

B. Piping Insulation:
1. Locate insulation and cover seams in least visible locations unless otherwise specified.
2. Neatly finish insulation at supports, protrusions, and interruptions.
3. Provide vapor retardant jackets with self-sealing laps on insulated cold pipes conveying fluids below ambient temperature. Insulate complete system. Staples used on pipes conveying fluids below ambient temperatures (cold systems) must be covered with approved mastic.
4. For insulated pipes conveying fluids above ambient temperature, secure jackets with self-sealing lap or outward clinched, expanded staples. Seal ends of insulation at equipment, flanges, and unions.
5. Provide insert between support shield and piping on piping 1-1/2” diameter and larger. Fabricate insert using hydrous calcium silicate or other heavy density insulating material suitable for temperature and required insulation thickness. Insulation inserts shall not be less than the following lengths:
a. 1-1/2" to 2-1/2" pipe size: 10" or longer.

b. 3" to 6" pipe size: 12" or longer.
c. 8" to 10" pipe size: 16" or longer.
d. 12" pipe size and larger: 22" or longer.

6. For smaller pipe sizes, less than 1-1/2” diameter, provide metal or pre-manufactured plastic insulation shield to support the insulated pipe through the support point at the hanger or saddle. Pipe shield shall be a minimum of 6” long to distribute the weight of the insulated pipe without crushing or damaging the insulation. Pipe shield shall be located outside of the metal insulation jacket where applicable.
7. Use of metal saddles is acceptable as specified in Section 230500. Fill interior voids with segments of insulation matching adjoining pipe insulation.
8. Use of pipe hangers designed as an insulation coupling is acceptable in lieu of saddles and other devices.
9. For insulated pipe exposed in mechanical equipment rooms or in finished spaces below seven (7) feet above finished floor, cover insulation with PVC or metal jacketing.
10. Where pumps, valves (manual and control types), strainers, etc., with insulation require periodic opening for maintenance, repair or cleaning, install insulation in such a manner that it can be easily removed and replaced without damage.
    a. Cold Systems: Provide elastomeric foam for pumps and strainers.
    b. Hot Systems: Provide removable blanket covers on valves, pumps, and strainers.
11. For exterior applications:
    a. Apply weather-resistant protective finish to flexible elastomeric insulation. Insulation seams shall be located on the bottom side of horizontal piping.
    b. All lateral and longitudinal insulation joints to be sealed with low VOC, UV inhibitive adhesive.
    c. Provide weather protection jacket over insulation. Insulated pipe lengths, pumps, fittings, joints, and valves shall be covered with aluminum jacket or stainless steel jacket. PVC or plastic jackets are not allowed exterior to the building. Jacket seams shall be located on bottom side of horizontal piping. All lateral jacket joints shall be caulked with a minimum 20-year silicone sealant (clear). All longitudinal jacket joints, except those at the bottom of a horizontal pipe run, shall be caulked with a minimum 20-year silicone sealant (clear).
12. For underground installations, install per manufacturer's written instructions and recommendations.
13. When maintenance or service access for equipment will result in foot traffic over floor mounted insulated piping the contractor is to fabricate a permanent removable walkway to prevent damage to the piping and insulation.
14. Jacket Locations for Pipe, Valve and Fittings. Provide protective insulation jackets for the following locations where not defined elsewhere in the specifications for piping systems:

Insulation Jacket Location	Jacket Material
Indoors: Concealed in Accessible Ceiling Voids.	None.
Indoors: Concealed in Inaccessible Ceiling Voids.	None.
Indoors: Concealed in Accessible Portions of Shafts or Chaseways.	None.
Indoors: Concealed in Inaccessible Portions of Shafts or Chaseways.	None.
Indoors: Mechanical Rooms.	PVC or Aluminum or Stainless Steel to seven (7) feet AFF.
Indoors: Exposed to view in normally occupied spaces such offices, conference rooms, restaurants and retail spaces.	PVC.
Indoors: Exposed to view in warehouse, storage and manufacturing spaces.	None.
Outdoors: Exposed to weather.	Aluminum or stainless steel with white coating for low emissivity.
Outdoors: Exposed in covered outdoor areas such as garages or under canopies.	Aluminum or stainless steel.
Outdoors: Located in vaults or accessible concrete trenches.	Aluminum or stainless steel.

3.03 PIPING INSULATION SCHEDULE

A. TABLE 1: PIPING SERVICES, FLUID TEMPERATURE, AND INSULATION TYPE REQUIRED.

1. All insulation thicknesses shall meet or exceed state energy code requirements as noted below. Increase thickness by 1/2" (minimum) where insulated pipe is exposed to exterior ambient air. Minimum thermal resistance shall comply with building code minimum ranges and may exceed those minimum levels. Insulation thicknesses may be adjusted for equivalent insulation values for materials with superior "K" factors. Refer to "PART 2-PRODUCTS" for characteristics of each insulation material listed below.

PIPE INSULATION INDEX	
INSULATION KEY CODE	INSULATION TYPE
PI-A	Preformed Flexible Mineral Wool or Fiberglass.
PI-B	Preformed Flexible Closed-Cell Elastomeric, Neoprene or Polyethylene.
PI-E	Rigid Preformed Hydrous Calcium Silicate.

TABLE 1: PIPING SERVICES, FLUID TEMPERATURE, AND INSULATION TYPE REQUIRED		
SERVICE	INSULATION KEY CODE	THICKNESS/REMARKS (Minimum)
Insulated pipes at pipe hangers and supports with saddles or 360° shields.	**PI-E**	Thickness as required by State Energy Code. See Table 2 below. Refer to 230500 Basic HVAC Materials and Methods for length of saddles and shields based on pipe size. Required on pipe sizes 1-1/2" and larger.
Cooling coil condensate drain piping and traps located inside spaces within the building, and above ceilings and in attics.	**PI-A or B**	Provide 1/2" (minimum) thickness insulation, all pipe sizes. Refer to Division 22.
Cooling coil condensate drain piping and traps located inside the building, in mechanical rooms located in buildings located in humid climates defined as "A-Moist" or "C-Marine" in the IECC.	**PI-A or B**	Provide 1/2" (minimum) thickness insulation, all pipe sizes. Refer to Division 22.
Cooling coil condensate drain piping and traps located outdoors.	**N/A**	Not required.
Refrigerant suction piping.	**PI-B**	Provide 3/4" (minimum) thickness insulation or increased thickness as required by State Energy Code. See Table 2 below.
Refrigerant liquid and hot-gas piping.	**PI-B**	Provide 3/4" (minimum) insulation for all warm/hot piping in close proximity to human contact and where located in enclosed ceiling, shaft or chase spaces.
Refrigerant piping for heat pump and VRF systems.	**PI-B**	Provide 3/4" (minimum) thickness insulation on all piping.

B. TABLE 2: MINIMUM PIPING INSULATION THICKNESS BASED ON FLUID TEMPERATURE AND PIPING SIZE.
   1. California

Table 2

Insulation Based on California T-24 Energy Code Table 120.3-A

Minimum Pipe Insulation Thicknesses or Greater

FLUID TEMPERATURE RANGE (°F)	CONDUCTIVITY RANGE (in Btu-inch per hour per square foot °F)	INSULATION MEAN RATING TEMPERATURE (°F)	NOMINAL PIPE DIAMETER (in inches)				
			Less than 1	1 and 1-1/4	1-1/2 to 3	4 to 6	8 and larger
			INSULATION THICKNESS REQUIRED (in inches)				
Space heating systems (steam, steam condensate and hot water) and Domestic Services Water Heating Systems							
Above 350	0.32-0.34	250	4.5	5.0	5.0	5.0	5.0
251-350	0.29-0.31	200	3.0	4.0	4.5	4.5	4.5
201-250	0.27-0.30	150	2.5	2.5	2.5	3.0	3.0
141-200	0.25-0.29	125	1.5	1.5	2.0	2.0	2.0
105-140	0.22-0.28	100	1.0	1.5	1.5	1.5	1.5
Space cooling systems (chilled water, refrigerant and brine)							
40-60	0.21-0.27	75	0.5	0.5	1.0	1.0	1.0
40-60 residential	0.21-0.27	75	0.75 for residential		1.0	1.0	1.0
Below 40	0.20-0.27	75	1.0	1.5	1.5	1.5	1.5

3.04 ACOUSTIC PIPE WRAP

A. Acoustic pipe wrap is to be used in piping system which occur over occupied spaces for the following:
   1. Horizontal condenser water riser offsets.
   2. Pipe, valves and fittings where water velocity exceeds 8 feet per second.

END OF SECTION

SECTION 23 09 00 - BUILDING AUTOMATION SYSTEM (BAS) CONTROLS

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 23 0500 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. All work to be furnished and installed under this Section shall comply with all the requirements of Division 01, and shall include but not necessarily be limited to the following:
   1. Provide new direct digital Building Automation System (BAS) for the new building with all hardware, software, controller, devices, sensors, conduit, wiring, and labor as required to provide complete and operational systems.
   2. Provide Tridium front end to interface existing building BAS systems with new building BAS.

B. General Requirements
   1. The work includes designing, providing and installing a complete and fully operable building automation system as described in this Section of the Specification and as shown on the contract construction drawings and shall be in accordance with rules, regulations and standards as required by the authorities having jurisdiction. Any alternations to the quantity or location of the control panels shall be coordinated with the Electrical Contractor and General Contractor prior to bidding. Any BAS changes after bidding must be coordinated with Electrical Contractor and General Contractor at no additional cost to Owner.
   2. Submit shop drawings of the entire control system components fully coordinated with major equipment suppliers' requirements. Provide proposed programming logic sequences of control functions on each system.
   3. Installation of control components other than valves, dampers and sensing wells as required for a complete and workable system.
   4. This Contractor shall furnish, install and coordinate the interlock and control wiring as specified and/or required for a complete and workable control system.
   5. Controls dampers are specified and furnished in Section 233113 of these specifications. Provide damper actuators, wiring and conduit as required to operate all dampers as shown.
   6. Upon completion of the installation, data entry and programming, provide complete validation and adjustment of specified control system through period of testing and Owner’s acceptance. The control contractor shall perform a point-to-point check out of all newly installed points to verify point existence, proper end to end connection and correct SI units with the Owners Representative.

7. The entire program and sequence of operation with the final points list shall be verified by the Control Contractor, the Owner's Representative, and signed by both parties. A copy of the final program, sequence of operation, and points list shall be submitted to the Engineer for approval and inclusion with the operation and maintenance manuals.
8. Owner training on operation of the control system.
9. One-year warranty on workmanship and materials.
10. Interlocking of electrical systems and motors as shown on Drawings, except where specifically shown on electrical drawings.

1.03 RELATED WORK IN OTHER SECTIONS

A. Refer to Division 0 and Division 1 for related contractual requirements.

B. Provide certificates of calibration for all sensors required for control and monitoring including temperature and pressure.

C. Refer to Division 23 and the following sections for Mechanical or Electrical Provision.
1. Division 01 - Submittal Procedures
2. Division 01 - Commissioning
3. Section 23 0500: Basic HVAC Materials and Methods
4. Section 23 0593: Testing, Adjusting, and Balancing
5. Section 23 0902: Variable Frequency Drives
6. Section 23 2113: Hydronic Piping, Valves and Specialties
7. Section 23 2123: Hydronic Pumps
8. Section 23 3113: Air Distribution
9. Sections 23 7000 through 238999 equipment
10. Division 26 – Electrical Materials and Methods
11. Division 28 – Electronic Safety and Security

D. Refer to Division 26 sections for Electrical Provisions. Sources of 120-volt electrical power as indicated on electrical drawings and specifications for control system components furnished by this section. The controls contractor shall be responsible for all additional electrical distribution from these connection points to the control panels and other controls devices.

E. BAS contractor will furnish, but not install the following:
1. Air flow measuring stations: furnish to mechanical installer and coordinate per manufacturer's requirements.
2. Flow meters: furnish to mechanical installer and coordinate per manufacturer's requirements.
3. Flow switches: furnish to mechanical installer and coordinate per manufacturer's requirements.
4. Hydronic pressure and temperature sensor wells: furnish to mechanical installer and coordinate per manufacturer's requirements.
5. Control valves: furnish to mechanical installer and coordinate per manufacturer's requirements.

1.04 REFERENCE STANDARDS

A. The latest edition of the following standards and codes in effect and amended as of supplier's proposal date, and any applicable subsections thereof, shall govern design and selection of equipment and material supplied:
   1. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE).
   2. ANSI/ASHRAE Standard 135-2012, BACnet.
   3. International Building Code (IBC), including local State and Local amendments.
   4. UL 916 Underwriters Laboratories Standard for Energy Management Equipment. Canada and the US.
   5. National Electrical Code (NEC).
   6. FCC Part 15, Subpart J, Class A.
   7. EMC Directive 89/336/EEC (European CE Mark).
   8. UL-864 UUKL listing for Smoke Controls for any equipment used in smoke control sequences.

B. City, county, state, and federal regulations and codes in effect as of contract date.

C. Except as otherwise indicated, the system supplier shall secure and pay for all permits, inspections, and certifications required for his work, and arrange for necessary approvals by the governing authorities.

1.05 DEFINITIONS

A. ASHRAE: American Society of Heating, Refrigerating, and Air-conditioning Engineers

B. BACnet: BACnet is a preferred communications protocol for building automation and control networks. It is an ASHRAE, ANSI, and ISO standard protocol. BACnet MS/TP is utilized with EIA/RS 485 hardware and BACnet/IP with Ethernet.

C. BAS: A system that optimizes the start-up and performance of HVAC equipment and alarm systems. A BAS greatly increases the interaction between the mechanical subsystems of a building, improves occupant comfort, lowers energy use, and allows off-site building control.

D. Modbus: One of industry standard communication protocols supported by NTMC. Developed by Modicon, Inc., North Andover, MA.

E. ODVA™: (Open DeviceNet Vendors Association) An international organization that supports computing network technologies based upon the Common Industrial Protocol (CIP). These include DeviceNet, EtherNet/IP, CIP Safety and CIP Sync.

F. RTD: Resistance temperature detector is a sensor whose resistance changes with temperature.

G. SCADA System (Supervisory Control And Data Acquisition): A type of industrial control system; a computer system which monitors and controls industrial, infrastructure, or facility-based processes.

H. Transducer: A device that converts variations in a physical quantity, such as pressure or brightness, into an electrical signal, or vice versa.

I. Transmitter: A set of equipment used to generate and transmit electromagnetic waves carrying messages or signals.

1.06 GENERAL REQUIREMENTS

A. Furnish a distributed logic BACnet-based control system including operator's workstation. The operator's workstation, all building controllers, application controllers, and all input/output devices shall communicate using the protocols and network standards as defined by ANSI/ASHRAE Standard 135-2012, BACnet. Provide all necessary BACnet-compliant hardware and software to meet the system's functional specifications. Provide Protocol Implementation Conformance Statement (PICS) for Windows-based control software and every controller in system, including unitary controllers.

B. Prepare individual hardware layouts, interconnection drawings, and software configuration from project design data.

C. Implement the detailed design for all analog and binary objects, system databases, graphic displays, logs, and management reports based on control descriptions, logic drawings, configuration data, and bid documents.

D. Design, provide, and install all equipment cabinets, panels, data communication network cables needed, and all associated hardware.

E. Provide and install all interconnecting cables between supplied cabinets, application controllers, and input/output devices.

F. Provide and install all interconnecting cables between all operator's terminals and peripheral devices (such as printers, etc.) supplied under this section.

G. Provide complete manufacturer's specifications for all items that are supplied. Include vendor name of every item supplied.

H. Provide supervisory specialists and technicians at the job site to assist in all phases of system installation, startup, and commissioning.

I. Provide a comprehensive operator and technician training program as described herein.

J. Provide as-built documentation, operator's terminal software, a software key for a minimum of one additional computer (coordinate with Owner's Representative if additional keys are required), diagrams, and all other associated project operational documentation (such as technical manuals) on approved media, the sum total of which accurately represents the final system.

K. Provide new sensors, dampers, valves, and install only new electronic actuators. No used components shall be used as any part or piece of installed system.

1.07 TRIDIUM REQUIREMENTS

A. The Building Automation System (BAS) specified herein is an “integrated” system that utilizes a Tridium Niagara (N4) front end with BAS contractor’s native BACnet controllers. The BAS contractor shall furnish and install all Tridium Niagara (N4) based front end, hardware systems, and equipment to access and interface with a BACnet control system that utilizes unitary controllers to control all mechanical equipment, including all unitary equipment such as VAV boxes, fan-coils, etc., and all air handlers, boilers, chillers, and any other listed equipment.

B. The BAS contractor shall develop, test, and commission all Tridium Niagara (N4) and GUI (Graphic User Interface) software applications for the HVAC control system. Additionally, the BAS contractor shall configure and commission the Ethernet communication network for the HVAC system.

C. Only BAS contractors that are Factory Authorized to sell and install the Niagara (N4) hardware and software are authorized to bid. The Niagara (N4) Authorized Contractor will have a minimum of three factory trained programmers. The programmers will have completed the Niagara (N4) Certification Program and work as full time employees, not sub-contractors.

D. It is the owner’s express goal to implement an open system that will allow products from various suppliers to be integrated into unified systems in order to provide flexibility for expansion, maintenance, and service of the system. The owner shall be the named license holder of all software associated with any and all incremental work on the project(s). All Niagara (N4) software licenses shall have the ‘accept.station.in=”*”; accept.station.out=”*”, accept.wb.in=”*” and ‘accept.wb.out=”*” section of the software licenses. The intent is to insure that the installed Niagara (N4) products may be completely open for integrations. The Owner shall be free to direct the modifications of the any software license, regardless of supplier. In addition, the Owner shall receive ownership of all job specific software configurations documentation, data files, and application-level software developed for the project. This shall include all custom job specific software code and documentation for all configuration and programming that is generated for a given project and/or configured for use within Niagara (N4) Framework (Niagara (N4)) based controllers and/or servers and any related LAN/ WAN Intranet and Internet connected routers and devices. Any and all required Ids and passwords for access to any component or software program shall be provided to the Owner.

E. Furnish a distributed logic BACnet-based control system, compatible operator’s workstation. The operator’s workstation, all building controllers, application controllers, and all input/output devices shall communicate using the protocols and network standards as defined by ANSI/ASHRAE Standard 135-2012, BACnet. Provide all necessary BACnet-compliant hardware and software to meet the system’s functional specifications. Provide Protocol Implementation Conformance Statement (PICS) for Windows-based control software and every controller in system, including unitary controllers.

F. The Web Server is a flexible network server for multiple connected Niagara controllers. The Web Supervisor is designed to harness the power of the Internet and provide efficient integration and aggregation of the information from multiple controllers. In effect, the Web Supervisor creates a single view of these multiple devices, while providing a powerful network environment with comprehensive database management, alarm management, and messaging services. In addition, the Web Supervisor provides the engineering environment used to set up and manage the systems and the graphical user interface. The software is designed to run on 64-bit Windows 8.1 Enterprise, Windows Server 2012 Standard, 2012 R2 Standard, or better. The browser interface utilizes HTML5. JAVA is not required for the system and graphics to operate.
   1. Processor: Intel Xeon CPU E5-2640 x64, or better, and is compatible with dual and quad core processors.
   2. RAM: 4 Gb of memory minimum.
   3. Hard disk: minimum 4 TB hard drive and additional space for archiving purposes.

1.08 SYSTEM DESCRIPTION

A. A distributed logic control system complete with all software and hardware functions shall be provided and installed. System shall be completely based on ANSI/ASHRAE Standard 135-2012, BACnet and achieved listing under the BACnet Testing Laboratories BACnet - Advanced Workstation Software (B-AWS). This system is to control all mechanical equipment, including all unitary equipment such as VAV boxes, fan-coils, air handlers, boilers, chillers, and any other listed equipment using native BACnet-compliant components. Non-BACnet-compliant or proprietary equipment or systems (including gateways) shall not be acceptable and are specifically prohibited.

B. The Building Automation System (BAS) application program shall be written to communicate specifically utilizing BACnet protocols. Software functions delivered on this project shall include password protection, scheduling (including optimum start), alarming, logging of historical data, full graphics including animation, after-hours billing program, demand limiting, and a full suite of field engineering tools including graphical programming and applications.

C. Building controllers shall include complete energy management software, including scheduling building control strategies with optimum start and logging routines. All energy management software and firmware shall be resident in field hardware and shall not be dependent on the operator’s terminal. Operator’s terminal software is to be used for access to field-based energy management functions only. Provide zone-by-zone direct digital logic control of space temperature, scheduling, runtime accumulation, equipment alarm reporting, and override timers for after-hours usage.

D. All application controllers for every piece of controlled equipment shall be fully programmable. Application controllers shall be mounted next to controlled equipment and communicate with building controller through BACnet LAN.

E. Room sensors shall be provided with digital readout that allow the user to view room temperature, CO2 or relative humidity, adjust the room setpoint within preset limits and set desired override time. User shall also be able to start and stop unit from the digital sensor. Include all necessary wiring and firmware such that room sensor includes field service mode. Field service mode shall allow a technician to balance VAV zones and access any parameter in zone controller directly from the room sensor. Field service mode shall have the ability to be locked out.

1.09 QUALITY ASSURANCE

A. The BAS shall be designed, installed, commissioned, and serviced by contractor authorized and trained personnel. System provider shall have an in-place support facility within two (2) hours response time of the site with technical staff, spare parts inventory, and necessary test and diagnostic equipment.

B. The manufacturer and installer shall have a minimum of 5 years of demonstrated technical expertise and experience in the manufacture, installation and maintenance of BAS systems similar in size and complexity to this project. A list of successful past projects of similar type, size and complexity shall be submitted. In addition, a reference list of names, addresses and telephone numbers of the design Engineer and the Owner's Representative for each installation shall be provided. The references may be contacted and questioned about the timely delivery, installation, operation and service received for each installation.

C. The contractor shall provide experienced project manager for this work, responsible for direct supervision of the design, installation, start-up and commissioning of the BAS system.

D. The Bidder shall be regularly engaged in the design, installation and maintenance of BAS systems and shall have demonstrated technical expertise and experience in the manufacture, installation and maintenance of BAS systems similar in size and complexity to this project. Bidders shall provide a list of at least 10 projects, similar in size and scope to this project completed within the past 3 years.

E. Materials and equipment shall be manufacturer's latest standard design that complies with the specification requirements.

F. All BAS peer-to-peer network controllers, central system controllers and local user displays shall be UL Listed under Standard UL 916, category PAZX.

G. All electronic equipment shall conform to the requirements of FCC Regulation, Part 15, Governing Radio Frequency Electromagnetic Interference and be so labeled.

H. Control system shall be engineered, programmed and supported completely by representative's local office that must be within 100 miles of project site.

I. Control components shall be products of the same manufacturer only, unless indicated otherwise and approved by Owner's Representative. Example – all valves shall by one manufacturer and all temperature sensors shall be by one manufacturer.

1.10 SUBMITTALS

A. Drawings

1. The system supplier shall submit point-to-point engineered drawings, control sequence, and bill of materials for approval.
2. Drawings shall be submitted in a standard size of 11” x 17” (ANSI B), or larger.
3. Eight complete sets (copies) of submittal drawings shall be provided.
4. Drawings shall be available on portable memory device, DVD or CD disk media.

B. System Documentation
1. Include the following in submittal package:
   a. System configuration diagrams in simplified block format.
   b. All input/output object listings and an alarm point summary listing.
   c. Electrical drawings that show all system internal and external connection points, terminal block layouts, and terminal identification.
   d. Complete bill of materials, valve schedule with Cv, valve pressure drop at design flow, and damper schedule.
   e. Manufacturer's instructions and drawings for installation, maintenance, and operation of all purchased items.
   f. Overall system operation and maintenance instructions—including preventive maintenance and troubleshooting instructions.
   g. For all system elements—operator’s workstation(s), building controller(s), application controllers, routers, and repeaters—provide BACnet Protocol Implementation Conformance Statements (PICS) as per ANSI/ASHRAE Standard 135-2012.
   h. Provide complete description and documentation of any proprietary (non-BACnet) services and/or objects used in the system.
   i. A list of all functions available and a sample of function block programming that shall be part of delivered system.

C. Project Management
1. The vendor shall provide a detailed project design and installation schedule with time markings and details for hardware items and software development phases. Schedule shall show all the target dates for transmission of project information and documents, and shall indicate timing and dates for system installation, debugging, and commissioning.

1.11 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 23 0500 for additional warranty and Substantial Completion requirements.

C. Warrant work as follows:
1. Control system failures during warranty period shall be adjusted, repaired, or replaced at no additional cost or reduction in service to Owner.
2. Warrant all actuators for a period of five (5) years.
3. Respond during normal business hours within 24 hours of Owner’s warranty service request.
4. Work shall have a single warranty date, even if Owner receives beneficial use due to early system start-up. If specified work is split into multiple contracts or a multi-phase contract, each contract or phase shall have a separate warranty start date and period.

5. If Owner's Representative determines that equipment and systems operate satisfactorily at the end of final start-up, testing, and commissioning phase, Owner's Representative will certify in writing that control system operation has been tested and accepted in accordance with the terms of this specification. Date of acceptance shall begin warranty period.
6. Provide updates to operator workstation software, project-specific software, graphic software, database software, and firmware that resolve Contractor-identified software deficiencies at no charge during warranty period. If available, Owner can purchase in-warranty service agreement to receive upgrades for functional enhancements associated with above-mentioned items. Do not install updates or upgrades without Owner's written authorization.
7. Exception: Contractor shall not be required to warrant reused devices except those that have been rebuilt or repaired. Installation labor and materials shall be warranted. Demonstrate operable condition of reused devices at time of Engineer's acceptance.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Acceptable BAS Manufacturers include:
   1. Johnson Controls
   2. Distech

2.02 OPERATOR'S WORKSTATION

A. General structure of workstation interaction shall be a standard client/server relationship. Server shall be used to archive data and store system database. Clients shall access server for all archived data. Each client shall include flexibility to access graphics from server or local drive. Server shall support a minimum of 50 simultaneous clients.

B. Primary Operator Workstation Hardware
   1. All workstations shall be general purpose microcomputer systems serving as an operator station in a cooperative processing server/client relationship with other connected work stations. The workstation shall consist of a high-speed central processing unit (CPU) with data storage facilities, high-resolution, 24", LCD monitor. Components shall be capable of operating in environments of 60°F to 105°F and relative humidity of 30% to 90%.
   2. CPU: Intel Xeon CPU E5-2640 x64, or better, and compatible with dual & quad core processors.
   3. Memory: 8 GB (minimum).
   4. Hard Drive: 1 TB (minimum) for the BAS operating software.
   5. Hard Drive: 4 TB (minimum) to be used for trend log archiving of annual data.
   6. Display: Video card and monitor capable of displaying 1920x1080 pixel resolution or better.
   7. Network Support: Ethernet adapter (10/100 Mb with RJ-45 connector, or greater).
   8. Keyboard: The keyboards shall be the enhanced with 101 keys and quiet.

C. Displays

1. In general, the operator's workstation shall display all data associated with project as called out on drawings and/or object type list supplied. Graphic files shall be created using digital, full color photographs of system installation, AutoCAD drawing files of field installation drawings and wiring diagrams from as-built drawings. Operator's workstation shall display all data using three-dimensional graphic representations of all mechanical equipment.
2. A customized menu label (push-button) shall be used for display selection. Menu items on a display shall allow penetration to lower level displays or additional menus. Dynamic point information and menu label pushbuttons may be mixed on the same display to allow sub-displays to exist for each item. Each display may be protected from viewing unless operator has appropriate security level. A security level may be assigned to each display and system object. The menu label shall not appear on the graphic if the operator does not have the appropriate security level.
3. The BAS displays shall have the ability to link to content outside of the BAS system. Such content shall include but is not limited to: Launching external files in their native applications (for example, a Microsoft Word document) and launching a Web browser resolving to a specified Web address.
4. The BAS system shall have the ability to run multiple, concurrent displays windows showing continuously updated data.

D. Password Protection
1. Provide security system that prevents unauthorized use unless operator is logged on. Access shall be limited to operator's assigned functions when user is logged on. This includes displays as outlined above.
2. Each operator's terminal shall provide security for a minimum of 200 users. Each user shall have an individual User ID, User Name, and Password. Entries are alphanumeric characters only and are case sensitive (except for User ID). User ID shall be capable of accepting 8 characters or more, User Name shall be 0–29 characters, and Passwords must accept a minimum of 4 characters and be capable of accepting 8 characters or more.
3. System shall include an Auto Logout Feature that shall automatically logout user when there has been no keyboard or mouse activity for a set period of time. Time period shall be adjustable by system administrator. Auto Logout may be enabled and disabled by system administrator. Operator terminal shall display message on screen that user is logged out after Auto Logout occurs.
4. The system shall permit the assignment of an effective date range, as well as an effective time of day, that the User IDs are permitted to authenticate.

E. Operator Activity Log
1. Operator Activity Log that tracks all operator changes and activities shall be included with system. System shall track what is changed in the system, who performed this change, date and time of system activity, and value of the change before and after operator activity. Operator shall be able to display all activity, sort the changes by user and also by operation. Operator shall be able to print the Operator Activity log display.
2. Log shall be gathered and archived to hard drive on operator's workstation as needed. Operator shall be able to export data for display and sorting in a spreadsheet.

F. Scheduling
1. Operator's workstation shall show all information in easy-to-read daily format including calendar of this month and next. All schedules shall show actual ON/OFF times for day based on scheduling priority. Priority for scheduling shall be events, holidays and daily, with events being the highest.
2. Holiday and special event schedules shall display data in calendar format. Operator shall be able to schedule holidays and special events directly from these calendars.
3. Operator shall be able to change all information for a given weekly or exception schedule if logged on with the appropriate security access.
4. Scheduling shall include optimum start based on outside air temperature, current heating/cooling setpoints, indoor temperature and history of previous starts. Each and every individual zone shall have optimum start time independently calculated based on all parameters listed. User shall input schedules to set time that occupied setpoint is to be attained. Optimum start feature shall calculate the startup time needed to match zone temperature to setpoint. User shall be able to set a limit for the maximum startup time allowed.

G. Alarm Indication and Handling.
1. Operator's workstation shall provide audible, visual, printed, email or test means of alarm indication. The alarm dialog box shall always become the top dialog box regardless of the application(s) currently running. Printout of alarms shall be sent to the assigned terminal and port. Alarm notification can be filtered based on the User ID's authorization level.
2. System shall provide log of alarm messages. Alarm log shall be archived to the hard disk of the system operator's terminal. Each entry shall include a description of the event-initiating object generating the alarm. Description shall be an alarm message of at least 256 characters in length. Entry shall include time and date of alarm occurrence, time and date of object state return to normal, time and date of alarm acknowledgment, and identification of operator acknowledging alarm.
3. Alarm messages shall be in user-definable text (English or other specified language) and shall be delivered either to the operator's terminal, client or through remote communication using email (Authenticated SMTP supported).

H. Trendlog Information
1. System server shall periodically gather historically recorded data stored in the building controllers and store the information in the system database. Stored records shall be appended with new sample data, allowing records to be accumulated. Systems that write over stored records shall not be allowed unless limited file size is specified. Samples may be viewed at the operator's workstation. Operator shall be able to view all trended records, both stored and archived. All trend log records shall be displayed in standard engineering units. Annual trend log data shall be archived by year for future analysis.
2. Software that is capable of graphing the trend logged object data shall be included. Software shall be capable of creating two-axis (X, Y) graphs that display up to 10 object types at the same time in different colors. Graphs shall show object values relative to time. Each trend log shall support a custom scale setting for the graph view that is to be stored continuously.

3. Operator shall be able to change trend log setup information. This includes the information to be logged as well as the interval at which it is to be logged. All input, output, and value object types in the system may be logged. All operations shall be password protected. Setup and viewing may be accessed directly from any and all graphics on which object is displayed.
4. System shall be capable of using Microsoft SQL as the system database.

I. Energy Log Information
1. System server shall be capable of periodically gathering energy log data stored in the field equipment and archive the information. Archive files shall be appended with new data, allowing data to be accumulated. Systems that write over archived data shall not be allowed unless limited file size is specified. Display all energy log information in standard engineering units.
2. All data shall be stored in database file format for direct use by third-party programs. Operation of system shall stay completely online during all graphing operations.
3. Operator shall be able to change the energy log setup information as well. This includes the meters to be logged, meter pulse value, and the type of energy units to be logged. All meters monitored by the system may be logged. System shall support using flow and temperature sensors for BTU monitoring.
4. System shall display archived data in tabular format form for both consumption and peak values. Data shall be shown in hourly, daily, weekly, monthly and yearly formats. In each format, the user shall be able to select a specific period of data to view.

J. Demand Limiting
1. System shall include demand limiting program that includes two types of load shedding. One type of load shedding shall shed/restore equipment in binary fashion based on energy usage when compared to shed and restore settings. The other type of shedding shall adjust operator selected control setpoints in an analog fashion based on energy usage when compared to shed and restore settings. Shedding may be implemented independently on each and every zone or piece of equipment connected to system.
2. Binary shedding shall include minimum of five (5) priority levels of equipment shedding. All loads in a given priority level shall be shed before any loads in a higher priority level are shed. Load shedding within a given priority level shall include two methods. In one, the loads shall be shed/restored in a “first off-first on” mode, and in the other the loads are just shed/restored in a “first off-last on” (linear) fashion.
3. Analog shed program shall generate a ramp that is independently used by each individual zone or individual control algorithm to raise the appropriate cooling setting and lower appropriate heating setting to reduce energy usage.
4. Status of each and every load shed program shall be capable of being displayed on every operator terminal connected to system. Status of each load assigned to an individual shed program shall be displayed along with English description of each load.

K. Tenant Activity
1. System shall include program that monitors after-hours overrides by tenants, logs that data, and generates a bill based on usage and rate charged for each tenant space. Tenant Activity program shall be able to assign multiple zones, from a list of every zone connected to system, to a particular tenant. Every zone is monitored for after-hour override usage and that data logged in server.

Operator may then generate a bill based on the usage for each tenant and the rate charged for any overtime use.

2. Configuration shall include entry of the following information for use in logging and billing:
   a. Tenant's contact name and address.
   b. One or multiple tenant zones that make up a total tenant space, including a separate billing rate for each separate zone.
   c. Minimum and maximum values an event duration and event limit.
   d. Property management information.
   e. Overall billing rate.
   f. Seasonal adjustments or surcharge to billing rate.
   g. Billing notification type such including, but not limited to printer, file and email.
   h. Billing form template.
   i. Logging shall include recording the following information for each and every tenant event.
   j. Zone description.
   k. Time the event begins.
   l. Total override time.
   m. Limits shall be applied to override time.
3. A tenant bill shall be generated for a specific period using all the entered configuration data and the logged data. User with appropriate security level shall be able to view and override billing information. User shall be able to select a billing period to view and be able to delete events from billing and edit a selected tenant activity event's override time.

L. Reports
1. System server shall be capable of periodically producing reports of trend logs, alarm history, tenant activities, device summary, energy logs, and override points. The frequency, content, and delivery are to be user adjustable.
2. All reports shall be capable of being delivered in multiple formats including text- and comma-separated value (CSV) files. The files can be printed, emailed, or saved to a folder, either on the server hard drive or on any network drive location.

M. Configuration/Setup
1. Provide means for operator to display and change system configuration. This shall include, but not be limited to, system time, day of the week, date of daylight savings set forward/set back, printer termination, port addresses, modem port and speed, etc. Items shall be modified using understandable terminology with simple mouse/cursor key movements.

N. Field Engineering Tools
1. Operator's workstation software shall include field engineering tools for programming all controllers supplied. All controllers shall be programmed using graphical tools that allow the user to connect function blocks on screen that provide sequencing of all control logic. Function blocks shall be represented by graphical displays that are easily identified and distinct from other types of blocks. User shall be able to select a graphical function block from menu and place on screen. Provide zoom in and zoom out capabilities. Function blocks shall be downloaded to controller without any reentry of data.

2. Programming tools shall include a real-time operation mode. Function blocks shall display real-time data and be animated to show status of data inputs and outputs when in real-time operation. Animation shall show change of status on logic devices and countdown of timer devices in graphical format.
3. System shall automatically notify the user when a device that is not in the database is added to the network.
4. System shall include backup/restore function that will back up entire system to selected medium and then restore system from that media. The system shall be capable of creating a backup for the purpose of instantiating a new client PC.
5. The system shall provide a means to scan, detect, interrogate, and edit third-party BACnet devices and BACnet objects within those devices.

O. Workstation Hardware
1. Workstation/server computer minimum requirements
a. Enterprise Server (supports heavy trending and/or alarm handling at very large sites using SQL Server)
b. 64-bit Windows 8.1 Enterprise, Windows Server 2012 Standard, 2012 R2 Standard, or better,
c. Browser/client requirements: Most current versions of the following: Internet Explorer, Firefox, Chrome, Safari (Mac OS X).

P. Software
1. At the conclusion of project, contractor shall provide to the Owner's Representative a portable memory device or DVD ROM that includes the complete software operation system and project graphics, setpoints, system parameters, etc. This backup shall allow the Owner to completely restore the system in the case of a computer malfunction.

2.03 WEB INTERFACE

A. General
1. BAS supplier shall provide Web-based access to the system as part of standard installation. User must be able to access all displays of real-time data that are part of the BAS using a standard Web browser. Web browser shall tie into the network through Owner-supplied Ethernet network connection. Web page host may be a separate device that resides on the BAS BACnet network, but is not the BAS server for the control system. BAS server may be a separate computer from the Web page host device. The Web page software shall not require a per-user licensing fee or annual fees. The Web page host must be able to support simultaneous users with the ability to expand the system to accommodate an unlimited number of users.

B. Browser Technology
1. No special vendor-supplied software shall be needed on computers running browser. All displays shall be viewable and the webpage host shall directly access real-time data from the BAS BACnet network. Data shall be displayed in real-time and update automatically without user interaction. User shall be able to change data on displays if logged in with the appropriate user name and password.

C. Communications

1. Web page host shall support Ethernet network connections. A network connection shall be used to gather real-time data from all the BACnet devices that form the BAS. This network shall communicate using BACnet, allowing the Web page host to gather data directly from units on the local LAN or from other projects connected over a WAN. This network shall also provide the connection to the BAS server for Web page generation.
2. An Ethernet connection shall provide the physical connection to the Internet or an IP-based WAN. It shall be the port that is used for the browser to receive Web pages and data from the Web page host. The Web page host shall act as a physical barrier between the BAS network and the WAN or Internet connection that allows the browser to receive Web pages and data. The two separate network connections provide for a physical barrier to prevent raw BACnet traffic being exposed on the IP network.
3. The Web page host shall provide for complete isolation of the IP and BACnet networks by not routing networking packets between the two networks.

D. Display of Data
1. Web page graphics shown on browser shall be replicas of the BAS displays. User shall need no additional training to understand information presented on Web pages when compared to what is shown on BAS displays. Web page displays shall include animation just as BAS displays. Fans shall turn, pilot lights shall blink, coils shall change colors, and so on.
2. Real-time data shall be shown on all browser Web pages. This data must be directly gathered using the BACnet network and automatically updated on browser Web page displays without any user action. Data on the browser shall automatically refresh as changes are detected without re-drawing the complete display.
3. It shall be possible for user from browser Web page to change data if the user is logged on with the appropriate password. Clicking on a button or typing in a new value shall change digital data. Using pull-down menus or typing in a new value shall change analog data.
4. Data displays shall be navigated using pushbuttons on the displays that are simply clicked on with the mouse to select a new display. Alternatively, the standard back and forward buttons of the browser can be used for display navigation.

E. Time Schedule Adjustment
1. Web access shall allow user to view and edit all schedules in the system. This includes three types of schedules: standard, holiday and event. Display of schedules shall show interaction of all schedules on a single display so user sees an overview of how all work together. User shall be able to edit schedules from this display.
2. Display of all three schedule types must show all ON times for standard, holiday and event schedules in different colors on a given day. In addition, OFF times for each must also be shown in additional colors. User shall be able to select from standard calendar what days are to be scheduled and same display shall show all points and zones affected. User shall be able to set time for one day and select all days of the week that shall be affected as a recurrence of that same schedule for that given day.
3. Schedule list shall show all schedules currently defined. This list shall include all standard, holiday and event schedules. In addition, user shall be able to select a list that shows all scheduled points and zones.

F. Logging of Information
1. User shall use standard browser technology to view all trendlogs in system. User shall be able to view logged data in tabular form or graphical format. User shall be able to adjust time interval of logged data viewed and shall be able to adjust Y axis of data viewed in graphical format. User shall also be able to download data through the Web interface to local computer. Data shall be in CSV format.

G. Alarm Handling
1. Web interface shall display alarms as they occur. User shall be able to acknowledge alarms using browser technology. In addition, user shall be able to view history of alarm occurrence over a user-selected time frame. In addition, those alarms may be filtered for viewing per user-selected options. A single selection shall display all alarms that have not been acknowledged.

H. Web Page Generation
1. Web pages shall be automatically generated from the BAS displays that reside on the BAS server. User shall access Web page host through the network and shall initiate a Web page generation utility that automatically takes the BAS displays and turns them into Web pages. The Web pages generated are automatically installed on the Web page host for access using any computer's standard browser. Any system that requires use of an HTML editor for generation of Web pages shall not be considered.

I. Password Security and Activity Log
1. Access through Web browser shall utilize the same hierarchical security scheme as BAS system. User shall be asked to log on once the browser makes connection to Web page host. Once the user logs in, any and all changes that are made shall be tracked by the BAS system. The user shall be able to change only those items he or she has authority to change. A user activity report shall show any and all activity of the users who have logged in to the system, regardless of whether those changes were made using a browser or through the BAS workstation.

J. BACnet Communication
1. Web server shall directly communicate to all devices on the BAS network using BACnet protocol. No intermediate devices shall be necessary for BACnet communication.

2.04 BUILDING NETWORK CONTROLLER

A. Building Network Controller
1. BACnet Conformance
a. Building Network Controller shall be approved by the BACnet Testing Laboratories as meeting the BACnet Building Controller requirements.

B. Building network controller modules shall provide normal 7-day scheduling, holiday scheduling and event scheduling.
1. Logging Capabilities
a. Logs shall be supported in the building network controller. Any object in the system (real or calculated) may be logged. Sample time interval shall be adjustable at the operator's workstation.

b. Logs may be viewed both on-site or off-site using WAN or remote communication.
c. Building network controller shall periodically upload trended data to networked operator's workstation for long-term archiving if desired.
d. Archived data stored in database format shall be available for use in third-party spreadsheet or database programs.

2. Alarm Generation
   a. Alarms may be generated within the system for any object change of value or state (either real or calculated). This includes things such as analog object value changes, binary object state changes, and various controller communication failures.
   b. Each alarm may be dialed out as noted elsewhere.
   c. Alarm log shall be provided for alarm viewing. Log may be viewed on-site at the operator's terminal or off-site using remote communications.
   d. Controller must be store alarms as BACnet event enrollment objects, with system destination and actions individually configurable.
3. Demand Limiting
   a. Demand limiting of energy shall be a built-in, user-configurable function. Each controller module shall support shedding of up to 200 loads using a minimum of two types of shed programs.
   b. Load shedding programs in building controller modules shall operate as coordinated with local utility.
4. Tenant Activity Logging
   a. Tenant activity logging shall be supported by building network controller module.

C. Ethernet – MS/TP Module
1. Ethernet – MS/TP Module shall support every function as listed under paragraph A, General Requirements, of this section and the following.
2. All communication with operator's workstation and all application controllers shall be through BACnet. Building controller Ethernet – MS/TP module shall incorporate as a minimum, the functions of a 2-way BACnet router. Controller shall route BACnet messages between the high-speed LAN (Ethernet 10/100MHz) and MS/TP LAN. Ethernet – MS/TP module shall also route messages from all other building controller modules onto the BACnet Ethernet network.
   a. MS/TP LAN must be software-configurable from 9.6 to 76.8Kbps.
   b. The RJ-45 Ethernet connection must accept either 10Base-T or 100Base-TX BACnet over twisted pair cable (UTP).

D. MS/TP Module
1. MS/TP module shall support every listed function in this specification and the following.
2. Building controller MS/TP module communications shall be though BACnet MS/TP LAN to all advanced application and application-specific controllers. MS/TP module shall also route messages to Ethernet – MS/TP module for communication over WAN.
   a. MS/TP LAN must be software configurable from 9.6 to 76.8Kbps.
   b. Configuration shall be through RS-232 connection.

E. Power Supply Module
1. Input for power shall accept between 17–30VAC, 47–65Hz.

2. Power supply module shall include rechargeable battery for orderly shutdown of controller modules including storage of all data in flash memory and for continuous operation of real-time clocks for minimum of 20 days.

F. Modbus Module
1. Modbus Module shall support every function as listed in this specification.
2. Building Controller Modbus module communications shall be via one of three types of ports: EIA-485, EIA-422 or RS-232 connection. Modbus module shall convert Modbus data into BACnet objects. Modbus module shall also route messages to Ethernet-MS/TP module for BACnet Ethernet communication over WAN.
   a. Modbus Module shall support ASCII or RTU Modbus communication at 9600 or 4800 baud.
   b. EIA-422 and EIA-232 connection shall support one connection of Modbus unit.
   c. EIA-485 connection shall support connection of up to 247 Modbus units.
   d. Configuration shall be via RS-232 connection.
3. BACnet Translation
   a. All Modbus data shall be translated into BACnet objects by the Modbus module. All configuration tools shall be supplied to assure data is translated as necessary to the correct format and value.
   b. Standard BACnet object types supported shall include as a minimum: Analog Value, Binary Value, Calendar, Device, File, Group, Notification Class, Program and Schedule object types. All proprietary object types, if used in the system, shall be thoroughly documented and provided as part of the submittal data. All necessary tools shall be supplied for working with proprietary information.

2.05 TRIDIUM NETWORK INTEGRATION

A. The Building Automation System (BAS) specified herein is an “integrated” system that utilizes a Tridium Niagara (N4) front end with BAS contractor’s native BACnet controllers. The BAS contractor shall furnish and install all Tridium Niagara (N4) based front end, hardware systems, and equipment to access and interface with a BACnet control system that utilizes unitary controllers to control all mechanical equipment, including all unitary equipment such as VAV boxes, fan-coils, etc., and all air handlers, boilers, chillers, and any other listed equipment.

B. The BAS contractor shall develop, test, and commission all Tridium Niagara (N4) and GUI (Graphic User Interface) software applications for the HVAC control system. Additionally, the BAS contractor shall configure and commission the Ethernet communication network for the HVAC system.

C. Only BAS contractors that are Factory Authorized to sell and install the Niagara (N4) hardware and software are authorized to bid. The Niagara (N4) Authorized Contractor will have a minimum of three factory trained programmers. The programmers will have completed the Niagara (N4) Certification Program and work as full time employees, not sub-contractors.

D. It is the owner's express goal to implement an open system that will allow products from various suppliers to be integrated into unified systems in order to provide flexibility for expansion, maintenance, and service of the system. The owner shall be the named license holder of all software associated with any and all incremental work on the project(s). All Niagara (N4) software licenses shall have the 'accept.station.in="*"; accept.station.out="*", accept.wb.in="*" and 'accept.wb.out="*" section of the software licenses. The intent is to insure that the installed Niagara (N4) products may be completely open for integrations. The Owner shall be free to direct the modifications of the any software license, regardless of supplier. In addition, the Owner shall receive ownership of all job specific software configurations documentation, data files, and application-level software developed for the project. This shall include all custom job specific software code and documentation for all configuration and programming that is generated for a given project and/or configured for use within Niagara (N4) Framework (Niagara (N4)) based controllers and/or servers and any related LAN/ WAN Intranet and Internet connected routers and devices. Any and all required Ids and passwords for access to any component or software program shall be provided to the Owner.

E. Furnish a distributed logic BACnet-based control system, compatible operator's workstation. The operator's workstation, all building controllers, application controllers, and all input/output devices shall communicate using the protocols and network standards as defined by ANSI/ASHRAE Standard 135-2012, BACnet. Provide all necessary BACnet-compliant hardware and software to meet the system's functional specifications. Provide Protocol Implementation Conformance Statement (PICS) for Windows-based control software and every controller in system, including unitary controllers.

F. The Web Server is a flexible network server for multiple connected Niagara controllers. The Web Supervisor is designed to harness the power of the Internet and provide efficient integration and aggregation of the information from multiple controllers. In effect, the Web Supervisor creates a single view of these multiple devices, while providing a powerful network environment with comprehensive database management, alarm management, and messaging services. In addition, the Web Supervisor provides the engineering environment used to set up and manage the systems and the graphical user interface. The software is designed to run on 64-bit Windows 8.1 Enterprise, Windows Server 2012 Standard, 2012 R2 Standard, or better. The browser interface utilizes HTML5. JAVA is not required for the system and graphics to operate. The workstation shall include the following minimal features:
   1. Processor: Intel Xeon CPU E5-2640 x64, or better, and is compatible with dual and quad core processors.
   2. RAM: 4 Gb of memory minimum.
   3. Hard disk: minimum 4 TB hard drive and additional space for archiving purposes.

G. Java Application Control Engine JACE (8000)
   1. The Tridium JACE Controllers shall provide the interface between the LAN or WAN and the field control devices, and provide global supervisory control functions over the control devices connected to the JACE. It shall be capable of executing application control programs to provide:
      a. Calendar functions
      b. Scheduling
      c. Trending

d. Alarm monitoring and routing
e. Time synchronization by means of an Atomic Clock Internet site including automatic synchronization
f. Integration of LonWorks controller data and BACnet controller data
g. Network Management functions for all LonWorks and BACnet based devices

2. The JACE (8000) must provide the following hardware features as a minimum:
   a. Two Ethernet Port -10/100 Mbps
   b. Two Isolated RS-485 and, if needed, RS -232 ports
   c. One LonWorks Interface Port - 78KB FTT-10A with Weidmuller connector.
   d. Two BACnet MS/TP interface Ports
   e. Power supply 120 VAC
   f. Battery Backup
   g. Real-time clock
   h. Processor: TI AM3352, 1GHz, or greater
   i. 1 GB Ram, or greater
   j. 4 GB flash memory.
   k. 2 GB user storage
   l. USB flash drive
   m. Wi-Fi (Client or WAP)
   n. Operating temperature: -20°C to 60°C
3. The JACE shall provide multiple user access to the system and support for ODBC or SQL. A database resident on the Tridium JACE shall be an ODBC compliant database or must provide an ODBC data access mechanism to read and write data stored within it.
4. The JACE shall support standard Web browser access via the Intranet/Internet. It shall support a minimum of 64 simultaneous users.
5. Event Alarm Notification and actions
   a. The JACE shall provide alarm recognition, storage; routing, management, and analysis to supplement distributed capabilities of equipment or application specific controllers.
   b. The JACE shall be able to route any alarm condition to any defined user location whether connected to a local network or remote via dial-up telephone connection, or wide-area network.
   c. Provide for the creation of a minimum of eight of alarm classes for the purpose of routing types and or classes of alarms, i.e.: security, HVAC, Fire, etc.
   d. Provide timed (schedule) routing of alarms by class, object, group, or node.
   e. Provide alarm generation from binary object "runtime" and log event counts for equipment maintenance. The user shall be able to reset runtime or event count values with appropriate password control.
   f. Control equipment and network failures shall be treated as alarms and annunciated.
   g. Graphic with flashing alarm object(s)
   h. The following shall be recorded by the Tridium JACE for each alarm (at a minimum):
   i. Time and date
   j. Location (building, floor, zone, office number, etc.)
   k. Equipment (air handler #, accessway, etc.)
   l. Acknowledge time, date, and user who issued acknowledgement.
   m. Number of occurrences since last acknowledgement.

n. Alarm actions may be initiated by user defined programmable objects created for that purpose.
o. Defined users shall be given proper access to acknowledge any alarm, or specific types or classes of alarms defined by the user.
p. A log of all alarms shall be maintained by the JACE and/or a server (if configured in the system) and shall be available for review by the user.
q. Provide a "query" feature to allow review of specific alarms by user defined parameters.
r. A separate log for system alerts (controller failures, network failures, etc.) shall be provided and available for review by the user.
s. An Error Log to record invalid property changes or commands shall be provided and available for review by the user.

6. Data Collection and Storage
   a. The JACE shall have the ability to collect data for any property of any object and store this data for future use.
   b. The data collection shall be performed by log objects, resident in the Tridium JACE that shall have, at a minimum, the following configurable properties:
      1) Designating the log as interval or deviation.
      2) For interval logs, the object shall be configured for time of day, day of week and the sample collection interval.
      3) For deviation logs, the object shall be configured for the deviation of a variable to a fixed value. This value, when reached, will initiate logging of the object.
      4) For all logs, provide the ability to set the maximum number of data stores for the log and to set whether the log will stop collecting when full, or rollover the data on a first-in, first-out basis.
      5) Each log shall have the ability to have its data cleared on a time-based event or by a user-defined event or action.
7. All log data shall be stored in a relational database in the Tridium JACE and the data shall be accessed from a server (if the system is so configured) or a standard Web Browser.
8. All log data, when accessed from a server, shall be capable of being manipulated using standard SOL statements.
9. All log data shall be available to the user in the following data formats:
   a. HTML
   b. XML
   c. Plain Text
   d. Comma or tab separated values
10. Systems that do not provide log data in HTML and XML formats at a minimum shall provide as an alternative Microsoft SOL Server, Oracle Si or Expressa, Hyperion Solutions™ SOL Server.
11. The Tridium JACE shall have the ability to archive it's log data either locally (to itself), or remotely to a server or other Tridium JACE on the network. Provide the ability to configure the following archiving properties, at a minimum:
    a. Archive on time of day
    b. Archive on user-defined number of data stores in the log (buffer size)
    c. Archive when log has reached its user-defined capacity of data stores
    d. Provide ability to clear logs once archived

12. Audit Log
    a. Provide and maintain an Audit Log that tracks all activities performed on the Tridium JACE. Provide the ability to specify a buffer size for the log and the ability to archive log based on time or when the log has reached the user-defined buffer size. Provide the ability to archive the log locally (to the Tridium JACE), to another Tridium JACE on the network, or to a server. For each log entry, provide the following data:
        1) Time and date
        2) User ID
        3) Change or activity: i.e., Change setpoint, add or delete objects, commands, etc.
13. Database Backup and Storage
    a. The Tridium JACE shall have the ability to automatically backup its database. The database shall be backed up based on a user defined time interval.
    b. Copies of the current database and, at the most recently saved database shall be stored in the Tridium JACE. An onboard micro SD card contains a real-time back up of the system software, database, graphics, license and ability to be relocated to a replacement controller in the event the original controller fails.
    c. The Tridium JACE database shall be stored, at a minimum, in XML format to allow for user viewing and editing, if desired. Other formats are acceptable as well, as long as XML format is supported.
14. A JACE with I/O boards shall not be used for the control of any equipment such as fan coil units, boilers, pumps, etc. A single Unitary or Programmable controller shall manage the control functions for a specific mechanical system.

H. Ethernet – MS/TP Module
1. Ethernet – MS/TP Module shall support every function as listed under paragraph A, General Requirements, of this section and the following.
2. All communication with operator's workstation and all application controllers shall be through BACnet. Building controller Ethernet – MS/TP module shall incorporate as a minimum, the functions of a 2-way BACnet router. Controller shall route BACnet messages between the high-speed LAN (Ethernet 10/100MHz) and MS/TP LAN. Ethernet – MS/TP module shall also route messages from all other building controller modules onto the BACnet Ethernet network.
    a. MS/TP LAN must be software-configurable from 9.6 to 76.8Kbps.
    b. The RJ-45 Ethernet connection must accept either 10Base-T or 100Base-TX BACnet over twisted pair cable (UTP).

I. MS/TP Module
1. MS/TP module shall support every listed function in this specification and the following.
2. Building controller MS/TP module communications shall be though BACnet MS/TP LAN to all advanced application and application-specific controllers. MS/TP module shall also route messages to Ethernet – MS/TP module for communication over WAN.
    a. MS/TP LAN must be software configurable from 9.6 to 76.8Kbps.
    b. Configuration shall be through RS-232 connection.

J. Wireless Module
1. Integrated IEEE 802.11 a/b/g/n

2. The wireless function comes from the factory disabled and can be turned on or off from a selector switch and can also be turned off through software. It should be turned off when wireless is not being used. Both Client mode and Access Point mode are supported, but cannot be run simultaneously. Broadcasting of the SSID can be turned off. For those using wireless please read the JACE 8000 WiFi document for proper configuration. It supports only WPA-PSK & WPA2-SPK security protocols. It has a single dual band antenna supporting 2.4 Ghz channels 1-11 & 5.8Ghz channels 36, 40, 44, 48, 149, 153, 157, 161, & 165.
3. Several wireless protocols can be used including: WiFi, Zigbee, Z Wave, Enocean, 3G, 4G LTE.

K. Power Supply:
1. Provide UPS for power supply-backup controller.

L. Modbus Module
1. Modbus Module shall support every function as listed in this specification
2. Building Controller Modbus module communications shall be via one of three types of ports: EIA-485, EIA-422 or RS-232 connection. Modbus module shall convert Modbus data into BACnet objects. Modbus module shall also route messages to Ethernet-MS/TP module for BACnet Ethernet communication over WAN.
   a. Modbus Module shall support ASCII or RTU Modbus communication at 9600 or 4800 baud.
   b. EIA-422 and EIA-232 connection shall support one connection of Modbus unit.
   c. EIA-485 connection shall support connection of up to 247 Modbus units.
   d. Configuration shall be via RS-232 connection.
3. BACnet Translation
   a. All Modbus data shall be translated into BACnet objects by the Modbus module. All configuration tools shall be supplied to assure data is translated as necessary to the correct format and value.
   b. Standard BACnet object types supported shall include as a minimum: Analog Value, Binary Value, Calendar, Device, File, Group, Notification Class, Program and Schedule object types. All proprietary object types, if used in the system, shall be thoroughly documented and provided as part of the submittal data. All necessary tools shall be supplied for working with proprietary information.

2.06 APPLICATION CONTROLLERS – GENERAL

A. All application controllers shall include universal inputs with 10-bit resolution that can accept 3K and 10K thermistors, 0–5VDC, 4–20mA, dry contact signals and a minimum of 3 pulse inputs. Any input on controller may be either analog or digital. Controller shall also include support and modifiable programming for interface to intelligent room sensor. Controller shall include binary outputs on board with analog outputs as needed.

B. All program sequences shall be stored on board controller in memory. No batteries shall be needed to retain logic program. All program sequences shall be executed by controller ten(10) times per second and shall be capable of multiple PID loops for control of multiple devices. Programming of application controller shall be completely modifiable in the field over installed BACnet LANs or remotely through modem interface. Operator shall program logic sequences by graphically moving function blocks on screen and tying blocks together on screen. Application controller shall be programmed using same programming tools as building controller and as described in operator workstation section. All programming tools shall be provided and installed as part of system.

C. Provide all application controllers with a minimum of 10% spare points for analog input, analog output, digital input and digital output signals.

2.07 APPLICATION CONTROLLERS –AIR HANDLER

A. Provide one or more native BACnet application controllers to adequately cover all objects listed in object list. All controllers shall interface to building controller through MS/TP LAN using BACnet protocol. No gateways shall be used. Controllers shall include input, output and self-contained logic program as needed for complete control of units. Controllers shall be fully programmable using graphical programming blocks. Programming tool shall be resident on operator workstation and be the same tool as used for the building controller. No auxiliary or non-BACnet controllers shall be used.

B. Programming of application controller shall be completely modifiable in the field over installed BACnet LANs or remotely using modem interface. Operator shall program logic sequences by graphically moving function blocks on screen and tying blocks together on screen. Application controller shall be programmed using programming tools as described in operator's terminal section.

C. Application controller shall include support for intelligent room sensor. Display on intelligent room sensor shall be programmable at application controller and include an operating mode and a field service mode. All button functions and display data shall be programmable to show specific controller data in each mode, based on which button is pressed on the sensor. See sequence of operation for specific display requirements at intelligent room sensor.

D. Schedules
   1. The controller shall support a minimum of three (3) BACnet Schedule Objects and have a real-time clock on board with battery backup to maintain time through a power loss.

E. Logging Capabilities
   1. Controller shall support a minimum of 50 trend logs. Any object in the controller (real or calculated) may be logged. Sample time interval shall be adjustable at the operator's workstation.
   2. Controller shall periodically upload trended data to system server for long-term archiving if desired. Archived data stored in (MS Jet Database or SQL) database form and shall be available for use in third-party spreadsheet or database programs.

F. Alarm Generation

1. Alarms may be generated within the controller for any object change of value or state (either real or calculated). This includes things such as analog object value changes, and binary object state changes.
2. Alarm log shall be provided for alarm viewing. Log may be viewed on-site at the operator's terminal or off-site using remote communications.
3. Controller must be able to handle up to 25 alarm setups stored as BACnet event enrollment objects, with system destination and actions individually configurable.

G. The packaging of the controller shall provide operable doors to cover the terminals once installation is complete. The housing of the controller shall provide for DIN rail mounting and also fully enclose circuit board.

2.08 APPLICATION CONTROLLER – UNITARY MECHANICAL EQUIPMENT

A. Provide one native BACnet application controller for each piece of unitary mechanical equipment that adequately covers all objects listed in object list for unit. All controllers shall interface to building controller through MS/TP LAN using BACnet protocol. No gateways shall be used. Controllers shall include input, output and self-contained logic program as needed for complete control of unit.

2.09 APPLICATION CONTROLLER – VAV BOX SINGLE DUCT

A. Provide one native BACnet application controller for each VAV box that adequately covers all objects listed in object list for unit. All controllers shall interface to building controller through MS/TP LAN using BACnet protocol. No gateways shall be used. Controllers shall include on board CFM flow sensor, inputs, outputs and programmable, self-contained logic program as needed for control of units.

B. On board flow sensor shall be microprocessor-driven and pre-calibrated at the factory. All factory calibration data shall be stored in non-volatile memory. Calibration data shall be field adjustable to compensate for variations in VAV box type and installation. All calibration parameters shall be adjustable through intelligent room sensor. Operator's workstation, portable computers, and special hand-held field tools shall not be needed for field calibration.

C. Provide duct temperature sensor at discharge of each VAV box that is connected to controller for reporting back to operator's workstation.

2.10 AUXILIARY CONTROL DEVICES

A. Temperature Sensors (TS)
1. Duct air temperature (duct mounted, indoor location)
a. Thermistor type with 1/4" stainless steel probe and junction box. 10K ohm, type II, or as required for controller interface. Two-wire, loop powered 4-20 mA. Probe length as required to extend 25% (minimum) to 50% (maximum) into the width of duct. Manufacturer: Veris #TF Series, Dwyer Instruments #TE-DFG Series, Kele (Minco) #TT Series, or equal.

2. Duct air temperature (duct mounted, outdoor location)
   a. Thermistor type with 1/4" stainless steel probe and weather-tight junction box. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA. Probe length as required to extend 25% (minimum) to 50% (maximum) into the width of duct. Manufacturer: Veris #TG Series, Dwyer Instruments #TE-DFW Series, Kele (Minco) #TT Series, or equal.
3. Outside air temperature (wall mounted location)
   a. Thermistor type with stainless steel or platinum probe and weather-proof aluminum junction box. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA. Probe encased in durable radiation shield with radiation solar shield. Manufacturer: Veris #TO Series, Dwyer Instruments #TE Series, or equal.
4. Pipe or tank fluid temperature (immersion probe)
   a. Immersion probe type temperature sensor encased in a corrosion-resistant stainless steel thermowell. Thermistor type with metallic housing. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA. Manufacturer: Veris #TIG Series, Dwyer Instruments #TE Series, or equal.
5. Temperature averaging (coil mounting)
   a. Thermistor type with bendable copper tubing element water-resistant junction box. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA. Probe length as required to extend across coil face at least twice to cover two corners and one midpoint. Mounting of tubing shall utilize Veris #AA64 mounting clips, or equal. Manufacturer: Veris #TA Series, Kele #ACI Series, or equal.

B. Intelligent Room Temperature Sensor (TS) with LCD Readout
1. Sensor shall contain a backlit LCD digital display and user function keys along with temperature sensor. Controller shall function as room control unit and allow occupant to raise and lower setpoint, and activate terminal unit for override use-all within limits as programmed by building operator. Sensor shall also allow service technician access to hidden functions as described in sequence of operation.
2. The intelligent room sensor shall simultaneously display room setpoint, room temperature, outside temperature, and fan status (if applicable) at each controller. This unit shall be programmable, allowing site developers the flexibility to configure the display to match their application. The site developer should be able to program the unit to display time-of-day, room humidity and outdoor humidity. Unit must have the capability to show temperatures in degrees Fahrenheit or Centigrade.
3. Override time may be set and viewed in half-hour increments. Override time countdown shall be automatic, but may be reset to zero by occupant from the sensor. Time remaining shall be displayed. Display shall show the word “OFF” in unoccupied mode unless a function button is pressed.
4. See sequence of operation for specific operation of LCD displays and function keys in field service mode and in normal occupant mode. Provide intelligent room sensors as specified in point list. Field service mode shall be customizable to fit different applications. If intelligent room sensor is connected to VAV controller, VAV box shall be balanced and all air flow parameters shall be viewed and set from the intelligent room sensor with no computer or other field service tool needed.

C. Humidity Sensors
   1. Indoor space humidity (wall mounted inside):
      a. 1% accuracy thin film capacitive replaceable sensor element, LED display. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA.
      b. Manufacturers: Veris #HW Series, Dwyer Instruments #RHP-W Series or equal.
   2. Outside air humidity (wall mounted outdoors):
      a. 2% accuracy thin film capacitive replaceable sensor element, with weatherproof housing. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA.
      b. Manufacturers: Veris #HO Series, Dwyer Instruments #RHP-W Series, or equal.
   3. Duct air humidity (duct mounted indoor application):
      a. Humidity sensor, 2% accuracy thin film capacitive replaceable sensor element, with die cast metal housing. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA.
      b. Manufacturers: Veris #HD Series, Dwyer Instruments #RHP-W Series, or equal.
   4. Indoor space humidity with temperature (wall mounted inside):
      a. Combination humidity and temperature sensor, 2% accuracy thin film capacitive replaceable sensor element, LED display, push button override and setpoint slider. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA.
      b. Manufacturers: Veris #HW Series, Dwyer Instruments #RHP-W Series, Vaisala #HMW Series, or equal.
   5. Outside air humidity with temperature (wall mounted outside):
      a. Combination humidity and temperature sensor, 2% accuracy thin film capacitive replaceable sensor element, with weatherproof housing. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA.
      b. Manufacturers: Veris #HO Series, Dwyer Instruments #RHP Series, Vaisala #HMS Series, or equal.
   6. Duct air humidity and temperature (duct mounted indoor application):
      a. Combination humidity and temperature sensor, 2% accuracy thin film capacitive replaceable sensor element, with die cast metal housing. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA.
      b. Manufacturers: Veris #HD Series, Dwyer Instruments #RHP Series, Vaisala, #HMT Series, or equal.
   7. Duct high limit humidity switch (duct mounted indoor application):
      a. Single-stage duct hygrostat with insertion probe to monitor humidity level with NO and NC contacts. Adjustable relative humidity setpoint range of 35 to 100% RH. SPDT 250 Vac/ 15 amp.
      b. Manufacturers: Honeywell #H6045A1002, or equal.

D. Dew Point Sensor (Wall Mounted Indoors):
   1. Dew point transmitter with non-dispersive dual beam infrared sensor in high impact ABS plastic enclosure. Measurement range from 0°F to 80°F (-18°C to 26°C) dew point with altitude correction. 24 VAC input with 0-10 VDC or 4 to 20 mA output as required by controller interface. Accuracy +/- 3.6°F (2°C).
   2. Manufacturers: GE (Telaire) #Vaporstat 9002 or equal.

E. Dew Point Sensor (Pipe Strap Mounted Indoors):
   1. Early-warning dew point switch to monitor chilled water pipes. Strap on mounting, status light, NO and NC alarm terminals, 24 VAC/0.3 VA.
   2. Manufacturers: Honeywell #HSS-DPS or equal.

F. CO2 Sensors
   1. Indoor space measurement (wall mounted):
      a. Non-dispersive infrared sensor in high impact white ABS plastic enclosure. Input power 20 to 30 VDC/24 AC, 100 mA. Analog output 4-20 mA. Operating range 32°F to 122°F (0°C to 50°C). Measurement range of 0-2000 ppm with accuracy of +/- 30 ppm.
      b. Manufacturers: Veris #CWE Series, Dwyer #CDT Series, or equal.
   2. Outdoor air measurement (indoor duct mounted location):
      a. Non-dispersive infrared sensor in high impact white ABS plastic enclosure. Input power 20 to 30 VDC/24 AC, 100 mA. Analog output 4-20 mA. Operating range 32°F to 122°F (0°C to 50°C). Measurement range of 0-2000 ppm with accuracy of +/- 30 ppm.
      b. Manufacturers: Veris #CDE Series, Dwyer #CDT Series, or equal.

G. CO2, Humidity, Temperature Combined Sensor (Indoor Wall and Duct Mounted)
   1. High impact white ABS plastic enclosure with digital LCD display and adjustable setpoints.
   2. Input power 20 to 30 VDC/24 AC, 100 mA.
   3. Analog output 4-20 mA.
   4. Operating range 32°F to 122°F (0°C to 50°C).
   5. CO2 Sensor: Non-dispersive infrared sensor in. Measurement range of 0-5000 ppm with accuracy of +/- 30 ppm.
   6. Humidity Sensor: Digitally profiled thin-film capacitive, plus or minus 2% RH. 2% accuracy thin film capacitive replaceable sensor element, with weatherproof housing. 10K ohm, Type 2, or as required for controller interface. Two-wire, loop powered 4-20 mA.
   7. Temperature Sensor: Thermistor. 2% accuracy thin film capacitive replaceable sensor element.
   8. Manufacturers: Veris #CWLP Series or equal.

H. Leak Detector
   1. Water leak detector connected to BAS to alarm on detecting the presence of water in the following locations:
      a. Secondary condensate drip pan below air conditioning air handling units and fan coils located above spaces with electrical and/or electronic equipment.
      b. Below raised access floors with one sensor per 5,000 square feet (maximum) where water pipes are located below access floor. Or, one sensor per 10,000 square feet (maximum) where no water pipes are located below access floor.
      c. On the floor adjacent to sump pump(s).
      d. On the floor of mechanical rooms adjacent to electrical equipment and/or data/electronics equipment rooms.
   2. Features:
      a. Mounting: Base mounted.
      b. Service: water of conductive fluids.
      c. Sensing gap: Minimum 1/8” (3 mm) to maximum 1/4” (6 mm).
      d. Switch type: DPDT relay.

e. External power: 1 A @ 24 VAC/DC.
f. Audible alarm: 85 dB @ 1’ distance (0.3 m).
g. Visual indicators:
h. Green to indicate power is supplied.
i. Red to indicate water is detected.
j. Temperature limits: 32 to 122°F (0 to 50°C).
k. Flammability: plenum rated electrical cable with length as required and UL-94 compliant housing.
l. Attached with 1/16” thick double sided adhesive urethane foam tape.

3. Manufacturers: Dwyer #WD3-LP-D2-A, Kele, Veris or equal.

I. Condensate Sensor (Pipe):
1. Solid state condensate detector for locating condensate on chilled water piping. Sensing of water shall provide a signal to the BAS system for control sequence adjustment to raise chilled water temperature.
2. Features:
a. Service: mounted on metallic pipe from 1/2” to 3” in diameter.
b. Sensing: 80% to 90% RH (adjustable) surface moisture.
c. Switch type: SPST open/close.
d. External power: 40 mA at 24 VAC or 20 mA at 12 to 30 VDC.
e. Temperature limits: 149°F (65°C).
f. Flammability: plenum rated electrical cable with length as required and UL-94 compliant housing.
g. Mounting bracket with stainless steel worm gear clamp for attachment.
3. Manufacturers: Consense #CG-ICM-P or equal.

J. Differential Pressure Transmitters:
1. Duct Static Pressure Transmitter:
a. Differential pressure transducer with selectable range, +/- 1% accuracy, with push button auto-zero, LCD display.
b. Manufacturers: Veris #PX Series, Dwyer Instruments #MS2, Kele #DPA Series, or equal.
2. Building Static Pressure Transmitter:
a. Differential pressure transducer with selectable range, +/- 1% accuracy, with push button auto-zero. Provide with AA05 ceiling mount static pressure pick up, LCD display.
b. Manufacturers: Veris #PX Series, Dwyer Instruments #MS2, Kele #DPA Series, or equal.
3. Water differential pressure transmitter:
a. Differential pressure transmitter, wet/wet, switch selectable pressure ranges, jumper selectable port swap, LCD display and NEMA 4 enclosure.
b. Manufacturers: Veris #PW Series, Dwyer Instruments #MS2, or equal.

K. Differential Pressure Switches:
1. Filter differential pressure switch for status:
a. Adjustable differential pressure switch, dual scale adjustable knob, silicone diaphragm, single-pole double-throw type, 1/4" tubing diameter, setting range from 0.08 in. w.c. (20 Pa) up to 20 in. w.c. (5000 Pa), and NEMA-3 enclosure.
b. Manufacturers: Dwyer #ADPS Series or equal.
2. Duct static manual reset high pressure safety switch for supply fan shut down:

a. Adjustable trip and manual reset, single-pole double-throw, 120-480 VAC. Maximum operating range of -30°F to 180°F (-34°C to 82.2°C) and humidity limit of 80% RH non-condensing. Provide weatherproof housing where mounted outdoors. Adjustable setpoint between 3.0 to 11.75 in. w.c.
b. Manufacturers: Dwyer #1900-10-MR Series or equal.

3. Duct static manual reset high pressure safety switch for return fan shut down:
   a. Adjustable trip and manual reset, single-pole double-throw, 120-480 VAC. Maximum operating range of -30°F to 180°F (-34°C to 82.2°C) and humidity limit of 80% RH non-condensing. Provide weatherproof housing where mounted outdoors. Adjustable setpoint between 1.40 to 5.5 in. w.c.
   b. Manufacturers: Dwyer #1900-5-MR Series or equal.

L. Air Filter Differential Pressure Gauges: (where not supplied by air handling equipment manufacturer):
1. Dial type, diaphragm-actuated with external zero adjustment and 3-7/8-inch diameter dial.
2. With two (2) static pressure tips, 2-way valves, tubing and mounting plate (and adjustable signal flag).
3. Range as recommended by filter manufacturer.
4. One gauge per filter bank for direct field verification independent of BAS monitoring.
5. Manufacturers: Dwyer 2000 Series Magnehelic or equal.

M. Current Sensors
1. Current sensing switch for constant speed fans and pumps to detect belt loss, coupling shear and mechanical failure:
   a. Current switch with split core, adjustable trip, pilot light, self-gripping split core housing and mounting bracket.
   b. Manufacturers: Veris #HX08 Series or equal.
2. Current sensing switch for VFD controlling multiple fans and pumps:
   a. VFD current switch split core, self-learning adjustable trip, pilot light, self-gripping split core housing and mounting bracket.
   b. Manufacturers: Veris #H614 or equal.
3. Current sensing switch with fixed trip point for monitoring constant speed direct-drive fans, recirculating pumps or other fixed loads:
   a. Current switch with split core, fixed trip, self-gripping split core housing and mounting bracket.
   b. Manufacturers: Veris #HX00 Series or equal.
4. Current sensing transmitter for load trending with proportional 4 to 20 mA output signal:
   a. Current sensing transmitter with self-gripping split core, preset slide switches, and removable mounting bracket.
   b. Manufacturers: Veris #H921 or equal.
5. Current sensing transmitter with relay for fan start/stop control and status monitoring of motors:
   a. Current sensing transmitter with integral relay, slide switches, self-gripping split core, and removable mounting bracket.
   b. Manufacturers: Veris #H931 or equal.

N. Flow Meters – Liquid:
   1. Single turbine insertion flow meter:
      a. 316 stainless steel, weather tight aluminum enclosure, and standard or copper installation kit including 1" full port bronze ball valve, close nipple, and branch outlet. Provide with D-100 totalizing display module with BACnet interface.
      b. Manufacturers: Onicon #F-1100 or #F-3000, Badger Meter #Impeller SDI Series or equal.
   2. Electromagnetic inline flow meter for high accuracy flow measurement of clean fluid in a closed loop:
      a. Accuracy: +/- 0.25% with bidirectional flow capability. Maintain minimum of three (3X) straight pipe diameters upstream and two (2X) pipe diameters downstream when installed greater than seven (7X) pipe diameters downstream of a pump.
      b. Electrodes: Two electrodes for flow measurement, one electrode for empty pipe detection, and one electrode for grounding as required by piping system. Constructed of Hastelloy C22, 316 stainless steel, gold, platinum or tantalum.
      c. Pipe spool: 316 stainless steel.
      d. Flanges: ANSI B16.5 carbon steel, 304 or 316 stainless steel.
      e. Housing: NEMA 4X weather tight aluminum enclosure, or carbon steel or stainless steel. Powder coated.
      f. Power: 120 VAC or 24 VDC.
      g. Connections: Four programmable digital outputs (minimum), one analog programmable and scalable output, and one digital input.
      h. Totalizing display: Backlit with minimum four rows of text with BACnet interface.
      i. Ambient operating temperature range: -4°F to 140°F (-20°C to 60°C).
      j. Fluid temperature to maximum of 212°F (100°C).
      k. Manufacturers: Badger Meter #ModMAG M2000, Onicon #FT-3000 or equal.
   3. Ultrasonic clamp-on flow meter (for metal piping installation only):
      a. Accuracy: +/- 1% with bidirectional flow capability. Maintain minimum of ten (10X) straight pipe diameters upstream and five (5X) pipe diameters downstream when installed greater than 24 pipe diameters downstream of a pump, header or valve.
      b. Transducers: Two ultrasonic transducers function as both transmitters and receivers. Volumetric flow measurement is made by measuring the difference time between two digitally synthesized contra propagating acoustic waves traveling between the two ultrasonic transducers positioned lineally, a known distance apart, on the outside of a closed pipe.
      c. Housing: NEMA 4 or 4X weather tight aluminum enclosure.
      d. Transducer housing: PVC, CPVC, PTFE or PBT glass filled as required by fluid operating temperature.
      e. Power: 120 VAC or 24 VDC.
      f. Connections: Two programmable digital outputs (minimum), one digital input, and one 4-20 mA output.
      g. Totalizing display: Backlit with minimum four rows of text with BACnet interface.
      h. Ambient operating temperature range: -4°F to 140°F (-20°C to 60°C).
      i. Fluid temperature to maximum of 212°F (100°C).

j. Flow meter may also be used with energy meter.
k. Manufacturers: Badger #Dynasonics TFX-5000, Siemens #Sitrans FS230 or equal.

O. Flow Meters - Natural Gas:
1. Thermal mass flow meter, in-line or flanged. Provide with totalizing display module with BACnet interface.
2. Manufacturers: Onicon #F-5100 Series, Badger Meter #VN-2000 or equal.

P. Flow Meters – Steam:
1. Insertion type Vortex flow meter.
2. Accuracy: +/- 1%. Maintain minimum of ten (10X) straight pipe diameters upstream and five (5X) pipe diameters downstream when installed greater than 30 pipe diameters downstream of a header or valve.
3. Sensor: Stainless steel with dual piezo vortex sensors.
4. Display: 2x16 character minimum.
5. Power: 24 VDC.
6. Connections: One digital output and one 4-20 mA output.
7. Ambient operating temperature range: 32°F to 140°F (0°C to 60°C).
8. Steam temperature to maximum of 400°F (204°C).
9. Flow meter may also be used with energy meter.
10. Manufacturers: Badger #Vortex VN2000 or equal.

Q. BTU Meters:
1. BTU meter with BACnet interface with matched temperature sensors and thermo-wells, NEMA 4X wall mount enclosure, 316 stainless steel, weather tight aluminum enclosure, and standard or copper installation kit including 1” full port bronze ball valve, close nipple, and branch outlet.
2. Manufacturers: Onicon #System-10-BAC and provide with Onicon #F-1100 single turbine insertion flow meter, or Onicon #F-3500 electromagnetic flow meter, or equal by E-Mon D-Mon or Badger.

R. Airflow Measuring Arrays
1. Provide one thermal dispersion airflow/temperature measurement device (ATMD) at each location indicated on the plans, schedules and/or control schematics.
2. Each ATMD shall consist of one to four sensor probes and a single, remote transmitter. Each sensor probe shall consist of one to eight independent sensor nodes in a gold anodized, aluminum 6063 alloy tube with 304 stainless steel mounting brackets.
3. Each sensor node shall consist of two hermetically sealed bead-in-glass thermistors. Chip thermistors of any type or packaging are not acceptable.
4. The velocity-weighted average temperature output performance of the ATMD is preferred to that of the specified temperature measuring device (TMD), when the location of the ATMD and TMD are effectively the same.
5. Outside Air Measurement:
a. Provide a minimum outside airflow measuring station in a straight duct section upstream from the minimum outside air dampers and interfacing control for providing an electronic signal for use by the control contractor in controlling a minimum outside airflow. On outdoor mounted air handling units, outside airflow measurement station is to be factory mounted on the intake side of the outside air intake (upstream of the damper).

6. Sensor Performance:
   a. Fan Installation:
      1) Installed airflow accuracy: +/- 3% to 10% of reading with +/- 0.25% repeatability.
      2) Sensor probe performance: +/- 2% of reading, 0-5000 fpm, +/- 0.15□F temperature accuracy.
   b. Outside Air/duct Installation:
      1) Installed airflow accuracy: +/- 2% of reading with +/- 0.25% repeatability.
      2) Sensor probe performance: +/- 2% of reading, 0-5000 fpm, +/- 0.15□F temperature accuracy.
7. Transmitter:
   a. Flow measuring array to include a transmitter for flow and temperature analog output signal for the building energy management system to be user selectable in either 4-20 mA or 0-10VDC. Coordinate signal output with controls installer.
   b. Transmitter to include an analog airflow gauge to provide direct analog readout in cfm. Mount on the outside of the air handler if air handler is located in a mechanical room. Mount in a NEMA 3R control cabinet if located outside.
   c. Device to provide switch selectable Modbus or Johnson N2 outputs.
   d. Device to be UL listed.
   e. The transmitter shall be powered by 24 VAC, shall include over-voltage and over-current protection, and shall include watchdog circuitry to ensure continuous operation following power failures and/or brown- outs.
   f. The transmitter shall determine the airflow rate and temperature of each sensing node prior to averaging.
   g. The transmitter shall include self-diagnostics and other features to ensure reliability and continued operation despite a limited failure. The transmitter shall automatically detect sensor damage and correctly calculate the average using the remaining functional sensor nodes, while reporting a system fault over the network and by local visual indication.
   h. All integrated circuits shall be industrial rated for operation down to -40°F (-40°C).
   i. The environmental operating temperature limits for the transmitter shall be -20°F to 120°F (-29°C to 49°C).
   j. The system shall be factory tested prior to shipment and not require calibration or adjustment over the life of the equipment when installed in accordance to manufacturer's guidelines.
   k. The Sensors shall be calibrated to NIST traceable standards.
8. Manufacturers: Ebtron, Paragon Controls, Dynasonics, or equal.

S. LED Pilot Lights
1. Provide wall mounted pilot lights to indicate when operable windows may be opened or closed based on outdoor weather conditions as determined by BAS. Mount adjacent to main access door serving space with operable windows or adjacent to light switch, as shown on Architectural or Mechanical drawings. Coordinate final placement of pilot lights and color of cover plate with Owner's Representative.
2. Polycarbonate or steel wall box.
3. Wall plate color to match wall color. Color options shall include: ivory, white, black or stainless steel.

4. Continuous color indication. LED lights, 20-25 mm diameter. One green light located above one red light.
5. Voltage as selected by BAS installer, 12-volt or 24-volt, 20 mA, maximum.
6. Manufacturers: Signaworks #WP22 Series or equal.

T. Flow Switch
1. Paddle type vane flow switch for insertion into pipe sizes 1” to 8”. Forged brass body, stainless steel vane, and tin-bronze bellows. Maximum operating temperature to 230°F (110°C) and maximum operating pressure to 145 psig (10 bar). NEMA 4 enclosure, SPDT snap switch, 250 VAC (max). Connection using 1” male NPT or BSPT. Switch must be installed vertically on a horizontal pipe run.
2. Manufacturers: Dwyer #FS-2, or equal.

2.11 ACTUATORS

A. Electronic Actuators:
1. Size for torque required for damper seal at load conditions.
2. Coupling: V-bolt dual nut clamp with a V-shaped, toothed cradle.
3. Mounting: Actuators shall be capable of being mechanically and electrically paralleled to increase torque if required.
4. Overload protected electronically throughout rotation.
5. Fail-Safe Operation: Mechanical, spring-return mechanism
6. Electronic Fail-Safe Operation: Incorporate a visual indication of the fail safe status on the face of the actuator. The power fail position shall be field adjustable between 0 to 100% in 10% increments. The electronic fail safe shall have a 2-10 second adjustable operational delay.
7. Power Requirements (Spring Return): 24-V ac, maximum 10 VA at 24-V ac or 8 W at 24-V dc (running). Maximum 1 VA at 24-V ac or 1 W at 24-V dc (holding).
8. Proportional Actuators shall be fully programmable through an onboard EEPROM by using an external cable and software interface.
9. Temperature Rating: -22 to +122ºF.
10. Housing: Minimum requirement NEMA type 2 mounted in any orientation. .
11. Agency Listings: ISO 9001, cULus, CE or CSA
12. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional.
13. Manufacturers: Belimo, Siemens, Honeywell, Keystone #777, or equal.

B. Actuators with torque requirements exceeding 360 inch-pounds:
1. The combination of valve and actuator shall meet the close-off requirements as specified in Section 2.16.H – Butterfly Valves.
2. Coupling: ISO 5211 mounting standards.
3. Overload Protection: A self-resetting thermal switch embedded in the motor.
4. Manual Override: Actuator shall be equipped with a hand wheel or shaft for manual override to permit operation of the actuator in the event of an electrical power failure
5. Power Requirements: 24VAC, 120VAC, or 230VAC single phase.
6. Auxiliary Switches: 2 SPDT rated 3A at 250 VAC.
7. Temperature Rating: -22 to +122ºF.
8. Duty Cycle Rated 75% minimum.
9. Housing: Minimum requirement NEMA type 4X/ IP67 with an industrial quality coating. Actuator shall have an internal heater to prevent condensation within

the housing. A visual indication beacon shall indicate position status of the device.

10. Agency Listing: ISO, CE, CSA
11. The manufacturer shall warrant for 2 years from the date of production.
12. Manufacturers: Belimo, Siemens, Honeywell, or equal.

2.12 CONTROL VALVES

A. Manufacturer: Belimo, Siemens, Honeywell, or equal.

B. The manufacturer shall warrant all components for a period of 5 years from the date of production, with the first two years unconditional (except as noted).

C. Control Valve Actuators:
1. Size for valve close off at 150 percent of total system (head) pressure for two-way valves; and 100 percent of pressure differential across the valve or 100 percent of total system (pump) head differential pressure for three-way valves.
2. Coupling: directly couple and mount to valve stem, shaft ISO-style direct-coupled mounting pad.
3. Non-spring return actuators shall have manual override
4. Spring return actuators of 90 inch-pounds or above shall have manual override.

D. Control Valves:
1. Factory fabricated of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.
2. Sizing (Water):
   a. Two-Position: Line size or size using a pressure differential of 1 psi.
   b. Two-Way Modulating: Size for a pressure differential across the valve of 4 psi at design flow, or twice the load pressure drop at design flow.
   c. Three-Way Modulating: Size for a pressure differential across the valve of not more than 4 psi at design flow
3. Sizing (Steam):
   a. Two-Position: Line size or sized using 10% of inlet gauge pressure.
   b. Modulating: 15 psig or less inlet steam pressure, the pressure drop shall be 80% of inlet gauge pressure. Higher than 15 psig inlet steam pressure the pressure drop shall be 42% of the inlet absolute pressure.
4. Close-Off Pressure Rating: Combination of actuator and trim shall provide minimum close-off pressure rating of 150 percent of total system head pressure for two-way valves and 150 percent of the design pressure differential across the three-way valves.
5. The control valve assembly shall be provided and delivered from a single manufacturer as a complete assembly.

E. Pressure Independent Control Valves:
1. NPS 2 and Smaller: Forged brass body rated at no less than 400 PSI, chrome plated brass ball and stem, female NPT ends, dual EPDM lubricated O-rings and a brass or TEFZEL characterizing disc for equal percentage characteristic.
2. NPS 2-1/2 through 6: GG25 cast iron body according to ANSI Class 125, standard class B, stainless steel ball and blowout proof stem, flange to match ANSI 125 with a dual EPDM O-ring packing design, PTFE seats, and a stainless steel flow characterizing disc.

3. The control valve assembly shall have an integral magnetic flow meter Magnetic flow meter to accurately control the flow from 0 to 100% full rated flow with an operating pressure differential range of 5 to 50 PSID across the valve with a valve body accuracy of +/- 5% variance due to differential pressure fluctuation or +/- 10% total assembly error incorporating differential pressure fluctuation, manufacturing tolerances and valve hysteresis.
4. Flow Characteristics: NPS 1/2" through 2" Equal percentage characteristic. NPS 2-1/2" through 6" capable of Equal percentage or Linear characteristic (field programmable).
5. All proportional actuators shall be capable of being electronically programmed in the field by use of external computer software or a dedicated handheld tool for the adjustment of flow. Programming using actuator mounted switches or multi-turn actuators are not acceptable.
6. Actuators for 3-wire floating (tri-state) and on 2 position (on/off) on 1/2" to 1" pressure independent control valves shall fail in place.
7. Water Coil optimization 2-1/2" through 6" shall be accomplished by utilizing an energy meter (a pressure independent control valve assembly) with two integral temperature sensors providing feedback of coil inlet and coil outlet water temperature; and integral magnetic flow meter for control and to provide actual analog flow feedback. Valve assembly to have built in intelligence to control pressure independently and a Delta T Manager mode to mitigate low delta T syndrome by referencing an internally programmed design delta T setpoint. Valve assembly shall be capable of communicating data by means of BACnet MS/TP, BACnet I/P and TCP IP. Data to include, but not be limited to, inlet and outlet coil water temperatures, valve position, absolute flow, absolute valve position, absolute power and heating/cooling energy in BTU/hr. Valve assembly shall be capable of trending and storing up to 13 months of data on the actuator. Trended data on actuator to be retrievable via TCP IP or direct connect and download to *.csv file format.
8. The manufacturer shall provide a published commissioning procedure following the guidelines of the National Environmental Balancing Bureau (NEBB) or Associated Air Balance Council (AABC).
9. The control valve shall require no maintenance and shall not include replaceable cartridges.
10. NPS 2" and smaller pressure independent control valves for individual coil control shall be provided as part of a pipe package supplied by the valve manufacturer. The supply side of the coil shall contain an integrated isolation ball valve/manual air vent with strainer/shut-off valve/drain with pressure/temperature test ports. The return side shall contain a union fitting with a pressure/temperature test port, pressure independent control valve, and integrated isolation ball valve/manual air vent with a pressure/temperature test port. Shut-off valves as an integrated part of the pressure independent control valve are prohibited. A braided stainless flexible hose shall be provided for each coil supply and return connection for all pipe packages.

F. Characterized Control Valves:
1. NPS 1/2" and smaller for Terminal Units: Nickel plated forged brass body rated at no less than 600 psi WOG Water oil gas, chrome plated brass Stainless steel stem is an option ball and blowout proof stem, female NPT end fittings, with a dual EPDM O-Ring packing design, fiberglass reinforced Teflon seats, and a TEFZEL flow characterizing disc.

2. NPS 1” through 2”: Nickel-plated forged brass body rated at no less than 400 psi, stainless steel ball and blowout proof stem, female NPT end fittings, with a dual EPDM O-ring packing design, fiberglass reinforced Teflon seats, and a TEFZEL flow characterizing disc.
3. NPS 2-1/2” through 6”: GG25 cast iron body according to ANSI Class 125, standard class B, stainless steel ball, stainless steel blowout proof stem, flange to match ANSI 125 with a dual EPDM O-ring package design, PTFE seats, and a stainless steel flow characterizing disc.
4. Flow Characteristics: Equal percentage characteristics.
5. Six-way control valve used for chilled beam applications shall have the following characteristics:
    a. NPS 1/2” and 3/4”: Nickel plated forged brass body rated at no less than 600 psi, dual chrome plated brass ball and blowout proof stems, and female NPT end fittings. Each three-way portion of the 6-way valve body shall have EPDM O-Ring packing design, fiberglass reinforced Teflon seats, and a TEFZEL flow characterizing disc.
    b. The six-way control valve shall be controlled by a rotary actuator for managing two media in a modulating application. The valve shall be closed to all flow at mid-rotation.

G. Butterfly Valves – Resilient Seat:
1. NPS 2 to 12: Valve body shall be full lugged cast iron to meet ANSI 150 or 300 standards, with a 304/316/416 stainless steel disc, EPDM seat, extended neck and shall meet ANSI Class 125/150 flange standards. The shaft shall be supported at four locations by reinforced PTFE bushings.
2. NPS 14 and Larger: Valve body shall be full lugged cast or ductile iron to meet ANSI 150 or 300 standards, with a 304/316/416 stainless steel disc, EPDM seat, extended neck and shall meet ANSI Class 125/150 flange standards. Disc-to-stem connection shall utilize a dual-pin method to prevent the disc from settling onto the liner. The shaft shall be supported at four locations by reinforced PTFE bushings.
3. Sizing:
    a. Two-Position: Line size or size using a pressure differential of 1 psi.
    b. Modulating: 4 psig or twice the load pressure drop, whichever is more. Size for the design flow with the disc in a 60-degree-open-position and a design velocity not to exceed 12 feet per second.
4. Close-Off Pressure Rating: NPS 2-12” 200 psi bubble tight shut-off. NPS 14 and larger, 150 psi bubble tight shut-off.

H. Butterfly Valves – High Performance:
1. Valve body shall be full lugged carbon steel body to meet ANSI Class 150 or 300 standards, as required, with a 316/416 stainless steel disc without a nylon coating, reinforced PTFE seat, and meet ANSI Class 150/300 flange standards. Blowout-proof shaft shall be 17-4ph stainless steel and shall be supported at four locations by glass-backed PTFE bushings. Valve packing shall be PTFE and shall include fully adjustable packing flange and separable packing gland. Valve body shall have long stem design to allow for 2” insulation (minimum). Valve face-to-face dimensions shall comply with API 609 and MSS-SP-68. Valve assembly shall be completely assembled and tested, ready for installation.
2. Sizing:
    a. Two-Position: Line size or size using a pressure differential of 1 psi.

b. Modulating: 4 psig, or twice the load pressure drop, whichever is more. Size for the design flow with the disc in a 60-degree-open-position with the design velocity less than 32 feet per second.

3. Flow Characteristics: Modified equal percentage, unidirectional.
4. Close-Off Pressure Rating: 150 psi bubble tight shut-off.
5. Media Temperature Range: ANSI Class 150 limitations.
6. Max Differential Pressure: 285 psi @ 100°F for ANSI 150 (725 psi @ 100°F for ANSI 300).

I. Equipment Isolation Valves:

1. Slow Closing/Quick Opening Solenoid Valve (2-Way/2-Position), 1/2” to 2-1/2”:
   a. Class 125, brass body, stainless steel core, snubber slows disc closing to protect system against water hammer, minimum operating pressure differential 5 psi, 120 VAC input, normally closed (closed when deenergized). Lead-free construction and UL/NSF compliant. Valve shall full stroke close in 4 to 10 seconds and open immediately when energized. Manufacturers: Asco Redhat #8221 or equal.
2. Butterfly Valves, 2-1/2” and larger:
   a. Valve body shall be full lugged cast iron body and shall meet ANSI Class 125/150 flange standards. Disk shall be aluminum bronze or 304/316/416 stainless steel with EPDM seat and extended neck as required to accommodate insulation. The shaft shall be supported at four locations by reinforced PTFE bushings.
   b. Valve actuator with integrated linkage for 90° degree rotation and visual position indicator. Power supply with input voltage from 24 to 240 VAC. Power consumption in operation 20 watts and resting power consumption of 6 watts maximum. Adjustable running time of 30 to 120 seconds for full stroke. Ambient humidity to 95% RH non-condensing and operating temperature from -22°F to 122°F (-30°C to 50°C). Die cast aluminum Type 4X enclosure. Open/close or floating point operation as required by system operation. Manufacturer: Belimo #PR Series or equal.

2.13 ENERGY VALVE

A. NPS 1/2” through 2”:

1. 2-way characterized control valve with tight close-off. Nickel-plated forged brass body rated at no less than 360 psi, stainless steel ball and blowout proof stem, female NPT end fittings, with a dual EPDM O-ring packing design, fiberglass reinforced Teflon seats, and flow characterizing disc.
2. Non-spring return or electronic fail-safe actuator with analog input and output
3. Ultrasonic flow meter with temperature and glycol compensation.
4. Supply and return temperature sensors with thermowells and pipe fittings.

B. NPS 2-1/2” through 6”:

1. 2-way characterized control valve with tight close-off. GG25 cast iron body according to ANSI Class 125 or Class 250 per system pressure class, standard class B, stainless steel ball, stainless steel blowout proof stem, flange to match ANSI 125/250 with a dual EPDM O-ring package design, PTFE seats, and a stainless steel flow characterizing disc.
2. Non-spring return or electronic fail-safe actuator with analog input and output
3. Magnetic flow sensor.
4. Supply temperature sensor with thermowell.
5. Return temperature sensor embedded.

C. Manufacturer: Belimo.

2.14 DOMESTIC WATER SECURITY VALVES

A. Scope: connect to BAS for automatic opening and closing of domestic cold water supply to building.

B. Control Valve Actuator:
1. High torque actuator, fast opening and closing to control incoming domestic cold water service.
2. NEMA 6P waterproof enclosure.
3. UL listed.
4. Power supply input:100–240 volts, 60 Hz, 1 amp maximum. Output 18 volts, 2.22 amps.
5. BAS feedback signals for valve open or closed.
6. 12 VDC trigger contact to open valve.

C. Control Valve:
1. 316 stainless steel, 3-piece construction for body, ball and stem.
2. Equipped with a manual handle for emergency override.
3. Pressure rated to 600 psi, minimum.
4. Full port ball valve.
5. Threaded for sizes 1/2” to 2”.

D. Low lead and certified for potable water use per UPC and NSF/ANSI 61.

E. Manufacturer: Automatic Security Valves, or equal.

2.15 WIRELESS SYSTEM

A. Architecture and Communications:
1. Wireless equipment controllers and control devices shall conform to IEEE 802.15.4 standard for low-power, low duty-cycle RF transmitting systems. Equipment shall also comply with the following standards:
   a. UL 916: Energy Management Equipment
   b. UL 94: The Standard for Flammability of Plastic Materials for Parts in Devices and Appliances: 5 VA flammability rating
   c. UL 873: Temperature regulating and indicating equipment
   d. ZigBee Building Automation
   e. BACnet Tunneling
2. Communication between equipment controllers shall conform to ZigBee Building Automation (ZBA) standard as BACnet tunneling devices to ensure future integration of other ZBA certified devices.
3. Operating range shall be a minimum of 200 feet; open range shall be 2,500 ft. (762 m) with less than 2% packet error rate to ensure reliable operation.
4. To maintain robust communication, mesh networking and two-way communications shall be used to optimize the wireless network health.
5. Wireless communication shall be capable of many-to-one sensors per controller to support averaging, monitoring, and multiple zone applications.
6. Certifications shall include FCC CFR47 - RADIO FREQUENCY DEVICES - Section 15.247 & Subpart E.
7. The system devices shall use direct sequence spread spectrum RF technology.
8. The system devices shall operate on the 2.4 GHZ ISM Band.

9. The system devices shall be FCC compliant to CFR Part 15 subpart B Class A.

B. Service Tools:
   1. To support network setup and troubleshooting, service tools shall display link quality and hop quantities for each wireless device.
   2. Wireless service tool access to communication link shall be provided to minimize installation and troubleshooting labor.

C. Construction:
   1. Devices such as sensors, receivers and signal coordinators, intended to be installed in a return air plenum, shall be assembled in a plenum rated plastic housing with flammability rated to UL94-5VB. Wall mounted devices may be assembled in NEMA-1 plastic enclosures.

D. Wireless Field Bus System:
   1. The system shall employ ZigBee technology to create a wireless mesh network to provide wireless connectivity for BACnet devices at multiple system levels. This includes communications from field controllers to sensors and from sensors to field controllers. Wireless devices shall co-exist on the same network with hardwired devices. Hardwired controllers shall be capable of retrofit to wireless devices with no special software.
   2. The field bus coordinator shall provide a wireless interface between supported field controllers and an NAE35/45/55 or NCE25 supervisory controller via the BACnet MS/TP field bus. Each wireless mesh network shall be provided with a coordinator for initiation and formation of the network
      a. The coordinator shall operate as a bidirectional transceiver with the sensors and routers to confirm and synchronize data transmission.
      b. The coordinator shall be capable of communication with sensors and routers up to a maximum distance of 250 Feet (line of sight).
      c. The coordinator shall have LED indicators to provide diagnostic information required for efficient operation and commissioning.
   3. A wireless field bus router shall be used with any controller and field device to provide a wireless interface to supervisory devices and associated wireless mesh room temperature sensors.
      a. The router shall operate as a bidirectional transceiver with other mesh network devices to ensure network integrity.
      b. The router shall be capable of communication with other mesh network devices at a maximum distance of 250 feet (line of sight).
      c. The router shall provide LED indication for use in commissioning and troubleshooting that can be disabled.

E. Wireless Room Temperature Sensors:
   1. Wireless space sensors shall be capable of continuous operation in the following conditions:
      a. Ambient operating temperature range shall be 32°F to 122°F (0 to 50°C).
      b. Ambient operating and storage humidity range shall be 5 to 95%, non-condensing.
   2. Wireless room temperature sensors shall sense and transmit room temperatures, room set point, room occupancy notification low battery condition to an associated router.
      a. The sensors shall be available with:
         1) Warmer/cooler setpoint adjustment or no setpoint adjustment.

2) Setpoint adjustment scale: 55°F to 85º F (minimum range).

b. Wireless sensors shall be provided with display of room temperature, signal strength, fan mode, occupancy and network status as required by application and indicated on plans or in the schedules.

3. Features:
   a. The wireless space sensor battery life shall provide at least 15 years life under normal operating conditions and must be readily available size AA, 1.5V.
   b. To check for proper operation, wireless space temperature sensors shall include signal strength on the space sensor display.
   c. To support use by the physically impaired, the wireless space sensor shall be a minimum font size of 12 points, and the LCD model shall be readable in low light conditions.
   d. An optional 2% relative humidity sensors module shall be available for humidity control applications to minimize the need for wired sensors, and shall not shorten typical battery life to less than 15 years.
   e. Wireless space sensors shall be available as: temperature only, field configurable model with digital display, and optional 2% humidity module for use in either model above. The field configurable models shall all allow field configuration without a field service tool. Configuration options include: setpoint, override pushbuttons, fan speed, and system mode switches. System mode, fan speed and setpoint shall include a lock option. The digital display shall also be field configurable to display in Fahrenheit or Celsius units of measure, and can also be configured to display setpoint only.
   f. The wireless space sensor addresses shall be held in non-volatile memory to ensure operation through system voltage disturbances and to minimize the risk of incorrect association.
   g. The wireless space sensor shall be addressed using pushbuttons and display with numerical indication to simplify and reduce installation time and minimize risk of incorrect addressing.
   h. The wireless space sensor shall include security screws to protect against theft.
4. Accuracy:
   a. To ensure proper system performance, the wireless space sensors shall automatically determine when the space temperature is rapidly changing. When the space temperature is rapidly changing, the space temperature shall be transmitted at least once each 30 seconds. The maximum time between transmissions shall be 15 minutes. Space temperature sensing accuracy shall be +/- 0.5°F (+/- 0.28°C).

F. Wireless Communications Interface:
1. Wireless communication devices and receivers shall be capable of continuous operation in the following conditions:
   a. Ambient operating temperature range shall be 32°F to 122°F (0 to 50°C).
   b. Ambient operating and storage humidity range shall be 5 to 95%, non-condensing.
2. Features:
   a. Wireless communications interface shall be addressed using rotary switches with numerical indication to simplify and reduce installation time and minimize risk of incorrect addressing.

G. Many-To-One Wireless Receiver:
1. The Many-To-One System Receiver shall receive wireless Radio Frequency (RF) signals containing temperature data from multiple wireless room temperature sensors.
2. The receiver shall operate as a bidirectional transceiver with the sensors to confirm and synchronize data transmission.
3. The receiver shall be capable of communication with sensors up to a distance of 200 Feet.
4. The receiver shall be assembled in a plenum rated plastic housing with flammability rated to UL94-5VB.
5. The receiver shall have LED indicators to provide information regarding the following conditions:
   a. Power: on/off.
   b. Ethernet: receiver activity/no activity.
   c. Wireless Normal Mode: transmission from sensors/no transmission.
   d. Wireless Rapid Transmit Mode: no transmission/weak signal/adequate signal/excellent signal.
   e. Ethernet Connection: No connection/10Mbps connection/100Mbps connection
   f. Network Activity: No network activity/half-duplex communication/full-duplex communication.

H. One-to-One Wireless Receiver:
1. The One-To-One Wireless Receiver shall receive wireless radio frequency (RF) signals containing temperature data from multiple wireless room temperature sensors and communicate this information to field controllers via the communication bus.
2. The receiver shall operate as a bidirectional transceiver with the sensors to confirm and synchronize data transmission.
3. The receiver shall be capable of communication with from one to five sensors up to a distance of 200 Feet.
4. The receiver shall have LED indicators to provide information regarding the following conditions:
   a. Power.
   b. Communication Bus: Receiver activity/no activity.
   c. Wireless RF: Transmission from sensors/no transmission.
   d. Wireless Rapid Transmit Mode: No transmission/weak signal/adequate signal/excellent signal.

I. System Tools:
1. Wireless Space Sensor Installation and Configuration Tools
   a. To enable installation and servicing when specialized tools are required, site survey and installation tools as well as software shall be provided to the contractor use for system installation and commissioning for the duration of the warranty period.
   b. To enable installation and servicing when specialized tools are required, site survey and installation tools as well as software shall be provided to the Owner for permanent possession for ongoing system maintenance and trouble shooting.

2.16 ENCLOSURES

A. All controllers, power supplies and relays shall be mounted in enclosures.

B. Enclosures may be NEMA 1 when located in a clean, dry, indoor environment.

C. Indoor enclosures shall be NEMA 12 when installed in other than a clean environment.

D. Outdoor enclosures shall be NEMA 3R or NEMA 4X, as necessary for the site.

E. Enclosures shall have hinged, locking doors.

F. Provide laminated plastic nameplates for all enclosures in any mechanical room or electrical room. Include location and unit served on nameplate. Laminated plastic shall be 0.125 inches thick and appropriately sized to make label easy to read.

2.17 PROGRAMMABLE THERMOSTAT

A. Thermostat with 365 day programmability that allows the building occupants to program the temperature setpoints for at least four periods within 24 hours. A minimum of 5 holidays shall be programmable for up to 5 years. Daylight savings shall be provided as a standard feature in the programming calendar.
   1. Manufacturers: Honeywell VisionPRO 8000 Series, Honeywell Prestige THX 9000 Series, Honeywell TB7600 Series, Venstar ColorTouch T6000 Series, EnTouch Pro/One or equal.

B. Minimum thermostat features shall include, but not limited to, the following:
   1. The thermostat shall have a touch screen and shall display both room temperature and cooling and heating setpoints simultaneously, and shall indicate when cooling or heating and what stage is energized on the main screen.
   2. Programming may be accomplished at the thermostat, or via free software. The program shall have an override mode to provide comfort on demand while in an unoccupied period. The unoccupied override shall be adjustable by pushing an override button and selecting thirty minute increments, up to four hours.
   3. The setback override shall be activated by a single button, and deactivated on demand.
   4. Setpoints shall be adjustable from 35°F to 99°F, with a minimum 5°F adjustable deadband available.
   5. Dual setpoints shall be provided with the ability to individually set heating and cooling temperatures with adjustable heating and cooling setpoint limits. Initial occupied mode cooling setpoint of 75°F and heating setpoint of 70°F. Initial unoccupied mode cooling setpoint of 85°F and heating setpoint of 55°F.

C. The thermostat shall be capable of independently controlling an individual system, with up to three stages of heating and two stages of cooling, fan, and reversing valve.
   1. For heat pumps an adjustable auxiliary heat lockout temperature based on outdoor temperatures shall be provided.
   2. Emergency Heat switch will be provided on the touch screen when set in heat pump mode.

D. The fan shall be programmable to operate continuously during occupied periods and in auto mode during unoccupied periods.

E. Controls shall be capable of alternating compressor starting sequence with a built-in lead-lag operating logic.

1. Equipment protection options shall be provided to prevent compressor short-cycling, and to limit the number of cycles per hour. These options shall be overridden for use with zoning systems.

F. Pre-Occupancy purge cycle that energizes the fan before the programmed occupancy time, adjustable up to three (3) hours in 15-minute increments.
1. Configurable terminals shall be provided for remote indoor, remote outdoor or remote supply air temperature sensing.

G. Multiple security levels to limit access to programming and configuration and will allow for a custom passcode. The various security levels will allow controlled access to programming, unoccupied override, and thermostat mode.

H. All programming information, except time of day, shall reside in nonvolatile memory. During a power failure, the thermostat shall maintain its program indefinitely without the use of batteries. Wi-Fi capable and controlled through local wireless internet routers. The thermostat shall be capable of receiving an automated demand response signal from the local electrical utility, and automatically reset the cooling and heating setpoints during the demand event. When the demand event is terminated by the local electrical power utility, the thermostat will reset to normal occupied and unoccupied setpoints.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Prior to starting work, carefully inspect installed work of other trades and verify that such work is complete to the point where work of this Section may properly commence.

B. Notify the Owner’s Representative in writing of conditions detrimental to the proper and timely completion of the work.

C. Do not begin work until all unsatisfactory conditions are resolved.

3.02 INSTALLATION (GENERAL)

A. Install in accordance with manufacturer's instructions.

B. Provide all miscellaneous devices, hardware, software, interconnections, installation, and programming required to ensure a complete operating system in accordance with the sequences of operation and point schedules.

3.03 LOCATION AND INSTALLATION OF COMPONENTS

A. Locate and install components for easy accessibility; in general, mount 48 inches above floor with minimum three (3) feet of clear access space in front of units. Obtain approval on locations from Owner’s Representative prior to installation.

B. Wall mounted temperature sensors will typically be mounted directly above or below light switches and comply with ADA height requirements. Coordinate with Owner, Architect and other trades to assure proper mounted locations prior to installation.

C. All instruments, switches, transmitters, etc., shall be suitably wired and mounted to protect them from vibration, moisture, and high or low temperatures.

D. Identify all equipment and panels. Provide permanently mounted tags for all panels.

E. Provide stainless steel or brass thermowells suitable for respective application and for installation under other sections, and sized to suit pipe diameter without restricting flow.

3.04 CONDUIT

A. Conduit Requirements: all conduit shall with comply with minimum requirements of local authority having jurisdiction.
   1. Low voltage wiring in concealed areas may be plenum rated. Low voltage wiring in exposed areas shall be enclosed in conduit.
      a. All low voltage wiring exposed to weather shall be installed in conduit.
      b. Low voltage wiring in exposed areas, such as in mechanical, electrical, or service rooms, shall be installed in EMT conduit up to 10 feet above finished floor.
   2. All low voltage control wiring in critical facilities and critical locations shall be enclosed in conduit.

B. Provide rigid conduit for low voltage wring in walls for all wall mounted sensors, CO2 sensors, humidity sensors, etc. Conduit shall be run to 6” (minimum) above the ceiling and shall terminate with a bushing installed on the conduit end. Flexible conduit shall not be used.

C. Provide conduit for low voltage wiring above inaccessible ceilings.

D. Conceal all conduits, except within mechanical, electrical, or service rooms. Install conduit to maintain a minimum clearance of 12 inches (30 cm) from high-temperature equipment (i.e.-such as flues or high temperature pipes).

E. Conduit must be rigidly installed, adequately supported, properly reamed at both ends, and left clean and free of obstructions. Conduit sections shall be joined with couplings (according to code). Terminations must be made with fittings at boxes, and ends not terminating in boxes shall have bushings installed.

F. Secure conduits with conduit clamps fastened to the structure and spaced according to code requirements. Conduits and pull boxes may not be hung on flexible duct strap or tie rods. Conduits may not be run on or attached to ductwork.

G. Size of conduit and size and type of wire type shall be the responsibility of the contractor in keeping with the manufacturer’s recommendations and NEC requirements, except as noted elsewhere.

3.05 LOW VOLTAGE INTERLOCKING AND CONTROL WIRING

A. All control and interlock wiring shall comply with national and local electrical codes, and Division 26 of this specification, Where the requirements of this section differ from Division 26, the requirements of this section shall take precedence.

B. All low-voltage wiring shall meet NFPA-70 (NEC) Article 725 Class 2 requirements. Low-voltage power circuits shall be subfused when required to meet Class 2 current limit.

C. Do not install Class 2 wiring (greater than 100 volts and protected by overcurrent device not over 20 amperes) in conduits containing Class 1 wiring (not exceeding 30 volts and 1000 volt-amperes). Boxes and panels containing line voltage wiring and equipment may not be used for low-voltage wiring except for the purpose of interfacing the two (e.g. relays and transformers).

D. Unless otherwise noted, power wiring for all valve and damper actuators is Class 2. If the BAS contractor desires to substitute 120-volt actuators, the BAS contractor shall coordinate directly with the General Contractor and Electrical Contractor to provide all 120-volt wiring and conduit at no additional cost to the Owner.

E. Contractor shall provide step-down transformers as necessary.

F. Install insulated bushings on all conduit ends and openings to enclosures. Seal top end of vertical conduits.

G. All wire-to-device connections shall be made at a terminal block or terminal strip. All wire-to-wire connections shall be at a terminal block. Wire nuts are not acceptable.

H. All wiring within enclosures shall be neatly bundled and anchored to permit access and prevent restriction to devices and terminals.

I. All wiring shall be installed as continuous lengths, with no splices permitted between termination points.

J. Use color-coded conductors throughout with conductors of different colors.

K. Control and status relays are to be located in designated enclosures only. These enclosures include packaged equipment control panel enclosures unless they also contain Class 1 starters.

L. The contractor shall terminate all communications, control and/or interlock wiring and shall maintain updated (as-built) wiring diagrams with terminations identified at the job site.

3.06 COMMUNICATION WIRING

A. The contractor shall adhere to the wiring requirement previously listed.

B. All cabling shall be installed in a neat and workmanlike manner. Follow manufacturer's installation recommendations for all communication cabling

C. Do not install communication wiring in conduits and enclosures containing Class 1 or other Class 2 wiring.

D. Maximum pulling, tension, and bend radius for the cable installation, as specified by the cable manufacturer, shall not be exceeded during installation.

E. Contractor shall verify the integrity of the entire network following cable installation. Use appropriate test measures for each particular cable.

F. When a cable enters or exits a building, a lightning arrestor must be installed between the lines and ground. The lighting arrestor shall be installed according to manufacturer's instructions.

G. All runs of communication wiring shall be unspliced length when that length is commercially available.

H. All communication wiring shall be labeled to indicate origination and destination data.

I. Grounding of coaxial cable shall be in accordance with NEC regulations article on "Communications Circuits, Cable, and Protector Grounding."

J. BACnet MS/TP communications wiring shall be installed in accordance with ASHRAE/ANSI Standard 135. This includes but is not limited to:
   1. The network shall use shielded, twisted-pair or stranded cable with characteristic impedance between 100 and 120 ohms. Distributed capacitance between conductors shall be less than 100 pF per meter (30 pF per foot). Wire gauge and wire type shall be sized and coordinated with manufacturer load requirements and lengths of runs.
   2. The maximum length of an MS/TP segment is 1200 meters (4000 ft) with AWG 18 cable. The use of greater distances and/or different wire gauges shall comply with the electrical specifications of EIA-485.
   3. The maximum number of nodes per segment shall be 32, as specified in the EIA 485 standard. Additional nodes may be accommodated by the use of repeaters.
   4. An MS/TP EIA-485 network shall have no T connections.

K. All Ethernet cabling, routers, hubs and switches for connecting 230900 furnished and installed control panels, servers and clients to the building Owner's Ethernet network are the responsibility of the BAS contractor.

3.07 MOTORIZED DAMPERS

A. Where ducts penetrate an exterior surface install a Class I motorized damper at each outdoor air supply opening, return air opening, exhaust opening, relief outlet, shaft vent and stairway vent, as required to comply with minimum requirements of the local Energy Code.
   1. Dampers shall be installed with automatic controls configured to close when the systems or spaces served are not in use or during unoccupied period warm-up and setback operation, unless the system served requires outdoor air or exhaust air or operates continuously or the dampers are opened to provide intentional economizer cooling.
   2. Stairway and shaft vent dampers shall be installed with automatic controls configured to open upon the activation of any fire alarm initiating device of the building's fire alarm system or the interruption of power to the damper.

3.08 FIELD SERVICES

A. Prepare and start logic control system under provisions of this section.

B. Start up and commission systems. Allow sufficient time for startup and commissioning prior to placing control systems in permanent operation. Provide all labor and services as necessary to support testing and verification by third party commissioning authority.

C. Provide the capability for off-site monitoring at control contractor's local or main office. At a minimum, off-site facility shall be capable of system diagnostics and software download. Owner shall provide phone line for this service for one year or as specified.

D. Provide Owner's Representative with spare parts list. Identify equipment critical to maintaining the integrity of the operating system.

1.02 PROJECT RECORD DOCUMENTS

E. Project Record Documents: Upon completion of installation, submit three copies of record (as-built) documents. The documents shall be submitted for approval prior to final completion and shall include:
1. Project Record Drawings. As-built versions of the submittal shop drawings provided as AutoCAD 2006 (or newer) compatible files on optical media and as 11” x 17” prints.
2. Testing and Commissioning Reports and Checklists. Completed versions of reports, checklists, and trend logs used to meet requirements of Part 3: “Control System Demonstration and Acceptance.”
3. Operation and Maintenance (O & M) Manual.
4. As-built versions of submittal product data.
5. Names, addresses, and 24-hour telephone numbers of installing contractors and service representatives for equipment and control systems.
6. Operator’s manual with procedures for operating control systems: logging on and off, handling alarms, producing point reports, trending data, overriding computer control, and changing setpoints and variables.
7. Programming manual or set of manuals with description of programming language and syntax, of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.
8. Engineering, installation, and maintenance manual or set of manuals that explains how to design and install new points, panels, and other hardware; how to perform preventive maintenance and calibration; how to debug hardware problems; and how to repair or replace hardware.
9. Documentation of all programs created using custom programming language including setpoints, tuning parameters, and object database.
10. Graphic files, programs, and database on magnetic or optical media.
11. List of recommended parts with part numbers and suppliers.
12. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware including computer equipment and sensors.
13. Complete original-issue copies of furnished software, including operating systems, custom programming language, operator workstation software, and graphics software.
14. Licenses, guarantees, and warranty documents for equipment and systems.

15. Recommended preventive maintenance procedures for system components, including schedule of tasks such as inspection, cleaning, and calibration; time between tasks; and task descriptions.

3.09 TRAINING

A. Provide application engineer to instruct Owner in operation of systems and equipment.

B. Provide system operator's training to include (but not be limited to) such items as the following: modification of data displays, alarm and status descriptors, requesting data, execution of commands and request of logs. Provide this training to a minimum of three persons.

C. Provide on-site training above as required, up to 16 hours as part of this contract.

D. Provide tuition for at least one individual to attend for a one-week factory training class. If applicable, costs for travel, lodging and meals will be the responsibility of the Owner.

3.10 DEMONSTRATION

A. Demonstrate complete operating system to Owner's Representative.

B. Provide certificate stating that control system has been tested and adjusted for proper operation.

END OF SECTION

SECTION 23 09 02 - VARIABLE FREQUENCY DRIVES (VFD)

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, and Section 23 0500 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. Furnish complete and operational VFD systems as shown on the plans. All work to be furnished and installed under this Section shall comply with all the requirements of Division 01, and shall include, but not necessarily be limited to, the following:
   1. Variable frequency drives (VFDs), with or without bypass, as scheduled on drawings.
   2. Controls and control connections.
   3. Electrical power connections.

1.03 RELATED WORK IN OTHER SECTIONS

A. Section 23 0500: Basic HVAC Materials and Methods

B. Section 23 0593: Testing, Adjusting and Balancing

C. Section 23 0900: Building Automation System (BAS) Controls

D. Section 23 2123: Hydronic Pumps

E. Section 23 7312: Custom Factory Air Handling Units

F. Division 26: Coordination of interface items between the Mechanical equipment and controls and the Electrical Work specified in Division 26.

1.04 DEFINITIONS

A. THD: Total Harmonic Distortion in %. RMS value of harmonic currents expressed as a percentage of fundamental current occurring at the fundamental frequency (60 Hz). This equals the square root of the sum of the squares of the amplitudes of the 2^{nd} through the 50^{th} harmonic currents, divided by the amplitude of the 1^{st} harmonic. Used for both voltage (THD_v) and current distortion (THD_i).

B. TDD: Total Demand Distortion in %. This equals the square root of the sum of the squares of the amplitudes of the 2^{nd} through the 50^{th} harmonic currents, divided by the amplitude of the maximum demand current of the facility. This is used by IEEE 519 to determine the harmonic current distortion that a facility presents to the utility. TDD is not the current distortion of any individual device.

C. RMS

1.05 QUALITY ASSURANCE

A. Supplier of VFD shall be solely responsible for assuring that the VFD shall work properly with the motor(s) being controlled. VFD supplier shall provide all materials and labor required to replace motors, bearing, shafts, etc. that may be incompatible with VFD or become damaged by VFD at no additional cost to the owner. VFD supplier shall reimburse Architect and Engineer at their standard hourly rates for their involvement in resolving failures due to their VFDs.

B. Manufacturer shall have a minimum of 15 years of experience building similar equipment for controlling the speed for induction motors and at least one hundred successful installations with a variety of VFD sizes and applications.

C. To reduce the known problem of bearing failures by "fluting" the VFD switching rates shall be 6-8 KHz wherever possible. Manufactured VFDs at switching rates of 12-15 KHz shall be accompanied by an additional extended warranty to cover bearings and motors to a period of ten (10) years. Shaft grounding is not required for EC motors with integrated speed controller. Acceptable manufacturers include Shaft Grounding Systems (www.shaft-grounding-systems.com) or Aegis Shaft Grounding Ring (www.est-aegis.com).

D. To ensure quality and minimize infantile failures at the job site, the VFD shall be burned in at the factory at an ambient of 104°F minimum for at least 8 hours. The VFD shall be operating a dynamometer and the load speed shall be cycled during the test. All optional and special features shall be functionally tested at the factory for proper operation.

E. Standards and Guidelines: Provide VFDs conforming to the requirements of the latest addition of the following:
   1. UL 508: The UL Safety Standard for Industrial Control Equipment. All VFD equipment provided under this section must be labeled as UL 508 approved.
   2. ANSI/IEEE 518: Guide for the Installation of Electrical Equipment to Minimize Electrical Noise Inputs to Controllers from External Sources.
   3. ANSI/IEEE 519: Recommended Practices and Requirements for Harmonic Control in Electrical Power Systems. This addresses the current distortion of a complete facility and not current distortion of individual pieces of equipment within the facility.
   4. International Standards Organization (ISO) certified 9001.
   5. International Building Code (IBC) seismic requirement referencing ASC 7 and ICC AC-156.
   6. International Electrotechnical Commission 60721-3c1, 2, & 3 Conformal coating
   7. NEC 430.120, Adjustable-Speed Drive Systems.
   8. NEMA ICS 7.0, Application Guide for AC Adjustable Speed Drives.
   9. AHJ approval or proof of special seismic certification for structures requiring it.
   10. RoHS (Restriction of Hazardous Substances) certified.
   11. SEMI F47-0706 for voltage sag immunity

F. Performance Standards: VFDs shall be tested and listed for drive system efficiency, motor insulation and power line harmonics conforming to the requirements of one, or more, of the latest addition of the following:
   1. AHRI 1210/1211: Performance Rating of Variable Frequency Drives.
   2. IEC 61800: Adjustable Speed Electrical Power Drive Systems.

1.06 QUALIFICATIONS

1. VFDs and options shall be UL 508 listed as a complete assembly. The base VFD shall be UL listed for 100 kA SCCR without the need for external input fuses.
2. The entire VFD assembly, including the bypass (as scheduled on drawings), shall be seismically certified and labeled as such in accordance with the International Building Code (IBC) and local amendments:
   a. VFD manufacturer shall provide Seismic Certification and Installation requirements at time of submittal.
   b. Seismic importance factor of 1.5 rating is required, and shall be based upon actual shake test data as defined by ICC AC-156
   c. AHJ approval if needed.
3. Base VFD shall have CE Mark conforming to European Union Electromagnetic Compatibility directive, requiring VFD meet product standard EN 61800-3 for the First Environment restricted level (Category C2). Base drives that only meet the Second Environment (Category C3, C4) shall be supplied with filters to bring the drive in compliance with the First Environment levels.
4. VFD Enclosure to be UL rated: 1,12, 3R, 3RX, 4 or 4X as needed. Cabinets correctly sized for airflow and heat dissipation of drive with interlocked handle. Outdoor 3R enclosures include thermostatically controlled vent fans and heater. 4X shall be stainless steel cabinet with temperature controlled air-conditioned air isolated from outside air in the VFD cabinet. Self-certified UL enclosures not accepted.
5. Factory authorized start up and owner training should be provided locally upon request. A toll free 24/365 technical support line connected to factory support personnel located in the US shall be available
6. VFDs and bypasses shall be considered as an “end device” and not specifically listed as UL 864 UUKL compliant. However, VFDs shall be provided with control and override capabilities as required for smoke control.

1.07 SUBMITTALS

A. Prior to construction submit for approval the following materials:
   1. VFD supplier shall provide reference list showing at least ten years of prior manufacturing experience in production of VFDs and a list of at least twenty successful installations with a variety of VFD sizes and applications.
   2. Manufacturer's data, installation instructions, and maintenance and operational instructions for variable frequency drives. Indicate electrical service and special requirements. Include manufacturer's descriptive literature, repair data, and parts listing.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver units to the site in containers with manufacturer's stamp or label affixed.

B. Protect units against dirt, water, chemical, and mechanical damage. Do not install damaged units. Remove damaged equipment from site.

1.09 WARRANTY

A. Provide minimum two-year (24 months) warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 230500 for additional warranty and Substantial Completion requirements.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. ABB ACH580 (1 to 350 hp), ABB ACH880 (Ultra Low Harmonic Drive), ABB ACC55 (Micro Drive 0.25 to 3 hp). Or, equal by Danfoss, Allen-Bradley, Emerson, Schneider Electric (Square D), Toshiba, or Yaskawa.

2.02 GENERAL

A. Furnish a complete VFD as scheduled on the plans. Refer to plans for locations of variable speed controllers. Each fan or pump motor shall have a dedicated VFD unit. All standard and optional features shall be included within the VFD enclosure unless otherwise specified. The VFD enclosure shall be provided to match the environment requirements where the VFD will be mounted and operated. Provide NEMA/UL rated enclosure as required for environment.

B. The adjustable frequency controller shall convert three-phase, 60 Hz utility power to adjustable voltage and frequency, three-phase, AC power for stepless motor speed control from 10% to 100% of the motor's 60 Hz speed.

C. The VFD shall provide full rated output from a line of ±10% of nominal voltage. The VFD shall continue to operate without faulting from a line of +30% to -35% of nominal voltage. Overload rating of VFD shall be 110% of normal duty current rating for 1 minute every 10 minutes, 130% overload for 2 seconds every minute. VFDs shall be capable of continuous full load operation in the following environmental conditions:
   1. -15 to 40° C (5 to 104°F) ambient temperature. Operation to 50° C (122°F) shall be allowed with a 10% reduction from VFD full load current.
   2. Altitude 0 to 3300 feet above sea level. Operation to 6600 feet shall be allowed with a 10% reduction from VFD full load current.
   3. Humidity less than 95%, non-condensing.

D. The VFD shall include a converter and an inverter section. The converter section shall convert fixed frequency and voltage AC utility power to a DC voltage. Drive shall utilize a single surface mount micro-processor.

E. The VFD shall be of the pulse width modulation (PWM) type. VFDs shall be provided with an advanced flux vector frequency control to limit noise at drive and motor.

F. Drive manufacturer or sales representative shall evaluate electrical system of the project. Any additional protective equipment such as line filters, reactors or input isolation transformers required to prevent interference from drive with other electrical equipment in the building shall be included as part of the bid. No additional expense shall be incurred by Owner for provision or installation of these devices if required for electrical system operation after drive has been purchased. Units shall include factory mounted input line reactors.

G. The VFD maximum output current rating shall be 110% of the motor nameplate full load current. VFD shall be able to start into a rotating load in either direction without trip.

H. The VFD and options shall be tested to ASNI/EIA Standard 508 and listed by a nationally recognized testing agency such as UL or ETL.

I. The VFD and options shall comply with the applicable requirements of the latest standards of ANSI, IEEE, and the National Electrical Code.

J. Power line noise shall be limited to a voltage distortion factor and line notch depth as defined in ANSI/IEEE Standard 519.

K. The drive efficiency shall be 97% (minimum) and have a fundamental power factor of 0.98 at all speeds.

2.03 BASIC FEATURES

A. The VFD shall be housed in a NEMA enclosure appropriate to the mounting location.
1. NEMA 12 enclosure shall be used indoors in dusty locations, plenum mechanical rooms, penthouses, or air stream mounting.
2. NEMA 3R is required for all outdoor locations exposed to falling rain, snow or ice or to indoor locations subject to falling water.
3. If NEMA 1 enclosure is suitable it shall be vented through cabinet and equipped with an integral cooling fan with thermostat control and arranged so that units can be mounted back to back on a frame and/or side to side on a wall. Venting fans shall be supplied in enclosure if required. If a different NEMA enclosure is indicated the enclosure shall provide means of maintaining the drive at temperature acceptable to the drive manufacturer in exterior ambient temperatures. Enclosure shall be complete with no requirements for low voltage wiring. Factory mounted main circuit breaker disconnect shall be included.

B. All circuit boards shall be coated to protect against corrosion. Control boards shall be conformal coated to at least IEC 60721-3c2.

C. All VFDs shall have the same HMI/keypad, with backlit digital display, regardless of horsepower rating. The keypad shall be removable, capable of remote mounting and allow for uploading and downloading of parameter settings as an aid for start-up of multiple VFDs. It shall incorporate “Bumpless transfer” of speed reference when switching between “Hand” and “Auto” modes. HMI/keypad shall include password protection against parameter changes.

D. The HMI/keypad shall include Hand-Off-Auto selections and manual speed control. There shall be fault reset and “Help” buttons on the keypad. The Help button shall include “on-line” assistance for programming and troubleshooting. The display shall be in complete English words for programming and fault diagnostics (alphanumeric codes only are not acceptable.)

E. The HMI/keypad shall utilize pre-programmed application macros or templates specifically designed to facilitate start-up. The Macros shall provide one command to reprogram all parameters and customer interfaces for a particular application to

reduce programming time. The VFD shall have two user savable programs to allow the user to save custom settings.

F. HMI/keypad operating values shall be capable of being displayed in engineering units for sub-metering purposes [i.e. GPH, KW, Motor Amps, Frequency, Speed, Torque, etc.]. A minimum of three operating values shall be displayed at all times.

G. VFD shall have the option to support Bluetooth Advanced Control Panel and Apps. The Bluetooth control panel shall be FCC and QSL (Qualified Design Listing) certified.

H. VFD shall include built in coordinated AC transient surge protection system consisting of four MOVs (phase to phase & phase to ground), capacitor clamp, 1600 PIV Diode Bridge and internal chokes.

I. VFDs shall have 5% impedance AC reactors or internal dual 5% DC chokes to reduce harmonics to the power line and as protection from AC line transients. VFD's with only one DC choke shall have OEM add AC UL 508 listed and approved Chokes or line reactors. Maximum allowable total demand distortion shall not exceed 5% and the total harmonic distortion shall be less than 3%. VFDs using thin wall, small DC bus or metallic type capacitors must add active harmonic filters to prevent high frequency harmonics from corrupting the electrical system.

J. VFD shall automatically mitigate harmonics throughout the effective load range using Swinging chokes or other devices designed to lower harmonics when VFD is at partial loads.

K. VFDs shall include Ferrite Core EMI/RFI/Common mode filters. The onboard filters shall allow the VFD assembly to be CE Marked and the VFD shall meet product standard EN 61800-3 for the First Environment restricted level (Category C2).

L. The input current rating of the VFD shall not be greater than the output current rating. VFD's with higher input current ratings require the upstream wiring, protection devices, and source transformers to be oversized per NEC 430.122.

M. VFDs shall be able to have a distance from the VFD to the motor of at least 250 feet at the maximum carrier frequency, or provide a DV/DT filter in addition to each VFD as needed to protect the motors.

N. VFD shall have its own standardized control board that is the same for all drive sizes, with all communications and I/O terminals on it, and standard BAS communications protocols to include ModBus RTU; Johnson Controls N2; Siemens Building Technologies FLN (P1); and BACnet MS/TP. All diagnostic warning and fault information shall be transmittable over serial communications. With Remote fault reset if programmed. Options available for: Ethernet IP, BACnet IP, ControlNet, DeviceNet, EtherCAT, Lonworks, ModBus TCP and Profibus. All protocols shall be "certified" by the governing authority. VFD shall have ability to provide feedback to the BAS for kWh, speed of drive, torque load, load curve status, current proof using built-in current sensors, alarm and faults indication, motor temperatures, and other input and output status conditions.

O. Two (2) programmable analog inputs shall accept 0-10VDC or 4-20 ma signals.

P. Two (2) programmable analog outputs 0-20ma or 4-20 ma signals. Outputs proportionally programmable for: Motor Current, Power, Speed, Torque, (kW) and other data.

Q. Minimum of six (6) programmable digital inputs for interfacing with external devices. All digital inputs shall be programmable to initiate upon an application or removal of 24VDC.

R. Minimum of three (3) programmable, Form-C relay outputs. The relay outputs shall include programmable on and off delay times and adjustable hysteresis. Rated for maximum switching current 8 amps at 24 VDC and 0.4 A at 250 VAC; Maximum voltage 300 VDC and 250 VAC; continuous current rating of 2 amps RMS. Outputs shall be true Form-C type contacts.

S. The VFD shall have 250 ma of 24 VDC auxiliary power and be capable of loop powering a transmitter supplied by others.

T. The VFD shall have Pass thru I/O- to allow the BAS to monitor and control the VFD/ bypass or its analog and digital outputs via communications. This control shall be independent of any VFD function and may be used to control or monitor any other device.

U. The VFD shall include multiple “two zone” PID algorithms that allow the VFD to maintain PID control from two separate feedback signals (4-20mA, 0-10V, and/or communications). The two zone control PID algorithm will control motor speed based on a minimum, maximum, or average of the two feedback signals. All of the VFD PID controllers shall include the ability for “two zone” control. The PID set points shall be adjustable from the VFD keypad, analog inputs, or over the communications bus.

V. The VFD shall have cooling fans that are designed for replacement without requiring removing the VFD from the wall or removal of circuit boards. The VFD cooling fans shall operate only when required, based on the temperature and run command to the drive. VFD protection shall be based on thermal sensing and not cooling fan operation.

W. There shall be a built-in time clock in the VFD keypad. The clock shall have a battery backup with a 10-year minimum life span. The clock shall be used to date and time stamp faults and record operating parameters at the time of fault. VFD programming shall be held in non-volatile memory and is not dependent on battery power.

X. Drive options shall be furnished and mounted by the drive manufacturer as defined on the VFD schedule. All optional features shall be UL Listed by the drive manufacturer as a complete assembly and carry a UL508 label.

Y. VFD shall include option for nonpowered programming via Laptop and adapter.

Z. VFD shall include option for a Bluetooth Advanced Control Panel. The Bluetooth control panel shall be FCC and QDL (Qualified Design Listing) certified. A free app (iOS and Android) shall replicate the control panel on a mobile device or tablet. The control panel’s programming and control functionality shall function on the device. Customizing text, such as AHU-1 End Switch, shall be supported by the device’s keyboard. Bluetooth connectivity shall allow uploading, downloading, and emailing of parameters. Bluetooth connectivity shall include two pairing modes-always

discoverable with a fixed passcode and manual discovery with a unique generated passcode every pairing.

2.04 PROGRAMMABLE ADJUSTMENTS

A. Three (3) programmable critical frequency lockout ranges (aka Skip or resonant) to prevent the VFD from operating the load continuously at an unstable speed. The lockout range must be fully adjustable, from 0 to full speed.

B. The VFD shall include a programmable time delay for VFD start and a keypad indication that this time delay is active. A Form C relay output provides a contact closure to signal the VAV boxes open. This will allow VAV boxes to be driven open before the motor operates.

C. Two independent adjustable acceleration and deceleration ramp times, adjustable from 1 to 1800 seconds, initial settings shall be 60 seconds set by manufacturer.

D. VFD shall include a motor flux optimization and noise smoothing circuits that will automatically reduce applied motor voltage to the motor to optimize energy consumption and reduce audible motor noise.

E. VFD shall provide built-in current sensor with programmable loss-of-load (broken belt / broken coupling) option to signal the loss-of-load condition via a keypad warning, Form-C relay output, and / or over the BAS.

F. VFD shall have programmable “Sleep” and “Wake up” functions to allow the drive to be started and stopped from the level of a process feedback signal.

G. VFD to have two PID controls built in for VFD or other uses. PID controllers have ability for “two zone” control. PID set points adjustable from the VFD keypad, analog inputs or BAS

H. If the input reference is lost, the VFD shall be programmable to: (1) stop and display a fault, (2) run at a programmable preset speed, (3) hold the VFD speed based on the last good reference received, or (4) go to a backup control system wired to the VFD. As well as cause a warning to be issued, as selected by the user. The drive shall be programmable to signal this condition via a keypad warning, Form-C relay output and / or over the communication bus.

I. VFD shall have the ability to automatically restart after an over-current, over-voltage, under-voltage, or loss of input signal protective trip. The number of restart attempts, trial time and time between attempts shall be programmable. VFD shall be initially set to perform at least five (5) restarts after a power outage, drive fault or external fault before requiring manual reset. After ten minutes of runtime, the restart attempts return to zero. The VFD shall display a countdown timer when auto restart is being attempted, or incorporate programming to select number of restarts, number of faults per time period, and time between restarts.

J. VFD shall be capable of starting into a coasting load (flying start or forward or reverse) up to full speed and accelerate or decelerate to set point without tripping or component damage.

K. VFD shall include a fireman's override input. Upon receipt of a contact closure from the fire / smoke control station, the VFD shall operate in one of two modes: 1) Operate at a programmed predetermined fixed speed ranging from -500Hz (reverse) to 500Hz (forward). 2) Operate in a specific fireman's override PID algorithm that automatically adjusts motor speed based on override set point and feedback. The mode shall override all other inputs (analog/digital, serial communication, and all keypad commands), except customer defined safety run interlocks, and force the motor to run in one of the two modes above. "Override Mode" shall be displayed on the keypad. Upon removal of the override signal, the VFD shall resume normal operation, without the need to cycle the normal digital input run command.

L. Micro Drive VFDs shall have the following features and programmability:
1. Each Micro Drive shall have a HMI/keypad with Hand-Off-Auto modes, manual speed control, fault reset on it and ability to program the VFD for all functions. Ability to save VFD program preferred.
2. Each Micro Drive shall have the ability to run on single phase of power when derated 50%.
3. Each Micro Drive shall have at least one analog input and digital inputs and outputs built in when needed.
4. Each Micro Drive when needed shall have BAS communications protocols to include: ModBus RTU; Johnson Controls N2, and BACnet MS/TP are preferred.

2.05 PROTECTIVE FEATURES

A. A minimum of Class 20 I^2t electronic motor overload protection for single motor applications shall be provided. Overload protection shall automatically compensate for changes in motor speed.

B. Protection against input transients, loss of AC line phase, output short circuit, output ground fault, over voltage, under voltage, VFD over temperature and motor over temperature. The VFD shall display all faults in plain language. Codes are not acceptable.

C. Protect VFD from input phase loss. The VFD should be able to protect itself from damage and indicate the phase loss condition. During an input phase loss condition, the VFD shall be able to be programmed to either trip off while displaying an alarm, issue a warning while running at reduced output capacity, or issue a warning while running at full commanded speed. This function is independent of which input power phase is lost.

D. Protect from under voltage. The VFD shall provide full rated output with an input voltage as low as 90% of the nominal. The VFD will continue to operate with reduced output, without faulting, with an input voltage as low as 70% of the nominal voltage.

E. Protect from over voltage. The VFD shall continue to operate without faulting with a momentary input voltage as high as 130% of the nominal voltage.

F. The VFD shall incorporate a programmable motor preheat feature to keep the motor warm and prevent condensation build up in the motor when it is stopped in a damp environment by providing the motor stator with a controlled level of current.

G. VFD shall include a “signal loss detection” algorithm with adjustable time delay to sense the loss of an analog input signal. It shall also include a programmable time delay to eliminate nuisance signal loss indications. The functions after detection shall be programmable.

H. VFD shall function normally when the keypad is removed while the VFD is running. No warnings or alarms shall be issued as a result of removing the keypad.

I. VFD shall catch a rotating motor operating forward or reverse up to full speed without VFD fault or component damage.

J. Selectable over-voltage control shall be provided to protect the drive from power regenerated by the motor while maintaining control of the driven load.

K. VFD shall include current sensors on all three output phases to accurately measure motor current, protect the VFD from output short circuits, output ground faults, and act as a motor overload. If an output phase loss is detected, the VFD will trip off and identify which of the output phases is low or lost.

L. If the temperature of the VFD’s heat sink rises to 80°C, the VFD shall automatically reduce its carrier frequency to reduce the heat sink temperature. It shall also be possible to program the VFD so that it reduces its output current limit value if the VFD’s temperature becomes too high.

M. In order to ensure operation during periods of overload, it must be possible to program the VFD to automatically reduce its output current to a programmed value during periods of excessive load. This allows the VFD to continue to run the load without tripping.

N. The VFD shall have temperature controlled cooling fan(s) for quiet operation, minimized losses, and increased fan life. At low loads or low ambient temperatures, the fan(s) may be off even when the VFD is running.

O. The VFD shall store in memory the last 10 alarms. A description of the alarm, and the date and time of the alarm shall be recorded.

P. When used with a pumping system, the VFD shall be able to detect no-flow situations, dry pump conditions, and operation off the end of the pump curve. It shall be programmable to take appropriate protective action when one of the above situations is detected.

2.06 BYPASS

A. Bypasses shall be a complete assembly UL 508 listed, furnished and mounted by the OEM as defined on the VFD schedule. All bypasses shall have a service Disconnect switch with two (2) contactor operation. They shall also have a UL rating of SCCR of 100,000 Amps.
   1. Factory wired and tested system with door interlocked, padlockable circuit breaker, output contactor, bypass contactor, and fast acting Drive Isolation input fuses. UL Listed motor electronic overload protection Class 10, 20, or 30 (programmable) shall be included in both drive and bypass modes.
   2. The drive and bypass package shall be Seismic certified and labeled to IBC 2012:

3. Rating of 1.5 is required and based upon actual shake table test defined by ICC AC-156.
4. AHJ preapproval as needed.
5. Bypass system shall be designed for stand-alone operation and shall be completely functional in both Hand and Automatic modes even if the VFD has been removed from the system for repair/replacement. Bypass can be controlled by inputs, locally or by communications.
6. Bypass designs must allow qualified person to work on or remove bypassed VFD for service and allow bypass to continue to run system. Only approved per NEC 430.103 service disconnect switch with two (2) contactors should be used. Three contactor or "isolation contactors" are not an acceptable alternative to fuses and are not an NEC recognized disconnecting device for LOTO.
7. Bypass shall have its own standardized control board that is the same for all drive sizes, with all communications and I/O terminals on it. The keypad and two line (minimum), 20 character LCD display to control or program unit, read status and reset faults. Bypass shall have preset macros with user programmable options. As well as let user select whether the system shall automatically transfer from drive to bypass mode on the following drive fault conditions: Over current, Over voltage, Under voltage or Loss of analog input.
8. Bypass shall have its own built in communications protocols that include ModBus RTU; Johnson Controls N2; Siemens Building Technologies FLN(P1); and BACnet MS/TP. All bypass diagnostic warning and fault information shall be transmitted over the communications. With Remote bypass fault reset if programmed. Options available for Lonworks, ControlNet and DeviceNet.
9. Bypass shall have Pass-Through analog and digital Inputs and Outputs that are capable of being monitored and/or controlled via serial communications for the drive or other devices.
10. Bypass shall have a proof of flow and broken belt adjustable motor current sensing circuit for bypass and VFD modes, condition shall be indicated on keypad display or over the BAS.
11. Bypass shall have six 24VDC digital inputs on its own separate terminal strip and incorporate an internally sourced 24VDC 250 mA power supply for use by itself or others to power external devices and not require an external control power source.
12. The bypass shall include a supervisory control mode. In bypass mode it shall monitor the value of the VFD's analog input (feedback). This feedback is used to control the bypass contactor on and off to maintain hysteresis control over applications such as cooling towers and booster pumps.
13. The user shall be able to select text to be displayed on the keypad when an external safety opens. Such as "FireStat", "FreezStat", "Over pressure" and "Low suction". The user shall also be able to determine which of the four (4) safety contacts is open over the serial communications connection.
14. Bypass shall meet requirements of SEMI F47-0706 for voltage sag immunity and maintain positive contactor control with a +30%, -35% tolerance of nominal voltage. This feature is designed to avoid contactor coil failure during brown out/low line conditions and allow for single-phase operation in VFD mode. Designs that will not allow single-phase operation in VFD mode and meet F47 are not acceptable.
15. Single phase Motor protection bypass must be able to detect a single phase condition IF VFD is running and prevent transfer as well as detect single phase power condition if it occurs while running or trying to start in bypass, disengage

the motor in a controlled fashion, and give a single phase input power indication locally and to BAS if programmed. Bypass systems not incorporating single-phase protection in bypass mode are not acceptable.

16. Earth or ground fault motor protection bypass system must be able to detect earth or ground fault if VFD is running and prevent transfer as well as detect if a ground fault condition occurs while running or trying to start in bypass, disengage the motor in a controlled fashion, and give a clear message of earth or ground fault locally and to BAS if programmed. Bypass systems not incorporating earth or ground fault protection in bypass mode are not acceptable.
17. The bypass control shall include a programmable time delay bypass start with keypad indication of time delay. A Form C relay output commands the VAV boxes to open before the motor operates at full speed in the bypass mode. The time delay shall be field programmable from 0 to 120 seconds.
18. Smoke Control Override Mode (Override 1): The bypass shall include a dedicated digital input that will transfer the motor from VFD mode to Bypass mode upon receipt of a dry contact closure from the Fire/Smoke Control System. The Smoke Control Override Mode action is not programmable and will always function as described in the bypass User's Manual documentation. In this mode, the system will ignore low priority safeties and acknowledge high priority safeties. All keypad control, serial communications control, and normal customer start / stop control inputs will be disregarded. This Smoke Control Mode shall be designed to meet the intent of UL864/UUKL.
19. Fireman's Override Mode (Override 2) – the bypass shall include a second, programmable override input which will allow the user to configure the unit to acknowledge some digital inputs, all digital inputs, ignore digital inputs or any combination of the above. This programmability allows the user to program the bypass unit to react in whatever manner the local Authority Having Jurisdiction (AHJ) requires. The Override 2 action may be programmed for "Run-to-Destruction". The user may also force the unit into Override 2 via the serial communications link.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Verify that mounting surface is ready to receive work. Mount the VFD(s) on the wall or at supports in locations identified on the drawings. Provide a layout drawing of VFD locations to electrical installer.

B. If the disconnect for the equipment powered by the VFD is in a location where it is probable that it will be placed in an off position prior to shutting down the VFD, the contractor is to provide electrical protection for the VFD. This may be in the form of a conduit and wire interlock between disconnect and drive or internal protection integral to the VFD.

C. Coordinate wiring and control with Control Contractor. Control installers shall install all wiring associated with control signals into the VFD and for interlock control wiring between disconnects and VFDs.

D. Electrical installer shall install all line voltage power wiring and conduit from electrical switchgear and from the VFD to the disconnect at the controlled motor. The only

exception to this is when the motor and drive are factory installed on a packaged piece of equipment. In that case the wiring from drive to motor is to be installed in the factory to meet the requirements herein. Coordinate with Division 26 work.

E. Line length between VFD and driven motor shall be as short as possible. Line length shall not exceed twenty (20) feet without prior approval from Engineer.

F. Input and output power wiring shall be installed in separate grounded conduit. In addition, control wiring shall be installed in its own separate grounded conduit.

G. Use symmetric motor cable between the VFD and motor, with low inductance shield or conduit, and with all joints joined with bonding straps. MC metal clad 3 phase type cable per NEC 334-1, UL approved, 3 phase conductors and 3 ground conductors. Sheath to be continuous corrugated aluminum. Manufacturer and type to be BICC 2 kV rated Drives Cable, Anixter series 7V, or approved equal.

H. Use cable connectors with 360-degree connections to the armor conduit at both ends of motor cable. Verify electrical path from inverter cabinet entry plate to armor / conduit to motor terminal box.

I. Install an auxiliary high frequency bonding connection for potential equalization between VFD frame and building steel.

J. Unless absolutely necessary do not install disconnect between VFD and connected motor. VFD is to be furnished with a lockable disconnect.

K. Installation in Air Handlers multiple fan arrays: When a single VFD supplies multiple fans, assemble and prewire units at the factory, installing conduit and conductors between the fan motor, VFD, and terminal strips. Wiring from the VFD output terminals to the fan motor shall be Belden VFD Cable installed in conduit (295XX Series).

3.02 MANUFACTURER'S START-UP SERVICES

A. The manufacturer shall provide start-up service in the form of a factory trained service technician. The service technician shall verify correct installation, verify control wiring, verify power wiring, start-up the drive, and check for proper operation. The service technician shall provide final adjustments to meet the specified performance requirements. Fully staffed parts and service personnel shall be within four hours travel from the jobsite.

B. Carrier frequency setup:
1. Set initial carrier frequency at 2 kHz.
2. Manually raise VFD speed output from 10 Hz to 60 Hz by 10 Hz increments, allowing at least 15 seconds between each adjustment. If excessive motor noise is heard at any speed, raise carrier frequency by 2 kHz increments until motor noise is no longer excessive. Do not set carrier frequency higher than 10 kHz.
3. If excessive motor noise continues to be heard at or below 10 kHz, inform owner. If the motor is provided by the VFD manufacturer, either repair, replace, or provide 5 year extended warranty on the effected motor.

C. Lockout of resonant frequencies:

1. With carrier frequency set per the above specification, manually and slowly raise VFD speed output from 10 Hz to 60 Hz by 1 Hz increments. If excessive motor, frame, or driven load noise is heard at any speed, lock out that frequency.
2. Each frequency skip shall be programmed with as narrow a bandwidth as possible, while still avoiding the most objectionable range of resonant frequencies. Each frequency skip bandwidth shall not exceed 5 Hz without approval by Engineer.

D. Training:
   1. Provide one (1) hour training session to the Owner's Representative.
   2. Training to include:
      a. Demonstration of operation of bypass switch and door-mounted disconnect switches. Explain emergency operation.
      b. Demonstrate operation of operator keypads for viewing data and setting parameters.
      c. Demonstrate operation in manual mode, including setting of specific speeds.
      d. Explain the drive parameters that might require operator adjustment.
      e. Describe troubleshooting techniques and warranty procedure.

END OF SECTION

SECTION 23 23 00 - REFRIGERANT PIPING SYSTEMS

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 23 0500 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. Includes, but not limited to:
1. Furnish and install piping and piping specialties for refrigeration systems serving split system air conditioning units.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Section 23 0500: Basic HVAC Materials and Methods.

B. Section 23 0719: HVAC Piping Insulation.

C. Section 23 8126: Split Gas Furnace/Air Conditioning Units.

D. Section 23 8145: Split Heat Pump Units.

E. Division 26: Electrical.

1.04 QUALITY ASSURANCE

A. Codes and Standards: Comply with the requirements of the latest addition of the following:
1. Welding Qualifications: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications" latest edition.
2. ASHRAE 15: Safety Code for Refrigeration Systems.
3. ASME B31.5: Refrigeration Piping and Heat Transfer Components.
4. ASTM B 280: Specification for Seamless Copper Tube for Air Conditioning & Refrigeration Field Service.

B. Contractor Qualifications: A refrigeration contractor licensed by the State shall install refrigerant piping.

C. Manufacturer Qualifications:
   1. Manufactured items furnished shall be the current, cataloged product of the manufacturer.
   2. Replacement parts shall be readily available and stocked in the USA.
   3. Manufacturer shall have a minimum of five years of manufacturing products related to refrigerant piping and/or fittings.
   4. Products shall have an installation history of no less than five years of field operation with reliable maintenance track record.
   5. Alternate system and material must be submitted with historical supporting documentation and reliability report before approval is allowed.

D. Codes and Standards:
   1. All work shall be in full accordance with all applicable codes, ordinances and code rulings.
   2. The Contractor shall furnish without any extra charge the labor and material required for compliance of codes for work required, but not specifically shown in Drawings.
   3. Perform all tests required by governing authorities and as required under all Division 23 Sections. Provide written reports on all tests.
   4. Electrical devices and wiring shall confirm to the latest standards of NEC; all devices shall be UL listed and so identified.

E. Product Control
   1. Protection: Use all means necessary to protect materials before, during, and after installation and to protect the installed work and materials of all other trades.
   2. The general arrangement and locations of piping are shown on the Drawings. Changes may be necessary to accommodate work. Should it be necessary to deviate from arrangement or location indicated in order to meet existing conditions or due to interference with work of other trades, such deviations as offsets, pipe sizes, fittings sizes, rises and drops in piping that may be necessary, whether shown or not, shall be made without extra expense. Accuracy of data given herein and on the Drawings is not guaranteed. The Drawings and Specifications are for assistance and guidance, and exact locations, distances, and elevations will be governed by actual site conditions.
   3. All work shall be in accordance with the applicable codes listed in Division 01. No extra charge will be paid for furnishing items required by the regulations but not specified herein or shown on the Drawings. Should there be any direct conflict between the Drawings and/or Specifications and the above rules and regulations, the rules and regulations shall take precedence.
   4. All work shall be completely coordinated, and all lines, grades, slopes and vertical and horizontal locations of pipes shall be exactly determined in the field and cleared with the Owner's Representative before the installation of these items is begun. No extra compensation shall be made for failure to observe this clause.

5. The Drawings and Specifications do not undertake to list every item that will be installed. When an item is necessary for the satisfactory operation of the system, it shall be furnished without extra cost. Work called for in the Specifications, but not on the Drawings, or vice versa, shall be done as though required by both. Lack of specific mention of any work necessary for proper completion of the work in the Specifications and/or Drawings, shall not lessen the Contractor's responsibility.
6. Obtain Owner's Representative's approval prior to rerouting of existing services. Refer to Division 01 sections for alterations, shutdown and temporary construction for existing services.
7. Pipe spaces provided in the design shall be utilized and the work shall be kept within the spaces established on the Drawings.
8. Manufacturers' directions shall be followed in all cases where manufacturers of articles used in this Contract furnish directions covering points not shown on the Drawings or specified herein. Manufacturers' directions do not take precedence over the Drawings and Specifications. Where manufacturers' directions are in conflict with the Drawings and Specifications, submit these conflicts to the Owner’s Representative and receive clarification before installing the work.
9. Do not permit or cause any work to be covered or enclosed until it has been inspected, tested, and approved. Should any of the work be enclosed or covered before inspection and test, Contractor shall, at his/her own expense, uncover the work; and, after it has been inspected, tested and approved, make all repairs with such materials as may be required. Restore all work to its original and proper condition.
10. Be responsible for damage to any of this work before acceptance. Securely cover all openings, both before and after setting into place, to prevent obstructions in the pipes and breakage.
11. Repair all damage to the premises occasioned by the work. All damage to any part of the premises caused by leaks or breaks in the pipe installed under this Section of the work for a period of one (1) year after date of final acceptance of the work, shall be repaired.

F. All materials (such as insulation, ductwork, piping, wiring, controls, etc.) located within air plenum spaces, air shafts, and occupied spaces shall have a flame-spread index of 25 or less, and smoke-developed index of 50 or less, as tested by ASTM E84 (NFPA 255) Method. In addition, the products, when tested, shall not drip flame particles, and flame shall not be progressive. Provide Underwriters Laboratories, Inc., label or listing, or satisfactory certified test report from an approved testing laboratory to prove the fire hazard ratings for materials proposed for use do not exceed those specified.

1.05 SUBMITTALS

A. Product Data: Submit manufacturer’s technical product data for all refrigerant piping, valves and specialties indicating dimensions, flow capacity, pressure setting, tolerances etc.

B. Shop Drawings:
   1. Submit shop drawings including plans, schematics, and riser diagrams of refrigerant piping, including dimensions of all piping.
   2. Reference to associated insulation systems submitted in compliance with Section 230719 HVAC Piping Insulation.
   3. Provide all details of suspension and support for ceiling hung equipment.

C. Maintenance Data: Submit maintenance instructions, including instructions for lubrication, valve replacement, and spare parts lists. Include this data, product data, and shop drawings in operating and maintenance manuals.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver unit to the site in containers with manufacturer's stamp or label affixed.

B. Store and protect equipment and products against dirt, water, chemical, and mechanical damage. Do not install damaged unit - remove from project site.

1.07 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 23 0500 for additional warranty and Substantial Completion requirements.

C. Provide the following additional extended warranty requirements that apply to piping with mechanical type joints and fittings, such as grooved or pressed/compression type fittings.
   1. The warranties and corrective obligations provided under this section (i) are in addition to, and not in lieu of, any other warranty, representation, covenant, duty or other obligation (including any corrective obligation) of the Contractor or Manufacturer, (ii) have no relationship to the time when any warranty, representation, duty, covenant or other obligation of Contractor or Manufacturer may be enforced or any dispute resolution proceeding commenced and (iii) are made by the Manufacturer to both the Contractor and the Owner and by the Contractor to Owner.
   2. Contractor and Manufacturer warrant that, for a period of ten (10) years from the date of Substantial Completion, the entire system, including but not limited to the fittings and joints, will conform to the requirements of the Contract Documents, will be free from defects, and will not leak.
   3. Nothing in any separate warranty or other document provided by Contractor or Manufacturer, or both, will apply to limit their liability or responsibility for damages arising out of or related to a breach of any warranty or corrective obligation.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Line Test Pressure for Refrigerant R-134a:
   1. Suction Lines for Air-Conditioning Applications: 115 psig (793 kPa).
   2. Suction Lines for Heat-Pump Applications: 225 psig (1551 kPa).
   3. Hot-Gas and Liquid Lines: 225 psig (1551 kPa).

B. Line Test Pressure for Refrigerant R-407C:
   1. Suction Lines for Air-Conditioning Applications: 230 psig (1586 kPa).
   2. Suction Lines for Heat-Pump Applications: 380 psig (2620 kPa).
   3. Hot-Gas and Liquid Lines: 380 psig (2620 kPa).

C. Line Test Pressure for Refrigerant R-410A:
   1. Suction Lines for Air-Conditioning Applications: 300 psig (2068 kPa).
   2. Suction Lines for Heat-Pump Applications: 535 psig (3689 kPa).
   3. Hot-Gas and Liquid Lines: 535 psig (3689 kPa).

D. Do not use pre-charged refrigerant lines more than 50 feet in length.

2.02 COPPER TUBE AND FITTINGS

A. Copper Tube: ASTM B88, Type K or L; or ASTM B280, Type ACR.

B. Wrought-Copper Fittings and Unions: ASME B16.22.

C. Solder Filler Metals: ASTM B32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.

D. Flux: Stay-Silv white brazing flux by J.W. Harris Co or silver solder flux by Handy & Harmon.

E. Brazing Filler Metals: AWS A5.8.
   1. Copper to Copper Connections:
      a. AWS Classification BCuP-4 Copper Phosphorus (6% silver).
      b. AWS Classification BCuP-5 Copper Phosphorus (15% silver).
   2. Copper to Brass or Copper to Steel Connections
      a. AWS Classification BAg-5 Silver (45% silver)
   3. Do not use rods containing Cadmium.

F. Manufacturers: Mueller Streamline, Nibco, Grinnell, Elkhart, or equal.

2.03 FLEXIBLE CONNECTORS

A. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.

B. End Connections: Socket ends.

C. Offset Performance: Capable of minimum 3/4 inch (20 mm) misalignment in minimum 7 inch (180 mm) long assembly.

D. Working Pressure Rating: Factory test at minimum 450 psig (3100 kPa).

E. Maximum Operating Temperature: 250°F (121°C).

F. Manufacturers: Metraflex #RAF or equal.

2.04 VALVES AND SPECIALTIES

A. Diaphragm Packless Valves:
1. Body and Bonnet: Forged brass or cast bronze; globe design with straight-through or angle pattern.
2. Diaphragm: Phosphor bronze and stainless steel with stainless-steel spring.
3. Operator: Rising stem and hand wheel.
4. Seat: Nylon.
5. End Connections: Socket, union, or flanged.
6. Working Pressure Rating: 500 psig (3450 kPa).
7. Maximum Operating Temperature: 275 F (135 C).

B. Packed-Angle Valves:
1. Body and Bonnet: Forged brass or cast bronze.
2. Packing: Molded stem, back seating, and replaceable under pressure.
3. Operator: Rising stem.
4. Seat: Nonrotating, self-aligning polytetrafluoroethylene.
5. Seal Cap: Forged-brass or valox hex cap.
6. End Connections: Socket, union, threaded, or flanged.
7. Working Pressure Rating: 500 psig (3450 kPa).
8. Maximum Operating Temperature: 275 F (135 C).

C. Check Valves:
1. Body: Ductile iron, forged brass, or cast bronze; globe pattern.
2. Bonnet: Bolted ductile iron, forged brass, or cast bronze; or brass hex plug.
3. Piston: Removable polytetrafluoroethylene seat.
4. Closing Spring: Stainless steel.
5. Manual Opening Stem: Seal cap, plated-steel stem, and graphite seal.
6. End Connections: Socket, union, threaded, or flanged.
7. Maximum Opening Pressure: 0.50 psig (3.4 kPa).
8. Working Pressure Rating: 500 psig (3450 kPa).
9. Maximum Operating Temperature: 275 F (135 C).

D. Service Valves:
1. Body: Forged brass with brass cap including key end to remove core.
2. Core: Removable ball-type check valve with stainless-steel spring.

3. Seat: Polytetrafluoroethylene.
4. End Connections: Copper spring.
5. Working Pressure Rating: 500 psig (3450 kPa).
6. Manufacturers: Apollo Valves (Conbraco), Henry, Mueller, Superior, Virginia, or equal.

E. Solenoid Valves: Comply with AHRI 760 and UL 429; listed and labeled by a National Recognized Testing Laboratory (NRTL).
1. Body and Bonnet: Plated steel.
2. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
3. Seat: Polytetrafluoroethylene.
4. End Connections: Threaded.
5. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch (16-GRC) conduit adapter, and 24/115/208-volt ac coil as required.
6. Working Pressure Rating: 400 psig (2760 kPa).
7. Maximum Operating Temperature: 240 F (116 C).

F. Safety Relief Valves: Comply with 2010 ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
1. Body and Bonnet: Ductile iron and steel, with neoprene O-ring seal.
2. Piston, Closing Spring, and Seat Insert: Stainless steel.
3. Seat: Polytetrafluoroethylene.
4. End Connections: Threaded.
5. Working Pressure Rating: 400 psig (2760 kPa).
6. Maximum Operating Temperature: 240 F (116 C).

G. Thermostatic Expansion Valves: Comply with AHRI 750.
1. Body, Bonnet, and Seal Cap: Forged brass or steel.
2. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
3. Packing and Gaskets: Non-asbestos.
4. Capillary and Bulb: Copper tubing filled with refrigerant charge.
5. Reverse-flow option (for heat-pump applications).
6. End Connections: Socket, flare, or threaded union.
7. Manufacturers: Alco, Henry, Mueller, Parker, Singer, Sporlan, or equal.

H. Hot-Gas Bypass Valves: Comply with UL 429; listed and labeled by an NRTL.
1. Body, Bonnet, and Seal Cap: Ductile iron or steel.
2. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
3. Packing and Gaskets: Non-asbestos.
4. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
5. Seat: Polytetrafluoroethylene.
6. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch (16-GRC) conduit adapter and 24/115/208-volt AC coil as required.
7. End Connections: Socket.

8. Throttling Range: Maximum 5 psig (34 kPa).
9. Working Pressure Rating: 500 psig (3450 kPa).
10. Maximum Operating Temperature: 240 F (116 C).

I. Straight-Type Strainers:
1. Body: Welded steel with corrosion-resistant coating.
2. Screen: 100-mesh stainless steel.
3. End Connections: Socket or flare.
4. Working Pressure Rating: 500 psig (3450 kPa).
5. Maximum Operating Temperature: 275 F (135 C).

J. Angle-Type Strainers:
1. Body: Forged brass or cast bronze.
2. Drain Plug: Brass hex plug.
3. Screen: 100-mesh monel.
4. End Connections: Socket or flare.
5. Working Pressure Rating: 500 psig (3450 kPa).
6. Maximum Operating Temperature: 275 F (135 C).

K. Moisture/Liquid Indicators:
1. Body: Forged brass.
2. Window: Replaceable, clear, fused glass window with indicating element protected by filter screen.
3. Indicator: Color coded to show moisture content in parts per million (ppm).
4. Minimum Moisture Indicator Sensitivity: Indicate moisture above 60 ppm.
5. End Connections: Socket or flare.
6. Working Pressure Rating: 500 psig (3450 kPa).
7. Maximum Operating Temperature: 240 F (116 C).

L. Replaceable-Core Filter Dryers: Comply with AHRI 730.
1. Body and Cover: Painted-steel shell with ductile-iron cover, stainless-steel screws, and neoprene gaskets.
2. Filter Media: 10-micron, pleated with integral end rings; stainless-steel support.
3. Desiccant Media: Activated alumina or charcoal.
4. End Connections: Socket.
5. Access Ports: NPS 1/4 (DN 8) connections at entering and leaving sides for pressure differential measurement for suction-line filter dryers.
6. Maximum Pressure Loss: **2 psig (14 kPa)**.
7. Working Pressure Rating: 500 psig (3450 kPa).
8. Maximum Operating Temperature: 240 F (116 C).

M. Permanent Filter Dryers: Comply with AHRI 730.
1. Body and Cover: Painted-steel shell.
2. Filter Media: 10-micron, pleated with integral end rings; stainless-steel support.
3. Desiccant Media: Activated alumina or charcoal.
4. End Connections: Socket.

5. Access Ports: NPS 1/4 (DN 8) connections at entering and leaving sides for pressure differential measurement.
6. Maximum Pressure Loss: **2 psig (14 kPa)**.
7. Working Pressure Rating: 500 psig (3450 kPa).
8. Maximum Operating Temperature: 240 F (116 C).
9. Manufacturers: Alco, Mueller, Parker, Sporlan, Virginia, or equal.

N. Mufflers:
1. Body: Welded steel with corrosion-resistant coating.
2. End Connections: Socket or flare.
3. Working Pressure Rating: 500 psig (3450 kPa).
4. Maximum Operating Temperature: 275 F (135 C).

O. Receivers: Comply with AHRI 495.
1. Comply with 2010 ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL for receivers larger than 6 inches (150 mm).
2. Comply with UL 207; listed and labeled by an NRTL.
3. Body: Welded steel with corrosion-resistant coating.
4. Tappings: Inlet, outlet, liquid level indicator, and safety relief valve.
5. End Connections: Socket or threaded.
6. Working Pressure Rating: 500 psig (3450 kPa).
7. Maximum Operating Temperature: 275 F (135 C).

P. Liquid Accumulators: Comply with AHRI 495.
1. Body: Welded steel with corrosion-resistant coating.
2. End Connections: Socket or threaded.
3. Working Pressure Rating: 500 psig (3450 kPa).
4. Maximum Operating Temperature: 275 F (135 C).

Q. Sight Glass
1. Combination moisture and liquid indicator with protection cap.
2. Sight glass shall be full line size.
3. Sight glass connections shall be solid copper or brass, no copper-coated steel sight glasses allowed.
4. Manufacturers: Alco, Asco, Mueller, Parker, Sporlan, or equal.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Provide and install refrigerant piping, fittings, valves and devices as required by equipment manufacturer and as shown on the Drawings.

B. Refrigeration system connections shall be copper-to-copper, copper-to-brass, or copper-to-steel type properly cleaned and brazed with specified rods. Use flux only where necessary.
   1. No soft solder (tin, lead, antimony) connections will be allowed in system.
   2. Braze valve, sight glass, and flexible connections.
   3. Circulate dry nitrogen through tubes being brazed to eliminate formation of copper oxide during brazing operation.

C. Insulate all suction and hot gas lines. Insulate liquid lines where pipe may be in close contact to humans.

3.02 VALVE AND SPECIALTY APPLICATIONS

A. Install diaphragm packless or packed-angle valves in suction and discharge lines of compressor.

B. Install service valves for gage taps at inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of valves and strainers.

C. Install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.

D. Install diaphragm packless or packed-angle valves on inlet and outlet side of filter dryers.

E. Install a full-size, three-valve bypass around filter dryers.

F. Install solenoid valves upstream from each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at top.

G. Install thermostatic expansion valves as close as possible to distributors on evaporators.
   1. Install valve so diaphragm case is warmer than bulb.
   2. Secure bulb to clean, straight, horizontal section of suction line using two bulb straps. Do not mount bulb in a trap or at bottom of the line.
   3. If external equalizer lines are required, make connection where it will reflect suction-line pressure at bulb location.

H. Install safety relief valves where required by ASME Boiler and Pressure Vessel Code. Pipe safety-relief-valve discharge line to outside according to ASHRAE 15.

I. Install moisture/liquid indicators in liquid line at the inlet of the thermostatic expansion valve or at the inlet of the evaporator coil capillary tube.

J. Install strainers upstream from and adjacent to the following unless they are furnished as an integral assembly for the device being protected:
   1. Solenoid valves.
   2. Thermostatic expansion valves.
   3. Hot-gas bypass valves.
   4. Compressor.

K. Install filter dryers in liquid line between compressor and thermostatic expansion valve.

L. Install receivers sized to accommodate pump-down charge.

M. Install flexible connectors at refrigerant piping connection to all equipment (coils, condensers, and/or compressors) as required by the manufacturer and where necessary to prevent vibration from transferring into the building structure and to minimize vibration and audible noise in occupied spaces.

3.03 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

B. Install refrigerant piping according to ASHRAE 15.

C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping adjacent to machines to allow service and maintenance.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Select system components with pressure rating equal to or greater than system operating pressure.

J. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.

K. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels if valves or equipment requiring maintenance is concealed behind finished surfaces.

L. Install refrigerant piping in protective chaseway where installed belowground.

M. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.

N. Slope refrigerant piping as follows:
1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
2. Install horizontal suction lines with a uniform slope downward to compressor.
3. Install traps and double risers to entrain oil in vertical runs.
4. Liquid lines may be installed level.

O. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.

P. Before installation of steel refrigerant piping, clean pipe and fittings using the following procedures:
1. Shot blast the interior of piping.
2. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through tubing by means of a wire or electrician's tape.
3. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
4. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
5. Finally, draw a clean, dry, lintless cloth through the tube or pipe.
6. Safety-relief-valve discharge piping is not required to be cleaned but is required to be open to allow unrestricted flow.

Q. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.

R. Install sleeves and escutcheons for piping penetrations of walls, ceilings, and floors.

3.04 PIPE JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Steel pipe: Fill pipe and fittings with an inert gas (nitrogen or carbon dioxide), during brazing or welding, to prevent scale formation.

D. Soldered Joints: Construct joints according to ASTM B828 or CDA's "Copper Tube Handbook."

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."
   1. Use Type BCuP (copper-phosphorus) alloy for joining copper socket fittings with copper pipe.
   2. Use Type BAg (cadmium-free silver) alloy for joining copper with bronze or steel.

F. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and to restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.

H. Welded Joints: Construct joints according to AWS D10.12M/D10.12.

I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.05 HANGERS AND SUPPORTS

A. Install the following pipe attachments:
   1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet (6 m) long.
   2. Spring hangers to support vertical runs.
   3. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.

B. Install hangers for copper tubing with the following maximum spacing and minimum rod diameters:
   1. Up to NPS 5/8”(DN 18): Maximum span, 60” (1500 mm); minimum rod, 3/8” (9.5 mm).
   2. Greater than 5/8” up to NPS 1-1/8” (DN 25): Maximum span, 72” (1800 mm); minimum rod, 3/8” (9.5 mm).
   3. Greater than 1-1/8” up to NPS 2” (DN50): Maximum span, 96” (2400 mm); minimum rod, 3/8” (9.5 mm).
   4. NPS 2-1/2” (DN 65): Maximum span, 108” (2700 mm); minimum rod, 3/8” (9.5 mm).

5. NPS 3” (DN 80): Maximum span, 10 feet (3 m); minimum rod, 3/8” (9.5 mm).
6. NPS 4” (DN 100): Maximum span, 12 feet (3.7 m); minimum rod, 1/2” (13 mm).

C. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 2” (DN 50): Maximum span, 10 feet (3 m); minimum rod, 3/8 inch (9.5 mm).
2. NPS 2-1/2” (DN 65): Maximum span, 11 feet (3.4 m); minimum rod, 3/8 inch (9.5 mm).
3. NPS 3” (DN 80): Maximum span, 12 feet (3.7 m); minimum rod, 3/8 inch (9.5 mm).
4. NPS 4” (DN 100): Maximum span, 14 feet (4.3 m); minimum rod, 1/2 inch (13 mm).

D. Support multifloor vertical runs at each floor.

3.06 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
1. Comply with ASME B31.5, Chapter VI.
2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in "Performance Requirements" Article.
   a. Fill system with nitrogen to the required test pressure.
   b. System shall maintain test pressure at the manifold gage throughout duration of test.
   c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
   d. Remake leaking joints using new materials, and retest until satisfactory results are achieved.
4. Prepare test and inspection reports.

3.07 SYSTEM CHARGING

A. Charge system using the following procedures:
1. Install core in filter dryers after leak test but before evacuation.
2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers (67 Pa). If vacuum holds for 12 hours, system is ready for charging.
3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig (14 kPa).
4. Charge system with a new filter-dryer core in charging line.

3.08 ADJUSTING

A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.

B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.

C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.

D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
   1. Open shutoff valves in condenser water circuit.
   2. Verify that compressor oil level is correct.
   3. Open compressor suction and discharge valves.
   4. Open refrigerant valves except bypass valves that are used for other purposes.
   5. Check open compressor-motor alignment and verify lubrication for motors and bearings.

E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

END OF SECTION

SECTION 23 31 13 - AIR DISTRIBUTION

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this Section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 23 0500 - Basic Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. All work to be furnished and installed under this Section shall comply with all the requirements of Division 01, and shall include, but not necessarily be limited to, the following:
   1. Ductwork - Rigid, Flexible and Fabric.
   2. Diffusers, Grilles, and Registers.
   3. Ductwork Specialties.
   4. Flexible Connections.
   5. Sealants, Adhesives and Tapes.
   6. Duct Access Panels and Doors.
   7. Backdraft and Relief Dampers.
   8. Combination Fire and Smoke Dampers.
   9. Fire Dampers.
   10. Smoke Dampers.
   11. Control Dampers.
   12. Louvers.
   13. Flashings.
   14. Bird/Insect Screens.
   15. Sound Traps.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Section 23 0500: Basic Materials and Methods.

B. Section 23 0593: Testing, Adjusting and Balancing.

C. Section 23 0713: Duct Insulation.

D. Section 23 0900: Building Automation System (BAS) Control.

E. Division 26: Electrical.

1.04 QUALITY ASSURANCE

A. Codes and Standards: Provide products conforming to the requirements of the following:
   1. ARI 885-98: Procedure for Estimating Occupied Space Sound Levels in the Application of Air Terminal and Air Outlets.
   2. AMCA-210: Laboratory Methods of Testing Fans for Rating Purposes.
   3. ANSI S12.23: Designation of Sound Power Emitted by Machinery and Equipment.
   4. ASC-A7001: Standard for Duct Sealants.
   5. ASHRAE Standard 130: Methods of Testing Air Terminal Units.
   6. AHRI Standard 885: Procedures for Estimating Occupied Space Sound Levels in the Application of Air Terminals and Air Outlets.
   7. NFPA 90A: Standards for the Installation of Air Conditioning and Ventilating Systems.
   8. NFPA 90B: Standard for the Installation of Warm Air Heating and Air-Conditioning Systems.
   9. American Society for Testing and Materials (ASTM): Manufacture and test in accordance with the ASTM Standards, including:
      a. ASTM A167: Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip. Type 304 or 304 stainless steel.
      b. ASTM A525: Standard Specification for General Requirements for Steel Sheet, Zinc-Coated (Galvanized) Hot-Dip Process. G60 and G90 zinc-coated.
      c. ASTM A527/A527M: Standard Specification for Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process, Lock-Forming Quality.
      d. ASTM C920: Standard Specification for Elastomeric Joint Sealants.
   10. Underwriters Laboratory (UL): Manufacture and test in accordance with the UL Standards, including:
      a. 181:Standard for Factory-Made Air Ducts and Air Connectors.
      b. 181A: Standard for Closure Systems for Use With Rigid Air Ducts.
      c. 181B: Standard for Closure Systems for Use With Flexible Air Ducts and Air Connectors.
      d. 268A: Standard for Smoke Detectors for Duct Application.
      e. 555: Standard for Fire Dampers.
      f. 555C: Standard for Ceiling Dampers.
      g. 555S: Standard for Smoke Dampers.
      h. 723: Standard for Test for Surface Burning Characteristics of Building Materials.
      i. 2043: Standard for Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces.

B. Provide and construct ductwork systems in conformance with the latest editions of the following documents:
   1. SMACNA HVAC Duct Construction Standards-Metal and Flexible.
   2. SMACNA HVAC Air Duct Leakage Test Manual.

3. SMACNA HVAC Phenolic Duct Construction Standards.
4. SMACNA - Accepted Industry Practice for Industrial Duct Construction" for duct pressures above +5" w.g. positive pressure or below -5" w.g. negative pressure. Where differences exist between SMACNA and the prevailing building code, the gauge or construction method of the submitted ductwork shall be the more stringent of the two standards.
5. ASHRAE Systems and Equipment Handbook "Duct Construction" chapter.
6. ASHRAE Fundamentals Handbook "Duct Design" chapter.

C. Alternatives: The SMACNA standards and publications referenced in this Section of the specifications establish ductwork construction requirements.
1. Alternatives to these standards and publications may be submitted. Approval will be based on demonstration that such alternatives are equivalent and satisfy the functional requirements described in the referenced standards.
2. Such demonstration shall include evidence that the alternatives proposed were tested in accordance with SMACNA procedures and with test results certified by an independent testing laboratory.

D. All ductwork and equipment shall be seismically supported and braced to meet or exceed the minimum requirements of local building code requirements.

E. Flame/Smoke Rating: All materials, including sealants and adhesives, exposed within plenum shall be noncombustible or have a flame-spread index of 25 or less, and smoke developed index of 50 or less, as tested by ASTM E84 (NFPA 255) Method or UL 723. All materials installed within a plenum shall meet these requirements or have a safety data sheet available to indicate that materials are non-combustible. In addition, the products, when tested, shall not drip flame particles, and flame shall not be progressive. Provide Underwriters Laboratories, Inc., label or listing; or satisfactory certified test report from an approved testing laboratory to prove the fire hazard ratings for materials proposed for use do not exceed those specified. Discrete plumbing, mechanical, and electrical products that are located in a plenum and have exposed combustible material shall be in accordance with UL 2043.

1.05 DEFINITIONS

A. Class 0: Factory-made air ducts and connectors, compliant with ANSI/UL 181, having a surface burning characteristic of zero. Typically constructed of semi-rigid corrugated aluminum. This does not include sheet metal ductwork constructed per SMACNA Standards.

B. Class 1: Factory-made air ducts and connectors, compliant with ANSI/UL 181, having a flame spread index of not over 25 and a smoke developed index of not more than 50. Typically constructed of flexible ductwork, rigid fiberglass ductwork and plastic ductwork. This does not include sheet metal ductwork constructed per SMACNA Standards.

C. Flexible Air Duct (Factory-Made): Class 0 or Class 1 air ducts tested in accordance with 15 tests per ANSI/UL 181 and installed in conformance with the conditions of the listing and NFPA 90A/90B. Flexible ducts shall not be installed to serve more than two stories and shall not penetrate a fire-resistance rated assembly or construction. Maximum lengths of flexible ductwork shall not exceed lengths identified in this section or as limited by the AHJ, whichever is shorter.

D. Flexible Duct Connector (Factory-Made): Class 0 or Class 1 connectors tested in accordance with 12 of 15 tests per ANSI/UL 181 and installed in conformance with the conditions of the listing and NFPA 90A/90B. Connectors include, but are not limited to, short flexible connections between air handlers and ductwork systems, uninsulated transition fittings, specialty shapes for diffuser connections, etc. Connectors shall not penetrate a wall, floor, or ceiling. Maximum lengths of flexible ductwork shall not exceed five-foot (5') lengths or as limited by the AHJ, whichever is shorter.

1.06 SUBMITTALS

A. Prior to construction, submit for approval on all materials and equipment:
1. Ductwork - Rigid, Flexible and Fabric.
2. Ductwork Specialties.
3. Flexible Connections.
4. Sealants, Adhesives and Tapes.
5. Flashings.
6. Bird/Insect Screens.
7. Duct Access Panels and Doors.
8. Backdraft Dampers.
9. Control Dampers.
10. Diffusers, Grilles, and Registers.
11. Fire/Smoke Dampers - Schedule of selected dampers must include the location, nominal size, free area velocity, and static pressure drop at free area velocity for each damper.
12. Sound Traps - Provide a table documenting anticipated pressure drop, insertion loss per octave band and self-noise at design conditions.
13. SMACNA "HVAC Duct Construction Standards - Metal and Flexible".

B. Shop Drawings: Provide shop drawings of sheet metal ductwork and plenums as follows:
1. Draw to a scale not less than 1/8" to one foot, with sheet sizes equal to Contract Drawings.
2. Show duct sizes, where possible use even duct sizes.
3. Show fitting details.
4. Show coordination with lighting fixtures, fire dampers, fire/smoke dampers, piping, diffusers, grilles, registers, fans, major electrical runs, cable trays and bus ducts.

C. Shop Drawings: Provide shop drawings for field erected mechanical equipment:
1. Draw to a scale of 1/2" to one foot, with sheet sizes equal to Contract Drawings.

2. Show plan, sections, elevations and details of all joints and enclosures.
3. Detail access doors and hardware.
4. Detail coil, damper, humidifier, filter and fan installations.
5. Show access space for electrical components that are part of the equipment provided and/or installed such as power and control panels on humidifiers. This shall be coordinated with Division 26 and NEC.

D. Certifications: Provide a duct schedule, certified by an officer of the sheet metal fabrication subcontractor, that the ductwork conforms to SMACNA standards, and for each sheet metal system furnished on the project include:
1. System name.
2. Duct material.
3. Duct gauge.
4. SMACNA rectangular reinforcement number.
5. SMACNA intermediate reinforcement number.
6. SMACNA transverse reinforcement number.
7. Rod diameter and type.
8. Sealant type.
9. Attachment method.
10. Duct system design pressure.

E. Construction IAQ Management Plan: Collaborate with the general contractor to submit and implement an IAQ Management Plan for the construction process meeting the requirements of the SMACNA IAQ Guidelines. This plan should address the protection of the ventilation system components during construction and cleanup of contaminated components after construction is complete. SMACNA IAQ Guideline recommends control measures in five areas. The IAQ Management Plan should address how compliance has been achieved in these required five areas as follows:
1. HVAC Protection
    a. Shutdown of return side of existing HVAC system in areas affected by heavy construction.
    b. Provision of temporary filters if existing or new systems must remain operational during construction.
    c. Close the supply, return and exhaust dampers and seal duct openings in areas subject to construction dust.
2. Source Control
    a. How will reduction of contaminants be reduced at the source?
    b. What steps will be taken to employ low emitting products and sealants.
    c. How will air handling equipment be cycled off when not needed?
3. Pathway Interruption
    a. Describe how the construction space will be ventilated as required to dilute contaminants.
    b. Describe how occupied spaces adjacent to construction areas will be kept at positive pressure relative to spaces under construction.
4. Housekeeping: Describe how the following housekeeping objectives will be implemented:
    a. Reduction of dust generated by work will be suppressed.

b. Maintaining a frequent cleaning frequency for dust and particulates.
c. Remove spills or excess applications of solvent-containing products as soon as possible.
d. Remove accumulated water and keep work areas as dry as possible.
e. Protect insulation materials from exposure to moisture.

5. Scheduling: Describe how overlap of construction activity and ongoing building occupancy activities will be minimized.

F. Field Manual: Submit one copy of the SMACNA "HVAC Duct Construction Standards - Metal and Flexible". Maintain a second copy on the project site.

G. Any ductwork installed without prior approval by the specifier, shall be replaced at the expense of the contractor.

H. The contractor must comply with the enclosed specification in its entirety. If on inspections, the specifier finds changes have been made without prior approval, the contractor will make the applicable changes to comply with this specification, at the contractor's expense.

I. At the discretion of the specifier, sheet metal gauges and reinforcing may be checked at various times to verify all duct construction is compliant.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to the site in containers with manufacturer's stamp or label affixed.

B. Store and protect products against dirt, water, chemical, and mechanical damage. Do not install damaged components. Remove damaged products from project site.

1.08 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 23 0500 for additional warranty and Substantial Completion requirements.

PART 2 - PRODUCTS

2.01 DUCTWORK

A. Construct all ducts and plenum of gauges, and with joints, bracing, reinforcing, and other construction details in accordance with the latest construction standards previously listed. Metals shall be manufactured by United States Steel, Nucor or equal.

B. Duct dimensions indicated on drawings are net, inside, clear dimensions. For internally lined ducts, add lining thickness to determine metal duct dimensions.

C. Ducts shall be constructed of material gauges and reinforcement Class per SMACNA pressurization classifications to meet 150% of the pressure requirements for external static pressure scheduled on drawings for the fans serving each system. Where differences exist between SMACNA and the prevailing building code, the gauge or construction method of the submitted ductwork shall be the more stringent of the code or standard. Refer to Part III - Execution for matrix of pressure and leakage requirements.

D. Ductwork gauge shall not be thinner than 26-gauge for all work.

2.02 SHEET METAL MATERIALS

A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

B. Galvanized Sheet Steel: Comply with ASTM A653/A653M.
1. Galvanized Coating Designation: G60 (Z180) for ductwork inside the building envelope in non-corrosive environments. G90 (Z275) for ductwork installed external to the building and may be installed inside the building as an alternate to G60.

C. Carbon-Steel Sheets: Comply with ASTM A1008/A1008M, with oiled, matte finish for exposed ducts.

D. Stainless-Steel Sheets: Comply with ASTM A480/A480M, Type 304 or 316, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.

E. Aluminum Sheets: Comply with ASTM B209 (ASTM B209M) Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.

F. Reinforcement Shapes and Plates: ASTM A36/A36M, steel plates, shapes, and bars; black and galvanized. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.

G. Tie Rods: Galvanized steel, 1/4-inch (6-mm) minimum diameter for lengths 36 inches (900 mm) or less; 3/8-inch (10-mm) minimum diameter for lengths longer than 36 inches (900 mm).

2.03 DUCTWORK FABRICATION

A. Rectangular Ducts
   1. Longitudinal Seams:
      a. Grooved seam flat/pipe lock (L-3), standing seam (L-4), single corner seam (L-5) or butt/corner weld for +/- 10 in. w.g. service. Snaplock and button-lock (L-1 and L-2) type joints are only allowed when ductwork is installed inside the conditioned space and when duct static pressures are less than 2" w.c. (500 Pa) or these type of joints must be reinforced with screws, soldering or welding when located in unconditioned areas or outside the insulated envelope.
   2. Lateral Joints:
      a. Slip drive joints, standard seams, flanges or welding as required by SMACNA HVAC Duct Construction Standards for system static pressure and sealed airtight. Flanged and gasketed joint fittings, such as Ductmate 25/35/45, Carlisle, MEZ Industries, or equal, are acceptable joint methods, but must be sealed as described previously. Transverse duct joints shall be constructed per Figure 1-4 for types T-8 through T-25. T-1 and T-5 slip joints are NOT allowed for transverse duct joints. T-5 slip joints may be used at connections to fire and smoke dampers as breakaway connections. Joint T-2, T-3, T-6 and T-7 reinforced slip joints are allowed below 2" static pressures.
      b. Exposed Ductwork: All sealant or gaskets applied internally within joint.
      c. Concealed Ductwork: Same as exposed ductwork, or sealant may be applied to the exterior side of joints.
      d. Welded where required for leakproof and airtight operation and per code.

B. Round Ducts
   1. Longitudinal Seams:
      a. Spiral seam (RL-1), butt weld (RL-4), or grooved seam flat/pipe lock (RL-5) for +/- 10 in. w.g. service.
   2. Lateral Joints:
      a. Exposed Ductwork: Beaded sleeve joint (RT-1), crimp joint bead (RT-5), or flange type joint. All joints secured with sheet metal screws. All sealant applied internally within joint.
      b. Concealed Ductwork: Same as exposed ductwork, or sealant may be applied to the exterior side of joints.
      c. Welded where required for leakproof and airtight operation.

C. Elbows
   1. Construct long radius elbows with centerline not less than 1.5 times the duct width. Shorter radius elbows may be used where required to fit in restricted spaces, or as shown. For rectangular ductwork provide single thickness turning vanes on all short rectangular elbows less than 25" wide or provide double thickness turning vanes for short rectangular elbows 25" wide and greater. Number of vanes per SMACNA. Elbows with square throat and radius heel are NOT allowed.

D. Transitions
1. Construct transitions to not exceed the slopes identified per SMACNA HVAC Duct Construction Standards-Metal and Flexible. Slopes shall generally be no greater than 15%, and no greater than 30% where shown on the drawings.

E. Branch Connections
1. Provide 45°entry boots or radius taps for rectangular duct take-offs. Provide conical, bellmouth or 45° lo-loss boot taps for round duct take-offs. Straight 90° taps and spin-in taps are not allowed, except where round take-off duct size equals height of branch duct size. Provide volume dampers at each duct take-off for balancing. Provide insulation guards at transitions to lined ductwork.

F. Manufactured Joints
1. 316 stainless steel adjustable clamps with gaskets for connecting welded laterals, branches, and Y fittings. Manufacturer: CECO Environmental #KB Duct or equal.

2.04 RECTANGULAR DUCTWORK

A. Construct rectangular ductwork to meet all functional criteria defined in of the SMACNA HVAC Duct Construction Standards-Metal and Flexible. All ductwork must comply with all local, code requirements. Ductwork shall be constructed of galvanized steel. Diagonally cross break all panels on ducts 30 inches wide and larger, or bead using automatic bead machine with beads at 12 inches on center or less. All connections shall utilize 45° boot take-offs. Bullhead tees and straight taps are not permitted.
1. Listed manufactured ductwork system are allowed where they are installed per the manufacturer’s installation instructions and meet or exceed the requirements of the design requirements.

2.05 ROUND AND OVAL DUCTWORK

A. Round and oval ductwork shall be constructed to SMACNA round ductwork requirements of galvanized sheet steel. Comply with SMACNA HVAC Duct Construction Standards-Metal and Flexible, based on indicated static-pressure class unless otherwise indicated. Longitudinal seams shall be spiral lock seams or continuous welded. Flat oval may be utilized in space-restricted areas. All elbows shall be long radius type with centerline radius to duct diameter of 1.5, exceptions will only be allowed at restricted space locations.

B. Round or oval duct and fitting manufacturers:
1. McGill Airflow Corporation.
2. Lindab.
3. Semco.
4. Sheet Metal Connectors.
5. Spiral Manufacturing.
6. Nordfab.
7. Spiral Fittings.

8. Or equal.

C. Flat-Oval Ducts:
1. Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).

D. Transverse Joints:
1. Fabricate according to SMACNA HVAC Duct Construction Standards-Metal and Flexible, for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions. All transverse joints, including mechanical flange type fittings, to be externally sealed at all joints.
2. Exception: internal manufactured single or dual EPDM rubber gasket fittings do not require external sealant.
3. Transverse joints in ducts larger than 50” diameter require flanged joints.
4. Lap or snap lock seams are not permitted for round ductwork of any size.

E. Longitudinal Seams:
1. Select seam types and fabricate according to SMACNA HVAC Duct Construction Standards-Metal and Flexible, Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA HVAC Duct Construction Standards-Metal and Flexible. All longitudinal joints shall be sealed airtight with sealant or continuous welding.
2. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
3. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.

F. Tees and Laterals:
1. Select types and fabricate compliant with SMACNA HVAC Duct Construction Standards-Metal and Flexible, Figure 3-5, "45 Degree Tees and Laterals”, and Figure 3-6, "Conical Tees” and “45 Degree Boot Tees" for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions.
2. Spin-in type or other types of butt tees, bullhead tees or straight taps are not permitted.

G. Elbows:
1. Any deviation from a straight run shall be made using a gored or welded elbows or stamped elbows. Normal 90-degree elbows may include 5-gore fittings and the radius of the elbow is 1.5 times the diameter of the fabric duct. All gores shall be continuous metal or use fully welded joints/seams. Die stamped sheet metal elbows shall be fully welded on the heel and throat by an automated welder. Flexible duct elbows or adjustable gore type elbows are not allowed.
2. Construct long radius elbows with centerline not less than 1.5 times the duct width. Shorter radius elbows may be used where required to fit in restricted spaces with prior approval or where shown on the drawings.

2.06 DIFFUSERS, GRILLES AND REGISTERS

A. All diffusers, grilles, and registers shall be selected to provide proper air distribution for the intended occupant application. All supply air devices shall be selected to provide a maximum air velocity of 50 fpm at three feet above the floor, unless otherwise noted. Manufacturer's representative shall carefully review Architectural and Mechanical drawings and ensure diffuser/grille/register selections will provide proper air distribution at NC 25 or less. Manufacturer at no additional expense to the Owner shall replace diffusers, grilles, and registers not providing proper distribution or excessive noise at scheduled airflow.

B. All frames shall be selected to fit the ceiling type. Verify with Architectural Drawing. Each diffuser, grille and register shall be individually capable of balancing via duct mounted balancing dampers or attached opposed blade dampers. Provide unit opposed blade damper where individual duct mounted balancing dampers are not provided.

C. Refer to schedule on drawings for sizes, capacities and patterns.

D. Manufacturers: Titus, Krueger, Price, Metal Aire, Nailor, Anemostat, Carnes, Tuttle&Bailey, or equal.

2.07 FLEXIBLE DUCTWORK

A. Pre-insulated flexible round ductwork, minimum one-inch thick, Class 0 or Class 1, may be utilized for final connections to each air outlet and inlet, unless shown otherwise on the plans. Uninsulated flexible ductwork, flexible PVC or flexible aluminum duct products are not allowed. Duct shall have a minimum R-4.2 (one-inch thick) for ductwork enclosed in conditioned spaces and R-8.0 (two-inch thick) for ductwork installed in unconditioned spaces. Maximum length of flexible ductwork in each low-pressure branch shall not exceed five feet (5’) and maximum flexible connector lengths shall not exceed five feet (5’).

B. All connections shall utilize welded conical tees, aluminum conical fitting, or manufacturer high efficiency branch take-offs. Spin-in type or other types of butt tees, bullhead tees or straight taps ARE NOT permitted. Manufacturers: Flexmaster #CBD, or 45° boot take-offs by Flexmaster #STO, or equal.

C. Dampers regulators shall include end bearings as manufactured by DuraDyne, Ventlok or equal.

D. Flexible ductwork for low pressure systems with positive static pressure up to 2” w.g. positive pressure and negative pressured up to 1/2" w.g. suitable for both terminal unit connection and diffuser/grilles. Flexible ductwork fittings may be used at seismic expansion joints and to accommodate vertical drift between building levels. Fabrication shall include a multiple laminate of aluminized polyester/mylar, fiberglass insulation, and polyester, mechanically locked to galvanized steel helix without adhesives, exterior

fiberglass insulation and fire-retardant polyester/mylar outer jacket. Manufacturers: Casco #L-181M, Flexmaster #Type 5B, Thermaflex #M-KC or EverClean, or equal.

E. Flexible Duct Clamps/Draw Bands: Stainless steel band with cadmium-plated hex screw to tighten band with a worm-gear action in sizes up to 18 inches to match duct size. Use permanent screwed attachment systems for ducts sizes larger than 18”.

2.08 DUCTWORK SPECIALTIES

A. General: Where specifically called for, materials for use in fabricating ductwork specialties shall be identical to that used to fabricate ductwork. See drawings and Part 3, Execution for schedule.

B. Flexible Connections (Indoor Applications):
1. Provide flexible connectors at the discharge and inlet of fans, air handlers, rotating mechanical equipment, and where shown on the Drawings for proper vibration isolation.
2. Neoprene (polychloroprene) impregnated glass cloth with 24-gauge (minimum) galvanized metal frame. Hypalon, teflon or silicone coated fabrics may be acceptable.
3. Shall be airtight, watertight and fire retardant.
4. Minimum density of 30 oz. per sq. yard.
5. Temperature range: -40°F to 200°F
6. Neoprene-only connectors are not allowed due to non-compliant surface-burning characteristics.
7. Minimum dimensions shall be 3" metal, 3" fabric, 3" metal up to maximum dimensions of 4” metal, 6” fabric, 4” metal as required by application.
8. Manufacturers: Ventfabrics #Ventglas, Duro Dyne, Q Industries, Kinetics, Ductmate Proflex or Elgen.

C. Flexible Connections (Outdoor Applications):
1. Provide flexible connectors at the discharge and inlet of fans, air handlers, rotating mechanical equipment, and where shown on the Drawings for proper vibration isolation.
2. Hypalon (chlorosulfurated polyethylene) impregnated glass cloth with 24-gauge (minimum) galvanized metal frame.
3. Shall be airtight, watertight and fire retardant. Resistant to sunlight, ozone and weather.
4. Minimum density of 26 oz. per sq. yard.
5. Temperature range: -50°F to 275°F
7. Minimum dimensions shall be 3" metal, 3" fabric, 3" metal up to maximum dimensions of 4” metal, 6” fabric, 4” metal as required by application.
8. Provide flexible cloth insulating blanket to encase flexible connections to maintain ductwork insulation integrity as follows:
   a. Jacket shall be UV and ozone resistant with Velcro attachment.
   b. Service Operating Temperature: 0-350°F.

c. Jacket and Liner: silicon or teflon impregnated fiberglass or mineral wool cloth.
d. Insulation: Aerogel, 2” thick (minimum) or R-8 equivalent (minimum), and thicker as required by local energy code.
e. Fastening: 2” Nomex Velcro or 1” straps and stainless steel D-rings.
f. Thread: Kevlar/stainless steel thread.
g. Manufacturers: Thermal Energy Products, Coverflex, Thermaxx, Pacor, Unitherm, Advance Thermal, Fit Tight Covers, or equal.

9. Manufacturers: Ventfabrics #Ventlon, Duro Dyne, Kinetics, Ductmate Proflex or Elgen.

D. Volume and Splitter Dampers: Galvanized sheet metal blade and frame with Ventfabrics Inc., Ventlok operating hardware. For accessible dampers, provide #641 self -locking dial regulators and #644 self-locking dial regulators for insulated ductwork, #637 square end bearing, and #635 spring end bearing, as applicable. For inaccessible dampers, provide #666 or #677 concealed locking damper regulator with bearings as above. For static pressures above 3"wg, provide #640 HiVel dial regulator and #609 HiVel end bearing for accessible dampers. Regulators shall extend to and through ceiling with neatly installed hardware at the finished ceiling. For inaccessible dampers requiring adjustment through diffusers use Young Regulator, Bowden cable control system.

E. Multi-louver Volume Dampers: 16-gauge galvanized steel frame. Opposed, 6" wide, 16-gauge galvanized steel blades. Concealed linkage in frame. Ruskin #CD35/OBD or equal.

F. Ducts Through Roof: Unsupported duct penetration through a roof, without roof curbs, shall be 16-gauge (minimum), flashed and counterflashed, and provided with storm collars to secure a watertight construction.

G. Bird/Insect Screens: 19-gauge (0.91 mm) galvanized after weld wire mesh (minimum gauge), 1/2" x 1/2” openings (maximum) set in a galvanized steel frame. Or, 23-gauge (0.57 mm) galvanized after weld wire mesh (maximum gauge), 3/8" x 3/8” openings (minimum) set in a galvanized steel frame. Verify minimum requirements per local code for outdoor air intake and exhaust outlets.

H. Seismic Duct Connector (Indoors): Provide flexible connector at penetrations between two structural elements where the structural design has designated allowable seismic or settlement movement. Flexible EPDM elastomeric fabric bonded to a 1/4" steel perimeter flange on each end. EPDM shall be rated for maximum temperature of 250°F and 3 psi maximum. Connector shall be rated to meet or exceed structural design requirements with a minimum of 3” for axial compression, 3” axial extension, and 3” lateral deflection. Manufacturers: Mercer Rubber Co #ME-3/MI-9-3, Mason Industries #MD-4/MI-9, Flexicraft, Garlock, Hyspan, or equal.

I. Hanging Cables with Adjustable Fastener: Wire rope hangers for maximum point loads not exceeding 100 lbs. (45 Kg) for supporting rigid galvanized ductwork not exceeding

18” (450 mm) diameter, and suspended diffusers/grilles/terminal units. Alternate to metal strap options per SMACNA's "HVAC Duct Construction Standards - Metal and Flexible".

1. Wire Rope: High tensile steel wire rope, to ASTM 1023/1023M, class A zinc coating; 7 by 7 or 7 by 19 cross-sectional construction; having a tensile strength of 256,000 psi (1,770 N per sq. mm); lengths, diameters, and wire construction to accommodate design loads and as indicated on Construction Shop Drawings.
2. Adjustable Fastener: Mild steel (type EN1A), bright zinc plated, one-channel body; encasing a series of Type 302 stainless-steel springs with serrated self-locking grade 40 chrome steel balls, adjustable by means of an integrated mechanism, capable of accommodating load of 100 lbs. (45 kg) (maximum per hanger).
3. Manufacturers: Gripple #Standard No. 2/3/4/5, Ductmate #Clutcher, or equal.

2.09 ACCESS DOORS

A. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 7-2 (7-2M), "Duct Access Doors and Panels," and 7-3, "Access Doors - Round Duct." Access doors shall be insulated hollow core double construction. Access doors in exhaust ducts shall be of same, or heavier, gauge material as duct in which installed.

B. Casing Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 9-16, "Casing Access Doors." Access doors shall be insulated hollow core double construction of same, or heavier, gauge material as duct in which installed.

C. Minimum door size shall be 12" by 12" for simple manual access and up to 24" by 24" where personnel must pass through infrequently. Provide 20" x 54" (minimum) door for access to filters and more frequent maintenance.

D. Maximum door leakage shall not exceed 10 cfm/sq.ft. at maximum operating pressure. Doors larger than four sq.ft. in area shall open against pressure.

E. Doors:
   1. Double wall, rectangular.
   2. Galvanized sheet metal with insulation fill and gauge thickness as indicated for duct pressure class. Minimum 1” insulation thickness for doors up to 24” tall and 2” thick insulation for larger door assemblies as required per energy code. Insulation not required in exhaust duct access doors as allowed by local code.
   3. Latches: Steel cam or lever type. Access doors shall openable by hand with no tools.
   4. Vision panel shall be provided on doors 24” x 60” and larger.
   5. Fabricate doors airtight and suitable for duct pressure and air leakage class.
   6. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets for doors up to 24” tall. For larger doors provide 1-1/2" by 1/8" flat stock or 14-gauge angle frame.

7. Gaskets: Closed cell neoprene rubber, 1” x 1/4" (minimum).
8. Access Door Manufacturers (Small Dimensions, Low Pressure Rating): CESCO, Pottorff, Ruskin, Vent Products, Air Balance Inc., Ductmate Sandwich, United Enertech, or equal, as required by size and pressure application.

F. Hinges and Latches:
1. Access doors up to 14 by 14 inches (300 x 300 mm) square: Two hinges or continuous piano hinge and one sash lock. Doors shall not be removable.
2. Access doors up to 16 by 24 inches (400 by 600 mm) square: Two hinges or continuous piano hinge and two sash locks (minimum). Doors shall not be removable.
3. Access doors up to 24 by 48 inches (600 by 1200 mm): Three hinges or continuous piano hinge and two compression latches (minimum) with outside and inside handles.
4. Access doors larger than 24 by 48 inches (600 by 1200 mm): Four hinges or continuous piano hinge and two compression latches (minimum) with outside and inside handles.
5. Latch Manufacturer: Ventlok #100 Series hinges and latches on low pressure system doors up to 18 " maximum dimension, #200 Series on larger low pressure system doors, #333 Series on high pressure systems with stops, or equal.

2.10 DUCTWORK SEALANT

A. Duct tape, pressure sensitive type, is not allowed.

B. Solvent-based and oil-based sealants are not allowed indoors.

C. Seal all transverse joints, including mechanical joint flanges, similar to Ductmate, on all supply, return, exhaust, and outside air intake ducts.

D. All sealant systems for outdoor application to be suitable for use in exposure to water, sunlight, temperatures extremes associated with project location.

E. All sealant systems for indoor application to be meet VOC limits as specified in South Coast Air Quality Management District (SCAQMD) Rule #1168 limiting VOC’s to 80 grams/liter for duct liner adhesives and 250 grams/liter for duct sealants.

F. Indoor Application Water-Based Joint and Seam Sealant:
1. Flexible, adhesive sealant, suitable for high velocity and high pressure applications, UL 181B-M listed, UL 723 classified, and complying with NFPA requirements for Class 1 ducts.
   a. Sealant shall be water based latex UL 181 B-M non-reinforced sealant.
   b. Sealant shall meet flame spread rating of 0 and smoke developed rating of 0.
   c. Flexibility on 1/4” mandrel.
   d. Freeze/thaw stability - 5 cycles.
   e. Service temperature: -20°F to +200°F (-29°F to +93°C).

f. ASTM 5590; Resistance to mold, mildew and water.
g. Meet all SMACNA seal classes.
h. Meet all SMACNA pressure classes (+/-): 1/2, 1, 2, 3, 4, 6, and 10" water gauge.

2. Manufacturer: Carlisle (Hardcast) #Iron Grip 601 or #Flex-Grip 550 or #Spray-Seal, Ductmate #PROseal, Design Polymerics #DP1010 or #DP1020 or #DP 1010 Spray, or equal.

G. Indoor Application Water-Based Joint and Seam Sealant with Extended Material Warranty:

1. Flexible, adhesive sealant, suitable for high velocity and high pressure applications, UL 181B-M listed, UL 723 classified, and complying with NFPA requirements for Class 1 ducts.
   a. Sealant shall be water based latex UL 181 B-M non-reinforced sealant.
   b. Sealant shall meet flame spread rating of 0 and smoke developed rating of 0.
   c. Flexibility on 1/4" mandrel.
   d. Freeze/thaw stability - 5 cycles.
   e. Service temperature: -20°F to +200°F (-29°F to +93°C).
   f. ASTM 5590; Resistance to mold, mildew and water.
   g. Meet all SMACNA seal classes.
   h. Meet all SMACNA pressure classes (+/-): 1/2, 1, 2, 3, 4, 6, and 10" water gauge.
   i. Manufacturer: Carlisle (Hardcast) #Iron Grip 601 or #Flex-Grip 550 or #Spray-Seal and #Aluma-Grip AFT-701 rolled sealant, or equal.
2. And, all transverse joints, longitudinal seams, and duct wall penetrations shall be sealed by a 30-mil rolled sealant. Rolled sealant shall be comprised of a 2-mil foil faced with 28 mils of butyl adhesive/sealant conforming to the product specifications. Rolled sealant shall have the following physical properties:
   a. Peel Strength: 16 lbs. per linear inch.
   b. Tensile strength: 955 psi
   c. Elongation: 560%
   d. Bonding time: Instant with full bond in 24 hours.
   e. Resistance to mold, mildew and water.
   f. Weather Resistance per ASTM G-53 @ 2000 hours QUV.
   g. Service temperature: -20°F to +200°F (-29°F to +93°C).
   h. Surface burning characteristics: Flame spread/smoke developed rating of 20/40, tested in accordance with UL 723.
   i. VOC: 0 g/l
   j. Meet all SMACNA seal classes.
   k. Meet all SMACNA pressure classes (+/-): 1/2, 1, 2, 3, 4, and 6" water gauge.
   l. Manufacturer: Carlisle (Hardcast) #Aluma-Grip AFT-701 rolled sealant, or equal.

H. Outdoor Application Two-Part Tape Sealing System:

1. Woven-fiber tape impregnated with gypsum mineral compound and modified acrylic/silicone activator to react exothermally with tape to form hard, durable airtight seal.
2. Manufacturer: Carlisle (Hardcast) #Two Part II, McGill Uni-Cast, or equal.

I. Outdoor Application Low VOC Solvent Based Joint and Seam Sealant:
1. Flexible, adhesive sealant, suitable for outdoor application on joints and seams.
   a. Sealant shall be solvent based synthetic elastomeric. Water and UV resistant. Crack and peel resistant.
   b. Compliant with ASMT E84 and UL 723. Sealant shall meet flame spread rating of 0 and smoke developed rating of 0 after cured.
   c. Freeze/thaw stability - 5 cycles.
   d. Service temperature: -20°F to +190°F (-29°C to +88°C).
   e. VOC: 44 g/l.
   f. ASTM 5590 compliant for resistance to mold, mildew and water.
   g. Meet all SMACNA seal classes.
   h. Meet all SMACNA pressure classes (+/-): 1/2, 1, 2, 3, 4, 6, and 10” water gauge.
2. Manufacturer: Design Polymerics #DP1090 or equal.

J. Rolled (Tape) Mastic Sealant for indoor and outdoor application on flat sheet metal duct joints. Aluminum substrate with modified butyl sealant. Compliant with UL 181B-FX. Rolled sealant shall have the following physical properties:
1. Peel Strength: >10 lbs. per linear inch.
2. Bonding time: Instant tack with full bond in 24 hours.
3. Resistance to mold, mildew and water.
4. Weather Resistance per ASTM G-53 @ 2000 hours QUV.
5. Service temperature: -20°F to +180°F (-29°C to +82°C).
6. Surface burning characteristics: Flame spread/smoke developed rating of 5/25, tested in accordance with UL 723.
7. VOC: 0 g/l.
8. Meet all SMACNA seal classes.
9. Meet all SMACNA pressure classes (+/-): 1/2, 1, 2, 3, 4, 6” and 10” water gauge.
10. Roll width as required to maintain minimum 3/4” adhesion width on each side of joint.
11. City of Los Angeles RR#8069 approved.
12. Manufacturer: Carlisle (Hardcast) #Foil-Grip 1404-181BFX rolled sealant, or equal.

K. Manufacturers of duct sealant systems for various ductwork applications: Design Polymerics, Tremco, Dure Dyne, Carlisle Hardcast, Ductmate, Mon-Eco Industries, Sikaflex, and McGill AirSeal LLC.

2.11 PRE-INSULATED DUCT SYSTEM FOR OUTDOOR AND UNCONDITIONED LOCATIONS

A. General
1. Pre-manufactured exterior ductwork to be a double layered duct system using the Pal Phenolic duct panels pre-fabricated and assembled into inter-locking sections. This as an alternate method to contractor fabricated double wall sheet metal ductwork with internal insulation.
2. All fabricated duct segments and fittings shall be designed in accordance with "SMACNA HVAC Phenolic Duct Construction Standards" latest edition.
3. Duct sizes are limited to maximum 80" x 80" operating up to 4" w.g. positive or 3" w.g. negative pressure class.

B. System
1. The panels used in the fabrication of the ductwork system shall Pal Phenolic Duct rigid phenolic insulation panels with a thermal conductivity of 0.1977 BTU-in/hr•ft^2 °F and a minimum compressive strength of 29 psi, as manufactured by Pal International.
2. Assembled panels shall be a minimum of 2" thick and minimum R-10 insulating value.
3. Pal Phenolic Duct rigid phenolic insulation panels shall comprise a 3.4–3.75 pcf nominal density CFC/HCFC–free rigid Phenolic insulation core with zero Ozone Depletion Potential (ODP), autohesively bonded on both sides with 60-micron aluminum internal liner and a 200-micron aluminum external liner. Both liners are to be solid aluminum with no perforations.
4. All other components required for the fabrication of the system shall be from the Pal Phenolic Duct System guidelines including the sealant, contact adhesive, aluminum tape, self–adhesive gasket, ductwork reinforcements, closures, connectors and flanges.
5. Exterior weatherproof cladding shall be a 5 ply, zero permeability vapor barrier, puncture resistant, tear resistant, flexible, and meet UL-1709.

C. Fire and Smoke Performance
1. The rigid phenolic insulation panels shall achieve the following fire and smoke performance requirements:
    a. ASTM E 84–low contribution to fire growth not exceeding 25 Flame Spread and 50 Smoke Developed indices.
    b. UL 723 –low contribution to fire growth not exceeding 25 Flame Spread and 50 Smoke Developed indices.
    c. UL 181 – UL/ULC classification as a Class 1 Air Duct to NFPA Standards 90A & 90B.

D. Sealant Material
1. All internal seams must be fully sealed with an unbroken layer of Pal Phenolic sealant.
2. Each ductwork section must be duly connected with an inter-locking, double sealed jointing system. Sufficient sealant should be applied to each layer in

order to seal the rigid phenolic insulation panels and ensure minimum air leakage.

3. Ductwork reinforcement, if necessary, shall be applied to protect against side deformation from both positive and negative pressure.
4. All external seams where two separate panels join must be tiger clipped, taped and jacketed in watershed fashion whenever possible to achieve a permanent bond with weather protection and a smooth appearance.

E. Manufacturers: AQC Industries #QDuct, KoolDuct or equal.

2.12 FIBERGLASS DUCTBOARD

A. Ductboard shall be 1" thick (minimum) finished with a factory-applied thermosetting acrylic polymer coating to the air stream side resistant to potential dust incursion into the material substrate, containing an immobilized EPA-approved anti-microbial agent to further inhibit potential microbial growth as indicated by ASTM G-21 and G-22 test data and resistant to fiber shed and damage during duct cleaning operations.

B. Reinforce as necessary to assure no collapse of ducts under positive or negative pressures up to 1.0" w.g. of static pressure. Support ductwork with 3/4" wide galvanized sheet metal straps at intervals recommended by manufacturer. Protect duct wall against abrasion from support straps. Support at all fittings and each change in direction.

C. Product requirements:
1. Fiber glass duct board with a bio based thermosetting resin meeting.
2. Comply with ASTM C411, ASTM C1071, ASTM E84, UL723, and UL Greenguard Low VOC certified.
3. Comply with ASTM G21 and ASTM G22 and ASTM C1338 for microbial resistance.
4. K-value: 0.23 Btu•in./(hr•ft²•ºF) at 75°F (maximum).
5. Water vapor absorption: ASTM C1104, less than 3% by weight.
6. Noise Reduction Coefficient (NRC) equal to, or greater than, 0.75 based on ASTM C423 Type “A” mounting.
7. Maximum allowable velocity on mat or coated air side: 1,000 ft./min.
8. Surface burning: NFPA 90 A and 90B.
9. Maximum operating temperature: 250°F.
10. Flame spread index: ASTM E84, less than 25.
11. Smoke developed index: ASTM E84, less than 50.
12. Density: 3.0 lbs./cu ft. (minimum).
13. Vapor Barrier Jacket: ASJ+ (All Service Jacket) or FSK (Foil-Scrim-Kraft) aluminum foil faced reinforced with glass mineral wool yarn and laminated to fire-resistant Kraft paper.

D. Duct board must be fabricated and installed in accordance with the NAIMA or SMACNA Fibrous Glass Duct Construction Standards and all closure systems must meet the requirements of UL 181A.

E. Manufacturers: Johns Manville #Superduct RC, Certainteed #Ultra*Duct or equal.

2.13 PLENUMS AND EQUIPMENT CASINGS

A. Construct casings and plenums in conformance with SMACNA. Minimum Pressure Class: Unless otherwise indicated construct plenums and casings to withstand either a negative or positive static pressure of 4" w.g.

B. Single-Wall: Provide single-wall, casings and plenums where indicated on the drawings.
1. Construct in accordance with SMACNA Standards.
2. Use steel-angle-reinforced standing-seam construction.
3. Locate intermediate bracing angles bolted to the casing 24 inches on centers.
4. Construct for static pressure indicated or for the maximum fan static pressure whichever is less.
5. Bolt to 3" high concrete pads using 1-1/2" x 1-1/2" x 1/4" thick galvanized steel structural sections.

C. Double-Wall: Provide double-wall insulated ductwork where indicated on the drawings.
1. Construct in accordance with SMACNA Standards. Provide insulation thicknesses to meet or exceed the minimum required by local energy codes.
2. Provide 2" (minimum) thick prefabricated double wall insulated metal panel assemblies, with 16-gauge aluminum or 18-gauge minimum galvanized steel outer sheets.
3. Provide 22-gauge galvanized steel inner sheets to encapsulate the insulation.
4. Casings shall be fully metal enclosed, insulated with 2" thick (minimum) rigid fiberglass insulation and conforming to NFPA 90A, with maximum flame spread of 25 and maximum smoke developed of 50.
5. Field or factory fabricate to size and configuration indicated on the drawings, using field verified dimensions.
6. Provide coordinated shop drawings.
7. Reinforce spans 10' or greater with structural steel sections to yield maximum deflection 1/4" at minus 10" w.g. or plus 10" w.g. static pressure.
8. Provide openings and doors, all factory framed, and reinforced with 304 stainless steel structural sections.
9. Construct doors of same material as casings, of sizes and locations indicated on the drawings but not smaller than 18" by 54", and conforming to SMACNA.
10. Provide doors, hinges and hardware factory fabricated and mounted.
11. Door swings shall open against air pressure, with door latches operable from either side.
12. Provide door seals with neoprene gaskets, which have an airtight seal.
13. Provide each door with a 10" by 10" wire reinforced double pane window.
14. Bolt base channel to 3" high concrete pads.

2.14 CONTROL DAMPERS

A. General: Low leakage dampers shall be Class 1A with a maximum leakage rate of 3 cfm/ft^2 at 1.0 in wg pressure difference when tested to AMCA Standard 500.

B. Damper Type One: Airfoil Low Leakage Dampers (Galvanized Steel or Aluminum)
   1. Application: Commercial supply, return, and general exhaust air systems up to 3,000 fpm velocity. Damper shall be rated for -22°F to 122°F (-30°C to 50°C) minimum operating range.
   2. Frames to be 5" x 1"x 16-gauge galvanized steel hat-shaped channel or 5" x 1" x 0.125 anodized extruded aluminum hat channel with corner reinforcement.
   3. Blades: Airfoil shaped, single piece, 6" wide (maximum), 14-gauge galvanized steel or 6063-T5 anodized aluminum.
      a. Action:
         1) Parallel blade for open and closed control, and economizer dampers.
         2) Opposed blade for modulating and air flow measurement control.
   4. Seals: Silicone rubber or EPDM blade and jam seals.
   5. Axles: 7/16" diameter steel (minimum), hex-shaped, mechanically attached to blade.
   6. Bearings: Self-lubricating stainless steel or molded synthetic sleeve.
   7. Linkage to be concealed in frame.
   8. Crank lever for operator to be provided.
   9. Provide with mill finish on blades and frame.
   10. Damper position indicator switch(es) as required by control sequence.
   11. Manufacturer: Ruskin #CD60 or #CD50, Swartout, NCA PBD/OPD-AF-101, American Warming, Tamco, Air Balance, Greenheck, Pottorff, Nailor or equal.

C. Damper Type Two: Airfoil Low Leakage for Coastal and High Moisture Environments (Aluminum)
   1. Application: Commercial supply, return, and general exhaust air systems where damper will be exposed to damp marine air and where velocity is less than 3,000 fpm. Damper shall be rated for -22°F to 122°F (-30°C to 50°C) minimum operating range.
   2. Frame to be 5" x 1" x 0.125 anodized extruded aluminum hat channel with silicon side seals and corner reinforcement.
   3. Blades: Airfoil shaped, single piece, 6" wide (maximum), 6063-T5 anodized aluminum.
      a. Action:
         1) Parallel blade for open and closed control, and economizer dampers.
         2) Opposed blade for modulating and air flow measurement control.
   4. Seals: Silicone rubber or EPDM blade and jam seals.
   5. Axles: 1/2" diameter steel, hex-shaped, mechanically attached to blade.
   6. Bearings: Self-lubricating stainless steel sleeve or molded synthetic sleeve.
   7. Linkage to be concealed in frame.
   8. Stainless steel hardware.
   9. Damper position indicator switch(es) as required by control sequence.

10. Manufacturer: Tamco #SW Series, Ruskin #CD50, Swartout, NCA, Pottorff, American Warming, Air Balance, Greenheck or equal.

D. Damper Type Three: Heavy Duty Fan Discharge Control
1. Application: Velocity over 3,000 fpm as fan outlet damper.
2. Frames to be 8" x 2" x 12-gauge steel channel (minimum).
3. Blades to be 8" wide (maximum), 0.080 thick extruded aluminum airfoil design.
4. Seals: Silicone rubber or EPDM blade and jam seals.
5. Axles: 3/4" diameter steel, hex-shaped, mechanically attached to blade.
6. Bearings: Stainless steel sleeve type pressed into frame.
7. Linkage to be out of airstream with 10-gauge galvanized steel clevis type arms with crank lever operator.
8. Provide with mill finish on blades and frame.
9. Maximum temperature rating to be 300°F.
10. Manufacturer: Ruskin #CD102, Nailor, Swartout, Pottorff, American Warming, Air Balance, Greenheck or equal.

E. Damper Type Four: Low Leakage Airfoil Insulated Dampers
1. Application: Air handler intake and exhaust. Damper shall be rated for -25°F to 180°F (-32°C to 83°C) minimum operating range.
2. Frames to be 5" x 1"x 16-gauge galvanized steel hat-shaped channel or 5" x 1" x 0.125 anodized extruded aluminum hat channel with corner reinforcement.
3. Blades: Insulated, single piece, 6" wide (maximum), 14-gauge galvanized steel or 6063-T5 anodized aluminum, R-3.3.
   a. Action: Parallel blade for open and closed control.
4. Seals: Silicone rubber or EPDM blade and jam seals.
5. Axles: 7/16" diameter steel (minimum), hex-shaped, mechanically attached to blade.
6. Bearings: Self-lubricating stainless steel or molded synthetic sleeve.
7. Linkage to be concealed in frame.
8. Crank lever for operator to be provided.
9. Provide with mill finish on blades and frame.
10. Damper position indicator switch(es) as required by control sequence.
11. Manufacturer: Ruskin #IL35, Greenheck, Pottorff, Tamco, or equal.

F. Damper Type Five: Ultra Low Leakage Airfoil, Double Row Dampers
1. Application: Natural ventilation wall inlets and outlets with parallel (double row) damper blades. Damper shall be rated for -72°F to 275°F (-58°C to 135°C) minimum operating range.
2. Frames to be 8” x 1” steel or aluminum channel thermally broken with insulation within frame channels.
3. Blades: Airfoil shaped, single piece, 4" wide (maximum), 14-gauge galvanized steel or 6063-T5 anodized aluminum.
   a. Action: Parallel blade for open and closed control.
4. Seals: Silicone rubber or EPDM blade and jam seals.
5. Axles: 7/16" diameter steel (minimum), hex-shaped, mechanically attached to blade.

6. Bearings: Self-lubricating stainless steel or molded synthetic sleeve.
7. Linkage to be concealed in frame
8. Crank lever for operator to be provided.
9. Provide with mill finish on blades and frame.
10. Damper position indicator switch(es) as required by control sequence.
11. Manufacturer: Ruskin #CD40x2, Greenheck, Pottorff, Tamco, or equal.

2.15 BACKDRAFT AND RELIEF DAMPERS

A. Light Duty Counterbalanced Backdraft Damper
1. Applications: Low pressure ductwork systems, including outside air intake and exhaust locations.
2. Frame: Extruded aluminum channel frame with flanges to match ductwork requirements.
3. Blades: Parallel blades, horizontal orientation, 0.025” (0.6 mm) minimum formed aluminum. Maximum 6” wide blades. Extruded vinyl blade seals mechanically attached to blade edge.
4. Counterbalance: Adjustable steel weights mechanically attached to blade.
5. Mounting: Vertically or horizontally oriented as shown on the drawings.
6. Sized for maximum velocity of 1,500 fpm (7.6 m/s).
7. Maximum back pressure of 2.0” w.g. (1.1 kPa).
8. Maximum Pressure Drop Fully Open: 0.06” w.g. (15 Pa).
9. Manufacturer: Ruskin #CBD2, Greenheck #WD Series, or equal.

B. Heavy Duty Counterbalanced Backdraft Damper
1. Application: Medium pressure air ductwork and generator exhaust.
2. Frame: Galvanized steel, 16-gauge (1.5 mm) wall thickness minimum with flanges to match ductwork requirements.
3. Blades: Parallel blades, horizontal orientation, 0.05” (1.2 mm) minimum formed aluminum. Maximum 6” wide blades. Extruded vinyl blade seals mechanically attached to blade edge.
4. Counterbalance: Adjustable steel weights mechanically attached to blade.
5. Mounting: Vertically or horizontally oriented as shown on the drawings.
6. Sized for maximum velocity of 2,500 fpm (12.7 m/s).
7. Maximum back pressure of 4.5” w.g. (1.1 kPa).
8. Maximum Pressure Drop Fully Open: 0.20” w.g. (50 Pa).
9. Manufacturer: Ruskin #BD6, Greenheck #HB Series, Nailor #1380, or equal.

C. Barometric Relief Damper
1. Applications: Gravity hood exhaust, room pressurization control and stairwell pressurization relief.
2. Frame: Extruded aluminum channel frame, 0.090” (2.3 mm) wall thickness minimum with flanges to match ductwork requirements.
3. Blades: Parallel blades, horizontal orientation, 0.063” (1.6 mm) minimum formed aluminum. Maximum 6” wide blades. Extruded vinyl blade seals mechanically attached to blade edge.

4. Counterbalance: Adjustable on-blade counterweights for tuning of start-to-open and full open blade operation.
5. Axle: 3/8” (9.5 mm) galvanized steel rod with roller bearings.
6. Mounting: Vertically or horizontally oriented as shown on the drawings.
7. Sized for maximum velocity of 1,000 fpm (5.1 m/s).
8. Maximum back pressure of 2.0” w.g. (0.5 kPa).
9. Start-Open Pressure: 0.05” w.g. (12.5 Pa).
10. Manufacturer: Greenheck #BR-30 for vertical mounting, Greenheck #BD-10 for horizontal mounting, or equal.

D. Round Counterbalanced Backdraft Damper
1. Dampers shall be of the two-blade design with separate axles. Blades shall be retained in closed position with tensioned spring and field adjustable for required opening pressure. Not allowed for installation in dryer exhaust, kitchen exhaust or bypass air applications.
2. Frame: 20-gauge (1.0 mm) minimum galvanized steel.
3. Blade: 0.016” thick (0.40 mm) minimum aluminum.
4. Blade Seals: Vinyl foam.
5. Axle: 3/16” (4.8 mm) minimum steel.
6. Maximum Velocity: 1,000 fpm (7.6 m/s).
7. Maximum Pressure Drop Fully Open: 0.06” w.g. (125 kPA).
8. Manufacturer: Ruskin #BDR2, Greenheck #WDR-53 or equal.

E. Light Duty Non-Counterbalanced Neoprene Backdraft Damper
1. Applications: Low pressure exhaust from small mechanical equipment less than 2,500 cfm.
2. Frame: 16-gauge galvanized steel with flanges to match ductwork requirements.
3. Blades: Neoprene coated fiberglass. Maximum 6” wide blades.
4. Mounting: Vertically or horizontally oriented as shown on the drawings.
5. Sized for maximum velocity of 1,000 fpm (5.1 m/s).
6. Manufacturer: Ruskin #NMW2 or equal.

2.16 LOUVERS

A. Louvers are generally to be provided under Division 8 or as specified in the equipment schedules on the drawings. Where louvers are not covered on architectural plans and specifications, contractor is to provide louvers with the following minimum specifications:
1. Louvers to be 6" deep, 35° drainable fixed blade design, constructed of galvanized steel or extruded aluminum, or as specified on the plans.
2. Frames to be constructed of 6" deep channel, aluminum or galvanized steel.
3. Provide with 1/2" x 1/2" aluminum mesh bird screen mounted on backside of louver.
4. Finish/color per architect/engineer's review of manufacturers color chart or custom color matching if required.
5. Manufacturer: Ruskin #ELF6375DX or equal.

2.17 DUCT SMOKE DETECTORS (DSD)

A. Duct mounted photoelectric smoke detector. One required for each heating or cooling system supplying air in excess of 2,000 cfm, for systems serving more than one occupancy type, and for control of each combination fire/smoke damper when not controlled by Division 26 area wide detection system.

B. Coordinate with Division 26 work and electrical installer for power to smoke detector. Detector shall be installed in the system in compliance with Chapter 6 of the Mechanical Code and NFPA-72. Provide 24-volt power supply option and/or 24-volt transformer as required to coordinate with Division 26.

C. Coordinate with control installer to assure that detector shall shut down the air-moving equipment when smoke is detected and close associated damper actuator(s). Sensor shall be selected to operate with air velocity rating from 100 to 4000 fpm. Provide with metal sampling tube. Provide remote test and reset station at ceiling or as otherwise indicated. Duct smoke detector shall be installed in the supply or return in compliance with the applicable mechanical or building code. Coordinate with Section 230900 and 230593 work.

D. Provide additional duct smoke detectors per requirements of Section 6.4 of NFPA-90A. Provide one duct smoke detector at each story to the connection to a common supply and/or return and prior to any recirculation or fresh air inlet connection in air return systems having a capacity greater than 15,000 cfm and serving more than one story.

E. Provide additional duct smoke detectors in high rise buildings and I-2 Occupancies per the Section 907.2 of the Building Code with duct smoke detectors in the main return and exhaust air plenums of each air-conditioning system having a capacity greater than 2,000 cfm.

F. Manufacturer: System Sensor #D2 series or equal.

2.18 FIRE, SMOKE AND COMBINATION FIRE/SMOKE DAMPERS

A. General:
1. Provide UL labeled 3 hour rated fire dampers at 3-hour and greater penetrations.
2. Provide UL labeled 1-1/2 hour rated fire dampers at less than 3-hour penetrations.
3. All dampers to be certified under the latest UL Standard. Certification based on former non-current standards is unacceptable.
4. All damper installations to conform with NFPA 90A and manufacturer's installation instructions. Details on drawings are shown for reference only.
5. Install in ducts passing through walls, floors, and ceilings as required by code. Refer to Architectural and Mechanical plans for damper locations.
6. Provide fire, smoke and fire/smoke dampers in locations as required by local code and NFPA-90A and 92A.

7. Provide sleeves, slip joints, retaining angles, duct access doors, ceiling access panels, etc., as required to check and service the fire dampers. Slip or break away joints are not allowed to be taped or sealed.
8. Access doors shall be tight fitting hinged with hand operable cam or lever type latches. Access shall not require the use of keys, tools or special knowledge. Removable doors are not allowed. The access point shall permanently labeled with 1" (25 mm) high letters: "FIRE DAMPER", "SMOKE DAMPER", or "FIRE/SMOKE DAMPER".
9. All dampers to be designed for use in dynamic systems.
10. Dampers shall be rated for Leakage Class I. Leakage Class II may be used if damper size is smaller than available Leakage Class I dampers.
11. Dampers shall be certified for use by State and local authorities.
12. Dampers shall be installed straight and true, level in all planes, and square in all dimensions. Dampers shall move freely without undue stress doe to twisting, racking, bowing, or other installation error. Do not install actuators in area where moisture can penetrate actuator or where temperature exceeds 120°F.
13. All fire dampers shall be sized to provide equivalent free area through the damper equal to, or greater than, the free area of the connecting ductwork. Upsize fire dampers as required to minimize pressure drops. In no case is the damper pressure drop to exceed 0.20" w.g., but ideally less than 0.10" w.g .for low velocity dampers, as designed for total system static pressure allowance. Refer to submittal requirements in Part One of this section and requirements on the drawings.

B. Radiation Ceiling Fire Dampers:
1. Bladed ceiling fire damper constructed and tested in conformance with UL-555C (dynamic rating).
2. Fire damper shall have a fusible link that opens at 165°F (74°C) or 212°F (100°C) for high temperature duct applications. Installation shall be in accordance with damper manufacturer's instructions.
3. Provide fire blanket where required to obtain listed fire rating.
4. Manufacturers: Ruskin #CFD Series, Greenheck #CRD Series, or equal by Pottorff, Cesco, Nailor, or Air Balance.

C. Dynamic Fire Dampers (FD) for use in Dynamic and Static Systems:
1. Curtain fire damper constructed and tested in conformance with UL-555C.
2. Fire damper shall have a fusible link that opens at 165°F (74°C) or 212°F (100°C) for high temperature duct applications. Fire damper shall be equipped for vertical penetrations with manufacturer supplied sleeve. Installation shall be in accordance with damper manufacturer's instructions.
3. Curtain damper shall not be located in air stream during system operation, Style B or C. Clear inside opening through fire damper is to match clear inside opening of duct. Fire dampers in lined ducts are to match size of sheet metal duct.
4. Dynamic Closure Rating Velocity: 2000 fpm (minimum).

5. Allowable Pressure Drop: size damper as shown on drawings and as required to not exceed maximum allowable pressure drop of 0.10” w.g. at full air flow.
6. Pressure rating: 4” w.g.
7. Manufacturers: Ruskin #DIBD Series, Greenheck #DFD Series, or equal by Pottorff, Air Balance, Nailor or CESCO.

D. Combination Fire and Smoke Dampers (FSD):
   1. Required Locations:
      a. Install at ducted penetrations through rated fire barriers, fire walls, rated ceilings, rated corridor ceilings, shaft enclosures, and smoke barriers and partitions as defined on Architectural drawings and Chapter 7 of the Building Code.
      b. Per NFPA-90A install smoke dampers or combination fire/smoke dampers in systems with a capacity greater than 15,000 cfm to isolate the air handling equipment from the remainder of the system on the building supply and return side. Air handling units located on the floor they serve and only serving that floor are exempt. Air handling units located on the roof and serving only the floor immediately below the roof shall be exempt.
   2. General Requirements:
      a. Dampers shall be Low Leakage Class 1 in accordance with UL 555S.
      b. Dampers shall be provided as a manufactured UL listed device with electric actuator. Actuator shall be attached to sleeve outside of air stream.
      c. Temperature Rating: 165°F (74°C) or 212°F (100°C) for high temperature duct applications.
      d. Mounting: Vertical or horizontal
      e. Frame: 5” wide by 16-gauge roll formed, galvanized steel hat-channel, minimum.
      f. Sleeve: Minimum 20-gauge thickness and minimum 16” long.
      g. Bearings: Stainless steel, permanently lubricated sleeve type.
      h. Each damper shall be equipped with a controlled 15 second electric heat-actuated release device. This device is to be equipped with a push-button reset. No manual fusible links are permitted. Installation shall be in accordance with damper manufacturer's instructions. Coordinate power and smoke detector connections with electrical installer. Integral smoke detection and actuating devices may be used if listed and approved for such service. Comply with building code requirements. All combination fire and smoke dampers shall automatically reset from closed to open position upon the reapplication of power to actuators, if temperature switch is not tripped.
      i. Dampers shall be installed straight and true, level in all planes, and square in all dimensions. Dampers shall move freely without undue stress due to twisting, racking, bowing, or other installation error.
      j. Voltage: Coordinate with Division 26 work and electrical installer for power to damper actuator. Provide 24 VAC, 120 VAC or 230 VAC power option to match power supply provided by Division 26. Prior to purchase and

installation coordinate with Division 26 to align power requirements at no additional cost to Owner.

k. Electric Actuators: All gear and housing shall be steel. The actuator shall be direct coupled and employ a steel toothed cold-weld clamp for connecting to damper shafts. Aluminum clamps or set-screw attachments are not acceptable. Actuator shall be UL listed and manufactured under ISO 9001 quality control.
   1) Actuator shall carry a manufacturer's 5-year warranty.
   2) Damper position shall fail closed on loss of power.
   3) Actuator shall have microprocessor based motor controller providing electronic cut off at full open so that no noise can be generated while holding open. Holding noise level shall be inaudible. Actuator shall be incapable of burning out if stalled before full rotation is reached.
   4) Actuator shall have UL555S Listing by the damper manufacturer and be rated for 20,000 cycles minimum. Actuator shall draw no more than 0.23 amps at 120-volt running, or 0.11 amps holding at 120-volt (27 VA and 10 VA respectively for 24-volt power) for 70 in.lbs. torque.
   5) Stall and instantaneous type actuators are not acceptable.
   6) Do not install in areas where moisture can penetrate damper or actuator, nor where actuator temperature exceeds 122°F (50°C).
   7) Manufacturer: Belimo #FS Series or equal by Siemens, Johnson Controls, or Honeywell.

3. Required Options:
   a. Provide open or closed indicator assembly consisting of a single pole, double throw switch used to indicate damper blade position. Include switch mounting bracket, crank arm, blade bracket and linkage from blade to the switch. Or, provide optional actuator end switches to indicate damper open and damper closed positions. Coordinate with fire alarm system and FireFighter's Smoke Control Panel for remote indication and damper override control.
   b. Provide a damper mounted testing module to permit test cycling of the damper actuator assembly as required for start-up testing and maintenance.
   c. Provide integral duct smoke detector and coordinate with Division 26 for area smoke detection and comply with NFPA-90A and NFPA-72. All wiring to be provided by Division 26 installers. In buildings not equipped with an approved fire alarm system the smoke detection activation shall cause a visual signal and audible signal in a normally occupied area and be identified as air duct detector trouble.For exposed wall applications provide matching wall grille to maintain appearance and fire rating.
   e. Temperature limited override: Provide a two-temperature electronic high temperature limit. A primary sensor at 165°F (or higher temperature as dictated by AHJ or Building Code) can be bypassed by an external electrical signal allowing the damper to reopen and remain open until the temperature reaches the setting of the secondary sensor at 350°F at which

point the damper is closed and remains closed. Both sensors are to be equipped with manual resets.

4. Low Velocity Applications (1500 fpm or below):
   a. Maximum Rate Velocity: 1500 fpm.
   b. Style: 3V grooved blades or airfoil-shaped, single piece, double skin with mechanically fastened silicone edge seals.
   c. Allowable Pressure Drop: size damper as shown on drawings and as required to not exceed maximum allowable pressure drop of 0.10” w.g. at full air flow.
   d. Pressure rating: 4” w.g.
   e. Manufacturers: Ruskin #FSD37 or #FSD60 or #FSD60-3, Ruskin #FSDR25 or #FSDR60 round style, Greenheck #FSD-211 or #FSD-231 or #FSD-311 or #FSD-311M, or equal by Pottorff, Nailor, Cesco or Air Balance.
5. High Velocity Applications (Greater than 1500 fpm):
   a. Maximum Rate Velocity: 4000 fpm.
   b. Style: True airfoil-shaped, extruded aluminum blades with silicone edge seals.
   c. Allowable Pressure Drop: size damper as shown on drawings and as required to not exceed maximum allowable pressure drop of 0.20” w.g. at full air flow.
   d. Pressure rating: 4” w.g.
   e. Manufacturers: Ruskin #FSD60 or #FSD60-3, Greenheck #FSD-211 or #FSD-231 or #FSD-311 or #FSD-331, or equal by Pottorff, Nailor, Cesco or Air Balance.
6. Low and Medium Velocity Round Applications (3000 fpm or below):
   a. Maximum Rate Velocity: 3000 fpm.
   b. Style: Two piece 14-gauge thickness galvanized steel with mechanically fastened silicone edge seals
   c. Allowable Pressure Drop: size damper as shown on drawings and as required to not exceed maximum allowable pressure drop of 0.15” w.g. at full air flow.
   d. Pressure rating: 4” w.g.
   e. Manufacturers: Ruskin #FSDR25 or #FSDR60, Greenheck #FSDR-511, or equal by Pottorff, Nailor, Cesco or Air Balance.
7. Corridor Ceiling Application:
   a. Maximum Rate Velocity: 1500 fpm.
   b. Style: 3V grooved blades or airfoil-shaped, single piece, double skin with mechanically fastened silicone edge seals.
   c. Allowable Pressure Drop: size damper as shown on drawings and as required to not exceed maximum allowable pressure drop of 0.10” sp w.g. at full air flow.
   d. Pressure rating: 4” w.g.
   e. Manufacturers: Ruskin #FSD60-C, Greenheck #CFSD-211, or equal by Pottorff, Nailor, Cesco or Air Balance.

E. Smoke Dampers (SD):
   1. Required Locations:
      a. Install at rated smoke barriers and partitions as defined on Architectural drawings and Chapter 7 of the Building Code.
      b. Per NFPA-90A install smoke dampers in systems with a capacity greater than 15,000 cfm to isolate the air handling equipment from the remainder of the system on the building supply and return side. Air handling units located on the floor they serve and only serving that floor are exempt. Air handling units located on the roof and serving only the floor immediately below the roof shall be exempt.
   2. General Requirements:
      a. Dampers shall be Low Leakage Class 1 in accordance with UL 555S.
      b. Dampers shall be provided as a manufactured UL listed device with electric actuator. Actuator shall be attached to sleeve outside of air stream.
      c. Temperature Rating: 165°F (74°C) or 212°F (100°C) for high temperature duct applications.
      d. Mounting: Vertical or horizontal
      e. Frame: 5” wide by 16-gauge roll formed, galvanized steel hat-channel, minimum.
      f. Sleeve: Minimum 20-gauge thickness and minimum 12” long.
      g. Bearings: Stainless steel, permanently lubricated sleeve type.
      h. Smoke damper shall be equipped for vertical wall penetrations with manufacturer supplied sleeve and fail closed on loss of power. Each damper shall be equipped with a controlled 15 second electric heat-actuated release device. This device is to be equipped with a push-button reset. No manual fusible links are permitted. Installation shall be in accordance with damper manufacturer's instructions. Coordinate power and smoke detector connections with electrical installer. Integral smoke detection and actuating devices may be used if listed and approved for such service. Comply with building code requirements. All combination smoke and fire dampers shall automatically reset from closed to open position upon the reapplication of power to actuators, if temperature switch is not tripped.
      i. Dampers shall be installed straight and true, level in all planes, and square in all dimensions. Dampers shall move freely without undue stress due to twisting, racking, bowing, or other installation error.
      j. Voltage: Coordinate with Division 26 work and electrical installer for power to damper actuator. Provide 24 VAC, 120 VAC or 230 VAC power option to match power supply provided by Division 26. Prior to purchase and installation coordinate with Division 26 to align power requirements at no additional cost to Owner.
      k. Electric Actuators: All gear and housing shall be steel. The actuator shall be direct coupled and employ a steel toothed cold-weld clamp for connecting to damper shafts. Aluminum clamps or set-screw attachments are not acceptable. Actuator shall be UL listed and manufactured under ISO 9001 quality control.

1) Actuator shall carry a manufacturer's 5-year warranty.
2) Actuator shall have microprocessor based motor controller providing electronic cut off at full open so that no noise can be generated while holding open. Holding noise level shall be inaudible. Actuator shall be incapable of burning out if stalled before full rotation is reached.
3) Actuator shall have UL555S Listing by the damper manufacturer and be rated for 20,000 cycles minimum. Actuator shall draw no more than 0.23 amps at 120-volt running, or 0.11 amps holding at 120-volt (27 VA and 10 VA respectively for 24-volt power) for 70 in-lb torque.
4) Stall and instantaneous type actuators are not acceptable.
5) Do not install in areas where moisture can penetrate damper or actuator nor where actuator temperature exceeds 122□F (50°C).
6) Manufacturer: Belimo #FS Series or equal by Siemens, Johnson Controls, or Honeywell.

3. Required Options:
   a. Provide open or closed indicator option assembly consisting of a single pole and a double throw switch used to indicate damper blade position. Output from switch to position indicator light (LED, provided by Division 26) is by automatic temperature control contractor. Include switch mounting bracket, crank arm, blade bracket and linkage from blade to the switch.
   b. Provide a test module to permit test cycling of the damper/actuator in the field
   c. Provide integral duct smoke detector or coordinate with Division 26 for area smoke detection. Division 26 to provide all wiring.For exposed wall applications provide matching wall grille to maintain appearance and fire rating.
4. Low Velocity Applications (1500 fpm or below):
   a. Maximum Rate Velocity: 1500 fpm.
   b. Style: 3V grooved blades or airfoil-shaped, single piece, double skin with mechanically fastened silicone edge seals.
   c. Allowable Pressure Drop: size damper as shown on drawings and as required to not exceed maximum allowable pressure drop of 0.10" sp w.g. at full air flow.
   d. Pressure rating: 4" w.g.
   e. Manufacturer: Ruskin #SD-37, Ruskin #SD-60, Greenheck #SMD-201, Pottorff #SD-141, Pottorff #SD-151, or equal by Nailor, Cesco or Air Balance.
5. High Velocity Applications (Greater than 1500 fpm):
   a. Maximum Rate Velocity: 4000 fpm.
   b. Style: True airfoil-shaped, extruded aluminum blades with silicone edge seals.
   c. Allowable Pressure Drop: size damper as shown on drawings and as required to not exceed maximum allowable pressure drop of 0.20" sp wg at full air flow.
   d. Pressure rating: 4" wg.

e. Manufacturer: Ruskin #SD-50, Greenheck #SMD-401, or equal by Pottorff, Nailor, Cesco or Air Balance.

2.19 DUCT SILENCERS

A. Sound traps shall be IAC Acoustics, Vibro-Acoustics, Aerosonics, United McGill, Pottorff, Ruskin, Nailor or equal. Sound traps shall be sized for a maximum air pressure drop and maximum air velocity as noted on schedule.

B. Materials
1. Outer casings of rectangular silencers shall be made of 22-gauge type #G-90 lock-former-quality galvanized steel.
2. Interior partitions for rectangular silencers shall be not less than 26-gauge type #G-90 galvanized lock-former-quality perforated steel.
3. Filler material shall be as indicated on the Schedules and as appropriate for the application:
   a. Standard fill: Filler material shall be inorganic glass fiber of a proper density to obtain the specified acoustic performance and be packed under not less than 5% compression to eliminate voids due to vibration and settling. Material shall be inert, vermin- and moisture-proof.
   b. Encapsulated fill for hospital or clean room applications: Filler material shall be inorganic glass fiber of a proper density to obtain the specified acoustic performance and be packed under not less than 5% compression to eliminate voids due to vibration and settling. Material shall be inert, vermin- and moisture-proof. Filler material shall be totally encapsulated and sealed with polymeric film of an appropriate thickness. The encapsulated fill material shall be separated from the interior perforated baffles by means of a noncombustible, erosion resistant, factory-installed, acoustic stand-off. It shall not be acceptable to omit the acoustic stand-off and try to compensate for its absence by means of corrugated baffles.
   c. Packless sound traps: No sound absorptive material of any kind is to be used in the silencers. The silencers shall attenuate air/gas transmitted noise solely by virtue of controlled impedance membranes and broadly tuned resonators.
   d. “Green” fill alternate: Acoustic fill material shall be 100% environmentally friendly, and constructed of recycled natural fibers. Each fiber shall be treated with an EPA registered fungal inhibitor in order to prevent mold, mildew, fungi, and pest protection. The fill material must not contain any harmful chemicals, irritants, and/or volatile organic compounds (VOCs) in order to prevent off-gassing.
4. Combustion ratings for the silencer acoustic fill shall be not greater than the following when tested to ASTM E 84, NFPA Standard 255, or UL No. 723:
   a. Flame Spread Classification: 25
   b. Smoke Development Rating: 50

C. Construction
1. Units shall be constructed in accordance with the ASHRAE Guide recommendations for high pressure duct work. Seams shall be lock formed and mastic filled. Rectangular casing seams shall be in the corners of the silencer shell to provide maximum unit strength and rigidity. Interior partitions shall be fabricated from single-piece, margin-perforated sheets and shall have die-formed entrance and exit shapes so as to provide the maximum aerodynamic efficiency and minimum self-noise characteristics in the sound attenuator. Blunt noses or squared off partitions will not be accepted.
2. Attachment of the interior partitions to the casing shall be by means of an interlocking track assembly. Tracks shall be solid galvanized steel and shall be welded to the outer casing. Attachment of the interior partitions to the tracks shall be such that a minimum of 4 thicknesses of metal exist at this location. The track assembly shall stiffen the exterior casing, provide a reinforced attachment detail for the interior partitions, and shall maintain a uniform airspace width along the length of the silencer for consistent aerodynamic and acoustic performance. Interior partitions shall be additionally secured to the outer casing with welded nose clips at both ends of the sound attenuator.
3. Sound attenuating units shall not fail structurally when subjected to a differential air pressure of 8-inches water gauge from inside to outside the casing. Airtight construction shall be provided by use of a duct sealing compound on the jobsite material and labor furnished by the contractor.

D. Acoustic Performance
1. All silencer ratings shall be determined in a duct-to-reverberant room test facility which provides for airflow in both directions through the test silencer in accordance with ASTM Specification E477-99. The test facility shall be NVLAP accredited for the ASTM E477-99 test standard. Data from a non-accredited laboratory will not be acceptable. The test set-up and procedure shall be such that all effects due to end reflection, directivity, flanking transmission, standing waves, and test chamber sound absorption are eliminated. Acoustic ratings shall include Dynamic Insertion Loss (DIL) and Self-Noise (SN) Power Levels both for FORWARD FLOW (air and noise in same direction) and REVERSE FLOW (air and noise in opposite directions) with airflow of at least 2000 fpm entering face velocity. Data for rectangular and tubular type silencers shall be presented for tests conducted using silencers no smaller than the following cross-sections:
   a. Rectangular, inch: 24x24, 24x30, or 24x36, and
   b. Tubular, inch: 12, 24, 36, and 48

E. Aerodynamic Performance
1. Static pressure loss of silencers shall not exceed those listed in the silencer schedule as the airflow indicates. Airflow measurements shall be made in accordance with ASTM specification E477-99 and applicable portions of ASME, AMCA, and ADC airflow test codes. Tests shall be reported on the identical units for which acoustic data is presented.

2.20 AIR BLENDERS

A. Prove air blenders of size as shown on Drawings, constructed of heavy gauge aluminum, all welded. Units shall be factory constructed and tested, and installed in accordance with manufacturer's recommendations. RM Products Co, Blender Products. or equal.

PART 3 - EXECUTION

3.01 DUCTWORK GENERAL REQUIREMENTS

A. Fabricate ducts with galvanized sheet steel, except as otherwise indicated and as follows:
   1. All duct system appurtenances are to be the same material as ductwork including volume dampers and access panels.
   2. Where duct joints are not connected using flanges or manufactured assemblies, provide sheet-metal screws equally spaces around the joint or equivalent fastening method as required by mechanical code and SMACNA HVAC Duct Construction Standards-Metal and Flexible. Where sheet-metal screws are utilized provide a minimum of three screws on round ductwork and minimum four screws on rectangular ductwork. Maximum spacing between screws shall not be greater than 12” on center.
   3. Humidifier ductwork: Ductwork for humidifiers shall be constructed of 20-gauge stainless steel ductwork with longitudinal seam at top of horizontal runs and all joints sealed watertight. Duct length shall be as required by humidifier manufacturer, or as shown on drawings whichever is greater, to allow for full absorption of water vapor. This portion of duct shall include an integral drain pan and drain line connection.
   4. Shower Rooms: Exhaust ductwork serving shower rooms or other wet areas shall be constructed of stainless steel or aluminum. Where shower room exhaust ducts connect to a general exhaust riser, the non-ferrous ductwork with sealed joints need only extend to point of connection to the general exhaust riser.
   5. Environmental exhaust ductwork serving domestic clothes dryers shall be constructed of metal and shall have smooth interior surface. Provide backdraft damper at discharge to atmosphere.
   6. Non-toxic and non-hazardous wet vapor exhaust, such as dishwasher, sterilizers, cart washers, and shower exhaust systems:
      a. Material: Type 304 or 316L stainless steel, minimum 24-gauge spiral or sheet metal ductwork with G90 zinc coating. Type 304 or 316L stainless steel fittings.
      b. Joints: welded, or swaged lap-joint with silicon caulk and stainless steel sheet metal screws.
      c. All accessories shall be stainless steel including dampers, damper hardware and turning vanes.

3.02 DUCTWORK CONSTRUCTION AND SEALING CRITERIA

A. Leakage classification of ductwork shall conform to the minimum requirements of Table 3.1 and Table 3.2 (see below) based on procedures of "SMACNA HVAC Duct Construction Standards-Metal and Flexible" and "SMACNA HVAC Air Duct Leakage Test Manual" as follows:

TABLE 3.1 DUCT LEAKAGE CLASSIFICATION			
DUCT WORKING PRESSURE CLASS	AIR PRESSURE LESS THAN +/- 0.5"WC	AIR PRESSURE +/-0.5" TO +/-2.99"	AIR PRESSURE +/-3" TO +/-10" WC
SMACNA Seal Class	C	B	A
Sealing Applicable	Transverse joints	Transverse joints and longitudinal seams	Transverse joints longitu-dinal seams and all duct wall penetrations
LEAKAGE CLASS			
Rectangular sheet metal SMACNA Leakage Class	6	6	4
Round sheet metal SMACNA Leakage Class	6	4	2
Note: Duct sealant ranges and classification are generally more restrictive than SMACNA guide-lines.			

B. Ductwork shall be constructed to SMACNA pressure class based on 150% of the maximum working pressure at connection to air handling unit, or better as specified herein. Unless called out otherwise on drawings the pressure classification of ductwork shall be as follows:

TABLE 3.2 DUCT CONSTRUCTION CLASSIFICATION				
DUCT SYSTEM	**LOCATION**	**WORKING PRESSURE (ESP FROM SCHEDULE)**	**BUILD TO SMACNA PRESSURE CLASS**	**BUILD TO SMACNA SEAL CLASS**
Outdoor air intake	From outdoor air in-take to AHU	-1" wc	-2" wc	B
Low pressure supply air	Downstream of air terminal units to grilles, registers or diffusers.	+0.5"	+1" wc	B

TABLE 3.2
DUCT CONSTRUCTION CLASSIFICATION

DUCT SYSTEM	LOCATION	WORKING PRESSURE (ESP FROM SCHEDULE)	BUILD TO SMACNA PRESSURE CLASS	BUILD TO SMACNA SEAL CLASS
Low pressure supply air	From AHU to grilles, registers or diffusers.	+0.5 wc	+1” wc	B
Low pressure return air	From return grilles to AHU	-0.5” wc	-1” wc	B
Transfer air	From grille to grille, or acoustic boots or “z” bends	-/+0.25” wc	-/+0.5” wc	C
Med pressure supply air	From AHU to air terminal units	+6” wc	+10” wc	A
Med pressure supply air	From AHU to air terminal units	+4” wc	+6” wc	A
Med pressure supply air	From AHU to air terminal units	+2” wc	+3” wc	A
Med pressure return air	From air terminal units to AHU	-3” wc	-4” wc	A
Med pressure return air	From air terminal units to AHU	-2” wc	-3” wc	B
Med pressure return air	From air terminal units to AHU	-1” wc	-2” wc	B
Relief air	From AHU to discharge at outdoors	+1” wc	+2” wc	B
General exhaust	From grille to exhaust fan	-1” wc	-2” wc	B
General exhaust	From exhaust fan to discharge at outdoors	+1” wc	+2” wc	B
Toilet/shower room exhaust	From grille to exhaust fan	-1” wc	-2” wc	B
Toilet/shower room exhaust	From exhaust fan to discharge at outdoors	+1” wc	+2” wc	B

3.03 DUCTWORK LEAKAGE TESTING

A. Refer to Section 23 0593 Testing, Adjusting and Balancing for air leakage testing requirements and procedures.

3.04 DUCTWORK SPECIALTIES INSTALLATION

A. Ductwork is generally diagrammatically indicated and shall be generally installed as indicated. Do not scale Drawings for exact location of ducts. Install ducts to best suit field conditions and cooperate with other trades. Do not penetrate Structural members without consent of Architect or Structural Engineer. Check with Structural drawings prior to locating any penetrations. Duct sizes are indicated as net inside dimensions on the Drawings. The indicated dimensions shall be altered at the job site for the purpose of avoiding interferences and clearance difficulties to other dimensions producing the same air handling characteristics, provided such altered dimensions are approved by the Architect. Ducts shall be constructed in accordance with the latest edition of codes and standards identified in Part 1 and as shown on the Drawings.

1. Grilles, Registers and Diffusers: Install flush, squared, tightly sealed, and entirely covering sheet metal ductwork and gaskets. Thread sheet metal mounting screws tightly into sheet metal. All frames shall be selected to fit the ceiling type. Verify with Architectural Drawing. Each diffuser, grille and register shall be individually capable of balancing via duct mounted balancing dampers or attached opposed blade dampers. Provide unit opposed blade damper only where individual duct mounted balancing dampers are specifically noted as not provided. Duct connections shall fit securely to necks or collars behind face area. Provide all necessary transition pieces and duct collars to make connections from ductwork to neck sizes. Where ducts connect directly to necks or collars provide a minimum straight duct section of two times the duct diameter to the last elbow. Where minimum straight duct sections are not physically possible provide sheet metal plenum sized for approximately 500 fpm air velocity with duct tapped directly to side of plenum. Where building walls, floors and ceilings form portions of duct or plenum, provide gasketed angles or channels at junction points, securely bolted and sealed to building structure.
2. Install turning vanes in all mitered elbows in all ducts, so that tips are parallel with the sides of the ducts. Tips of acoustical turning vanes on outside radius shall be flush with acoustical lining.
3. Provide flexible connections to completely isolate fans from direct contact with all sheet metal work.
4. Provide access doors, as required, for access to valves, controllers, dampers and humidifier dispersion tubes. Access doors required in Product Conveying Vapor/Moisture Ductwork (see applicable paragraph above) shall not be installed in the bottom of the duct or in a manner to allow leaks.
5. Volume Dampers: Provide manual volume dampers in all supply, return and exhaust branch and run-out ductwork to grilles, diffusers, registers, and other inlet and outlet openings to facilitate balancing of air distribution systems. These are to be provided as part of contract whether shown on plans or not. Where ceilings are not accessible, provide access door or remote damper regulator. Volume dampers must be installed immediately downstream of each duct takeoff.
6. Multi-Blade Control Dampers: Provide control dampers as shown on drawings. Coordinate with BAS system provider for control actuators.

7. Clean and pretreat surfaces before application of sealant. Conform to the manufacturer's cleaning procedures. Install sealants in conformance with manufacturer's instructions.
8. Except where noted, vertical ducts or horizontal ductwork penetrating fire rated ceilings, roofs, walls and floors shall be fire separated with UL listed and labeled fire dampers installed per UL tested assembly including sleeves and retaining angles. Provide additional fire dampers indicated on the Drawings and as otherwise required by the IBC and building inspector. Provide approved firestopping between damper frames and firewalls. Install fire dampers in accordance with NFPA Standards, requirements of the State Fire Marshal, and applicable codes. Ensure that fire dampers are installed in the open position.
9. For penetration of fire rated partitions which meet the IBC Chapter Seven requirements of non-Group H occupancy penetration of tenant separation and corridor walls in buildings with fire sprinklers provide metal sleeves as follows: A minimum 12 inch-long (0.30 m) by 0.060-inch-thick (1.52 mm) steel sleeve shall be centered in each duct opening. The sleeve shall be secured to both sides of the wall and all four sides of the sleeve with minimum 1-1/2" by 1-1/2” by 0.060-inch steel retaining angles. The retaining angles shall be secured to the sleeve and the wall with No. 10 screws. The annular space between the steel sleeve and wall opening shall be filled with rock wool batting on all sides.

B. Hangers and Supports: Securely fasten all ductwork to the building construction by means of hangers, supports, guides, anchors, and sway braces to maintain duct alignment, to prevent sagging, and to prevent noise and excessive strain on ductwork due to movement under operating conditions.
   1. Maximum spacing between hangers shall not exceed ten (10) feet for rectangular sheet metal ductwork and twelve (12) feet for spiral round sheet metal ductwork. Provide hanger at each change in direction and at each branch takeoff. Refer to “SMACNA HVAC Duct Construction Standards Metal and Flexible” for additional requirements.
   2. Provide duct supports within two (2) feet of each: duct elbow; connection to flexible ductwork; connection to terminal units; connection to fan coil units; connection to exhaust fans, connection to air handling units, and fire and/or smoke dampers.
   3. Adequately mount and anchor all material and equipment as required. Include lateral bracing as required to prevent horizontal, seismic movement. Refer to IBC and Architectural and Structural Drawings for seismic requirements.
   4. Do not support ductwork from other ducts, pipes, fans or any other pieces of equipment.
   5. Powder driver fasteners shall not be used to support rectangular ducts larger than 40" maximum dimension. Powder driven fasteners shall not be allowed in existing facilities.
   6. Support round duct, larger than 36", shall have two hangers at each support point.
   7. Hangers and supports shall conform to SMACNA section "Hangers and Supports". Nail inserts, hangers and supports to formwork before slabs are

poured. Cut off or remove nails, strap-ends and other projections, flush with concrete after forms are removed.

8. Support vertical ducts, passing through floors with two continuous angles screwed to the duct and bearing to the floor and conforming to SMACNA section "Riser Support-From Floor". Blocking or shimming ducts will not be permitted.

C. Other:

1. Fans: Align fans, motors, and drives. Install fans to render bearings accessible for lubrication without dismantling fans or ducts. Provide extended bearing oilers as required. Mount all fans on vibration isolators as specified.
2. Insulation: Properly and neatly apply insulation on all material and equipment and apparatus, as specified, including all fittings. Apply insulation over clean, dry surfaces, with adjoining sections firmly butted together and canvas smoothly pasted over. When vapor barriers are specified, install continuous overall external surfaces of the entire system.
3. Duct Sizing: Where duct sizes are not specifically shown on the plans or must be modified due to physical limitations, supply ducts may be sized at a maximum velocity of 1,500 fpm or 0.08" sp friction per 100 feet, whichever provides the larger duct, and return/exhaust/intake ducts may be sized at a maximum velocity of 1,000 fpm or 0.06" sp friction per 100 feet, whichever provides the larger duct. Refer to Basis of Design for further duct sizing criteria.
4. Humidifiers: Humidifier installation shall be approved by manufacturer and coordinated with all other systems. Condensate piping shall include p-traps as recommended by the humidifier manufacturer. Insulate exposed piping as required by the code.
5. Exterior Ductwork: Ductwork located and installed outside the building envelope, on roof, grade or other location exposed to weather, shall be constructed and sealed airtight and watertight. The top of exterior ducts shall be cross-broken and sloped 1% towards edge of duct to eliminate any locations where rainwater can collect. Or, provide additional duct supports and mounting adjustments as necessary to prevent water retention on top of ductwork.
6. Double Wall Ductwork: Insulated ductwork located and installed outside the building envelope may be constructed of two layers of galvanized sheetmetal encapsulating the insulation layer. The inner duct shall be constructed as the main carrier duct with gauge and fabrication as required per the SMACNA Duct Construction Standards and minimum 24-guage. The insulation layer shall be provided as required by the local energy code or Section 23 0713 Duct Insulation, whichever is greater. The outer sheetmetal layer shall be a non-pressurized layer, minimum 24-gauge, to encapsulate the insulation layer to prevent weather degradation and optimize the insulation effectiveness for the life of the building. The top layer shall be crossbroken and sloped 1% towards edge of duct to eliminate any locations where rainwater can collect. Or, provide additional duct supports and mounting adjustments as necessary to prevent water retention on top of ductwork.

7. Access Floor Diffusers: The mounting ring for floor mounted diffusers are to be affixed to the floor tiles using a clamp insert or other method approved for use with the floor diffuser.

3.05 FLEXIBLE DUCTWORK INSTALLATION

A. Flexible insulated round ductwork connectors may be utilized where shown on the Drawings and for transitions between air handling equipment and rigid ductwork. A five (5) foot (maximum) length of flexible air duct shall be allowed to be used as an elbow at a terminal devices or air outlet/inlet, unless shown otherwise on the Drawings. No intermediate joints are allowed. Seal each end using two wraps of tape listed in accordance with UL 181B and marked 181B-FX, followed by a mechanical stainless steel screw operated drawband. Plastic drawbands are not allowed. Support duct to maintain smooth shape without sagging. All connections shall utilize welded conical tees, aluminum conical fitting, Flexmaster #CBD, or 45° boot take-offs by Flexmaster #STO. Spin-in type or other types of butt tees, bullhead tees or straight taps are not permitted. Damper regulators shall include end bearings as manufactured by DuraDyne, Ventlok or equal.

B. Flexible duct runouts to diffusers and grilles is limited to the following sizes:
1. 6” diameter: Up to 100 cfm
2. 8” diameter: Up to 200 cfm.
3. 10” diameter: Up to 360 cfm.
4. 12” diameter: Up to 600 cfm.
5. 14” diameter: Up to 900 cfm.

3.06 EXPANSION JOINTS

A. At a non-rated penetration through an expansion joint wall:
1. Provide insulated flexible ductwork through expansion joint. Flexible connector shall be no longer than five feet between segments of rigidly attached ductwork.

B. At a fire/smoke rated penetration through an expansion joint wall:
1. Provide required fire/smoke damper with sleeve through rated assembly as required by Building Code and manufacturer’s instructions. Provide breakaway duct connections as required by manufacturer’s listing. Ductwork bracing on either side of wall must not be rigid within ten feet of wall to allow for building movement. Seismic restraints must not be closer than ten feet of expansion joints on either side of wall. Following a building seismic/movement event the ductwork will need to be inspected and possibly reattached to the fire/smoke damper.

3.07 DUCT SILENCER REQUIREMENTS

A. Install the duct silencer per manufacturer's basic installation instruction.

B. Do not locate duct silencers within one duct diameter from fan discharge/intake openings, elbows, or takeoffs.

C. Where multiple duct silencer units are grouped together in parallel within the duct system they shall be sealed airtight at all joints.

3.08 FABRIC AIR DISPERSION SYSTEM

A. Clean each air handling unit and rigid ductwork prior to installing the fabric air dispersion duct system.

B. Temporary Closure: At ends of ducts which are not connected to equipment of distribution devices at time of ductwork installation, cover with fire retardant film or other covering which will keep the ductwork system clean until installation is completed.

C. If fabric air dispersion system becomes soiled during installation, these sections should be removed and cleaned following the manufacturer's standard terms of laundry.

3.09 STAINLESS STEEL DUCTWORK

A. For installations serving moisture, vapor, or fume exhaust.
   1. For connections to hoods or equipment provide minimum 12" length flanged and bolted stainless steel spool piece connection.
   2. All fittings shall be long radius. Round elbows shall be minimum 5-gore.
   3. Slope horizontal ductwork back toward source connected equipment minimum 1% slope so that moisture and liquids may drain back toward equipment.
   4. Low point "traps" in the ductwork shall be fitted with a low point drain valve, 1/2" welded connection, stainless steel piping and valve.
   5. All welding to be completed by certified welders experienced in 316 stainless steel.

3.10 DUCTWORK SEALANT METHODS

A. General
   1. Installation shall meet or exceed all applicable federal, state and local requirements, referenced standards and conform to codes and ordinances of authorities having jurisdiction.
   2. All installation shall be in accordance with manufacturer's published recommendations.
   3. Cleanliness:
      a. Before installing sealant, Surface must be dry and be free of dirt, oil, grease, and loose or foreign matter that could impair adhesion wipe ductwork to a visibly clean condition.
      b. During construction, provide temporary closures of metal or taped polyethylene on open ductwork and duct taps to prevent construction dust or contaminants from entering ductwork system. Seal ends of ductwork

prior to installation to keep ductwork interior clean. Remove closures only for installation of the next duct section.

c. During duration of construction, maintain the integrity of all temporary closures until air systems are activated.

d. Follow the Advanced Level requirements as found in the SMACNA Duct Cleanliness for New Construction Guidelines.

B. Installation of Mastic/Sealant Duct System

1. One Part Sealant System:

a. Apply one-part sealant system at a 20 to 30 wet mil thickness with a brush, putty knife; caulk gun or spray to duct joints, fasteners and seams. Tool, if necessary, caulk bead with putty knife or brush. Let dry per manufacturer data sheet of a minimum of 48 hours.

2. Or, One Part Spray Applied Sealant System:

a. Use a manufacturer approved airless sprayer capable of application pressure up 2,000 psi spraying through a minimum 0.111 tip. Apply in a smooth application perpendicular to the substrate at a rate of 20 to 30 wet mils to joints, seams and duct wall penetrations per manufacturer's technical data sheet. Let dry per manufacturer data sheet of a minimum of 48 hours.

C. Installation of Mastic/Sealant Duct System with 10-Year Warranty

1. Installation of Rolled Sealant Tape over Mastic/Sealant:

a. Cut desired length for each side of the ductwork; peel off release liner and center over joint, seam or penetration. The rolled sealant should completely cover the sealant. Use hand pressure to place the rolled sealant followed by a squeegee application. Lap tape end 2 inches (50 mm minimum). Squeegee rolled sealant to insure bond and complete adhesion to the duct. Instant adhesion requires precise positioning. Not re-positional. Four-Bolt flange requires applying corner pieces prior to applying the edge strips.

D. Field Quality Control

1. Allow duct sealant system to cure minimum 48 hours before pressure testing for the fluid applied Sealants. Rolled sealants can be tested immediately with duct leakage tester.
2. Ductwork leakage testing and/or inspection shall be performed prior to installation of external ductwork insulation.
3. Notify Owner's Representative a minimum of seven (7) calendar days in advance of leakage testing.
4. Leaks identified during ductwork air leakage testing shall be repaired by:
5. Complete removal of the sealing materials.
6. Thorough cleaning of the joint surfaces.
7. Installation of multiple layers of sealing materials.
8. Discrepancies found during testing and balancing between duct traverses and diffuser/grille readings shall result in re-inspection, repair and retest until discrepancies are eliminated.

3.11 INSTALLATION OF EXPOSED DUCTWORK

A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.

B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.

C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.

D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.

E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.12 FIBERGLASS DUCTWORK INSTALLATION

A. Fiberglass ductboard may be utilized as an option to sheet metal ductwork in the following applications and where indicated on the drawings:
   1. Return air transfer ducts between two adjacent rooms with maximum design static pressure in the following range: -0.5" w.g. to +0.5" w.g.

3.13 FIRE AND COMBINATION FIRE/SMOKE DAMPER INSTALLATION

A. Install per manufacturer’s and UL installation requirements.

B. For buildings with no fire alarm system all fire/smoke dampers shall be interconnected with the HVAC unit’s controls and duct smoke detectors. The detection of smoke at any fire/smoke damper shall stop for HVAC unit fans and close all fire/smoke dampers. A single test/reset station shall be capable or resetting all devices back to normal operation.

C. Smoke and fire/smoke dampers shall close upon activation of a listed smoke detector or detectors installed in accordance with Chapter 7 of the Building Code. Other than in mechanical smoke control systems, smoke and fire/smoke dampers shall be closed upon fan shutdown where local smoke detectors require a minimum velocity to operate. Coordinate with electrical installer for all work associated with smoke and fire/smoke damper wiring and smoke detector initiation.

3.14 CONTROL DAMPER INSTALLATION

A. Note that installation of control dampers is a part of the mechanical contractor’s work regardless of whether they are specified in this section or as part of products to be selected by the Control Contractor.

B. When electric actuators are provided, dampers shall be installed to allow direct over the shaft mounting of actuators. No connecting rods and stand off brackets shall be necessary.

C. Dampers shall be installed straight and true, level in all planes, and square in all dimensions. Dampers shall move freely without undue stress due to twisting, racking (parallellogramming), bowing, or other installation error.

D. Blades shall close completely. Leakage shall not exceed manufacturer's specifications at rated static.

E. Structural support shall be provided as necessary for all multi-section dampers.

F. Where blankoffs or structural supports obstruct duct or air passages, the decrease in free area shall not exceed 15% of the damper face area unless otherwise specified here or on plans.

G. No individual damper section may exceed 20 sq. ft.

H. Dampers shall be parallel blades style for outside air economizer to facilitate improved mixing of outside air and return air. Airflows shall be directed towards each other.

I. Where ducts penetrate an exterior surface install a Class I motorized damper at each outdoor air supply opening, exhaust opening, relief outlet, shaft vent and stairway vent, as required to comply with minimum requirements of the local Energy Code.
   1. Dampers shall be installed with automatic controls configured to close when the systems or spaces served are not in use or during unoccupied period warm-up and setback operation, unless the system served requires outdoor air or exhaust air or operates continuously or the dampers are opened to provide intentional economizer cooling.
   2. Stairway and shaft vent dampers shall be installed with automatic controls configured to open upon the activation of any fire alarm initiating device of the building's fire alarm system or the interruption of power to the damper.

3.15 SEISMIC REQUIREMENTS

A. See Section 23 0549 for specific requirements.

B. All HVAC equipment and machinery shall be anchored to withstand forces generated by earthquake motions. As a minimum, equipment and equipment frames shall be designed to withstand a force of 100% of the weight of the equipment and frame acting at its center of gravity. Anchorage of the equipment and/or frame to the structure shall be for a force of four times gravity also acting at the center of gravity.

C. The seismic calculations shall be the responsibility of the structural engineer.

D. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by applicable building codes. Comply with the California Building Code and ASCE/SEI 7.
   1. Space lateral supports a maximum of 40 feet (12 m) and longitudinal supports a maximum of 80 feet (24 m) on center.
   2. Brace each change of direction longer than 12 feet (3.7 m).

E. Select seismic-restraint devices with capacities adequate to carry present and future static and seismic loads.

F. Install cables so they do not bend across edges of adjacent equipment or building structure.

G. Install cable restraints on ducts that are suspended with vibration isolators.

H. Install seismic-restraint devices using methods approved by the AHJ.

I. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.

J. Drilling for and Setting Anchors:
   1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcement or embedded items during drilling. Notify the Architect if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
   2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
   3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
   4. Set anchors to manufacturer's recommended torque, using a torque wrench.
   5. Install zinc-coated steel anchors for interior applications and stainless-steel anchors for applications exposed to weather.

3.16 EQUIPMENT

A. Install equipment as shown on plans and in accordance with manufacturer's installation recommendations.

3.17 SUPPLY DIFFUSER AND REGISTER LOCATIONS

A. Coordinate location of supply outlets with ceiling mounted smoke detectors. Locate outlets or outlet distribution so as to prevent airflow from inhibiting the operation of smoke detectors. Locate ceiling outlets a minimum of 3'-0" from smoke detectors.

3.18 PAINTING

A. Where the interior surfaces of ductwork are visible through the blades of supply outlets, return inlets, and exhaust inlets - paint the interior visible surfaces with one coat of flat black paint.

B. Ductwork exposed on the roof or exterior to the building shall be painted. Coordinate with Division 9 for requirements.

3.19 FIELD QUALITY CONTROL

A. Do not insulate or conceal ductwork before inspection by Owner's Representative, Architect or Engineer. If ductwork is insulated and concealed prior this inspection the Contractor shall remove insulation and ceiling to permit inspection at no additional cost to the Owner. The Contractor shall replace the insulation and ceiling after final inspection at no additional cost to the Owner.

B. Ductwork Deflection Criteria:
   1. Maximum inward and/or outward deflection at sheet metal panels shall be 3/4" under maximum static pressure operating conditions. Additional intermediate stiffening angles shall be installed where deflections exceed 3/4".
   2. Maximum inward and/or outward deflection at sheet metal elbows and joints shall be 1/4" under maximum static pressure operating conditions. Additional stiffening angles shall be installed where deflections exceed 1/4".

C. Acceptance of duct systems shall be contingent upon conformance with the requirements specified in Section 23 0593 "Testing, Adjusting and Balancing".

3.20 ADJUSTING AND CLEANING

A. Clean the inside of plenums, casings, enclosures, fans, and accessible ductwork before starting fans. Blowout coils and condensate piping with compressed air. Comb all coil fins that may be bent. Install a clean set of filters in each system prior to testing and balancing. Proceed with testing and balancing. All dampers shall be locked in place.

3.21 DUCT SEALING ALTERNATIVE

A. Occasionally a ducted system will experience leaks after the ductwork has been installed and sealed per one of the SMACNA duct sealant classifications. These leaks may not be identifiable until after ductwork has been installed and system air balancing and leakage testing has been engaged. At the contractor’s option an alternative solution to sealing such leaks may include the use of a water based sealing agent that is introduced to the interior of the duct system.
   1. Manufacturer: Aeroseal LLC or approved equal. Application must be performed by manufacturer approved provider.
   2. Sealant must be UL 723 approved for smoke and flame spread.

3. Sealant must be UL 181 approved for humidity, mold growth, temperature, erosion and puncture resistance.

B. Duct Sealing Procedure:
   1. Preparation:
      a. Inspect the entire duct shaft and horizontal plenums for major leakage sites (larger than 1/2” across).
      b. Mechanically clean duct shaft per NADCA (National Air Duct Cleaners Associations) standards if more than 1/8” of surface contaminants are visible on duct surfaces.
      c. Repair all major leakage sites using mastic and fiberglass mesh tape per SMACNA standards.
      d. Temporarily remove or protect all building controls and smoke detectors from aerosol particles as recommended by the Manufacturer.
      e. Temporarily disable fire alarms and notify appropriate authorities.
      f. Temporarily isolate air-moving equipment and block off air inlets and air outlets as recommended by the manufacturer.
      g. Protect occupied spaces from aerosol particles as recommended by the Manufacturer.
      h. Protect air-moving equipment, air inlets and outlets and other devices and appurtenances as recommended by the manufacturers.
   2. Duct Sealing:
      a. Seal existing ductwork from the inside using automated aerosolized sealant injection as recommended by manufacturer or by manually caulking internally with sealant.
      b. Sealant must cure within 2 hours with no odor or VOC off-gasing thereafter.
      c. Sealant shall remain elastic (not harden rigidly) after curing.
      d. Sealant shall be deposited substantially at areas of leakage only, and shall not coat interior duct walls, duct lining material, dampers, or turning vanes.
      e. Seal all test holes using patching plates sealed with mastic.
      f. Repair or replace insulation to match existing.
      g. Seal all injection openings with duct access doors or replace ductwork to match existing.
   3. Duct Reassembly and Cleanup:
      a. Reinstall building controls and smoke detectors.
      b. Enable fire alarms and notify appropriate authorities.
      c. Remove blocking, reinstall grills and registers, and enable air handling fans.
      d. Cleanup sealant residue that may have adhered to surfaces in occupied areas as recommended by the Manufacturer.
      e. All work shall be done in a substantial and workmanlike manner by factory-trained technicians.
   4. Testing:
      a. Provide pre-sealing and post-sealing leakage profile reports indicating percentage reduction of duct leakage for both supply and return ductwork.

b. Retest ductwork and document compliance with air leakage requirements as identified in section 23 0593 Testing, Adjusting and Balancing.

5. Warranty:
   a. The Contractor shall warrant that the aerosol sealant application will be free from defects for a period of 3 years from date of the sealing application. If defects should occur during this period, the Contractor shall repair or replace the defective duct seals, including the direct labor costs for performing the repair or replacement, at no additional cost to the Owner.

END OF SECTION

SECTION 23 34 16 - INLINE FANS

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 23 0500 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. All work to be furnished and installed under this Section shall comply with all the requirements of Division 1, and shall include, but not necessarily be limited to, the following:
   1. Small Cabinet Fans (Ceiling Mounted)
   2. Cabinet Fans (Inline)

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Section 23 0500: Basic HVAC Materials and Methods

B. Section 23 0593: Testing, Adjusting and Balancing

C. Section 23 3113: Air Distribution

D. Division 26: Electrical

1.04 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Provide units that are the standard product of an equipment manufacturer regularly engaged in the production of such units who issues complete catalog information on such products. Units shall not be fabricated by the Contractor.

B. Codes and Standards: Provide air handling units conforming to the requirements of the latest addition of the following:
   1. Air Movement and Control Association (AMCA):
      a. 99: Standards Handbook
      b. 210: Laboratory Methods of Testing Fans for Rating
      c. 300: Reverberant Room Method for Sound Testing of Fans
      d. 320: Laboratory Methods of Sound Testing of Fans Using Sound Intensity
      e. 301: Methods for Calculating Fan Sound Ratings from Laboratory Test Data

2. American National Standards Institute (ANSI):
   a. 9: Load Ratings and Fatigue Life for Ball Bearings
   b. 11: Load Ratings and Fatigue Life for Roller Bearings
3. National Electrical Manufacturers Association (NEMA): Except for motors, provide electrical components required as part of air handling units, which comply with NEMA Standards.
4. National Fire Protection Association (NFPA):
   a. 70: National Electrical Code
   b. 90A: Standard for the Installation of Air Conditioning and Ventilating Systems
   c. 90B: Standard for the Installation of Warm Air Heating and Air Conditioning Systems
5. Sheet Metal and Air Conditioning Contractors' National Association, Inc. (SMACNA): Comply with applicable SMACNA standards including "HVAC Duct Construction Standards - Metal and Flexible."
6. Underwriters Laboratories, Inc. (UL):
   a. UL 507: Standard for Electric Fan
   b. UL 705: Standard for Power Ventilators
   c. UL 1004: Standard for Rotating Electrical Machines-General Requirements

1.05 SAFETY PROVISIONS

A. Provide all open drives and fan wheels subject to maintenance and potential entanglement with protective guards or screens, with maximum 1/2” openings, meeting OSHA requirements.

1.06 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data for units showing dimensions, weights, capacities, ratings, fan performance with operating point clearly indicated, motor electrical characteristics, and finishes of materials, installation instructions, sound and vibration test report, and bearing life calculations.

B. Shop Drawings: Submit shop drawings showing unit dimensions, weight loadings, required clearances, field connection details and methods of support. Draw to a scale of 1/4” per one foot. Include field fabricated mixing boxes, dampers and duct connections.

C. Maintenance Data: Submit maintenance instructions, including instructions for lubrication, motor and drive replacement, and spare parts lists. Include this data, product data, shop drawings, and wiring diagrams in operating and maintenance manuals.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver unit to the site in containers with manufacturer's stamp or label affixed.

B. Store and protect equipment and products against dirt, water, chemical, and mechanical damage. Do not install damaged unit - remove from project site.

1.09 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 23 0500 for additional warranty and Substantial Completion requirements.

PART 2 - PRODUCTS

2.01 GENERAL FAN REQUIREMENTS

A. Construction, Rating and Testing: Provide fans constructed and factory tested in accordance with the Air Moving and Conditioning Association (AMCA). All fan wheels shall be statically and dynamically balanced. Size and capacity as indicated on the Drawings.

B. Motors and Drives: Provide premium efficiency drip-proof motors with temperature rise not greater than 40°C above ambient temperature.
   1. Belt Drive Fans: Provide belt drive assembly capable of 150% of the motor rated horsepower on one less than the total number of belts, for belt drives with two or more belts. All drives shall have adjustable sheaves to allow adjustment of +/- 20%. Provide premium efficiency multi-speed motors as indicated on the drawings.
   2. Direct Drive Fans: Provide ECM or premium efficiency motors as indicated on the drawings.

C. Accessories: Provide, as indicated on the drawings and specified in other paragraphs of this Section.

2.02 SMALL CABINET FANS (CEILING MOUNTED)

A. Ceiling mounted exhaust fans:
   1. Manufacturer: Greenheck SP-A, Panasonic, Cook, Penn, Carnes, Twin City, Air King or equal.
   2. General: Provide centrifugal direct drive type ceiling exhaust fan. The fan wheel(s) shall be of the forward curved centrifugal type and dynamically balanced.
   3. Noise Data: Provide sone or octave band noise values at the required air delivery.

4. Fan Housing: The fan housing shall be constructed of heavy gauge galvanized steel. The housing interior shall be lined with 1/2-inch acoustical insulation, or better. The outlet duct collar shall include a backdraft damper on all sizes and shall be spring loaded on larger units above 200 cfm.
   a. Integral backdraft damper shall be totally chatter-proof with no metal-to-metal contact.
   b. Entire fan, motor and wheel assembly shall be easily removable without disturbing the housing.
   c. Outlet shall be adaptable for horizontal or vertical discharge.
5. Motor speeds shall not exceed 1100 RPM and all fan motors shall be suitably grounded and mounted on rubber-in-shear vibration isolators.
6. Grille: For 300 cfm and smaller fans the grille shall be constructed of high impact polystyrene and for larger sizes the grille shall be constructed of aluminum. Grilles shall be non-yellowing.
7. The access for wiring shall be external. The motor disconnect shall be internal and of the plug-in type. The motor shall be mounted on vibration isolators.
8. All fans shall bear the AMCA Certified Ratings Seal for sound and air performance and shall be UL/cUL Listed.

2.03 CABINET FANS

A. Inline Cabinet Fans (Belt Drive and Direct Drive)

B. Duct mounted supply, exhaust or return fans shall be of the centrifugal, direct drive or belt driven in-line type.

C. Housing: The fan housing shall be of the rectangular design constructed of heavy gauge galvanized steel or aluminum and shall include rectangular duct mounting collars. A hinged or removable panel shall be provided in the fan cabinet of sufficient size to permit access for service to all of the fan’s internal components without dismantling the cabinet.

D. The fan wheel shall be of the galvanized steel or aluminum, backward-inclined, centrifugal type. Wheels shall be dynamically and statically balanced. The wheel shaft shall be grounded and polished steel mounted in permanently sealed pillow block bearings.

E. Drives shall be sized for a minimum of 150% of driven horsepower. Bearings shall be selected for a minimum L10 life in excess of 100,000 hours at maximum cataloged operating speed.

F. Motors shall be of the heavy-duty type with permanently sealed ball bearings.
   1. Belt drive: Pulleys shall be of the machined cast iron type, keyed and securely attached to the wheel and motor shafts. The motor pulleys shall be adjustable for final system balancing.
   2. Direct drive: Electronically commutated (EC) motor with potentiometer dial mounted on motor for speed adjustment and 0-10 VDC control wire inputs for connecting to the building automation system for remote control.

a. Up to 3/4 hp: 115 volts
b. 1 hp: 115/208-230 volts
c. 2 hp and over: 208-230 volts

G. All fans shall bear the AMCA Certified Ratings Seal for air performance.

H. NEMA-1 disconnect switch to be factory mounted and wired.

I. Manufacturers: Greenheck #SQ and BSQ Series, Cook, Penn, Carnes, Twin City or equal.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Coordinate motor starters with Division 26 and controls contractor.

B. Install in accordance with manufacturer's instructions.

C. Examine site to verify if site is ready to receive work. Provide layout drawings of air handlers and fan locations to electrical installer.

D. Install unit on vibration isolators.

E. Install 3" flexible duct connection at inlet and outlet of each unit.

F. Control installers shall install all wiring associated with control signals into the fan starters.

G. Electrical installer shall install all line voltage power wiring and conduit. Coordinate with Division 26 work.

3.02 MANUFACTURER'S START-UP SERVICES

A. The manufacturer shall provide start-up service in the form of a factory trained service technician. The service technician shall verify correct installation, verify unit mounting, verify fan rotation, verify spring isolator adjustments, verify control wiring, verify power wiring, start-up the fans, and check for proper operation. The service technician shall provide final adjustments to meet the specified performance requirements. Fully staffed parts and service personnel shall be within four-hours travel time from the job site.

END OF SECTION

SECTION 23 73 14 - DEDICATED OUTSIDE AIR HANDLING UNITS

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 230500 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. All work to be furnished and installed under this Section shall comply with all the requirements of Division 01, and shall include, but not necessarily be limited to, the following:
   1. Air Handling Units
   2. Fans

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Section 230500: Basic HVAC Materials and Methods

B. Section 230593: Testing, Adjusting and Balancing

C. Section 230902: Variable Frequency Drives (VFD)

D. Section 230700: Mechanical Insulation

E. Section 233113: Air Distribution

F. Division 26: Electrical

1.04 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Provide packaged units that are the standard product of an equipment manufacturer regularly engaged in the production of such units who issues complete catalog information on such products. Units shall not be fabricated by the Contractor.

B. Codes and Standards: Provide air handling units conforming to the requirements of the latest addition of the following:
   1. Air Movement and Control Association (AMCA):
      a. 99 - Standards Handbook

b. 210 - Laboratory Methods of Testing Fans [Unit shall bear AMCA Certified Rating Seal]
c. 300 - Reverberant Room Method for Sound Testing of Fans [Unit shall bear AMCA Certified Rating Seal]
d. 301 - Methods for Calculating Fan Sound Ratings from Laboratory Test Data
e. 500 - Test Method for Louvers, Dampers, and Shutters

2. American National Standards Institute (ANSI):
   a. 9 - Load Ratings and Fatigue Life for Ball Bearings
   b. 11 - Load Ratings and Fatigue Life for Roller Bearings
   c. 900 - Test Performance of Air Filter Units
3. Air-Conditioning, Heating and Refrigeration Institute (AHRI):
   a. 340/360 – Performance Rating of Commercial and Industrial Unitary Air-Conditioning and Heat Pump Equipment
   b. 410 - Forced-Circulation Air-Cooling and Air-Heating Coils
   c. 430 - Central-Station Air-Handling Units
4. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
   a. 15 - Safety Code for Mechanical Refrigeration
   b. 193 – Method of Test for Determining the Air Leakage of HVAC Equipment. All systems that move less than 3,000 cfm shall comply with less than 1.4% cabinet leakage rate.
5. National Electrical Manufacturers Association (NEMA): Except for motors, provide electrical components required as part of air handling units, which comply with NEMA Standards.
6. National Fire Protection Association (NFPA): Provide air handling unit internal insulation having flame spread rating not higher than 25 and smoke developed rating not higher than 50:
   a. 70 - National Electrical Code
   b. 90A - Standard for the Installation of Air Conditioning and Ventilating Systems
   c. 90B - Standard for the Installation of Warm Air Heating and Air Conditioning Systems
7. Sheet Metal and Air Conditioning Contractors' National Association, Inc. (SMACNA): Comply with applicable SMACNA standards including "HVAC Duct Construction Standards - Metal and Flexible."
8. Underwriters Laboratories, Inc. (UL): Except for motors, provide electrical components required as part of air handling units, which have been listed and labeled by UL.
9. Units shall be listed and labeled by either UP or ETL for air handler construction.

1.05 PRODUCT SUBSTITUTIONS

A. The Contractor shall certify the following items are correct when using substituted products other than those scheduled or shown on the drawings as a basis of design:
   1. The proposed substitution does not affect dimensions shown on drawings.

2. The Contractor shall pay for changes to building design, including engineering design, detailing, structural supports, and construction costs caused by proposed substitution.
3. The proposed substitution has no adverse effect on other trades, construction schedule, or specified warranty requirements.
4. Maintenance and service parts available locally are readily obtainable for the proposed substitute.

B. The Contractor further certifies function, appearance, and quality of proposed substitution are equivalent or superior to specified item.

C. The Contractor agrees that the terms and conditions for the substituted product that are found in the contract documents apply to this proposed substitution.

1.06 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data for packaged units showing dimensions, weights, capacities, ratings, fan performance with operating point clearly indicated, motor electrical characteristics, finishes of materials, installation instructions, sound and vibration test report, and bearing life calculations.

B. Maintenance Data: Submit maintenance instructions, including instructions for lubrication, filter replacement, motor and drive replacement, and spare parts lists. Include this data, product data, shop drawings, and wiring diagrams in operating and maintenance manuals; in accordance with requirements of Division 1.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver unit to the site in containers with manufacturer's stamp or label affixed.

B. Store and protect unit against dirt, water, chemical, and mechanical damage. Do not install damaged unit - remove from project site.

1.09 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 230500 for additional warranty and Substantial Completion requirements.

PART 2 - PRODUCTS

2.01 DOAS HEATING/COOLING UNIT

A. GENERAL:
1. Outdoor rooftop mounted, electrically controlled heating and cooling unit. Unit shall discharge supply air downward or horizontally as shown on contract drawings.
2. Unit shall be rated in accordance with ARI Standards 210, 240 and 270. Designed in accordance with UL Standard 465.
3. Unit shall be designed to conform to ANSI/ASHRAE 15.
4. Unit shall be UL tested and certified in accordance with ANSI Z21.47 Standards and CSA or CGA certified as a total package.
5. Roof curb shall be designed to conform to NRCA Standards.
6. Insulation and adhesive shall meet NFPA 90A requirements for flame spread and smoke generation.

B. Manufacturers: iAIRE, Carrier, Trane, Daikin, York, Lennox, Aaon, Engineered-Air, or equal.

C. Equipment:
1. General:
a. Factory assembled, single piece heating and cooling unit. Contained within the unit enclosure shall be all factory wiring, piping, controls, refrigerant charge (R-410A) and special features required prior to field start-up.
2. Unit Cabinet:
a. Unit cabinet shall be constructed of galvanized steel, bonderized and coated with a pre-painted baked enamel finish on all externally exposed surfaces.
b. Insulation: See Table below.
c. Cabinet panels shall be easily removable for servicing. See Table below.
d. Filters will be accessible through a hinged access door, and will require no panel or screw removal.
e. Holes shall be provided in the base rails for rigging shackles to facilitate maneuvering and overhead rigging.
f. Unit shall have a factory installed internal condensate drain trap made of a non-corrosive material, providing a minimum 3/4" connection.
3. Fans:
a. Indoor blower (evaporator fan):
1) Fan shall be direct or belt driven as specified here (See matrix below). If belt driven the drive shall include an adjustable pitch motor pulley.
2) Bearings shall be sealed, permanently lubricated ball bearing type for longer life and lower maintenance.
b. Indoor blower shall be made from steel with a corrosion resistant finish and shall be dynamically balanced.

c. Outdoor (condenser) fan shall be of the direct driven propeller type and shall discharge air vertically upward.

4. Compressor:
   a. Fully hermetic type, internally protected.
   b. Factory rubber shock mounted and internally spring mounted for vibration isolation.
   c. Equipped with a factory installed crankcase heater to minimize liquid refrigerant accumulation in compressor during shutdown and prevent refrigerant dilution of oil.
5. Coils:
   a. Evaporator and condenser coils shall have fins mechanically bonded to seamless tubes with all joints brazed.
   b. Tube sheet openings shall be belled to prevent tube wear.
   c. Evaporator coil shall be of the full-face active design, degreased at the factory.
6. Heating Section:
   a. Heat Pump Heating Section:
      1) The evaporator coil, condenser coil, compressors and refrigerant circuit shall be designed for heat pump operation. The refrigerant circuit shall contain a 4-way reversing valve for the heat pump operation. The outdoor coil shall have an electronic expansion valve to control the refrigerant flow. The unit controller shall modulate the expansion valve to maintain compressor operation within the compressor operational envelope.
      2) The refrigerant system shall have a pump-down cycle.
7. Refrigerant Components: Refrigerant circuit components shall include:
   a. Refrigerant feed system.
   b. Filter drier.
   c. Service gauge connections on suction, discharge and liquid lines.
8. Filter Section:
   a. Standard filter section shall consist of factory installed low velocity, disposable filters of commercially available sizes.
   b. Filter face velocity shall not exceed 500 fpm at nominal airflows.
9. Controls and Safeties:
   a. Unit Controls: Unit shall be complete with self-contained low voltage control circuit protected by a manually resettable circuit breaker.
   b. Fault Detection and Diagnostics: Provide an on-board fault detection and diagnostics system capable of identifying specific faults including alarm for low refrigerant charge, failed economizer function.
   c. Safeties:
      1) Unit shall incorporate a solid state compressor protector which provides reset capability at the space thermostat, should any of the following standard safety devices trip and shut off compressor:
         a) Compressor over temperature, overcurrent.
         b) Loss of charge/low pressure switch.
         c) Freezestat, evaporator coil.

d) High-pressure switch.

D. Operating Characteristics:
   a. Unit shall be capable of starting and running at 115°F ambient outdoor temperature per maximum load criteria of ARI Standard 210/240.
   b. Compressor with standard controls shall be capable of operation down to 25°F ambient outdoor temperature.
   c. Unit provided with fan time delay of 55 seconds to prevent cold air delivery before heat exchanger warms up.

2. Electrical Requirements: All unit power wiring shall enter unit cabinet at a single factory predrilled location.
3. Motors:
   a. Compressor motors shall be cooled by suction gas passing through motor windings and shall have line break thermal and current overload protection.
   b. Indoor blower motor shall have permanently lubricated bearings and inherent automatic reset thermal overload protection.
   c. Outdoor totally enclosed motor shall have permanently lubricated bearings, and inherent automatic reset thermal overload protection.
   d. Induced draft motor shall have permanently lubricated sealed bearings and inherent automatic reset thermal overload protection.
4. DOAS Unit Equipment Conformance List:

Medium Size Package Rooftop Unit (7-1/2 -25 ton) Equipment Requirements			
Component	**Feature**	**Specification Options**	**Specified Alternative**
Unit Cabinet	Wall Construction	Single wall	X
		Double wall	
	Liner Options	Foil faced insulation	X
	Insulation	1/2” Insulation	
		1” insulation	X
	Maintenance Access	Tool required	
		Tool free	X
		Hinged panels	X
		Non-hinged panels	
	Condensate Pan	Plastic	
		Galvanized	X
		Stainless	
Supply Fan	Fan Access	Slide out cassette	X
		Non-slide out	
	Fan Wheel Construction	Fully welded fan wheels	X
	Motor type	ECM motor	
		Conventional	X
	Drive	Belt and sheaves	
		Direct	X
OSA Intake	Fixed OSA		X

Medium Size Package Rooftop Unit (7-1/2 -25 ton) Equipment Requirements			
	Economizer	Modulating dampers	
Relief Air	Relief provisions	Barometric damper only	
		Prop relief fan with damper	
		Return fan	
		Not required	
Compressor	Type of compressor	Scroll	X
		Digital Scroll	
		Variable Speed	
Cooling Efficiency		EER	See schedule
		IEER or SEER	See schedule
Evaporator	Coil Construction	Copper tubes/Aluminum fins	X
		Epoxy coated coil	
Condenser	Coil Construction	Copper tubes/Aluminum fins	X
		All aluminum coil	
		Copper tubes/Copper fins	
		Epoxy coated coil	
	Condenser fan	ECM type motor	X
		Constant speed motor	
Reheat	Reheat Coil	Modulating hot gas reheat coil	X
		Not required	
Filters	Filter type	2" MERV 13 pleated filter	X
		4" MERV 13 pleated filter	

Medium Size Package Rooftop Unit (7-1/2 -25 ton) Equipment Requirements (Continued)			
Component	**Feature**	**Specification Options**	**Specified Alternative**
Controls	Economizer		
	Single Zone VAV		
	Full VAV Control		
	CO2 Sensor		
	OSA Monitor and controller		X
	Heat recovery control		
	Dehumidification Control		
	Factory digital controls	Zone controls by others	X
		Equip with zone controls and unit programming panel	
	BAS interface options	BACnet interface	X
		LonTalk Interface	
	Smoke Detector	Provide with unit	X
Electrical	Single point connection		X
	Powered convenience outlet	Receptacle	X

1. Other Features and Required Equipment: Provide the following with units.
   a. Roof Curb:
      1) Formed galvanized steel with wood nailer strip and capable of supporting entire unit weight.
      2) Seismically restrained spring isolating curb (See Section 230548 Vibration Seismic).
   b. Head Pressure Control Package: Consists of solid-state control and condenser coil temperature sensor to maintain condensing temperature between 90°F and 110°F at outdoor ambient temperatures down to -20°F by either condenser fan speed modulation or condenser fan cycling.
   c. Remote Control Panel: Panel shall be a decorative, indoor, wall mounted panel consisting of:
      1) Two stage heat/two stage cool thermostat.
      2) Automatic changeover.
      3) System switch with HEAT - COOL - AUTO - OFF settings.
      4) Fan switch with ON - AUTO settings.
      5) Indicator lights for HEAT - COOL - FAN operation.
      6) Three unused indicator lights for field use.

2.02 PROGRAMMABLE THERMOSTAT

A. Thermostat with 365-day programmability that allows the building occupants to program the temperature setpoints for at least four periods within 24 hours. A minimum of 5 holidays shall be programmable for up to 5 years. Daylight savings shall be provided as a standard feature in the programming calendar.
   1. Manufacturers: Honeywell VisionPRO 8000 Series, Honeywell Prestige THX 9000 Series, Honeywell TB7600 Series, Venstar ColorTouch T6000 Series, EnTouch Pro/One or equal.

B. Minimum thermostat features shall include, but not limited to, the following:
   1. The thermostat shall have a touch screen and shall display both room temperature and cooling and heating setpoints simultaneously, and shall indicate when cooling or heating and what stage is energized on the main screen.
   2. Programming may be accomplished at the thermostat, or via free software. The program shall have an override mode to provide comfort on demand while in an unoccupied period. The unoccupied override shall be adjustable by pushing an override button and selecting thirty minute increments, up to four hours.
   3. The setback override shall be activated by a single button, and deactivated on demand.
   4. Setpoints shall be adjustable from 35^0F to 99^0F, with a minimum 5°F adjustable deadband available.
   5. Dual setpoints shall be provided with the ability to individually set heating and cooling temperatures with adjustable heating and cooling setpoint limits. Initial occupied mode cooling setpoint of 75^0F and heating setpoint of 70^0F. Initial unoccupied mode cooling setpoint of 85^0F and heating setpoint of 55^0F

C. The thermostat shall be capable of independently controlling an individual system, with up to three stages of heating and two stages of cooling, fan, and reversing valve.
   1. For heat pumps an adjustable auxiliary heat lockout temperature based on outdoor temperatures shall be provided.
   2. An Emergency Heat switch will be provided on the touch screen when set in heat pump mode.

D. The fan shall be programmable to operate continuously during occupied periods and in auto mode during unoccupied periods.

E. Controls shall be capable of alternating compressor starting sequence with a built in lead-lag operating logic.
   1. Equipment protection options shall be provided to prevent compressor short-cycling, and to limit the number of cycles per hour. These options shall be overridden for use with zoning systems.

F. Pre-Occupancy purge cycle that energizes the fan before the programmed occupancy time, adjustable up to three (3) hours in 15-minute increments.
   1. Configurable terminals shall be provided for remote indoor, remote outdoor or remote supply air temperature sensing.

G. Multiple security levels to limit access to programming and configuration and will allow for a custom passcode. The various security levels will allow controlled access to programming, unoccupied override, and thermostat mode.

H. All programming information, except time of day, shall reside in nonvolatile memory. During a power failure, the thermostat shall maintain its program indefinitely without the use of batteries.

I. Wi-Fi capable and controlled through local wireless internet routers. The thermostat shall be capable of receiving an automated demand response signal from the local electrical utility, and automatically reset the cooling and heating setpoints during the demand event. When the demand event is terminated by the local electrical power utility, the thermostat will reset to normal occupied and unoccupied setpoints.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that mounting surface, e.g. roof, is ready to receive work.

B. Verify that proper power supply is available.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide layout drawings of units, locations and power requirements to electrical installer.

C. Install minimum 30% efficiency air filters in unit during installation phase. Do not operate the unit without filters in place.

D. Mount rooftop unit on:
   1. Seismically restrained spring vibration isolation curb. Install with top surface of roof mounting frame level.
   2. Or, factory built roof mounting frame where vibration will not be perceptible to occupants. Install with top surface of roof mounting frame level.

E. Install 3" flexible duct connection at inlets and outlets of units.

F. Install condensate drain piping and traps in accordance with manufacturer's instructions, per local code and as shown on the drawings.
   1. Install manufacturer provided condensate “air-trap” where provided with each unit. Install trap per manufacturer’s instructions and install condensate piping as required by local code.

G. Control installers shall install thermostat and all wiring associated with control signals into the units.

H. Electrical installer shall install all line voltage power wiring and conduit. Coordinate with Division 26 work.

I. Install a new set of filters prior to final air balance and substantial completion.

3.03 MANUFACTURER'S START-UP SERVICES

A. The manufacturer shall provide start-up service in the form of a factory trained service technician. The service technician shall verify correct installation, verify unit mounting, verify fan rotation, verify spring isolator adjustments, verify control wiring, verify power wiring, start-up the fans, and check for proper operation. The service technician shall provide final adjustments to meet the specified performance requirements. Fully staffed parts and service personnel shall be within four hours travel from the job site.

END OF SECTION

SECTION 23 74 13 - PACKAGED HVAC UNITS (UP TO 25 TONS)

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 230500 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. All work to be furnished and installed under this Section shall comply with all the requirements of Division 01, and shall include, but not necessarily be limited to, the following:
   1. Packaged unit
   2. Controls and control connections
   3. Electrical power connections
   4. Roof mounting frame and base

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Section 230500: Basic HVAC Materials and Methods

B. Section 230593: Testing, Adjusting and Balancing

C. Section 230700: Mechanical Insulation

D. Section 233113: Air Distribution

E. Division 26: Electrical

1.04 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Provide packaged units that are the standard product of an equipment manufacturer regularly engaged in the production of such units who issues complete catalog information on such products. Units shall not be fabricated by the Contractor.

B. Codes and Standards: Provide air handling units conforming to the requirements of the latest addition of the following:
   1. Air Movement and Control Association (AMCA):
      a. 99 - Standards Handbook
      b. 210 - Laboratory Methods of Testing Fans
      c. 300 - Reverberant Room Method for Sound Testing of Fans
      d. 301 - Methods for Calculating Fan Sound Ratings from Laboratory Test Data
      e. 500 - Test Method for Louvers, Dampers, and Shutters

2. American National Standards Institute (ANSI):
   a. 9 - Load Ratings and Fatigue Life for Ball Bearings
   b. 11 - Load Ratings and Fatigue Life for Roller Bearings
   c. 900 - Test Performance of Air Filter Units
3. Air-Conditioning, Heating and Refrigeration Institute (AHRI):
   a. 210/240 – Performance Rating of Unitary Air Conditioning & Air-Source Heat Pump Equipment
   b. 270 - Sound Rating of Outdoor Unitary Equipment
   c. 340/360 – Performance Rating of Commercial and Industrial Unitary Air-Conditioning and Heat Pump Equipment
4. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
   a. 15 - Safety Code for Mechanical Refrigeration
   b. 193 – Method of Test for Determining the Air Leakage of HVAC Equipment. All systems that move less than 3,000 cfm shall comply with less than 1.4% cabinet leakage rate.
5. National Electrical Manufacturers Association (NEMA): Except for motors, provide electrical components required as part of air handling units, which comply with NEMA Standards.
6. National Fire Protection Association (NFPA): Provide unit internal insulation having flame spread rating not higher than 25 and smoke developed rating not higher than 50:
   a. 70 - National Electrical Code
   b. 90A - Standard for the Installation of Air Conditioning and Ventilating Systems
   c. 90B - Standard for the Installation of Warm Air Heating and Air Conditioning Systems
7. Sheet Metal and Air Conditioning Contractors' National Association, Inc. (SMACNA): Comply with applicable SMACNA standards including "HVAC Duct Construction Standards - Metal and Flexible."
8. Underwriters Laboratories, Inc. (UL): Except for motors, provide electrical components required as part of units, which have been listed and labeled by UL.
9. Minimum Efficiency: Minimum efficiencies shall meet or exceed the values listed in this specification.

1.05 PRODUCT SUBSTITUTIONS

A. The Contractor shall certify the following items are correct when using substituted products other than those scheduled or shown on the drawings as a basis of design:
   1. The proposed substitution does not affect dimensions shown on drawings.
   2. The Contractor shall pay for changes to building design, including engineering design, detailing, structural supports, and construction costs caused by proposed substitution.
   3. The proposed substitution has no adverse effect on other trades, construction schedule, or specified warranty requirements.
   4. Maintenance and service parts available locally are readily obtainable for the proposed substitute.

B. The Contractor further certifies function, appearance, and quality of proposed substitution are equivalent or superior to specified item.

C. The Contractor agrees that the terms and conditions for the substituted product that are found in the contract documents apply to this proposed substitution.

1.06 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data for packaged units showing dimensions, weights, capacities, ratings, fan performance with operating point clearly indicated, motor electrical characteristics, finishes of materials, installation instructions, sound and vibration test report, and bearing life calculations.

B. Maintenance Data: Submit maintenance instructions, including instructions for lubrication, filter replacement, motor and drive replacement, and spare parts lists. Include this data, product data, shop drawings, and wiring diagrams in operating and maintenance manuals; in accordance with requirements of Division 1.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver units to the site in containers with manufacturer's stamp or label affixed.

B. Protect units against dirt, water, chemical, and mechanical damage. Do not install damaged units - remove from project site.

1.09 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 230500 for additional warranty and Substantial Completion requirements.

PART 2 - PRODUCTS

2.01 PACKAGED ROOFTOP HEATING/COOLING UNIT (UP TO 20 TONS)

A. General:
1. Outdoor rooftop mounted, electrically controlled heating and cooling unit. Unit shall discharge supply air downward or horizontally as shown on contract drawings.
2. Unit shall be rated in accordance with ARI Standards 210, 240 and 270. Designed in accordance with UL Standard 465.
3. Unit shall be designed to conform to ANSI/ASHRAE 15.

4. Unit shall be UL tested and certified in accordance with ANSI Z21.47 Standards and CSA or CGA certified as a total package.
5. Roof curb shall be designed to conform to NRCA Standards.
6. Insulation and adhesive shall meet NFPA 90A requirements for flame spread and smoke generation.

B. Manufacturers: Carrier, Trane, Daikin, York, Lennox, Aaon, Engineered-Air, or equal.

C. Equipment:
1. General:
   a. Factory assembled, single piece heating and cooling unit. Contained within the unit enclosure shall be all factory wiring, piping, controls, refrigerant charge (R-410A) and special features required prior to field start-up.
2. Unit Cabinet:
   a. Unit cabinet shall be constructed of galvanized steel, bonderized and coated with a pre-painted baked enamel finish on all externally exposed surfaces.
   b. Insulation: See Table below.
   c. Cabinet panels shall be easily removable for servicing. See Table below.
   d. Filters will be accessible through a hinged access door, and will require no panel or screw removal.
   e. Holes shall be provided in the base rails for rigging shackles to facilitate maneuvering and overhead rigging.
   f. Unit shall have a factory installed internal condensate drain trap made of a non-corrosive material, providing a minimum 3/4" connection.
3. Fans:
   a. Indoor blower (evaporator fan):
      1) Fan shall be direct or belt driven as specified here (See matrix below). If belt driven the drive shall include an adjustable pitch motor pulley.
      2) Bearings shall be sealed, permanently lubricated ball bearing type for longer life and lower maintenance.
   b. Indoor blower shall be made from steel with a corrosion resistant finish and shall be dynamically balanced.
   c. Outdoor (condenser) fan shall be of the direct driven propeller type and shall discharge air vertically upward.
4. Compressor:
   a. Fully hermetic type, internally protected.
   b. Factory rubber shock mounted and internally spring mounted for vibration isolation.
   c. Equipped with a factory installed crankcase heater to minimize liquid refrigerant accumulation in compressor during shutdown and prevent refrigerant dilution of oil.
5. Coils:
   a. Evaporator and condenser coils shall have fins mechanically bonded to seamless tubes with all joints brazed.
   b. Tube sheet openings shall be belled to prevent tube wear.
   c. Evaporator coil shall be of the full-face active design, degreased at the factory.

6. Heating Section:
   a. Heat Pump Heating Section:
      1) The evaporator coil, condenser coil, compressors and refrigerant circuit shall be designed for heat pump operation. The refrigerant circuit shall contain a 4 way reversing valve for the heat pump operation. The outdoor coil shall have an electronic expansion valve to control the refrigerant flow. The unit controller shall modulate the expansion valve to maintain compressor operation within the compressor operational envelope.
      2) The refrigerant system shall have a pump-down cycle.
7. Refrigerant Components: Refrigerant circuit components shall include:
   a. Refrigerant feed system.
   b. Filter drier.
   c. Service gauge connections on suction, discharge and liquid lines.
8. Filter Section:
   a. Standard filter section shall consist of factory installed low velocity, disposable filters of commercially available sizes.
   b. Filter face velocity shall not exceed 500 fpm at nominal airflows.
9. Controls and Safeties:
   a. Unit Controls: Unit shall be complete with self-contained low voltage control circuit protected by a manually resettable circuit breaker.
   b. Fault Detection and Diagnostics: Provide an on-board fault detection and diagnostics system capable of identifying specific faults including alarm for low refrigerant charge, failed economizer function.
   c. Safeties:
      1) Unit shall incorporate a solid-state compressor protector which provides reset capability at the space thermostat, should any of the following standard safety devices trip and shut off compressor:
         a) Compressor over temperature, overcurrent.
         b) Loss of charge/low pressure switch.
         c) Freeze stat, evaporator coil.
         d) High-pressure switch.

D. Operating Characteristics:
   a. Unit shall be capable of starting and running at 115°F ambient outdoor temperature per maximum load criteria of ARI Standard 210/240.
   b. Compressor with standard controls shall be capable of operation down to 25°F ambient outdoor temperature.
   c. Unit provided with fan time delay of 55 seconds to prevent cold air delivery before heat exchanger warms up.
2. Electrical Requirements: All unit power wiring shall enter unit cabinet at a single factory predrilled location.
3. Motors:
   a. Compressor motors shall be cooled by suction gas passing through motor windings and shall have line break thermal and current overload protection.
   b. Indoor blower motor shall have permanently lubricated bearings and inherent automatic reset thermal overload protection.
   c. Outdoor totally enclosed motor shall have permanently lubricated bearings, and inherent automatic reset thermal overload protection.

d. Induced draft motor shall have permanently lubricated sealed bearings and inherent automatic reset thermal overload protection.

4. Small Package Rooftop Unit (1-1/2 -5 ton) Equipment Conformance List: The scheduled units within this size category shall be configured with the following selected feature options.

Small Package Rooftop Unit (1-1/2 – 5 ton) **Equipment Requirements**			
Component	**Feature**	**Specification Options**	**Specified Alternative**
Unit Case	Wall Construction	Single wall	X
		Double wall	
	Liner options	Foil faced insulation	X
	Insulation	1/2” Insulation	X
		1” insulation	
	Maintenance Access	Tool required	X
		Tool free	
		Hinged panels	
		Removable panels	X
	Condensate Pan	Plastic	
		Galvanized	X
		Stainless	
Supply Fan	Fan Wheel Construction	Fully welded fan wheels	X
		Slot and tab wheel construction	
	Motor Type	ECM motor	
		Conventional	X
	Drive	Belt and sheaves	X
		Direct	
Relief Air	Relief provisions	Barometric damper only	X
		Prop relief fan with damper	

Small Package Rooftop Unit (1-1/2 – 5 ton) Equipment Requirements			
		Return fan	
Economizer		Fixed OSA damper	X

Small Package Rooftop Unit (1-1/2 – 5 ton) Equipment Requirements (Continued)			
Component	**Feature**	**Specification Options**	**Specified Alternative**
Compressor	Type of compressor	Scroll	X
		Digital Scroll	
		Variable speed	
Cooling Efficiency		SEER	See schedule
Evaporator	Coil Construction	Copper tubes/Aluminum fins	X
		Copper tubes/Copper fins	
		Epoxy coated Cu/Al coil	
Condenser	Coil Construction	Copper tubes/Aluminum fins	X
		Copper tubes/Copper fins	
		Coated condenser coil	
Reheat	Reheat Coil	Modulating hot gas reheat coil	
		Not required	X
Filters	Filter Type	1” filter	
		2" MERV 8 pleated filter	X
		2" MERV 13 pleated filter	
		4" MERV 13 pleated filter	

Small Package Rooftop Unit (1-1/2 – 5 ton) Equipment Requirements (Continued)			
Component	**Feature**	**Specification Options**	**Specified Alternative**
Controls	Economizer	Full integrated 100% OSA economizer	
	Single Zone VAV controls		
	24/7 Programmable Thermostat		X
	CO2 Sensor		
	Factory Digital Controls	Zone control by others	X
		Supply with zone control and interface panel	
	BAS Interface Options	BACnet interface	X
		LON Interface	
	Smoke Detector	Provide with unit	
Electrical	Single Point Connection		X
	Convenience outlet	Receptacle	X

5. Medium Size Package Rooftop Unit (7-1/2 -25 ton) Equipment Conformance List: The scheduled units within this size category shall be configured with the following selected feature options.

Medium Size Package Rooftop Unit (7-1/2 -25 ton) Equipment Requirements			
Component	**Feature**	**Specification Options**	**Specified Alternative**
Unit Cabinet	Wall Construction	Single wall	X
		Double wall	
	Liner Options	Foil faced insulation	X
	Insulation	1/2” Insulation	
		1” insulation	X

Medium Size Package Rooftop Unit (7-1/2 -25 ton) **Equipment Requirements**			
	Maintenance Access	Tool required	
		Tool free	X
		Hinged panels	X
		Non-hinged panels	
	Condensate Pan	Plastic	
		Galvanized	X
		Stainless	
Supply Fan	Fan Access	Slide out cassette	X
		Non-slide out	
	Fan Wheel Construction	Fully welded fan wheels	X
	Motor type	ECM motor	
		Conventional	X
	Drive	Belt and sheaves	
		Direct	X
OSA Intake	Fixed OSA		
	Economizer	Modulating dampers	X
Relief Air	Relief provisions	Barometric damper only	
		Prop relief fan with damper	X
		Return fan	
Compressor	Type of compressor	Scroll	X
		Digital Scroll	
		Variable Speed	
Cooling Efficiency		EER	See schedule
		IEER or SEER	See schedule

Medium Size Package Rooftop Unit (7-1/2 -25 ton) **Equipment Requirements**			
Evaporator	Coil Construction	Copper tubes/Aluminum fins	X
		Epoxy coated coil	
Condenser	Coil Construction	Copper tubes/Aluminum fins	X
		All aluminum coil	
		Copper tubes/Copper fins	
		Epoxy coated coil	
	Condenser fan	ECM type motor	X
		Constant speed motor	
Reheat	Reheat Coil	Modulating hot gas reheat coil	X
		Not required	
Filters	Filter type	2" MERV 8 pleated filter	X
		4" MERV 13 pleated filter	

Medium Size Package Rooftop Unit (7-1/2 -25 ton) **Equipment Requirements (Continued)**			
Component	**Feature**	**Specification Options**	**Specified Alternative**
Controls	Economizer	Fully integrated economizer controls	X
	Single Zone VAV		
	Full VAV Control		X
	CO2 Sensor		X
	OSA Monitor and controller		X
	Heat recovery control		

Medium Size Package Rooftop Unit (7-1/2 -25 ton) **Equipment Requirements (Continued)**			
	Dehumidification Control		
	Factory digital controls	Zone controls by others	X
		Equip with zone controls and unit programming panel	
	BAS interface options	BACnet interface	X
		LonTalk Interface	
	Smoke Detector	Provide with unit	X
Electrical	Single point connection		X
	Powered convenience outlet	Receptacle	X

6. Other Features and Required Equipment: Provide the following with units.
   a. Roof Curb:
      1) Formed galvanized steel with wood nailer strip and capable of supporting entire unit weight.

2) Seismically restrained spring isolating curb (See Section 230548 Vibration Seismic).

b. Head Pressure Control Package: Consists of solid-state control and condenser coil temperature sensor to maintain condensing temperature between 90°F and 110°F at outdoor ambient temperatures down to -20°F by either condenser fan speed modulation or condenser fan cycling.

c. Remote Control Panel: Panel shall be a decorative, indoor, wall mounted panel consisting of:
   1) Two stage heat/two stage cool thermostat.
   2) Automatic changeover.
   3) System switch with HEAT - COOL - AUTO - OFF settings.
   4) Fan switch with ON - AUTO settings.
   5) Indicator lights for HEAT - COOL - FAN operation.
   6) Three unused indicator lights for field use.

2.02 PROGRAMMABLE THERMOSTAT

A. Thermostat with 365-day programmability that allows the building occupants to program the temperature setpoints for at least four periods within 24 hours. A minimum of 5 holidays shall be programmable for up to 5 years. Daylight savings shall be provided as a standard feature in the programming calendar.
   1. Manufacturers: Honeywell VisionPRO 8000 Series, Honeywell Prestige THX 9000 Series, Honeywell TB7600 Series, Venstar ColorTouch T6000 Series, EnTouch Pro/One or equal.

B. Minimum thermostat features shall include, but not limited to, the following:
   1. The thermostat shall have a touch screen and shall display both room temperature and cooling and heating setpoints simultaneously, and shall indicate when cooling or heating and what stage is energized on the main screen.
   2. Programming may be accomplished at the thermostat, or via free software. The program shall have an override mode to provide comfort on demand while in an unoccupied period. The unoccupied override shall be adjustable by pushing an override button and selecting thirty minute increments, up to four hours.
   3. The setback override shall be activated by a single button, and deactivated on demand.
   4. Setpoints shall be adjustable from 35^0F to 99^0F, with a minimum 5°F adjustable deadband available.
   5. Dual setpoints shall be provided with the ability to individually set heating and cooling temperatures with adjustable heating and cooling setpoint limits. Initial occupied mode cooling setpoint of 75^0F and heating setpoint of 70^0F. Initial unoccupied mode cooling setpoint of 85^0F and heating setpoint of 55^0F

C. The thermostat shall be capable of independently controlling an individual system, with up to three stages of heating and two stages of cooling, fan, and reversing valve.
   1. For heat pumps an adjustable auxiliary heat lockout temperature based on outdoor temperatures shall be provided.
   2. An Emergency Heat switch will be provided on the touch screen when set in heat pump mode.

D. The fan shall be programmable to operate continuously during occupied periods and in auto mode during unoccupied periods.

E. Controls shall be capable of alternating compressor starting sequence with a built in lead-lag operating logic.
   1. Equipment protection options shall be provided to prevent compressor short-cycling, and to limit the number of cycles per hour. These options shall be overridden for use with zoning systems.

F. Pre-Occupancy purge cycle that energizes the fan before the programmed occupancy time, adjustable up to three (3) hours in 15-minute increments.
   1. Configurable terminals shall be provided for remote indoor, remote outdoor or remote supply air temperature sensing.

G. Multiple security levels to limit access to programming and configuration and will allow for a custom passcode. The various security levels will allow controlled access to programming, unoccupied override, and thermostat mode.

H. All programming information, except time of day, shall reside in nonvolatile memory. During a power failure, the thermostat shall maintain its program indefinitely without the use of batteries.

I. Wi-Fi capable and controlled through local wireless internet routers. The thermostat shall be capable of receiving an automated demand response signal from the local electrical utility, and automatically reset the cooling and heating setpoints during the demand event. When the demand event is terminated by the local electrical power utility, the thermostat will reset to normal occupied and unoccupied setpoints.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that mounting surface, e.g. roof, is ready to receive work.

B. Verify that proper power supply is available.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide layout drawings of units, locations and power requirements to electrical installer.

C. Install minimum 30% efficiency air filters in unit during installation phase. Do not operate the unit without filters in place.

D. Mount rooftop unit on:
   1. Seismically restrained spring vibration isolation curb. Install with top surface of roof mounting frame level.

2. Or, factory built roof mounting frame where vibration will not be perceptible to occupants. Install with top surface of roof mounting frame level.

E. Install 3" flexible duct connection at inlets and outlets of units.

F. Install condensate drain piping and traps in accordance with manufacturer's instructions, per local code and as shown on the drawings.
1. Install manufacturer provided condensate “air-trap” where provided with each unit. Install trap per manufacturer’s instructions and install condensate piping as required by local code.

G. Control installers shall install thermostat and all wiring associated with control signals into the units.

H. Electrical installer shall install all line voltage power wiring and conduit. Coordinate with Division 26 work.

I. Install a new set of filters prior to final air balance and substantial completion.

3.03 MANUFACTURER'S START-UP SERVICES

A. The manufacturer shall provide start-up service in the form of a factory trained service technician. The service technician shall verify correct installation, verify unit mounting, verify fan rotation, verify spring isolator adjustments, verify control wiring, verify power wiring, start-up the fans, and check for proper operation. The service technician shall provide final adjustments to meet the specified performance requirements. Fully staffed parts and service personnel shall be within four hours travel from the job site.

END OF SECTION

SECTION 23 81 30 - MINI-SPLIT AIR CONDITIONING UNITS

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 23 0500 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. All work to be furnished and installed under this Section shall comply with all the requirements of Division 01, and shall include, but not necessarily be limited to, the following:
   1. Split air conditioning unit.
   2. Controls and control connections.
   3. Electrical power connections.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Section 23 0500: Basic HVAC Materials and Methods

B. Section 23 0593: Testing, Adjusting and Balancing

C. Section 23 0716: Equipment Insulation

D. Section 23 0900: Building Automation System (BAS) Controls

E. Section 23 2300: Refrigerant Piping Systems

F. Section 23 3113: Air Distribution

G. Division 26: Electrical

1.04 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Provide packaged units that are the standard product of an equipment manufacturer regularly engaged in the production of such units who issues complete catalog information on such products. Units shall not be fabricated by the Contractor.

B. Codes and Standards: Provide air handling units conforming to the requirements of the latest addition of the following:
   1. Air Movement and Control Association (AMCA):
      a. 99 - Standards Handbook
      b. 210 - Laboratory Methods of Testing Fans for Rating
   2. Air-Conditioning, Heating and Refrigeration Institute (AHRI):
      a. 210 - Unitary Air-Conditioning Equipment
      b. 270 - Sound Rating of Outdoor Unitary Equipment
   3. National Electrical Manufacturers Association (NEMA): Except for motors, provide electrical components required as part of air handling units, which comply with NEMA Standards.
   4. National Fire Protection Association (NFPA): Provide unit internal insulation having flame spread rating not higher than 25 and smoke developed rating not higher than 50:
      a. 70 - National Electrical Code
      b. 90A - Standard for the Installation of Air Conditioning and Ventilating Systems
      c. 90B - Standard for the Installation of Warm Air Heating and Air Conditioning Systems
   5. Sheet Metal and Air Conditioning Contractors' National Association, Inc. (SMACNA): Comply with applicable SMACNA standards including "HVAC Duct Construction Standards - Metal and Flexible."
   6. Underwriters Laboratories, Inc. (UL): Except for motors, provide electrical components required as part of units, which have been listed and labeled by UL.
   7. Minimum Efficiency: Minimum efficiencies shall meet or exceed the values required by the local energy code.

1.05 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data for systems with air handler units, evaporator coils, and outdoor condensing units showing dimensions, weights, capacities, ratings, fan performance with operating point clearly indicated, motor electrical characteristics, finishes of materials, installation instructions, sound and vibration test report, and bearing life calculations.
   1. Provide a table listing:
      a. Items being submitted.
      b. Equipment tag.
      c. The acoustical test standard used.
      d. Acoustical performance in octave band format ranging from 63Hz to 8000Hz at design operating conditions.
      e. Installed operating CFM range.
      f. Installed static pressure expectations.
      g. Reference to the mechanical drawing sheet and room number to identify location.

B. Maintenance Data: Submit maintenance instructions, including instructions for lubrication, filter replacement, motor and drive replacement, and spare parts lists.

Include this data, product data, shop drawings, and wiring diagrams in operating and maintenance manuals; in accordance with requirements of Division 01.

1.06 ENVIRONMENTAL REQUIREMENTS

A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site under provisions of Division 01. Deliver units to the site in containers with manufacturer's stamp or label affixed.

B. Store/protect products under provisions of Division 01. Protect units against dirt, water, chemical, and mechanical damage. Do not install damaged units - remove from project site.

1.08 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 23 0500 for additional warranty and Substantial Completion requirements.

C. Provide five (5) year warranty on compressors.

PART 2 - PRODUCTS

2.01 SPLIT SYSTEM AIR CONDITIONING SYSTEM WITH INDOOR FAN COIL

A. Manufacturers: Mitsubishi, LG, Daikin, Carrier or equal.

B. Indoor Fan Coil Unit
   1. General:
      a. Factory fabricated wall or ceiling mounted fan coil units designed for ductless application of the size, type configuration and capacity as scheduled on the drawings.
      b. Units shall be self-contained, factory assembled and pre-wired.
      c. All pressure drops, motor horsepowers and dimensions shown are maximum allowable. All capacities shown are minimum allowable. All units must have AMCA certified performance data for fans tested in the unit casings. Bare fan certification without casing is not acceptable.
      d. Manufacturers unable to meet this criterion will only be considered as an alternate to specified and as a deduct to base bid. Manufacturers listed by name does not imply that their standard construction meets the

specifications nor that they are approved. All manufacturers are required to meet all details of this specification without exception.

e. Units shall be provided with factory welded mounting clips for mounting of units.

f. Sound power levels must be measured in accordance with AMCA 300-2008 or calculated in accordance with AMCA 301-2014

1) Inlet, discharge, and radiated sound power levels must not exceed the octave band limits scheduled on the project drawings under design operating conditions.

2. Unit Casing: Cabinet and grilles shall be zinc-coated bonderized steel finished with baked enamel paint or powdered coated finish. Grilles may be high-impact plastic.

3. Fan Assembly: Fan shall be direct drive with forward-curved blades, and be statically and dynamically balanced, with scrolls and fans constructed of galvanized steel. Rotating assembly shall provide a rigid support for motor and fan assembly. Assembly shall be accessible and entire assembly shall be removable for maintenance.

4. Motors: Motors shall be open drip-proof, permanently lubricated ball bearing with inherent overload protection or electrically commutated (EC). Fan motor to be multi-speed as specified on Drawings.

5. Coils: Coils shall be copper tube with ARI certified and of the same manufacturer as the unit to insure proper fit and quality mechanical bond. No exposed copper shall show between fins. Coils drip pan shall be galvanized steel coated with closed cell fire retardant foam insulation. A secondary drip pan shall be included under the coil header.

6. Filter Section: Filters shall be factory supplied cleanable filter or one-inch thick pleated.

7. Electrical: Unit electrical power shall be 115 volts, 1 phase, 60 hertz, or as specified on Drawings.

C. Outdoor Condensing Unit:

1. General: Provide remote outdoor air conditioning compressor units consisting of hermetic compressor with overload protection, direct drive condenser fan, aluminum fin/seamless copper tube coil, strainer, high- and low-pressure switches, accumulator, and thermostatic expansion valve.

2. Unit Cabinet: Galvanized steel, bonderized, and coated with powder coat paint.

3. Condenser Fans: Direct drive propeller type, discharging upward. Motors to be totally enclosed, single phase, with Class B insulation and permanently lubricated bearings. Condenser fan openings to be equipped with PVC-coated steel wire safety guards. Fan blades to be statically and dynamically balanced.

4. Coil: Aluminum fins mechanically bonded to copper tubes.

5. Refrigerant Components: Liquid tube shutoff valve with sweat connection, suction tube shutoff valves with sweat connection, refrigerant, accumulator, and reversing valve. An internal pressure relief valve to provide high-pressure protection to the refrigerant system.

6. Compressor: Hermetically sealed two-speed compressor mounted on rubber mountings. Protection to include internal PTC-type overloads. An internal pressure relief valve to provide high-pressure protection to the refrigerant system. Provide external service valves for the refrigerant circuit. A crankcase heater shall be factory mounted on the outside of the compressor.
7. Electrical: Unit electrical power shall be 208/230 volts, 1 phase, 60 hertz, or as specified on Drawings. The outdoor unit shall be controlled by the microprocessor located in the indoor unit. The control voltage between the indoor unit and the outdoor unit shall be 12 volts, DC.

D. Controls:
1. Unit shall have a factory wired temperature controller to perform input functions necessary to operate the system.
2. The controller shall consist of an on/off switch, thermostat setting, timer mode, high/medium/low fan speed, test run switching and check mode switching. Provide with 365-day programmability that allows the building occupants to program the temperature setpoints for at least four periods within 24 hours. A minimum of 5 holidays shall be programmable for up to 5 years. Daylight savings shall be provided as a standard feature in the programming calendar.
3. Temperature changes shall be by 2□F increments with a range of 65 - 87□F (minimum).
4. The control system shall consist of two (2) microprocessors interconnected by a single non-polar two wire cable.
5. Wiring shall run direct from the indoor unit to the controller with no splices.
6. The microprocessor located in the indoor unit shall have the capability of sensing return air temperature and indoor coil temperature, receiving and processing commands from the wired controller, providing emergency operation and controlling the outdoor unit.
7. Normal operation of the remote controller provides individual system control in which one remote controller and one indoor unit are installed in the same room.
8. The control voltage from the controller to the indoor unit shall be 12 volts, DC.
9. The control voltage between the indoor unit and the outdoor unit shall be 12 volts, DC.
10. The system shall be capable of automatic restart when power is restored after power interruption.
11. The system shall include self-diagnostics including total hours of compressor run time.
12. The microprocessor within the wall mounted remote controller shall provide automatic cooling, display set point and room temperature, 24 hour on/off timer so that automatic operation function display, check mode for memory of most recent problem.
13. Fan only operation shall be provided to permit room circulation when no cooling is required.
14. Compressor time delay to limit cycling.

E. Special Features:

1. Provide an internal condensate pump with interlock to unit operation in the event of malfunction.
2. Provide external electronic programmable thermostat.
3. Low ambient control capable of operating at 0ºF ambient temperature.

PART 3 - PRODUCTS

3.01 EXAMINATION

A. Verify that mounting surfaces are ready to receive work.

B. Verify that proper power supply is available.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide layout drawings of units, locations and power requirements to electrical installer.

C. Install air filters in unit during installation phase. Do not operate the unit without filters in place.

D. In the case of suspended units, mount the fan coil units on springs or from spring hangers as required and as shown on Drawings. Provide Mason #DNHS combination isolator hangers to fully support horizontal units hung from building framing.

E. Provide 4" high concrete pad extending 6" beyond edge of condensing unit on all sides. Attach condensing unit to concrete pad with concrete anchors and angle brackets.

F. Install condensate drain piping and traps in accordance with manufacturer's instructions and as shown on the Drawings.

G. Install copper refrigerant piping and insulate lines.

H. Install controller and all wiring associated with control signals between air handling unit and condensing unit. Conceal low voltage wiring in building structure, or inside the refrigerant pipe insulation, or in conduit.

I. Electrical installer shall install all line voltage power wiring and conduit. Coordinate with Division 26 work.

J. Install a new set of filters prior to final air balance and substantial completion.

3.03 MANUFACTURER'S START-UP SERVICES

A. The manufacturer shall provide start-up service in the form of a factory trained service technician. The service technician shall verify correct installation, verify unit mounting, verify fan rotation, verify spring isolator adjustments, verify control wiring, verify power wiring, start-up the fans, and check for proper operation. The service technician shall provide final adjustments to meet the specified performance requirements. Fully staffed parts and service personnel shall be within four hours travel from the job site.

END OF SECTION

SECTION 23 81 45 - SPLIT HEAT PUMP UNITS

PART 1 - GENERAL

1.01 APPLICABLE REQUIREMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 230500 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SCOPE

A. All work to be furnished and installed under this Section shall comply with all the requirements of Division 01, and shall include, but not necessarily be limited to, the following:
   1. Split air conditioning unit.
   2. Controls and control connections.
   3. Electrical power connections.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Section 23 0500: Basic HVAC Materials and Methods

B. Section 23 0593: Testing, Adjusting and Balancing

C. Section 23 0716: Equipment Insulation

D. Section 23 0900: Building Automation System (BAS) Controls

E. Section 23 2300: Refrigerant Piping Systems

F. Section 23 3113: Air Distribution

G. Division 26: Electrical

1.04 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Provide packaged units that are the standard product of an equipment manufacturer regularly engaged in the production of such units who issues complete catalog information on such products. Units shall not be fabricated by the Contractor.

B. Codes and Standards: Provide air handling units conforming to the requirements of the latest addition of the following:
   1. Air Movement and Control Association (AMCA):
      a. 99 - Standards Handbook
      b. 210 - Laboratory Methods of Testing Fans for Rating
      c. 300 - Reverberant Room Method for Sound Testing of Fans
      d. 301 - Methods for Calculating Fan Sound Ratings from Laboratory Test Data
      e. 500 - Test Method for Louvers, Dampers, and Shutters
   2. American National Standards Institute (ANSI):
      a. 9 - Load Ratings and Fatigue Life for Ball Bearings
      b. 11 - Load Ratings and Fatigue Life for Roller Bearings
      c. 900 - Test Performance of Air Filter Units
   3. Air-Conditioning, Heating and Refrigeration Institute (AHRI):
      a. 240 - Unitary Air-Source Heat Pump Equipment
      b. 270 - Sound Rating of Outdoor Unitary Equipment
   4. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
      a. 15 - Safety Code for Mechanical Refrigeration
      b. 193 – Method of Test for Determining the Air Leakage of HVAC Equipment. All systems that move less than 3,000 cfm shall comply with less than 1.4% cabinet leakage rate.
   5. National Electrical Manufacturers Association (NEMA): Except for motors, provide electrical components required as part of air handling units, which comply with NEMA Standards.
   6. National Fire Protection Association (NFPA): Provide unit internal insulation having flame spread rating not higher than 25 and smoke developed rating not higher than 50:
      a. 70 - National Electrical Code
      b. 90A - Standard for the Installation of Air Conditioning and Ventilating Systems
      c. 90B - Standard for the Installation of Warm Air Heating and Air Conditioning Systems
   7. Sheet Metal and Air Conditioning Contractors' National Association, Inc. (SMACNA): Comply with applicable SMACNA standards including "HVAC Duct Construction Standards - Metal and Flexible."
   8. Underwriters Laboratories, Inc. (UL): Except for motors, provide electrical components required as part of units, which have been listed and labeled by UL.
   9. Minimum Efficiency: Minimum efficiencies shall meet or exceed the values required by the local energy code.

1.05 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data for systems with air handler units, evaporator coils, and outdoor condensing units showing dimensions, weights, capacities, ratings, fan performance with operating point clearly indicated,

motor electrical characteristics, finishes of materials, installation instructions, sound and vibration test report, and bearing life calculations.

B. Maintenance Data: Submit maintenance instructions, including instructions for lubrication, filter replacement, motor and drive replacement, and spare parts lists. Include this data, product data, shop drawings, and wiring diagrams in operating and maintenance manuals; in accordance with requirements of Division 01.

1.06 ENVIRONMENTAL REQUIREMENTS

A. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site under provisions of Division 01. Deliver units to the site in containers with manufacturer's stamp or label affixed.

B. Store/protect products under provisions of Division 01. Protect units against dirt, water, chemical, and mechanical damage. Do not install damaged units - remove from project site.

1.08 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 23 0500 for additional warranty and Substantial Completion requirements.

C. Provide five (5) year warranty on compressors.

PART 2 - PRODUCTS

2.01 SPLIT SYSTEM HEAT PUMP WITH INDOOR FAN COIL

A. Manufacturers: Trane, Carrier, Lennox, York, Rheem or equal.

B. Indoor Fan Coil Unit
1. General:
a. Factory fabricated fan coil units of the size, type configuration and capacity as scheduled on the drawings. Units shall be self-contained, factory assembled and pre-wired with condensate pump designed to operate with a two speed high efficiency heat pump.
b. All pressure drops, horsepowers and dimensions shown are maximum allowable. All capacities shown are minimum allowable. All units must

have AMCA certified performance data for fans tested in the unit casings. Bare fan certification without casing is not acceptable.

c. Manufacturers unable to meet this criteria will only be considered as an alternate to specified and as a deduct to base bid. Manufacturers listed by name does not imply that their standard construction meets the specifications nor that they are approved. All manufacturers are required to meet all details of this specification without exception.

2. Unit Casing
   a. Unit shall be enameled, galvanized steel with minimum 1/2" 1.5 LB internal insulation. Insulation shall be attached with adhesive with all exposed edges coated to prevent erosion. All exposed metal inside and out shall be finished with at least one coat of gray enamel.
3. Fan Assembly
   a. Direct-driven, double-width fan wheels shall have forward-curved blades, and be statically and dynamically balanced, with scrolls and fans constructed of galvanized steel.
   b. Rotating assembly shall provide a rigid support for motor and fan assembly. Assembly shall be accessible and entire assembly shall be removable for maintenance.
   c. Motor shall be 3 speed permanent split capacitor type with sleeve type bearings and oversized oil reservoirs.
4. Coils
   a. Coils shall be ARI certified and of the same manufacturer as the unit to insure proper fit and quality. All coil casings shall be galvanized steel minimum or stainless steel. Copper tubes shall be a minimum thickness of 0.020 and return bends of minimum 0.035. Headers shall be non-ferrous seamless copper. Aluminum fins shall have a minimum thickness of 0.0080 and tubes shall be mechanically expanded into fin collars to provide permanent mechanical bond. No exposed copper shall show between fins.
   b. Coils shall be galvanized steel coated with closed cell fire retardant foam insulation.
5. Filter Section
   a. Filters shall be on inch thick pleated filter. Filter velocity shall be less than 500 FPM.
6. Unit Suspension
   a. For horizontally suspended units the manufacturer shall provide factory welded mounting clips for suspension of units. Clips to be capable of accepting 1/2" rod or isolators. Weights shown on plans are maximum allowable operating weights including water in coils.
7. Resistance Backup: Provide units with electric resistance backup heating capability. Coils to be of helix wound elements with limit controls and automatic reset.
8. Provide return air cabinet as specified on Drawings. Cabinet shall be constructed of heavy gage steel with baked enamel finish.
   a. Dampers: Outside air damper shall fail to closed position on shutdown.
   b. Damper Gaskets: Provide tight fitting dampers with edge gaskets.

c. Damper Operator: 24 volt operation.
d. Mixed Air Controls: Maintain selected supply air temperature and return dampers to minimum position when ambient air temperature exceeds return air temperature.
Controls shall prevent the operation of supplemental electric resistance heating when the heating load can be served by the heat pump alone.Controls shall prevent the operation of supplemental electric resistance heating when the heating load can be served by the heat pump alone.

C. Outdoor Condensing Unit:
1. General: Provide remote outdoor heat pump compressor units consisting of hermetic compressor with overload protection, direct drive condenser fan, aluminum fin/seamless copper tube coil, strainer, high and low pressure switches, accumulator, and thermostatic expansion valve.
2. Unit Cabinet: Galvanized steel, bonderized, and coated with powder coat paint.
3. Condenser Fans: Direct drive propeller type, discharging upward. Motors to be totally enclosed, single phase, with Class B insulation and permanently lubricated bearings. Motor to provide multispeed operation and enhanced low-speed efficiency and reduced noise. Fan blades to be statically and dynamically balanced. Condenser fan openings to be equipped with PVC-coated steel wire safety guards.
4. Coil: Aluminum fins mechanically bonded to copper tubes.
5. Refrigerant Components: Liquid tube shutoff valve with sweat connection, suction tube shutoff valves with sweat connection, R-401c refrigerant, accumulator, and reversing valve. An internal pressure relief valve to provide high-pressure protection to the refrigerant system.
6. Compressor: Hermetically sealed two-speed compressor mounted on rubber mountings. Protection to include internal PTC-type overloads. An internal pressure relief valve to provide high-pressure protection to the refrigerant system. Provide external service valves for the refrigerant circuit.
7. Controls: Provide. Provide an electronic anti-short cycle control, a malfunction output signal to the indoor thermostat and an outdoor thermostat for auxiliary heat staging. Provide a compressor quick start kit. Provide auto-reset high and low-pressure switches to continuously monitor system operation and mechanical and electrical interlocks between the low and high-speed contactors to eliminate the potential of compressor motor burnout due to contactor malfunction.

2.02 SPLIT SYSTEM HEAT PUMP WITH WALL OR CEILING HUNG DUCTLESS INDOOR UNIT

A. Manufacturers: Mitsubishi, Sanyo, Carrier, or equal.

B. Indoor Fan Coil Unit
   1. General:
      a. Factory fabricated wall or ceiling mounted fan coil units designed for ductless application of the size, type configuration and capacity as scheduled on the drawings. Units shall be self-contained, factory assembled and pre-wired.
      b. All pressure drops, horsepowers and dimensions shown are maximum allowable. All capacities shown are minimum allowable. All units must have AMCA certified performance data for fans tested in the unit casings. Bare fan certification without casing is not acceptable.
      c. Manufacturers unable to meet this criteria will only be considered as an alternate to specified and as a deduct to base bid. Manufacturers listed by name does not imply that their standard construction meets the specifications nor that they are approved. All manufacturers are required to meet all details of this specification without exception.
   2. Unit Casing:
      a. High Wall Unit: Cabinet shall be fully insulated with polystyrene inlet and discharge grilles.
      b. Ceiling Suspended Unit: Cabinet shall be zinc-coated bonderized steel finished with baked enamel paint. Inlet grilles shall be high-impact polystyrene.
   3. Fan Assembly:
      a. High Wall Unit: Tangential direct-drive blower with intake at the upper front face of the unit and discharge at the bottom front. Automatic, motor-driven vertical air sweep shall be standard.
      b. Fan shall be centrifugal blower with air intake in the bottom rear of the unit and discharge in the front.
   4. Motors:
      a. Motors shall be open drip-proof, permanently lubricated ball bearing with inherent overload protection. Fan motor to be 3-speed.
   5. Coils:
      a. Coils shall be copper tube with ARI certified and of the same manufacturer as the unit to insure proper fit and quality mechanical bond. No exposed copper shall show between fins.
      b. Coils drip pan shall be galvanized steel coated with closed cell fire retardant foam insulation. A secondary drip pan shall be included under the coil header.
   6. Filter Section:
      a. Filters shall be factory supplied cleanable filter.
   7. Controls - Microprocessor based with the following functions:
      a. Automatic restart after power failure.
      b. Internal temperature sensing controls shall sense return air temperature.
      c. Indoor coil freeze protection.
      d. Dehumidification mode shall be provided to increase latent removal capability by modulating fan speed and set point temperature.

e. Fan only operation shall be provided to permit room circulation when no cooling is required.
f. Fan speed control shall be user-selectable: high, medium, low, or microprocessor automatic operation during operating periods.
g. Compressor time delay to limit cycling.
h. Controls shall prevent the operation of supplemental electric resistance heating when the heating load can be served by the heat pump alone.

8. Special features:
   a. Provide an internal condensate pump with interlock to unit operation in the event of malfunction.
   b. Provide external electronic programmable thermostat for ceiling mounted units.

C. Outdoor Condensing Unit:
1. General: Provide remote outdoor heat pump compressor units consisting of hermetic compressor with overload protection, direct drive condenser fan, aluminum fin/seamless copper tube coil, strainer, high and low pressure switches, accumulator, and thermostatic expansion valve.
2. Unit Cabinet: Galvanized steel, bonderized, and coated with powder coat paint.
3. Condenser Fans: Direct drive propeller type, discharging upward. Motors to be totally enclosed, single phase, with Class B insulation and permanently lubricated bearings. Condenser fan openings to be equipped with PVC-coated steel wire safety guards.
4. Coil: Aluminum fins mechanically bonded to copper tubes.
5. Refrigerant Components: Liquid tube shutoff valve with sweat connection, suction tube shutoff valves with sweat connection, refrigerant, accumulator, and reversing valve. An internal pressure relief valve to provide high-pressure protection to the refrigerant system.
6. Compressor: Hermetically sealed two-speed compressor mounted on rubber mountings. Protection to include internal PTC-type overloads. An internal pressure relief valve to provide high-pressure protection to the refrigerant system. Provide external service valves for the refrigerant circuit.
7. Controls: Provide an electronic anti-short cycle control, a malfunction output signal to the indoor thermostat and an outdoor thermostat for auxiliary heat staging. Provide a compressor quick start kit. Provide auto-reset high and low-pressure switches to continuously monitor system operation and mechanical and electrical interlocks between the low and high-speed contactors to eliminate the potential of compressor motor burnout due to contactor malfunction high condensing temperature protection. Systems diagnostics with matching fan coil.

2.03 PROGRAMMABLE THERMOSTAT

A. Thermostat with 365 day programmability that allows the building occupants to program the temperature setpoints for at least four periods within 24 hours. A minimum of 5 holidays shall be programmable for up to 5 years. Daylight savings shall be provided as a standard feature in the programming calendar.

1. Manufacturers: Honeywell VisionPRO 8000 Series, Honeywell Prestige THX 9000 Series, Honeywell TB7600 Series, Venstar ColorTouch T6000 Series, EnTouch Pro/One or equal.

B. Minimum thermostat features shall include, but not limited to, the following:
   1. The thermostat shall have a touch screen and shall display both room temperature and cooling and heating setpoints simultaneously, and shall indicate when cooling or heating and what stage is energized on the main screen.
   2. Programming may be accomplished at the thermostat, or via free software. The program shall have an override mode to provide comfort on demand while in an unoccupied period. The unoccupied override shall be adjustable by pushing an override button and selecting thirty minute increments, up to four hours.
   3. The setback override shall be activated by a single button, and deactivated on demand.
   4. Setpoints shall be adjustable from 35ºF to 99ºF, with a minimum 5°F adjustable deadband available.
   5. Dual setpoints shall be provided with the ability to individually set heating and cooling temperatures with adjustable heating and cooling setpoint limits. Initial occupied mode cooling setpoint of 75ºF and heating setpoint of 70ºF. Initial unoccupied mode cooling setpoint of 85ºF and heating setpoint of 55ºF.

C. The thermostat shall be capable of independently controlling an individual system, with up to three stages of heating and two stages of cooling, fan, and reversing valve.
   1. For heat pumps an adjustable auxiliary heat lockout temperature based on outdoor temperatures shall be provided.
   2. An Emergency Heat switch will be provided on the touch screen when set in heat pump mode.

D. The fan shall be programmable to operate continuously during occupied periods and in auto mode during unoccupied periods.

E. Controls shall be capable of alternating compressor starting sequence with a built in lead-lag operating logic.
   1. Equipment protection options shall be provided to prevent compressor short-cycling, and to limit the number of cycles per hour. These options shall be overridden for use with zoning systems.

F. Pre-Occupancy purge cycle that energizes the fan before the programmed occupancy time, adjustable up to three (3) hours in 15-minute increments.
   1. Configurable terminals shall be provided for remote indoor, remote outdoor or remote supply air temperature sensing.

G. Multiple security levels to limit access to programming and configuration and will allow for a custom passcode. The various security levels will allow controlled access to programming, unoccupied override, and thermostat mode.

H. All programming information, except time of day, shall reside in nonvolatile memory. During a power failure, the thermostat shall maintain its program indefinitely without the use of batteries. Wi-Fi capable and controlled through local wireless internet routers. The thermostat shall be capable of receiving an automated demand response signal from the local electrical utility, and automatically reset the cooling and heating setpoints during the demand event. When the demand event is terminated by the local electrical power utility, the thermostat will reset to normal occupied and unoccupied setpoints.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that mounting surfaces are ready to receive work.

B. Verify that proper power supply is available.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide layout drawings of units, locations and power requirements to electrical installer.

C. Install air filters in unit during installation phase. Do not operate the unit without filters in place.

D. In the case of suspended units, mount the fan coil units on springs or from spring hangers as required and as shown on Drawings. Provide Mason #DNHS combination isolator hangers to fully support horizontal units hung from building framing.

E. Provide 4" high (minimum) concrete pad extending 6" beyond edge of condensing unit on all sides. Provide neoprene pad, minimum 3/4” by 2” x 2”, under each corner of condensing unit and secure to concrete pad with concrete wedge anchors, sheet metal screws and angle brackets.

F. Install 2" flexible duct connection at inlets and outlets of ducted units.

G. Install condensate drain piping and traps in accordance with manufacturer's instructions, per local code and as shown on the drawings.

H. Install manufacturer provided condensate “air-trap” where provided with each unit. Install trap per manufacturer’s instructions and install condensate piping as required by local code.

I. Install copper refrigerant piping and insulate lines.

J. Install thermostat and all wiring associated with control signals between air handling unit and condensing unit. Conceal low voltage wiring in building structure, or inside the refrigerant pipe insulation, or in conduit.

K. Electrical installer shall install all line voltage power wiring and conduit. Coordinate with Division 26 work.

L. Install a new set of filters prior to final air balance and substantial completion.

3.03 MANUFACTURER'S START-UP SERVICES

A. The manufacturer shall provide start-up service in the form of a factory trained service technician. The service technician shall verify correct installation, verify unit mounting, verify fan rotation, verify spring isolator adjustments, verify control wiring, verify power wiring, start-up the fans, and check for proper operation. The service technician shall provide final adjustments to meet the specified performance requirements. Fully staffed parts and service personnel shall be within four hours travel from the job site.

END OF SECTION

SECTION 23 84 13 - HUMIDIFIERS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. All work to be furnished and installed under this section shall comply with all the requirements of General Conditions, Supplemental Conditions, Division 01 - General Requirements, Section 23 0500 - Basic HVAC Materials and Methods, and other Sections in Division 23 specified herein.

1.02 SUMMARY

A. This Section includes the following humidifiers:
   1. Self-contained electric steam humidifiers.
   2. Steam jacketed dispersion tube injection humidifiers.

1.03 DEFINITION

A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50V or for remote-control, signaling power-limited circuits.

1.04 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA-70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. Comply with ANSI/NFPA-70 – National Electrical Code.

C. Comply with AHRI 640 – Standard for Commercial and Industrial Humidifiers.

1.05 ACTION SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings: Detail fabrication and installation of humidifiers. Include piping details, plans, elevations, sections, details of components, manifolds, and attachments to other work.
   1. Wiring Diagrams: Power, signal, and control wiring.

1.06 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Detail humidifiers and adjacent equipment. Show support locations, type of support, weight on each support, required clearances, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
   1. Structural members to which humidifiers will be attached.
   2. Size and location of initial access modules for acoustical tile.

1.07 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For humidifiers to include in operation and maintenance manuals.

1.08 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Supply one replacement electrode cylinder with each self-contained humidifier.

1.09 COORDINATION

A. Coordinate location and installation of humidifiers with manifolds in ducts and air-handling units or occupied space. Revise locations and elevations to suit field conditions and to ensure proper humidifier operation.

1.10 WARRANTY

A. Provide minimum one-year warranty from date of Substantial Completion, including all parts, material, labor and travel.

B. Refer to Section 23 0500 for additional warranty and Substantial Completion requirements.

PART 2 - PRODUCTS

2.01 SELF-CONTAINED ELECTRIC STEAM HUMIDIFIERS

A. Refer to schedule on drawings for capacities and characteristics. Provide Type 316 stainless steel components where DI water is used as steam source.

B. Manufacturers: Neptronic, Carel, Nortec Humidifier, or equal.

C. General:

1. Provide self-contained, microprocessor controlled, wall mounted, electric resistive steam humidifiers as indicated, of size and capacity as scheduled. Electrode technology is not acceptable.
2. Humidifier shall meet the requirements of UL 998 and CSA C22.2 No.104 standards to comply with ETL certification.

D. Humidifier cabinet:
1. The humidifier casing shall be constructed of cold roll steel and stainless steel base with baked enamel finish to prevent rust.
2. For safety and security reasons, all components, electrical wiring and plumbing connections will not be exposed and must be contained within the cabinet of the unit.
3. The compartmentalized enclosure shall separate the plumbing, controls, and high-voltage sections, preventing heat, humidity or water transfer to the electrical sections and ensuring that the evaporation chamber remains isolated.
4. The plumbing compartment shall be equipped with a drip tray.
5. The front of the unit and the high voltage compartment shall have a lockable door to restrict access by unauthorized personnel.

E. Evaporation chamber:
1. Steam shall be generated in a stainless steel cleanable evaporation chamber.
2. The evaporation chamber shall be easily serviceable and removable from the unit. No tools are required during servicing.
3. The electronic level sensing assembly remains permanently fixed and separate from the evaporation chamber.
4. The heating elements and manual reset high temperature safety cut-out switch remain fixed in place, even as the evaporation chamber is removed for service cleaning.
5. The evaporation chamber shall have a water port designed to minimize the risk of blockage caused by sediment build-up. The water port will be easily detachable for servicing by means of a single quick connect assembly.

F. Immersion heating element(s):
1. Steam shall be generated by self-cleaning 800/825 Incoloy electric heating immersion elements.
2. The heating elements shall have a high expansion factor, minimizing mineral deposits and enabling most of them to break off and fall to the bottom of the chamber.

G. Water level control:
1. The water level detection system shall be self-cleaning, self-calibrating and equipped with a redundancy system, consisting of a high-resolution capacitive sensor and two fail-safe resistive sensors.
2. The humidifier must have the ability to sense foam and take a corrective action by going into drain cycle.

3. For safe temperature operation, the humidifier must have both an electronic temperature sensor inside the evaporation chamber and an external bimetallic temperature cut-off.

H. Water requirements:
1. The humidifier shall operate under all types of water including tap, deionized and reverse osmosis water, with no additional parts required.

I. Feed water:
1. The supply water to the unit shall be controlled by a quiet three port solenoid valve equipped with flow regulators, to supply water into the evaporation chamber, temper the hot water during a drain and clean the water level sensors.
2. To conserve energy, any hot water skimming during normal FILLING cycle is not acceptable.
3. The humidifier shall have a check valve in the fill water line to prevent backflow of hot contaminated water into the water supply system.
4. The humidifier shall have a pulsed fill mode to ensure that boiling does not stop while the humidifier is refilling, in order to maintain a constant steam output.

J. Drain:
1. The humidifier shall have a drain pump which provides a quick drain cycle, minimizing the down time.
2. The humidifier shall have four draining strategies: periodic full drain cycle, water dilute system, AFEC and configurable drain schedule, ensuring maximum energy efficiency, optimal steam output stability and minimal steam output interruptions.
3. To enhance safety and minimize energy consumption, the humidifier shall vary the drain time periods according to variations in water conditions.
4. After 72 hours of no demand, the humidifier will go into "Tank Rinse" or end of season mode, completely draining the unit to eliminate stagnant water.

K. Manual drain valve:
1. The humidifier shall be supplied with a manual drain valve which ensures that the unit can be drained even during a power failure.

L. Disconnect switch:
1. For safety reasons and to conform to local regulations, the humidifier shall have a built-in factory wired disconnect switch, to easily turn off the power without opening any access doors, ensuring that the power is off when accessing the electrical panels. An external disconnect switch is not required.

M. Controller:
1. The humidifier shall have an alphanumeric display and control module with 8 function buttons for fast configuration and operation.
2. The Idle Screen shall display common information including humidity demand, actual steam output and state of operation. It will also indicate special diagnostic parameters such as abnormal operation, time delays, etc.

3. The humidifier shall be programmable using the menu buttons to view and configure settings including control method, %R.H. set point, control signal type, and indication on number of actual service hours.
4. After the maximum number of hours of operation before servicing is due has been exceeded, the unit will display a need for servicing and the Status Display LED on the control panel will turn red.

N. SD card:
1. The unit shall be equipped with an SD card slot, to allow for simplified troubleshooting, by storing a history log of all humidifier trends and alarms.
2. The SD card shall allow for on-site firmware upgrades.

O. USB connection:
1. The unit shall be equipped with a USB port, to allow on-site firmware upgrades.

P. Scheduling system:
1. The humidifier shall be equipped with a configurable and independent scheduling system for unit operation and drain cycle, ensuring that the unit does not operate or drain when not necessary.

Q. User rights management:
1. The electronic controller shall be equipped with a user rights management system, which simplifies operation and protects the humidifier from unwanted access by displaying only the features associated to the type of user logged in.

R. Building automation systems:
1. The humidifier shall be equipped with communication protocols, including BACnet MS/TP, Modbus RTU, LonWorks, BACnet UDP/IP, or Modbus TCP/IP, for integration with a building management system (BMS).
2. These protocols shall be available via a plug-in module for simple upgrade of units already in the field.

S. Web services:
1. The humidifier shall be equipped with web services enabling humidifier parameter configuration, and access to diagnostics and other functions remotely using the internet.

T. Modulating control:
1. The control modulating signal shall be 0-10 VDC or 2-10 VDC, 4-20 mA or 0-20 mA to modulate 0-100% of the capacity.
2. The maximum output (SPAN) can be minimized by using the electronic "MAX OUTPUT" setting.
3. Modulation of all elements shall be achieved using silent SSR's with zero voltage crossing detection and firing. The SSR's will be backed up by an electro-mechanical contactor.
4. To avoid harmonics and peak electrical loads, Time Proportioning modulation using only electro- mechanical relays will not be acceptable.

U. Manifold: Stainless-steel tube with integral fan to discharge vapor directly into occupied space.

V. Accessories:
1. Humidistat: Wall or return-duct-mounting, solid-state, electronic-sensor controller capable of full modulation or cycling control.
2. Duct-mounting, high-limit humidistat.
3. Airflow switch for preventing humidifier operation without airflow.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine ducts, air-handling units, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install humidifiers with required clearance for service and maintenance. Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1. Install per manufacturer’s instructions.

B. Seal humidifier manifold duct penetrations with flange.

C. Install humidifier manifolds in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

D. Install stainless-steel drain pan under each manifold mounted in duct.
1. Construct drain pans with connection for drain and insulated and complying with ASHRAE 62.1.
2. Connect to condensate trap and drainage piping.
3. Extend drain pan upstream and downstream from manifold a minimum distance recommended by manufacturer but not less than required by ASHRAE 62.1.

E. Install manifold supply piping pitched to drain condensate back to humidifier.

F. Install drip leg upstream from steam trap a minimum of 12 inches (300 mm) tall for proper operation of trap.

G. Equipment Mounting:
   1. Install steam generators on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Division 3 Concrete.
   2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 Vibration Isolation for Piping, Ductwork, and Equipment.

3.03 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
   1. Install piping adjacent to humidifiers to allow service and maintenance.
   2. Install shutoff valve, strainer, backflow preventer, and union in humidifier makeup line.

B. Install electrical devices and piping specialties furnished by manufacturer but not factory mounted.

C. Install piping from safety relief valves to nearest floor drain.

D. Ground equipment according to Division 26: Grounding and Bonding for Electrical Systems.

E. Connect wiring according to Division 26: Low-Voltage Electrical Power Conductors and Cables.

3.04 FIELD QUALITY CONTROL

A. Cleaning: Clean factory-finished surfaces. Repair any marred or scratched surfaces with manufacturer’s touch-up paint.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

C. Perform tests and inspections and prepare test reports.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:
   1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Remove and replace malfunctioning units and retest as specified above.

3.05 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain humidifiers. Refer to Section 017900 Demonstration and Training.

END OF SECTION

SECTION 26 00 00 - BASIC ELECTRICAL REQUIREMENTS

PART 1 - GENERAL

1.01 SUMMARY

A. This Section specifies requirements specifically applicable to the Work specified in Division 26. This Section is also referenced by related Work specified in other Divisions in addition to the provisions of Division 01.

1.02 WORK INCLUDED

A. Basic electrical requirements for all Division 26 Sections.

B. The Contract Documents, including Specifications and Construction Drawings, are intended to provide all material and labor to install complete power distribution, auxiliary power production, lighting systems for the building and shall interface with all existing building systems affected by new construction.

C. The Contractor shall refer to the architectural interior details, floor plans, elevations, and the structural and other Contract Drawings and they shall coordinate their work with that of the other trades to avoid interference. The plans are diagrammatic and show generally the locations of the fixtures, equipment, and raceways and are not to be scaled; all dimensions and existing conditions shall be inspected and verified by contractors at the building prior to start of any work.

D. The Contractor shall comply with the project closeout requirements as detailed in General Requirements of Division 01.

E. Where project involves interface with existing building and site systems, every effort has been made to note existing utilities and services. However, the Contractor should thoroughly familiarize themselves with existing conditions and be aware that in some cases information is not available as to concealed conditions, which exist in portions of the existing building affected by this work.

1.03 CODES AND STANDARDS

A. The Contractor is cautioned that code requirements not explicitly detailed in these specifications or drawings, but which may be reasonably inferred or implied from the nature of the project, must be provided as part of the contract.

B. Perform all tests required by governing authorities and required under all Division 26 Sections. Provide written reports on all tests.

1. All excavation work must comply with all provisions of state laws including notification to all owners of underground utilities at least 48 business day hours, but not more than 10 business days, before commencing an excavation
2. All work shall comply with the Americans with Disabilities Act (ADA).
3. Referenced Standards: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to the Owner's Representative for a decision before proceeding.
4. All work shall be incompliance with the following:
    a. Local, city, county and state codes and ordinances.
    b. Local Bureau of Buildings.
    c. Local Health Department.
    d. Local and State Fire Prevention Districts
    e. State Administrative Codes:
    f. Edit below to suit project state and years of codes currently in force. Verify information below matches information included on drawings.
    g. Provide in accordance with rules and regulations of the following:
5. California Building Codes enforced by the Authority Having Jurisdiction (AHJ).
    a. 2022 California Administrative Code, Part 1, Title 24 California Code of Regulations (CCR).
    b. 2022 California Building Code (CBC), Part 2, Title 24 CCR (2021 International Building Code with California Amendments).
    a. 2022 California Electrical Code (CEC), Part 3, Title 24 CCR (2020 National Electrical Code with California Amendments).
    c. 2022 California Mechanical Code (CMC) Part 4, Title 24 CCR (2021 Uniform Mechanical Code with California Amendments).
    d. 2022 California Plumbing Code (CPC), Part 5, Title 24 CCR (2021 Uniform Plumbing Code with California Amendments).
    e. 2022 California Building Energy Efficiency Standards, Part 6, Title 24 CCR.
    b. 2022 California Fire Code, Part 9, Title 24 CCR (2021 International Fire Code with California Amendments).
    f. 2022 California Green Building Standards Code (CALGreen), Part 11, Title 24 CCR.
    g. 2019 California Referenced Standards, Part 12, Title 24 CCR.
    h. Title 19 CCR Public Safety, State Fire Marshal Regulations.
6. Federal Building Codes enforced by the Authority Having Jurisdiction (AHJ):
    a. 2022 International Building Code (IBC).
    b. 2021 International Mechanical Code (IMC)
    c. 2021 International Plumbing Code (IPC)
    d. 2021 International Fire Code (IFC).
    e. 2021 International Energy Conservation Code (IECC).
    f. 2022 National Electrical Code (NEC)

1.04 CYBERSECURITY PROTECTION

A. For all installed systems that have internet connectivity, including but not limited to controls, monitoring, metering, sensors, or other remote access capabilities, the General Contractor is responsible to request from its subcontractors a cybersecurity risk mitigation plan. All cybersecurity risk mitigation plans shall be coordinated with the owner to verify functionality and compatibility with the owner's network architecture and topology. Cybersecurity risks to be mitigated include intrusion, remote access, viruses, spy-ware, and malware. Put in-place and in-use effective protection and homogenous policies for infrastructure, servers, workstations, controllers, network connected equipment, internet connected systems/devices, WiFi devices, IOT devices and mobile devices. Where relevant and applicable, apply the requirements of ISO/IEC 27000 Series of Standards relating to "Information Technology - Security Techniques".

B. For any "highly secure environments" identified by the owner, implement relevant jurisdiction-specific standards to be performed by an accredited Information Security advisor.

C. Coordinate with other divisions as applicable.

1.05 SAFETY AND INDEMNITY

A. The Contractor shall be solely and completely responsible for conditions of the job site including safety of all persons and property during performance of the work. This requirement will apply continuously and not be limited to normal hours of work.

B. No act, service, drawing, review, or Construction Review by the Owner, Architect, the Engineers or their consultants, is intended to include the review of the adequacy of the Contractor's safety measures, in, on, or near the construction site.

C. The Contractor performing work under this Division of the Specifications shall hold harmless, indemnify and defend the Owner, the Architect, the Engineers and their consultants, and each of their officers, employees and agents from any and all liability claim, losses or damage arising, or alleged to arise from bodily injury, sickness, or death of a person or persons, and for all damages arising out of injury to or destruction of property arising directly or indirectly out of, or in connection with, the performance of the work under the Division of the Specifications, and from the Contractor's negligence in the performance of the work described in the Construction Contract Documents; but not including the sole negligence of the Owner, the Architect, the Engineers, and their consultants or their officers, employees and agents.

1.06 GENERAL REQUIREMENTS

A. Examine all existing conditions at building site.

B. Review contract documents and technical specifications for extent of new work to be provided.

C. Coordinate with other divisions work to provide electrical service as required to operate all equipment and devices under this Division of work.

D. Install equipment and materials to provide required access for servicing and maintenance. Coordinate the final location of concealed equipment and devices requiring access with final location of required access panels and doors. Allow ample space for removal of all parts that require replacement or servicing. This work shall include furnishing and installing all access doors required for access.

E. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected. Refer to Equipment Specifications in Divisions 02 through 40 for rough-in requirements.

F. Coordinate electrical equipment and materials installation with other building components.

G. Verify all dimensions by field measurements.

H. Arrange for chases, slots, and openings in other building components to allow for mechanical installations.

I. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.

J. Sequence, coordinate, and integrate installations of materials and equipment for efficient flow of the work. Give particular attention to large equipment requiring positioning prior to closing-in the building.

K. Coordinate the cutting and patching of building components to accommodate the installation of electrical equipment and materials. Contractor to provide for all cutting and patching required for installation of this work unless otherwise noted.

L. Where mounting heights are not detailed or dimensioned, install electrical services and overhead equipment to provide the maximum headroom possible.

M. Install electrical equipment to facilitate maintenance and repair or replacement of equipment components.

N. Coordinate the installation of electrical materials and equipment above ceilings with ductwork, piping, conduits, suspension system, light fixtures, cable trays, sprinkler piping and heads, and other installations.

O. Coordinate connection of electrical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service.

P. All materials located within air plenum spaces, air shafts, and occupied spaces shall have a flame-spread index of 25 or less, and smoke-developed index of 50 or less, as tested by ASTM E84 (NFPA 255) Method. In addition, the products, when tested, shall not drip flame particles, and flame shall not be progressive. Provide Underwriters Laboratories, Inc., label or listing, or satisfactory certified test report from an approved testing laboratory to prove the fire hazard ratings for materials proposed for use do not exceed those specified when requested by the AHJ. If installed products are found to be not in compliance with the above, they shall be replaced at the contractor's expense.

Q. Products made of or containing lead, asbestos, mercury or other known toxic or hazardous materials are not acceptable for installation under this Division. Any such products installed as part of the work of the Division shall be removed and replaced and all costs for removal and replacement shall be borne solely by the installing Contractor.

1.07 REFERENCES

A. Abbreviations and Acronyms for Electrical Terms and Units of Measure:
1. 8P8C: An 8-position 8-contact modular jack.
2. A: Ampere, unit of electrical current.
3. AC or ac: Alternating current.
4. AFCI: Arc-fault circuit interrupter.
5. AIC: Ampere interrupting capacity.
6. AL, Al, or ALUM: Aluminum.
7. ASD: Adjustable-speed drive; also called "variable-frequency drive" (VFD).
8. ATS: Automatic transfer switch.
9. AWG: American wire gauge; see ASTM B258.
10. BAS: Building automation system.
11. BIL: Basic impulse insulation level.
12. BIM: Building information modeling.
13. CAD: Computer-aided design or drafting.
14. CATV: Community antenna television.
15. CB: Circuit breaker.
16. cd: Candela, the SI fundamental unit of luminous intensity.
17. CO/ALR: Copper-aluminum, revised.
18. COPS: Critical operations power system.
19. CU or Cu: Copper.
20. CU-AL or AL-CU: Copper-aluminum.
21. dB: Decibel, a unitless logarithmic ratio of two electrical, acoustical, or optical power values.

22. dB(A-weighted) or dB(A): Decibel acoustical sound pressure level with A-weighting applied in accordance with IEC 61672-1.
23. dB(adjusted) or dBa: Decibel weighted absolute noise power with respect to 3.16 pW (minus 85 dBm).
24. dBm: Decibel absolute power with respect to 1 mW.
25. DC or dc: Direct current.
26. DCOA: Designated critical operations area.
27. DDC: Direct digital control (HVAC).
28. EGC: Equipment grounding conductor.
29. ELV: Extra-low voltage.
30. EMF: Electromotive force.
31. EMI: Electromagnetic interference.
32. EPM: Electrical preventive maintenance.
33. EPS: Emergency power supply.
34. EPSS: Emergency power supply system.
35. ESS: Energy storage system.
36. EV: Electric vehicle.
37. EVPE: Electric vehicle power export equipment.
38. EVSE: Electric vehicle supply equipment.
39. fc: Footcandle, an internationally recognized unit of illuminance equal to one lumen per square foot or 10.76 lx. The simplified conversion 1 fc = 10 lx in the Specifications is common practice and considered adequate precision for building construction activities. When there are conflicts, lux is the primary unit; footcandle is specified for convenience.
40. FLC: Full-load current.
41. FRT: Fire retardant treated wood is any wood product that, when impregnated with chemicals by a pressure process or other means during manufacture, shall have, when tested in accordance with ASTM E84 or UL 723, a listed flame spread index of 25 or less.
42. ft: Foot.
43. ft-cd: Foot-candle, the antiquated U.S. Standard unit of illuminance, equal to one international candle measured at a distance of one foot, which was superseded in 1948 by the unit "footcandle" after the SI unit candela (cd) replaced the international candle; see "fc,"
44. GEC: Grounding electrode conductor.
45. GFCI: Ground-fault circuit interrupter.
46. GFPE: Ground-fault protection of equipment.
47. GND: Ground.
48. HACR: Heating, air conditioning, and refrigeration.
49. HDPE: High-density polyethylene.
50. HID: High-intensity discharge.
51. HP or hp: Horsepower.
52. HVAC: Heating, ventilating, and air conditioning.
53. Hz: Hertz.
54. IBT: Intersystem bonding termination.

55. inch: Inch. To avoid confusion, the abbreviation "in." is not used.
56. IP: Ingress protection rating (enclosures); Internet protocol (communications).
57. IR: Infrared.
58. IS: Intrinsically safe.
59. IT&R: Inspecting, testing, and repair.
60. ITE: Information technology equipment.
61. kAIC: Kiloampere interrupting capacity.
62. kcmil or MCM: One thousand circular mils.
63. kV: Kilovolt.
64. kVA: Kilovolt-ampere.
65. kVAr or kVAR: Kilovolt-ampere reactive.
66. kW: Kilowatt.
67. kWh: Kilowatt-hour.
68. LAN: Local area network.
69. lb: Pound (weight).
70. lbf: Pound (force).
71. LCD: Liquid-crystal display.
72. LCDI: Leakage-current detector-interrupter.
73. LED: Light-emitting diode.
74. Li-ion: Lithium-ion.
75. lm: Lumen, the SI derived unit of luminous flux.
76. LNG: Liquefied natural gas.
77. LP-Gas: Liquefied petroleum gas.
78. LRC: Locked-rotor current.
79. LV: Low voltage.
80. lx: Lux, the SI derived unit of illuminance equal to one lumen per square meter.
81. m: Meter.
82. MCC: Motor-control center.
83. MDC: Modular data center.
84. MG set: Motor-generator set.
85. MIDI: Musical instrument digital interface.
86. MLO: Main lugs only.
87. MV: Medium voltage.
88. MVA: Megavolt-ampere.
89. mW: Milliwatt.
90. MW: Megawatt.
91. MWh: Megawatt-hour.
92. NC: Normally closed.
93. Ni-Cd: Nickel-cadmium.
94. Ni-MH: Nickel-metal hydride.
95. NIU: Network interface unit.
96. NO: Normally open.
97. NPT: National (American) standard pipe taper.
98. NRTL: Nationally Recognized Testing Laboratory, including UL and/or ETL.
99. OCPD: Overcurrent protective device.

100. ONT: Optical network terminal.
101. PC: Personal computer.
102. PCS: Power conversion system.
103. PCU: Power-conditioning unit.
104. PF or pf: Power factor.
105. PHEV: Plug-in hybrid electric vehicle.
106. PLC: Programmable logic controller.
107. PLFA: Power-limited fire alarm.
108. PoE: Power over Ethernet.
109. PV: Photovoltaic.
110. PVC: Polyvinyl chloride.
111. pW: Picowatt.
112. RFI: (electrical) Radio-frequency interference; (contract) Request for interpretation.
113. RMS or rms: Root-mean-square.
114. RPM or rpm: Revolutions per minute.
115. SCADA: Supervisory control and data acquisition.
116. SCR: Silicon-controlled rectifier.
117. SPD: Surge protective device.
118. sq.: Square.
119. SWD: Switching duty.
120. TCP/IP: Transmission control protocol/Internet protocol.
121. TEFC: Totally enclosed fan-cooled.
122. TR: Tamper resistant.
123. TVSS: Transient voltage surge suppressor.
124. UL: (standards) Underwriters Laboratories, Inc.; (product categories) UL, LLC.
125. UL CCN: UL Category Control Number.
126. UPS: Uninterruptible power supply.
127. USB: Universal serial bus.
128. UV: Ultraviolet.
129. V: Volt, unit of electromotive force.
130. V(ac): Volt, alternating current.
131. V(dc): Volt, direct current.
132. VA: Volt-ampere, unit of complex electrical power.
133. VAR: Volt-ampere reactive, unit of reactive electrical power.
134. VFC: Variable-frequency controller.
135. VOM: Volt-ohm-multimeter.
136. VPN: Virtual private network.
137. VRLA: Valve regulated lead acid; also called "sealed lead acid (SLA)" or "valve regulated sealed lead acid."
138. W: Watt, unit of real electrical power.
139. Wh: Watt-hour, unit of electrical energy usage.
140. WPT: Wireless power transfer.
141. WPTE: Wireless power transfer equipment.
142. WR: Weather resistant.

B. Abbreviations and Acronyms for Electrical Raceway Types:
   1. CR: Communications raceway.
   2. CR-GP: General-purpose communications raceway.
   3. CR-P: Plenum communications raceway.
   4. CR-R: Riser communications raceway.
   5. EMT: Electrical metallic tubing.
   6. EMT-A: Aluminum electrical metallic tubing.
   7. EMT-S: Steel electrical metallic tubing.
   8. EMT-SS: Stainless steel electrical metallic tubing.
   9. ENT: Electrical nonmetallic tubing.
   10. EPEC: Electrical HDPE underground conduit (thin wall).
   11. EPEC-A: Type A electrical HDPE underground conduit.
   12. EPEC-B: Type B electrical HDPE underground conduit.
   13. ERMC: Electrical rigid metal conduit.
   14. ERMC-A: Aluminum electrical rigid metal conduit.
   15. ERMC-S: Steel electrical rigid metal conduit.
   16. ERMC-S-G: Galvanized-steel electrical rigid metal conduit.
   17. ERMC-S-PVC: PVC-coated-steel electrical rigid metal conduit.
   18. ERMC-SS: Stainless steel electrical rigid metal conduit.
   19. FMC: Flexible metal conduit.
   20. FMC-A: Aluminum flexible metal conduit.
   21. FMC-S: Steel flexible metal conduit.
   22. FMT: Steel flexible metallic tubing.
   23. FNMC: Flexible nonmetallic conduit. See "LFNC."
   24. HDPE: HDPE underground conduit (thick wall).
   25. HDPE-40: Schedule 40 HDPE underground conduit.
   26. HDPE-80: Schedule 80 HDPE underground conduit.
   27. IMC: Steel electrical intermediate metal conduit.
   28. LFMC: Liquidtight flexible metal conduit.
   29. LFMC-A: Aluminum liquidtight flexible metal conduit.
   30. LFMC-S: Steel liquidtight flexible metal conduit.
   31. LFMC-SS: Stainless steel liquidtight flexible metal conduit.
   32. LFNC: Liquidtight flexible nonmetallic conduit.
   33. LFNC-A: Layered (Type A) liquidtight flexible nonmetallic conduit.
   34. LFNC-B: Integral (Type B) liquidtight flexible nonmetallic conduit.
   35. LFNC-C: Corrugated (Type C) liquidtight flexible nonmetallic conduit.
   36. OFR: Optical fiber raceway.
   37. OFR-GP: General-purpose optical fiber raceway.
   38. OFR-P: Plenum optical fiber raceway.
   39. OFR-R: Riser optical fiber raceway.
   40. PVC: Rigid PVC conduit.
   41. PVC-40: Schedule 40 rigid PVC conduit.
   42. PVC-80: Schedule 80 rigid PVC Conduit.
   43. PVC-A: Type A rigid PVC concrete-encased conduit.
   44. PVC-EB: Type EB rigid PVC concrete-encased underground conduit.

45. RGS: See ERMC-S-G.
46. RMC: See ERMC.
47. RTRC: Reinforced thermosetting resin conduit.
48. RTRC-AG: Low-halogen, aboveground reinforced thermosetting resin conduit.
49. RTRC-AG-HW: Heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
50. RTRC-AG-SW: Standard wall, low-halogen, aboveground reinforced thermosetting resin conduit.
51. RTRC-AG-XW: Extra heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
52. RTRC-BG: Low-halogen, belowground reinforced thermosetting resin conduit.

C. Abbreviations and Acronyms for Electrical Single-Conductor and Multiple-Conductor Cable Types:
1. AC: Armored cable.
2. CATV: Coaxial general-purpose cable.
3. CATVP: Coaxial plenum cable.
4. CATVR: Coaxial riser cable.
5. CI: Circuit integrity cable.
6. CL2: Class 2 cable.
7. CL2P: Class 2 plenum cable.
8. CL2R: Class 2 riser cable.
9. CL2X: Class 2 cable, limited use.
10. CL3: Class 3 cable.
11. CL3P: Class 3 plenum cable.
12. CL3R: Class 3 riser cable.
13. CL3X: Class 3 cable, limited use.
14. CM: Communications general-purpose cable.
15. CMG: Communications general-purpose cable.
16. CMP: Communications plenum cable.
17. CMR: Communications riser cable.
18. CMUC: Under-carpet communications wire and cable.
19. CMX: Communications cable, limited use.
20. DG: Distributed generation cable.
21. FC: Flat cable.
22. FCC: Flat conductor cable.
23. FPL: Power-limited fire-alarm cable.
24. FPLP: Power-limited fire-alarm plenum cable.
25. FPLR: Power-limited fire-alarm riser cable.
26. IGS: Integrated gas spacer cable.
27. ITC: Instrumentation tray cable.
28. ITC-ER: Instrumentation tray cable, exposed run.
29. MC: Metal-clad cable.
30. MC-HL: Metal-clad cable, hazardous location.
31. MI: Mineral-insulated, metal-sheathed cable.

32. MTW: (machine tool wiring) Moisture-, heat-, and oil-resistant thermoplastic cable.
33. MV: Medium-voltage cable.
34. NM: Nonmetallic sheathed cable.
35. NMC: Nonmetallic sheathed cable with corrosion-resistant nonmetallic jacket.
36. NMS: Nonmetallic sheathed cable with signaling, data, and communications conductors, plus power or control conductors.
37. NPLF: Non-power-limited fire-alarm circuit cable.
38. NPLFP: Non-power-limited fire-alarm circuit cable for environmental air spaces.
39. NPLFR: Non-power-limited fire-alarm circuit riser cable.
40. NUCC: Nonmetallic underground conduit with conductors.
41. OFC: Conductive optical fiber general-purpose cable.
42. OFCG: Conductive optical fiber general-purpose cable.
43. OFCP: Conductive optical fiber plenum cable.
44. OFCR: Conductive optical fiber riser cable.
45. OFN: Nonconductive optical fiber general-purpose cable.
46. OFNG: Nonconductive optical fiber general-purpose cable.
47. OFNP: Nonconductive optical fiber plenum cable.
48. OFNR: Nonconductive optical fiber riser cable.
49. P: Marine shipboard cable.
50. PLTC: Power-limited tray cable.
51. PLTC-ER: Power-limited tray cable, exposed run.
52. PV: Photovoltaic cable.
53. RHH: (high heat) Thermoset rubber, heat-resistant cable.
54. RHW: Thermoset rubber, moisture-resistant cable.
55. SA: Silicone rubber cable.
56. SE: Service-entrance cable.
57. SER: Service-entrance cable, round.
58. SEU: Service-entrance cable, flat.
59. SIS: Thermoset cable for switchboard and switchgear wiring.
60. TBS: Thermoplastic cable with outer braid.
61. TC: Tray cable.
62. TC-ER: Tray cable, exposed run.
63. TC-ER-HL: Tray cable, exposed run, hazardous location.
64. THW: Thermoplastic, heat- and moisture-resistant cable.
65. THHN: Thermoplastic, heat-resistant cable with nylon jacket outer sheath.
66. THHW: Thermoplastic, heat- and moisture-resistant cable.
67. THWN: Thermoplastic, moisture- and heat-resistant cable with nylon jacket outer sheath.
68. TW: Thermoplastic, moisture-resistant cable.
69. UF: Underground feeder and branch-circuit cable.
70. USE: Underground service-entrance cable.
71. XHH: Cross-linked polyethylene, heat-resistant cable.
72. XHHW: Cross-linked polyethylene, heat- and moisture-resistant cable.

D. Abbreviations and Acronyms for Electrical Flexible Cord Types:
   1. SEO: 600 V extra-hard-usage, hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp locations.
   2. SEOW: 600 V extra-hard-usage, hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp or wet locations.
   3. SEOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp locations.
   4. SEOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp or wet locations.
   5. SJEO: 300 V hard-usage, junior hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp locations.
   6. SJEOW: 300 V hard-usage, junior hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp or wet locations.
   7. SJEOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp locations.
   8. SJEOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp or wet locations.
   9. SJO: 300 V hard-usage, junior hard-service cord with thermoset insulation and oil-resistant thermoset outer cover for damp locations.
   10. SJOW: 300 V hard-usage, junior hard-service cord with thermoset insulation and oil-resistant thermoset outer cover for damp or wet locations.
   11. SJOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer cover for damp locations.
   12. SJOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer cover for damp or wet locations.
   13. SJTO: 300 V hard-usage, junior hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer cover for damp locations.
   14. SJTOW: 300 V hard-usage, junior hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer cover for damp or wet locations.
   15. SJTOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer cover for damp locations.
   16. SJTOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer cover for damp or wet locations.
   17. SO: 600 V extra-hard-usage, hard-service cord with thermoset insulation and oil-resistant thermoset outer covering for damp locations.

18. SOW: 600 V extra-hard-usage, hard-service cord with thermoset insulation and oil-resistant thermoset outer covering for damp or wet locations.
19. SOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer covering for damp locations.
20. SOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer covering for damp or wet locations.
21. STO: 600 V extra-hard-usage, hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer covering for damp locations.
22. STOW: 600 V extra-hard-usage, hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer covering for damp or wet locations.
23. STOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer covering for damp locations.
24. STOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer covering for damp or wet locations.

E. Definitions:
1. 8-Position 8-Contact (8P8C) Modular Jack: An unkeyed jack with up to eight contacts commonly used to terminate twisted-pair and multiconductor Ethernet cable. Also called a "TIA-1096 miniature 8-position series jack" (8PSJ), or an "IEC 8877 8-pole jack."
    a. Be careful when suppliers use "RJ45" generically. Obsolete RJ45 jacks used for analog telephone cables have rejection keys. 8P8C jacks used for digital telephone cables and Ethernet cables do not have rejection keys.
2. Above Grade: Not buried in the ground and not embedded in concrete slab on ground.
3. Accessible: Ability to perform recommended maintenance without removal of services or equipment and requiring no special platforms.
4. Basic Impulse Insulation Level (BIL): Reference insulation level expressed in impulse crest voltage with a standard wave not longer than 1.5 times 50 microseconds and 1.5 times 40 microseconds.
5. Below Grade: Buried in the ground or embedded in concrete slab on ground.
6. Cable: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "cable" is (1) a conductor with insulation, or a stranded conductor with or without insulation (single-conductor cable); or (2) a combination of conductors insulated from one another (multiple-conductor cable).
7. Communications Jack: A fixed connecting device designed for insertion of a communications cable plug.
8. Communications Outlet: One or more communications jacks, or cables and plugs, mounted in a box or ring, with a suitable protective cover.
9. Concealed: Embedded in masonry or other construction, installed in furred spaces, within double partitions or hung ceilings, in trenches, in crawl spaces, or in enclosures. In general, any item not visible or directly accessible.

10. Conductor: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "conductor" is (1) a wire or combination of wires not insulated from one another, suitable for carrying an electric current; (2) (National Electrical Safety Code) a material, usually in the form of wire, cable, or bar, suitable for carrying an electric current; or (3) (general) a substance or body that allows a current of electricity to pass continuously along it.
11. Connect: Complete hook-up of item with required service
12. Designated Seismic System: A system component that requires design in accordance with Ch. 13 of ASCE/SEI 7 and for which the Component Importance Factor is greater than 1.0.
13. Direct Buried: Installed underground without encasement in concrete or other protective material.
14. Enclosure: The case or housing of an apparatus, or the fence or wall(s) surrounding an installation, to prevent personnel from accidentally contacting energized parts or to protect the equipment from physical damage. Types of enclosures and enclosure covers include the following:
    a. Cabinet: An enclosure that is designed for either surface mounting or flush mounting and is provided with a frame, mat, or trim in which a swinging door or doors are or can be hung.
    b. Concrete Box: A box intended for use in poured concrete.
    c. Conduit Body: A means for providing access to the interior of a conduit or tubing system through one or more removable covers at a junction or terminal point. In the United States, conduit bodies are listed in accordance with outlet box requirements.
    d. Conduit Box: A box having threaded openings or knockouts for conduit, EMT, or fittings.
    e. Cutout Box: An enclosure designed for surface mounting that has swinging doors or covers secured directly to and telescoping with the walls of the enclosure.
    f. Device Box: A box with provisions for mounting a wiring device directly to the box.
    g. Extension Ring: A ring intended to extend the sides of an outlet box or device box to increase the box depth, volume, or both.
    h. Floor Box: A box mounted in the floor intended for use with a floor box cover and other components to complete the floor box enclosure.
    i. Floor-Mounted Enclosure: A floor box and floor box cover assembly with means to mount in the floor that is sealed against the entrance of scrub water at the floor level.
    j. Floor Nozzle: An enclosure used on a wiring system, intended primarily as a housing for a receptacle, provided with a means, such as a collar, for surface-mounting on a floor, which may or may not include a stem to support it above the floor level, and is sealed against the entrance of scrub water at the floor level.

k. Junction Box: A box with a blank cover that joins different runs of raceway or cable and provides space for connection and branching of the enclosed conductors.
l. Outlet Box: A box that provides access to a wiring system having pry-out openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for the entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting an outlet box cover, but without provisions for mounting a wiring device directly to the box.
m. Pedestal Floor Box Cover: A floor box cover that, when installed as intended, provides a means for typically vertical or near-vertical mounting of receptacle outlets above the floor's finished surface.
n. Pull Box: A box with a blank cover that joins different runs of raceway and provides access for pulling or replacing the enclosed cables or conductors.
o. Raised-Floor Box: A floor box intended for use in raised floors.
p. Recessed Access Floor Box: A floor box with provisions for mounting wiring devices below the floor surface.
q. Recessed Access Floor Box Cover: A floor box cover with provisions for passage of cords to recessed wiring devices mounted within a recessed floor box.
r. Ring: A sleeve, which is not necessarily round, used for positioning a recessed wiring device flush with the plaster, concrete, drywall, or other wall surface.
s. Ring Cover: A box cover, with raised center portion to accommodate a specific wall or ceiling thickness, for mounting wiring devices or luminaires flush with the surface.
t. Termination Box: An enclosure designed for installation of termination base assemblies consisting of bus bars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors, or both.

15. Emergency Systems: Those systems legally required and classed as emergency by municipal, state, federal, or other codes, or by any governmental agency having jurisdiction that are designed to ensure continuity of lighting, electrical power, or both, to designated areas and equipment in the event of failure of the normal supply for safety to human life.
16. Essential Electrical Systems: (healthcare facilities) Those systems designed to ensure continuity of electrical power to designated areas and functions of a healthcare facility during disruption of normal power sources, and also to minimize disruption within the internal wiring system.
17. Expansion Joint: A mid-structure separation designed to relieve stress on building materials caused by building movement induced by any of the following: thermal expansion and contraction; wind sway; seismic events; static load deflection; or live load deflection. Expansion joint systems are used to bridge the gap and maintain building assembly functions while accommodating expected movements. Expansion joints also include transitions from an existing building to

a new building addition. Refer to structural design for expansion joint dimensional movements.

18. Explosion Proof Equipment (per National Electrical Code-Article 501): Equipment enclosed in a case that is capable of withstanding an explosion of a specified gas or vapor that may occur within it and of preventing the ignition of a specified gas or vapor surrounding the enclosure by sparks, flashes, or explosion of the gas or vapor within, and that operates at such an external temperature that a surrounding flammable atmosphere will not be ignited thereby. Explosion proof motors are required for Class I, II or II applications regardless of Division or Group as defined in National Electrical Code – Article 501 and ANSI/ISA-12.20.01.
    a. Class I: Hazardous due to flammable gases or vapors are present or may be present in quantities sufficient to produce explosive or ignitable mixtures.
    b. Class II: Hazardous due to combustible or conductive dusts are present or may be present in quantities sufficient to produce explosive or ignitable mixture.
    c. Class III: Hazardous dues to ignitable fibers are present or may be present in quantities sufficient to produce explosive or ignitable mixtures.
    d. Division: The substance referred to by Class has a high probability (Division 1) or low probability (Division 2) of producing an explosive or ignitable mixture due to it being present continuously, intermittently, or periodically or from the equipment itself under normal operating conditions.
    e. Group: Type of hazardous material in surrounding environment ranging from Group A flammable liquids to Group G combustible dusts
19. Exposed: Not installed underground or concealed
20. Fault Limited: Providing or being served by a source of electrical power that is limited to not more than 100 W when tested in accordance with UL 62368-1.
    a. The term "fault limited" is intended to encompass most Class 1, 2, and 3 power-limited sources complying with Article 725 of NFPA 70; Class ES1 and ES2 electrical energy sources that are Class PS1 electrical power sources (e.g., USB); and Class ES3 electrical energy sources that are Class PS1 and PS2 electrical power sources (e.g., PoE). See UL 62368-1 for discussion of classes of electrical energy sources and classes of electrical power sources.
21. High-Performance Building: A building that integrates and optimizes on a life-cycle basis all major high-performance attributes, including energy conservation, environment, safety, security, durability, accessibility, cost-benefit, productivity, sustainability, functionality, and operational considerations.
22. Install: To erect, mount and connect complete with related accessories.
23. Jacket: A continuous nonmetallic outer covering for conductors or cables.
24. Luminaire: A complete lighting unit consisting of a light source such as a lamp, together with the parts designed to position the light source and connect it to the power supply. It may also include parts to protect the light source or the ballast or to distribute the light.

25. Mode: The terms "Active Mode," "Off Mode," and "Standby Mode" are used as defined in the Energy Independence and Security Act (EISA) of 2007.
26. Multi-Outlet Assembly: A type of surface, flush, or freestanding raceway designed to hold conductors, receptacles, and switches, assembled in the field or at the factory.
27. Noncombustible Material: A noncombustible material is a substance that will not ignite, burn, support combustion, or release flammable vapors when subject to fire or heat in compliance with ASTM E136 Standard Test Method for Assessing Combustibility of Materials Using a Vertical Tube Furnace at 750°C. Examples of noncombustible materials include the following, but confirm compliance in manufacturer literature.
    a. Portland cement concrete, concrete, gypsum concrete (normally used in drywall or poured gypsum floor toppings), Portland cement stucco, Portland cement plaster, and gypsum plaster, gypsum wall board (sheetrock), and Type X gypsum wall board.
    b. Brick masonry, concrete block masonry, and ceramic tiles.
    c. Steel, stainless steel, galvanized steel, and other metals, except aluminum (aluminum is classified as limited-combustible), magnesium and magnesium alloys.
    d. Sheet glass, block glass, and uncoated glass fibers.
    e. Mineral wool and rock wool.
28. Plenum: A compartment or chamber to which one or more air ducts are connected and that forms part of the air distribution system.
29. Provide: To supply, install and connect as specified for a complete, safe and operationally ready system.
30. Receptacle: A fixed connecting device arranged for insertion of a power cord plug. Also called a power jack.
31. Receptacle Outlet: One or more receptacles mounted in a box with a suitable protective cover.
32. Rough-In: Provide all indicated services in the necessary arrangement suitable for making final connections to fixture or equipment.
33. Shall: An exhortation or command to complete the specified task including providing and installing work associated with task.
34. Sheath: A continuous metallic covering for conductors or cables.
35. Supply: To purchase, procure, acquire and deliver complete with related accessories.
36. Typical or Typ: Exhibiting the qualities, traits, or characteristics that identify a kind, class, number, group or category. Of or relating to a representative specimen. Application shall apply to all other similarly identified on plan or detail.
37. UL Category Control Number (CCN): An alphabetic or alphanumeric code used to identify product categories covered by UL's Listing, Classification, and Recognition Services.

38. Voltage Class: For specified circuits and equipment, voltage classes are defined as follows:
    a. Control Voltage: Having electromotive force between any two conductors, or between a single conductor and ground, which is supplied from a battery or other Class 2 or Class 3 power-limited source.
    b. Line Voltage: (1) (controls) Designed to operate using the supplied low-voltage power without transformation. (2) (transmission lines, transformers, SPDs) The line-to-line voltage of the supplying power system.
    c. Extra-Low Voltage (ELV): Not having electromotive force between any two conductors, or between a single conductor and ground, exceeding 30 V(ac rms), 42 V(ac peak), or 60 V(dc).
    d. Low Voltage (LV): Having electromotive force between any two conductors, or between a single conductor and ground, which is rated above 30 V but not exceeding 1000 V.
    e. Medium Voltage (MV): Having electromotive force between any two conductors, or between a single conductor and ground, which is rated about 1 kV but not exceeding 69 kV.
    f. High Voltage: (1) (circuits) Having electromotive force between any two conductors, or between a single conductor and ground, which is rated above 69 kV but not exceeding 230 kV. (2) (safety) Having sufficient electromotive force to inflict bodily harm or injury.

F. Wire: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "wire" is a slender rod or filament of drawn metal. A group of small wires used as a single wire is properly called a "stranded wire." A wire or stranded wire covered with insulation is properly called an "insulated wire" or a "single-conductor cable." Nevertheless, when the context indicates that the wire is insulated, the term "wire" will be understood to include the insulation.

1.08 COORDINATION

A. The Drawings are diagrammatic and show the general arrangements of all electrical work and requirements to be performed. It is not intended to show or indicate all details which will be required for installation, as a part of the work of this Section.

B. The Contractor shall review the structural and architectural conditions affecting the work. It is the specific intention of this section that the contractor's scope of work shall include:
    1. Proper code complying support systems for all equipment whether or not scheduled or detailed on drawings or in these specifications.
    2. Minor deviations from the electrical plans required by architectural and structural coordination.

C. The Contractor shall study the operational requirements of each system, and shall arrange their work accordingly, and shall furnish such fittings, offsets, supports, accessories, as are required for the proper and efficient installation of all systems from the physical space available for use by this section. This requirement extends to the Contractor's coordination of this section's work with all other trades. Should conflicts occur due to lack of coordination, the time delay, cost of rectification, demolition, labor, and materials, shall be borne by the Contractor and shall not be at a cost to the Owner.

D. Minor deviations in order to avoid conflict shall be permitted where the design intent is not altered.

E. Advise the Owner’s Representative, in writing, in the event a conflict occurs in the location or connection of equipment. Bear all costs for relocation of equipment, resulting from failure to properly coordinate the installation or failure to advise the Owner’s Representative of conflict.

F. Coordinate arrangement, mounting, and support of electrical equipment.
   1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
   2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
   3. To allow right of way for piping and conduit installed at required slope.
   4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

G. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

H. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames". The location needs to be coordinated with the architect prior to rough-in.

I. Coordinate sleeve selection and application of firestopping specified in Division 07.

J. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by Owner or others unless permitted under the following conditions:
   1. Notify Owner no fewer than seven days in advance of proposed interruption of electrical service.
   2. Do not proceed with interruption of electrical service without Owner's written permission.
   3. Coordinate interruption with systems impacted by outage including, but not limited to, the following:
      a. Exercising generators.
      b. Emergency lighting.

c. Elevators.
d. Fire-alarm systems.

K. Arrange to provide temporary electrical power in accordance with requirements specified in Division 01.

1.09 PREINSTALLATION MEETINGS

A. Electrical Preconstruction Conference: Schedule conference with Architect and Owner, not later than 10 days after notice to proceed. Agenda topics include, but are not limited to, the following:
1. Electrical installation schedule.
2. Status of power system studies.
3. Value analysis proposals and requests for substitution of electrical equipment.
4. Utility work coordination and class of service requests.
5. Commissioning activities.
6. Sustainability activities, including Measurement and Verification Plan.

1.10 SEQUENCING

A. Conduct and submit results of power system studies before submitting Product Data and Shop Drawings for electrical equipment.

1.11 ACTION SUBMITTALS

A. Coordination drawings.

1.12 INFORMATIONAL SUBMITTALS

A. Electrical installation schedule.

B. Qualification statements.

C. Welding certificates.

D. Seismic-load performance certificates.

E. Delegated design drawings for structural masonry wall penetrations.

1.13 CLOSEOUT SUBMITTALS

A. Facility EPM program binders.

B. Operation and maintenance data.

C. Software and firmware operational documentation.

D. Software.

1.14 QUALITY ASSURANCE

A. Provide equipment and materials which conform to the standards effective as of the date of the Contract Documents as promulgated by the following bodies:
   1. Underwriters' Laboratories (UL).
   2. National Electrical Manufacturers' Association (NEMA).
   3. Electrical Testing Laboratories (ETL).
   4. American National Standards Institute (ANSI).
   5. Insulated Cable Engineers Association (ICEA).
   6. State adopted Electrical Code including local amendments applied to permit documentation.

B. Experience: Unless more stringent requirements are specified in other sections of Division 26, manufactured items shall have been installed and used, without modification, renovation, or repair, on other projects for not less than one year prior to the date of bidding for this project.
   1. All work shall include the following:
      a. Manufactured items and equipment shall be a current, cataloged product of the manufacturer.
      b. Replacement parts shall be readily available and stocked in the USA.

C. Special Inspections: Provide structural design and Special Inspections as required by local building codes and the Authority Having Jurisdiction, and as defined in the manufacturer installation instructions for each anchorage system. All anchors post-installed in hardened concrete members shall have periodic Special Inspections. Special inspection agencies shall be independent of the design and construction companies and shall act as agents for the AHJ, but contracted directly with the Owner or Owner’s Representative

D. Qualifications: Prepare and submit qualification statements for the following entities performing Work on Project:
   1. Qualified Regional Manufacturer: Manufacturer, possessing qualifications specified in Section 014000 "Quality Requirements," that maintains a service center capable of providing training, parts, and emergency on-site repairs to Project site with response time less than eight hours.
   2. Structural Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in structural engineering, including seismic modeling and analysis.
   3. Electrical Professional Engineer: Professional engineer possessing active qualifications specified in Section 014000 "Quality Requirements," with expertise in electrical engineering, including electrical power system modeling and analysis of electrical safety in accordance with NFPA 70E.

4. Lighting Professional Engineer: Professional engineer possessing active qualifications in accordance with Section 014000 "Quality Requirements" and the following:
   a. Expertise in electrical engineering, lighting design, and structural requirements for exterior poles and standards.
   b. Lighting Certified (LC) Professional by the National Council on Qualifications for the Lighting Professions (NCQLP).
5. EPM Specialist: Recognized experts possessing the following qualifications in accordance with Section 014000 "Quality Requirements" and NFPA 70B:
   a. Technical Competence: Person should, by education, training, and experience, be well-rounded in all aspects of electrical maintenance.
   b. Administrative and Supervisory Skills: Person should be skilled in planning and development of long-range objectives to achieve specific results and should be able to command respect and solicit cooperation of persons involved in EPM Program development.
6. Welder: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," with training and certification in accordance with AWS D1.1/D1.1M and AWS D1.2/D1.2M.
7. ERMC-S-PVC Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by ERMC-S-PVC manufacturer prior to starting installation.
8. Medium-Voltage Cable Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with training and manufacturer certification to install, splice, and terminate medium-voltage cable in accordance with electrical utility service provider's requirements.
   a. Medium-voltage cable Installer must be approved by owner.
9. Medium-Voltage Duct Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with installation of medium-voltage duct banks in accordance with electrical utility service provider's requirements.
   a. Medium-voltage duct Installer must be approved by Owner.
10. Medium-Voltage Equipment Installer: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with hazards and safety requirements associated with installation and operation of medium-voltage equipment in accordance with electrical utility service provider requirements.
    a. Medium-voltage equipment Installer must be approved by Owner.
11. Electrical Power Monitoring Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by manufacturer prior to starting installation.
12. EVSE Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by EVSE manufacturer prior to starting installation.

13. Generator Set Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by generator set manufacturer prior to starting installation.
14. Lightning Protection System Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired UL-Listed Installer, UL Category Control Number OWAY, credentials or unexpired LPI Master Installer credentials prior to starting installation.
15. Theatrical Lighting Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by theatrical lighting manufacturers prior to starting installation.
16. Exterior Athletic Lighting Installers: Installer possessing active qualifications specified in Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by exterior athletic lighting manufacturer prior to starting installation.
17. Power Quality Specialist: Recognized experts possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction, and able to present unexpired NICET Level 4 credentials with documented experience in power quality testing for installations similar in complexity to this Project.
18. Low-Voltage Electrical Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
    a. On-site electrical testing supervisors must have documented certification and experience with testing electrical equipment in accordance with NETA testing standards.
19. Medium-Voltage Electrical Testing and Inspecting Agency: Entities possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
    a. On-site electrical testing supervisors must have documented certification and experience with testing electrical equipment in accordance with NETA testing standards.
20. Power-Limited Electrical Testing Agency: Entity possessing active credentials from a qualified electrical testing laboratory recognized by authorities having jurisdiction.
    a. On-site power-limited testing supervisor must have BICSI Registered Communications Distribution Designer certification and documented training and experience with testing power-limited equipment in accordance with NETA testing standards.
21. Structural Testing and Inspecting Agency: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with testing structural concrete, seismic controls, and wind-load controls.

22. Outdoor Pole Testing and Inspecting Agency: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience in accordance with ASTM C1093 for foundation testing and inspections.
23. Luminaire Photometric Testing Laboratory: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" accredited under the NVLAP for Energy Efficient Lighting Products and complying with applicable IES testing standards.
24. Lighting Testing and Inspecting Agency: Entity possessing active qualifications specified in Section 014000 "Quality Requirements" with documented training and experience with testing and inspecting lighting installations in accordance with IES LM-5.

E. Certifications:
   a. Include the following information:
      1) Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
      2) Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
      3) Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
      4) Detailed description of conduit support devices and interconnections on which the certification is based and their installation requirements.
      5) Provide equipment manufacturer's written certification for each designated active electrical seismic device and system, stating that it will remain operable following the design earthquake. Certification must be based on requirements of ASCE/SEI 7, including shake table testing per ICC-ES AC156 or a similar nationally recognized testing standard procedure acceptable to authorities having jurisdiction, or experience data as permitted by ASCE/SEI 7-10.
      6) Provide equipment manufacturer's written certification that components with hazardous contents maintain containment following the design earthquake by methods required in ASCE/SEI 7-10.
      7) Submit evidence demonstrating compliance with these requirements for approval to authorities having jurisdiction after review and acceptance by qualified structural professional engineer.
   b. The following systems and components are Designated Seismic Systems and require written special certification of seismic qualification by manufacturer:
      1) Hangers and supports specified in Section 260529 "Hangers and Supports for Electrical Systems."
      2) Conduits and their mounting provisions specified in Section 260533.13 "Conduits for Electrical Systems."
      3) Boxes and their mounting provisions specified in Section 260533.16 "Boxes and Covers for Electrical Systems."

4) Seismic restraints specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
5) Equipment, accessories, and components specified in Section 262213 "Low-Voltage Distribution Transformers."
6) Equipment, accessories, and components specified in Section 262413 "Switchboards."
7) Equipment, accessories, and components specified in Section 262416 "Panelboards."
8) Cabinets, enclosures, racks, and their mounting provisions specified in Section 262716 "Electrical Cabinets and Enclosures."
9) Equipment, accessories, and components specified in Section 262733 "Power Distribution Units."
10) Equipment, accessories, and components specified in Section 262816 "Enclosed Switches and Circuit Breakers."
11) Luminaires, accessories, and components specified in Section 265000 "Lighting."
12) Luminaires, accessories, components, and dimmer racks specified in Section 265561 "Theatrical Lighting."

2. Wind-Load Performance Certificates: Provide special certification for systems and components designated on Drawings or in the Specifications to be subject to high wind exposure and impact damage.
   a. Include the following information:
      1) Provide equipment manufacturer's written certification for each designated system and component, stating that it will remain in place and operable following the design wind event and comply with requirements of authorities having jurisdiction.
      2) Certification must be based on ICC-ES or similar nationally recognized testing standard procedures acceptable to authorities having jurisdiction.

1.15 FIELD CONDITIONS

A. Service Conditions for Electrical Power Equipment: Specified electrical power equipment must be suitable for operation under service conditions specified as usual service conditions in applicable NEMA PB series, IEEE C37 series, and IEEE C57 series standards, except for the following:
   1. Exterior locations
      a. Exposure to significant solar radiation.
      b. Exposure to fumes, vapors, or dust.
      c. Exposure to explosive environments.
      d. Ambient temperature not exceeding 104 deg F (40 deg C).
      e. Exposure to hot and humid climate or to excessive moisture, including steam, salt spray, and dripping water.
      f. Unusual transportation or storage conditions.
      g. Unusual grounding resistance conditions.
      h. Unusual space limitations.

1.16 TEMPORARY FACILITIES

A. Refer to Division 01 for the requirements of temporary power for construction and safety. Provide temporary electrical services as necessary during the construction period and as required to maintain operation of existing systems.

1.17 WARRANTIES

A. Refer to general terms and conditions, as well as warranties and obligations defined in Division 01 of the specifications that provide basic warranty requirements for the entire project.

B. The warranties and corrective obligations provided under this section (i) are in addition to, and not in lieu of, any other warranty, representation, covenant, duty or other obligation (including any corrective obligation) of the Contractor or Manufacturer, (ii) have no relationship to the time when any warranty, representation, duty, covenant or other obligation of Contractor or Manufacturer may be enforced or any dispute resolution proceeding commenced and (iii) are made by the Manufacturer to both the Contractor and the Owner and by the Contractor to Owner.

C. All equipment and systems shall be provided with a minimum one-year warranty, or longer, as defined in each subsequent specification section. Warranty shall include all parts, material, labor and travel.

D. Warranty Start Date: The start date for all warranty periods shall be defined as starting from the date of Substantial Completion which shall include the Certificate of Occupancy from the Authority Having Jurisdiction.

E. Provide complete warranty information for each item, to include product or equipment, date of beginning of warranty or bond; duration of warranty or bond; and names, addresses, telephone numbers and procedures for filing a claim and obtaining warranty services.

F. Nothing in any separate warranty or other document provided by Contractor or Manufacturer, or both, will apply to limit their liability or responsibility for damages arising out of or related to a breach of any warranty or corrective obligation.

G. Service during warranty period: Contractor shall provide maintenance as specified elsewhere during the warranty period.

1.18 GUARANTEE

A. The Contractor shall guarantee and service all workmanship and materials to be as represented by them and shall repair or replace, at no additional cost to the Owner, any part thereof which may become defective within the period of one (1) year after the Date of Final Acceptance, ordinary wear and tear excepted.

B. Contractor shall be responsible for and pay for any damages caused by or resulting from defects in this work.

1.19 INSTRUCTION, MAINTENANCE, AND O&M MANUALS

A. Operations and Maintenance (O&M) Manuals: Upon completion of the work, and prior to training of Owner's personnel, the Contractor shall submit to the Owner's Representative complete set of operating instructions, maintenance instructions, part lists, and all other bulletins and brochures pertinent to the operation and maintenance for equipment furnished and installed as specified in this section, bound in a durable binder as well as in electronic form. Refer to Division 01 for additional requirements.

B. Contractor shall be responsible for providing proper instruction of the of Owner's personnel for operation and maintenance of equipment, and apparatus installed as specified in Division 26. Training is to be appropriate to the complexity of the equipment. The Contractor shall develop and submit training materials prior to this training. These materials shall include qualifications of the trainer, training agenda, learning objectives, and a written test to be administered at the end of the training session. Operation and Maintenance manuals must present, incorporated, and referenced in the training sessions.

1.20 RECORD DRAWINGS

A. Refer to Division 01 for additional record drawing requirements not specifically described below.

B. Before commencing installation, obtain an extra set of prints from Architect, marked "Record". Keep this set of Drawings at the job site at all times and use it for no other purpose but to mark on it all the changes and revisions to the Contract Drawings resulting from coordination with other trades.

C. Mark Drawings to indicate revisions to raceways; actual equipment locations, dimensioned from column lines; actual inverts and locations of underground raceways; concealed equipment, dimensioned to column lines, and Change Orders.

D. Mark Specifications to indicate approved substitutions; Change Orders; actual equipment and materials used.

E. Edit project Revit or AutoCAD files to incorporate all site markups, changes, and revisions to the Contract Drawings. Submit electronic and plots of Record Drawings at completion of project.

PART 2 - GENERAL

2.01 EXAMINATION OF DOCUMENTS

A. Before submitting a bid, visit the Project Site and become familiar with conditions which may be pertinent to, or affect the cost of, the electrical installation.

B. Become acquainted with the Work of other installers whose activities will adjoin or be affected by the electrical Work. Consult with these other installers and study all pertinent Drawings in order to coordinate the Work and to avoid conflicts, omissions and delays.

C. Before submitting a bid, examine all pertinent Contract Documents for electrical requirements which are not necessarily indicated on the electrical drawings and include in the bid a sum which is sufficient to cover the costs of these other requirements.

D. Should it be perceived that the Contract Documents do not sufficiently define the required electrical work, contact the Architect for clarification or further description. Failure to do this will be construed as evidence of an understanding of the required electrical systems and their installation.

E. Specifications, in general, describe quality and character of materials and equipment.

F. Drawings in general, are diagrammatic and indicate sizes, locations, connections to equipment and methods of installation.

2.02 PERMITS AND FEES

A. Contractor shall be responsible for obtaining and paying for all necessary electrical permits, fees, and inspections, including, but not limited to, building permits, planning permits, air quality management district permits, operating licenses, utility district fees, special district fees, environmental impact reports, and additional local permits and fees.

2.03 EXISTING FACILITIES

A. Examine the drawings and specifications of the completed work and inspect the site to establish the scope of demolition work and new work to be provided under this sections and clarification of the phasing of the work.

B. Based on project phasing and scheduling, demolition work will be taking place in and around existing areas that are to remain in service. Where the work under this section affects or interferes with the operation of any existing areas to remain in service, or portions of the work already in operation, provide all necessary work and material including premium pay, required to avoid shutdown of these areas during normal

operations. Obtain Owner's approval for shutdown, in writing, 48 hours prior to shut down.

2.04 UNIT PRICING

A. See Division 01 for Unit Pricing Requirements.

B. Included with unit price shall be the labor cost index.

C. In addition to those items noted in Division 01 provide unit pricing for the following:
   1. Electrical outlet with backbox, cover plate, and 20’ of raceway and wire.

2.05 SUBSTITUTION LIMITATIONS FOR ELECTRICAL EQUIPMENT

A. Substitution requests for electrical equipment will be entertained under the following conditions:
   1. Notification of Contractor's intent to request substitutions for convenience must be declared during the Electrical Preconstruction Conference so potential risks to system performance and construction schedule may be identified for Contractor's response in submission of the substitution request. Submission of requests for substitutions for convenience must meet the conditions and deadline specified in Section 012500 “Substitution Procedures” to receive approval.
   2. For electrical equipment and systems, substitutions for cause are considered major construction risks. If it is possible that Contractor may need to request substitutions for cause because of equipment unavailability, or inability to meet construction schedule because of lead time, Contractor must declare the possibility during the Electrical Preconstruction Conference to permit establishing a mitigation plan for minimizing risks to system performance and construction schedule.
   3. The Contractor shall certify the following items are correct when using substituted products other than those scheduled or shown on the drawings as a basis of design:
      a. The proposed substitution does not affect dimensions shown on drawings.
      b. The proposed substitution does not affect the electrical characteristics shown on the drawings.
      c. The Contractor shall pay for changes to building design, including engineering design, detailing, structural supports, and construction costs caused by proposed substitution.
      d. The proposed substitution has no adverse effect on other trades, construction schedule, or specified warranty requirements.
      e. Maintenance and service parts available locally are readily obtainable for the proposed substitute.
   4. The Contractor further certifies function, appearance, and quality of proposed substitution are equivalent or superior to specified item.
   5. The Contractor agrees that the terms and conditions for the substituted product that are found in the contract documents apply to this proposed substitution.

PART 3 - EXECUTION

3.01 CONSTRUCTION ADMINISTRATION

A. Substitutions
   1. Refer to other Sections of these Specifications for substitution requirements.

B. Submittals
   1. All submittals shall be provided in electronic format for review.
   2. All submittals associated within a single specification section shall be submitted as a single package. Piecemeal submittals will be rejected as incomplete.
   3. Re-submittals shall only include the requested resubmittal documentation. A complete resubmittal including approved equipment and materials will be rejected.
   4. If an error in the submittals is not detected during the review process, this does not grant the contractor permission to proceed in error. Regardless of any information contained in the submittals, the requirements of the drawings and specifications must be followed and are not waived or superseded by the submittal review. Any conflicting information shall be brought to the attention of the engineer and design team through the RFI process.
   5. Submittals for all installed items shall be included in final Operations & Maintenance Manuals at the completion of the project. Refer to Division 01 for additional requirements.

C. Requests for Information (RFIs)
   1. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified (refer to Division 1).
      a. Coordinate and submit RFIs in a prompt manner to avoid delays in Contractor's work or work of subcontractors.
      b. RFIs shall address single questions and related issues only.
      c. All RFIs shall be thoroughly reviewed and approved by the General Contractor and/or Construction Manager for accuracy and need for information required before submittal to Owner’s Design Representative.
   2. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:
      a. Project name.
      b. Project number.
      c. Date.
      d. Name of Contractor.
      e. Name of Architect [and Construction Manager].
      f. RFI number, numbered sequentially and unique.
      g. RFI subject.

h. Specification Section number and title and related paragraphs, as appropriate.
i. Drawing number and detail references, as appropriate.
j. Field dimensions and conditions, as appropriate.
k. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
l. Contractor's signature.
m. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
n. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

3. Engineer’s Action: Engineer will review each RFI, determine action required, and respond. Allow a minimum three business days for Engineer's response for each RFI, plus additional time for Architect and General Contractor to review and forward. RFIs received by Engineer after 1:00 p.m. will be considered as received the following working day.
   a. The following Contractor-generated RFIs will be returned without action:
   b. Incomplete RFIs or inaccurately prepared RFIs.
   c. RFIs submitted without indication of review and approval for submission by General Contractor.
   d. RFIs addressing multiple unrelated issues.
   e. Requests for approval of submittals.
   f. Requests for approval of substitutions.
   g. Requests for approval of Contractor’s means and methods.
   h. Requests for information already indicated in the Contract Documents.
   i. Requests for adjustments in the Contract Time or the Contract Sum.
   j. Requests for interpretation of Engineer’s actions on submittals.
   k. Engineer’s action may include a request for additional information, in which case Engineer’s time for response will date from time of receipt of additional information.

D. Installation Drawings
   1. Refer to other Sections of these Specifications for installation drawing requirements.

E. Project Record Documents
   1. Maintain Record Documents which clearly indicate variances from the specified systems, and which accurately locate all underground electrical conduits and structures.

3.02 EXAMINATION

A. Verification of Conditions:
   1. Field verify exact locations, dimensions, and routing of existing equipment.

2. Throughout the course of construction, verify that sufficient space will be available for the equipment and their required clearances to be installed. If conflict determined, contractor shall contact the design team for clarification on how to proceed prior to installation.

3.03 DRAWINGS

A. For purposes of clarity and legibility, the electrical Drawings are essentially diagrammatic. although the size and location of electrical equipment is drawn to scale wherever possible, make use of all data in all the Contract Documents, and verify this at the Project Site. Determine the exact location of conduits, outlets and equipment by the study of details, shop drawings and/or the Architect's directions.

B. The electrical Drawings show the required size and points of termination of the conduits and the quantity and size of the conductors within. However, the Drawings do not show all the necessary conduit routing. Install conduits in such a manner as to conform to structure, avoid obstruction, preserve headroom and keep passageways and openings clear.

C. Locate outlets symmetrically with architectural elements, notwithstanding the fact that the locations shown of the electrical drawings may be distorted for clarity of representation.

D. The architectural Drawings take precedence over the electrical Drawings. Study the reflected ceiling plans and interior elevations to determine the exact location of lighting fixtures, wall-mounted devices and fixtures, etc. The Architect has taken a very active role in the placement of these items. Should there be a conflict between locations shown on the architectural and electrical drawings, contact the Engineer for clarification prior to rough-in.

3.04 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

A. Unless more stringent requirements are specified in the Contract Documents or manufacturers' written instructions, comply with NFPA 70 and NECA NEIS 1 for installation of Work specified in Division 26. Consult Architect for resolution of conflicting requirements.

B. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

C. Right of Way: Give way to piping systems installed at a required slope.

D. Equipment Dimensions: Provide equipment that fits the available space. Do not exceed dimensions indicated or shown without prior approval.

E. Workmanship shall be performed or supervised by licensed journeymen or master electrician and shall result in an installation consistent with the best practices of trades.

F. Install work uniform, level and plumb, in relationship to lines of building. Do not install any diagonal, or otherwise irregular work unless so indicated on Drawings or approved by Architect.

G. Coordinate the work between the various Electrical Sections and with the work specified under other Divisions. If any cooperative work must be altered due to lack of proper supervision or failure to make proper and timely provisions, the alternations shall be made to the satisfaction of the Engineer and at the Contractor's cost. Coordinate wall and ceiling work with the General Contractor, and their subcontractors in locating lighting fixtures, wiring devices, disconnects, controllers, etc.

H. Inspect all material, equipment, and apparatus upon delivery and do not install any damaged or defected materials.

3.05 MANUFACTURER'S DIRECTIONS

A. Follow manufacturers' directions and recommendations in all cases where the manufacturers of articles used on this Contract furnish directions covering points not shown on the Drawings or covered in these Specifications.

B. If the contractor must deviate from the manufacturer's recommendations provide a letter from the manufacturer indicating the clearance to be provided is acceptable for scheduled performance and maintenance.

3.06 COORDINATION OF ELECTRICAL INSTALLATIONS

A. Electrical Contractor shall coordinate with all other divisions work to provide electrical services as required to operate all devices under this Division of work.

B. Installation of Electrical Connections: Furnish and install devices, conduit, and wire (except as may be otherwise indicated) to all other trades equipment in accordance with equipment manufacturer's written instructions and with recognized industry practices, and complying with applicable requirements of UL, NEC, and NECA's "Standard of Installation" to ensure that products fulfill requirements.

C. Coordinate location of electrical devices and electrical connections with all other trades prior to rough-in. Any rework of installations required due to incorrect rough-in shall be corrected at no additional cost to the owner.

D. Divisions 21, 22, and 23 has responsibilities for electrically powered or controlled equipment which is specified in these related division specifications or scheduled on these related division Drawings. The specific division of responsibilities between these

divisions and Division 26 for furnishing or wiring this equipment is shown on the equipment schedule located on the drawing set and listed below:

1. Divisions 21, 22, and 23 Responsibilities:
    a. Motors: Furnish and install all motors necessary for mechanical equipment.
    b. Magnetic starters: Furnish all magnetic starters whether manually or automatically controlled which are necessary for mechanical equipment. Furnish these starters with all control relays or transformers necessary to interface with mechanical controls. If the starter is factory installed on a piece of equipment, also furnish and install the power wiring between starter and motor.
    c. Variable frequency drives: Provide all VFD's associated with mechanical equipment. If the drive is installed on a piece of factory assembled equipment the wiring between motor and drive is to be provided as part of the factory equipment.
    d. Disconnects: Provide the disconnects which are part of factory wired equipment. Factory wiring to include wiring between motor and disconnect or combination starter/disconnect.
    e. Controls: Divisions 21, 22, and 23 Contractor (including the Building Automation System (BAS) controls contractor is responsible for furnishing the following equipment in its entirety. This equipment includes but is not limited to the following:
        1) Additional control panels beyond what is identified on drawings shall be provided by BAS contractor in order to provide a complete control system at no additional cost to Owner. 120v wiring to these control panels shall be provided by BAS Contractor from nearest source panel.
        2) Control relays necessary for controlling equipment.
        3) Control transformers necessary for providing power to controls for equipment.
        4) Line voltage thermostats for controlling Division 23 equipment.
        5) Low or non-load voltage control components.
        6) Remote bulb thermostats.
        7) Non-life safety related valve or damper actuators.
        8) Float switches.
        9) Solenoid valves, EP and PE switches.
        10) Communications wiring and conduit between control devices and mechanical equipment.
        11) Refrigeration controls. (Division 26 provides power to refrigeration panels.)
        12) Raceways to support control cabling.
    f. Fire/Smoke Dampers: Division 23 is responsible for providing and physically installing the damper and for installing any required control interface wiring to Division 23 controls.

1) Where fire/smoke dampers are part of an integrated smoke control system, Division 23 is responsible for providing dampers with specified end switches for use by Division 28 in providing proof of closure.
2) Where these dampers are not part of an integrated area wide smoke detection system, Division 23 is responsible for providing each fire/smoke damper with a dedicated duct detector installed per the requirements of the building code. If not integral with the damper assembly, the detector is to be installed by Division 23 but wired for damper control by Division 26.

g. Fire Sprinkler System: Division 23 is responsible for providing necessary controls including flow switches and alarm bells.
h. Specialized fire suppression systems: Division 23 is responsible for providing necessary system controls and any required control interface wiring to these controls. Division 26 is responsible for bringing power to point of connection with the system.

E. Division 26 Electrical Responsibilities:
a. Motors: Provide the power wiring for the motors from servicing panel to motor controller.
b. Magnetic starters: Except where magnetic starters are factory installed on factory assembled equipment, Division 26 is to install magnetic starters furnished by others and install the necessary power wiring to the starter and from the starter to the motor, unless otherwise noted on the drawings. In the case of factory installed starters, Division 26 is to install the necessary power wiring to the starter.
c. Variable frequency drives: Physically mount all VFD's, which are not specified to be installed on factory assembled equipment. Provide the necessary power wiring to the VFD and from the VFD to the motor except in the case of factory installed VFD's where wiring between the motor and VFD is to be by the factory. Where disconnects are installed between a VFD and a motor provide the interlocking wiring between the disconnect and VFD to ensure that the drive is shutdown simultaneously with motor.
d. Disconnects: Provide all disconnects necessary for equipment which are not provided as part of factory wired equipment, unless otherwise noted on the drawings. Provide power wiring to all disconnects. In addition provide power wiring between equipment and disconnect when the disconnect is not factory installed. See also Variable Frequency Drive above for special wiring requirements.
e. Controls: Division 26 Contractor is responsible for providing power to control panels, control transformers, and control circuit outlets.
f. Building Automation System:
1) BAS Controls Contractor shall initiate and coordinate a meeting with the Electrical Contractor and General Contractor to coordinate all BAS component locations and wiring requirements prior to start of

construction. All additional costs associated with lack a coordinated shall be the responsibility of the BAS Contractor at no additional cost to the Owner.

2) Additional power requirements, including conduit and wiring, for additional or relocated control panels and devices shall be coordinated and the responsibility of the BAS Controls Contractor at no additional cost to Owner.

g. Fire/Smoke Dampers:
   1) Division 26 is responsible for power wiring to the damper.
   2) Where these dampers are part of an integrated smoke control system Division 28 is responsible for providing the duct\smoke detectors, for Division 23 installation in duct. Division 26 is responsible for all fire detection system wiring necessary to integrate dampers and related end switches into the system.
   3) Where these dampers are not part of an integrated area wide smoke detection system, Division 23 is responsible for providing each fire/smoke damper with a dedicated duct detector installed per the requirements of the building code. If not integral with the damper assembly, the detector is to be installed by Div. 23 but wired for damper control by Div. 26.

h. Fire Sprinkler System: Division 26 is responsible for providing power wiring to fire protection controls including flow switches and alarm bells.

i. Specialized fire suppression systems: Division 26 is responsible for providing power wiring to suppression system and its controls.

3.07 EXISTING FACILITIES

A. Based on project phasing and scheduling, demolition work will be taking place in and around existing areas that are to remain in service. Where the work under this section affects or interferes with the operation of any existing areas to remain in service, or portions of the work already in operation, provide all necessary work and material including premium pay, required to avoid shutdown of these areas during normal operations. Obtain Owner's approval for shutdown, in writing, 48 hours prior to shut down.

B. Existing electrical and signal facilities outside of the demolition area to remain in place and in service during demolition.

C. Where areas of existing facilities are indicated to be demolished or remodeled, relocate electric and signal system equipment, and reroute or replace conduit and wiring as required to conform with new use of the area and maintain operation of adjacent areas.

D. Unless specifically noted or otherwise indicated or directed, remove all existing electrical equipment in the areas to be demolished. Deliver all equipment removed, including lighting fixtures, to the Owner's representative.

E. Where remodeling of existing areas is indicated, provide all work indicated and required for a complete and operating facility. Where work is adjacent to existing fixtures or devices, provide matching products to present uniform appearance. Salvage demolished material and equipment and deliver to Owner as directed. Dispose of salvaged materials and equipment where so directed in writing by Owner. Patch all openings in existing walls or floors caused by removal of materials and/or equipment under this work.

3.08 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver products to project properly identified with names, model numbers, types, grades, compliance labels, and similar information needed for distinct identifications.

B. Protect electrical equipment and materials during transit, storage and handling to prevent damage, soiling and deterioration.

C. Provide new electrical materials and deliver them to the Project Site in unbroken packages.

D. Store equipment and materials in an environmentally controlled area at the site, unless off-site storage is authorized in writing. Protect stored equipment and materials from damage. Conduit and equipment showing signs of rust shall be removed from site and replaced with new.

3.09 PREPARATION

A. Electrical Installation Schedule: At preconstruction meeting, and periodically thereafter as dates change, provide schedule for electrical installation Work to Owner and Architect including, but not limited to, milestone dates for the following activities:
   1. Submission of power system studies.
   2. Submission of specified coordination drawings.
   3. Submission of action submittals specified in Division 26.
   4. Orders placed for major electrical equipment.
   5. Arrival of major electrical equipment on-site.
   6. Preinstallation meetings specified in Division 26.
   7. Utility service outages.
   8. Utility service inspection and activation.
   9. Mockup reviews.
   10. Closing of walls and ceilings containing electrical Work.
   11. System startup, testing, and commissioning activities for major electrical equipment.
   12. System startup, testing, and commissioning activities for emergency lighting.
   13. System startup, testing, and commissioning activities for automation systems (SCADA, BMS, lighting, HVAC, fire alarm, fire pump, etc.).
   14. Pouring of concrete housekeeping pads for electrical equipment and testing of concrete samples.

15. Requests for special inspections.
16. Requests for inspections by authorities having jurisdiction.

3.10 COORDINATION DRAWINGS

A. Coordination Drawings for Structural Supports: Show coordination of structural supports for equipment and devices, including restraints and bracing for control of seismic and wind loads, with other systems, equipment, and structural supports in the vicinity.

B. Coordination Drawings for Ceiling Areas: Where indicated on Drawings, provide reflected ceiling plan(s), supplemented by sections and other details, drawn to scale, in accordance with Section 013100 "Project Management and Coordination," on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Suspended ceiling components.
   2. Structural members to which equipment, luminaires, and suspension systems will be attached.
   3. Partitions and millwork that penetrate ceiling or extend to within 12 inch (300 mm) of plane of luminaires.
   4. Size and location of access panels on ceilings.
   5. Elevation, size, and route of sprinkler piping.
   6. Elevation, size, and route of plumbing piping.
   7. Elevation, size, and route of ductwork.
   8. Elevation, size, and route of cable tray.
   9. Elevation, size, and route of conduit.
   10. Elevation and size of wall-mounted and ceiling-mounted equipment.
   11. Moldings.
   12. Access panels.
   13. Sprinklers.
   14. Air inlets and outlets.
   15. Control modules.
   16. Luminaires.
   17. Communications devices.
   18. Speakers.
   19. Ceiling-mounted projectors.
   20. Security devices.
   21. Fire-alarm devices.
   22. Indicate clear dimensions for maintenance access in front of equipment.
   23. Indicate dimensions of fully-open access doors.

C. Coordination Drawings for Conduit Routing: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
   1. Structural members in paths of conduit groups with common supports.

2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

D. Coordination Drawings for Large Equipment Indoor Installations:
   1. Location plan, drawn to scale, showing heavy equipment or truck access paths to loading dock or other freight access into building. Indicate available width and height of doors or openings.
   2. Floor plan for entry floor and floor where equipment is located, drawn to scale, showing heavy equipment access paths for maintenance and replacement, with the following items shown and coordinated with each other, based on input from installers of the items involved:
      a. Dimensioned concrete bases, outlines of equipment, conduit entries, and grounding equipment locations.
      b. If freight elevator must be used, indicate width and height of door and depth of car. Indicate if large equipment must be tipped to use elevator.
      c. Dimensioned working clearances and dedicated areas below and around electrical equipment where obstructions and tripping hazards are prohibited.
   3. Reflected ceiling plans for entry floor and floor where equipment is located, drawn to scale, on which the following items shown and coordinated with each other, based on input from installers of the items involved:
      a. Support locations, type of support, and weight on each support. Locate structural supports for structure-supported raceways and seismic bracing.
      b. Location of lighting fixtures, sprinkler piping and sprinklers, ducts and diffusers, and other obstructions, indicating available overhead clearance.
      c. Dimensioned working clearances and dedicated areas above and around electrical equipment where foreign systems and equipment are prohibited.

E. Coordination Drawings for Large Equipment Outdoor Installations:
   1. Utilities site plan, drawn to scale, showing heavy equipment or truck access paths for maintenance and replacement, with the following items shown and coordinated with each other, based on input from installers of the items involved:
      a. Fences and walls, dimensioned concrete bases, outlines of equipment, conduit entries, and grounding and bonding locations.
      b. Indicate clear dimensions for fence gates and wall openings.
      c. Indicate depth and type of ground cover, and locations of trees, shrubbery, and other obstructions in access path.
      d. Indicate clear height below tree branches, overhead lines, bridges, and other overhead obstructions in access path, or where cranes and hoists will be needed to handle large electrical equipment.
      e. Support locations, type of support, and weight on each support. Locate structural supports for structure-supported raceways and seismic bracing.
      f. Dimensioned working clearances and dedicated areas around electrical equipment.

F. Coordination Drawings for Duct Banks:
   1. Show duct profiles and coordination with other utilities and underground structures.
   2. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.

3.11 DELEGATED DESIGN OF STRUCTURAL PENETRATIONS

A. Engage qualified structural professional engineer to design penetrations of structural masonry walls.

B. Delegated Design Drawings for Structural Masonry Wall Penetrations: Where indicated on Drawings, provide reflected ceiling plan(s), supplemented by elevations, sections, and other details, drawn to scale, signed and sealed by a qualified structural professional engineer, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Location and dimensions of structural members supporting wall.
   2. Location and dimensions of columns near penetrations.
   3. Location and dimension of headers and lintels.
   4. Doors and windows near penetrations.
   5. Location and dimensions of penetrating cuts.
   6. Sprinkler piping and sleeves.
   7. Plumbing piping and sleeves.
   8. Ductwork and sleeves.
   9. Cable tray and sleeves.
   10. Conduit and sleeves.
   11. Firestopping assemblies for rated penetrations.
   12. Structural supports for piping, ductwork, and conduit on both sides of wall.

C. Delegated Design Criteria: As depicted on Drawings.

3.12 ACCESS PANELS

A. Provide all access doors and panels to serve equipment under this work, including those which must be installed, in finished architectural surfaces. Refer to Architectural Specifications for the required product Specification for each surface.

B. Exact size, number and location of access panels is not shown on Plans. Contractor is to submit schedule of access panels as well as a markup on architectural plans showing size and location of all panels for approval.

C. Access doors shall be of a size to permit removal of equipment for servicing. Access door shall have same rating as the wall or ceiling in which it is mounted.

D. Included under this work is the responsibility for verifying the exact location and type of each access panel or door required to serve equipment under this work and in the proper sequence to keep in tune with construction and with prior approval of the Architect. Access doors in fire rated partitions and ceilings shall carry all label ratings as required to maintain the rating of the rated assembly.

3.13 WATERPROOFING

A. Wherever electrical Work pierces waterproofing or waterproofing membranes, install it in an approved watertight manner.

3.14 CUTTING AND PATCHING

A. Provide core drilling, cutting and patching of existing construction and surfaces for the installation of electrical systems. Concrete, asphalt, or plaster surfaces which have been damaged by such drilling or cutting shall be patched and repaired to match the surrounding surface.

3.15 FIELD QUALITY CONTROL

A. At Project Completion:
   1. Test electrical loads and controls under full operating conditions and immediately replace defective electrical equipment, devices and workmanship at no cost to the Owner.
   2. Perform all standard electrical functional tests such as electrical insulation and ground resistance, or temperature rise, as well as the tests required in subsequent sections.

B. Administrant for Medium-Voltage Electrical Tests and Inspections:
   1. Engage qualified medium-voltage electrical testing and inspecting agency to administer and perform tests and inspections.

C. Administrant for Low-Voltage Electrical Tests and Inspections:
   1. Engage qualified low-voltage electrical testing and inspecting agency to administer and perform tests and inspections.

D. Administrant for Power-Limited Electrical Tests and Inspections:
   1. Engage qualified power-limited electrical testing and inspecting agency to administer and perform tests and inspections.

E. Administrant for Structural Tests and Inspections:
   1. Engage qualified structural testing and inspecting agency to administer and perform tests and inspections.

F. Administrant for Field Tests and Inspections of Lighting Installations:
   1. Engage qualified lighting testing and inspecting agency to administer and perform tests and inspections.

G. Closing-in of Work: Do not allow Electrical Work to be covered or enclosed until it has been observed by the Architect's Representative. Should unobserved Electrical Work be covered or enclosed, uncover it for observation and then make repairs as necessary to restore the Electrical Work and the Work of other affected installers to its original and proper condition, at no cost to the Owner.

3.16 ADJUST AND CLEAN

A. Keep the Project Site free from accumulations of electrical rubbish and debris. Remove such accumulations from the Project Site.

B. Thoroughly clean electrical equipment and materials of plaster, cement and other foreign materials and leave smooth, clean, and dry.

C. Upon completion of the work, all equipment installed as specified in this section, and all areas where work was performed, shall be cleaned to provide operating conditions satisfactory to the Architect (Owner’s Representative).

3.17 CLOSEOUT ACTIVITIES

A. Development of Facility EPM Program
   1. Facility EPM Program must be developed by qualified EPM specialist.
   2. Conduct Facility EPM Program analysis in accordance with NFPA 70B recommendations.
      a. Renovation Projects:
         1) Facility diagrams must include connected existing equipment for entire facility where known. Areas of uncertainty should be clearly indicated.
         2) Obtain copies of existing operation and maintenance data and existing Facility EPM Program information from Owner.
         3) Facility EPM Program analysis should identify existing equipment that does not have available operation and maintenance data and should explain the Owner's risks because this equipment is not included in Facility EPM Program.
         4) Data for existing equipment outside scope of Project may be inserted in Facility EPM Program Binders without analysis.
         5) Data for existing equipment impacted by scope of Project should be analyzed and documented similar to Project's new equipment data as much as possible.
   3. Compile operation and maintenance data from Facility EPM Program analysis and submit updated Facility EPM Program Binders.

d) Include warranty and maintenance contract information.

6) Volume 6 - Inventory of Facility Tools, Supplies, and Personnel Protective Equipment:
   a) Include schedules of maintenance material items recommended to be stored at facility.
   b) Include list of lamp types and photoelectric relays used in facility with ANSI and manufacturers' codes.
   c) Include calibration and servicing data for each item.
7) Volume 7 - Inspection, Testing, and Repair (IT&R) Plan:
   a) Include tables showing frequency of activities for each item.
   b) Include annual schedule with activities mapped to specific days of the year.
   c) Include exterior pole inspection and repair procedures.
8) Volume 8 - Inspection, Testing, and Repair (IT&R) Forms:
   a) As required.
9) Volume 9 - Inspection, Testing, and Repair (IT&R) Procedures:
   a) As required.
10) Volume 10 - Spare Parts List:
   a) Include list of all parts required to perform IT&R procedures.
   b) Identify quantities of which parts are recommended to be stored on-site.
   c) Include source contact information and budget cost for each item.
11) Volume 11 - Construction Project Closeout Record Documentation:
   a) Include records of power system studies and photometric studies.
   b) Include records of risk assessment studies.
   c) Include records of electrical system startup and commissioning activities.
   d) Include records of baseline inspections and tests.
   e) Include records of baseline infrared photographs with normal light photographs showing the location, direction, angle, and conditions necessary for reproducing each infrared photograph.
   f) Include records of baseline settings for adjustable equipment and devices.

5. Format of Facility EPM Program Binders Submittal:
   a. Complete Set: On USB media that is clearly and permanently labeled with attached placard on lanyard to prevent misplacement.
   b. Volumes 2 and 8: Reproducible hardcopy on archival quality, 28 lb (105 GSM), acid-free, bond paper.

B. Operation and Maintenance Data: Prepare and submit the following:
   1. Provide emergency operation, normal operation, and preventive maintenance manuals for each system, equipment, and device listed below:
      a. Emergency inverter System.

4. Organization of Facility EPM Program Binders:
   a. Description: Set of binders containing operation and maintenance data for facility's electrical equipment that was compiled during analysis of installed electrical Work for Facility EPM Program development.
   b. Referenced Standards: Content must comply with recommendations in NFPA 70B.
   c. General Characteristics:
      1) Volume 1 - Introduction:
         a) Summarize how Facility EPM Program Analysis was performed, how data were collected, and how volumes are organized.
         b) Describe Facility EPM Program and provide recommended policies and procedures for implementing the program and keeping it current.
         c) Provide place for Owner to identify contact information for employees responsible for implementing and maintaining Facility EPM Program.
      2) Volume 2 - Facility Safety, Hazards Awareness, and Emergency Procedures:
         a) Include training requirements for employees and contractors.
         b) Include list of known facility hazards impacting IT&R activities.
         c) Include approval and permitting procedures for IT&R activities.
         d) Include incident emergency response procedures.
         e) Include emergency shutdown procedures.
         f) Include electrical disaster recovery procedures.
      3) Volume 3 - Operating Procedures for Electrical Equipment and Controls:
         a) Include copies of demonstration and training videos.
      4) Volume 4 - Facility Diagrams and Schedules:
         a) Include single-line diagrams.
         b) Include grounding and bonding diagrams.
         c) Include essential wiring diagrams.
         d) Include system communications diagrams (WAN, LAN, Wi-Fi, ERCES, MNS, etc.)
         e) Include system automation diagrams (SCADA, BMS, lighting, HVAC, etc.).
         f) Include records of switchgear, switchboard, and panelboard schedules.
         g) Include time-current curves for overcurrent protective devices.
         h) Include list of load-current and overload-relay heaters with related motor nameplate data.
      5) Volume 5 - Inventory of Facility Equipment Using Electrical Power:
         a) Include simplified floor plans showing equipment locations.
         b) Identify critical equipment (electrical or otherwise).
         c) Include identifying designations and nameplate data.

2. Include the following information:
   a. Manufacturer's operating specifications.
   b. User's guides for software and hardware.
   c. Schedule of maintenance material items recommended to be stored at Project site.
   d. Detailed instructions covering operation under both normal and abnormal conditions.
   e. Time-current curves for overcurrent protective devices and manufacturer's written instructions for testing and adjusting their settings.
   f. List of load-current and overload-relay heaters with related motor nameplate data.
   g. List of lamp types and photoelectric relays used on Project, with ANSI and manufacturers' codes.
   h. Manufacturer's instructions for setting field-adjustable components.
   i. Manufacturer's instructions for testing, adjusting, and reprogramming microprocessor controls.
   j. EPSS: Manufacturer's system checklists, maintenance schedule, and maintenance log sheets in accordance with NFPA 110.
   k. Exterior pole inspection and repair procedures.
   l. Include copies of demonstration and training videos.

C. Software and Firmware Operational Documentation: Provide software and firmware operational documentation in Facility EPM Program Binders, including the following:
   1. Software operating and upgrade manuals.
   2. Names, versions, and website addresses for locations of installed software.
   3. Device address list.
   4. Printout of software application and graphic screens.
   5. Testing and adjusting of panic and emergency power features.
   6. For lighting controls, include the following:
      a. Adjustments of scene preset controls, adjustable fade rates, and fade overrides.
      b. Operation of adjustable zone controls.

D. Software:
   1. Program Software Backup: Provide USB media that is clearly and permanently labeled with attached placard on lanyard to prevent misplacement.
   2. Provide to Owner upgrades and unrestricted licenses for installed and backup software, including operating systems and programming tools required for operation and maintenance.

E. Demonstration: With assistance from factory-authorized service representatives, demonstrate to Owner's maintenance and clerical personnel and building occupants how to operate the following systems and equipment:
   1. Lighting control devices specified in Section 260923 "Lighting Control Devices."
   2. Electronic metering and billing software specified in Section 262713 "Electricity Metering."

F. Training: With assistance from factory-authorized service representatives, train Owner's maintenance personnel on the following topics:
   1. How to implement Facility EPM Program.
   2. How to adjust, operate, and maintain equipment specified in Section 111136 "Vehicle Charging Equipment."
   3. How to operate normal and emergency electrical systems, including justifications for, and limitations of, protective device settings recommended in study report specified in Section 260573.16 "Coordination Studies."
   4. Electrical power safety fundamentals refresher including arc-flash hazard safety features of electrical power distribution equipment in facility, interpreting arc-flash warning labels, selecting appropriate personal protective equipment, and understanding significance of findings documented in study report specified in Section 260573.19 "Arc-Flash Hazard Analysis."
   5. How to adjust, operate, and maintain systems specified in Section 260913 "Electrical Power Monitoring."
   6. How to adjust, operate, and maintain devices specified in Section 260923 "Lighting Control Devices."
   7. ow to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories specified in Section 262413 "Switchboards."
   8. How to adjust, operate, and maintain hardware and software specified in Section 262713 "Electricity Metering."
   9. How to adjust, operate, and maintain stage lighting equipment specified in Section 265561 "Theatrical Lighting."
   10. How to adjust, operate, and maintain luminaires and photoelectric controls specified in Section 265619 "LED Exterior Lighting."

END OF SECTION

SECTION 26 05 13 - MEDIUM-VOLTAGE CABLES AND ACCESSORIES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Division 26 Section "Hangers and Supports for Electrical Systems.

1.02 SUMMARY

A. This Section includes cables and related splices, terminations, and accessories for medium- voltage (MV) electrical distribution systems.

B. Provide the following termination assemblies:
1. 200A & 600A are two standard amperages. Selection should be based on facility standard or the load you are designing for.
2. 600A bolted cable terminations at MV switchgear.
3. 600A separable elbows at main service MV transformers.
4. 600A separable Bolted T-splice in underground vault(s).
5. 600A 4-Way MV separable elbows in underground vault(s) and above-ground metal-enclosed cabinets.
6. Use these on elbows only
7. Test point fault indicators with remote monitoring.
8. Clamp-on fault indicators.
9. Use these at end of radial feeders via loop switch on transformers.
10. MOV separable elbows at main service MV transformers.
11. Refer to electrical single-line diagrams for additional requirements.

1.03 DEFINITIONS

A. NETA ATS: Acceptance Testing Specification.

B. Cable splice: Where the joining of two or more cable ends is accomplished by using field installed non-separable connector assembly that joins another cable end.

C. Cable connector: Where a cable end is field joined to a factory-made separable connector assembly that can be attached and unattached to a mating termination fitting on a piece of equipment. 600A connectors are dead-break rated and require the system to be shutdown prior to disconnection. 200A elbows shall be load-break rated.

D. Cable termination: Where a cable end is field joined to a factory-made assembly with compression type lug bolted to a bus bar on the piece of equipment.

E. Termination assembly(ies): Refers to all components associated with cable splices, cable connectors and cable terminations.

F. Separable connector: A cable is terminated in a factory-made assembly unit that can be attached and unattached to another similar unit without damage to the connection or the cable ends.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of cable indicated. Include splices and terminations for cables and cable accessories.

B. Samples: 16-inch (400-mm) lengths of each type of cable indicated.

C. Cable-pulling calculations indicating the maximum pulling tension of the cable will not be exceeded in PDF, MS Word, or MS Excel format. Provide calcs prior to cable installation.

D. Dynamometer readings recorded during cable pulling in PDF, MS Word or MS Excel format per submittal schedule.

1.05 INFORMATIONAL SUBMITTALS

A. Coordinate first paragraph below with qualification requirements in Division 01 Section "Quality Requirements" and as supplemented in "Quality Assurance" Article. Defaulted to Installer. No Qual Data for Testing agency

B. Qualification Data: For Installer.

C. Material Certificates: For each cable and accessory type, signed by manufacturers.

D. Delete test reports below if not required.

E. Source quality-control test reports.

F. Retain paragraph below if Contractor is responsible for field quality-control testing.

G. Field quality-control test reports.

H. Coordination drawings including routing and elevations.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer of medium voltage electrical cable to perform the installation specified in this section. Cable splices, connectors and terminations shall be made by certified workman with a minimum of 5 years' experience in terminating the specific types of cable and cable accessories specified in this Section.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
   1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

C. Source Limitations: Obtain cables and accessories through one source from a single manufacturer.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Each reel of cable furnished shall be newly manufactured, no more than 12 months old.

F. Codes and Standards: Conform to the following Standards:
   1. NFPA 70.
   2. Electrical components and/or systems shall be listed and labeled by a nationally recognized testing laboratory (NRTL) such as: UL, ETL, CSA, or FM; shall be labeled and/or listed as part of a UL-labeled assembly, or shall be evaluated by a third party acceptable to the authority having jurisdiction (AHJ) as suitable for the use intended. All labels shall be applied at the manufacturer's factory or facility prior to shipment.
   3. AEIC – Association of Edison Illuminating Companies.
   4. AEIC CG5-2005 – Underground Extruded Power Cable Pulling Guide.
   5. AEIC CS8-2007 – Specification for Extruded Dielectric Shielded Power Cables Rated 5 Through 46 kV.
   6. IEEE C2-latest – National Electrical Safety Code (NESC) Part 3: Safety Rules for the Installation and Maintenance of Underground Electric Supply and Communication Lines.
   7. ASTM B496-04-2010 – Standard Specification for Compact Round Concentric-Lay-Stranded Copper Conductors.

8. ICEA – Insulated Cable Engineer's Association.
   a. ICEA S-93-639 / NEMA WC 74-2006 – 5-46 kV Shielded Power Cables for Use in the Transmission and Distribution of Electric Energy.
   b. ICEA S-94-649-2004 – Standard for Concentric Neutral Cables Rated 5 Through 46 kV.
   c. ICEA S-96-659 / NEMA WC71-1999 – Standard for NonShielded Cables Rated 2001 5000 Volts for Use in the Distribution of Electric Energy.
   d. ICEA S-97-682-2007 – Standard for Utility Shielded Power Cables Rated 5 Through 46 kV.
9. IEEE
   a. IEEE 48™-latest – IEEE Standard Test Procedures and Requirements for Alternating-Current Cable Terminations Used on Shielded Cables Having Laminated Insulation Rated 2.5 kV Through 765 kV or Extruded Insulation Rated
   b. 2.5 kV Through 500 kV.
   c. IEEE 386™-latest – IEEE Standard for Separable Insulated Connector Systems for Power Distribution Systems above 600 V.
   d. IEEE 400.1™-latest – IEEE Guide for Field Testing of Laminated Dielectric, Shielded Power Cable Systems Rated 5 kV and Above with High Direct-Current Voltage.
   e. IEEE 404™-latest – IEEE Standard for Extruded and Laminated Dielectric Shielded Cable Joints Rated 2,500V to 500,000 V.
   f. IEEE 525™-latest – IEEE Guide for the Design and Installation of Cable Systems in Substations.
   g. IEEE 576™-latest – Recommended Practice for Installation, Termination, and Testing of Insulated Power Cable as Used in Industrial and Commercial Applications.
   h. IEEE 835™-latest – IEEE Standard Power Cable Ampacity Tables.
10. NECA NEIS 600-2003 – Recommended Practice for Installing and Maintaining Medium- Voltage Cable.
11. NETA – InterNational Electrical Testing Association Inc.
12. NETA ATS-latest – Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems.
13. UL
   a. UL 510-latest – UL Standard for Safety, Polyvinyl Chloride, Polyethylene and Rubber Insulating Tape.
   b. UL 1072-latest – UL Standard for Safety, Medium-Voltage Power Cables.

1.07 PROJECT CONDITIONS

A. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
   1. Notify Owner no fewer than two days in advance of proposed interruption of electric service.
   2. Do not proceed with interruption of electric service without Owner's written permission.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver medium voltage cable on factory reels conforming to NEMA Standard WC 26 - Wire and Cable Packaging. Reels with unsealed cable ends will be recorded and rejected by the Owner's representative.

B. Store cables on reels on elevated platforms in a clean, dry location.

C. On receipt, inspect cable protective covering for evidence of damage during shipment. Report immediately to carrier if evidence of damage is found.

D. Accomplish unloading without contacting cable surface or protective wrap. If unloading by crane, use cradle supporting reel flanges or a shaft through arbor hole. If using a forklift, lift the reel at 90 degrees to flanges. Use forms long enough to make complete lifting contact with both reel flanges.

E. If using inclined ramp for unloading, use ramp wide enough to contact both reel flanges completely. Accomplish stopping of reels at bottom by using the reel flanges and not the surface of the cable.

F. Do not drop reels from delivering vehicle to ground.

G. Store reels on hard surface to prevent flanges from sinking into the earth and allow the weight of the reel and cable to rest on the cable surface.

H. Do not store reels in an area where construction equipment, falling or flying objects or other materials will contact the cable.

I. Store cable where chemicals or petroleum products will not be spilled or sprayed on the cable.

J. Store cable away from open fires or sources of high heat.

K. When a reel of cable is rolled from one point to another, check for and remove objects on surface that could contact or damage the cable surface or protective wrap. Roll reel in direction to prevent loosening of the cable on the reel.

L. Store cable according to manufacturer's recommendations, as a minimum. In addition, store cable in location protected from vandalism and weather. If cable is stored outside, it must be covered with opaque plastic or canvas with provisions for ventilation to prevent condensation and for protection from weather. If air temperature at the cable storage location will be below 5 degrees C, move cable to a heated (10 degrees C minimum) location. If necessary, properly store cable off site at Contractor's expense.

M. Seal cut cable ends using properly sized heat shrink cap to prevent moisture ingress to the internal part of the cable

1.09 EXTRA MATERIALS

A. Provide three (3) snap-on, hot-stick operable capacitive test point caps.

PART 2 - PRODUCTS

2.01 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application. Revise paragraph below to suit Project. See Editing Instruction No. 1 in the Evaluations.

B. Comply with IEEE C2 and NFPA 70.

C. Source Limitations: Obtain cables and accessories from single source from single manufacturer.

2.02 CABLES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Cables:
      a. General Cable Technologies Corporation.
      b. Okonite Company (The).
      c. Pirelli Cables & Systems NA.
      d. Prysmian.
      e. Rome Cable Corporation.
      f. Southwire Company.
   2. Cable Splicing and Terminating Products and Accessories:
      a. Raychem: Tyco Electronics.
      b. RTE Components; Cooper Power Systems, Inc.
      c. Elastimold/ABB.
      d. 3M; Electrical Products Division.
   3. Tapes
      a. 3M Scotch® 24 – Electrical Shielding Tape.
      b. 3M Scotch® 27 – Glass Cloth Electrical Tape.
      c. 3M Scotch® 33 – Electrical Tape.
      d. 3M Scotch® 69 – Glass Cloth Electrical Tape.
      e. 3M Scotch® 77 – Fire Retardant Electric Arc Proofing Tape.
      f. 3M Scotch® 130C – Linerless Rubber Splicing Tape.
      g. 3M Scotchfil™ - Electrical Insulation Putty.
      h. Insulating Materials Inc. (IMI) 202 – Irrathene Film, Class 105C Tape.
      i. Plymouth® Bishop® 53 Plyarc® – Arc and Fire Proofing Tape.
   4. Conductor and Cable Stripping Tools
      a. Acceptable Manufacturers

1) Greenlee.
2) Hi-Line Company
3) Ideal
4) Ripley Company (UtilityTool), BP A, BP 1A, BP 2A, Icon, PIT 1T, TSW 4550, WS 6, WS 7, WS 7A, WS 8, WS 8A, WS 15, WS 64-U, WS 5A, or WS 66
5) Speed Systems, Inc., 1542-2CL and 1700 Series.

2.03 MV CABLES

A. Cable Type: MV105.

B. Comply with UL 1072, AEIC CS 8, ICEA S-93-639, and ICEA S-97-682.

C. Conductor: Copper or Aluminum.

D. Conductor Stranding: Concentric lay, Class B.

E. Conductor Insulation: Ethylene-propylene rubber. Conductor Insulation: Crosslinked polyethylene.
1. Voltage Rating: 5 kV.
2. Insulation Thickness: 133 percent insulation level.

F. Shielding:
1. Two layers of 5-mil uncoated Copper tape, with minimum 12.5% overlap, helically applied over semiconducting insulation shield. The copper tape shall meet all of the requirements of Part 4 of ICEA.
2. Concentric neutral, solid copper wires helically applied over semiconducting insulation shield.

G. Three-Conductor Cable Assembly: Three insulated, shielded conductors cabled together with ground conductors.
1. Circuit Identification: Color-coded tape (black, red, blue) under the metallic shielding.

H. Cable Armor: Corrugated aluminum tube applied over cable.

I. Cable Jacket: Black, sunlight-resistant PVC. Use cable jacket meeting the electrical, physical and sunlight resistant requirements of ICEA S 93 639 / NEMA WC74 and of UL Standard 1072. The average thickness of the jacket shall be as specified in Part 4 of ICEA. Provide minimum thickness at any point of not less than 80 percent of that specified. CSA listed to C68.3.

2.04 SPLICE KITS

A. Connectors and Splice Kits: Comply with IEEE 404; type as recommended by cable or splicing kit manufacturer for the application.

B. Splicing Products: As recommended, in writing, by splicing kit manufacturer for specific sizes, ratings, and configurations of cable conductors. Include all components required for complete splice, with detailed instructions.
   1. Combination tape and cold-shrink-rubber sleeve kit with rejacketing by cast-epoxy-resin encasement or other waterproof, abrasion-resistant material.
   2. Premolded EPDM splicing body kit with cable joint sealed by interference fit of mating parts and cable.

2.05 SOLID TERMINATIONS

A. Multiconductor Cable Sheath Seals: Type recommended by seal manufacturer for type of cable and installation conditions, including orientation.
   1. Compound-filled, cast-metal body, metal-clad cable terminator for metal-clad cable with external plastic jacket.
   2. Cast-epoxy-resin sheath seal kit with wraparound mold and packaged, two-part, epoxy- resin casting material.

B. Shielded-Cable Terminations: Comply with the following classes of IEEE 48. Insulation class is equivalent to that of cable. Include shield ground strap for shielded cable terminations. Terminations without sheds (skirts) are only allowed on indoor applications.
   1. Class 3 Terminations: Kit with stress cone and compression-type connector.

2.06 SEPARABLE INSULATED CONNECTORS

A. Description: Modular system, complying with IEEE 386, with disconnecting, single-pole, cable terminators and with matching, stationary, plug-in, dead-front terminals designed for cable voltage and for sealing against moisture.

B. Terminations at Distribution Points: Modular type, consisting of terminators installed on cables and modular, dead-front, terminal junctions for interconnecting cables.

C. Dead-Break Cable Terminators: Elbow-type unit with 600-A continuous-current rating; designed for de-energized disconnecting and connecting; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body that is capacitance coupled.

D. Dead-Front Terminal Junctions: Modular bracket-mounted groups of dead-front stationary terminals that mate and match with above cable terminators. Two-, three-, or four-terminal units as indicated, with fully rated, insulated, watertight conductor connection between terminals and complete with grounding lug, manufacturer's standard accessory stands, stainless-steel mounting brackets, and attaching hardware.
   1. Protective Cap: Insulating, electrostatic-shielding, water-sealing cap with drain wire.
   2. Portable Feed-Through Accessory: Two-terminal, dead-front junction arranged for removable mounting on accessory stand of stationary terminal junction.

3. Grounding Kit: Jumpered elbows, portable feed-through accessory units, protective caps, test rods suitable for concurrently grounding three phases of feeders, and carrying case.
4. Standoff Insulator: Portable, single dead-front terminal for removable mounting on accessory stand of stationary terminal junction. Insulators suitable for fully insulated isolation of energized cable-elbow terminator.

E. Test-Point Fault Indicators: Applicable current-trip ratings and arranged for installation in test points of load-break separable connectors, and complete with self-resetting indicators capable of being installed with shotgun hot stick and tested with test tool.

F. Tool Set: Shotgun hot stick with energized terminal indicator, fault-indicator test tool, and carrying case.

2.07 SEPARABLE INSULATED MOV SURGE ARRESTERS

A. Description: Modular system, complying with IEEE 386, with single-pole, plug-in, dead-front surge arrester designed for system voltage and for sealing against moisture.

B. The pre-molded parts shall be suitable for indoor, outdoor, and submersible applications.

C. The arrester shall be designed with a 60 Hz sparkover of 1.5 times its duty cycle rating. The operation of the MOV arrester shall have the line voltage shared by both resistance graded gap structure and metal oxide varistors (MOV). When overvoltages occur, the gaps sparkover, leaving only the metal oxide varistors in the circuit. This shall result in lower discharge voltages than are possible with gapless metal oxide arresters.

D. Performance Test Characteristics: The MOV surge arrester shall withstand the following design tests as described by IEEE Standard C62.11
1. Duty Cycle: 22 current surges of 5 kA crest, 8/20 µs waveshape.
2. High-Current, Short-Duration Discharge: 2 current surges of 40 kA crest, 4/10 µs waveshape.
3. Low-Current, Long-Duration Discharge: 20 current surges of 75 A crest, 2000 µs rectangular wave duration.

2.08 ARC-PROOFING MATERIALS

A. General: Provide fire taping of all medium voltage cables and termination assemblies inside vaults, including existing cables if present.

B. Tape for First Course on Metal Objects: 10-mil- (250-micrometer-) thick, corrosion-protective, moisture-resistant, PVC pipe-wrapping tape.

C. Arc-Proofing Tape: Fireproof tape, flexible, conformable, intumescent to 0.3 inch (8 mm) thick, compatible with cable jacket.

D. Glass-Cloth Tape: Pressure-sensitive adhesive type, 1/2 inch (13 mm) wide.

2.09 FAULT INDICATORS

A. Provide automatic reset, in-rush restraint type fault indicators at all splices and at all terminations. Provide all mounting kits and adapters as required. Manufacturer to recommend correct trip ratings at each location to be used. Manual reset types are prohibited. Provide a display that a fault has occurred in cable. Instrument shall not be affected by heat, moisture, and corrosive conditions and shall be recommended by manufacturer for installation conditions.

B. Mounting: Arranged to clamp to cable sheath on cable terminations or test points on elbow connectors.

C. Provide Cooper power systems, or equal, S.T.A.R. (capacitive test point) fault indicator with three-phase remote display on all separable connectors.

D. Provide corrosion resistant, clamp-on current type reset units on terminations without capacitive test points. Cooper Power Systems, or equal, CRR3PD fault indicator with three-phase remote display on all solid terminations.

E. Provide one test point testing tool suitable for each type of indicator.

2.10 SOURCE QUALITY CONTROL

A. Edit paragraph below for cable type specified. First option refers to shielded cable, second to concentric neutral cable designs.

B. Test and inspect cables according to ICEA S-94-649 before shipping.

PART 3 - EXECUTION

3.01 INSPECTION

A. Verify that each conduit is ready to receive work. Use properly sized mandrel to determine if installed conduit is suitable for use.

B. Verify field measurements are as shown on Drawings.

C. Record field-measured lengths of cable and forward to the Contractor.

D. Beginning of installation means Contractor accepts existing conditions.

3.02 PREPARATION

A. Thoroughly swab conduits and pipes to remove foreign material before pulling cables.

3.03 INSTALLATION

A. Permanent splices are not allowed. All splices shall be made with separable connectors and shall occur only in vaults and pullboxes.

B. All equipment terminations shall be made via two-hole bolted lugs or separable elbow connectors, as indicated.

C. Install cable and terminations in accordance with IEEE Standard 576.

D. Install cable and terminations in accordance with manufacturer's instructions and installation guidelines.

E. Avoid abrasion and other damage to cables during installation. Install cable as indicated on plan drawings and cable schedules.

F. Pulling Conductors:
1. Do not exceed manufacturer's recommended bending radius, maximum pulling tensions and sidewall pressure values.
2. Where necessary, use manufacturer-approved pulling compound or lubricant that will not deteriorate conductor or insulation.
3. Use pulling means, including fish tape, cable, rope, and basket-weave cable grips that will not damage cables and raceways. Do not use rope hitches for pulling attachment to cable.
4. Pull cables using suitable cable-pulling equipment. Do not exceed cable-pulling tensions or minimum-bending radius recommended by manufacturer.
5. Include approval of cable pull setup by Contractor and Owner prior to each pull.
6. Where pulling equipment is attached to columns, structure, or strut framework, ensure maximum stress limitations of support and structure systems are not exceeded.
7. During the pulling operation, use dynamometer to record the pulling tension. Give notice to Owner before cable is pulled so his representative can observe pull. Record dynamometer readings.
8. Include witnessing of cable pulls by cable manufacturer and certification by manufacturer that cable was not damaged during installation. Include witnessing of dynamometer readings and certification that the manufacturer's allowable pulling tension for each pull was not exceeded.
9. Install cable using mechanical means with cable pulling equipment, pulleys, sheaves, wheel, and rollers. Use of hydraulic or electric pulling equipment with smooth, variable speed control is required. Do not manually pull in cables.
10. Use correctly sized cable pulley (sheave) for each cable-pull. Size sheave diameter per cable calculations. Use sheave wide enough for cables to properly ride over the sheave. Do not use narrow sheaves. Set up sheaves for direct reading from dynamometer.
11. Use listed pulling compounds compatible with the cable's outer jacket, the raceway involved, and acceptable to the cable manufacturer. If compatible, use Polywater® Type J or F lubricant.

12. Do not exceed pulling tension of 0.008 pounds per circular mil of conductor cross sectional area.
13. Pull cable from end resulting in least amount of tension applied to cable. Pull cables down-grade with the feed-in point at the manhole or building with the highest elevation. Keep pulling tension to a minimum by liberal application of lubricant, hand turning of reel and slack feeding of cable into duct entrance. Employ not less than one person at each reel and one at each manhole during pulling operation. Use 6 personnel minimum when each phase is on a separate reel.
14. Remove all lashings used for temporary bunching of individual cables before they enter the raceways.
15. Install cable in manholes along those walls providing the longest route and most spare cable lengths. Loop cables around the entire inside diameter of manholes where possible. Arrange cable to avoid interferences with duct entrances into manhole to allow future cable installation without relocation of cables.
16. Where required, use pulling eyes and bolts with long barrel ferrules that compress on to the exposed conductors. Follow cable manufacturer's instructions for application of pulling eyes.
17. Do not pull cable into conduit embedded in concrete until after concrete is poured and has set up.
18. Where cable is pulled under tension over sheaves, conduit bends or other curved surfaces, select radium that will not result in excessive sidewall pressure and include sheaves, conduit bends or other curved surfaces in above calculations.

G. Splices, Taps and Terminations
1. Approved splices and taps are indicated on Drawings. Obtain preapproval from the Engineer or Owner in writing for any additional required splices and taps.
2. Provide terminals and connectors acceptable for the type of conductor used.
3. Follow the manufacturer's installation instructions for all approved splices, taps and terminations. For DIN plug-in connections, only factory trained and certified installers are to be used.
4. Ground/earth cable shield at each splices, taps and terminations.
5. Use tools specified in this Section, for the required task, instead of a standard utility knife, when cutting the outer jacket, tape-shields, semi-conductor insulation or stripping insulation from medium-voltage cables.
6. Support cable splices and taps on each side of the splice or tap. Locate splices or taps to prevent cyclic bending in the spliced sheath. Splices or taps shall not rely on the cable for support.
7. Provide temporary seal over exposed conductors using tape and heat shrink sleeving unless splicing and taps are to be completed immediately.
8. For grounding cable shield at each termination and splice, use one- or two-hole appropriately sized compression connectors on cable shields and join connectors using properly sized corrosion-resistant bolts, lock-washers and nuts. Install washers on the lug side of the connection. Torque bolts to recommended values. Split-bolt type connectors are not approved.

9. Install terminations at ends of conductors and seal multiconductor cable ends with standard kits.
10. Install separable insulated-connector components as follows:
    a. Protective Cap: At each terminal junction, with one on each terminal to which no feeder is indicated to be connected.
    b. Portable Feed-Through Accessory: Three.
    c. Standoff Insulator: Three.

H. Other Installation Requirements
1. Locate approved splices and taps in manholes to enable periodic thermal imaging of the splice or tap to be carried out by Owner.
2. Cable types to be used:
    a. Single Conductor Medium-Voltage Cable - Shielded: Use for above and underground applications (except for Jumper Cable applications – see Jumper Cable below) and install in conduit or other raceways. Use in cable trays in dedicated electrical vaults or rooms only.
    b. Single Conductor Medium-Voltage Cable - Unshielded (Jumper): Use only between equipment in the same vicinity, such as between primary switch and transformer where adequate through-air clearance can be achieved between conductors. In general, do not use for installation in metallic raceways.
3. Support cables in manholes and similar locations with cable racks and secure to rack insulators with self-locking nylon cable ties. Place each cable on a separate insulator.
4. For single-conductor mounting, install all phases from the same circuit on the same rack. Do not install cables of more than one circuit on the same insulator.
5. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.
6. Support cables according to Division 26 Section "Hangers and Supports for Electrical Systems."
7. [Install direct-buried cables on leveled and tamped bed of 3-inch- (75-mm-) thick, clean sand. Separate cables crossing other cables or piping by a minimum of 4 inches (100 mm) of tamped earth. Install permanent markers at ends of cable runs, changes in direction, and buried splices.]
8. Install warning tape 12 inches (305 mm) above cables per details in the construction drawings.
9. In manholes, handholes, pull boxes, junction boxes, and cable vaults, train cables around walls by the longest route from entry to exit and support cables at intervals adequate to prevent sag.
10. Seal around cables passing through fire-rated elements according to Division 07 Section "Penetration Firestopping."
11. Install fault indicators on each phase where indicated.
12. Avoiding Cable Strain: Cable shall be trained to final location and secured with temporary ties prior to any cutting. Terminations installed on the cable shall be oriented to permit completion of the termination without twisting or stressing the cable insulation.

13. Bending and Training Cable: The bend radius of any cable shall not be less than fifteen times the outside diameter of the cable jacket. Cable shall not be twisted.
14. Contractor shall be responsible for the correct phasing out of the conductors of each circuit at terminations and/or splices.

I. [Install cable splices at pull points and elsewhere as indicated; use standard kits.]

J. [Arc Proofing: After all tests have been performed and accepted, arc-proof medium voltage cables and termination assemblies within the manhole and at locations not protected by conduit or termination materials except where indicated. Do not fire tape termination assemblies in medium voltage switchgear or transformers. Fire tape each individual phase conductor. In addition to arc-proofing tape manufacturer's written instructions, apply arc proofing as follows:
1. Clean cable sheath.
2. Wrap metallic cable components with 10-mil (250-micrometer) pipe-wrapping tape.
3. Smooth surface contours with electrical insulation putty.
4. Fireproof cables installed in manholes with one layer of one-half-lapped 3M Scotch® 77 or Plymouth-Bishop 53 tape. Apply vinyl side to outside of wrap. Wrap 3M Scotch 27 or
5. 69 tape over fireproofing tape to hold the half-lapped tape in place and prevent unraveling.
6. Band arc-proofing tape with 1-inch- (25-mm-) wide bands of half-lapped, adhesive, glass- cloth tape 2 inches (50 mm) o.c.
7. Fireproof all three-phase cables together ending a minimum of 6 feet (1.83 m) from the splice or connectors, and then individually wrap each phase conductor up to the splice or connector. This works best if the individual wraps are applied first, and then the triplex-cables are wrapped afterward to overlap the tape and adequately protect all cable surfaces.
8. Completely cover each individual and triplex cable with fireproofing tape and hand-taped splices from duct entrance to duct exit.
9. Extend half-lapped wraps a minimum of 1-inch into all ducts.
10. Extend the fireproofing tape a minimum of 1-inch onto all splice and T-connector bodies.]

K. Termination requirements:
1. Torque values specified by the termination manufacturer must be strictly adhered to.
2. Contractor shall follow the termination manufacturers specified procedures, strictly, in detail.

L. Site and Work Conditions: The site of the work and working conditions and procedures shall comply with the following:
1. Clean dry work site a clean dry site shall be provided for constructing all terminations. Termination work shall be done only in sunny dry weather, unless a heated and lighted enclosure for the work is provided by the Contractor.
2. Clean drop cloths shall be provided for laying of parts and tools.

3. Hand cleaning supplies packaged cleaning tissues impregnated with an evaporating cleaning compound and clean dry cotton cloths shall be provided for the termination workmen to clean and dry their hands.
4. Adequate lighting natural or artificial lighting provided by the Contractor, shall be used to provide not less than 200 footcandles on the work to be assembled.
5. Manufacturer's instructions work will be permitted at such time as the termination manufacturers installation and assembly instructions are at work site and easily available to the termination workmen.
6. Required tool set all tools required for assembly shall be at the work site prior to beginning termination. The set shall include:
    a. Cable shears and hacksaw (or rotating blade cable cutter). Roughing cut may be made with shears. Final cable cut shall be made with hacksaw or rotating blade cable cutter.
    b. Crimping tool with proper dies for conductors terminated, including grounding cable and ground leads from ground adapters.
    c. Torque wrench (and spanner wrench for 600 amp).
    d. Rotary blade insulation cutter and sharp knife.
    e. Sandpaper and insulation file.

3.04 CABLE GROUNDING:

A. Ground shields of all shielded cable at terminations, splices, and separable insulated connectors. Ground metal bodies of terminators, splices, cable and separable insulated connector fittings, and hardware in accordance with manufacturer’s written instructions. Use cable shield adaptor kits, unless noted otherwise.

B. Connect the primary cable grounding conductors to the ground lug at the transformers and in turn to the ground rod.

C. The shields of all primary cable terminations shall be bonded to the local ground in each piece of equipment.

D. Bare #4/0 AWG, copper 600 volt, equipment ground conductor shall be provided in all medium voltage cable runs.

E. Ground all cable shields to new #4/0 AWG bare copper ring around interior of each vault. Bond ring to new ground rods and to new #4/0 bare copper conductors in medium voltage conduit runs.

F. For grounding cable shield at each termination and splice, use one- or two-hole appropriately sized compression connectors on cable shields and join connectors using properly sized corrosion-resistant bolts, lock-washers and nuts. Install washers on the lug side of the connection. Torque bolts to recommended values. Split-bolt type connectors are not approved.

3.05 INSTALLATION OF CABLE ACCESSORIES

A. Tape for first course on metal objects in contact with cable, such as racks, shall be 10 mil thick, corrosion protective, moisture resistant PVC pipe wrapping tape.

B. Fault Indicators: Mount remote 3-phase display unit in location noted:
   1. Vaults: Point 3-phase display face toward ladder.
   2. Switchgear: Flush mounted through housing with 3-phase display on the outside. Provide label to indicate with circuit is represented.

3.06 IDENTIFICATION

A. Identify cables according to Division 26 Section "Identification for Electrical Systems."

B. Cables shall be identified in two locations:
   1. Identify each cable bundle (related A, B and C phase cables) as to manufacturer's product number (MV-105), year installed, voltage (15 kV), conductor size, and Owner's circuit numbering scheme.
   2. Identify each phase cable as to Phase, conductor size, and Owner's circuit numbering scheme.

C. Identification shall be carried in plastic embossed letter holder permanently secured with black nylon ty-wraps where the cable emerges into each and all manholes or switchgear. Identification shall be applied over the fire tapping where present.

D. The cables shall be identified with a 2" wide band of Scotch 35 colored insulation tape adjacent to all splices and terminations. The colors shall correspond to the following code.
   1. Phase A Two red bands.
   2. Phase B Two yellow bands
   3. Phase C Two blue bands

E. Equipment grounding conductor Green

F. Provide above mentioned identification on all new cables and all existing cables in each underground vault.

3.07 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:
   1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters.
   2. After installing medium-voltage cables and before electrical circuitry has been energized, test for compliance with requirements.

A. Remove and replace malfunctioning items and retest as specified above.

END OF SECTION

SECTION 26 05 19 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Copper building wire.
2. Photovoltaic cable, Type PV.
3. Tray cable, Type TC.
4. Connectors and splices.

B. Related Requirements:
1. Section 26 0513 "Medium-Voltage Cables" for single-conductor and multiconductor cables, cable splices, and terminations for electrical distribution systems with 601 to 35 000 V.
2. Section 27 1313 "Communications Copper Backbone Cabling" for twisted pair cabling used for data circuits.
3. Section 27 1513 "Communications Copper Horizontal Cabling" for twisted pair cabling used for data circuits.

1.02 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

PART 2 - PRODUCTS

2.01 COPPER BUILDING WIRE

A. Description: Flexible, insulated and uninsulated, drawn copper current-carrying conductor with an overall insulation layer or jacket, or both, rated 600 V or less.

B. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. General Cable
2. Rome
3. Southwire
4. Or equal.

C. Standards:
   1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
   2. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Conductors: Copper, complying with ASTM B3 for bare annealed copper and with ASTM B8 for stranded conductors.

E. Conductor Insulation:
   1. Type NM: Comply with UL 83 and UL 719.
   2. Type RHH and Type RHW-2: Comply with UL 44.
   3. Type USE-2 and Type SE: Comply with UL 854.
   4. Type TC-ER: Comply with NEMA WC 70/ICEA S-95-658 and UL 1277.
   5. Type THHN and Type THWN-2: Comply with UL 83.
   6. Type THW and Type THW-2: Comply with NEMA WC-70/ICEA S-95-658 and UL 83.
   7. Type UF: Comply with UL 83 and UL 493.
   8. Type XHHW-2: Comply with UL 44.

F. Shield:
   1. Type TC-ER: Cable designed for use with ASDs, with oversized crosslinked polyethylene insulation, spiral-wrapped foil plus 85 percent coverage braided shields and insulated full-size ground wire, and sunlight- and oil-resistant outer PVC jacket.

2.02 CONNECTORS AND SPLICES

A. Description: Factory-fabricated connectors, splices, and lugs of size, ampacity rating, material, type, and class for application and service indicated; listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

B. Available Manufacturers: Ideal Industries, 3M, “ScotchLok”, “T&B”, Burndy, or equa

C. Jacketed Cable Connectors: For steel and aluminum jacketed cables, zinc die-cast with set screws, designed to connect conductors specified in this Section.

D. Lugs: One piece, seamless, designed to terminate conductors specified in this Section.
   1. Material: Copper.
   2. Type: Two hole with standard barrels.
   3. Termination: Compression.

PART 3 - EXECUTION

3.01 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders:
   1. Copper; solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
   2. Copper for feeders smaller than No. 4 AWG; copper or aluminum for feeders No. 4 AWG and larger. Conductors must be solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Branch Circuits:
   1. Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
   2. Copper. Solid for No. 12 AWG and smaller; stranded for No. 10 AWG and larger.

C. ASD Output Circuits Cable: Extra-flexible stranded for all sizes.

D. Power-Limited Fire Alarm and Control: Solid for No. 12 AWG and smaller.

E. PV Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

3.02 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Service Entrance: Type THHN/THWN-2, single conductors in raceway Type XHHW-2, single conductors in raceway Type USE, single conductor in raceway.

B. Exposed Feeders: Type THHN/THWN-2, single conductors in raceway Type XHHW-2, single conductors in raceway.

C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspaces: Type THHN/THWN-2, single conductors in raceway.

D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN/THWN-2, single conductors in raceway Type XHHW-2, single conductors in raceway.

E. Exposed Branch Circuits, Including in Crawlspaces: Type THHN/THWN-2, single conductors in raceway.

F. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN/THWN-2, single conductors in raceway.

G. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN/THWN-2, single conductors in raceway Type XHHW-2, single conductors in raceway.

H. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless steel, wire-mesh, strain relief device at terminations to suit application.

I. PV Circuits, Type USE-2: For PV source circuits rated at 600 V or less.

3.03 INSTALLATION, GENERAL

A. Conceal cables in finished walls, ceilings, and floors unless otherwise indicated.

B. Complete raceway installation between conductor and cable termination points according to Section 260533 "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables.

C. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

D. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

E. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.

F. Support cables according to Section 260529 "Hangers and Supports for Electrical Systems."

G. Complete cable tray systems installation according to Section 260536 "Cable Trays for Electrical Systems" prior to installing conductors and cables.

3.04 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

B. Make splices, terminations, and taps that are compatible with conductor material.
1. Use oxide inhibitor in each splice, termination, and tap for aluminum conductors.

C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inch (150 mm) of slack.

3.05 IDENTIFICATION

A. Identify and color-code conductors and cables according to Section 26 0553 "Identification for Electrical Systems."

B. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

3.06 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 26 0544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.07 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Section 07 8413 "Penetration Firestopping."

3.08 FIELD QUALITY CONTROL

A. Tests and Inspections:
   1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors for compliance with requirements.
   2. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors and conductors feeding critical equipment.
   3. Perform each of the following visual and electrical tests:
      a. Inspect exposed sections of conductor and cable for physical damage and correct connection according to the single line diagram.
      b. Test bolted connections for high resistance using one of the following:
         1) A low-resistance ohmmeter.
         2) Calibrated torque wrench
         3) Thermographic survey
   4. Inspect compression-applied connectors for correct cable match and indentation.
   5. Inspect for correct identification.
   6. Inspect cable jacket and condition.
   7. Insulation-resistance test on each conductor for ground and adjacent conductors. Apply a potential of 500 V(dc) for 300 V rated cable and 1000 V(dc) for 600 V rated cable for a one-minute duration.
   8. Continuity test on each conductor and cable.
   9. Uniform resistance of parallel conductors.
   10. Initial Infrared Scanning: After Substantial Completion, but before Final Acceptance, perform an infrared scan of each splice in conductors No. 3 AWG and larger. Remove box and equipment covers so splices are accessible to portable scanner. Correct deficiencies determined during the scan.
      a. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

b. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

11. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.

B. Cables will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports to record the following:
1. Procedures used.
2. Results that comply with requirements.
3. Results that do not comply with requirements, and corrective action taken to achieve compliance with requirements.

END OF SECTION

SECTION 26 05 26 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - PART 1 - GENERAL

A. Section includes grounding and bonding systems and equipment.

B. Section includes grounding and bonding systems and equipment, plus the following special applications:
   1. Underground distribution grounding.
   2. Ground bonding common with lightning protection system.
   3. Foundation steel electrodes.

C. Related Requirements:
   1. Section 26 0010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
   2. Section 26 0011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.01 ACTION SUBMITTALS

A. A.Product Data: For each type of product indicated.

1.02 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans showing dimensioned locations of grounding features specified in "Field Quality Control" Article, including the following:
   1. Test wells.
   2. Ground rods.
   3. Ground rings.
   4. Grounding arrangements and connections for separately derived systems.

B. Field quality-control reports.

1.03 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals.
   1. Include the following:
      a. Plans showing as-built, dimensioned locations of system described in "Field Quality Control" Article, including the following:
         1) Test wells.
         2) Ground rods.
         3) Ground rings.
         4) Grounding arrangements and connections for separately derived systems.
      b. Instructions for periodic testing and inspection of grounding features at test wells ground rings grounding connections for separately derived systems based on NETA MTS.
         1) Tests must determine if ground-resistance or impedance values remain within specified maximums, and instructions must recommend corrective action if values do not.
         2) Include recommended testing intervals.

PART 2 - PRODUCTS

2.01 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with UL 467 for grounding and bonding materials and equipment.

2.02 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the followings:
   1. Eritech / Erico
   2. Blackburn / Thomas & Betts
   3. Galvan Industries

2.03 CONDUCTORS

A. Insulated Conductors: Copper or tinned-copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.

B. Bare Copper Conductors:
   1. Solid Conductors: ASTM B3.
   2. Stranded Conductors: ASTM B8.
   3. Tinned Conductors: ASTM B33.
   4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch (6 mm) in diameter.
   5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
   6. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1- 5/8 inch (41 mm) wide and 1/16 inch (1.6 mm) thick.
   7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inch (41 mm) wide and 1/16 inch (1.6 mm) thick.

C. Grounding Bus: Predrilled rectangular bars of annealed copper, 1/4 by 4 inch (6.3 by 100 mm) in cross section, with 9/32 inch (7.14 mm) holes spaced 1-1/8 inch (28 mm) apart. Stand-off insulators for mounting must comply with UL 891 for use in switchboards, 600 V and must be Lexan or PVC, impulse tested at 5000 V.

2.04 CONNECTORS

A. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.

B. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

C. Mechanical-Type Bus-Bar Connectors: Cast silicon bronze, solderless exothermic-type wire terminals, and long-barrel, two-bolt connection to ground bus bar.

D. Compression-Type Bus-Bar Connectors: Copper or copper alloy, with two wire terminals.

E. Beam Clamps: Mechanical type, terminal, ground wire access from four directions, with dual, tin-plated or silicon bronze bolts.

F. Cable-to-Cable Connectors: Compression type, copper or copper alloy.

G. Cable Tray Ground Clamp: Mechanical type, zinc-plated malleable iron.

H. Conduit Hubs: Mechanical type, terminal with threaded hub.

I. Ground Rod Clamps: Mechanical type, copper or copper alloy, terminal with hex head bolt.

J. Ground Rod Clamps: Mechanical type, copper or copper alloy, terminal with hex head bolt.

K. Lay-in Lug Connector: Mechanical type, copper rated for direct burial terminal with set screw.

L. Service Post Connectors: Mechanical type, bronze alloy terminal, in short- and long-stud lengths, capable of single and double conductor connections.

M. Signal Reference Grid Clamp: Mechanical type, stamped-steel terminal with hex head screw.

N. Straps: Solid copper, cast-bronze clamp. Rated for 600 A.

O. Tower Ground Clamps: Mechanical type, copper or copper alloy, terminal one-piece clamp.

P. U-Bolt Clamps: Mechanical type, copper or copper alloy, terminal listed for direct burial.

Q. Water Pipe Clamps:
1. Mechanical type, two pieces with zinc-plated bolts.
2. Material: Die-cast zinc alloy.
3. Listed for direct burial.
4. U-bolt type with malleable-iron clamp and copper ground connector.

2.05 GROUNDING ELECTRODES

A. Ground Rods: Copper-clad steel; 3/4 inch by 10 ft. (19 mm by 3 m).

B. Ground Plates: 1/4 inch (6 mm) thick, hot-dip galvanized.

PART 3 - EXECUTION

3.01 APPLICATIONS

A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger unless otherwise indicated.

B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. 2/0 AWG minimum.
1. Bury at least 30 inch (750 mm) below grade.
2. Duct-Bank Grounding Conductor: Bury 12 inch (300 mm) above duct bank when indicated as part of duct-bank installation.

C. Grounding Conductors: Green-colored insulation with continuous yellow stripe.

D. Isolated Grounding Conductors: Green-colored insulation with more than one continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow.

E. Grounding Bus: Install in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
   1. Install bus horizontally, on insulated spacers 2 inch (50 mm) minimum from wall, 6 inch (150 mm) above finished floor unless otherwise indicated.
   2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down; connect to horizontal bus.

F. Conductor Terminations and Connections:
   1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
   2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
   3. Connections to Ground Rods at Test Wells: Bolted connectors.
   4. Connections to Structural Steel: Welded connectors.

3.02 GROUNDING AT THE SERVICE

A. Equipment grounding conductors and grounding electrode conductors must be connected to the ground bus. Install a main bonding jumper between the neutral and ground buses.

3.03 GROUNDING SEPARATELY DERIVED SYSTEMS

A. Generator: Install grounding electrode(s) at the generator location. The electrode must be connected to the equipment grounding conductor and to the frame of the generator.

3.04 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Comply with IEEE C2 grounding requirements.

B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inch (100 mm) will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inch (50 mm) above to 6 inch (150 mm) below concrete. Seal floor opening with waterproof, nonshrink grout.

C. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields according to written instructions by manufacturer of splicing and termination kits.

D. Pad-Mounted Transformers and Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2 AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 6 inch (150 mm) from the foundation.

3.05 EQUIPMENT GROUNDING

A. Install insulated equipment grounding conductors with all feeders and branch circuits.

B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:
1. Feeders and branch circuits.
2. Lighting circuits.
3. Receptacle circuits.
4. Single-phase motor and appliance branch circuits.
5. Three-phase motor and appliance branch circuits.
6. Flexible raceway runs.

C. Isolated Grounding Receptacle Circuits: Install an insulated equipment grounding conductor connected to the receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service unless otherwise indicated.

D. Isolated Equipment Enclosure Circuits: For designated equipment supplied by a branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with a nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install a separate insulated equipment grounding conductor. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service unless otherwise indicated.

E. Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.

3.06 INSTALLATION

A. Grounding Conductors: Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor and install in conduit.

C. Ground Rods: Drive rods until tops are 2 inch (50 mm) below finished floor or final grade unless otherwise indicated.
   1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.
   2. Use exothermic welds for all below-grade connections.
   3. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.

D. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Section 260543 "Underground Ducts and Raceways for Electrical Systems," and must be at least 12 inch (300 mm) deep, with cover.
   1. Install at least one test well for each service unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.

E. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
   1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
   2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
   3. Use exothermic-welded connectors for outdoor locations; if a disconnect-type connection is required, use a bolted clamp.

F. Grounding and Bonding for Piping:
   1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use a bolted clamp connector or bolt a lug-type connector to a pipe flange by using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
   2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
   3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

G. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install tinned bonding jumper to bond across flexible duct connections to achieve continuity.

H. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 ft. (18 m) apart.

I. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each steel column, extending around the perimeter of building.
   1. Install tinned-copper conductor not less than No. 2/0 AWG for ground ring and for taps to building steel.
   2. Bury ground ring not less than 24 inch (600 mm) from building's foundation.

J. Concrete-Encased Grounding Electrode (Ufer Ground): Fabricate according to NFPA 70; use a minimum of 20 ft. (6 m) of bare copper conductor not smaller than No. 4 AWG.
   1. If concrete foundation is less than 20 ft. (6 m) long, coil excess conductor within base of foundation.
   2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building's grounding grid or to grounding electrode external to concrete.

K. Concrete-Encased Grounding Electrode (Ufer Ground): Fabricate according to NFPA 70; using electrically conductive coated steel reinforcing bars or rods, at least 20 ft. (6.0 m) long. If reinforcing is in multiple pieces, connect together by the usual steel tie wires or exothermic welding to create the required length.

L. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
   1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
   2. Make connections with clean, bare metal at points of contact.
   3. Make aluminum-to-steel connections with stainless steel separators and mechanical clamps.
   4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
   5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

3.07 FIELD QUALITY CONTROL

A. Tests and Inspections:
   1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
   2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
   3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells, and at individual ground rods. Make tests at ground rods before any conductors are connected.
      a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
      b. Perform tests by fall-of-potential method according to IEEE 81.
   4. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

B. Grounding system will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

D. Report measured ground resistances that exceed the following values:
   1. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: 10 ohms.
   2. Power and Lighting Equipment or System with Capacity of 500 to 1000 kVA: 5 ohms.
   3. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: 3 ohms.
   4. Substations and Pad-Mounted Equipment: 5 ohms.
   5. Manhole Grounds: 10 ohms.

E. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Architect promptly and include recommendations to reduce ground resistance.

END OF SECTION

SECTION 26 05 29 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Support, anchorage, and attachment components.
2. Fabricated metal equipment support assemblies.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:
2. Slotted support systems, hardware, and accessories.
3. Clamps.
4. Hangers.
5. Sockets.
6. Eye nuts.
7. Fasteners.
8. Anchors.
9. Saddles.
10. Brackets.
11. Include rated capacities and furnished specialties and accessories.

B. Shop Drawings: Signed and sealed by a qualified professional engineer. For fabrication and installation details for electrical hangers and support systems.
1. Hangers. Include product data for components.
2. Slotted support systems.
3. Equipment supports.
4. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

C. Delegated Design Submittal: For hangers and supports for electrical systems.

1.03 INFORMATIONAL SUBMITTALS

A. Welding certificates.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified structural professional engineer to design hanger and support system.

B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Flame Rating: Class 1.
2. Self-extinguishing according to ASTM D635.

2.02 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Preformed steel channels and angles with minimum 13/32 inch (10 mm) diameter holes at a maximum of 8 inch (200 mm) on center in at least one surface.
1. Available Manufacturers: ABB, Electrification Business, Gripple Inc., Robroy Industries
2. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
3. Material for Channel, Fittings, and Accessories: Galvanized steel.
4. Channel Width: Selected for applicable load criteria.
5. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
6. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
7. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
8. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Aluminum Slotted Support Systems: Extruded-aluminum channels and angles with minimum 13/32 inch (10 mm) diameter holes at a maximum of 8 inch (200 mm) on center in at least one surface.
1. Available Manufacturers: ABB, Electrification Business or equal.
2. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
3. Channel Material: 6063-T5 aluminum alloy.
4. Fittings and Accessories Material: 5052-H32 aluminum alloy.

5. Channel Width: Selected for applicable load criteria.
6. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
7. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
8. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

D. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for nonarmored electrical conductors or cables in riser conduits. Plugs must have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body must be made of malleable iron.

E. Structural Steel for Fabricated Supports and Restraints: ASTM A36/A36M steel plates, shapes, and bars; black and galvanized.

F. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel, for use in hardened portland cement concrete, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
3. Concrete Inserts: Steel or malleable-iron, slotted support system units are similar to MSS Type 18 units and comply with MFMA-4 or MSS SP-58.
4. Clamps for Attachment to Steel Structural Elements: MSS SP-58 units are suitable for attached structural element.
5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM F3125/F3125M, Grade A325 (Grade A325M).
6. Toggle Bolts: All steel springhead type.
7. Hanger Rods: Threaded steel.

2.03 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

B. Materials: Comply with requirements in Section 05 5000 "Metal Fabrications" for steel shapes and plates.

PART 3 - EXECUTION

3.01 SELECTION

A. Comply with the following standards for selection and installation of hangers and supports, except where requirements on Drawings or in this Section are stricter:
   1. NECA NEIS 101

B. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.

C. Comply with requirements for raceways and boxes specified in Section 260533 "Raceway and Boxes for Electrical Systems."

D. Maximum Support Spacing and Minimum Hanger Rod Size for Raceways: Space supports for EMT, IMC, and ERMC as required by NFPA 70. Minimum rod size must be 1/4 inch (6 mm) in diameter.

E. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
   1. Secure raceways and cables to these supports with two-bolt conduit clamps.

F. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2 inch (38 mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings, and for fastening raceways to trapeze supports.

3.02 INSTALLATION OF SUPPORTS

A. Comply with NECA NEIS 101 for installation requirements except as specified in this article.

B. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination must be weight of supported components plus 200 lb (90 kg).

C. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
   1. To Wood: Fasten with lag screws or through bolts.
   2. To New Concrete: Bolt to concrete inserts.
   3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
   4. To Existing Concrete: Expansion anchor fasteners.

5. To Steel: [Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts] [Beam clamps (MSS SP-58, Type 19, 21, 23, 25, or 27), complying with MSS SP-69] [Spring-tension clamps].
6. To Light Steel: Sheet metal screws.
7. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that comply with seismic-restraint strength and anchorage requirements.

A. Drill holes for expansion anchors in concrete at locations and to depths that avoid the need for reinforcing bars.

3.03 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Section 055000 "Metal Fabrications" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M. Submit welding certificates.

3.04 CONCRETE BASES

A. Construct concrete bases of dimensions indicated, but not less than 4 inch (100 mm) larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.

B. Use 3000 psi (20.7 MPa), 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Section 033000 "Cast-in-Place Concrete."

C. Anchor equipment to concrete base as follows:
1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
2. Install anchor bolts to elevations required for proper attachment to supported equipment.
3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.05 PAINTING

A. Touchup:
1. Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
2. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils (0.05 mm).

3. Comply with requirements in Section 099113 "Exterior Painting" Section 099123 "Interior Painting" and Section 099600 "High-Performance Coatings" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780.

END OF SECTION

SECTION 26 05 33 - RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:
1. Metal conduits and fittings.
2. Nonmetallic conduits and fittings.
3. Metal wireways and auxiliary gutters.
4. Nonmetal wireways and auxiliary gutters.
5. Surface raceways.
6. Boxes, enclosures, and cabinets.
7. Handholes and boxes for exterior underground cabling.

B. Related Requirements:
1. Section 07 8413 "Penetration Firestopping" for firestopping at conduit and box entrances.
2. Section 26 0543 "Underground Ducts and Raceways for Electrical Systems" for exterior duct banks, manholes, and underground utility construction.
3. Section 27 0528 "Pathways for Communications Systems" for conduits, wireways, surface pathways, innerduct, boxes, faceplate adapters, enclosures, cabinets, and handholes serving communications systems.

1.03 DEFINITIONS

A. ARC: Aluminum rigid conduit.

B. EMT: Electric Metallic Tube.

C. ENT: Electrical Nonmetallic Tube.

D. FMC: Flexible Metal Conduit.

E. GRC: Galvanized rigid steel conduit.

F. HDPE: High Density Polyethylene.

G. IMC: Intermediate metal conduit.

H. LFMC: Liquid-tight Flexible Metal Conduit.

I. LFNC: Liquid-tight Flexible Nonmetallic Conduit.

J. RNC: Rigid Nonmetallic Conduit.

K. RTRC: Reinforced Thermosetting Resin Conduit (Fiberglass).

1.04 ACTION SUBMITTALS

A. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

B. Shop Drawings: For custom enclosures and cabinets. Include plans, elevations, sections, and attachment details.

1.05 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
   1. Structural members in paths of conduit groups with common supports.
   2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.

B. Qualification Data: For professional engineer.

C. Seismic Qualification Data: Certificates, for enclosures, cabinets, and conduit racks and their mounting provisions, including those for internal components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
   4. Detailed description of conduit support devices and interconnections on which the certification is based and their installation requirements.

PART 2 - PRODUCTS

2.01 METAL CONDUITS AND FITTINGS

A. Metal Conduit:
   1. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. GRC: Comply with ANSI C80.1 and UL 6.

3. ARC: Comply with ANSI C80.5 and UL 6A.
4. IMC: Comply with ANSI C80.6 and UL 1242.
5. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit or IMC.
6. Comply with NEMA RN 1.
7. Coating Thickness: 0.040 inch (1 mm), minimum.
8. EMT: Comply with ANSI C80.3 and UL 797.
9. FMC: Comply with UL 1; zinc-coated steel or aluminum.
10. LFMC: Flexible steel conduit with PVC jacket and complying with UL 360.

B. Metal Fittings:
1. Comply with NEMA FB 1 and UL 514B.
2. Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. Fittings, General: Listed and labeled for type of conduit, location, and use.
4. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 1203 and NFPA 70.
5. Expansion Fittings: PVC or steel to match conduit type, complying with UL 651, rated for environmental conditions where installed, and including flexible external bonding jumper.
6. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.

C. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.02 NONMETALLIC CONDUITS AND FITTINGS

A. Nonmetallic Conduit:
1. Listing and Labeling: Nonmetallic conduit shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Fiberglass:
3. Comply with NEMA TC 14.
4. Comply with UL 2515 for aboveground raceways.
5. Comply with UL 2420 for belowground raceways.
6. ENT: Comply with NEMA TC 13 and UL 1653.
7. RNC: Type EPC-40-PVC or Type EPC-80-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.
8. LFNC: Comply with UL 1660.
9. Rigid HDPE: Comply with UL 651A.
10. Continuous HDPE: Comply with UL 651A.
11. Coilable HDPE: Preassembled with conductors or cables and complying with ASTM D3485.
12. RTRC: Comply with UL 2515A and NEMA TC 14.

B. Nonmetallic Fittings:

1. Fittings, General: Listed and labeled for type of conduit, location, and use.
2. Fittings for ENT and RNC: Comply with NEMA TC 3; match to conduit or tubing type and material.
   a. Fittings for LFNC: Comply with UL 514B.
3. Solvents and Adhesives: As recommended by conduit manufacturer.

2.03 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Description: Sheet metal, complying with UL 870 and NEMA 250, and sized according to NFPA 70.
   1. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

C. Wireway Covers: Hinged type or Screw-cover type unless otherwise indicated.

D. Finish: Manufacturer's standard enamel finish.

2.04 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS

A. Listing and Labeling: Nonmetallic wireways and auxiliary gutters shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Description: Fiberglass polyester, extruded and fabricated to required size and shape, without holes or knockouts. Cover shall be gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections shall be flanged and have stainless-steel screws and oil-resistant gaskets.

C. Description: PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.

D. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.

E. Solvents and Adhesives: As recommended by conduit manufacturer.

2.05 SURFACE RACEWAYS

A. Listing and Labeling: Surface raceways and tele-power poles shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Surface Metal Raceways: Galvanized steel with snap-on covers complying with UL 5. Manufacturer's standard enamel finish in color selected by Architect.

C. Surface Nonmetallic Raceways: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC with texture and color selected by Architect from manufacturer's standard colors. Product shall comply with UL 94 V-0 requirements for self-extinguishing characteristics.

D. Tele-Power Poles:
1. Material: Galvanized steel or Aluminum with finish and color selected by the architect.
2. Fittings and Accessories: Dividers, end caps, covers, cutouts, wiring harnesses, devices, mounting materials, and other fittings shall match and mate with tele-power pole as required for complete system.

2.06 BOXES, ENCLOSURES, AND CABINETS

A. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets installed in wet locations shall be listed for use in wet locations.

B. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

C. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy or aluminum, Type FD, with gasketed cover.

D. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.

E. Metal Floor Boxes:
1. Type: Adjustable.
2. Shape: Rectangular unless otherwise indicated.
3. Listing and Labeling: Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Nonmetallic Floor Boxes:
1. Listing and Labeling: Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Luminaire Outlet Boxes: Nonadjustable, designed for attachment of luminaire weighing 50 lb (23 kg). Outlet boxes designed for attachment of luminaires weighing more than 50 lb (23 kg) shall be listed and marked for the maximum allowable weight.

H. Paddle Fan Outlet Boxes: Nonadjustable, designed for attachment of paddle fan weighing 70 lb (32 kg).

1. Listing and Labeling: Paddle fan outlet boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

I. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

J. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum or galvanized, cast iron with gasketed cover.

K. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

L. Device Box Dimensions: 4 inches square by 2-1/8 inches deep (100 mm square by 60 mm deep) unless otherwise indicated.

M. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250 with continuous-hinge cover with flush latch unless otherwise indicated.
1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
2. Nonmetallic Enclosures: Plastic or Fiberglass.
3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

N. Cabinets:
1. NEMA 250 galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
2. Hinged door in front cover with flush latch and concealed hinge.
3. Key latch to match panelboards.
4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.
6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.07 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. General Requirements for Handholes and Boxes:
1. Boxes and handholes for use in underground systems shall be designed and identified as defined in NFPA 70, for intended location and application.
2. Boxes installed in wet areas shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel, fiberglass, or a combination of the two.
1. Standard: Comply with SCTE 77.
2. First option in "Configuration" Subparagraph below facilitates bottom conduit entry. Second option may be provided by a separate slab placed in the excavation under

an open-bottom enclosure; third option is obtained by molding or fabricating the bottom integrally with the body of unit.

3. Configuration: Designed for flush burial with integral closed bottom unless otherwise indicated.
4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
6. Cover Legend: Molded lettering, "ELECTRIC".
7. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.

C. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with frame and covers of fiberglass.

1. Standard: Comply with SCTE 77.
2. Color of Frame and Cover: by Architect.
3. Configuration: Designed for flush burial with integral closed bottom unless otherwise indicated.
4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and handhole location.
5. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
6. Cover Legend: Molded lettering, "ELECTRIC".
7. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.

2.08 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by an independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012 and traceable to NIST standards.

PART 3 - EXECUTION

3.01 RACEWAY APPLICATION

A. Outdoors: Apply raceway products as specified below unless otherwise indicated:

1. Exposed Conduit: RNC, Type EPC-40-PVC.
2. Concealed Conduit, Aboveground: EMT.
3. Underground Conduit: RNC, Type EPC-40-PVC, direct buried unless otherwise indicated.

4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
6. Conduit exposed to cooling tower water or chemicals: Type EPC-80-PVC.

B. Indoors: Apply raceway products as specified below unless otherwise indicated:
1. Exposed, Not Subject to Physical Damage: EMT.
2. Exposed and Subject to Physical Damage: IMC. Including, but not limited to the following locations:
   a. Loading dock.
   b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
   c. Mechanical rooms.
   d. Gymnasiums.
   e. <Insert designations of applicable spaces or locations>.
3. Concealed in Ceilings and Interior Walls and Partitions: EMT.
4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
5. Damp or Wet Locations: IMC.
6. Metal Floor Boxes: Cast iron for on-grade installations, stamped steal or cast metal for above-grade installations.
7. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel in institutional and commercial kitchens and damp or wet locations.

C. Minimum Raceway Size: 3/4-inch (21-mm) trade size.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.
1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
3. EMT: Use setscrew, steel or cast-metal fittings. Comply with NEMA FB 2.10.
4. Flexible Conduit: Use only fittings listed for use with flexible conduit. Comply with NEMA FB 2.20.

E. Install nonferrous conduit or tubing for circuits operating above 60 Hz. Where aluminum raceways are installed for such circuits and pass through concrete, install in nonmetallic sleeve.

F. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.

G. Install surface raceways only where indicated on Drawings.

H. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F (49 deg C).

3.02 INSTALLATION

A. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.

B. Comply with NECA 1 and NECA 101 for installation requirements except where requirements on Drawings or in this article are stricter. Comply with NECA 102 for aluminum conduits. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.

C. Do not install raceways or electrical items on any "explosion-relief" walls or rotating equipment.

D. Do not fasten conduits onto the bottom side of a metal deck roof.

E. Keep raceways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

F. Complete raceway installation before starting conductor installation.

G. Arrange stub-ups so curved portions of bends are not visible above finished slab.

H. Install no more than the equivalent of four 90-degree bends in any conduit run except for control wiring conduits, for which fewer bends are allowed. Support within 12 inches (300 mm) of changes in direction.

I. Make bends in raceway using large-radius preformed ells. Field bending shall be according to NFPA 70 minimum radii requirements. Use only equipment specifically designed for material and size involved.

J. Conceal conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.

K. Support conduit within 12 inches (300 mm) of enclosures to which attached.

L. Raceways Embedded in Slabs:
1. Run conduit larger than 1-inch (27-mm) trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure raceways to reinforcement at maximum 10-foot (3-m) intervals.
2. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
3. Arrange raceways to keep a minimum of 2 inches (50 mm) of concrete cover in all directions.

4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
5. Change from ENT to IMC before rising above floor.

M. Stub-Ups to Above Recessed Ceilings:
1. Use EMT, IMC, or RMC for raceways.
2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

N. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.

O. Coat field-cut threads on PVC-coated raceway with a corrosion-preventing conductive compound prior to assembly.

P. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors including conductors smaller than No. 4 AWG.

Q. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to 1-1/4-inch (35mm) trade size and insulated throat metal bushings on 1-1/2-inch (41-mm) trade size and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.

R. Install raceways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus 1/4 turn more.

S. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to assure a continuous ground path.

T. Cut conduit perpendicular to the length. For conduits 2-inch (53-mm) trade size and larger, use roll cutter or a guide to make cut straight and perpendicular to the length.

U. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb (90-kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each end of pull wire. Cap underground raceways designated as spare above grade alongside raceways in use.

V. Surface Raceways:
1. Install surface raceway with a minimum 2-inch (50-mm) radius control at bend points.
2. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inches (1200 mm) and with no less than two supports per straight raceway section. Support surface raceway according to manufacturer's written instructions. Tape and glue are not acceptable support methods.

W. Install raceway sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings according to NFPA 70.

X. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all raceways at the following points:
   1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
   2. Where an underground service raceway enters a building or structure.
   3. Conduit extending from interior to exterior of building.
   4. Conduit extending into pressurized duct and equipment.
   5. Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
   6. Where otherwise required by NFPA 70.

Y. Comply with manufacturer's written instructions for solvent welding RNC and fittings.

Z. Expansion-Joint Fittings:
   1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F (17 deg C) and that has straight-run length that exceeds 25 feet (7.6 m). Install in each run of aboveground RMC and EMT conduit that is located where environmental temperature change may exceed 100 deg F (55 deg C) and that has straight-run length that exceeds 100 feet (30 m).
   2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:
      a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F (70 deg C)
      b. temperature change.
      c. Outdoor Locations Exposed to Direct Sunlight: 155 deg F (86 deg C)
      d. temperature change.
      e. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F (70 deg C) temperature change.
      f. Attics: 135 deg F (75 deg C) temperature change.
      g. <Insert location and corresponding temperature change>.
   3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F (0.06 mm per meter of length of straight run per deg C) of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F (0.0115 mm per meter of length of straight run per deg C) of temperature change for metal conduits.
   4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.

5. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

AA. Flexible Conduit Connections: Comply with NEMA RV 3. Use a maximum of 72 inches (1830 mm) of flexible conduit for recessed and semirecessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
1. Use LFMC in damp or wet locations subject to severe physical damage.
2. Use LFMC in damp or wet locations not subject to severe physical damage.

BB. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to top of box unless otherwise indicated.

CC. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.

DD. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.

EE. Locate boxes so that cover or plate will not span different building finishes.

FF. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.

GG. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.

HH. Set metal floor boxes level and flush with finished floor surface.

II. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.03 INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:
1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 312000 "Earth Moving" for pipe less than 6 inches (150 mm) in nominal diameter.
2. Install backfill as specified in Section 312000 "Earth Moving."

3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches (300 mm) of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 312000 "Earth Moving."
4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through floor unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
5. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through floor.
   a. Couple steel conduits to ducts with adapters designed for this purpose and encase coupling with 3 inches (75 mm) of concrete for a minimum of 12 inches (300 mm) on each side of the coupling.
   b. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment.
6. Warning Planks: Bury warning planks approximately 12 inches (300 mm) above direct-buried conduits but a minimum of 6 inches (150 mm) below grade. Align planks along centerline of conduit.
7. Underground Warning Tape: Comply with requirements in Section 260553 "Identification for Electrical Systems."

3.04 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch (25 mm) above finished grade.

D. Install handholes with bottom below frost line. Contractor to confirm frost line depth with the local AHJ.

E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables but short enough to preserve adequate working clearances in enclosure.

F. Field-cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.05 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.06 FIRESTOPPING

A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.07 PROTECTION

A. Protect coatings, finishes, and cabinets from damage and deterioration.
1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.

2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION

SECTION 26 05 43 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEM

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Type EPEC raceways and fittings.
2. Type ERMC-SS raceways, elbows, couplings, and nipples.
3. Type ERMC-S raceways, elbows, couplings, and nipples.
4. Type IMC raceways.
5. Type PVC raceways and fittings.
6. Type RTRC-BG raceways and fittings.
7. Fittings for conduit, tubing, and cable.
8. Threaded metal joint compound.
9. Solvent cements.
10. Duct accessories.
11. Handholes and boxes for exterior underground wiring.
12. Manholes for exterior underground wiring.
13. Utility structure accessories.
14. Duct sealing.

B. Related Requirements:
1. Section 26 0010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 26 0011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. Section 26 0519 "Low-Voltage for Electrical Power Conductors and Cables" for nonmetallic underground conduit with conductors (Type NUCC).

1.02 ALLOWANCES

A. See Section 01 2100 "Allowances" for description of allowances affecting items specified in this Section.

1.03 UNIT PRICES

A. See Section 01 2200 "Unit Prices" for description of unit prices affecting items specified in this Section.

1.04 ALTERNATES

A. See Section 01 2300 "Alternates" for description of alternates affecting items specified in this Section.

1.05 DEFINITIONS

A. Duct: A single raceway or multiple raceways, installed singly or as components of a duct bank.

B. Duct Bank: Two or more ducts installed in parallel, direct buried or with additional casing materials such as concrete.

C. Handhole: An underground chamber containing electrical cables, sized such that personnel are not required to enter in order to access the cables.

D. Manhole: An underground chamber containing electrical cables and equipment, sized to provide access with working space clearances.

E. Trafficways: Locations where vehicular or pedestrian traffic is a normal course of events.

1.06 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at project site.

B. Preinstallation Coordination Meeting(s): For underground ducts and raceways. Conduct meeting(s) as videoconference or at Project site.
   1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect, Construction Manager, and Owner's Commissioning Authority of scheduled meeting dates.

1.07 ACTION SUBMITTALS

A. Product Data:
   1. Duct-bank materials, including spacers and miscellaneous components.
   2. Ducts, conduits, and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
   3. Accessories for manholes, handholes, boxes, and other utility structures.
   4. Underground-line warning tape.
   5. Warning planks.

B. Shop Drawings:
   1. Precast or Factory-Fabricated Concrete Structures:
      a. Include plans, elevations, sections, and details, including attachments to other Work.
      b. Include duct entry provisions, including locations and duct sizes, and methods and materials for waterproofing duct entry locations.

c. Include reinforcement details.
d. Include frame and cover design and manhole chimneys.
e. Include ladder step details.
f. Include grounding details.
g. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, sumps, and other accessories.
h. Include joint details.

2. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:
a. Include dimensioned plans, sections, and elevations, and fabrication and installation details.
b. Include duct entry provisions, including locations and duct sizes, and methods and materials for waterproofing duct entry locations.
c. Include cover design.
d. Include grounding details.
e. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, and other accessories.

C. Field Quality-Control Submittals:
1. Field quality-control reports.

D. Sustainable Design Submittals:

1.08 INFORMATIONAL SUBMITTALS

A. Certificates:
1. For concrete and steel used in precast concrete manholes and handholes, as required by ASTM C858.

B. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:
1. For Type ERMC-S-PVC.

C. Source Quality-Control Submittals:
a. Source quality-control reports.

1.09 MAINTENANCE MATERIAL SUBMITTALS

A. Spare Parts: Furnish to Owner spare parts necessary for repairing or adding more cables to manholes or handholes that are packaged with protective covering for storage and identified with labels describing contents.
1. Cable-Support Stanchions, Arms, Insulators, and Associated Fasteners: Five percent of quantity of each item installed.

1.10 REGULATORY AGENCY APPROVALS

A. Shop Drawing submittals for electric utility duct banks and structures must be signed and sealed by qualified electrical professional engineer responsible for their preparation. Obtain approval by electric utility prior to submitting for action by Architect. Submit for action by Architect prior to submitting for approval by electric utility.

B. Submit Shop Drawings for electric utility duct banks and structures for action by Architect prior to submitting for approval by electric utility.

PART 2 - PRODUCTS

2.01 TYPE EPEC RACEWAYS AND FITTINGS

A. Performance Criteria:
1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 651A and UL CCN EAZX.

B. Schedule 40 Electrical HDPE Underground Conduit (EPEC-40):
1. Dimensional Specifications: Schedule 40.
2. Options:
a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

C. Schedule 80 Electrical HDPE Underground Conduit (EPEC-80):
1. Dimensional Specifications: Schedule 80.
2. Options:
a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

D. Type A Electrical HDPE Underground Conduit (EPEC-A):
1. Dimensional Specifications: Type A.
2. Options:
a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

E. Type B Electrical HDPE Underground Conduit (EPEC-B):
1. Dimensional Specifications: Type B.
2. Options:
a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.02 TYPE ERMC-SS RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. Performance Criteria:
1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 6A and UL CCN DYWV.

B. Stainless Steel Electrical Rigid Metal Conduit (ERMC-SS), Elbows, Couplings, and Nipples:
   1. Material: Stainless steel.
   2. Options:
      a. Minimum Trade Size: Metric designator 21 (trade size 3/4).
      b. Colors: As indicated on Drawings.

2.03 TYPE ERMC-S RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. Performance Criteria:
   1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
   2. General Characteristics: UL 6 and UL CCN DYIX.

B. Galvanized-Steel Electrical Rigid Metal Conduit (ERMC-S-G), Elbows, Couplings, and Nipples:
   1. Exterior Coating: Zinc.
   2. Options:
      a. Interior Coating: Zinc with organic top coating.
      b. Minimum Trade Size: Metric designator 21 (trade size 3/4).
      c. Colors: As indicated on Drawings.

C. PVC-Coated-Steel Electrical Rigid Metal Conduit (ERMC-S-PVC), Elbows, Couplings, and Nipples:
   1. Additional Characteristics:
   2. Fittings for PVC-Coated Conduit:
      a. Minimum coating thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.
      b. Conduit bodies must be Form 8 with effective seal and positive placement feature to ease and assure proper installation. Certified results confirming seal performance at 15 psig (positive) and 25 inch Hg (vacuum) for 72 hours must be available. Conduit bodies must be supplied with plastic-encapsulated stainless steel cover screws.
      c. Form 2 inch (51 mm) long or one pipe diameter long, whichever is less, PVC sleeve at openings of female fittings, except unions. Inside sleeve diameter must be matched to outside diameter of metal conduit.
      d. PVC coating on outside of conduit couplings must be protected from tool damage during installation.
      e. Female threads on fittings and couplings must be protected by urethane coating.
      f. Fittings must be from same manufacturer as conduit.
      g. Beam clamps and U bolts must be formed and sized to fit outside diameter of coated conduit. Plastic-encapsulated nuts must cover exposed portions of threads.

3. Options:
   a. Exterior Coating: PVC complying with NEMA RN 1 and marked ETL Verified PVC-001.
   b. Interior Coating: Zinc with organic top coating.
   c. Minimum Trade Size: Metric designator 21 (trade size 3/4).
   d. Colors: As indicated on Drawings.
   e. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
   f. Expansion and Deflection Fittings: UL 651 with flexible external bonding jumper.

2.04 TYPE IMC RACEWAYS

A. Performance Criteria:
   1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
   2. General Characteristics: UL 1242 and UL CCN DYBY.

B. Steel Electrical Intermediate Metal Conduit (IMC):
   1. Options:
      a. Exterior Coating: Zinc.
      b. Interior Coating: Zinc with organic top coating.
      c. Minimum Trade Size: Metric designator 21 (trade size 3/4).
      d. Colors: As indicated on Drawings.

2.05 TYPE PVC RACEWAYS AND FITTINGS

A. Performance Criteria:
   1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
   2. General Characteristics: UL 651 and UL CCN DZYR.

B. Schedule 40 Rigid PVC Conduit (PVC-40) and Fittings:
   1. Dimensional Specifications: Schedule 40.
   2. Options:
      a. Minimum Trade Size: Metric designator 21 (trade size 3/4).
      b. Markings: For use with maximum 90 deg C wire. For directional boring applications.

C. Schedule 80 Rigid PVC Conduit (PVC-80) and Fittings:
   1. Dimensional Specifications: Schedule 80.
   2. Options:
      a. Minimum Trade Size: Metric designator 21 (trade size 3/4).
      b. Markings: For use with maximum 90 deg C wire. For directional boring applications.

D. Type A Rigid PVC Concrete-Encased Conduit (PVC-A) and Fittings:
   1. Dimensional Specifications: Type A.
   2. Options:
      a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

E. Type EB Rigid PVC Concrete-Encased Underground Conduit (PVC-EB) and Fittings:
   1. Dimensional Specifications: Type EB.
   2. Options:
      a. Minimum Trade Size: Metric designator 53 (trade size 2).

2.06 TYPE RTRC-BG RACEWAYS AND FITTINGS

A. Performance Criteria:
   1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
   2. General Characteristics: UL 2420 and UL CCN DZKT, for Type BG.

B. Low-Halogen, Belowground Reinforced Thermosetting Resin Conduit (RTRC-BG) and Fittings:
   1. Options:
      a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.07 FITTINGS FOR CONDUIT, TUBING, AND CABLE

A. Performance Criteria:
   1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.

B. Metallic Fittings for Type ERMC, Type IMC, Type PVC, Type EPEC, and Type RTRC Raceways:
   1. General Characteristics: UL 514B and UL CCN DWTT.
   2. Options:
      a. Material: Steel.
      b. Coupling Method: Raintight compression coupling with distinctive color gland nut.
      c. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
      d. Expansion and Deflection Fittings: UL 651 with flexible external bonding jumper.

2.08 ELECTRICALLY CONDUCTIVE CORROSION-RESISTANT COMPOUNDS FOR THREADED CONDUIT

A. Performance Criteria:
   1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
   2. General Characteristics: UL Subject 2419 and UL CCN FOIZ.

2.09 SOLVENT CEMENTS

A. Performance Criteria:
1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: As recommended by conduit manufacturer in accordance with UL 514B and UL CCN DWTT.
3. Sustainability Characteristics:

B. Solvent Cements for Type PVC Raceways and Fittings:

2.10 DUCT ACCESSORIES

A. Duct Spacers: Factory-fabricated, rigid, PVC interlocking spacers; sized for type and size of duct with which used, and selected to provide minimum duct spacing indicated while supporting duct during concreting or backfilling.

B. Underground-Line Warning Tape: In accordance with Section 260553 "Identification for Electrical Systems."

C. Concrete Warning Planks: Nominal 12 by 24 by 3 inch (300 by 600 by 75 mm) in size, manufactured from 6000 psi (41 MPa) concrete.
1. Color: Red dye added to concrete during batching.
2. Mark each plank with "ELECTRIC" in 2 inch (50 mm) high, 3/8 inch (10 mm) deep letters.

2.11 HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. Performance Criteria:
1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics:
a. ASTM C858 for design and manufacturing processes.
b. SCTE 77.

B. Source Quality Control:
1. Precast Concrete Utility Structures: Test and inspect in accordance with ASTM C1037.
2. Polymer Concrete and Nonconcrete Handhole and Pull-Box Prototypes: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests must be for specified tier ratings of products supplied. Testing machine pressure gages must have current calibration certification, complying with ISO 9000 and ISO 10012, and traceable to NIST standards.
a. Tests of materials must be performed by independent testing agency.
b. Strength tests of complete boxes and covers must be by independent testing agency or manufacturer. Qualified registered professional engineer must certify tests by manufacturer.

C. Precast Concrete Handholes and Boxes:
1. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover must form top of enclosure and must have load rating consistent with that of handhole or box.
2. Configuration: Units must be designed for flush burial and have integral closed
3. bottom unless otherwise indicated.
4. Frame and Cover:
   a. Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
   b. Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
   c. Weatherproof steel frame, with concealed-hinge steel access door assembly; tamper-resistant, captive, cover-securing bolts; hold-open ratchet assembly; and recessed cover handle.
   d. Weatherproof aluminum frame, with concealed-hinge aluminum access door assembly; tamper-resistant, captive, cover-securing bolts; hold-open ratchet assembly; and recessed cover handle.
   e. Cover Finish: Nonskid finish must have minimum coefficient of friction of 0.50.
   f. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.
5. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.
   a. Extension must provide increased depth of [12 inch (300 mm)].
   b. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.
6. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at installation location with ground-water level at grade.
7. Knockout Panels: Precast openings in walls, arranged to match dimensions and elevations of approaching duct, plus additional 12 inch (300 mm) vertically and horizontally to accommodate alignment variations.
   a. [Splayed] [Center window] location.
   b. Knockout panels must be located no less than 6 inch (150 mm) from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
   c. Knockout panel opening must have cast-in-place, welded-wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct.
   d. Knockout panels must be framed with at least two additional No. 3 steel reinforcing bars in concrete around each opening.
   e. Knockout panels must be 1-1/2 to 2 inch (38 to 50 mm) thick.
8. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
   a. Type and size: Match fittings to duct to be terminated.
   b. Fittings must align with elevations of approaching duct and be located near interior corners of handholes to facilitate racking of cable.
   c. Provide minimum of one cast end-bell or duct-terminating fitting of each size provided in each wall.

9. Handholes 12 inch wide by 24 inch long (300 mm wide by 600 mm long) and larger must have inserts for cable racks and pulling-in irons installed before concrete is poured.

D. Polymer Concrete Handholes and Boxes with Polymer Concrete Cover:
   1. Description: Molded of sand, concrete, and aggregate, bound together with polymer resin, and reinforced with steel or fiberglass or combination.
   2. Configuration: Units must be designed for flush burial and have [open] [closed] [integral closed] bottom unless otherwise indicated.
   3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure and installed location.
      a. Cover Finish: Nonskid finish must have minimum coefficient of friction of 0.50.
      b. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.
   4. Conduit Entrance Provisions: Conduit-terminating fittings must mate with entering ducts for secure, fixed installation in enclosure wall.
   5. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.
   6. Duct Entrance Provisions: Duct-terminating fittings must mate with entering duct for secure, fixed installation in enclosure wall.
   7. Handholes 12 inch wide by 24 inch long (300 mm wide by 600 mm long) and larger must have factory-installed inserts for cable racks and pulling-in irons.
   8. Options:
      a. Color: Gray.

E. Fiberglass Handholes and Boxes with Polymer Concrete Frame and Cover:
   1. Description: Sheet-molded, fiberglass-reinforced, polyester resin enclosure joined to polymer concrete top ring or frame.
   2. Configuration: Units must be designed for flush burial and have integral closed
   3. bottom unless otherwise indicated.
   4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
      a. Cover Finish: Nonskid finish must have minimum coefficient of friction of 0.50.
      b. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.
   5. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.
   6. Duct Entrance Provisions: Duct-terminating fittings must mate with entering duct for secure, fixed installation in enclosure wall.
   7. Handholes 12 inch wide by 24 inch long (300 mm wide by 600 mm long) and larger must have factory-installed inserts for cable racks and pulling-in irons.
   8. Options:
      a. Color: Gray.

F. Fiberglass Handholes and Boxes:
1. Description: Molded of fiberglass-reinforced polyester resin, with covers made of [polymer concrete] [reinforced concrete] [cast iron] [hot-dip galvanized-steel diamond plate] [reinforced fiberglass].
2. Configuration: Units must be designed for flush burial and have integral closed
3. bottom unless otherwise indicated.
4. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
   a. Cover Finish: Nonskid finish must have minimum coefficient of friction of 0.50.
   b. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.
5. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.
6. Duct Entrance Provisions: Duct-terminating fittings must mate with entering duct for secure, fixed installation in enclosure wall.
7. Handholes 12 inch wide by 24 inch long (300 mm wide by 600 mm long) and larger must have factory-installed inserts for cable racks and pulling-in irons.
8. Options:
   a. Color: Gray.

G. High-Density Polyethylene (HDPE) Boxes:
1. Description: Injection molded of HDPE or copolymer-polypropylene. Cover must be made of hot-dip galvanized-steel diamond plate.
2. Configuration: Units must be designed for flush burial and have integral closed bottom unless otherwise indicated.
3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
   a. Cover Finish: Nonskid finish must have minimum coefficient of friction of 0.50.
   b. Cover Legend: Molded lettering, "ELECTRIC" as indicated for each service.
4. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.
5. Duct Entrance Provisions: Duct-terminating fittings must be installed perpendicular to box wall and mate with entering duct for secure, fixed installation in enclosure wall without putting stress on box wall or fitting.
6. Options:
   a. Color: Gray.

2.12 MANHOLES FOR EXTERIOR UNDERGROUND WIRING

A. Performance Criteria:
1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics:
   a. ASTM C858 for design and manufacturing processes.
   b. SCTE 77.

B. Precast Concrete Manholes:
   1. Description: One-piece units and units with interlocking mating sections, complete with accessories, hardware, and features.
   2. Knockout Panels: Precast openings in walls, arranged to match dimensions and elevations of approaching duct, plus additional 12 inch (300 mm) vertically and horizontally to accommodate alignment variations.
      a. Center window location.
      b. Knockout panels must be located no less than 6 inch (150 mm) from interior surfaces of walls, floors, or roofs of manholes, but close enough to corners to facilitate racking of cables on walls.
      c. Knockout panel opening must have cast-in-place, welded-wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct.
      d. Knockout panel must be framed with at least two additional No. 3 steel reinforcing bars in concrete around each opening.
      e. Knockout panels must be 1-1/2 to 2 inch (38 to 50 mm) thick.
   3. Duct Entrances in Manhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
      a. Type and size: Match fittings to duct to be terminated.
      b. Fittings must align with elevations of approaching duct and be located near interior corners of manholes to facilitate racking of cable.
      c. Provide minimum of one cast end-bell or duct-terminating fitting of each size provided in each wall.
   4. Ground Rod Sleeve: Provide 3 inch (75 mm) PVC sleeve in manhole floors 2 inch (50 mm) from wall adjacent to, but not underneath, duct entering structure.
   5. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at installation location with ground-water level at grade.
   6. Source Quality Control: Test and inspect in accordance with ASTM C1037.

C. Cast-In-Place Concrete Manholes:
   1. Description: Underground utility structures, constructed in place, complete with accessories, hardware, and features. Include concrete knockout panels for duct entrance and sleeve for ground rod.
   2. Additional Criteria: Comply with Section 033000 "Cast-in-Place Concrete."

2.13 UTILITY STRUCTURE ACCESSORIES

A. Description: Utility equipment and accessory items used for utility structure access and utility support, listed and labeled for intended use and application, and complying with the local utility company requirements.

B. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.
   1. Frame and Cover: Weatherproof, [gray cast iron complying with ASTM A48/A48M, Class 30B] [cast aluminum] with milled cover-to-frame bearing surfaces; diameter, 26 inch (660 mm).

a. Cover Finish: Nonskid finish must have minimum coefficient of friction of 0.50.
b. Special Covers: Recess in face of cover designed to accept finish material in paved areas.

2. Cover Legend: Cast in; selected to suit system.
   a. Legend:
      1) "ELECTRIC-LV" for duct systems with power wires and cables for systems operating at 600 V and less.
      2) "ELECTRIC-HV" for duct systems with medium-voltage cables.
3. Manhole Chimney Components: Precast concrete rings with dimensions matched to those of roof opening.
   a. Mortar for Chimney Ring and Frame and Cover Joints: Comply with ASTM C270, Type M, except for quantities less than 2.0 cu. ft (60 L) where packaged mix complying with ASTM C387/C387M, Type M, may be used.
   b. Seal joints watertight using preformed plastic or rubber complying with ASTM C990. Install sealing material in accordance with sealant manufacturers' published instructions.

C. Manhole Sump Frame and Grate: ASTM A48/A48M, Class 30B, gray cast iron.

D. Pulling Eyes in Concrete Walls: Eyebolt with reinforcing-bar fastening insert, 2 inch (50 mm) diameter eye, and 1-by-4 inch (25-by-100 mm) bolt.
1. Working Load Embedded in 6 inch (150 mm), 4000 psi (27.6 MPa) Concrete: 13,000 lbf (58 kN) minimum tension.

E. Pulling Eyes in Nonconcrete Walls: Eyebolt with reinforced fastening, 1-1/4 inch (31 mm) diameter eye, rated [2500 lbf (11 kN)] minimum tension.

F. Pulling-in and Lifting Irons in Concrete Floors: 7/8 inch (22 mm) diameter, hot-dip galvanized, bent steel rod; stress relieved after forming; fastened to reinforcing rod; and with exposed triangular opening.
1. Ultimate Yield Strength: 40,000 lbf (180 kN) shear and 60,000 lbf (270 kN) tension.

G. Bolting Inserts for Concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of noncorrosive, chemical-resistant, nonconductive thermoplastic material; 1/2 inch (13 mm) ID by 2-3/4 inch (69 mm) deep, flared to 1-1/4 inch (31 mm) minimum at base.
1. Tested Ultimate Pullout Strength: 12,000 lbf (53 kN) minimum.

H. Ground Rod Sleeve: 3 inch (75 mm) PVC sleeve in manhole floors 2 inch (50 mm) from wall adjacent to, but not underneath, ducts routed from facility.

I. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless steel expander clip with 1/2 inch (13 mm) bolt, 5300 lbf (24 kN) rated pullout strength, and minimum 6800 lbf (30 kN) rated shear strength.

J. Steel Cable Rack Assembly: Hot-rolled galvanized, except insulators.
1. Stanchions: T-section or channel with provisions to connect to other sections or channels to form continuous unit; 1-1/2 inch (38 mm) in width by nominal 24 inch

(600 mm) long; punched with 14 hook holes on 1-1/2 inch (38 mm) centers for cable-arm attachment.

2. Arms: 1-1/2 inch (38 mm) wide, lengths ranging from 3 inch (75 mm) with 450 lb (204 kg) minimum capacity to 18 inch (450 mm) with 250 lb (114 kg) minimum capacity. Arms must have slots along full length for cable ties and be arranged for secure mounting in horizontal position at vertical locations on stanchions.
3. Insulators: High-glaze, wet-process porcelain arranged for mounting on cable arms.

K. Nonmetallic Cable Rack Assembly: Components fabricated from nonconductive, fiberglass-reinforced polymer.

1. Stanchions: Nominal 36 inch (900 mm) high by 4 inch (100 mm) wide, with provisions to connect to other sections to form continuous unit, with minimum of nine holes for arm attachment.
2. Arms: Arranged for secure, drop-in attachment in horizontal position at locations on cable stanchions, and capable of being locked in position. Arms must be available in lengths ranging from 3 inch (75 mm) with 450 lb (204 kg) minimum capacity to 20 inch (500 mm) with 250 lb (114 kg) minimum capacity. Top of arm must be nominally 4 inch (100 mm) wide, and arm must have slots along full length for cable ties.

L. Fixed Manhole Ladders: Arranged for attachment to wall and floor of manhole. Ladder and mounting brackets and braces must be fabricated from nonconductive, structural-grade, fiberglass-reinforced resin.

M. Portable Manhole Ladders: UL-listed, heavy-duty fiberglass specifically designed for portable use for access to electrical manholes. Length must be not less than distance from deepest manhole floor to grade plus 36 inch (900 mm). Two ladder(s) are required.

N. Cover Hooks: Heavy duty, designed for lifts 60 lbf (270 N) and greater Light duty, designed for lifts less than 60 lbf (270 N). Two ladders(s) are required.

2.14 DUCT SEALING

A. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F (2 deg C). Compound must be capable of withstanding temperature of 300 deg F (150 deg C) without slump and adhering to clean surfaces of plastic ducts, metallic conduit, conduit and duct coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals. Duct sealing compound must be removable without damaging ducts or cables.

B. Inflatable Duct-Sealing System: Wraparound inflatable bladder that seals ducts that are empty or containing conductors against air and water infiltration. System is suitable for use in steel, plastic, or concrete ducts and penetrations.

PART 3 - EXECUTION

3.01 PREPARATION

A. Coordinate layout and installation of duct, duct bank, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in field. Notify Architect if there is conflict between areas of excavation and existing structures or archaeological sites to remain.

B. Coordinate elevations of duct and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of duct and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct and duct bank will drain to manholes and handholes, and as approved by Architect.

C. Clear and grub vegetation to be removed, and protect vegetation to remain in accordance with Section 311000 "Site Clearing." Remove and stockpile topsoil for reapplication in accordance with Section 311000 "Site Clearing."

3.02 SELECTION OF UNDERGROUND DUCTS

A. Duct for Electrical Cables More Than 600 V: PVC-40, concrete encased unless otherwise indicated.

B. Duct for Electrical Feeders 600 V and Less:PVC-40, concrete encased unless otherwise indicated.

C. Duct for Electrical Branch Circuits: PVC-40, direct buried unless otherwise indicated.

D. Bored Underground Duct: EPEC-40 unless otherwise indicated.

E. Underground Ducts Crossing Paved Paths, Walkways, and Driveways: PVC-40 direct buried.

F. Underground Ducts Crossing Roadways and Railroads: PVC-40, encased in reinforced concrete.

G. Stub-ups: Concrete encased, PVC-40.

3.03 SELECTION OF UNDERGROUND ENCLOSURES

A. Handholes and Boxes:
   1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete, AASHTO HB 17, H-10 structural load rating.
   2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Precast concrete, AASHTO HB 17, H-10 structural load rating.

3. Units in Sidewalk and Similar Applications with Safety Factor for Nondeliberate Loading by Vehicles: Precast concrete, AASHTO HB 17, H-10 structural load rating.
4. Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin, structurally tested in accordance with SCTE 77 with 3000 lbf (13 345 N) vertical loading.
5. Cover design load must not exceed load rating of handhole or box.

B. Manholes: Precast or cast-in-place concrete.
1. Units Located in Roadways and Other Deliberate Traffic Paths by Heavy or Medium Vehicles: H-20 structural load rating in accordance with AASHTO HB 17.
2. Units Not Located in Deliberate Traffic Paths by Heavy or Medium Vehicles: H-10 load rating in accordance with AASHTO HB 17.

3.04 EARTHWORK

A. Excavation and Backfill: Comply with Section 312000 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restoration: Restore area immediately after backfilling is completed or after construction vehicle traffic in immediate area is complete.

C. Restore surface features at areas disturbed by excavation, and re-establish original grades unless otherwise indicated. Replace removed sod immediately after backfilling is completed.

D. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 329200 "Turf and Grasses" and Section 329300 "Plants."

E. Cut and patch existing pavement in path of underground duct, duct bank, and underground structures in accordance with "Cutting and Patching" Article in Section 017300 "Execution."

3.05 INSTALLATION OF DUCTS AND DUCT BANKS

A. Reference Standards:
1. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NEMA TCB 2 for installation of underground ducts and duct banks.
2. Consult Architect for resolution of conflicting requirements.

B. Special Techniques:
1. Where indicated on Drawings, install duct, spacers, and accessories into duct-bank configuration shown. Duct installation requirements in this Section also apply to duct bank.
2. Steel raceway, bends, and fittings in single duct run or duct bank on Project must be of same type.

3. Slope: Pitch duct minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope duct from high point between two manholes to drain in both directions.
4. Expansion and Deflection Fittings: Install expansion and deflection fitting in each duct in area of disturbed earth adjacent to manhole or handhole.
5. Install expansion fitting near center of straight line duct with calculated expansion of more than 3/4 inch (19 mm).
6. Curves and Bends:
    a. Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with minimum radius of 48 inch (1200 mm), both horizontally and vertically, at other locations unless otherwise indicated.
    b. Field bending must be in accordance with NFPA 70 minimum radii requirements, except bends over 45 degrees must be made with minimum radius of 48 inch (1200 mm). Use only equipment specifically designed for material and size involved. Use PVC heating bender for bending PVC conduit.
    c. Duct must have maximum of 180 degrees of bends between pull points.
7. Joints: Use solvent-cemented joints in nonmetallic duct and fittings and make watertight in accordance with manufacturer's published instructions. Stagger couplings so those of adjacent duct do not lie in same plane. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with minimum 3 inch (75 mm) of concrete for minimum of 12 inch (300 mm) on each side of coupling.
    a. Install insulated grounding bushings on steel raceway terminations that are less than 12 inch (300 mm) below grade or floor level and do not terminate in hubs.
8. Installation Adjacent to High-Temperature Steam Lines: Where duct is installed parallel to underground steam lines, perform calculations showing duct will not be subject to environmental temperatures above 104 deg F (40 deg C). Where environmental temperatures are calculated to rise above 104 deg F (40 deg C), and anywhere duct crosses above underground steam line, install insulation blankets listed for direct burial to isolate duct bank from steam line to maintain maximum environmental temperature of 104 deg F (40 deg C).
9. End Bell Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inch (250 mm) o.c. for 5 inch (125 mm) duct, and vary proportionately for other duct sizes.
    a. Begin change from regular spacing to end-bell spacing 10 ft (3 m) from end bell, without reducing duct slope and without forming trap in line.
    b. Grout end bells into structure walls from both sides to provide watertight entrances.
10. Duct Terminators for Entrances to Cast-in-Place Manholes and Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately 6 inch (150 mm) o.c. for 4 inch (100 mm) duct, and vary proportionately for other duct sizes.
    a. Begin change from regular spacing to terminator spacing 10 ft (3 m) from terminator, without reducing duct line slope and without forming trap in line.

11. Building Wall Penetrations: Make transition from underground duct to steel raceway at least 10 ft (3 m) outside building wall, without reducing duct line slope away from building and without forming trap in line. Use fittings manufactured for transition to steel raceway type installed. Install steel raceway penetrations of building walls as specified in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."
12. Install manufactured steel raceway elbows for stub-ups at poles unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
    a. Couple steel elbows to ducts with adapters designed for this purpose and encase coupling with minimum 3 inch (75 mm) of concrete for minimum of 12 inch (300 mm) on each side of coupling.
13. Sealing: Provide temporary closure at terminations of duct with pulled cables. Seal spare duct at terminations. Use sealing compound and plugs to withstand at least 15 psig (1.03 MPa) hydrostatic pressure.
14. Pulling Cord: Install 200 lbf (1000 N) test nylon cord in empty ducts.
15. Concrete-Encased Ducts and Duct Bank:
    a. Excavate trench bottom to provide firm and uniform support for duct. Prepare trench bottoms as specified in Section 312000 "Earth Moving" for pipes 6 inch (150 mm) or less in nominal diameter.
    b. Width: Excavate trench 3 inch (75 mm) wider than duct on each side.
    c. Depth: Install so top of duct envelope is at least 24 inch (600 mm) below finished grade in areas not subject to deliberate traffic, and at least 30 inch (750 mm) below finished grade in deliberate traffic paths for vehicles unless otherwise indicated. Install so top of duct envelope is below local frost line.
    d. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
    e. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 ft (6 m) of duct. Place spacers within 24 inch (600 mm) of duct ends. Stagger spacers approximately 6 inch (150 mm) between tiers. Secure spacers to earth and to duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
    f. Minimum Space between Ducts: 3 inch (75 mm) between edge of duct and exterior envelope wall, 2 inch (50 mm) between ducts for like services, and 4 inch (100 mm) between power and communications ducts.
    g. Elbows:
        1) Use manufactured duct elbows for stub-ups and at changes of direction in duct unless otherwise indicated. Extend encasement throughout length of elbow.
        2) Use manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct run.
    h. Stub-ups to Outdoor Equipment: Extend concrete-encased steel raceway horizontally minimum of 60 inch (1500 mm) from edge of equipment base.
        1) Stub-ups must terminate in coupling installed flush with be minimum 4 inch (100 mm) above finished floor and minimum 3 inch (75 mm) from conduit side to edge of slab.

i. Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally minimum of 60 inch (1500 mm) from edge of wall. Install insulated grounding bushings on terminations at equipment.
   1) Stub-ups must terminate in coupling installed flush with be minimum 4 inch (100 mm) above finished floor and no less than 3 inch (75 mm) from conduit side to edge of slab.

j. Reinforcement: Reinforce concrete-encased duct where crossing disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.

k. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.

l. Concrete Cover: Install minimum of 3 inch (75 mm) of concrete cover between edge of duct to exterior envelope wall, 2 inch (50 mm) between duct of like services, and 4 inch (100 mm) between power and communications ducts.

m. Place minimum 6 inch (150 mm) of engineered fill above concrete encasement of duct.

n. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
   1) Start at one end and finish at other, allowing for expansion and contraction of duct as its temperature changes during and after pour. Use expansion fittings installed in accordance with manufacturer's published instructions, or use other specific measures to prevent expansion-contraction damage.
   2) If more than one pour is necessary, terminate each pour in vertical plane and install 3/4 inch (15 mm) reinforcing-rod dowels extending minimum of 18 inch (450 mm) into concrete on both sides of joint near corners of envelope.

o. Pouring Concrete: Comply with requirements in "Concrete Placement" Article in Section 033000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between duct and at exterior surface of envelope. Do not allow heavy mass of concrete to fall directly onto ducts. Allow concrete to flow around duct and rise up in middle, uniformly filling open spaces. Do not use power-driven agitating equipment unless specifically designed for duct- installation application.

16. Direct-Buried Duct and Duct Bank:
   a. Excavate trench bottom to provide firm and uniform support for duct. Comply with requirements in Section 312000 "Earth Moving" for preparation of trench bottoms for pipes less than 6 inch (150 mm) in nominal diameter.
   b. Width: Excavate trench 3 inch (75 mm) wider than duct on each side.
   c. Depth: Install top of duct at least 36 inch (900 mm) below finished grade unless otherwise indicated.
   d. Set elevation of top of duct bank below frost line.
   e. Place minimum 3 inch (75 mm) of sand as bed for duct. Place sand to minimum of 6 inch (150 mm) above top level of duct.
   f. Support ducts on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.

g. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 ft (6 m) of duct. Place spacers within 24 inch (600 mm) of duct ends. Stagger spacers approximately 6 inch (150 mm) between tiers. Secure spacers to earth and to ducts to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.

h. Install duct with minimum of 3 inch (75 mm) between ducts for like services and 6 inch (150 mm) between power and communications duct.

i. Install manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct direction unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.

j. Install manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct.
   1) Couple RNC duct to steel raceway with adapters designed for this purpose, and encase coupling with minimum 3 inch (75 mm) of concrete.
   2) Stub-ups to Outdoor Equipment: Extend concrete-encased steel raceway horizontally minimum of 60 inch (1500 mm) from edge of base. Install insulated grounding bushings on terminations at equipment.
      a) Stub-ups must terminate in coupling installed flush with be minimum 4 inch (100 mm) above finished base and minimum 3 inch (75 mm) from conduit side to edge of base.
   3) Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally on exterior of wall minimum of 60 inch (1500 mm) from edge of wall. Install insulated grounding bushings on terminations at equipment.
   4) Stub-ups through interior floors must terminate in coupling installed flush with be minimum 4 inch (100 mm) above finished floor and no less than 3 inch (75 mm) from conduit side to edge of equipment pad or floor slab.

k. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to 4 inch (100 mm) over duct and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 312000 "Earth Moving" for installation of backfill materials.

17. Warning Planks: Bury warning planks approximately 12 inch (300 mm) above direct-buried duct, placing them 36 inch (900 mm) o.c. Align planks along width and along centerline of duct or duct bank. Provide additional plank for each 12 inch (300 mm) increment of duct-bank width over nominal 18 inch (450 mm). Space additional planks 12 inch (300 mm) apart, horizontally across width of ducts.

18. Underground-Line Warning Tape: Bury nonconducting conducting underground line specified in Section 260553 "Identification for Electrical Systems" no less than 12 inch (300 mm) above concrete-encased duct and duct banks and approximately 12 inch (300 mm) below grade. Align tape parallel to and within 3 inch (75 mm) of centerline of duct bank. Provide additional warning tape for each 12 inch (300 mm) increment of duct-bank width over nominal 18 inch (450 mm). Space additional tapes 12 inch (300 mm) apart, horizontally across width of ducts.
19. Ground ducts and duct banks in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:
1. Coordinate installation of new products with existing conditions.

3.06 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

A. Reference Standards:
1. Precast Concrete Handholes: Comply with ASTM C891 unless otherwise indicated.
2. Consult Architect for resolution of conflicting requirements.

B. Special Techniques:
1. Cast-in-Place Manholes:
a. Finish interior surfaces with smooth-troweled finish.
b. Knockouts for Future Duct Connections: Form and pour concrete knockout panels 1-1/2 to 2 inch (38 to 50 mm) thick, arranged as indicated.
c. Comply with requirements in Section 033000 "Cast-in-Place Concrete" for cast-in-place concrete, formwork, and reinforcement.
2. Precast Concrete Handholes and Manholes:
a. Install units level and plumb and with orientation and depth coordinated with connecting duct to minimize bends and deflections required for proper entrances.
b. Unless otherwise indicated, support units on level bed of crushed stone or gravel graded from 1 inch (25 mm) sieve to No. 4 (4.75 mm) sieve and compacted to same density as adjacent undisturbed earth.
c. Field-cut openings for conduits in accordance with enclosure manufacturer's published instructions. Cut wall of enclosure with tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
3. Elevations:
a. Manhole Roof: Install with rooftop at least 15 inch (375 mm) below finished grade.
b. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch (25 mm) above finished grade.
c. Install handholes with bottom below frost line, below grade.
d. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
e. Where indicated, cast handhole cover frame integrally with handhole structure.

4. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.
5. Manhole Access: Circular opening in manhole roof; sized to match cover size.
   a. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.
   b. Install chimney, constructed of precast concrete] collars and rings, and cast-iron frame to connect cover with manhole roof opening. Provide moisture-tight joints and waterproof grouting for frame and chimney.
6. Waterproofing: Apply waterproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Waterproofing materials and installation are specified in " Section 071354 "Thermoplastic Sheet Waterproofing". After duct has been connected and grouted, and before backfilling, waterproof joints and connections, and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.
7. Dampproofing: Apply dampproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Dampproofing materials and installation are specified in Section 071113 "Bituminous Dampproofing." After ducts are connected and grouted, and before backfilling, dampproof joints and connections, and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.
8. Hardware: Install removable hardware, including pulling eyes, cable stanchions, and cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.
9. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.
10. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inch (97 mm) for manholes and 2 inch (50 mm) for handholes, for anchor bolts installed in field. Use minimum of two anchors for each cable stanchion.
11. Ground manholes, handholes, and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:
   1. Coordinate installation of new products with existing conditions.

3.07 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Reference Standards:
   1. Consult Architect for resolution of conflicting requirements.

B. Special Techniques:
   1. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of duct, and seal joint between box and extension as recommended by manufacturer.
   2. Unless otherwise indicated, support units on level bed of crushed stone or gravel, graded from 1/2 inch (12.5 mm) sieve to No. 4 (4.75 mm) sieve and compacted to same density as adjacent undisturbed earth.

3. Elevation: In paved areas and trafficways, set cover flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
4. Install handholes and boxes with bottom below frost line, below grade.
5. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.
6. Field cut openings for duct in accordance with enclosure manufacturer's published instructions. Cut wall of enclosure with tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
7. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour concrete ring encircling, and in contact with enclosure entry, and with top surface screeded to top of box cover frame. Bottom of ring must rest on compacted earth.
   a. Concrete: 3000 psi (20 kPa), 28-day strength, complying with Section 033000 "Cast-in-Place Concrete," with troweled finish.
   b. Dimensions: 10 inch wide by 12 inch deep (250 mm wide by 300 mm deep).
8. Ground handholes and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:
   1. Coordinate installation of new products for with existing conditions.

3.08 FIELD QUALITY CONTROL

A. Field tests and inspections must be witnessed by Architect], Tenant, and authorities having jurisdiction.

B. Tests and Inspections:
   1. Demonstrate capability and compliance with requirements on completion of installation of underground duct, duct bank, and utility structures.
   2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide minimum 12 inch (300 mm) long mandrel equal to duct size minus 1/4 inch (6 mm). If obstructions are indicated, remove obstructions and retest.
   3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 260526 "Grounding and Bonding for Electrical Systems."

C. Nonconforming Work:
   1. Underground ducts, raceways, and structures will be considered defective if they do not pass tests and inspections.
   2. Correct deficiencies and retest as specified above to demonstrate compliance.

D. Assemble and submit test and inspection reports.

E. Manufacturer Services:
   1. Engage factory-authorized service representative to support supervise field tests and inspections.

3.09 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of duct until duct cleaner indicates that duct is clear of dirt and debris. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

B. Clean internal surfaces of manholes, including sump, and building interiors affected by Work.
   1. Sweep floor, removing dirt and debris.
   2. Remove foreign material.

END OF SECTION

SECTION 26 05 44 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Round sleeves.
2. Rectangular sleeves.
3. Sleeve seal systems.
4. Grout.
5. Pourable sealants.
6. Foam sealants.

B. Related Requirements:
1. Section 26 0500 "Basic Electrical Requirements" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 07 8413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.02 ACTION SUBMITTALS

A. A. Product Data: For each type of product

PART 2 - PRODUCTS

2.01 ROUND SLEEVES

A. Wall Sleeves, Steel:
1. Description: ASTM A53/A53M, Type E, Grade B, Schedule 40, zinc coated, plain ends and integral waterstop.

B. Wall Sleeves, Cast Iron:
1. Description: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop.

C. Pipe Sleeves, PVC:
1. Description: ASTM D1785, Schedule 40.

D. Molded Sleeves, PVC:
   1. Description: With nailing flange for attaching to wooden forms.

E. Molded Sleeves, PE or PP:
   1. Description: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

F. Sheet Metal Sleeves, Galvanized Steel, Round:
   1. Description: Galvanized-steel sheet; thickness not less than 0.0239 inch (0.6 mm); round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

2.02 RECTANGULAR SLEEVES

A. Sheet Metal Sleeves, Galvanized Steel, Rectangular:
   1. Description:
      a. Material: Galvanized sheet steel.
      b. Minimum Metal Thickness:
         1) For sleeve cross-section rectangle perimeter less than 50 inch (1270 mm) and with no side larger than 16 inch (400 mm), thickness must be 0.052 inch (1.3 mm).
         2) For sleeve cross-section rectangle perimeter not less than 50 inch (1270 mm) or with one or more sides larger than 16 inch (400 mm), thickness must be 0.138 inch (3.5 mm).

2.03 SLEEVE SEAL SYSTEMS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable or between raceway and cable.
   1. Sealing Elements: EPDM rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   2. Pressure Plates: Stainless steel.
   3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.

2.04 GROUT

A. Description: Nonshrink; recommended for interior and exterior sealing openings in non- fire-rated walls or floors.
   1. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
   2. Design Mix: 5000 psi (34.5 MPa), 28-day compressive strength.
   3. Packaging: Premixed and factory packaged.

2.05 POURABLE SEALANTS

A. Description: Single-component, neutral-curing elastomeric sealants of grade indicated below.
   1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.

B. Sustainability Criteria:

2.06 FOAM SEALANTS

A. Description: Multicomponent, liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam. Foam expansion must not damage cables or crack penetrated structure.

B. Sustainability Criteria.

PART 3 - EXECUTION

3.01 INSTALLATION OF SLEEVES FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

A. Sleeves for Conduits Penetrating Above-Grade, Non-Fire-Rated, Concrete and Masonry- Unit Floors and Walls:
   1. Interior Penetrations of Non-Fire-Rated Walls and Floors:
      a. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall or floor so no voids remain. Tool exposed surfaces smooth; protect material while curing.
      b. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Joint Sealants."
   2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
   3. Size pipe sleeves to provide 1/4 inch (6.4 mm) annular clear space between sleeve and raceway or cable, unless sleeve seal system is to be installed or seismic criteria require different clearance.
   4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
   5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inch (50 mm) above finished floor level. Install sleeves during erection of floors.

B. Sleeves for Conduits Penetrating Non-Fire-Rated Wall Assemblies:
   1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
   2. Seal space outside of sleeves with approved joint compound for wall assemblies.

C. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

D. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seal systems. Size sleeves to allow for 1 inch (25 mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

E. Underground, Exterior-Wall and Floor Penetrations:
1. Install steel pipe sleeves with integral waterstops. Size sleeves to allow for 1 inch (25 mm) annular clear space between raceway or cable and sleeve for installing sleeve seal system. Install sleeve during construction of floor or wall.
2. Install steel pipe sleeves. Size sleeves to allow for 1 inch (25 mm) annular clear space between raceway or cable and sleeve for installing sleeve seal system. Grout sleeve into wall or floor opening.

3.02 INSTALLATION OF RECTANGULAR SLEEVES AND SLEEVE SEALS

A. Install sleeves in existing walls without compromising structural integrity of walls. Do not cut structural elements without reinforcing the wall to maintain the designed weight bearing and wall stiffness.

B. Install conduits and cable with no crossings within the sleeve.

C. Fill opening around conduits and cables with expanding foam without leaving voids.

D. Provide metal sheet covering at both wall surfaces and finish to match surrounding surfaces. Metal sheet must be same material as sleeve.

3.03 INSTALLATION OF SLEEVE SEAL SYSTEMS

A. Install sleeve seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.

B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

END OF SECTION

SECTION 26 05 48- VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Delegated Design: Performance specifications for bidder-designed vibration and seismic controls for electrical systems, including the provision of stamped/sealed shop drawings and associated calculations.
   2. Basic materials specifications, including:
      a. Elastomeric isolation pads.
      b. Restraints - rigid type.
      c. Restraints - cable type.
      d. Restraint accessories.
      e. Post-Installed concrete anchors.
      f. Concrete inserts.
   3. Requirements for installation.

B. Related Requirements
   1. Section 26 0529 "Hangers and Supports for Electrical Systems" for commonly used electrical supports and installation requirements.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include rated load capacity for each seismic-restraint device.
   2. Illustrate or indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
   3. Annotate types and sizes of seismic restraints and accessories, complete with listing markings or report numbers and load rating in tension and compression as evaluated by an evaluation service member of an agency acceptable to authorities having jurisdiction.
   4. Annotate to indicate application of each product submitted and compliance with requirements.

B. Shop Drawings:
   1. Detail fabrication and assembly of equipment bases.
   2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

C. Delegated Design Submittal for Each Seismic-Restraint Device: Signed and sealed by qualified structural professional engineer.

1. For each seismic-restraint device, including restraint - rigid and cable type, restraint accessory, and concrete anchor and insert that is required by this Section or is indicated on Drawings, submit the following:
   a. Seismic Restraints: Select seismic restraints complying with performance requirements, design criteria, and analysis data.
   b. Post-Installed Concrete Anchors and Inserts: Include calculations showing anticipated seismic loads. Include certification that device is approved by an NRTL for seismic reinforcement use.
   c. Seismic Design Calculations: Submit input data and loading calculations prepared under "Seismic Design Calculations" Paragraph in "Performance Requirements" Article.
2. Seismic-Restraint Detail Drawings: Signed and sealed by qualified structural professional engineer.
   a. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
   b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
3. Product Listing, Preapproval, and Evaluation Documentation: By an evaluation service member of an agency acceptable to authorities having jurisdiction, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

1.03 INFORMATIONAL SUBMITTALS

A. A.Field quality-control reports.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Seismic-Restraint Device Load Ratings: Devices to be tested and rated in accordance with applicable code requirements and authorities having jurisdiction. Devices to be listed by a nationally recognized third party that requires periodic follow-up inspections and has a listing directory available to the public. Provide third-party listing by one or more of the following: UL product listing or an agency acceptable to authorities having jurisdiction.

B. Consequential Damage: Provide additional seismic restraints for suspended components or anchorage of floor-, roof-, or wall-mounted components so that failure of a non-essential or essential component will not cause failure of any other essential building component.

C. Fire/Smoke Resistance: Seismic-restraint devices that are not constructed of ferrous metals must have a maximum flame-spread index of 25 and maximum smoke- developed index of 50 when tested by an NRTL in accordance with ASTM E84 or UL 723, and be so labeled.

D. Component Supports:
   1. Load ratings, features, and applications of reinforcement components must be based on testing standards of a nationally recognized testing agency.

2.02 ELASTOMERIC ISOLATION PADS

A. Elastomeric Isolation Pads:
   1. Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area.
   2. Size: Factory or field cut to match requirements of supported equipment.
   3. Pad Material: Oil and water resistant with elastomeric properties. Neoprene rubber, silicone rubber, or other elastomeric material.
   4. Surface Pattern: Smooth, ribbed, or waffle pattern.

2.03 RESTRAINTS - RIGID TYPE

A. Description: Shop- or field-fabricated bracing assembly made of ANSI/AISI S110-07-S1 slotted steel channels, ANSI/ASTM A53/A53M steel pipe, or other rigid steel brace member. Includes accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; rated in tension, compression, and torsion forces.

2.04 RESTRAINTS - CABLE TYPE

A. Seismic-Restraint Cables: ASTM A1023/A1023M galvanized or ASTM A603 galvanized-steel cables where concealed above ceilings or other architectural finishes; ASTM A492 stainless steel cables where exposed. End connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for seismic-restraining cable service; with fittings attached by means of poured socket, swaged socket, or mechanical (Flemish eye) loop.

B. Restraint cable assembly and cable fittings must comply with ASCE/SEI 19. Cable fittings and complete cable assembly must maintain the minimum cable breaking force. U-shaped cable clips and wedge-type end fittings do not comply and are unacceptable.

2.05 RESTRAINT ACCESSORIES

A. Hanger-Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections or reinforcing steel angle clamped to hanger rod. Non-metallic stiffeners are unacceptable.

B. Hinged and Swivel Brace Attachments: Multifunctional steel connectors for attaching hangers to rigid channel bracings and] [restraint cables.

C. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.

D. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.

E. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

2.06 POST-INSTALLED CONCRETE ANCHORS

A. Mechanical Anchor Bolts:
1. Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength for anchor and as tested according to ASTM E488/E488M.

B. Adhesive Anchor Bolts:
1. Drilled-in and capsule anchor system containing PVC or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E488/E488M.

C. Provide post-installed concrete anchors that have been prequalified for use in seismic applications.
1. Prequalify post-installed anchors in concrete in accordance with ACI 355.2 or other approved qualification testing procedures.
2. Prequalify post-installed anchors in masonry in accordance with approved qualification procedures.

D. Expansion-type anchor bolts are not permitted for equipment in excess of 10 hp (7.46 kW) that is not vibration isolated.
1. Undercut expansion anchors are permitted.

2.07 CONCRETE INSERTS

A. Provide preset concrete inserts that are seismically prequalified in accordance with ICC-ES AC446 testing.

B. Comply with MSS SP-58.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and equipment to receive seismic control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for reinforcement and cast-in-place anchors to verify actual locations before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 APPLICATIONS

A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.

B. Hanger-Rod Stiffeners: Indicate on shop drawings, in schedules, or a combination of both, the locations where hanger rods for individual raceways, bus duct, cable trays, and hanger rods for trapeze hangers require hanger-rod stiffeners. Install where required to prevent buckling of hanger rods caused by seismic forces.

C. Strength of Support and Seismic-Restraint Assemblies: Select sizes of components so strength will be adequate to carry static and seismic loads within specified loading limits.

3.03 INSTALLATION OF SEISMIC-RESTRAINT DEVICES

A. Install equipment and devices to withstand the effects of earthquake motions. Provide seismic restraint devices for systems and equipment where required by applicable codes.

B. Coordinate location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 033000 "Cast-in-Place Concrete."

C. Installation of seismic restraints must not cause any stresses, misalignment, or change of position of equipment or conduits.

D. Equipment Restraints:
1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).

2. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction that provides required submittals for component.

E. Raceway, Cable, Wireway, Cable Tray, and Busway Support and Hanger Restraints:
1. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
2. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction providing required submittals for component.

F. Install cables so they do not bend across edges of adjacent equipment or building structure.

G. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

H. Attachment to Structure: Anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

I. Post-Installed Concrete Anchors:
1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Mechanical-Type Anchor Bolts: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors must be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Adhesive-Type Anchor Bolts: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
5. Set anchors to manufacturer's recommended torque using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.04 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. A. Install flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where connection is terminated to equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

3.05 FIELD QUALITY CONTROL

A. Field tests must be witnessed by Architect, Owner/Tenant representative, and authorities having jurisdiction.

B. Tests and Inspections:
1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless post-connection testing has been approved), and with at least seven days' advance notice.
3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
4. Test no fewer than four of each type and size of installed anchors and fasteners selected by Architect.
5. Test to 90 percent of rated proof load of device.

C. Nonconforming Work:
1. Seismic controls will be considered defective if they do not pass tests and inspections.
2. Remove and replace malfunctioning units and retest as specified above.

D. Prepare test and inspection reports.

END OF SECTION

SECTION 26 05 53 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Labels.
   2. Bands and tubes.
   3. Tapes and stencils.
   4. Tags.
   5. Signs.
   6. Cable ties.
   7. Miscellaneous identification products.

B. Related Requirements:
   1. Section 26 0050 "Basic Electrical Requirements" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

1.02 ACTION SUBMITTALS

A. Product Data:
   1. Includeconstruction details, material descriptions, dimensions of individual components and profiles, and finishes for electrical identification products.

B. Samples: For each type of label and sign to illustrate composition, size, colors, lettering style, mounting provisions, and graphic features of identification products.

C. Identification Schedule: For each piece of electrical equipment and electrical system components to be index of nomenclature for electrical equipment and system components used in identification signs and labels. Use same designations indicated on Drawings.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Comply with ASME A13.1 and IEEE C2.

B. Comply with 29 CFR 1910.144 for color identification of hazards; 29 CFR 1910.145 for danger, caution, warning, and safety instruction signs and tags; and the following:

1. Fire-protection and fire-alarm equipment, including raceways, must be finished, painted, or suitably marked safety red.
2. Ceiling-mounted hangers, supports, cable trays, and raceways must be finished, painted, or suitably marked safety yellow where less than 7.7 ft (2.3 m) above finished floor.

C. Signs, labels, and tags required for personnel safety must comply with the following standards:
1. Safety Colors: NEMA Z535.1.
2. Facility Safety Signs: NEMA Z535.2.
3. Safety Symbols: NEMA Z535.3.
4. Product Safety Signs and Labels: NEMA Z535.4.
5. Safety Tags and Barricade Tapes for Temporary Hazards: NEMA Z535.5.

D. Comply with NFPA 70E and Section 260573.19"Arc-Flash Hazard Analysis"

E. requirements for arc-flash warning labels.

F. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, must comply with UL 969.

G. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 COLOR AND LEGEND REQUIREMENTS

A. Raceways and Cables Carrying Circuits at 1000 V or Less:
1. Black letters on orange field.
2. Legend: Indicate voltage and system or service type.

B. Color-Coding for Phase- and Voltage-Level Identification, 1000 V or Less: Use colors listed below for ungrounded service feeder and branch-circuit conductors.
1. Color must be factory applied or field applied for sizes larger than 8 AWG if authorities having jurisdiction permit.
2. Colors for 208Y/120 V Circuits:
   a. Phase A: Black.
   b. Phase B: Red.
   c. Phase C: Blue.
3. Colors for 240 V Circuits:
   a. Phase A: Black.
   b. Phase B: Red.
4. Colors for 480Y/277 V Circuits:
   a. Phase A: Brown.
   b. Phase B: Orange.
   c. Phase C: Yellow.

5. Color for Neutral: White or gray.
6. Color for Equipment Grounds: Bare copper, Green, or Green with yellow stripe.
7. Colors for Isolated Grounds: Green with two or more yellow stripes.

C. Raceways and Cables Carrying Circuits at More Than 1000 V:
1. Black letters on orange field.
2. Legend: "DANGER - CONCEALED HIGH VOLTAGE WIRING."

D. Warning Label Colors:
1. Identify system voltage with black letters on orange background.

E. Warning labels and signs must include, but are not limited to, the following legends:
1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 3 FEET MINIMUM."

F. Equipment Identification Labels:
1. Black letters on white field.

2.03 LABELS

A. Vinyl Wraparound Labels: Preprinted, flexible labels laminated with clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.

B. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameters sized to suit diameters and that stay in place by gripping action.

C. Self-Adhesive Wraparound Labels: Preprinted, 3 mil (0.08 mm) thick, polyester flexible label with acrylic pressure-sensitive adhesive.
1. Self-Lamination: Clear; UV-, weather- and chemical-resistant; self-laminating, protective shield over legend. Labels sized such that clear shield overlaps entire printed legend.
2. Marker for Labels:
a. Permanent, waterproof, black ink marker recommended by tag manufacturer.
b. Machine-printed, permanent, waterproof, black ink recommended by printer manufacturer.

D. Self-Adhesive Labels: Polyester, thermal, transfer-printed, 3 mil (0.08 mm) thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.
1. Minimum Nominal Size:
a. 1-1/2 by 6 inch (37 by 150 mm) for raceway and conductors.
b. 3-1/2 by 5 inch (76 by 127 mm) for equipment.
c. As required by authorities having jurisdiction.

2.04 BANDS AND TUBES

A. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inch (50 mm) long, with diameters sized to suit diameters and that stay in place by gripping action.

B. Heat-Shrink Preprinted Tubes: Flame-retardant polyolefin tubes with machine-printed identification labels, sized to suit diameter and shrunk to fit firmly. Full shrink recovery occurs at maximum of 200 deg F (93 deg C). Comply with UL 224.

2.05 TAPES AND STENCILS

A. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

B. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; not less than 3 mil (0.08 mm) thick by 1 to 2 inch (25 to 50 mm) wide; compounded for outdoor use.

C. Tape and Stencil: 4 inch (100 mm) wide black stripes on 10 inch (250 mm) centers placed diagonally over orange background and are 12 inch (300 mm) wide. Stop stripes at legends.

D. Floor Marking Tape: 2 inch (50 mm) wide, 5 mil (0.125 mm) pressure-sensitive vinyl tape, with black and white or yellow and black stripes and clear vinyl overlay.

E. Underground-Line Warning Tape:
   1. Tape:
      a. Recommended by manufacturer for method of installation and suitable to identify and locate underground electrical and communications utility lines.
      b. Printing on tape must be permanent and may not be damaged by burial operations.
      c. Tape material and ink must be chemically inert and not be subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.
   2. Color and Printing:
      a. Comply with APWA Uniform Color Code using NEMA Z535.1 safety colors.
      b. Inscriptions for Red Tapes: "CAUTION BURIED ELECTRIC LINE BELOW"
      c. Inscriptions for Orange Tapes: "CAUTION BURIED COMMUNICATION LINE BELOW".
   3. Tape Type I:
      a. Pigmented polyolefin, bright colored, continuous-printed on one side with inscription of utility, compounded for direct-burial service.
      b. Width: 3 inch (75 mm).
      c. Thickness: 4 mil (0.1 mm).
      d. Weight: 18.5 lb/1000 sq. ft (9.0 kg/100 sq. m).

e. Tensile in accordance with ASTM D882: 30 lbf (133.4 N) and 2500 psi (17.2 MPa).

4. Tape Type II:
   a. Multilayer laminate, consisting of high-density polyethylene scrim coated with pigmented polyolefin; bright colored, continuous-printed on one side with inscription of utility, compounded for direct-burial service.
   b. Width: 3 inch (75 mm).
   c. Thickness: 12 mil (0.3 mm).
   d. d. Weight: 36.1 lb/1000 sq. ft (17.6 kg/100 sq. m).
   e. e. Tensile in accordance with ASTM D882: 400 lbf (1780 N) and 11,500 psi (79.2 MPa).
5. Tape Type ID:
   a. Detectable three-layer laminate, consisting of printed pigmented polyolefin film, solid aluminum-foil core, and clear protective film that allows inspection of continuity of conductive core; bright colored, continuous-printed on one side with inscription of utility, compounded for direct-burial service.
   b. Width: 3 inch (75 mm).
   c. Overall Thickness: 5 mil (0.125 mm).
   d. Foil Core Thickness: 0.35 mil (8.9 µm).
   e. e. Weight: 28 lb/1000 sq. ft (13.7 kg/100 sq. m).
   f. f. Tensile in accordance with ASTM D882: 70 lbf (311.3 N) and 4600 psi (31.7 MPa).
6. Tape Type IID :
   a. Reinforced, detectable three-layer laminate, consisting of printed pigmented woven scrim, solid aluminum-foil core, and clear protective film that allows inspection of continuity of conductive core; bright-colored, continuous-printed on one side with inscription of utility, compounded for direct-burial service.
   b. Width: 3 inch (75 mm).
   c. Overall Thickness: 8 mil (0.2 mm).
   d. Foil Core Thickness: 0.35 mil (8.9 µm).
   e. e. Weight: 34 lb/1000 sq. ft (16.6 kg/100 sq. m).
   f. f. Tensile in accordance with ASTM D882: 300 lbf (1334 N) and 12,500 psi (86.1 MPa).

F. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height must be 1 inch (25 mm).

2.06 TAGS

A. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch (50 by 50 by 1.3 mm), with stamped legend, punched for use with self-locking cable tie fastener.

B. Nonmetallic Preprinted Tags: Polyethylene tags, 0.023 inch (0.58 mm) thick, color-coded for phase and voltage level, with factory printed permanent designations; punched for use with self-locking cable tie fastener.

C. Write-on Tags:
1. Polyester Tags: 0.015 inch (0.38 mm) thick, with corrosion-resistant grommet and cable tie for attachment.
2. Marker for Tags:
a. Permanent, waterproof, black ink marker recommended by tag manufacturer.
b. Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.07 SIGNS

A. Baked-Enamel Signs:
1. Preprinted aluminum signs, high-intensity reflective, punched or drilled for fasteners, with colors, legend, and size required for application.
2. 1/4 inch (6.4 mm) grommets in corners for mounting.
3. Nominal Size: 7 by 10 inch (180 by 250 mm).

B. Metal-Backed Butyrate Signs:
1. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs, with 0.0396 inch (1 mm) galvanized-steel backing, punched and drilled for fasteners, and with colors, legend, and size required for application.
2. 1/4 inch (6.4 mm) grommets in corners for mounting.
3. Nominal Size: 10 by 14 inch (250 by 360 mm).

C. Laminated Acrylic or Melamine Plastic Signs:
1. Engraved legend.
2. Thickness:
a. For signs up to 20 sq. inch (129 sq. cm), minimum 1/16 inch (1.6 mm) thick.
b. For signs larger than 20 sq. inch (129 sq. cm), 1/8 inch (3.2 mm) thick.
c. Engraved legend with black letters on white face.
d. Punched or drilled for mechanical fasteners with 1/4 inch (6.4 mm) grommets in corners for mounting.
e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.08 CABLE TIES

A. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.
1. Minimum Width: 3/16 inch (5 mm).
2. Tensile Strength at 73 deg F (23 deg C) in accordance with ASTM D638: 12,000 psi (82.7 MPa).
3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
4. Color: Black, except where used for color-coding.

B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: 3/16 inch (5 mm).
2. Tensile Strength at 73 deg F (23 deg C) in accordance with ASTM D638: 12,000 psi (82.7 MPa).
3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
4. Color: Black.

C. Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.
1. Minimum Width: 3/16 inch (5 mm).
2. Tensile Strength at 73 deg F (23 deg C) in accordance with ASTM D638: 7000 psi (48.2 MPa).
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: Minus 50 to plus 284 deg F (Minus 46 to plus 140 deg C).
5. Color: Black.

2.09 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).

B. Fasteners for Labels and Signs: Self-tapping, stainless steel screws or stainless steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.01 PREPARATION

A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.02 INSTALLATION

A. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.

B. Install identifying devices before installing acoustical ceilings and similar concealment.

C. Verify identity of item before installing identification products.

D. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.

E. Apply identification devices to surfaces that require finish after completing finish work.

F. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.

G. System Identification for Raceways and Cables under 1000 V: Identification must completely encircle cable or conduit. Place identification of two-color markings in contact, side by side.
   1. Secure tight to surface of conductor, cable, or raceway.

H. System Identification for Raceways and Cables over 1000 V: Identification must completely encircle cable or conduit. Place adjacent identification of two-color markings in contact, side by side.
   1. Secure tight to surface of conductor, cable, or raceway.

I. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.

J. Emergency Operating Instruction Signs: Install instruction signs with white legend on red background with minimum 3/8 inch (10 mm) high letters for emergency instructions at equipment used for load shedding.

K. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from floor.

L. Accessible Fittings for Raceways: Identify cover of junction and pull box of the following systems with wiring system legend and system voltage. System legends must be as follows:
   1. "EMERGENCY POWER."
   2. "POWER."
   3. "UPS."

M. Vinyl Wraparound Labels:
   1. Secure tight to surface of raceway or cable at location with high visibility and accessibility.
   2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to location and substrate.

N. Snap-Around Labels: Secure tight to surface at location with high visibility and accessibility.

O. Self-Adhesive Wraparound Labels: Secure tight to surface at location with high visibility and accessibility.

P. Self-Adhesive Labels:
   1. Install unique designation label that is consistent with wiring diagrams, schedules, and operation and maintenance manual.
   2. Unless otherwise indicated, provide single line of text with 1/2 inch (13 mm) high letters on 1-1/2 inch (38 mm) high label; where two lines of text are required, use labels 2 inch (50 mm) high.

Q. Snap-Around Color-Coding Bands: Secure tight to surface at location with high visibility and accessibility.

R. Heat-Shrink, Preprinted Tubes: Secure tight to surface at location with high visibility and accessibility.

S. Marker Tapes: Secure tight to surface at location with high visibility and accessibility.

T. Self-Adhesive Vinyl Tape: Secure tight to surface at location with high visibility and accessibility.
   1. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for minimum distance of 6 inch (150 mm) where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding.

U. Tape and Stencil: Comply with requirements in painting Sections for surface preparation and paint application.

V. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's instructions.

W. Underground Line Warning Tape:
   1. During backfilling of trenches, install continuous underground-line warning tape directly above cable or raceway at 6 to 8 inch (150 to 200 mm) below finished grade. Use multiple tapes where width of multiple lines installed in common trench or concrete envelope exceeds 16 inch (400 mm) overall.
   2. Limit use of underground-line warning tape to direct-buried cables.
   3. Install underground-line warning tape for direct-buried cables and cables in raceways.

X. Metal Tags:
   1. Place in location with high visibility and accessibility.
   2. Secure using UV-stabilized, plenum-rated cable ties.

Y. Nonmetallic Preprinted Tags:
   1. Place in location with high visibility and accessibility.
   2. Secure using UV-stabilized plenum-rated cable ties.

Z. Write-on Tags:
   1. Place in location with high visibility and accessibility.
   2. Secure using UV-stabilized plenum-rated cable ties.

AA. Baked-Enamel Signs:
   1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.
   2. Unless otherwise indicated, provide single line of text with 1/2 inch (13 mm) high letters on minimum 1-1/2 inch (38 mm) high sign; where two lines of text are required, use signs minimum 2 inch (50 mm) high.

BB. Metal-Backed Butyrate Signs:
1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.
2. Unless otherwise indicated, provide single line of text with 1/2 inch (13 mm) high letters on 1-1/2 inch (38 mm) high sign; where two lines of text are required, use labels 2 inch (50 mm) high.

CC. Laminated Acrylic or Melamine Plastic Signs:
1. Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.
2. Unless otherwise indicated, provide single line of text with 1/2 inch (13 mm) high letters on 1-1/2 inch (38 mm) high sign; where two lines of text are required, use labels 2 inch (50 mm) high.

DD. Cable Ties: General purpose, for attaching tags, except as listed below:
1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

3.03 IDENTIFICATION SCHEDULE

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

C. Concealed Raceways, Duct Banks, More Than 1000 V, within Buildings: Tape and stencil. Stencil legend "DANGER - CONCEALED HIGH-VOLTAGE WIRING" with 3 inch (75 mm) high, black letters on 20 inch (500 mm) centers.
1. Locate identification at changes in direction, at penetrations of walls and floors, and at 10 ft (3 m) maximum intervals.

D. Accessible Raceways, Armored and Metal-Clad Cables, More Than 1000 V: Snap-around color-coding bands for raceway and cables].
1. Locate identification at changes in direction, at penetrations of walls and floors, at 50 ft (15 m) maximum intervals in straight runs, and at 25 ft (7.6 m) maximum intervals in congested areas.

E. Accessible Raceways and Metal-Clad Cables, 1000 V or Less, for Service, Feeder, and Branch Circuits, More Than 30 A and 120 V to Ground: Identify with self-adhesive vinyl tape applied in bands.
1. Locate identification at changes in direction, at penetrations of walls and floors, at 50 ft (15 m) maximum intervals in straight runs, and at 25 ft (7.6 m) maximum intervals in congested areas.

F. Accessible Fittings for Raceways and Cables within Buildings: Identify cover of junction and pull box of the following systems with self-adhesive labels containing wiring system legend and system voltage. System legends must be as follows:
   1. "EMERGENCY POWER."
   2. "POWER."
   3. "UPS."

G. Power-Circuit Conductor Identification, 1000 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use self-adhesive vinyl tape to identify phase.
   1. Locate identification at changes in direction, at penetrations of walls and floors, at 50 ft (15 m) maximum intervals in straight runs, and at 25 ft (7.6 m) maximum intervals in congested areas.

H. Power-Circuit Conductor Identification, More Than 1000 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use nonmetallic preprinted tags colored and marked to indicate phase, and separate tag with circuit designation.

I. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use self-adhesive labels with conductor or cable designation, origin, and destination.

J. Control-Circuit Conductor Termination Identification: For identification at terminations, provide self-adhesive labels with conductor designation.

K. Conductors to Be Extended in Future: Attach marker tape to conductors and list source.

L. Auxiliary Electrical Systems Conductor Identification: Self-adhesive vinyl tape that is uniform and consistent with system used by manufacturer for factory-installed connections.
   1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.

M. Locations of Underground Lines: Underground-line warning tape for power, lighting, communication, and control wiring and optical-fiber cable.

N. Concealed Raceways and Duct Banks, More Than 1000 V, within Buildings: Apply floor marking tape to the following finished surfaces:
   1. Floor surface directly above conduits running beneath and within 12 inch (300 mm) of floor that is in contact with earth or is framed above unexcavated space.
   2. Wall surfaces directly external to raceways concealed within wall.
   3. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in building, or concealed above suspended ceilings.

O. Workspace Indication: Apply floor marking tape or tape and stencil to finished surfaces. Show working clearances in direction of access to live parts. Workspace must comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

P. Instructional Signs: Self-adhesive labels, including color code for grounded and ungrounded conductors.

Q. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting:

R. Baked-enamel warning signs.
   1. Apply to exterior of door, cover, or other access.
   2. For equipment with multiple power or control sources, apply to door or cover of equipment, including, but not limited to, the following:
      a. Power-transfer switches.
      b. Controls with external control power connections.

S. Arc Flash Warning Labeling: Self-adhesive labels.

T. Operating Instruction Signs: Baked-enamel warning signs Metal-backed.

U. Emergency Operating Instruction Signs: Baked-enamel warning signs with white legend on red background with minimum 3/8 inch (10 mm) high letters for emergency instructions at equipment used for load shedding.

V. Equipment Identification Labels:
   1. Indoor Equipment: Baked-enamel signs.
   2. Outdoor Equipment: Stenciled legend 4 inch (100 mm) high.
   3. Equipment to Be Labeled:
      a. Panelboards: Typewritten directory of circuits in location provided by panelboard manufacturer. Panelboard identification must be in form of self-adhesive, engraved, laminated acrylic or melamine label.
      b. Enclosures and electrical cabinets.
      c. Access doors and panels for concealed electrical items.
      d. Switchgear.
      e. Switchboards.
      f. Transformers: Label that includes tag designation indicated on Drawings for transformer, feeder, and panelboards or equipment supplied by secondary.
      g. Substations.
      h. Emergency system boxes and enclosures.
      i. Motor-control centers.
      j. Enclosed switches.
      k. Enclosed circuit breakers.
      l. Enclosed controllers.
      m. Variable-speed controllers.
      n. Push-button stations.
      o. Power-transfer equipment.
      p. Contactors.
      q. Remote-controlled switches, dimmer modules, and control devices.
      r. Battery-inverter units.

s. Battery racks.
t. Power-generating units.
u. Monitoring and control equipment.
v. UPS equipment.

END OF SECTION

SECTION 26 05 73.13 - SHORT-CIRCUIT STUDIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Computer-based, fault-current study to determine minimum interrupting capacity of circuit protective devices.

B. Related Requirements:
1. Section 26 0010 "Basic Electrical Requirements" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 26 0573.16 "Coordination Studies" for overcurrent protective device coordination studies.
3. Section 26 0573.19 "Arc-Flash Hazard Analysis" for arc-flash studies.

1.02 DEFINITIONS

A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed and salvaged, or removed and reinstalled. Existing to remain items must remain functional throughout construction period.

B. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.

C. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion of the circuit from the system.

D. SCCR: Short-circuit current rating.

E. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

F. Single-Line Diagram: See "One-Line Diagram."

1.03 ACTION SUBMITTALS

A. Product Data:
1. For power system analysis software to be used for studies.

B. Short-Circuit Study Report:
   1. Submit the following after approval of system protective devices submittals. Submittals must be in digital form.
      a. Short-circuit study input data, including completed computer program input data sheets.
      b. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.
      c. Revised one-line diagram, reflecting field investigation results and results of short-circuit study.

1.04 INFORMATIONAL SUBMITTALS

A. Product Certificates: For short-circuit study software, certifying compliance with IEEE 399.

1.05 QUALITY ASSURANCE

A. Study must be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms must comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.

PART 2 - PRODUCTS

2.01 POWER SYSTEM ANALYSIS SOFTWARE

A. Comply with IEEE 399 and IEEE 551.

B. Analytical features of power systems analysis software program must have capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

C. Computer software program must be capable of plotting and diagramming time-current-characteristic curves as part of its output.

D. Computer program must be designed to perform short-circuit studies or have function, component, or add-on module designed to perform short-circuit studies.

E. Computer program must be developed under supervision of licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.

2.02 SHORT-CIRCUIT STUDY REPORT CONTENTS

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram of modeled power system, showing the following:
   1. Protective device designations and ampere ratings.
   2. Conductor types, sizes, and lengths.
   3. Transformer kVA and voltage ratings.
   4. Motor and generator designations and kVA ratings.
   5. Switchgear, switchboard, motor-control center, and panelboard designations and ratings.
   6. Derating factors and environmental conditions.
   7. Any revisions to electrical equipment required by study.

D. Comments and recommendations for system improvements or revisions in written document, separate from one-line diagram.

E. Protective Device Evaluation:
   1. Evaluate equipment and protective devices and compare to available short-circuit currents. Verify that equipment withstand ratings exceed available short-circuit current at equipment installation locations.
   2. Tabulations of circuit breaker, fuse, and other protective device ratings versus calculated short-circuit duties.
   3. For 600 V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
   4. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in standards to 1/2-cycle symmetrical fault current.
   5. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

F. Short-Circuit Study Input Data:
   1. One-line diagram of system being studied.
   2. Power sources available.
   3. Manufacturer, model, and interrupting rating of protective devices.
   4. Conductors.
   5. Transformer data.

G. Short-Circuit Study Output Reports:
   1. Low-Voltage Fault Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
      a. Voltage.
      b. Calculated fault-current magnitude and angle.

c. Fault-point X/R ratio.
d. Equivalent impedance.

2. Momentary Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
   a. Voltage.
   b. Calculated symmetrical fault-current magnitude and angle.
   c. Fault-point X/R ratio.
   d. Calculated asymmetrical fault currents:
      1) Based on fault-point X/R ratio.
      2) Based on calculated symmetrical value multiplied by 1.6.
      3) Based on calculated symmetrical value multiplied by 2.7.
3. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
   a. Voltage.
   b. Calculated symmetrical fault-current magnitude and angle.
   c. Fault-point X/R ratio.
   d. No AC Decrement (NACD) ratio.
   e. Equivalent impedance.
   f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on symmetrical basis.
   g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on total basis.

PART 3 - EXECUTION

3.01 POWER SYSTEM DATA

A. Obtain data necessary for conduct of study.
   1. Verify completeness of data supplied on one-line diagram. Call discrepancies to Architect's attention.
   2. For equipment included as Work of this Project, use characteristics submitted under provisions of action submittals and information submittals for this Project.
   3. For relocated equipment and that which is existing to remain, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers in accordance with NFPA 70E.

B. Gather and tabulate required input data to support short-circuit study. Comply with requirements in Section 017839 "Project Record Documents" for recording circuit protective device characteristics. Record data on Record Document copy of one-line diagram. Comply with recommendations in IEEE 551 as to amount of detail that is required to be acquired in field. Field data gathering must be by, or under supervision of, qualified electrical professional engineer. Data include, but are not limited to, the following:
   1. Product Data for Project's overcurrent protective devices involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.

2. Obtain electrical power utility impedance at service.
3. Power sources and ties.
4. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
5. For reactors, provide manufacturer and model designation, voltage rating, and impedance.
6. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip, SCCR, current rating, and breaker settings.
7. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
8. Busway manufacturer and model designation, current rating, impedance, lengths, and conductor material.
9. Motor horsepower and NEMA MG 1 code letter designation.
10. Conductor sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).
11. Derating factors.

3.02 SHORT-CIRCUIT STUDY

A. Perform study following general study procedures contained in IEEE 399.

B. Calculate short-circuit currents according to IEEE 551.

C. Base study on device characteristics supplied by device manufacturer.

D. Extent of electrical power system to be studied is indicated on Drawings.

E. Begin short-circuit current analysis at service, extending down to system overcurrent protective devices as follows:
1. To normal system low-voltage load buses where fault current is 5 kA or less.
2. Exclude equipment supplied by single transformer smaller than 75 kVA

F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

G. Include ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for fault-current dc decrement to address asymmetrical requirements of interrupting equipment.

H. Calculate short-circuit momentary and interrupting duties for three-phase bolted fault and single line-to-ground fault at each equipment indicated on one-line diagram.
1. For grounded systems, provide bolted line-to-ground fault-current study for areas as defined for three-phase bolted fault short-circuit study.

I. Include in report identification of protective device applied outside its capacity.

END OF SECTION

SECTION 26 05 73.16 - COORDINATION STUDIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Computer-based, overcurrent protective device coordination studies to determine overcurrent protective devices and to determine overcurrent protective device settings for selective tripping.
a. Study results must be used to determine coordination of series-rated devices.

B. Related Requirements:
1. Section 26 0500 "Basic Electrical Requirements" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 26 0573.13 "Short-Circuit Studies" for fault-current studies.
3. Section 26 0573.19 "Arc-Flash Hazard Analysis" for arc-flash studies.

1.02 DEFINITIONS

A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled. Existing to remain items must remain functional throughout construction period.

B. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of electric circuit or system of circuits and the component devices or parts used therein.

C. Protective Device: A device that senses when abnormal current flow exists and then removes the affected portion of the circuit from the system.

D. SCCR: Short-circuit current rating.

E. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

F. Single-Line Diagram: See "One-Line Diagram."

1.03 ACTION SUBMITTALS

A. Product Data:
   1. For power system analysis software to be used for studies.

B. Coordination Study Report:
   1. Submit the following after approval of system protective devices submittals. Submittals must be in digital form.
      a. Coordination-study input data, including completed computer program input data sheets.
      b. Study and equipment evaluation reports.
      c. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.
      d. Revised one-line diagram, reflecting field investigation results and results of coordination study.

1.04 INFORMATIONAL SUBMITTALS

A. Product Certificates: For overcurrent protective device coordination study software, certifying compliance with IEEE 399.

1.05 QUALITY ASSURANCE

A. Studies must be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms must comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.

1.06 REGULATORY AGENCY APPROVALS

A. Submittals for coordination study requiring approval by authorities having jurisdiction must be signed and sealed by qualified electrical professional engineer responsible for their preparation. Submit for action by Architect prior to submitting for approval by authorities having jurisdiction.

B. Submittals for coordination study require action by Architect prior to submitting for approval by authorities having jurisdiction.

PART 2 - PRODUCTS

2.01 POWER SYSTEM ANALYSIS SOFTWARE

A. Comply with IEEE 242 and IEEE 399.

B. Analytical features of device coordination study computer software program must have capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

C. Computer software program must be capable of plotting and diagramming time- current-characteristic curves as part of its output. Computer software program must report device settings and ratings of overcurrent protective devices and must demonstrate selective coordination by computer-generated, time-current coordination plots.
   1. Optional Features:
      a. Arcing faults.
      b. Simultaneous faults.
      c. Explicit negative sequence.
      d. Mutual coupling in zero sequence.

D. Computer program must be designed to perform coordination studies or have function, component, or add-on module designed to perform coordination studies.

E. Computer program must be developed under supervision of licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.

2.02 COORDINATION STUDY REPORT CONTENTS

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram of modeled power system, showing the following:
   1. Protective device designations and ampere ratings.
   2. Conductor types, sizes, and lengths.
   3. Transformer kVA and voltage ratings.
   4. Motor and generator designations and kVA ratings.
   5. Switchgear, switchboard, motor-control center, and panelboard designations.
   6. Revisions to electrical equipment required by study.
   7. Study Input Data: As described in "Power System Data" Article.
      a. Short-Circuit Study Output: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260573.13 "Short-Circuit Studies."

D. Protective Device Coordination Study:
   1. Report recommended settings of protective devices, ready to be applied in field. Use manufacturer's data sheets for recording recommended setting of overcurrent protective devices when available.
      a. Phase and Ground Relays:
         1) Device tag.
         2) Relay current transformer ratio and tap, time dial, and instantaneous pickup value.
         3) Recommendations on improved relaying systems, if applicable.
      b. Circuit Breakers:
         1) Adjustable pickups and time delays (long time, short time, and ground).
         2) Adjustable time-current characteristic.
         3) Adjustable instantaneous pickup.
         4) Recommendations on improved trip systems, if applicable.
      c. Fuses: Show current rating, voltage, and class.

E. Time-Current Coordination Curves: Determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for switching schemes and for emergency periods where power source is local generation. Show the following information:
   1. Device tag and title, one-line diagram with legend identifying portion of system covered.
   2. Terminate device characteristic curves at point reflecting maximum symmetrical or asymmetrical fault current to which device is exposed.
   3. Identify device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
   4. Plot the following listed characteristic curves, as applicable:
      a. Power utility's overcurrent protective device.
      b. Medium-voltage equipment overcurrent relays.
      c. Medium- and low-voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.
      d. Low-voltage equipment circuit-breaker trip devices, including manufacturer's tolerance bands.
      e. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.
      f. Cables and conductors damage curves.
      g. Ground-fault protective devices.
      h. Motor-starting characteristics and motor damage points.
      i. Generator short-circuit decrement curve and generator damage point.
      j. Largest feeder circuit breaker in each motor-control center and panelboard.
   5. Maintain selectivity for tripping currents caused by overloads.
   6. Maintain maximum achievable selectivity for tripping currents caused by overloads on series-rated devices.

7. Provide adequate time margins between device characteristics such that selective operation is achieved.
8. Comments and recommendations for system improvements.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance of the Work. Devices to be coordinated are indicated on Drawings.
   1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.02 POWER SYSTEM DATA

A. Obtain data necessary for conduct of overcurrent protective device study.
   1. Verify completeness of data supplied in one-line diagram on Drawings. Call discrepancies to Architect's attention.
   2. For equipment included as Work of this Project, use characteristics submitted under provisions of action submittals and information submittals for this Project.
   3. For relocated equipment and that which is existing to remain, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers. Qualifications of technicians and engineers must be in accordance with NFPA 70E.

B. Gather and tabulate required input data to support coordination study. List below is guide. Comply with recommendations in IEEE 551 for amount of detail required to be acquired in field. Field data gathering must be by, or under supervision of, qualified electrical professional engineer. Data include, but are not limited to, the following:
   1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
   2. Electrical power utility impedance at service.
   3. Power sources and ties.
   4. Short-circuit current at each system bus (three phase and line to ground).
   5. Full-load current of loads.
   6. Voltage level at each bus.
   7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
   8. For reactors, provide manufacturer and model designation, voltage rating, and impedance.

9. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.
10. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
11. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
12. Maximum demands from service meters.
13. Busway manufacturer and model designation, current rating, impedance, lengths, size, and conductor material.
14. Motor horsepower and NEMA MG 1 code letter designation.
15. Low-voltage cable sizes, lengths, number, conductor material, and conduit material (magnetic or nonmagnetic).
16. Medium-voltage cable sizes, lengths, conductor material, cable construction, metallic shield performance parameters, and conduit material (magnetic or nonmagnetic).
17. Data sheets to supplement electrical distribution system one-line diagram, cross-referenced with tag numbers on diagram, showing the following:
    a. Special load considerations, including starting inrush currents and frequent starting and stopping.
    b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
    c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
    d. Generator thermal-damage curve.
    e. Ratings, types, and settings of utility company's overcurrent protective devices.
    f. Special overcurrent protective device settings or types stipulated by utility company.
    g. Time-current-characteristic curves of devices indicated to be coordinated.
    h. Manufacturer, frame size, interrupting rating in amperes root mean square (rms) symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
    i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
    j. Switchgear, switchboards, motor-control centers, and panelboards ampacity, and SCCR in amperes rms symmetrical.
    k. Identify series-rated interrupting devices for condition where available fault current is greater than interrupting rating of downstream equipment. Obtain device data details to allow verification that series application of these devices complies with NFPA 70 and UL 489 requirements.

3.03 COORDINATION STUDY

A. Comply with IEEE 242 for calculating short-circuit currents and determining coordination time intervals.

B. Comply with IEEE 399 for general study procedures.

C. Base study on device characteristics supplied by device manufacturer.

D. Extent of electrical power system to be studied is indicated on Drawings.

E. Begin analysis at service, extending down to system overcurrent protective devices as follows:
   1. To normal system low-voltage load buses where fault current is 5 kA or less.
   2. Exclude equipment supplied by single transformer smaller than 75 kVA.

F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

G. Transformer Primary Overcurrent Protective Devices:
   1. Device must not operate in response to the following:
      a. Inrush current when first energized.
      b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
      c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
   2. Device settings must protect transformers according to IEEE C57.12.00, for fault currents.

H. Motor Protection:
   1. Select protection for low-voltage motors according to IEEE 242 and NFPA 70.
   2. Select protection for motors served at voltages more than 600 V according to IEEE 620.

I. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and protection recommendations in IEEE 242. Demonstrate that equipment withstands maximum short-circuit current for time equivalent to tripping time of primary relay protection or total clearing time of fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current

J. Generator Protection: Select protection according to manufacturer's instructions and to IEEE 242.

K. Include ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems.

Also account for fault-current dc decrement, to address asymmetrical requirements of interrupting equipment.

L. Calculate short-circuit momentary and interrupting duties for three-phase bolted fault and single line-to-ground fault at each equipment indicated on one-line diagram.
   1. For grounded systems, provide bolted line-to-ground fault-current study for areas as defined for three-phase bolted fault short-circuit study.

M. Protective Device Evaluation:
   1. Evaluate equipment and protective devices and compare to short-circuit ratings.
   2. Adequacy of switchgear, motor-control centers, and panelboard bus bars to withstand short-circuit stresses.
   3. Applicationof series-rated devices must be recertified, complying with requirements in NFPA 70.
   4. Include in report identification of protective device applied outside its capacity.

3.04 LOAD-FLOW AND VOLTAGE-DROP STUDY

A. Perform load-flow and voltage-drop study to determine steady-state loading profile of system. Analyze power system performance two times as follows:
   1. Determine load flow and voltage drop based on full-load currents obtained in "Power System Data" Article.
   2. Determine load flow and voltage drop based on 80 percent of design capacity of load buses.
   3. Prepare load-flow and voltage-drop analysis and report to show power system components that are overloaded or might become overloaded; show bus voltages that are less than as prescribed by NFPA 70.

3.05 MOTOR-STARTING STUDY

A. Perform motor-starting study to analyze transient effect of system's voltage profile during motor starting. Calculate significant motor-starting voltage profiles and analyze effects of motor starting on power system stability.

B. Prepare motor-starting study report, noting light flicker for limits proposed by IEEE 141, and voltage sags so as not to affect operation of other utilization equipment on system supplying motor.

3.06 FIELD ADJUSTING

A. Adjust relay and protective device settings according to recommended settings provided by coordination study. Field adjustments must be completed by engineering service division of equipment manufacturer under "Startup and Acceptance Testing" contract portion.

B. Make minor modifications to equipment as required to accomplish compliance with short-circuit and protective device coordination studies.

C. Testing and adjusting must be by qualified medium-voltage and low-voltage electrical testing and inspecting agency.
   1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for adjustable overcurrent protective devices.

END OF SECTION

SECTION 26 05 73.19 - ARC-FLASH HAZARD ANALYSIS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Computer-based, arc-flash study to determine arc-flash hazard distance and incident energy to which personnel could be exposed during work on or near electrical equipment.

B. Related Requirements:
1. Section 26 0010 "Basic Electrical Requirements" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 26 0573.13 "Short-Circuit Studies" for fault-current studies.
3. Section 26 0573.16 "Coordination Studies" for overcurrent protective device coordination studies.

1.02 DEFINITIONS

A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed, and salvaged, or removed and reinstalled.

B. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.

C. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.

D. p.u.: Per unit. The reference unit, established as a calculating convenience, for expressing all power system electrical parameters on a common reference base.

E. SCCR: Short-circuit current rating.

F. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

G. Single-Line Diagram: See "One-Line Diagram."

1.03 ACTION SUBMITTALS

A. Product Data:
   1. For power system analysis software to be used for studies.

B. Study Submittals:
   1. Submit the following after approval of system protective devices submittals. Submittals must be in digital form:
      a. Arc-flash study input data, including completed computer program input data sheets.
      b. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.
      c. Revised one-line diagram, reflecting field investigation results and results of arc-flash study.

1.04 INFORMATIONAL SUBMITTALS

A. Product Certificates: For arc-flash hazard analysis software, certifying compliance with IEEE 1584 and NFPA 70E.

1.05 QUALITY ASSURANCE

A. Study must be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms must comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.

1.06 REGULATORY AGENCY APPROVALS

A. Submittals for arc-flash hazard analysis requiring approval by authorities having jurisdiction must be signed and sealed by qualified electrical professional engineer responsible for their preparation. Submit for action by Architect prior to submitting for approval by authorities having jurisdiction.

B. Submittals for arc-flash hazard analysis require action by Architect prior to submitting for approval by authorities having jurisdiction.

PART 2 - PRODUCTS

2.01 COMPUTER SOFTWARE

A. Comply with IEEE 1584 and NFPA 70E.

B. Analytical features of device coordination study computer software program must have capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

C. Computer program must be designed to perform arc-flash analysis or have function, component, or add-on module designed to perform arc-flash analysis.

D. Computer program must be developed under supervision of licensed professional engineer who holds IEEE Computer Society's Certified Software Development Professional certification.

2.02 ARC-FLASH STUDY REPORT CONTENT

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram, showing the following:
1. Protective device designations and ampere ratings.
2. Conductor types, sizes, and lengths.
3. Transformer kVA and voltage ratings, including derating factors and environmental conditions.
4. Motor and generator designations and kVA ratings.
5. Switchgear, switchboard, motor-control center, panelboard designations, and ratings.

D. Study Input Data: As described in "Power System Data" Article.

E. Short-Circuit Study Output Data: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260573.13 "Short-Circuit Studies."

F. Protective Device Coordination Study Report Contents: As specified in "Coordination Study Report Contents" Article in Section 260573.16 "Coordination Studies."

G. Arc-Flash Study Output Reports:
1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each equipment location included in report:
a. Voltage.
b. Calculated symmetrical fault-current magnitude and angle.
c. Fault-point X/R ratio.

d. No AC Decrement (NACD) ratio.
e. Equivalent impedance.
f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on symmetrical basis.
g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on total basis.

H. Incident Energy and Flash Protection Boundary Calculations:
1. Arcing fault magnitude.
2. Protective device clearing time.
3. Duration of arc.
4. Arc-flash boundary.
5. Restricted approach boundary.
6. Limited approach boundary.
7. Working distance.
8. Incident energy.
9. Hazard risk category.
10. Recommendations for arc-flash energy reduction.

I. Fault study input data, case descriptions, and fault-current calculations including definition of terms and guide for interpretation of computer printout.

2.03 ARC-FLASH WARNING LABELS

A. Comply with requirements in Section 260553 "Identification for Electrical Systems" for self-adhesive equipment labels. Produce 3.5 by 5 inch (76 by 127 mm) self-adhesive equipment label for each work location included in analysis.

B. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard analysis:
1. Location designation.
2. Nominal voltage.
3. Protection boundaries.
4. Arc-flash boundary.
5. Restricted approach boundary.
6. Limited approach boundary.
7. Arc flash PPE category.
8. Required minimum arc rating of PPE in Cal/cm squared.
9. Available incident energy.
10. Working distance.
11. Engineering report number, revision number, and issue date.

C. Labels must be machine printed, with no field-applied markings.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine Project overcurrent protective device submittals. Proceed with arc-flash study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study.

3.02 ARC-FLASH HAZARD ANALYSIS

A. Comply with NFPA 70E and its Annex D for hazard analysis study.

B. Preparatory Studies: Perform Short-Circuit and Protective Device Coordination studies prior to starting Arc-Flash Hazard Analysis or obtain results from another source.
   1. Short-Circuit Study Output: As specified in "Short-Circuit Study Output Reports" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260573.13 "Short-Circuit Studies."
   2. Coordination Study Report Contents: As specified in "Coordination Study Report Contents" Article in Section 260573.16 "Coordination Studies."

C. Calculate maximum and minimum contributions of fault-current size.
   1. Maximum calculation must assume maximum contribution from utility and must assume motors to be operating under full-load conditions.
   2. Calculate arc-flash energy at 85 percent of maximum short-circuit current in accordance with IEEE 1584 recommendations.
   3. Calculate arc-flash energy at 38 percent of maximum short-circuit current in accordance with NFPA 70E recommendations.
   4. Calculate arc-flash energy with utility contribution at minimum and assume no motor contribution.

D. Calculate arc-flash protection boundary and incident energy at locations in electrical distribution system where personnel could perform work on energized parts.

E. Include medium- and low-voltage equipment locations, except equipment fed from transformers smaller than 75 kVA.

F. Calculate limited, restricted, and prohibited approach boundaries for each location.

G. Incident energy calculations must consider accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations must take into account changing current contributions, as sources are interrupted or decremented with time. Fault contribution from motors and generators must be decremented as follows:
   1. Fault contribution from induction motors must not be considered beyond three to five cycles.

2. Fault contribution from synchronous motors and generators must be decayed to match actual decrement of each as closely as possible (for example, contributions from permanent magnet generators will typically decay from 10 p.u. to 3 p.u. after 10 cycles).

H. Arc-flash energy must generally be reported for maximum of line or load side of circuit breaker. However, arc-flash computation must be performed and reported for both line and load side of circuit breaker as follows:
1. When circuit breaker is in separate enclosure.
2. When line terminals of circuit breaker are separate from work location.

I. Base arc-flash calculations on actual overcurrent protective device clearing time. Cap maximum clearing time at two seconds based on IEEE 1584, Section B.1.2.

3.03 POWER SYSTEM DATA

A. Obtain data necessary for conduct of arc-flash hazard analysis.
1. Verify completeness of data supplied on one-line diagram on Drawings and under "Preparatory Studies" Paragraph in "Arc-Flash Hazard Analysis" Article. Call discrepancies to Architect's attention.
2. For new equipment, use characteristics from approved submittals under provisions of action submittals and information submittals for this Project.
3. For existing equipment, whether or not relocated, obtain required electrical distribution system data by field investigation and surveys conducted by qualified technicians and engineers.

B. Electrical Survey Data: Gather and tabulate the following input data to support study. Comply with recommendations in IEEE 1584 and NFPA 70E as to amount of detail that is required to be acquired in field. Field data gathering must be under direct supervision and control of engineer in charge of performing study, and must be by, or under supervision of, qualified electrical professional engineer. Data include, but are not limited to, the following:
1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. Obtain electrical power utility impedance or available short circuit current at service.
3. Power sources and ties.
4. Short-circuit current at each system bus (three phase and line to ground).
5. Full-load current of loads.
6. Voltage level at each bus.
7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
8. For reactors, provide manufacturer and model designation, voltage rating and impedance.

9. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.
10. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
11. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
12. Busway manufacturer and model designation, current rating, impedance, lengths, size, and conductor material.
13. Motor horsepower and NEMA MG 1 code letter designation.
14. Low-voltage conductor sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).
15. Medium-voltage conductor sizes, lengths, conductor material, conductor construction and metallic shield performance parameters, and conduit material (magnetic or nonmagnetic).

3.04 LABELING

A. Apply one arc-flash label on front cover of each section of equipment and on side or rear covers with accessible live parts and hinged doors or removable plates for each equipment included in study. Base arc-flash label data on highest values calculated at each location.

B. Each piece of equipment listed below not fed by single transformer smaller than 75 kVA must have arc-flash label applied to it:
   1. Medium-voltage switchgear.
   2. Medium-voltage switches.
   3. Medium voltage transformers.
   4. Switchboards.
   5. Panelboards.
   6. Low voltage transformers.
   7. Safety switches.
   8. Control panels.

C. Note on record Drawings location of equipment where personnel could be exposed to arc-flash hazard during their work.
   1. Indicate arc-flash energy.
   2. Indicate protection level required.

3.05 APPLICATION OF WARNING LABELS

A. Install arc-flash warning labels under direct supervision and control of qualified electrical professional engineer.

END OF SECTION

SECTION 26 0923 LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. Electronic time switches.
2. Electromechanical dial-time switches.
3. Outdoor photoelectric switches, solid state, flexible mounting.
4. Outdoor photoelectric switches, solid state, luminaire-mounted.
5. Outdoor photoelectric switches, low voltage.
6. Daylight-harvesting switching controls.
7. Daylight-harvesting dimming controls, analog.
8. Daylight-harvesting dimming controls, digital.
9. Indoor occupancy and vacancy sensors.
10. Switchbox-mounted occupancy sensors.
11. Digital timer light switch.
12. High-bay occupancy sensors.
13. Extreme-temperature occupancy sensors.
14. Outdoor motion sensors.
15. Lighting contactors.
16. Emergency shunt relay.
17. Conductors and cables.

B. Related Requirements:
1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260011 "Facility Performance Requirements" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.
3. Section 262726 "Wiring Devices" for wall-box dimmers, non-networkable wall-switch occupancy sensors, and manual light switches.

1.02 ACTION SUBMITTALS

A. Product Data:
1. For each type of product.

B. Shop Drawings:
1. Show installation details for the following:
a. Occupancy sensors.
b. Vacancy sensors.
2. Interconnection diagrams showing field-installed wiring.
3. Include diagrams for power, signal, and control wiring.

C. Field quality-control reports.

1.03 INFORMATIONAL SUBMITTALS

A. Sample Warranty: For manufacturer's warranties.

1.04 WARRANTY

A. Special Extended Warranty: Manufacturer and Installer warrant that installed lighting control devices perform in accordance with specified requirements and agree to repair or replace, including labor, materials, and equipment, devices that fail to perform as specified within extended warranty period.
   1. Failures include, but are not limited to, the following:
      a. Faulty operation of lighting control software.
      b. Faulty operation of lighting control devices.
   2. Extended Warranty Period: 5 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 ELECTRONIC TIME SWITCHES

A. Electronic Time Switches: Solid state, programmable, with alphanumeric display; complying with UL 917.
   1. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. Contact Configuration: SPST
   3. Contact Rating: 20 A ballast load, 120/240 V(ac).
   4. Programs:
   5. Eight on-off set points on a 24-hour schedule and an annual holiday schedule that overrides the daily operation on holidays.
   6. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program.
   7. Astronomic Time: All channels.
   8. Automatic daylight savings time changeover.
   9. Battery Backup: Not less than seven days reserve, to maintain schedules and time clock.

2.02 ELECTROMECHANICAL DIAL-TIME SWITCHES

A. Electromechanical-Dial Time Switches: Comply with UL 917.
   1. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. Contact Configuration: SPST
   3. Contact Rating: 20 A ballast load, 120/240 V(ac).

4. Circuitry: Allows connection of a photoelectric relay as a substitute for the on-off function of a program.
5. Astronomic time dial.
6. Eight-Day Program: Uniquely programmable for each weekday and holidays.
7. Skip-a-day mode.
8. Wound-spring reserve carryover mechanism to keep time during power failures, minimum of 16 hours.

2.03 OUTDOOR PHOTOELECTRIC SWITCHES, SOLID STATE, FLEXIBLE MOUNTING

A. Description: Solid state, with SPST dry contacts rated for 1000 W, to operate connected relay, contactor coils, or microprocessor input; complying with UL 773A, and compatible with ballasts and LED lamps.
   1. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lx), with an adjustment for turn- on and turn-off levels within that range, and a directional lens in front of the photocell to prevent fixed light sources from causing turn-off.
   3. Time Delay: Fifteen-second minimum, to prevent false operation.
   4. Surge Protection: Metal-oxide varistor.
   5. Mounting: Twist lock complies with ANSI C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure from same source and manufacturer as switch.
   6. Failure Mode: Luminaire stays ON.

2.04 OUTDOOR PHOTOELECTRIC SWITCHES, SOLID STATE, LUMINAIRE-MOUNTED

A. Description: Solid state, with SPST dry contacts rated for 1000 W, to operate connected load, complying with UL 773, and compatible with CFL and LED lamps.
   1. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lx), with an adjustment for turn- on and turn-off levels within that range.
   3. Time Delay: Thirty-second minimum, to prevent false operation.
   4. Lightning Arrester: Air-gap type.
   5. Mounting: Twist lock complying with ANSI C136.10, with base from same source and manufacturer as switch.
   6. Failure Mode: Luminaire stays ON.

2.05 OUTDOOR PHOTOELECTRIC SWITCHES, LOW VOLTAGE

A. Description: Solid state; one set of NO dry contacts rated for 24 V(ac) at 1 A, to operate connected load, complying with UL 773, and compatible with luminaire.

1. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lx), with an adjustment for turn- on and turn-off levels within that range.
3. Time Delay: Thirty-second minimum, to prevent false operation.
4. Mounting: 1/2 inch (13 mm) threaded male conduit.
5. Failure Mode: Luminaire stays ON.
6. Power Pack:
   a. Digital controller capable of accepting four 8PSJ inputs with two outputs rated for 20 A LED load at 120 and 277 V(ac), for 13 A LED at 120 and 277 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), Class 2 power source.
      1) With integral current monitoring.
      2) Compatible with digital addressable lighting interface.
      3) Plenum rated.

2.06 DAYLIGHT-HARVESTING SWITCHING CONTROLS

A. Description: System operates indoor lighting.

B. Sequence of Operation: As daylight increases, the lights are turned off at a predetermined level. As daylight decreases, the lights are turned on at a predetermined level.
   1. Lighting control set point is based on two lighting conditions:
      a. When no daylight is present.
      b. When significant daylight is present (target level).
      c. System programming is done with two hand-held, remote-control tools.

C. Ceiling-Mounted Switching Controls:
   1. Solid-state, light-level sensor unit, with **integrated** power pack, that detects changes in indoor lighting levels that are perceived by the eye.

B. Electrical Components, Devices, and Accessories:
   1. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
   2. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (0 to 49 deg C).
   3. Sensor Output: Digital signal compatible with power pack.
   4. Sensor type: Closed loop.
   5. Zone: Multi.
   6. Power Pack:
      a. Digital controller capable of accepting 4 8PSJ inputs with two outputs rated for 20 A LED load at 120 and 277 V(ac), for 13 A LED at 120 and 277 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc) Class 2 power source.
         1) With integral current monitoring
         2) Compatible with digital addressable lighting interface.
         3) Plenum rated.
   7. General Space Sensors Light-Level Monitoring Range: 10 to 200 fc (108 to 2152 lx), with an adjustment for turn-on and turn-off levels within that range.

8. Atrium Space Sensors Light-Level Monitoring Range: 100 to 1000 fc (1080 to 10 800 lx), with an adjustment for turn-on and turn-off levels within that range.
9. Skylight Sensors Light-Level Monitoring Range: 1000 to 10 000 fc (10 800 to 108 000 lx), with an adjustment for turn-on and turn-off levels within that range.
10. Time Delay: Adjustable from 5 to 300 seconds to prevent cycling.
11. Set-Point Adjustment: Equip with deadband adjustment of 25, 50, and 75 percent above the "on" set point, or provide with separate adjustable "on" and "off" set points.
12. Test Mode: User selectable, overriding programmed time delay to allow settings check.
13. Control Load Status: User selectable to confirm that load wiring is correct.
14. Indicator: Two digital displays to indicate the beginning of on-off cycles.

2.07 DAYLIGHT-HARVESTING DIMMING CONTROLS, DIGITAL

A. Description: Sensing daylight and electrical lighting levels, the system adjusts the indoor electrical lighting levels. As daylight increases, lights are dimmed.
   1. Lighting control set point is based on the following two lighting conditions:
      a. When no daylight is present (target level).
      b. When significant daylight is present.
   2. System programming is done with two hand-held, remote-control tools.
      a. Initial setup tool.
      b. Tool for occupants to adjust the target levels by increasing the set point up to 25 percent, or by minimizing the electric lighting level.

B. Ceiling-Mounted Dimming Controls: Solid-state, light-level sensor unit, with integrated power pack, to detect changes in indoor lighting levels that are perceived by the eye.

C. Electrical Components, Devices, and Accessories:
   1. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. Sensor Output: zero to 10 V(dc) to operate luminaires. Sensor is powered by controller unit.
   3. Light-Level Sensor Set-Point Adjustment Range: 20 to 60 fc (120 to 640 lx).

D. Power Pack: Digital controller capable of accepting four 8PSJ inputs with two output(s) rated for 20 A LED load at 120 and 277 V(ac). Sensor has 24 V(dc) Class 2 power source.

1. With integral current monitoring.
2. Compatible with digital addressable lighting interface.
3. Plenum rated.

2.08 INDOOR OCCUPANCY AND VACANCY SENSORS

A. General Requirements for Sensors:
   1. Wall and/or Ceiling-mounted, solid-state indoor vacancy sensors.
   2. Dual technology.
   3. Integrated power pack.
   4. Hardwired connection to switch and BAS and lighting control system.
   5. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   6. Operation:
      a. Vacancy Sensor: Unless otherwise indicated, lights are manually turned on and sensor turns lights off when the room is unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
   7. Sensor Output: Sensor is powered from the power pack.
   8. Power: Line voltage.
   9. Power Pack: Dry contacts rated for 20 A LED load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
   10. Mounting:
      a. Sensor: Suitable for mounting in any position in a standard device box or outlet box.
      b. Relay: Externally mounted through a 1/2-inch (13 mm) knockout in a standard electrical enclosure.
      c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
   11. Indicator: Digital display, to show when motion is detected during testing and normal operation of sensor.
   12. Bypass Switch: Override the "on" function in case of sensor failure.
   13. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc (21.5 to 2152 lx); turn lights off when selected lighting level is present.

B. Dual-Technology Type: Wall and/or Ceiling mounted; detect occupants in coverage area using PIR and ultrasonic detection methods. The particular technology or combination of technologies that control on-off functions is selectable in the field by operating controls on unit.
   1. Sensitivity Adjustment: Separate for each sensing technology.
   2. Detector Sensitivity: Detect occurrences of 6 inch (150 mm) minimum movement of any portion of a human body that presents a target of not less than 36 sq. inch (23 200 sq. mm) and detect a person of average size and weight moving not less than 12 inch (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inch/s (305 mm/s).

3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96 inch (2440 mm) high ceiling.
4. Detection Coverage (Room, Wall Mounted): Detect occupancy anywhere within a 180- degree pattern centered on the sensor over an area of 1000 sq. ft. (110 sq. m) when mounted 48 inch (1200 mm) above finished floor.

2.09 SWITCHBOX-MOUNTED OCCUPANCY SENSORS

A. General Requirements for Sensors: Automatic-wall-switch occupancy sensor with manual on-off switch, suitable for mounting in a single gang switchbox, with provisions for connection to BAS using hardwired connection.
1. Listed and labeled in accordance with NFPA 70, by a qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application, and must comply with California Title 24.
2. Occupancy Sensor Operation: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn lights off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
3. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (0 to 49 deg C).
4. Switch Rating: Not less than 800 VA LED load at 120 V, 1200 VA LED load at 277 V, and 800 W incandescent.

2.10 CONDUCTORS AND CABLE

A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 16 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine lighting control devices before installation. Reject lighting control devices that are wet, moisture damaged, or mold damaged.

B. Examine walls and ceilings for suitable conditions where lighting control devices will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF SENSORS

A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.

B. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's instructions.

3.03 INSTALLATION OF WIRING

A. Wiring Method: Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size is 1/2 inch (13 mm).

B. Wiring within Enclosures: Separate power-limited and nonpower-limited conductors in accordance with conductor manufacturer's instructions.

C. Size conductors in accordance with lighting control device manufacturer's instructions unless otherwise indicated.

D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, device, and outlet boxes; terminal cabinets; and equipment enclosures.

3.04 IDENTIFICATION

A. Identify components and power and control wiring in accordance with Section 260553 "Identification for Electrical Systems.
   1. Identify controlled circuits in lighting contactors.
   2. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor

B. Label time switches and contactors with a unique designation.

3.05 FIELD QUALITY CONTROL

A. Field tests must be witnessed by Architect.

B. Tests and Inspections:
   1. Operational Test: After installing time switches and sensors, and after electrical circuitry has been energized, start units to confirm proper unit operation.
   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Nonconforming Work:

1. Lighting control devices will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Prepare test and inspection reports.

E. Manufacturer Services:
1. Engage factory-authorized service representative to supervise field tests and inspections.

3.06 ADJUSTING

A. Occupancy Adjustments: When requested within 3 months from date of Substantial Completion, provide on-site assistance in adjusting lighting control devices to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit Owner's operations.
2. For daylighting controls, adjust set points and deadband controls to suit Owner's operations.
3. Align high-bay occupancy sensors using manufacturer's laser aiming tool.

3.07 MAINTENANCE

A. Software and Firmware Service Agreement:
1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for two years.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within two years from date of Substantial Completion. Verify upgrading software includes operating system and new or revised licenses for using software.
a. Upgrade Notice: No fewer than 30 days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.
3. Upgrade Reports: Prepare written report after each update, documenting upgrades installed.

END OF SECTION

SECTION 26 22 13 - LOW-VOLTAGE DISTRIBUTION TRANSFORMERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Distribution, dry-type transformers with nominal primary and secondary rating of 600 V and less, with capacities up to 1500 kVA.

B. Related Requirements:
   1. Section 26 0500 "Basic Electrical Requirements" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

1.02 ACTION SUBMITTALS

A. Product Data:
   1. For each type of product.
      a. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type and size of transformer.
      b. Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer.

B. Shop Drawings:
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
   2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
   3. Include diagrams for power, signal, and control wiring.

C. Field Quality-Control Submittals:
   1. Field quality-control reports.

1.03 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:
   1. Transformer temporary heating, working clearances, anchoring, torque values, and insulation-resistance testing.

B. Source quality-control reports.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Inspection: On receipt, inspect for and note shipping damage to packaging and transformer.
   1. If manufacturer packaging is removed for inspection, and transformer will be stored after inspection, re-package transformer using original or new packaging materials that provide protection equivalent to manufacturer's packaging.

B. Storage: Store in warm, dry, and temperature-stable location in original shipping packaging.

C. Temporary Heating: Apply temporary heat in accordance with manufacturer's published instructions within enclosure of ventilated-type units, throughout periods during which equipment is not energized and when transformer is not in space that is continuously under normal control of temperature and humidity.

D. Handling: Follow manufacturer's instructions for lifting and transporting transformers.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Obtain each type of transformer from single source from single manufacturer.

2.02 GENERAL TRANSFORMER REQUIREMENTS

A. Description: Factory-assembled and -tested, air-cooled units for 60 Hz service.

B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

C. Transformers Rated 15 kVA and Larger:
   1. Comply with 10 CFR 431 (DOE 2016) efficiency levels.
   2. Marked as compliant with DOE 2016 efficiency levels by qualified electrical testing laboratory recognized by authorities having jurisdiction.

D. Shipping Restraints: Paint or otherwise color-code bolts, wedges, blocks, and other restraints that are to be removed after installation and before energizing. Use fluorescent colors that are easily identifiable inside transformer enclosure.

2.03 DISTRIBUTION TRANSFORMERS

A. Option in first paragraph below may not be available from manufacturers and is only applicable to single- and three-phase transformers greater than 10 kVA.

B. Comply with NFPA 70 and list and label as complying with UL 1561.

C. Cores: Electrical grade, non-aging silicon steel with high permeability and low hysteresis losses.
   1. One leg per phase.
   2. Core volume must allow efficient transformer operation at 10 percent above nominal tap voltage.
   3. Grounded to enclosure.

D. Coils: Continuous windings without splices except for taps.
   1. Coil Material: Copper.
   2. Internal Coil Connections: Brazed or pressure type.
   3. Terminal Connections: Bolted.

E. Encapsulation: Transformers smaller than 30 kVA must have core and coils completely resin encapsulated.

F. Enclosure: Ventilated.
   1. Core and coil must be encapsulated within resin compound using vacuum- pressure impregnation process to seal out moisture and air.
   2. KVA Ratings: Based on convection cooling only and not relying on auxiliary fans.
   3. Wiring Compartment: Sized for conduit entry and wiring installation.
   4. Environmental Protection:
      a. Indoor: UL 50E, Type 2.
      b. Outdoor: UL 50E, Type 3R.
   5. Finish Color: Gray weather-resistant enamel.

G. Taps for Transformers 3 kVA and Smaller: One 5 percent tap above normal full capacity.

H. Taps for Transformers 7.5 to 24 kVA: One 5 percent tap above and one 5 percent tap below normal full capacity.

I. Taps for Transformers 25 kVA and Larger: Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity.

J. Insulation Class, Smaller Than 30 kVA: 180 deg C, UL-component-recognized insulation system with maximum of 115 deg C rise above 40 deg C ambient temperature.

K. Insulation Class, 30 kVA and Larger: 220 deg C, UL-component-recognized insulation system with maximum of 150 deg C rise above 40 deg C ambient temperature.

L. Grounding: Provide ground-bar kit or ground bar installed on inside of transformer enclosure.

M. K-Factor Rating: Transformers indicated to be K-factor rated must comply with UL 1561 requirements for non-sinusoidal load current-handling capability to degree defined by designated K-factor.
   1. Unit may not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor, without exceeding indicated insulation class in 40 deg C maximum ambient and 24-hour average ambient of 30 deg C.
   2. Indicate value of K-factor on transformer nameplate.
   3. Unit must comply with requirements of DOE 2016 efficiency levels when tested in accordance with NEMA TP 2 with K-factor equal to one.

N. Electrostatic Shielding: Windings must have independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.
   1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
   2. Include special terminal for grounding shield.

O. Neutral: Rated 200 percent of full load current for K-factor-rated transformers.

P. Wall Brackets: Wall brackets fabricated from design drawings signed and sealed by qualified structural professional engineer.

Q. Low-Sound-Level Requirements: Maximum sound levels when factory tested in accordance with IEEE C57.12.91, as follows:
   1. 9.00 kVA and Less: 40 dB(A-weighted)
   2. 9.01 to 30.00 kVA: 45 dB(A-weighted)
   3. 30.01 to 50.00 kVA: 45 dB(A-weighted) for K-factors of 1, 4, and 9, and 48 dB(A-weighted) for K-factors of 13 and 20.
   4. 50.01 to 150.00 kVA: 50 dB(A-weighted) for K-factors of 1, 4, and 9, and 53 dB(A-weighted) for K-factors of 13 and 20.
   5. 150.01 to 300.00 kVA: 55 dB(A-weighted) for K-factors of 1, 4, and 9, and 58 dB(A-weighted) for K-factors of 13 and 20.
   6. 300.01 to 500.00 kVA: 60 dB(A-weighted) for K-factors of 1, 4, and 9, and 63 dB(A-weighted) for K-factors of 13 and 20.
   7. 500.01 to 700.00 kVA: 62 dB(A-weighted) for K-factors of 1, 4, and 9, and 65 dB(A-weighted) for K-factors of 13 and 20.

2.04 IDENTIFICATION

A. Nameplates:
   1. Engraved, laminated-acrylic or melamine plastic signs for distribution transformers, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 26 0553 "Identification for Electrical Systems."
   2. Self-adhesive label for distribution transformers. Self-adhesive labels are specified in Section 26 0553 "Identification for Electrical Systems."

2.05 SOURCE QUALITY CONTROL

A. Testing Administrant: Engage qualified electrical testing agency to evaluate transformer.

B. Factory Tests and Inspections: Test and inspect assembled system, by, or under supervision of, qualified electrical testing laboratory recognized by authorities having jurisdiction, in accordance with IEEE C57.12.01 and IEEE C57.12.91 before delivering to site. Affix label with name and date of qualified electrical testing laboratory's certification of system compliance on control units.
   1. Resistance measurements of windings at rated voltage connections and at tap connections.
   2. Ratio tests at rated voltage connections and at tap connections.
   3. Phase relation and polarity tests at rated voltage connections.
   4. No load losses, and excitation current and rated voltage at rated voltage connections.
   5. Impedance and load losses at rated current and rated frequency at rated voltage connections.
   6. Applied and induced tensile tests.
   7. Regulation and efficiency at rated load and voltage.
   8. Insulation-Resistance Tests:
      a. Line-side to ground.
      b. Load-side to ground.
      c. Line-side to load-side.
   9. Temperature tests.
   10. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

C. Nonconforming Work:
   1. System equipment that does not pass tests and inspections will be considered defective.

D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for transformers.

B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's published instructions.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

A. Verify that ground connections are in place and requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be 5 Ω at location of transformer
B. Environment: Enclosures must be rated for environment in which they are located. Covers for UL 50E, Type 4X enclosures may not cause accessibility problems.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install wall-mounted transformers level and plumb with wall brackets fabricated from design drawings signed and sealed by qualified structural professional engineer.
   1. Coordinate installation of wall-mounted and structure-hanging supports with actual transformer provided.
   2. Brace wall-mounted transformers as specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

B. Install transformers level and plumb on concrete base with vibration-dampening supports. Locate transformers away from corners and not parallel to adjacent wall surface.

C. Construct concrete bases and anchor floor-mounted transformers in accordance with manufacturer's published instructions, seismic requirements applicable to Project, and requirements in Section 260529 "Hangers and Supports for Electrical Systems."
   1. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

D. Secure transformer to concrete base in accordance with manufacturer's published instructions.

E. Secure covers to enclosure and tighten bolts to manufacturer-recommended torques to reduce noise generation.

F. Remove shipping bolts, blocking, and wedges.

3.03 CONNECTIONS

A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Tighten electrical connectors and terminals in accordance with manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

D. Provide flexible connections at conduit and conductor terminations and supports to eliminate sound and vibration transmission to building structure.

3.04 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

B. Field tests and inspections must be witnessed by architect and authorities having jurisdiction.

C. Tests and Inspections:
1. Small (Upto 167 kVA Single-Phase or 500 kVA Three-Phase) Dry-Type Transformer Field Tests:
   a. Visual and Mechanical Inspection.
      1) Inspect physical and mechanical condition.
      2) Inspect anchorage, alignment, and grounding.
      3) Verify that resilient mounts are free and that shipping brackets have been removed.
      4) Verify that unit is clean.
      5) Perform specific inspections and mechanical tests recommended by manufacturer.
      6) Verify that as-left tap connections are as specified.
      7) Verify presence of surge arresters and that their ratings are as specified.
   b. Electrical Tests:
      1) Measure resistance at windings, taps, and bolted connections.
      2) Perform insulation-resistance tests winding-to-winding and windings-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index: value of index may not be less than 1.0.
      3) Perform turns-ratio tests at tap positions. Test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
      4) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.
2. Large (Larger Than 167 kVA Single Phase or 500 kVA Three Phase) Dry-Type Transformer Field Tests:
   a. Visual and Mechanical Inspection:
      1) Inspect physical and mechanical condition.
      2) Inspect anchorage, alignment, and grounding.
      3) Verify that resilient mounts are free and that shipping brackets have been removed.
      4) Verify that unit is clean.
      5) Perform specific inspections and mechanical tests recommended by manufacturer.
      6) Verify that as-left tap connections are as specified.

7) Verify presence of surge arresters and that their ratings are as specified.

b. Electrical Tests:
   1) Measure resistance at windings, taps, and bolted connections.
   2) Perform insulation-resistance tests winding-to-winding and windings-to-ground. Apply voltage in accordance with manufacturer's published data. In absence of manufacturer's published data, comply with NETA ATS, Table 100.5. Calculate polarization index: value of index may not be less than 1.0.
   3) Perform power-factor or dissipation-factor tests on windings.
   4) Perform turns-ratio tests at tap positions. Test results may not deviate by more than one-half percent from either adjacent coils or calculated ratio. If test fails, replace transformer.
   5) Perform excitation-current test on each phase.
   6) Perform applied voltage test on line- and load-side windings to ground. See IEEE C57.12.91, Sections 10.2 and 10.9.
   7) Verify correct secondary voltage, phase-to-phase and phase-to-neutral, after energization and prior to loading.

D. Test Labeling: On completion of satisfactory testing of units, attach dated and signed "Satisfactory Test" label to tested components.

E. Nonconforming Work:
   1. Transformer will be considered defective if it does not pass tests and inspections.
   2. Remove and replace units that do not pass tests or inspections and retest as specified above.

F. Assemble and submit test and inspection reports.

G. Manufacturer Services:
   1. Engage factory-authorized service representative to supervise field tests and inspections.

3.05 ADJUSTING

A. Record transformer secondary voltage at unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 5 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Output Settings Report: Prepare written report recording output voltages and tap settings.

3.06 CLEANING

A. A.Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.07 MAINTENANCE

A. Infrared Scanning: Two months after Substantial Completion, perform infrared scan of transformer connections.
   1. Use infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
   2. Perform two follow-up infrared scans of transformers, one at four months and another at 11 months after Substantial Completion.
   3. Prepare certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action.

END OF SECTION

SECTION 26 24 13 - SWITCHBOARDS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:
1. Service and distribution switchboards rated 600 V and less.
2. Surge protection devices.
3. Disconnecting and overcurrent protective devices.
4. Instrumentation.
5. Control power.
6. Accessory components and features.
7. Identification.

B. Related Requirements
1. Section 26 0573.19 "Arc-Flash Hazard Analysis" for arc-flash analysis and arc-flash label requirements.

1.03 ACTION SUBMITTALS

A. Product Data: For each switchboard, overcurrent protective device, surge protection device, ground-fault protector, accessory, and component.
1. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

B. Shop Drawings: For each switchboard and related equipment.
1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Detail short-circuit current rating of switchboards and overcurrent protective devices.

5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
6. Detail utility company's metering provisions with indication of approval by utility company.
7. Include evidence of NRTL listing for series rating of installed devices.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.
10. Include schematic and wiring diagrams for power, signal, and control wiring.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Seismic Qualification Data: Certificates, for switchboards, overcurrent protective devices, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field Quality-Control Reports:
1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals.
1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
a. Routine maintenance requirements for switchboards and all installed components.
b. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
c. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Potential Transformer Fuses: Equal to 10 percent of quantity installed for each size and type but no fewer than two of each size and type.
   2. Control-Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
   3. Fuses and Fusible Devices for Fused Circuit Breakers: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
   4. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
   5. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
   6. Indicating Lights: Equal to 10 percent of quantity installed for each size and type but no less than one of each size and type.

1.07 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.

B. Testing Agency Qualifications: Accredited by NETA.
   1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.

B. Remove loose packing and flammable materials from inside switchboards and install temporary electric heating (250 W per section) connect factory-installed space heaters to temporary electrical service to prevent condensation.

C. Handle and prepare switchboards for installation according to NECA 400 NEMA PB 2.1.

1.09 FIELD CONDITIONS

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

B. Environmental Limitations:
   1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
   a. Ambient Temperature: Not exceeding 104 deg F (40 deg C).
   b. Altitude: Not exceeding 6600 feet (2000 m).

C. Unusual Service Conditions: NEMA PB 2, as follows:
1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet (2000 m).

D. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
1. Notify Architect, Construction Manager, and Owner no fewer than seven days in advance of proposed interruption of electric service.
2. Indicate method of providing temporary electric service.
3. Do not proceed with interruption of electric service without Owner's written permission.
4. Comply with NFPA 70E.

1.10 COORDINATION

A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.

1.11 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace switchboard enclosures, buswork, overcurrent protective devices, accessories, and factory installed interconnection wiring that fail in materials or workmanship within specified warranty period.
1. Warranty Period: Three years from date of Substantial Completion.

B. Manufacturer's Warranty: Manufacturer's agrees to repair or replace surge protection devices that fail in materials or workmanship within specified warranty period.
1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Switchboards shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation. Shake-table testing shall comply with ICC- ES AC156.
   2. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2.02 SWITCHBOARDS

A. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NEMA PB 2.

E. Comply with NFPA 70.

F. Comply with UL 891.

G. Front-Connected, Front-Accessible Switchboards:
   1. Main Devices: Fixed, individually mounted.
   2. Branch Devices: Panel mounted.
   3. Sections front and rear aligned.

H. Front- and Side-Accessible Switchboards:
   1. Main Devices: Fixed, individually mounted.
   2. Branch Devices: Panel mounted.
   3. Section Alignment: Front aligned.

I. Front- and Rear-Accessible Switchboards:
   1. Main Devices: Fixed, individually mounted.
   2. Branch Devices: Fixed, individually mounted.
   3. Sections front and rear aligned.

J. Nominal System Voltage: 480Y/277 V 208Y/120 V.

K. Main-Bus Continuous: 4000 A.

L. Seismic Requirements: Fabricate and test switchboards according to IEEE 344 to withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems."
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation. Shake-table testing shall comply with ICC- ES AC156.
      a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
      b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

M. Indoor Enclosures: Steel, NEMA 250, Type 1.

N. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray

O. finish over a rust-inhibiting primer on treated metal surface.

P. Outdoor Enclosures: Type 3R, with interior-lighted walk-in aisle.
   1. Finish: Factory-applied finish in manufacturer's standard color; undersurfaces treated with corrosion-resistant undercoating.
   2. Enclosure: Downward, rearward sloping roof; rear hinged doors for each section, with provisions for padlocking.
   3. Doors: Personnel door at each end of aisle, minimum width of 30 inches (762 mm); opening outwards; with panic hardware and provisions for cylinder lock. At least one door shall be sized to permit the largest single switchboard section to pass through without disassembling doors, hinges, or switchboard section.
   4. Accessories: LED luminaires, ceiling mounted; wired to a three-way light switch at each end of aisle; ground-fault circuit interrupter (GFCI) duplex receptacle; emergency battery pack luminaire installed on wall of aisle midway between personnel doors.
   5. Walk-in Aisle Heating and Ventilating:
      a. Factory-installed electric unit heater(s), wall or ceiling mounted, with integral thermostat and disconnect and with capacities to maintain switchboard interior temperature of 40 deg F (5 deg C) with outside design temperature of 0 deg F (minus 18 deg C).
      b. Factory-installed exhaust fan with capacities to maintain switchboard interior temperature of 100 deg F (38 deg C) with outside design temperature of 90 deg F (32 deg C).
      c. Ventilating openings complete with replaceable fiberglass air filters.
      d. Thermostat: Single stage; wired to control heat and exhaust fan.

6. Power for Space Heaters, Ventilation, Lighting, and Receptacle: Include a control-power transformer, with spare capacity of 25 percent, within the switchboard. Supply voltage shall be 120/208 V ac.
7. Power for space heaters, ventilation, lighting, and receptacle provided by a remote source.

Q. Barriers: Between adjacent switchboard sections.

R. Insulation and isolation for main bus of main section and main and vertical buses of feeder sections.

S. Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.
1. Space-Heater Control: Thermostats to maintain temperature of each section above expected dew point.
2. Space-Heater Power Source: 120-V external branch circuit.

T. Service Entrance Rating: Switchboards intended for use as service entrance equipment shall contain from one to six service disconnecting means with overcurrent protection, a neutral bus with disconnecting link, a grounding electrode conductor terminal, and a main bonding jumper.

U. Utility Metering Compartment: Barrier compartment and section complying with utility company's requirements; hinged sealable door; buses provisioned for mounting utility company's current transformers and potential transformers, or potential taps as required by utility company. If separate vertical section is required for utility metering, match and align with basic switchboard. Provide service entrance label and necessary applicable service entrance features.

V. Customer Metering Compartment: A separate customer metering compartment and section with front hinged door, and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks. Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.

W. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

X. Removable, Hinged Rear Doors and Compartment Covers: Secured by captive thumb screws, for access to rear interior of switchboard.

Y. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.

Z. Pull Box on Top of Switchboard:
   1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
   2. Set back from front to clear circuit-breaker removal mechanism.
   3. Removable covers shall form top, front, and sides. Top covers at rear shall be easily removable for drilling and cutting.
   4. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into switchboard.
   5. Cable supports shall be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.

AA. Buses and Connections: Three phase, four wire unless otherwise indicated.
   1. Provide phase bus arrangement A, B, C from front to back, top to bottom, and left to right when viewed from the front of the switchboard.
   2. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity,
   3. silver-plated.
   4. Phase- and Neutral-Bus Material: Tin-plated, high-strength, electrical-grade aluminum alloy with tin-plated aluminum circuit-breaker line connections.
   5. Copper feeder circuit-breaker line connections.
   6. Tin-plated aluminum feeder circuit-breaker line connections.
   7. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with compression connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.
   8. Ground Bus: 1/4-by-2-inch- (6-by-50-mm-) Minimum-size required by UL 891, hard- drawn copper of 98 percent conductivity, equipped with compression connectors for feeder and branch-circuit ground conductors.
   9. Main-Phase Buses and Equipment-Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
   10. Disconnect Links:
      a. Isolate neutral bus from incoming neutral conductors.
      b. Bond neutral bus to equipment-ground bus for switchboards utilized as service equipment or separately derived systems.
   11. Neutral Buses: 50 percent of the ampacity of phase buses unless otherwise indicated, equipped with compression connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
   12. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with compression connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
   13. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.

BB. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.

CC. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.

DD. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.

2.03 SURGE PROTECTION DEVICES

A. SPDs: Comply with UL 1449, Type 1.

B. SPDs: Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 1449, Type 1.

C. Features and Accessories:
1. Integral disconnect switch.
2. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
3. Indicator light display for protection status.
4. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.
5. Surge counter.

D. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 200 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.

E. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V , three-phase, four-wire circuits shall not exceed the following:
1. Line to Neutral: 1200 V for 480Y/277 V.
2. Line to Ground: 1200 V for 480Y/277 V.
3. Line to Line: 2000 V for 480Y/277 V.

F. Protection modes and UL 1449 VPR for 240/120 V, single-phase, three-wire circuits shall not exceed the following:
1. Line to Neutral: 700 V.
2. Line to Ground: 1000 V.
3. Line to Line: 1000 V.

G. SCCR: Equal or exceed 200 Ka.

H. Nominal Rating: 20 kA.

2.04 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.
   1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
   2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
   3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:
   4. Instantaneous trip.
   5. Long- and short-time pickup levels.
   6. Long- and short-time adjustments.
   7. Ground-fault pickup level, time delay, and I squared t response.
   8. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
   9. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter- style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
   10. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6-mA trip).
   11. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
   12. MCCB Features and Accessories:
      a. Standard frame sizes, trip ratings, and number of poles.
      b. Lugs: Compression style, suitable for number, size, trip ratings, and conductor material.
      c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
      d. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
      e. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
      f. Communication Capability: Circuit-breaker-mounted communication module with functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
      g. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75
      h. percent of rated voltage.
      i. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.

j. Auxiliary Contacts: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
k. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.

B. Insulated-Case Circuit Breaker (ICCB): 100 percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.
1. Fixed circuit-breaker mounting.
2. Two-step, stored-energy closing.
3. Full-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:
a. Instantaneous trip.
b. Time adjustments for long- and short-time pickup.
c. Ground-fault pickup level, time delay, and I squared t response.
4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
5. Remote trip indication and control.
6. Communication Capability: Web enabled integral Ethernet communication module and embedded Web server with factory-configured Web pages (HTML file format). Provide functions and features compatible with power monitoring and control system specified in Section 260913 "Electrical Power Monitoring and Control."
7. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
8. Control Voltage: 120-V ac.

C. Bolted-Pressure Contact Switch: Operating mechanism uses rotary-mechanical-bolting action to produce and maintain high clamping pressure on the switch blade after it engages the stationary contacts.
1. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.
2. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.
a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
3. Auxiliary Switches: Factory installed, SPDT, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
4. Service-Rated Switches: Labeled for use as service equipment.
5. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground- fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.

a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no- trip" mode is selected).

6. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.

D. High-Pressure, Butt-Type Contact Switch: Operating mechanism uses butt-type contacts and a spring-charged mechanism to produce and maintain high-pressure contact when switch is closed.
1. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.
2. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.
a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
3. Auxiliary Switches: Factory installed, SPDT, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
4. Service-Rated Switches: Labeled for use as service equipment.
5. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground- fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.
a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
6. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.

E. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

2.05 FUSES ARE SPECIFIED IN SECTION 262813 "FUSES."

2.06 INSTRUMENTATION

A. Instrument Transformers: NEMA EI 21.1, and the following:
   1. Potential Transformers: NEMA EI 21.1; 120 V, 60 Hz, tapped double secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.
   2. Current Transformers: NEMA EI 21.1; 5 A, 60 Hz, secondary; wound type; double secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.
   3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.
   4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.

B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:
   1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:
      a. Phase Currents, Each Phase: Plus or minus 0.5 percent.
      b. Phase-to-Phase Voltages, Three Phase: Plus or minus 0.5 percent.
      c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 0.5 percent.
      d. Megawatts: Plus or minus 1 percent.
      e. Megavars: Plus or minus 1 percent.
      f. Power Factor: Plus or minus 1 percent.
      g. Frequency: Plus or minus 0.1 percent.
      h. Accumulated Energy, Megawatt Hours: Plus or minus 1 percent; accumulated values unaffected by power outages up to 72 hours.
      i. Megawatt Demand: Plus or minus 1 percent; demand interval programmable from five to 60 minutes.
      j. Contact devices to operate remote impulse-totalizing demand meter.
   2. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.

C. Analog Meters:
   1. Meters: 4-inch (100-mm) diameter or 6 inches (150 mm) square, flush or semiflush, with anti-parallax 250-degree scales and external zero adjustment.

D. Voltmeters: Cover an expanded-scale range of nominal voltage plus 10 percent.

E. Instrument Switches: Rotary type with off position.
   1. Voltmeter Switches: Permit reading of all phase-to-phase voltages and, where a neutral is indicated, phase-to-neutral voltages.
   2. Ammeter Switches: Permit reading of current in each phase and maintain current-transformer secondaries in a closed-circuit condition at all times.

F. Ammeters: 2-1/2-inch (64-mm) minimum size with 90- or 120-degree scale. Meter and transfer device with off position, located on overcurrent device door for indicated feeder circuits only.

G. Watt-Hour Meters and Wattmeters:
1. Comply with ANSI C12.1.
2. Three-phase induction type with two stators, each with current and potential coil, rated 5 A, 120 V, 60 Hz.
3. Suitable for connection to three- and four-wire circuits.
4. Potential indicating lamps.
5. Adjustments for light and full load, phase balance, and power factor.
6. Four-dial clock register.
7. Integral demand indicator.
8. Contact devices to operate remote impulse-totalizing demand meter.
9. Ratchets to prevent reverse rotation.
10. Removable meter with drawout test plug.
11. Semiflush mounted case with matching cover.
12. Appropriate multiplier tag.

H. Impulse-Totalizing Demand Meter:
1. Comply with ANSI C12.1.
2. Suitable for use with switchboard watt-hour meter, including two-circuit totalizing relay.
3. Cyclometer.
4. Four-dial, totalizing kilowatt-hour register.
5. Positive chart drive mechanism.
6. Capillary pen holding a minimum of one month's ink supply.
7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
8. Capable of indicating and recording five -minute integrated demand of totalized system.

2.07 CONTROL POWER

A. Control Circuits: 120-V ac, supplied through secondary disconnecting devices from control-power transformer.

B. Control Circuits: 120-V ac, supplied from remote branch circuit.

C. Electrically Interlocked Main and Tie Circuit Breakers: Two control-power transformers in separate compartments, with interlocking relays, connected to the primary side of each control-power transformer at the line side of the associated main circuit breaker. 120-V secondaries connected through automatic transfer relays to ensure a fail-safe automatic transfer scheme.

D. Control-Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.

E. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

2.08 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from switchboard. Include relay and meter test plugs suitable for testing switchboard meters and switchboard class relays.

C. Portable Circuit-Breaker Lifting Device: Floor-supported, roller-based, elevating carriage arranged for movement of circuit breakers in and out of compartments for present and future circuit breakers.

D. Overhead Circuit-Breaker Lifting Device: Mounted at top front of switchboard, with hoist and lifting yokes matching each drawout circuit breaker.

E. Spare-Fuse Cabinet: Suitably identified, wall-mounted, lockable, compartmented steel box or cabinet. Arrange for wall mounting.

F. Mounting Accessories: For anchors, mounting channels, bolts, washers, and other mounting accessories, comply with requirements in Section 260548.16 "Seismic Controls for Electrical Systems" or manufacturer's instructions.

2.09 IDENTIFICATION

A. Mimic Bus: Entire single-line switchboard bus work, as depicted on factory record drawing, on a photoengraved nameplate.
   1. Nameplate: At least 0.032-inch- (0.813-mm-) thick anodized aluminum, located at eye level on front cover of the switchboard incoming service section.

B. Mimic Bus: Entire single-line switchboard bus work, as depicted on factory record drawing, on an engraved laminated-plastic (Gravoply) nameplate.
   1. Nameplate: At least 0.0625-inch- (1.588 mm-) thick laminated plastic (Gravoply), located at eye level on front cover of the switchboard incoming service section.

C. Mimic Bus: Continuously integrated mimic bus factory applied to front of switchboard. Arrange in single-line diagram format, using symbols and letter designations consistent with final mimic-bus diagram.

D. Coordinate mimic-bus segments with devices in switchboard sections to which they are applied. Produce a concise visual presentation of principal switchboard components and connections.

E. Presentation Media: Painted graphics in color contrasting with background color to represent bus and components, complete with lettered designations.

F. Service Equipment Label: NRTL labeled for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Receive, inspect, handle, and store switchboards according to NEMA PB 2.1.
   1. Lift or move panelboards with spreader bars and manufacturer-supplied lifting straps following manufacturer's instructions.
   2. Use rollers, slings, or other manufacturer-approved methods if lifting straps are not furnished.
   3. Protect from moisture, dust, dirt, and debris during storage and installation.
   4. Install temporary heating during storage per manufacturer's instructions.

B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.

C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work or that affect the performance of the equipment.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install switchboards and accessories according to NEMA PB 2.1.

B. Equipment Mounting: Install switchboards on concrete base, 4-inch (100-mm) nominal thickness. Comply with requirements for concrete base specified in Section 033000 "Cast-in- Place Concrete."
   1. Install conduits entering underneath the switchboard, entering under the vertical section where the conductors will terminate. Install with couplings flush with the concrete base. Extend 2 inches (50-mm) above concrete base after switchboard is anchored in place.
   2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
   3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   5. Install anchor bolts to elevations required for proper attachment to switchboards.

6. Anchor switchboard to building structure at the top of the switchboard if required or recommended by the manufacturer.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, straps and brackets, and temporary blocking of moving parts from switchboard units and components.

D. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

E. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.

F. Install filler plates in unused spaces of panel-mounted sections.

G. Install overcurrent protective devices, surge protection devices, and instrumentation.

H. Set field-adjustable switches and circuit-breaker trip ranges.

I. Install spare-fuse cabinet.

J. Comply with NECA 1.

3.03 CONNECTIONS

A. Comply with requirements for terminating feeder bus specified in Section 262500 "Enclosed Bus Assemblies." Drawings indicate general arrangement of bus, fittings, and specialties.

B. Comply with requirements for terminating cable trays specified in Section 260536 "Cable Trays for Electrical Systems." Drawings indicate general arrangement of cable trays, fittings, and specialties.

C. Bond conduits entering underneath the switchboard to the equipment ground bus with a bonding conductor sized per NFPA 70.

D. Support and secure conductors within the switchboard according to NFPA 70.

E. Extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.

3.04 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

C. Device Nameplates: Label each disconnecting, and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.05 FIELD QUALITY CONTRO

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections with the assistance of a factory-authorized service representative.
   1. Tests and Inspections:
   2. Acceptance Testing:
      a. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit. Open control and metering circuits within the switchboard and remove neutral connection to surge protection and other electronic devices prior to insulation test. Reconnect after test.
      b. Test continuity of each circuit.
   3. Test ground-fault protection of equipment for service equipment per NFPA 70.
   4. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   5. Correct malfunctioning units on-site where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
   6. Perform the following infrared scan tests and inspections, and prepare reports:
      a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchboard. Remove front and rear panels so joints and connections are accessible to portable scanner.
      b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
      c. Instruments and Equipment:
      d. Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

7. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

D. Switchboard will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.06 ADJUSTING

A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as indicated.

3.07 PROTECTION

A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

3.08 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories, and to use and reprogram microprocessor-based trip, monitoring, and communication units.

END OF SECTION

SECTION 26 24 16 - PANELBOARDS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:
1. Distribution panelboards.
2. Lighting and appliance branch-circuit panelboards.
3. Load centers.
4. Electronic-grade panelboards.

1.03 DEFINITIONS

A. ATS: Acceptance testing specification.

B. GFCI: Ground-fault circuit interrupter.

C. GFEP: Ground-fault equipment protection.

D. HID: High-intensity discharge.

E. MCCB: Molded-case circuit breaker.

F. SPD: Surge protective device.

G. VPR: Voltage protection rating.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of panelboard.
1. Include materials, switching and overcurrent protective devices, SPDs, accessories, and components indicated.
2. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: For each panelboard and related equipment.
1. Include dimensioned plans, elevations, sections, and details.

2. Show tabulations of installed devices with nameplates, conductor termination sizes, equipment features, and ratings.
3. Detail enclosure types including mounting and anchorage, environmental protection, knockouts, corner treatments, covers and doors, gaskets, hinges, and locks.
4. Detail bus configuration, current, and voltage ratings.
5. Short-circuit current rating of panelboards and overcurrent protective devices.
6. Include evidence of NRTL listing for series rating of installed devices.
7. Include evidence of NRTL listing for SPD as installed in panelboard.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include wiring diagrams for power, signal, and control wiring.
10. Key interlock scheme drawing and sequence of operations.
11. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device. Include an Internet link for electronic access to downloadable PDF of the coordination curves.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Panelboard Schedules: For installation in panelboards. Submit final versions after load balancing.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

1.07 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Keys: Two spares for each type of panelboard cabinet lock.
2. Circuit Breakers Including GFCI and GFEP Types: Two spares for each panelboard.
3. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
4. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.

1.08 QUALITY ASSURANCE

A. Manufacturer Qualifications: ISO 9001 or ISO 9002 certified.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

B. Handle and prepare panelboards for installation according to NEMA PB 1.

1.10 FIELD CONDITIONS

A. Environmental Limitations:
   1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
   2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
      a. Ambient Temperature: Not exceeding minus 22 deg F (minus 30 deg C) to plus 104 deg F (plus 40 deg C).
      b. Altitude: Not exceeding 6600 feet (2000 m).

B. Service Conditions: NEMA PB 1, usual service conditions, as follows:
   1. Ambient temperatures within limits specified.
   2. Altitude not exceeding 6600 feet (2000 m).

C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
   1. Notify Architect, Construction Manager, and Owner no fewer than two days in advance of proposed interruption of electric service.
   2. Do not proceed with interruption of electric service without Owner's written permission.
   3. Comply with NFPA 70E.

1.11 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace panelboards that fail in materials or workmanship within specified warranty period.
   1. Panelboard Warranty Period: 18 months from date of Substantial Completion.

B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace SPD that fails in materials or workmanship within specified warranty period.

1. SPD Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PANELBOARDS AND LOAD CENTERS COMMON REQUIREMENTS

A. Fabricate and test panelboards according to IEEE 344 to withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems."

B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NEMA PB 1.

E. Comply with NFPA 70.

F. Enclosures: Flush and Surface-mounted, dead-front cabinets.
   1. Rated for environmental conditions at installed location.
      a. Indoor Dry and Clean Locations: NEMA 250, Type 1.
      b. Outdoor Locations: NEMA 250, Type 3R.
      c. Kitchen and Wash-Down Areas: NEMA 250, Type 4X stainless steel.
      d. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
      e. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 5 Type 12.
   2. Height: 84 inches (2.13 m) maximum.
   3. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box. Trims shall cover all live parts and shall have no exposed hardware.
   4. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover. Trims shall cover all live parts and shall have no exposed hardware.
   5. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.
   6. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
   7. Finishes:
      a. Panels and Trim: Steel and galvanized steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
      b. Back Boxes: Same finish as panels and trim.

c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.

G. Incoming Mains:
1. Location: Convertible between top and bottom.
2. Main Breaker: Main lug interiors up to 400 amperes shall be field convertible to main breaker.

H. Phase, Neutral, and Ground Buses:
1. Material: Hard-drawn copper, 98 percent conductivity.
a. Plating shall run entire length of bus.
b. Bus shall be fully rated the entire length.
2. Interiors shall be factory assembled into a unit. Replacing switching and protective devices shall not disturb adjacent units or require removing the main bus connectors.
3. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
4. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
5. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure. Do not mount neutral bus in gutter.
6. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and listed and labeled by an NRTL acceptable to authority having jurisdiction, as suitable for nonlinear loads in electronic-grade panelboards and others designated on Drawings. Connectors shall be sized for double-sized or parallel conductors as indicated on Drawings. Do not mount neutral bus in gutter.
7. Split Bus: Vertical buses divided into individual vertical sections.

I. Conductor Connectors: Suitable for use with conductor material and sizes.
1. Material: Hard-drawn copper, 98 percent conductivity.
2. Terminations shall allow use of 75 deg C rated conductors without derating.
3. Size: Lugs suitable for indicated conductor sizes, with additional gutter space, if required, for larger conductors.
4. Main and Neutral Lugs: Mechanical type, with a lug on the neutral bar for each pole in the panelboard.
5. Ground Lugs and Bus-Configured Terminators: Mechanical type, with a lug on the bar for each pole in the panelboard.
6. Feed-Through Lugs: Mechanical type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
7. Subfeed (Double) Lugs: Mechanical type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
8. Gutter-Tap Lugs: Mechanical type suitable for use with conductor material and with matching insulating covers. Locate at same end of bus as incoming lugs or main device.
9. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.

J. NRTL Label: Panelboards or load centers shall be labeled by an NRTL acceptable to authority having jurisdiction for use as service equipment with one or more main service disconnecting and overcurrent protective devices. Panelboards or load centers shall have meter enclosures, wiring, connections, and other provisions for utility metering. Coordinate with utility company for exact requirements.

K. Future Devices: Panelboards or load centers shall have mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.
   1. Percentage of Future Space Capacity: 20 percent.

L. Panelboard Short-Circuit Current Rating: Rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by an NRTL. Include label or manual with size and type of allowable upstream and branch devices listed and labeled by an NRTL for series- connected short-circuit rating.
   1. Panelboards rated 240 V or less shall have short-circuit ratings as shown on Drawings, but not less than 10,000 A rms symmetrical.
   2. Panelboards rated above 240 V and less than 600 V shall have short-circuit ratings as shown on Drawings, but not less than 14,000 A rms symmetrical.

M. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals. Assembly listed by an NRTL for 100 percent interrupting capacity.
   1. Panelboards and overcurrent protective devices rated 240 V or less shall have short-circuit ratings as shown on Drawings, but not less than 10,000 A rms symmetrical.
   2. Panelboards and overcurrent protective devices rated above 240 V and less than 600 V shall have short-circuit ratings as shown on Drawings, but not less than 14,000 A rms symmetrical.

2.02 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Panelboards shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

B. Surge Suppression: Factory installed as an integral part of indicated panelboards, complying with UL 1449 SPD Type 1.

2.03 POWER PANELBOARDS

A. Panelboards: NEMA PB 1, distribution type.

B. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
   1. For doors more than 36 inches (914 mm) high, provide two latches, keyed alike.

C. Mains: Circuit breaker.

D. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.

E. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.

F. Branch Overcurrent Protective Devices: Fused switches.

G. Contactors in Main Bus: NEMA ICS 2, Class A, mechanically held, general-purpose controller, with same short-circuit interrupting rating as panelboard.
   1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
   2. External Control-Power Source: 120-V branch circuit.

2.04 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

A. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.

B. Mains: Circuit breaker or lugs only.

C. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.

D. Contactors in Main Bus: NEMA ICS 2, Class A, mechanically held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

E. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.

F. External Control-Power Source: 120-V branch circuit.

G. Doors: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.

H. Doors: Door-in-door construction with concealed hinges; secured with multipoint latch with tumbler lock; keyed alike. Outer door shall permit full access to the panel interior. Inner door shall permit access to breaker operating handles and labeling, but current carrying terminals and bus shall remain concealed.

I. Column-Type Panelboards: Single row of overcurrent devices with narrow gutter extension and overhead junction box equipped with ground and neutral terminal buses.
   1. Doors: Concealed hinges secured with multipoint latch with tumbler lock; keyed alike.

2.05 LOAD CENTERS

A. Load Centers: Comply with UL 67.

B. Mains: Circuit breaker or lugs only.

C. Branch Overcurrent Protective Devices: Plug-in circuit breakers, replaceable without disturbing adjacent units.

D. Doors: Concealed hinges secured with flush latch with tumbler lock; keyed alike.

E. Conductor Connectors: Mechanical type for main, neutral, and ground lugs and buses.

2.06 ELECTRONIC-GRADE PANELBOARDS

A. Panelboards: NEMA PB 1; with factory-installed, integral SPD; labeled by an NRTL for compliance with UL 67 and UL 1449 after installing SPD.

B. Doors: Secured with vault-type latch with tumbler lock; keyed alike.

C. Main Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.

D. Branch Overcurrent Protective Devices: Bolt-on thermal-magnetic circuit breakers.

E. SPD.
1. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 100 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.
2. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V or 208Y/120 V, three-phase, four-wire circuits shall not exceed the following:
    a. Line to Neutral: 1200 V for 480Y/277 V or 700 V for 208Y/120 V.
    b. Line to Ground: 1200 V for 480Y/277 V or 700 V for 208Y/120 V.
    c. Neutral to Ground: 1200 V for 480Y/277 V or 700 V for 208Y/120 V.
    d. Line to Line: 2000 V for 480Y/277 V or 1200 V for 208Y/120 V.
3. Protection modes and UL 1449 VPR for 240/120-V, single-phase, three-wire circuits shall not exceed the following:
    a. Line to Neutral: 700 V.
    b. Line to Ground: 700 V.
    c. Neutral to Ground: 700 V.
    d. Line to Line: 1200 V.
4. SCCR: Equal to the SCCR of the panelboard in which installed
5. Nominal Rating: 10 kA.

F. Buses:
1. Copper phase and neutral buses; 200 percent capacity neutral bus and lugs.
2. Copper equipment and isolated ground buses.

2.07 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. MCCB: Comply with UL 489, with interrupting capacity to meet available fault currents.
   1. Thermal-Magnetic Circuit Breakers:
   2. Inverse time-current element for low-level overloads.
   3. Instantaneous magnetic trip element for short circuits.
   4. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
   5. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field- adjustable trip setting.
   6. Electronic Trip Circuit Breakers:
      a. RMS sensing.
      b. Field-replaceable rating plug or electronic trip.
      c. Digital display of settings, trip targets, and indicated metering displays.
      d. Multi-button keypad to access programmable functions and monitored data.
      e. Ten-event, trip-history log. Each trip event shall be recorded with type, phase, and magnitude of fault that caused the trip.
      f. Integral test jack for connection to portable test set or laptop computer.
      g. Field-Adjustable Settings:
         1) Instantaneous trip.
         2) Long- and short-time pickup levels.
         3) Long and short time adjustments.
         4) Ground-fault pickup level, time delay, and I squared T response.
   7. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
   8. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6-mA trip).
   9. GFEP Circuit Breakers: Class B ground-fault protection (30-mA trip).
   10. Arc-Fault Circuit Interrupter Circuit Breakers: Comply with UL 1699; 120/240-V, single-pole configuration.
   11. Subfeed Circuit Breakers: Vertically mounted.
   12. MCCB Features and Accessories:
      a. Standard frame sizes, trip ratings, and number of poles.
      b. Breaker handle indicates tripped status.
      c. UL listed for reverse connection without restrictive line or load ratings.
      d. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor materials.
      e. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and HID lighting circuits.
      f. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
      g. Communication Capability: Circuit-breaker-mounted communication module with functions and features compatible with power monitoring and

control system specified in Section 260913 "Electrical Power Monitoring and Control."

h. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
i. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage with field-adjustable 0.1- to 0.6-second time delay.
j. Rating Plugs: Three-pole breakers with ampere ratings greater than 150 amperes shall have interchangeable rating plugs or electronic adjustable trip units.
k. Auxiliary Contacts: Two, SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
l. Alarm Switch: Single-pole, normally open contact that actuates only when circuit breaker trips.
m. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
n. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function with other upstream or downstream devices.
o. Multipole units enclosed in a single housing with a single handle or factory assembled to operate as a single unit.
p. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in on or off position.
q. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.

B. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
1. Fuses and Spare-Fuse Cabinet: Comply with requirements specified in Section 262813 "Fuses."
2. Fused Switch Features and Accessories:
a. Standard ampere ratings and number of poles.
b. Mechanical cover interlock with a manual interlock override, to prevent the opening of the cover when the switch is in the on position. The interlock shall prevent the switch from being turned on with the cover open. The operating handle shall have lock-off means with provisions for three padlocks.
c. Auxiliary Contacts: Two normally open and normally closed contact(s) that operate with switch handle operation.

2.08 IDENTIFICATION

A. Panelboard Label: Manufacturer's name and trademark, voltage, amperage, number of phases, and number of poles shall be located on the interior of the panelboard door.

B. Breaker Labels: Faceplate shall list current rating, UL and IEC certification standards, and AIC rating.

C. Circuit Directory: Directory card inside panelboard door, mounted in metal frame with transparent protective cover.
   1. Circuit directory shall identify specific purpose with detail sufficient to distinguish it from all other circuits.

D. Circuit Directory: Computer-generated circuit directory mounted inside panelboard door with transparent plastic protective cover.
   1. Circuit directory shall identify specific purpose with detail sufficient to distinguish it from all other circuits.

2.09 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify actual conditions with field measurements prior to ordering panelboards to verify that equipment fits in allocated space in, and comply with, minimum required clearances specified in NFPA 70.

B. Receive, inspect, handle, and store panelboards according to NEMA PB 1.1.

C. Examine panelboards before installation. Reject panelboards that are damaged, rusted, or have been subjected to water saturation.

D. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Comply with NECA 1.

C. Install panelboards and accessories according to NEMA PB 1.1.

D. Equipment Mounting:
   1. Install panelboards on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
   2. Attach panelboard to the vertical finished or structural surface behind the panelboard.
   3. Comply with requirements for seismic control devices specified in Section 260548.16 "Seismic Controls for Electrical Systems."

E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.

F. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."

G. Mount top of trim 90 inches (2286 mm) above finished floor unless otherwise indicated.

H. Mount panelboard cabinet plumb and rigid without distortion of box.

I. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.

J. Mount surface-mounted panelboards to steel slotted supports 5/8 inch (16 mm) in depth. Orient steel slotted supports vertically.

K. Install overcurrent protective devices and controllers not already factory installed.
   1. Set field-adjustable, circuit-breaker trip ranges.
   2. Tighten bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver per manufacturer's written instructions.

L. Make grounding connections and bond neutral for services and separately derived systems to ground. Make connections to grounding electrodes, separate grounds for isolated ground bars, and connections to separate ground bars.

M. Install filler plates in unused spaces.

N. Stub four 1-inch (25 mm) empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch (25 mm) empty conduits into raised floor space or below slab not on grade.

O. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.

P. Mount spare fuse cabinet in accessible location.

3.03 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; install warning signs complying with requirements in Section 260553 "Identification for Electrical Systems."

B. Create a directory to indicate installed circuit loads after balancing panelboard loads; incorporate Owner's final room designations. Obtain approval before installing. Handwritten directories are not acceptable. Install directory inside panelboard door

C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

D. Device Nameplates: Label each branch circuit device in power panelboards with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

E. Install warning signs complying with requirements in Section 260553 "Identification for Electrical Systems" identifying source of remote circuit.

3.04 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Acceptance Testing Preparation:
1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

D. Tests and Inspections:
1. Perform each visual and mechanical inspection and electrical test for low-voltage air circuit breakers and low-voltage surge arrestors stated in NETA ATS, Paragraph 7.6 Circuit Breakers and Paragraph 7.19.1 Surge Arrestors, Low-Voltage. Perform optional tests. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:
a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each

panelboard. Remove front panels so joints and connections are accessible to portable scanner.

b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.

c. Instruments and Equipment:

1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

E. Panelboards will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results, with comparisons of the two scans. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.05 ADJUSTING

A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Section 260573.16 "Coordination Studies."

C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes. Prior to making circuit changes to achieve load balancing, inform Architect of effect on phase color coding.

1. Measure loads during period of normal facility operations.
2. Perform circuit changes to achieve load balancing outside normal facility operation schedule or at times directed by the Architect. Avoid disrupting services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
3. After changing circuits to achieve load balancing, recheck loads during normal facility operations. Record load readings before and after changing circuits to achieve load balancing.
4. Tolerance: Maximum difference between phase loads, within a panelboard, shall not exceed 20 percent.

3.06 PROTECTION

A. Temporary Heating: Prior to energizing panelboards, apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION

SECTION 26 27 26 - WIRING DEVICES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
1. General-use switches, dimmer switches, and fan-speed controller switches.
2. General-grade single straight-blade receptacles.
3. General-grade duplex straight-blade receptacles.
4. Hospital-grade straight-blade receptacles.
5. Receptacles with arc-fault and ground-fault protective devices.
6. Locking receptacles.
7. Pin-and-sleeve receptacles.
8. Special-purpose power outlet assemblies.
9. Connectors, cords, and plugs.

B. Related Requirements:
1. Section 26 0923 "Lighting Control Devices" for occupancy sensors, timers, control-voltage switches, and control-voltage dimmers.

1.02 ALLOWANCES

A. A.See Section 01 2100 "Allowances" for description of allowances affecting items specified in this Section.

1.03 UNIT PRICES

A. A.See Section 01 2200 "Unit Prices" for description of unit prices affecting items specified in this Section.

1.04 ALTERNATES

A. A.See Section 01 2300 "Alternates" for description of alternates affecting items specified in this Section.

1.05 DEFINITIONS

A. Do not duplicate common acronyms, abbreviations, and terms defined in Section 260500 "Basic Electrical Requirements."

B. Retain terms that remain after this Section has been edited for a project. Include only essential definitions or acronyms not well understood by the affected industry or trade.

C. Commercial/Industrial-Use Cord Reel: A cord reel subject to severe use in factories, commercial garages, construction sites, and similar locations requiring a harder service-type cord.

D. UL 1472 Type I Dimmer: Dimmer in which air-gap switch is used to energize preset lighting levels.

1.06 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

B. Preinstallation Coordination Meeting(s): For ceiling-mounted cable reels. Conduct meeting as videoconference or at Project site.
   1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Architect, Construction Manager, and Owner's Commissioning Authority of scheduled meeting dates.

1.07 ACTION SUBMITTALS

A. Product Data:
   1. Toggle switches.
   2. Key lock switches.
   3. Maintained-contact switches.
   4. Momentary-contact switches.
   5. Rocker switches.
   6. Dimmer switches.
   7. Fan-speed controllers.
   8. Single straight-blade receptacles
   9. Duplex straight-blade receptacles.
   10. Duplex straight-blade receptacles with integral switching means.
   11. Receptacles with AFCI device.
   12. Receptacles with AFCI and GFCI devices.
   13. Receptacles with GFCI device.
   14. Locking receptacles.
   15. Pin-and-sleeve receptacles.
   16. Spring-driven commercial/industrial-use cord reels.
   17. Cord reels for use in hazardous locations.
   18. Cord connectors.

B. Shop Drawings:
   1. Wiring diagrams for duplex straight-blade receptacles with integral switching means.

1.08 INFORMATIONAL SUBMITTALS

A. Retain "Manufacturers' Instructions" Paragraph below when execution requirements state "in accordance with manufacturer's instructions," especially if those instructions may require preinstallation review and coordination with Construction Documents to verify constructability and commissioning requirements.

B. Manufacturers' Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:
   1. Dimmers.
   2. Fan-speed controllers.
   3. Single straight-blade receptacles.
   4. Duplex straight-blade receptacles.
   5. Duplex straight-blade receptacles with integral switching means.
   6. Receptacles with AFCI device.
   7. Receptacles with AFCI and GFCI devices.
   8. Receptacles with GFCI device.
   9. Locking receptacles.
   10. Pin-and-sleeve receptacles.
   11. Spring-driven commercial/industrial-use cord reels.
   12. Cord reels for use in hazardous locations.

C. Sample warranties.

1.09 CLOSEOUT SUBMITTALS

A. Sustainable Design Closeout Documentation.

1.10 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Items: Furnish extra materials to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Extra Keys for Key Lock Switches: One of each kind.
   2. SPD Receptacles: Equal to 10 percent of quantity installed for each kind specified, but no fewer than one unit.
   3. Controlled Receptacles: Equal to 10 percent of quantity installed for each kind specified, but no fewer than one unit.
   4. Cord Connectors: One of each kind.

B. Special tools are items that would not be available from a typical hardware store.

C. Special Tools:
   1. Proprietary equipment and software required to maintain, repair, adjust, or implement future changes to controlled receptacles.
   2. Proprietary equipment required to maintain, repair, adjust, or implement future changes to cord connectors.

1.11 WARRANTY FOR DEVICES

A. Special Manufacturer Extended Warranty: Manufacturer warrants that devices perform in accordance with specified requirements and agrees to provide repair or replacement of devices that fail to perform as specified within extended warranty period.
   1. Extended Warranty Period: Five years from date of Substantial Completion; full coverage for labor, materials, and equipment.
   2. Follow-On Extended Warranty Period: Eight years from date of Substantial Completion; full coverage for materials that failed because of transient voltage surges only, free on board destination, freight prepaid.

PART 2 - PRODUCTS

2.01 GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Toggle Switch :
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      a. Reference Standards: UL CCN WMUZ and UL 20.
   3. Options:
      a. Device Color: As indicated on architectural Drawings.
      b. Configuration:
         1) General-duty, 120-277 V, 15 A, single pole.
         2) General-duty, 120-277 V, 20 A, single pole.
         3) Extra-heavy-duty, 120-277 V, 15 A, single pole.
         4) Extra-heavy-duty, 120-277 V, 20 A, single pole.
         5) Extra-heavy-duty, 120-277 V, 30 A, single pole.
   4. Accessories:
      a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
      b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Toggle Switch with Forked Key Lock :
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      a. Reference Standards: UL CCN WMUZ and UL 20.
   3. Options:
      a. Device Color: As indicated on architectural Drawings.

b. Configuration:
1) Retain one of three subparagraphs below.
2) 120-277 V, 15 A, single pole.
3) 120-277 V, 20 A, single pole.
4) 120-277 V, 30 A, single pole.

C. Rocker Switch:
1. Regulatory Requirements:
a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
a. Reference Standards: UL CCN WMUZ and UL 20.
3. Options:
a. Device Color: As indicated on architectural Drawings.
b. Configuration:
1) 120-277 V, 15 A, single pole.
2) 120-277 V, 20 A, single pole.
4. Accessories:
a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Rocker Switch with Nightlight:
1. Regulatory Requirements:
a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
a. Reference Standards: UL CCN WMUZ and UL 20.
3. Options:
a. Device Color: As indicated on architectural Drawings.
b. Configuration: 120-277 V, 20 A, single pole.
4. Accessories:
a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Type I Dimmer Switch:
1. Regulatory Requirements:
a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.

2. General Characteristics:
   a. Reference Standards: UL CCN EOYX and UL 1472 Type I dimmer.
3. Options:
   a. Device Color: As indicated on architectural Drawings.
   b. Switch Style: Rocker.
   c. Dimming Control Style: Slide.
4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. Air-Gap Fan-Speed Controller Switch:
1. Regulatory Requirements:
   a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
   a. Reference Standards: UL CCN GQHG and UL 1917.
3. Options:
   a. Device Color: As indicated on architectural Drawings.
4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.02 GENERAL-GRADE SINGLE STRAIGHT-BLADE RECEPTACLES

A. Single Straight-Blade Receptacle:
1. Regulatory Requirements:
   a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
   a. Reference Standards: UL CCN RTRT and UL 498.
3. Options:
   a. Device Color: As indicated on architectural Drawings.
   b. Configuration:
      1) General-duty, NEMA 5-20R and NEMA 5-20R.
      2) General-duty, NEMA 6-30R and NEMA 6-50R.
      3) Heavy-duty, NEMA 5-30R and NEMA 5-50R.
      4) Heavy-duty, NEMA 6-30R and NEMA 6-50R.
      5) Extra-heavy-duty, NEMA 5-20R.

4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Tamper-Resistant, Clock Hanger Straight-Blade Receptacle:
1. Regulatory Requirements:
   a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. General Characteristics:
   a. Reference Standards: UL CCN RTRT and UL 498.
3. Options:
   a. Finish: Nickel plated.
   b. Configuration: Recessed, smooth wallplate; NEMA 5-15R and NEMA 5- 20R.

C. Tamper-Resistant, Floor-Mounted Display Straight-Blade Receptacle:
1. Regulatory Requirements:
   a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
   a. Reference Standards: UL CCN RTRT and UL 498.
   b. Configuration: NEMA 5-15R.
3. Options:
   a. Finish: Nickel plated.

2.03 GENERAL-GRADE DUPLEX STRAIGHT-BLADE RECEPTACLES

A. Duplex Straight-Blade Receptacle:
1. Regulatory Requirements:
   a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
   a. Reference Standards: UL CCN RTRT and UL 498.
3. Options:
   a. Device Color: As indicated on architectural Drawings.
   b. Configuration:
      1) General-duty, NEMA 5-15R and NEMA 5-20R.
      2) General-duty, NEMA 6 -20R.
      3) Heavy-duty, NEMA 5-15R and NEMA 5-20R.
      4) Heavy-duty, NEMA 6-20R.
      5) Extra-heavy-duty, NEMA 5-15R and NEMA 5-20R.
      6) Extra-heavy-duty, NEMA 6-20R.

4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Tamper-Resistant Duplex Straight-Blade Receptacle:
1. Regulatory Requirements:
   a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. General Characteristics:
   a. Reference Standards: UL CCN RTRT and UL 498.
3. Options:
   a. Device Color: As indicated on architectural Drawings.
   b. Configuration:
      1) General-duty, NEMA 5-15R and NEMA 5-20R.
      2) Heavy-duty, NEMA 5-15R and NEMA 5-20R.
      3) Extra-heavy-duty, NEMA 5-15R and NEMA 5-20R.
4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. Isolated Ground Duplex Straight-Blade Receptacle:
1. Regulatory Requirements:
   a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
   a. Reference Standards: UL CCN RTRT and UL 498.
3. Options:
   a. Device Color: As indicated on architectural Drawings.
   b. Configuration:
      1) General-duty, NEMA 5-15R and NEMA 5-20R.
      2) Heavy-duty, NEMA 5-15R and NEMA 5-20R.
      3) Extra-heavy-duty, NEMA 5-15R and NEMA 5-20R.
      4) Extra heavy-duty, NEMA 6-20R.
4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Isolated Ground Duplex Straight-Blade Receptacle with Type 3 Surge Protective Device:
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      a. Reference Standards:
         1) UL CCN RTRT and UL 498.
         2) Surge Protective Devices: UL 1449, Type 3.
   3. Options:
      a. Device Color: As indicated on architectural Drawings.
         1) Configuration: Heavy-duty, smooth face, NEMA 5-15R and NEMA 5- 20R.
   4. Accessories:
      a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
      b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Tamper-Resistant Duplex Straight-Blade Receptacle with USB Outlet to Power Class 2 Equipment:
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      a. Reference Standards: UL CCN RTRT and UL 498.
   3. Options:
      a. Device Color: As indicated on architectural Drawings.
      b. Configuration:
         1) General-duty, NEMA 5-15R and NEMA 5-20R; two USB-A ports.
         2) General-duty, NEMA 5-15R and NEMA 5-20R; two USB-C ports.
         3) General-duty, NEMA 5-15R and NEMA 5-20R; one USB-A port; one USB-C port.
         4) General-duty, smooth face, two USB-A ports.
         5) General-duty, smooth face, four USB-A ports.
   4. Accessories:
      a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
      b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. Wired Full-Controlled Duplex Straight-Blade Receptacle:
1. Regulatory Requirements:
a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
a. Reference Standards: UL CCN RTXI and UL Subject 498B.
3. Options:
a. Device Color: As indicated on architectural Drawings.
1) Configuration: NEMA 5-15R and NEMA 5-20R.
4. Accessories:
a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

G. Wired Half-Controlled Duplex Straight-Blade Receptacle:
1. Regulatory Requirements:
a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
a. Reference Standards: UL CCN RTXI and UL Subject 498B.
3. Options:
a. Device Color: As indicated on architectural Drawings.
1) Configuration: NEMA 5-15R and NEMA 5-20R.
4. Accessories:
a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.04 RECEPTACLES WITH ARC-FAULT AND GROUND-FAULT PROTECTIVE DEVICES

A. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with AFCI Device:
1. Regulatory Requirements:
a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
a. Reference Standards: UL CCN AWBZ, UL 498, UL 1699, and UL Subject 1699A.
3. Options:
a. Device Color: As indicated on architectural Drawings.
1) Configuration: Heavy-duty, NEMA 5-15R and NEMA 5-20R.

4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with AFCI and GFCI Device:
1. Regulatory Requirements:
   a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
   a. Reference Standards: UL CCN KCXX, UL 498, UL 943, UL 1699, and UL Subject 1699A.
3. Options:
   a. Device Color: As indicated on architectural Drawings.
      1) Configuration: Heavy-duty, NEMA 5-15R and NEMA 5-20R.
4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. General-Grade, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device:
1. Regulatory Requirements:
   a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
   a. Reference Standards: UL CCN KCXS, UL 498, and UL 943.
3. Options:
   a. Device Color: As indicated on architectural Drawings.
      1) Configuration: Heavy-duty, NEMA 5-15R and NEMA 5-20R.
4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. General-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device:
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      a. Reference Standards: UL CCN KCXS, UL 498, and UL 943.
   3. Options:
      a. Device Color: As indicated on architectural Drawings.
         1) Configuration: Heavy-duty, NEMA 5-15R and NEMA 5-20R.
   4. Accessories:
      a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
      b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. Hospital-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device:
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      a. Reference Standards: UL CCN KCXS, UL 498, and UL 943.
   3. Options:
      a. Device Color: As indicated on architectural Drawings.
         1) Configuration: Heavy-duty, NEMA 5-15R and NEMA 5-20R.
   4. Accessories:
      a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
      b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. Hospital-Grade, Isolated Ground, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device:
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      a. Reference Standards: UL CCN KCXS, UL 498, and UL 943.
   3. Options:
      a. Device Color: As indicated on architectural Drawings.
         1) Configuration: Heavy-duty, NEMA 5-15R and NEMA 5-20R.

4. Accessories:
   a. Cover Plate: 0.060 inch (1.5 mm) thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.05 LOCKING RECEPTACLES

A. NEMA, 125 V, Locking Receptacle:
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      a. Reference Standards: UL CCN RTRT and UL 498.
   3. Options:
      a. Device Color: Black with yellow voltage indication on face.
      b. Configuration: 2 pole, 3 wire, grounding, NEMA L5-15R, NEMA L5-20R, and NEMA L5-30R.

B. NEMA, 125 V, Isolated Ground Locking Receptacle:
   1. Regulatory Requirements:
   2. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   3. General Characteristics:
      a. Reference Standards: UL CCN RTRT and UL 498.
   4. Options:
      a. Device Color: Black with yellow voltage indication on face.
      b. Configuration: 2 pole, 3 wire, grounding, NEMA L5-15R, NEMA L5-20R, and NEMA L5-30R.

C. NEMA, 250 V, Locking Receptacle:
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      a. Reference Standards: UL CCN RTRT and UL 498.

D. Options:
      a. Device Color: Black with blue voltage indication on face.
      b. Configuration:
         1) 2 pole, 3 wire, grounding, NEMA L6-15R, NEMA L6-20R, and NEMA L6-30R.

E. NEMA, 250 V, Isolated Ground Locking Receptacle:
1. Regulatory Requirements:
a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
a. Reference Standards: UL CCN RTRT and UL 498.
3. Options:
a. Device Color: Black with blue voltage indication on face.
b. Configuration:
1) 2 pole, 3 wire, grounding, NEMA L6-15R, NEMA L6-20R, and NEMA L6-30R.

2.06 PIN-AND-SLEEVE RECEPTACLES

A. C2 Series, 125/250 V, Pin-and-Sleeve Receptacles:
1. Regulatory Requirements:
a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
2. General Characteristics:
a. Reference Standards: UL CCN QLIW, UL 1682, and UL 1686.
b. Series: UL 1686 C2 and IEC 60309-2 Series II.
c. Voltage Rating: 125/250 V.
3. Options:
a. Configuration:
1) 3 pole, 4 wire, 100 A, IP67.
2) 4 pole, 5 wire, 100 A, IP67.

B. C2 Series, 480 V, Pin-and-Sleeve Receptacles:
1. Regulatory Requirements:
a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
2. General Characteristics:
a. Reference Standards: UL CCN QLIW, UL 1682, and UL 1686.
b. Series: UL 1686 C2 and IEC 60309-2 Series II.
c. Voltage Rating: 480 V.
3. Options:
a. Configuration:
1) 3 pole, 4 wire, 100 A, IP67.
2) 4 pole, 5 wire, 100 A, IP67.

2.07 SPECIAL-PURPOSE POWER OUTLET ASSEMBLIES

A. Ceiling-Mounted, Wall-Mounted, and Floor-Mounted Power Outlet Cord Management Assembly:
   1. Source Limitations: Obtain all components for each power outlet cord management assembly from single manufacturer.
   2. Regulatory Requirements: Components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   3. General Characteristics: Provide the following specified products with fabricated power outlet cord management assembly:
      a. Cord Management System:
         1) Spring-driven commercial/industrial-use cord reel, 12 AWG conductors.
         2) Cord reel for use in Class I Group D hazardous location.
      b. Termination Fitting:
         1) Owner-furnished fitting.
         2) Outdoor-use, watertight, sealed cord connector.

B. Spring-Driven Commercial/Industrial-Use Cord Reel, No. 12 AWG Conductors:
   1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction, and marked for intended location and application.
   2. General Characteristics:
      b. Reference Standards: UL CCN SBCV and UL 355.
      c. Spring take-up retraction mechanism.
   3. Options:
      d. Electrical Rating with Cable: 600 V, 20 A.
      e. Color: As indicated by architect.
      f. Enclosure Degree of Protection: Type 4.
      g. Ball stop.
      h. Pivot base.
      i. Spool Capacity:
         1) No. 12 AWG, two wires and equipment ground, 20 ft (6 m).

2.08 CONNECTORS, CORDS, AND PLUGS

A. Outdoor-Use, Watertight, Sealed Cord Connector:
   1. Regulatory Requirements:
      a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
   2. General Characteristics:
      b. Reference Standards: UL CCN AXUT and UL 498.
   3. Options:
      c. Configuration:
         1) NEMA 5-15 with diagnostic LED indicator.
         2) NEMA 5-20 with diagnostic LED indicator.

3) NEMA 6-15.
4) NEMA 6-20.
5) NEMA L5-15.
6) NEMA L5-20 with diagnostic LED indicator.
7) NEMA L5-30.
8) NEMA L6-15.
9) NEMA L6-20.
10) NEMA L6-30.
11) NEMA L7-15.
12) NEMA L7-20.
13) NEMA L7-30.
14) NEMA L14-20.
15) NEMA L14-30.
16) NEMA L15-20.
17) NEMA L15-30.
18) NEMA L16-20.
19) NEMA L16-30.
20) NEMA L17-30.
21) NEMA L18-30.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Receptacles:
   1. Verify that receptacles to be procured and installed for Owner-furnished equipment are compatible with mating attachment plugs on equipment.

B. Cord Reels:
   2. Examine roughing-in for cord reel mounting and power connections to verify actual locations of mounts and power connections before cord reel installation.
   3. Examine walls, floors, and ceilings for suitable conditions where cord reel will be installed.
   4. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SELECTION OF CONTROLLED AND UNCONTROLLED RECEPTACLES

3.03 SELECTION OF GFCI RECEPTACLES

A. Healthcare Facilities: Unless protection of downstream branch-circuit wiring, cord sets, and power-supply cords is required by NFPA 70 or NFPA 99, provide non-feed-through GFCI receptacles.

3.04 INSTALLATION OF SWITCHES

A. Comply with manufacturer's instructions.

B. Reference Standards:
1. Unless more stringent requirements are specified in Contract Documents or manufacturers' instructions, comply with installation instructions in NECA NEIS 130.
2. Mounting Heights: Unless otherwise indicated in Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
3. Consult Architect for resolution of conflicting requirements.

C. Identification:
1. Identify cover or cover plate for device with panelboard identification and circuit number in accordance with Section 260553 "Identification for Electrical Systems."
a. Mark cover or cover plate using hot, stamped, or engraved machine printing with black-filled lettering and provide durable wire markers or tags inside device box or outlet box.
b. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

D. Interfaces with Other Work:
1. Coordinate installation of new products with existing conditions.

3.05 INSTALLATION OF STRAIGHT-BLADE RECEPTACLES

A. Comply with manufacturer's instructions.

B. Reference Standards:
1. Unless more stringent requirements are specified in Contract Documents or manufacturers' instructions, comply with installation instructions in NECA NEIS 130.
2. Mounting Heights: Unless otherwise indicated in Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
3. Receptacle Orientation: Unless otherwise indicated in Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.
4. Hospital-Grade Receptacle Orientation: Orient receptacle with ground pin or neutral pin at top.
5. Consult Architect for resolution of conflicting requirements.

C. Identification:
1. Identify cover or cover plate for device with panelboard identification and circuit number in accordance with Section 260553 "Identification for Electrical Systems."
a. Mark cover or cover plate using hot, stamped, or engraved machine printing with black-filled lettering and provide durable wire markers or tags inside device box or outlet box.
b. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

D. Interfaces with Other Work:
   1. Do not install Type 3 SPD, including surge-protected relocatable taps and power strips, on branch circuit downstream of GFCI device.
   2. Coordinate installation of new products with existing conditions.

3.06 INSTALLATION OF LOCKING RECEPTACLES

A. Comply with manufacturer's instructions.

B. Reference Standards:
   1. Unless more stringent requirements are specified in Contract Documents or manufacturers' instructions, comply with installation instructions in NECA NEIS 130.
   2. Mounting Heights: Unless otherwise indicated in Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
   3. Receptacle Orientation: Unless otherwise indicated in Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.
   4. Consult Architect for resolution of conflicting requirements.

C. Identification:
   1. Identify cover or cover plate for device with panelboard identification and circuit number in accordance with Section 260553 "Identification for Electrical Systems."
      a. Mark cover or cover plate using hot, stamped, or engraved machine printing with black-filled lettering and provide durable wire markers or tags inside device box or outlet box.
      b. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

D. Interfaces with Other Work:
   1. Coordinate installation of new products with existing conditions.

3.07 INSTALLATION OF PIN-AND-SLEEVE RECEPTACLES

A. Comply with manufacturer's instructions.

B. Reference Standards:
   1. Unless more stringent requirements are specified in Contract Documents or manufacturers' instructions, comply with installation instructions in NECA NEIS 130.
   2. Mounting Heights: Unless otherwise indicated in Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
   3. Receptacle Orientation: Unless otherwise indicated in Contract Documents, orient receptacle to match configuration diagram in UL 1686.
   4. Consult Architect for resolution of conflicting requirements.

C. Identification:
1. Identify cover or cover plate for device with panelboard identification and circuit number in accordance with Section 260553 "Identification for Electrical Systems."
a. Mark cover or cover plate using hot, stamped, or engraved machine printing with black-filled lettering, and provide durable wire markers or tags inside device box or outlet box.
b. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

D. Interfaces with Other Work:
1. Coordinate installation of new products with existing conditions

3.08 INSTALLATION OF CORD REELS AND FITTINGS

A. Comply with manufacturer's instructions.

B. Special Techniques:

C. Interfaces with Other Work:
1. Coordinate installation of new products with existing conditions.

3.09 INSTALLATION OF CONNECTORS, CORDS, AND PLUGS

A. Comply with manufacturer's instructions.

B. Reference Standards:
1. Consult Architect for resolution of conflicting requirements.

C. Interfaces with Other Work:
1. Coordinate with Section 262726.43 "Special-Purpose Power Outlet Assemblies" for installation of connectors and cords on fabricated power-outlet cord management assemblies.
2. Coordinate installation of new products with existing conditions.

3.10 FIELD QUALITY CONTROL OF SWITCHES

A. Testing Preparation:

B. Field tests and inspections must be witnessed by Architect and authorities having jurisdiction.

C. Tests and Inspections:
1. Perform tests and inspections in accordance with manufacturers' instructions.

D. Nonconforming Work:
1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Assemble and submit test and inspection reports.

F. Manufacturer Services:
1. Engage factory-authorized service representative to supervise field tests and inspections.

3.11 FIELD QUALITY CONTROL OF STRAIGHT-BLADE RECEPTACLES

A. Testing Preparation:
1. Field tests and inspections must be witnessed by Architect and authorities having jurisdiction.

B. Tests and Inspections:
1. Insert and remove test plug to verify that device is securely mounted.
2. Verify polarity of hot and neutral pins.
3. Measure line voltage.
4. Measure percent voltage drop.
5. Measure grounding circuit continuity; impedance must be not greater than 2 ohms.
6. Healthcare Facilities: Test straight-blade receptacles in patient care spaces with receptacle pin tension test instrument in accordance with NFPA 99. Retention force of ground pin must be not less than 115 g (4 oz).
7. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' instructions.

C. Nonconforming Work:
1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Assemble and submit test and inspection reports.

E. Manufacturer Services:
1. Engage factory-authorized service representative to supervise field tests and inspections.

3.12 FIELD QUALITY CONTROL OF LOCKING RECEPTACLES

A. Testing Preparation:

B. Field tests and inspections must be witnessed by Architect and authorities having jurisdiction.

C. Tests and Inspections:
1. Insert and remove test plug to verify that device is securely mounted.
2. Verify polarity of hot and neutral pins.
3. Measure line voltage.
4. Measure percent voltage drop.

5. Measure grounding circuit continuity; impedance must be not greater than 2 ohms.
6. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' instructions.

D. Nonconforming Work:
1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Assemble and submit test and inspection reports.

F. Manufacturer Services:
1. Engage factory-authorized service representative to supervise field tests and inspections.

3.13 FIELD QUALITY CONTROL OF PIN-AND-SLEEVE RECEPTACLES

A. Testing Preparation:

B. Field tests and inspections must be witnessed by Architect and authorities having jurisdiction.

C. Tests and Inspections:
1. Insert and remove test plug to verify that device is securely mounted.
2. Measure line voltage.
3. Measure percent voltage drop.
4. Measure ground impedance, which must be not greater than 2 ohms.
5. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' instructions.

D. Nonconforming Work:
1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Assemble and submit test and inspection reports.

F. Manufacturer Services:
1. Engage factory-authorized service representative to supervise field tests and inspections.

3.14 FIELD QUALITY CONTROL OF CORD REELS AND FITTINGS

A. Testing Preparation:

B. Field tests and inspections must be witnessed by Architect and authorities having jurisdiction.

C. Tests and Inspections:
   1. Perform tests and inspections indicated in manufacturer's instructions.

D. Nonconforming Work:
   1. Components and assemblies will be considered defective if they do not pass tests and inspections.
   2. Remove and replace defective units and retest.

E. Assemble and submit test and inspection reports.

F. Manufacturer Services:
   1. Engage factory-authorized service representative to supervise field tests and inspections.

3.15 FIELD QUALITY CONTROL OF CONNECTORS, CORDS, AND PLUGS

A. Testing Preparation:

B. Field tests and inspections must be witnessed by Architect and authorities having jurisdiction.

C. Tests and Inspections:
   1. Perform tests and inspections indicated in manufacturer's instructions.

D. Nonconforming Work:
   1. Unit will be considered defective if it does not pass tests and inspections.
   2. Remove and replace defective units and retest.

E. Assemble and submit test and inspection reports.

F. Manufacturer Services:
   1. Engage factory-authorized service representative to supervise field tests and inspections.

3.16 SYSTEM STARTUP FOR SWITCHES

A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks for momentary switches, dimmer switches, and fan-speed controller switches in accordance with manufacturer's instructions.

3.17 ADJUSTING

A. Occupancy Adjustments for Controlled Receptacles: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than- normal occupancy hours for this purpose.

B. Cord Reels and Fittings: Adjust spring mechanisms and moving parts of cord reels and fittings to function smoothly and lubricate as recommended in writing by manufacturer.

3.18 PROTECTION

A. Devices:
1. Schedule and sequence installation to minimize risk of contamination of wires and cables, devices, device boxes, outlet boxes, covers, and cover plates by plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other materials.
2. After installation, protect wires and cables, devices, device boxes, outlet boxes, covers, and cover plates from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

B. Cord Reels and Fittings:
1. After installation, protect cord reels and fittings from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

C. Connectors, Cords, and Plugs:
1. After installation, protect connectors, cords, and plugs from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

END OF SECTION

SECTION 26 31 00 – PHOTOVOLTAIC COMPONENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. PV system description.
2. Manufactured PV units.
3. PV module framing.
4. PV array construction.
5. Inverters.
6. System overcurrent protection.
7. Mounting structures.

1.3 DEFINITIONS

A. CEC: California Energy Commission.

B. ETFE: Ethylene tetrafluoroethylene.

C. FEP: Fluorinated ethylene propylene.

D. IP Code: Required ingress protection to comply with IEC 60529.

E. MPPT: Maximum power point tracking.

F. PTC: PVUSA Test Condition. Commonly regarded as a “real-world” measure of PV output. See below for definition of “PVUSA.”

G. PV: Photovoltaic.

H. PVUSA: Photovoltaics for Utility Systems Applications.

I. STC: Standard Test Conditions defined in IEC 61215.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for PV panels.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For PV modules.
   1. Include plans, elevations, sections, and mounting details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Detail fabrication and assembly.
   4. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Sample Warranty: For manufacturer's special materials and workmanship warranty and minimum power output warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For PV modules to include in operation and maintenance manuals.

1.7 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of PV modules that fail in materials or workmanship within specified warranty period.
   1. Manufacturer's materials and workmanship warranties include, but are not limited to, the following:
      a. Faulty operation of PV modules.
      b. Faulty operation of Inverter
   2. Warranty Period: Five years from date of Substantial Completion.

B. Manufacturer's Special Minimum Power Output Warranty: Manufacturer agrees to repair or replace components of PV modules that fail to exhibit the minimum power output within specified warranty period. Special warranty, applying to modules only, applies to materials only, on a prorated basis, for period specified.
   1. Manufacturer's minimum power output warranties include, but are not limited to, the following warranty periods, from date of Substantial Completion:

a. Specified minimum power output to 80 percent or more, for a period of 25 years.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. PV Module: Canadian Solar Co. Ltd. - TOPBiHiKu7 CS7N-720TB-AG
   2. Inverter: SolarEdge – S6-GC33K-US

2.2 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Seismic Qualification Certificates: For inverters, distribution boards, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

2.3 PV CAPACITIES AND CHARACTERISTICS

A. Minimum Electrical Characteristics:
   1. Nominal Power (Pnom): 720W
   2. Power Tolerance: +5/-3%
   3. Average Panel Efficiency: 23.2%
   4. Rated Voltage (Vmpp): 40.8V
   5. Rated Current (Impp): 17.67A
   6. Open-Circuit Voltage (Voc): 48.7V
   7. Short-Circuit Current (Isc): 18.69A
   8. Maximum System Voltage: 1500V
   9. Maximum Series Fuse: 35A
   10. Power Temperature Coefficient: -0.29%/C
   11. Voltage Temperature Coefficient: -0.25%/C
   12. Current Temperature Coefficient: 0.05%/C

2.4 PV SYSTEMS DESCRIPTION

A. Interactive PV System: Collectors connected in parallel to the electrical utility; and capable of providing power for Project and supplying power to a distributed network.
   1. System Components:
      a. PV modules.
      b. Array frame.
      c. Utility-interactive inverter.
      d. Overcurrent protection, disconnect, and rapid shutdown devices.
      e. Mounting structure.
      f. Utility meter.

2.5 MANUFACTURED PV UNITS

A. Cell Materials: Polycrystalline.
   1. TOPCon Cell

B. Module Construction:
   1. Nominal Size: 93.9 inches wide by 51.3 inches long.
   2. Weight: 83.3 lb.

C. Encapsulant: Ethyl vinyl acetate.

D. Front and Back Panel: High-transmission tempered anti-reflective tempered glass.

E. Backing Material: Polyester film.
   1. Color: White.

F. Bypass Diode Protection: Internal.

G. Junction Box:
   1. Size: 1.56 by 3.96 by 0.52 inch.
   2. Fully potted, vandal resistant.
   3. IP Code: IP67.
   4. Flammability Test: UL 1703.

H. Output Cabling:
   1. 0.158 inch.
   2. Quick, multiconnect, polarized connectors.
   3. Two-Conductor Harness: No traditional return wire is needed from the end of a row back to the source combiner.

I. Series Fuse Rating: 35A.

2.6 PV MODULE FRAMING

A. PV laminates mounted in anodized extruded-aluminum frames.
   1. Entire assembly UL Listed for electrical and fire safety, according to UL 1703, and complying with IEC 61215.
   2. Frame strength exceeding requirements of certifying agencies in subparagraph above.
   3. Finish: Anodized aluminum.
      a. Alloy and temper recommended by framing manufacturer for strength, corrosion resistance, and application of required finish.
      b. Color: As indicated by manufacturer's designations.

2.7 PV ARRAY CONSTRUCTION

A. Framing: Solar Wedge, 2" tall rail by Professional Solar products Inc attached to stanchion posts.
   1. Material: Extruded aluminum.
   2. Maximum System Weight: Less than 4 lb/sq. ft.
   3. Raceway Cover Plates: Aluminum.
   4. One degree tilt.

B. Flat-Roof Mounting:
   1. Wind-tunnel tested to 120-mph wind.
   2. Service Life: 20 years.
   3. Freestanding system, attached to stanchion posts.

2.8 INVERTER

A. Inverter Type: Central.

B. Control Type: Maximum power point tracker control.

C. Inverter Electrical Characteristics:
   1. Rated AC Power Output: 33000 VA
   2. Maximum AC Power Output: 33000 VA
   3. Maximum Continuous Output Current per Phase: 40A
   4. THD: Less than 3%
   5. Maximum DC Power: 33000W
   6. Maximum Input Current: 40Adc
   7. Maximum Input Short Circuit Current 63Adc

D. Operating Conditions:
   1. Operating Ambient Temperatures: Minus 13 to plus 140 deg F.
   2. Storage Temperature: Minus 13 to plus 140 deg F.
   3. Relative Humidity: Zero to 100 percent, noncondensing.

E. Charge controllers shall have the following:
   1. Overcurrent protection.
   2. Generator input breaker box.
   3. Automatic transfer relay.
   4. Digital display.
   5. Transformer.
   6. Disconnect switch.
   7. Shunt controller.
   8. Shunt regulator.
   9. Surge overload protection.

F. Enclosure:
   1. NEMA 250, Type 3R.
   2. Enclosure Material: Galvanized steel.
   3. Cooling Methods:
      a. Passive cooling.
   4. Protective Functions:
      a. AC over/undervoltage.
      b. AC over/underfrequency.
      c. Ground overcurrent.
      d. Overtemperature.
      e. AC and DC overcurrent.
      f. DC overvoltage.
      g. DC polarity.
      h. Surge protection.
      i. AFCI
      j. Integrated DC and AC switches
   5. Standard LCD user display.

G. Disconnects: Rated for system voltage and conductor.

H. Regulatory Approvals:
   1. IEEE 1547.1.
   2. IEEE 1547.3.
   3. UL 1741.
   4.

2.9 PERFORMANCE METER

A. The system shall include a California Energy Commission approved performance meter as specified on plans.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrate areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Do not begin installation until mounting surfaces have been properly prepared.

C. If preparation of mounting surfaces is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

D. Examine modules and array frame before installation. Reject modules and arrays that are wet, moisture damaged, or mold damaged.

E. Examine roofs, supports, and supporting structures for suitable conditions where PV system will be installed.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with NECA 1.

B. Coordinate layout and installation of PV panels with roof assembly and other construction.

C. Support PV panel assemblies independent of supports for other elements such as roof and support assemblies, enclosures, vents, pipes, and conduits. Support assembly to prevent twisting from eccentric loading.

D. Install weatherseal fittings and flanges where PV panel assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 07 92 00 “Joint Sealants” for materials and application.

E. Seismic Restraints: Comply with requirements for seismic-restraint devices specified in Section 26 05 48.16 “Seismic Controls for Electric Systems.”

F. Wiring Method: Install cables in raceways.

G. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer’s limitations on bending radii. Install lacing bars and distribution spools.

3.3 CONNECTIONS

A. Coordinate PV panel cabling to equipment enclosures to ensure proper connections.

B. Coordinate installation of utility-interactive meter with utility.

C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

D. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

3.4 FIELD TESTS

A. Complete testing of the installed system shall be performed by a factory-certified representative prior to system start up. All required modifications shall be made and system signed off.

B. Grounding: Grounding shall conform to Section 26 05 26.

3.5 UTILITY INTERCONNECT

A. Contractor shall coordinate with the utility company to provide all grid intertie requirements and process all required paper work per utility company requirements.

END OF SECTION

SECTION 26 55 61 - THEATRICAL LIGHTING

PART 1 - GENERAL

1.01 SUMMARY

A. This specification section includes the engineering, fabrication, furnishing, delivery, and installation of new theatrical stage lighting equipment as specified in the 'Products' specifications and as indicated on the related stage lighting drawing documents for the auditorium stage.

B. Contract Documents and General Requirements apply to the work of this Section.

C. All bidders shall fully inform themselves of the conditions under which the work is to be performed. No additional compensation shall be allowed for any labor or item the bidder could have been fully informed of prior to the bid date.

D. While the components, quantities, and arrangements described herein and shown on the drawings indicate specific details for the realization of the stage systems, bidders may propose alternate details and components that will fulfill the functional parameters of the envisioned system. In such event, bidders shall submit a complete set of specifications and drawings, not less detailed than these and following the same general outline, together with a detailed statement indicating paragraph by paragraph wherein the equipment to be offered deviates from specifications included in this bid request. Where alternate proposals are offered they shall be submitted with the amount to be added or deducted from the base bid which is required from all bidders.

1.02 SCOPE OF WORK

A. Work under this section consists of the installation of all materials and equipment necessary for the proper operation of all stage lighting equipment. Installation contractor shall furnish qualified personnel to test and adjust the equipment after installation until specified performance is attained.

B. Preparation and submission of complete engineered shop drawings for approval by the Architect and Theatre Systems Consultant.

C. Verification of conditions and dimensions at the job site.

D. The adjustment and testing of the completed installation by the Contractor's personnel, subject to Architect and Theatre Systems Consultant's approval.

E. Submission of required record documents.

F. Coordination with other affected work, trades, and inspections.

G. Installation work includes, but is not limited to the following:
   1. New stage lighting relay and dimmer racks.

2. New stage lighting data distribution and lighting control processor racks.
3. New lighting control receptacle stations and low voltage control wiring.
4. New house lighting control stations and low voltage control wiring.
5. New stage manager's control panel and low voltage control wiring.
6. New worklight control stations and low voltage control wiring.
7. New lighting control DMX512 protocol wiring, low voltage house light, worklight, and rehearsal light wiring, Ethernet data wiring, and any additional new control wiring per the systems manufacturer's final shop drawings.
8. New circuitry distribution connector strips, plug boxes and wall boxes.
9. New stage lighting spotlight fixtures and followspots.
10. New stage lighting control console, remote focus unit, video monitors, and Ethernet nodes.
11. New power service, circuit protection, system conduit, raceways, junction boxes, pull boxes and related wiring as specified on the electrical drawings.
12. Installation and connection of system line voltage equipment and components.
13. The contractor shall furnish and install all low voltage stage lighting control wiring. The contractor shall coordinate with the stage lighting equipment manufacturer regarding the responsibility for termination of stage lighting control low voltage wiring.
14. Initial hanging and plugging of new portable stage lighting fixtures per the Theatre Systems Consultant's directive.
15. All scaffolding, hoisting equipment, ladders, man-lift devices, tools, etcetera necessary to perform the work.

H. The above scope of work is intended as a reference guide only and is not intended to define the limits of the work necessary for a complete installation. All labor, materials, and equipment necessary for the proper operation of all systems must be provided.

1.03 RELATED SECTIONS

A. Theatrical Stage Rigging and Drapery Equipment

B. Basic Electrical Requirements

C. Basic Electrical Materials

1.04 SYSTEMS INTEGRATOR

A. The Contractor shall utilize a System Integrator to coordinate and assist in the installation of all aspects of the theatrical lighting system as specified in this section. This shall include but not be limited to all dimming and control equipment as well as integration with the architectural lighting fixtures connected to the dimming and control system. The following companies have prior approval as System Integrator:

1. Polaris Lighting
   624 Irving Ave.
   Glendale, CA. 91201
   (818) 265-0330

2. Kinetic Lighting
   5435 W. San Fernando Rd.
   Los Angeles, CA. 90039
   (310) 837-3204

3. LVH Entertainment
   3685 Medford Street
   Los Angeles, CA. 90063
   (805) 278-4584

4. Westview Productions
   5350 Vivian St. Suite A
   Arvada, CO 80002
   (844) 987-7378

5. BCT Entertainment
   2780 East Regal Park Dr.
   Anaheim, CA. 92806
   (714) 237-9270

1.05 RESPONSIBILITY

A. Organize and program the Work of the Section to harmonize with the work which will be performed by other contractors during the Project so that work will proceed as expeditiously as possible.

B. The engineering, fabrication, installation, and coordination of systems and associated components specified in this Section are the Contractor's responsibility.

C. Comply with all applicable code requirements and the requirements of federal, state, and local authorities having jurisdiction over the design, fabrication, installation, and operation of the systems and associated components specified in this section.

D. Take full responsibility for the proper placing and fitting of equipment and materials furnished under this Section into the structure.

E. Design components and install equipment to fit into the structure as built.

F. Specifications only establish criteria and do not attempt to dictate specific details and methods that may be necessary for proper installation; drawings related to the Work of this Section may therefore be diagrammatic.

G. Become familiar with the building construction and finishes, access and space available for equipment, and obvious interferences requiring special attention.

H. Check and verify pertinent dimensions, sizes, loads, and the appropriateness of structure supporting the proposed Work of this Section, both on the Drawings and in the field before proceeding with any work.

I. Provide additional structural and support members and guards as necessary for proper installation and operation of the Work of this Section.

J. All stage lighting equipment and hardware must be of new and recent manufacture.

K. All components utilized in the stage lighting equipment shall be specifically recommended by their manufacturer or trade organization for stage lighting applications. They shall be installed and used in accordance with the manufacturer's specification.

L. Provide equipment, devices, machinery, and systems based upon the following:
1. Safety to personnel during operation, use, and maintenance.
2. Adequate strength.
3. Reliability, with consideration for special or unusual requirements of the unit or installation.
4. Ease of maintenance.
5. Coordination with associated and adjacent systems provided under other Sections.

1.06 CODES, LABELS, AND STANDARDS

A. All stage lighting equipment and installation methods must conform to current State rules and all local codes and ordinances.

B. All components shall be listed by Underwriters Laboratories (UL).

C. A manufacturer's label shall be conspicuously and permanently attached to each piece of stage lighting equipment.

D. Those parts of the stage lighting equipment that require maintenance shall be safely and easily accessible and serviceable.

E. Conform to the applicable requirements of the current editions of the following reference codes or standards:
1. National Electrical Code (NEC).
2. United States Institute for Theatre Technology (USITT).
3. Entertainment Services & Technology Association (ESTA).
4. American National Standards Institute (ANSI).

F. Where in these Specifications one certain kind, type, or brand of manufacturer or material is named, it shall be regarded as the required minimum standard of quality. Substitutions lowering performance, quality, method of assembly or installation, or in general, not in keeping with Drawings and Specifications will not be permitted. Only written approval of the Architect and Theatre Systems Consultant will permit substitution for materials specified. Where both catalog number and description is indicated, requirements of description shall take precedence and prevail.

1.07 QUALIFICATIONS

A. Provide the Work of this Section under a single contractor with a contractor widely experienced in providing and installing theatrical stage lighting equipment and related electrical hardware of the quality and complexity specified in this Section.

B. Maintain a competent Supervisor, acceptable to the School and the Architect, during the entire installation. Change of Supervisor during the Project is not acceptable without prior written approval from the School and the Architect.

C. Employ only experienced electricians and stage lighting technicians on the Project.

D. Employ only certified welders, if welding is required.

1.08 BIDS MUST INCLUDE

A. All equipment, labor, and services indicated in these specifications and in the related stage lighting drawing documents, including all necessary hardware, fittings, and components necessary for a full and complete system.

B. A schedule and time estimate for preparation, fabrication, equipment delivery, and installation.

C. A list of manufacturer's names, model and type numbers, and catalog data sheets covering all items included in the ‘PRODUCTS’ section of this document.

1.09 SUBMITTALS

A. Make submittals to the Architect per requirements in Division 1 for transmittal to their consultants.

B. Identify variations from Contract Documents and product or system limitations which may be detrimental to successful performance of the completed Work.

C. Distribute copies of reviewed submittals to concerned parties. Instruct parties to promptly report any inability to comply with provisions. All submittals shall be submitted in a timely manner in order to allow adequate time for review and resubmittal if necessary.

D. Submit and identify each shop drawing using both descriptive title and numeric or alphanumeric drawing number. Do not change drawing title or number after first submittal.

E. The review of shop drawings, brochures, and samples is general only and does not relieve Manufacturer or Contractor of responsibility for errors, equipment design responsibility, deviations from Drawings and Specifications, or conflict with other work which may result from such deviations.

F. The review of a separate item does not indicate review of the complete assembly in which it functions.

G. No work shall begin on fabrication of equipment until drawings are approved and returned to contractor. No material shall be shipped to job site until formally approved in writing.

1.10 PERMITS AND INSPECTIONS

A. Obtain and pay for required permits and inspections of Work of the Section.

B. Furnish material and Work under this Section that meets or exceeds applicable legal and code requirements.

C. Perform tests required by the Architect, School Representative, and authorities having jurisdiction.

1.11 SAFEGUARDS AND PROTECTION

A. Provide suitable barriers and warning signs associated with or adjacent to stage lighting installation wherever necessary for the protection or safety of workers on the Project, School's personnel, and others during construction. Maintain barriers and warning signs during installation of the Work of this Section.

B. Provide guards and guides at structural edges and corners and surrounding equipment as necessary to prevent fouling or tearing of adjacent theatrical equipment or contact with personnel.

C. Protect materials and equipment from dirt and damage. Cover materials until just before the completion of the Project to prevent the adhesion of foreign matter or unintended paint.

D. Replace damaged or defective work or material prior to final payment request.

E. Take full responsibility for loss or injury to persons or property resulting from neglect of the above precautions.

1.12 DELIVERY AND STORAGE OF MATERIALS

A. Contractor is responsible for the scheduling and timely delivery and placement of items furnished under this Section.

B. Clearly identify on each container the contents stored within.

1.13 RECORD DRAWINGS AND MANUALS

A. Within thirty days of final installation approval, provide to the Architect (6) copies of an 'Operating and Servicing Manual' for the Stage Lighting System. Provide (1) copy of the manual to the Theatre Systems Consultant. Each manual shall be bound in a hard cover binder and contain the following information:
   1. Final as-built shop drawings including updated equipment locations and conduit runs.
   2. Catalog data.

3. Operating and maintenance data.
4. Parts lists and source for parts and service.
5. Guarantees and warrantees.
6. Test reports.

B. Each complete manual shall include all instructions necessary for proper operation and servicing of the systems. The instructions must be written in a manner that easily describes the necessary day-to-day operating procedures.

1.14 SPARE PARTS

A. Provide spares, spare parts, and special tools for all stage lighting equipment if necessary for proper operation and maintenance of equipment.

1.15 COMPLETION

A. Provide all labor, engineering, design, testing, supervision, material and equipment required even though not specifically mentioned herein, so that when work is completed, an operable system will be turned over to the School. Any errors, omissions, or ambiguities are not to condition this requirement but shall be brought to the attention of the Owner in their possible effect on intent of this Specification.

B. Before operating any equipment for demonstration or test comply with manufacturer's preparation instructions.

C. Once equipment has been installed a factory authorized field service technician shall check and test equipment and make adjustments as necessary.

D. After checkout and adjustment, the stage lighting system shall be operated for approval of the School, Architect, and Theatre Systems Consultant.

E. If due to installation-caused matters the Architect or Theatre Systems Consultant are required to perform any follow-up checkout or inspection visits after the approved completion of the project, the Contractor shall compensate the Architect or Consultant at their standard hourly rates for all time expended.

1.16 WARRANTY

A. Guarantee all materials, equipment, and work against defects of any kind for a period of one year from written acceptance of the work.

B. Parts Warranty: Obtain guarantees and/or warrantees for factory assembled equipment and include with ‘Operations and Maintenance Data’.

C. Replacement: In the event of failure of any work, equipment, or device during the life of the guarantee, at no cost to the School, repair or replace the defective work and remove, replace, or restore any parts of the structure or building which may be damaged as the direct result of the defective work or in the course of making the replacement of defective work or materials. Any work, equipment, or device replaced due to failure shall be guaranteed for a period of one year from date of replacement.

D. Make a minimum of two inspections with operations personnel, within the warranty period, at no expense to the School, to insure all systems to be in satisfactory operating condition. Submit a written report signed by operating personnel witnessing inspection to the School indicating inspection results with copies to the Architect and Theatre Systems Consultant.

E. The Contractor shall provide field service maintenance, at no cost to the School, within 24 hours of notification of system malfunction. This service response shall be in effect for a period of 12 months after the School's acceptance of the system.

1.17 INSURANCE

A. Provide full insurance against loss or damage during equipment shipment, storage, installation, and testing.

PART 2 - PRODUCTS

2.01 DIMMING SYSTEM

A. DIMMER RACKS
1. The dimmer racks shall be designed specifically for entertainment lighting, and shall consist of 6, 12, 24, or 48 dimmer module spaces. Dimmer rack shall be UL listed.
2. Rack set-up and preset data shall, as standard, be fully user programmable on a per rack or system wide basis.
3. Dimmer rack shall be a modular, freestanding cabinet. Cabinet shall be a welded, heavy gauge steel framework and be fully enclosed with removable panels and include a hinged, locking door over dimmer section. The dimmer rack shall allow for adjacent or back-to-back mounting of multiple racks. The rack shall be constructed to permit insertion and removal of dimmers and control modules without the use of tools. Finish shall be baked enamel over a primed surface.
4. Dimmer racks shall operate at 120/208VAC 3 phase, 4 wire + ground 60 Hz at a maximum of 800A per phase. Bussing across adjacent multiple racks shall be possible.
5. Load phase, neutral, and ground terminals shall, as standard accept up to a #6 gauge wire. An optional terminal adapter accepting up to #2 gauge wire shall be provided to minimize load voltage losses. Dimmer racks shall be braced for 50,000 amps. Provisions shall be made for optional amp trap devices to provide higher fault current protection, if required.
6. Dimmer rack shall be designed for up to 48 dual plug-in modules. Each module shall contain two 2.4KW dimmers, nondims, constant voltage breakers or one dual-sized special purpose fluorescent dimmer, comprising a total of up to 96 dimmers per cabinet. Provide additional special purpose modules as defined herein. Provide dimmer modules as indicated on Drawings.
7. Dimmer modules shall rest on mounting trays with guide rails to align dimmer during insertion. Cabinet shall be shipped without dimmers or mounting trays installed for ease of installation.

8. All dimmer input power and control wiring shall be factory wired with terminated load wires to terminals adjacent to each dimmer receptacle. A neutral buss shall also be furnished in cabinet.
9. Ventilation shall be provided using multiple low-noise fans. The fans shall maintain the temperature of all components at proper operating levels with dimmers at any load. Air shall flow over the surfaces of the heat generating components using a combination of convection and fan assisted airflow. Each rack shall be outfitted with a lockable door that does not impede airflow in any manner. Fans shall operate only when the lighting control console is activated.
10. Load terminations shall be clearly marked with the rack circuit number. Signal terminations shall be by plug-in screw terminals to facilitate contracting and servicing and shall be clearly labeled.
11. Provide a label for each dimmer rack with rack ID# and circuit # range contained within rack. Label to be attached near top of rack with mechanical fasteners, adhesive only fastening is not acceptable.
12. Provide spare modules as noted in schedule of quantities on project drawings.

B. DIMMER RACK CONTROL ELECTRONICS
1. The main dimmer control electronics shall be housed in one processor plug-in module. The dimmer control electronics shall have a direct Ethernet connection and shall accept (2) DMX512 protocol inputs.
2. All rack setup and preset data shall be stored in a non-volatile manner and may be transferred to a replacement control processor module without losing data.
3. The dimmer system shall support the following range of peripherals:
   a. Remote backup preset panels.
   b. Remote hand held programmers.
   c. Remote panels for architectural style channel and preset control of separate and independent zones of lighting.
4. Dimmer rack control electronics shall have the provision to select any circuit in the rack for activation by a Panic function. Panic function shall be activated by a remote contact closure.
5. Dimmer rack control electronics shall contain provisions for mapping DMX512 addresses from any of the three control inputs to circuits in that rack. Control electronics shall also support setting of minimum and maximum output levels, dimmer curves, non-dim operation, and direct dimmer level setting.

C. DIMMER MODULES
1. The dimmer modules shall be fully plug-in and factory wired. Dimmer modules shall be of rugged and heavy-duty construction. Power and signal pins shall be recessed in a self-aligning housing to avoid handling, storage, and insertion damage. A contoured handle shall be provided for ease of insertion and withdrawal. All chassis parts, except heat sinks and handle, shall be properly treated, primed and finished in fine texture, scratch resistant, gray powder coat paint. Each module shall be labeled with the manufacturer’s name, catalog number and rating. Dimmer modules shall be UL recognized devices.
2. Dimmer modules shall be keyed so that dimmer modules of greater capacity shall not be interchangeable.
3. Each dimmer module shall contain one or two single pole circuit breakers, associated solid state switching modules, filters, power, and control components.

4. Dimmer electronics shall be completely solid state. They shall utilize two silicon controlled rectifiers in a back-to-back electrical configuration. The full load of the circuit is to be carried and controlled by the silicon controlled rectifiers.
5. Each dimmer shall be protected by a fully magnetic circuit breaker of the appropriate current rating and 10,000 AIC surge rating mounted on the face plate of the dimmer module so that the trip current is not affected by ambient or rack temperature. The circuit breaker shall be rated for tungsten loads having an inrush rating of no less than 20 times normal current and shall disconnect the power to the dimmer module before damage can be done to the dimmer power components. The circuit breakers shall be rated for 100 percent switching duty applications and shall be a UL recognized device.
6. SSR devices shall be encapsulated, epoxy filled high impact plastic cases with optically isolated firing circuits, control circuitry, and two silicon controlled rectifiers (SCRs). There shall be a minimum of 2,500 volts RMS of isolation between the AC line and the control lines of the SSR.
7. The SSR shall be in an industry standard format that is easily field replaceable without removing any other electrical or electronic devices.
8. Each dimmer module shall have an integral inductive filter, minimum **500** micro-second rise time, to reduce the rate of current rise time resulting from the SSR switching on. The filter shall limit objectionable harmonics, reduce lamp filament sing and limit the radio frequency interference on line and load conductors.
9. Special Purpose Modules
    a. Standard factory modules shall be available to provide dedicated nondim circuits utilizing mechanical relays and not employing SSR devices. Each nondim shall be provided with a primary circuit breaker of the appropriate rating. Nondims shall be designed so they can be used for inductive loads.
    b. Standard factory modules shall be available to provide hard fired output for use with neon, cold cathode, and fluorescent loads. Hard fired modules shall provide a current source independent of the load current for the SCR Gate Drive Signal. Hard fired dimmers shall function independent of load as a result and shall drive loads of 1 watt or less.
    c. Standard factory modules shall be available to provide constant 120VAC voltage irrespective of control signal to dimmer racks.
    d. Standard factory modules shall be available that are capable of functioning as a dimmer, relay, or constant voltage breaker on either half of a dual module. Either of the three functions can be mixed or matched on either half of the module. Dimmer or relay functions can be remotely configured from the stage lighting control console or from the dimmer rack processor. The constant voltage function shall be manually activated at the dimmer module without the need for configuration at the dimmer processor

D. RELAY RACKS
1. Relay racks shall be UL-listed enclosures containing 12, 24, or 48 pole breaker subpanels. Racks shall be constructed of 16 gauge galvanized steel and finished in a fine-textured scratch resistant paint.
2. Panel covers shall be available to support surface or flush mounting. Panel shall contain lockable door(s).
3. 1, 2, or 3-pole breakers or relays, up to 30A capacity, shall be supported in any combination within the panel.

a. Provide a 3-pole breaker for sense feed connection of ELTS per project drawings.

4. A control interface shall be provided for panel setup and monitoring. Indicators shall be provided for power status, DMX status, network status, and rack errors. The panel shall support DMX512 and Ethernet network (sACN) control signals. The control interface shall support a USB memory stick interface for upload of configurations and software updates.
   a. Control interface shall support recording and playback of user-configured presets.
   b. Presets shall be able to be recalled via an astronomical time clock. Up to 50 events shall be supported.
   c. Individual relays shall be capable of being assigned a discrete control address on a circuit-by-circuit basis without the requirement for sequential addressing beginning from a rack start address.
5. The control electronics shall report the following information per branch circuit:
   a. Breaker state (on/off and open/closed).
   b. Current draw (amps)
   c. Voltage.
   d. Energy usage.
6. Branch circuit breakers shall feature a high inrush trip curve and shall not trip at full load. Relays shall utilize an integral mechanically held air-gap relay. All breakers shall feature integral current sensing.
7. Provide means for connection of normal power sense feeds to other devices.
   a. Provide a 15A 3-pole circuit breaker for connection of EM sense feed from ELTS.
   b. Provide a bus bar mounted tap kit with fuse holder for connection of sense feed from EBDK.
8. A main breaker shall be an option to support the maximum feeder size for each size panel.
9. Basis of design: Electronic Theatre Controls Sensor IQ Series.

E. PORTABLE DIMMER DEVICES - 1 CHANNEL DIMMERS
1. Portable dimming modules shall be comprised of one 750 watt dimmers packaged in an enclosure suitable for mounting to the yoke of incandescent-lamped theatrical spotlights.
2. The dimming module enclosure shall include provisions for pipe mounting brackets as well as wall mounting brackets and shall contain handles for ease of carrying.
3. Each dimming module shall be powered by a 20A 120VAC one-phase electrical service.
4. The dimmers shall be compatible with the USITT DMX512/1990 control protocol and the dimming control input shall be optically isolated. Each dimmer module shall include 5-pin XLR DMX512 input and thru receptacles.
5. Each dimming module shall include a processor with local controls mounted on its enclosure. The functions available at the local controls shall include selection of the starting DMX address, setting dimmer levels.
6. Dimmer output voltage transition time shall be not less than 450 microseconds.
7. Dimming modules shall be convection cooled and shall operate without cooling fans or filters. Each dimming module shall produce little or no mechanical noise.
8. Dimmer modules shall be UL listed and labeled.

9. Provide each dimming module with the following accessories & options.
    a. Dimmer outputs shall be via 20A grounded stage pin connectors on flexible cable.
    b. 5-15P input connector on 12” long flexible cable attached to module.
    c. (1) 15’ portable DMX512 control extension cable with heavy-duty jacket and black Neutrik 5-pin XLR connectors with gold plated contacts (TMB ProPlex PC224P or equal). Provide DMX512 extension cable fabricated per criteria noted in the extension cable portion of this specification section.
    d. Pipe mounting hardware kit suitable for attachment to a theatrical fixture yoke.
10. Provide quantity and type of dimming modules and accessories as indicated in the schedule of quantities on Project Drawings.
11. Acceptable products:
    a. E.T.C. #ES750.
    b. Vari-Lite Lighting Light Pack dimmer

2.02 EMERGENCY LIGHTING & POWER DISTRIBUTION

A. EMERGENCY LIGHTING TRANSFER SYSTEMS

1. Provide (1) UL 1008 code rated emergency lighting transfer relay panel to switch dimmed and nondimmed lighting circuits to emergency power in the event that the normal power supply to the stage lighting system fails. Features include:
    a. The transfer panel shall provide dimmer pass-through for normal operation.
    b. The panel shall be wall or floor-mounted, separate from the dimmer racks.
    c. The transfer panel shall be configured to accept a single 120/208VAC 3-phase emergency power source or individual emergency branch circuits, type per project drawings. The source voltage settings shall be field adjustable for either single or three phase power.
    d. The panel shall have a quantity of 20-amp circuits for transfer switches sufficient to supply emergency power to all applicable circuits as indicated on electrical drawings.
    e. The panel shall have voltage sensing of normal supply lines and automatic retransfer of power on restoration of normal supply.
    f. An integral test switch shall be provided to simulate normal power source failure for periodic verification of system operation. The test switch shall be accessible without opening the panel.
2. Provide DMX Emergency Bypass Controller(s) to bypass the DMX control signal and drive all connected loads to full in a loss-of-power or emergency situation.
    a. Bypass controller shall accept a contact closure input that will drive a single universe of DMX512 to full or to a preset level when activated. Bypass controller shall not process the DMX512 signal when in Normal input mode.
    b. Bypass controller shall contain an LED indicator on exterior of unit signaling normal state or bypass state. Controller shall contain internally accessible DIP switches for configuration o DMX record mode, Contact Input Type, and Wait Time for Restore of incoming DMX.
3. Provide Emergency Bypass Detection Kit(s) for monitoring normal 3-phase power feed to dimming system and providing a maintained contact closure output upon loss of power to trigger other lighting bypass controller(s).
4. Connect normal power sense feeds in relay rack as required.
    a. Connect ELTS EM sense feed to a 15A 3-pole circuit breaker in relay rack.

b. Connect EBDK sense feed to a bus bar mounted tap kit with fuse holder in relay rack.

B. DIMMER-CIRCUIT DISTRIBUTION EQUIPMENT

1. Provide stage lighting circuitry connector strips and plug boxes as shown on the stage lighting drawing documents.
   a. Each connector strip and plug box shall be provided with screw terminal strips for feed connections, mounting bracket devices, and basket weave strain-relief multi-cable connectors where necessary.
2. Provide all necessary mounting hardware for pipe or surface mounted strips and boxes as detailed on project drawings.
3. Backboxes for all plug boxes shall be provided by stage lighting manufacturer unless noted otherwise on project drawings.
4. Plug boxes and plug strips shall have two sets of knockouts on each of the sides.
   a. Production dimmer and relay circuits shall utilize grounded stage pin connectors or 5-20R connectors as indicated on project drawings.
   b. Dimmable rehearsal light circuits and running light circuits shall utilize L5-20R connectors.
   c. Non-dimmable and non-switched 120VAC power shall be supplied to connector strips and plug boxes via pigtail or panel mount 5-20R receptacles.
   d. 208VAC circuits when implemented shall utilize L6-20R connectors.
5. Exterior finish shall be flat, black baked enamel. Custom colored finishes shall be required if indicated on project drawings.
6. Circuit identification numbers shall be securely affixed to face of plug boxes and to one or both sides of plug strips as indicated on project drawings. Numbers shall be engraved lamacoid tags, white letters on black background and shall be secured via rivets or other mechanical fasteners. Adhesive-only fastening is not acceptable. All labels shall be attached at the factory where distribution devices are fabricated.

C. COMPANY SWITCH

1. Provide Theatrical Systems Company Switch as described herein and as shown on Theatre Systems Consultant's Drawings and Electrical Drawings.
2. Company Switch configuration shall be 120/208V, 3-phase, 5-wire, amperage as noted on Project Drawings. Lighting System Company Switches rated 200A or greater shall have double neutrals.
3. Enclosure shall be a NEMA 1 wall mounted enclosure fabricated with a 14 ga. steel and finished in a black epoxy paint. The Company Switch must satisfy requirements of NFPA 70 Article 384 and Article 520. The Company Switch shall be UL listed and labeled.
4. Provide a front door panel to protect circuit breaker controls. There shall be no access to live electrical conductors when the door is open.
5. 3-phase, 120/208VAC company switch assemblies shall be provided with connectors by Cam-Lok, Leviton or equal, compatible with industry standard Cam-Lok E1016 devices, six connectors including double neutrals.
6. Company switch shall also contain a connection chamber for connection with bare wire to copper bus bars. Load connection busbars shall contain (2) 3/8"-16 x 1" bolts and (1) dual rated solderless lug for cable connection. When open, the hinged door shall trigger a shunt-trip mechanism that will trip the breaker.

7. Main breaker shall be UL listed, 3-pole, 100% equipment rated, continuous duty circuit breaker with a minimum AIC rating of 65,000A. Enclosure shall be Hi-Pot tested at 1250VAC for a period of no less than 10 seconds.
8. All connections from Main Circuit Breaker to output panel shall be by copper bus. All bus sizes shall be based on a current density no greater than 1,000 amperes per square inch.
9. All internal noncurrent-carrying metal parts shall be grounded to the main chassis frame.
10. Enclosure shall contain a neon indication lamp to indicate voltage present on each phase leg and a neon lamp to indicate ground integrity.
11. Company switch shall be labeled, 'THEATRICAL LIGHTING SYSTEMS COMPANY SWITCH' along with amperage.
12. Acceptable Manufacturers:
    a. Electronic Theatre Controls - Powersafe Pro
    b. Lex Products Corp.
    c. ESL Power Systems
    d. Others contingent on approval by Theatre Systems Consultant.

2.03 STAGE LIGHTING CONTROL SYSTEM

A. STAGE LIGHTING CONTROL DATA NETWORK DEVICES
1. Provide Ethernet and DMX512 data network control and distribution devices as described herein. All devices connected to the ethernet data network shall be compatible with the lighting control console and any other lighting control devices connected to the ethernet network. All connected ethernet devices shall support 10BaseT and utilize Neutrik EtherCon RJ-45 connectors for data connections. All DMX512 and Ethernet network components shall be compatible with the following ANSI Standards:
    a. ANSI E1.11 - Entertainment Technology USITT DMX512-A - Asynchronous Serial Digital Data Transmission Standard For Controlling Lighting Equipment and Accessories.
    b. ANSI E1.20 - Entertainment Technology RDM - Remote Device Management Over DMX512 Networks
    c. ANSI E1.31 - Entertainment Technology - Lightweight Streaming Protocol For Transport of DMX512 using ACN.
2. Provide all control wiring and control cables for a complete functioning system so that all control and dimming components, except portable lighting fixtures, can be interconnected and tested at the time of system commissioning.

B. CONTROL EQUIPMENT RACKS (CER-1 & CER-2)
1. Provide floor or wall-mounted control equipment rack(s) for housing selected components described in this section and as noted in contract drawings.
2. Control equipment rack shall be a 16-gauge steel wall-mounted enclosure with provisions for a locking front door. The front door shall be solid or with a plexiglas insert per drawings. Doors shall be easily removable in the field. Plexiglas doors shall be reversible to hinge on the left or right side in the field. The side and rear panels shall contain louvered vents. Provide 5 sets of keys to the owner. When multiple racks are indicated they shall be keyed alike.
    a. CER-2 rack containing the SMP control station shall be Middle Atlantic SWR-series shallow wall rack with PFD-xx door.

3. The rack shall contain 2 pair (front and rear) of 11 gauge CRS mounting rails predrilled for #10-32 screws on standard EIA 19" spacing. Both sets of rails shall be adjustable from front to back. Provide screws sufficient to fasten all devices mounted in rack including blank cover plates and vent panels. Rear rails on CER-1 only.
4. All devices within rack shall be powered via UPS mounted in rack (CER-1 only). Provide additional power strips, as necessary, connected to UPS and designed to securely mount inside rear rails of rack.
5. Control equipment racks located in the stage areas or areas in or adjacent to the auditorium, seating area or control rooms shall only utilize a UPS power source if there are system control devices in the rack requiring 120VAC power. In this case the UPS shall be passively cooled with no fan noise or power shall come from a remote power source.
6. The rack shall be designed for single-phase 2-wire with ground operation at a maximum of 20 amps, 120 volts 60 Hz AC.
7. The rack shall be designed to allow for easy insertion and removal of all components, and for convenient access to all rear-mounted power and control connections.
8. The rack shall contain a minimum of 3 open rack spaces to accommodate future control devices. Provide solid blank panels for all empty spaces.
9. Provide labels on all devices in equipment rack if necessary to define function or clarify where control signals are fed from. Devices requiring labels include Ethernet nodes, DMX repeaters, and others as indicated on project drawings.
10. Items contained in the control equipment rack(s) shall include but are not limited to:
    a. Ethernet switch(es).
    b. CAT-5 cable management panel(s).
    c. Ethernet patch panel(s).
    d. Ethernet port label panel(s).
    e. DMX512/Ethernet nodes as required.
    f. DMX-to-0-10V interfaces as required.
    g. Sliding shelf & storage drawers.
    h. Stage Mangers Panel.
    i. A digital clock and timer panel.
    j. Adjustable panel mounted 12” LED gooseneck worklites with rotary dimmer knob (Littlite #RL-10-D-LED or equal).
    k. (1) UPS device.
    l. (lot) blank or vent panels as required.
    m. Architectural Lighting Control System Processor (see below.)

C. CONTROL RECEPTACLE STATIONS AND JUNCTION BOXES (CRS)
1. Control receptacle stations shall contain locking data-grade connectors and be provided with appropriately sized surface-mounted electrical back boxes unless noted otherwise. The faceplates shall have engraved nomenclature filled with contracting paint color for all connections. Ethernet connectors shall be Neutrik EtherCon RJ-45. Provide control receptacle stations with receptacles as indicated on Theatre Systems Consultant’s drawings.
2. All connectors shall utilize screw terminal or punchdown connections for termination of installed wiring, field soldering of connections is not acceptable.

3. Provide labels with unique port ID numbers corresponding to patch panel for every Ethernet network receptacle in the system.
    a. Provide a master list of all network segments with location, port #, measured cable length, and maximum extension cable length based on a 330 foot maximum network segment length. Master list shall be an engraved or silk screened on plastic or metal panel with white characters on a black background. Attach master list to equipment rack or adjacent wall next to each rack with network patch panels. Attach with screws, bolts, or concrete anchors. Adhesive only fastening is not acceptable.

D. ETHERNET SWITCH(ES)
1. Provide high-speed multiport Ethernet switch(es) suitable for use with the stage lighting control console and related ethernet nodes.
    a. Ethernet switch(es) shall contain a minimum of 24 ports. All connectors shall be located on the front of the unit.
    b. The switch shall have, located on the front panel, indicator status lights for each port as well as for general network and hub status.
    c. Switch(es) shall be mounted in equipment rack ‘CER-1’. Rack-mounting ears shall be provided.
    d. Ethernet switch(es) shall provide Power-over-Ethernet, PoE, based on the IEEE 802.3af standard.
    e. Provide a quantity of Ethernet switches as required, sufficient to support system design as indicated on contract drawings.

E. ETHERNET PATCH PANEL
1. Provide Ethernet patch panel(s) for terminating Category-5 ethernet wiring from field devices.
2. The patch panel(s) shall contain a quantity of ports sufficient to connect all field wiring devices. Minimum of 12 ports per patch panel. If all slots in patch panel are not required provide (5) spare, un-used RJ45 panel mount connectors for future expansion.
3. Patch panel(s) shall be mounted in equipment rack ‘CER-1’.
4. Provide separate 1RU blank panel(s) for labeling patch panel ports. Label each port with a unique I.D. label indicating port # and location for all Ethernet jacks connected to field wiring devices.
5. Provide a sufficient quantity of CAT-5 patch cables to connect all field wiring devices to Ethernet switch(es) plus (5) spare cables.
6. Provide red patch cables for all devices that are to remain permanently connected for basic system functionality including dimmer, racks, architectural control processor, hard wired LCD stations, and installed Ethernet nodes.
7. Provide rack-mounted cable management panel(s) for dressing of patch cables between patch panel and Ethernet switch(es).

F. UNINTERRUPTIBLE POWER SUPPLY (UPS)
1. Provide (1) rack-mounted uninterruptible power supply (UPS) for use with the control data network devices located within the control equipment rack “CER-1”. The UPS shall be sized to power all equipment installed in the rack with an allowance for future equipment but shall not be rated for less than 450 watts.

G. DMX512-to-0-10V INTERFACE

1. Provide DMX512-to-0-10 volt interface for control of 0-10V lighting fixtures.
2. Interface shall contain (24) analog outputs and, DMX512 input and pass thru connection with selectable end-of-line termination switch, and a network connection port.
3. Interface shall be suitable for DIN rail mounting and shall include an associated 120VAC power supply. Provide complete assembly in a rack tray suitable for mounting in a 19" equipment rack.
4. Converter shall be RDM discoverable and configurable.
5. All connections shall be via pluggable screw terminals.
6. Interface shall be selectable for 0-10, 0-15, 0-2.5, & 0-5V output modes. Current sinking output shall be possible. Interface shall support 10mA current source per channel and 30mA current sink per channel.

H. ETHERNET NODES
   1. PORTABLE DMX512-TO-ETHERNET NODES
      a. Provide portable DMX512 Ethernet pipe-mount nodes for connection to the stage lighting control network. DMX512 Ethernet Nodes shall be provided with the following features:
         1) ANSI E1.11 (DMX512-A), E1.20 (RDM) and E1.31 (sACN) compatibility.
         2) LCD screen for displaying status and configuration information.
         3) (1) Neutrik EtherCon RJ-45 Ethernet receptacle.
         4) (2) DMX512 receptacles configured as Outputs or Inputs. Ports shall be fully configurable via software provided by the Manufacturer.
         5) Nodes shall be capable of PoE Power-over-Ethernet operation.
         6) Pipe Clamp, mounting hardware, and safety cable for attachment to lighting pipes or handle with mounting hardware for desktop or surface mount applications.
      b. Temporarily connect nodes at field locations to ensure functionality of node with system. Return portable nodes to owner after system checkout, acceptance, and training.
      c. Refer to schedule of quantities on project drawings for types and quantities of nodes.
   2. RACK MOUNTED DMX512-TO-ETHERNET NODES
      a. Provide rack-mounted DMX512-to-Ethernet nodes for distribution of control signals to/from field devices as shown on Theatre Consultant's drawings. Rack-mounted DMX512-to-Ethernet Nodes shall be provided with the following features:
         1) ANSI E1.11 (DMX512-A), E1.20 (RDM) and E1.31 (sACN) compatibility.
         2) LCD screen for displaying status and configuration information.
         3) RJ-45 Ethernet receptacle on rear of unit or integral to circuit board.
         4) (2) DMX512 receptacles per node configured as outputs or inputs. Ports shall be fully configurable via software provided by the Manufacturer.
         5) Nodes shall be capable of PoE Power-over-Ethernet operation.
   3. PANEL MOUNTED DMX512-TO-ETHERNET NODES
      a. Provide panel mounted one-port, DMX512-to-Ethernet nodes, user configurable as an input or output, as shown on Theatre Consultant's drawings.

b. Node shall be capable of PoE operation, shall fit in a standard single gang deep backbox, and shall mount with standard Decora-style faceplates.
c. Node shall utilize an XLR5 male or female connector and shall contain signal indicators for Network and DMX512 status.
d. Node shall support multiple protocols including E1.31 Streaming ACN [sACN/Net3], ArtNet, Pathport Protocol, ETC Net3, Vari-Lite ShowNet.

4. PORTABLE VIDEO ETHERNET NODE
   a. Provide (1) portable table-top Video Ethernet Node for remote video connection to the main lighting control console. Remote video node shall be provided with the following:
      1) (1) UTP 10Base-T Ethernet port.
      2) Ports for connection of (2) Video Monitors. Video ports shall be configurable via software provided by the Manufacturer.
      3) Ports for connection of (1) Keyboard, and (1) mouse.
      4) LED indicator for display of power and network activity.
      5) (1) Full-size PC Keyboard and mouse.
      6) 24” LCD flat-panel touchscreen display monitor(s).
   b. If the Stage Lighting Manufacturer’s lighting console only supports a wireless video node in the form of a laptop computer, then the following accessories shall also be supplied:
      1) A quantity of Wireless access points and mounting hardware required to provide a strong signal to the computer at any location in the auditorium, backstage, and control room areas.
      2) (1) laptop computer with a minimum 15” display and included wireless card or built-in wireless capability.
      3) A lockable hard carrying case with space for computer, power supplies, cables, and accessories. Carrying case to include permanently attached label: ‘VIDEO NODE.’
      4) The laptop computer video node shall support an external video display. (1) external 22” LCD monitor shall be provided in addition to the LCD integral to laptop computer.
      5) Any additional accessories or items required to provide a complete and operational remote video node shall also be supplied. All original manuals and software (on CD-ROM or DVD) supplied with computer shall also be provided.

I. STAGE LIGHTING CONTROL CONSOLES
   1. Provide (1) stage lighting control console “CC-1”. The control console shall support the following minimum requirements:
      a. 2,048 DMX512 channels via XLR5 outputs. 12,288 DMX512 channels via lighting network (optional). Provide with 2,048 Control channels.
      b. 1,000 cues, 1,000 groups, 1,000 Macros. 400 effects.
      c. 1000 Palette presets for each of 4 moving light attribute groups
      d. 1 master playback fader with support for additional virtual playback faders with fully independent cuelists. Tracking and cue-only operation.
      e. 20 Submasters (minimum).
      f. Connections for (2) external video touchscreen displays.
      g. 4 rotary encoders for control of automated lighting functions.
      h. Attribute library support for automated lights.

i. Onboard editing function to allow user to add new fixtures to the attribute library.
j. Color picker function for color-changing lights.
k. Data storage via 40GB internal hard drive or via USB flash drive.
l. Automated lighting control support. Attribute library support for automated lights including an onboard editing function to allow user to add new fixtures to the attribute library.
m. Wireless Remote Focus Unit (WRFU) support via lighting network.
n. Offline editing software for creation and editing of control console show files.
o. Console facepanel and processor shall be a single integrated unit.
p. Basis of Design Products
    1) Electronic Theatre Controls, Ion Xe20, 2048 output.
    2) Vari-Lite Lighting, Neo, 2,000 Channel, with fader wing utilizing 20 submasters.

2. Provide 21” LCD flat panel video display monitor(s) with touchscreen capabilities and dust covers for use with “CC-1”.
3. Provide all related cables and accessories needed for a complete operating system that integrates the new stage lighting control and dimming system. All cables to be constructed from high quality data cable suitable for repeated flexing and portable operation, ProPlex or equal. These cables and accessories include but are not limited to:
    a. (1) 15' CAT-5 data cable with RJ-45 connectors.
    b. (1) 15’ DMX512 data cable with XLR5 connectors.
    c. (2) Console 18” gooseneck dimmable ‘Littlite’ or equal dimmable LED worklights for “CC-1”. Lights shall either securely attach directly to console via an XLR or BNC-style connector or if detached Littlites they shall include a weighted base suitable for tabletop use.
        1) Detached dimmable Littlites shall be model #MV-18-LED with #CWB cast weighted base.
    d. Control console dust cover.
    e. (1) Keyboard and (1) mouse for each control console.
    f. (2) 8GB USB flash drives for storing show and system information.
4. Provide (1) uninterruptible power supply (UPS) for use with the stage lighting control console “CC-1”. The UPS shall be sized to power the control console and (2) LCD monitors. The UPS shall be suitable for floor or desk-top mounting. UPS shall be passively cooled, no fans or other noise generating devices shall be included.
5. Provide all related cables and accessories needed for a complete operating system that integrates the new stage lighting control and dimming system. All cables to be constructed from high quality data cable suitable for repeated flexing and portable operation, ProPlex or equal. These cables and accessories include but are not limited to:
    a. (1) 15' CAT-5 data cable with RJ-45 connectors.
    b. (3) 15’ DMX512 data cable with XLR5 connectors.
    c. (2) Console 18” gooseneck dimmable ‘Littlite’ or equal dimmable LED worklights for “CC-1”. Lights shall either securely attach directly to console via an XLR or BNC-style connector or if detached Littlites they shall include a weighted base suitable for tabletop use.

1) Detached dimmable Littlites shall be model #MV-18-LED with #CWB cast weighted base.

d. Control console dust cover.
e. (1) Keyboard and (1) mouse for each control console.
f. (2) 8GB USB flash drives for storing show and system information.

J. WIRELESS REMOTE FOCUS UNIT

1. The WRFU shall be a portable hand held touchscreen device for remote connection to the primary control console. Software for use on device shall be provided and installed prior to system checkout and training. Device shall utilize an 8 inch capacitive multi-touch display and shall be mounted in a rugged enclosure. Remote focus unit capabilities shall include:
   a. Console programming functions including playback, parking, and patching of channels.
   b. Direct selects and playback controls.
   c. Color picker for selected fixtures.
   d. Rechargeable battery.
2. WRFU should be supplied with the following:
   a. Hand strap
   b. Charging cable/adapter
   c. USB Hub
   d. Office docking cradle with stand
   e. EETi Stylus Pen
3. Provide a wireless access point (WAP) that is PoE powered for use in providing wireless connectivity between control console and Android or iOS devices (tablets and phones) as well as wireless remote focus unit noted above.
4. If manufacturer's wireless remote utilizes a proprietary wireless base station provide an additional WiFi base station that is PoE powered for use in providing wireless connectivity between control console and Android or iOS devices (tablets and phones).

2.04 ARCHITECTURAL LIGHTING CONTROL SYSTEM

A. The Architectural Lighting Control System shall control the following components and functions:

1. Houselighting Control for dimming of the permanently installed house light fixtures located in the auditorium.
2. Worklighting Control for switching of all permanently installed worklight fixtures located backstage, in the box boom and front catwalk areas.
3. Rehearsal Lighting Control for dimming of all portable lighting fixtures mounted in the FOH catwalk and on the stage lighting electric battens over the stage.
4. Running Light Control for dimming of permanently installed performance run light fixtures in the backstage stage area and for receptacles for portable run light circuits as indicated on project drawings.
5. Stage Preset Lighting Control shall provide the capability to record and playback scenes that have been created with the stage lighting control console. Playback of scenes shall be possible without the aid of the control console.

B. The Architectural Lighting Control System shall not utilize control stations that are addressed using rotary encoders, DIP switches or other physical means at the individual station.

C. Provide station power modules or repeater modules in sufficient quantities to support the number of control stations and layout as shown on project drawings.

D. The Architectural Lighting Control System shall support the following system functionality:
   1. System shall support creation and scheduling of real time events via a network connected PC with a web browser. Real time events shall also be able to be created, modified, and monitored from LCD stations connected via the Stage Lighting Ethernet network.
   2. Houselight presets and stage presets shall have user-configurable fade times adjusted from a single page on any of the LCD stations via a password protected setup page. House or stage presets shall operate with the same fade time regardless of where they are recalled from, this includes multiple LCD pages, hard buttons on the SMP, or hard buttons on the PCS devices.
   3. Run light circuits shall include the capability to set a maximum level via a level fader on a password protected setup page. Run light circuits can then be toggled on and off via a single button per circuit without the level exceeding the maximum set on the fader.
   4. Logic shall be incorporated to manage power supply circuits for DMX512-controlled houselights. Features shall include:
      a. Power supply circuits shall be turned on if any DMX control channel is above 0%.
      b. Power supply circuits shall automatically turn off after a pre-determined time if no houselight DMX control channels are above 0%.
   5. The portable control stations (PCS-x) shall reflect the current state of circuits and presets in the system when re-connected to system receptacles.
   6. The system shall support the ability to separately lockout remote houselight stations (HCS-x) and remote worklights control stations (WCS-x) from any LCD screens in the system. When remote stations are locked out they shall exhibit behavior to indicate they are in a different state. Indications could include the button changing color or button illumination blinking several times.
   7. The system shall support group functionality of circuits such that a single button on a station or page of LCD station shall be able to control circuits that are individually switchable via other stations or LCD pages. The group button shall then be able to reflect a mixed state when all circuits within the group are not in the same state by changing the button illumination to another color (amber).
   8. The system shall allow any button, fader, or object on an LCD page for physical station to be in any space or room within the system configuration. Any button or object shall also be able to be excluded from room/space all off or global all off commands.
   9. The system configuration software shall have the ability to create full pages of multi-line text with system information and operating instructions.

E. STAGE MANAGER’S CONTROL PANEL (SMP-1)

1. Provide an integrated Stage Manager's Panel "SMP-1" that consists of separate control sections for Houselights, Worklights, Rehearsal Lights, Run Lights, and Stage Preset pushbuttons. The panel shall be a dedicated enclosure and shall contain physical faders & buttons as well as a 7" color LCD touchscreen display.
2. The Stage Manager's Panel shall provide the following capabilities and requirements for the facility:
   a. Houselight Control: Houselight area controls via physical zone fader controls and a master fader, take-control, preset record, and lockout functions for houselight circuits.
   b. Worklight Control: Control of non-dimmable worklights, lockout, and all-off functions for worklight circuits via pushbutton controls with LED indicators.
   c. Rehearsal Light Control: Control of the rehearsal light circuits, all-off functions for rehearsal light circuits via pushbutton controls with LED indicators.
   d. Run Lights: Control of hardwired or portable run light circuits via pushbuttons.
   e. Stage Preset Control: Recording and playback of stage lighting via user recordable DMX snapshots. Stage Presets shall be snapshots assigned to pushbuttons.
3. The LCD touchscreen display shall mimic all functions available as physical faders and buttons on the "SMP-1" panel. The LCD shall also provide for additional functionality not available with physical controls including monitoring of real time events created in the architectural control system. Programming of LCD pages shall be submitted and reviewed with Theatre Systems Consultant 4 weeks prior to system commissioning.
4. Provide instructions for recording Houselight & Stage presets as well as general operation of architectural lighting control system. Instructions shall be provided as user selectable help screens on the 7" LCD touchscreen.
5. The Stage Managers Panel "SMP-1" shall be constructed as a shallow rack panel for mounting in control equipment rack "CER-2". All individual sections of the SMP shall fit within a single custom rack panel that is no larger than 1 rack unit in size than indicated on project drawings. All individual stations, except the LCD panel, shall mount to a custom punched panel with electronics attached to the rear side of the panel so as not to necessitate the use of bezels on individual components.

F. PORTABLE CONTROL STATION (PCS-1)
1. Provide portable, table-top mount control consolettes with control capabilities and features similar to those of the Stage Manager's Control Panel (SMP-1). See above section STAGE MANAGER'S CONTROL PANEL (SMP-1).
2. The 'PCS-1' consolette shall be a tabletop LCD station with a 7" color touchscreen control panel which replicates all control functions present at 'SMP-1'. Buttons presses and control logic between stations shall mimic each other at the two stations. 'PCS-1' shall be a low profile station with a sturdy base and an angled face measuring not less than 30-degrees from horizontal for legibility of the LCD screen when seated at the control room counter or similar table.
3. The 'PCS-1' consolette shall connect to the architectural control system via Ethernet wiring

4. Provide 'PCS' station with (1) 15' and (1) 50' portable control cable with positive lock quick disconnect multipin connectors at each end for connection to control receptacle stations as indicated on project drawings and in project specifications.

G. HOUSELIGHT CONTROL STATIONS (HCS)
1. Provide prewired house pushbutton stations with appropriately sized back boxes to control the house lights. 1 momentary contact pushbutton with LED indicator light shall be provided to take control and turn on and off the house lights to a preset intensity level (cleanup preset). The control stations shall be suitable for flush mounting in custom electrical back boxes and shall include smoked Plexiglas hinged covers with magnetic twist latches. The faceplates shall be engraved with appropriate identification.

H. WORKLIGHT CONTROL STATIONS (WCS)
1. Provide prewired worklight pushbutton stations with appropriately sized back boxes to control the stage worklights. 1 momentary contact pushbutton with an LED indicator light shall be provided for each control circuit to turn on and off the work or rehearsal light circuits. The faceplate shall be engraved with appropriate identification. The stations and labels are indicated on the project drawings. Stations shall have smoked Plexiglas hinged covers with magnetic twist latches where indicated on project drawings.

I. CONTROL PROCESSOR FOR ARCHITECTURAL LIGHTING SYSTEM
1. The control processor for the Architectural Lighting System shall be mounted in the control equipment rack (CER-1). The control processor shall be designed for single phase 2 wire with ground operation at a maximum of 20 amps, 120 volts 60 Hz AC. The control processor shall have the following characteristics and requirements:
2. Interface electronics for controlling all house light dimmers, worklight nondims, rehearsal light nondims, and the stage presets control system shall be mounted in the control equipment rack
3. The control processing device shall have a control module with a multi-character display and keypad for system configuration. The control module shall have a memory card slot for storing the system configuration.
4. All control connections shall be terminated via factory provided plug-in connectors.

2.05 STAGE LIGHTING FIXTURES

A. Provide stage lighting instruments as indicated on the schedule of quantities on project drawings.

B. All stage lighting instruments shall be provided with the following accessories:
1. Pipe-mounting C-clamp (except followspots and floor-mounted instruments) and hanger brackets if yoke is not integral to instrument.
2. Floor trunions for floor mounted fixtures.
3. Color filter frame and 30" wire-rope safety cable with snap link closure.

C. Provide full-color LED profile spotlights suitable for long throw applications [production spotlights]. Fixtures shall include the following:

1. Die cast all metal housing with shutter barrel, double clutch locking yoke. Shutter barrel shall contain accessory slots for use with templates (glass or steel), iris, or special effect devices. Provide with a black finish.
2. Full color LED light engine that utilizes one of the following LED arrays:
   a. RGBIL: Red-Green-Blue-Indigo-Lime
   b. RGBALC: Red-Green-Blue-Amber-Lime-Cyan
   c. RGBL: Red-Green-Blue -Lime
3. Built-in power supply with input voltage range of 100-240VAC, on-board processor, (60) Luxeon LED emitters with a minimum 50,000 hour L70 lamp life. Greater than 8,000 output lumens.
   a. Theatrical grade dimming with a 15-bit virtual dimming. Low noise cooling via a variable speed, temperature controlled or user controllable fan.
4. Power in and thru via powerCON TRUE1 or powerCON connectors. Power leads shall use a 5’ long powerCON-to-5-15P connector. DMX512 input and through connectors via 5-pin XLR connectors.
5. Enhanced definition lens tubes and/or barrel assemblies of various beam widths or zoom ranges per schedule of quantities on project drawings. Lens tube or barrel shall include accessory slots with locking capability for two accessories (gel frames, top hats, etc.). A soft focus diffuser shall be provided for each fixture for use in shutter barrel accessory slot.
6. Acceptable products:
   a. E.T.C. ColorSource Spot V
   b. Vari-Lite Leko LED
   c. Altman Phoenix PHX3.5
   d. Others contingent on pre-approval.

D. Provide full-color LED wash lights with variable zoom suitable for long throw applications [production wash lights]. Fixtures shall include the following:
   1. Die cast all metal housing, double clutch locking yoke. Fixture body shall contain accessory slots with locking capability for two accessories (gel frames, top hats, etc). Provide with a black finish.
   2. Full color LED light engine that utilizes one of the following LED arrays:
      a. RGBIL: Red-Green-Blue-Indigo-Lime
      b. RGBW: Red-Green-Blue-White
      c. RGBL: Red-Green-Blue -Lime
   3. Built-in power supply with input voltage range of 100-240VAC, on-board processor, (44) LumiLED Luxeon LED emitters with a minimum 50,000 hour L70 lamp life. Greater than 5,000 output lumens. Theatrical grade dimming with a 15-bit virtual dimming. Low noise cooling via a variable speed, temperature controlled or user controllable fan settings.
   4. Power in and thru via powerCON TRUE1 connectors. Power leads shall use a 5’ long powerCON-to-5-15P connector. DMX512 input and through connectors via 5-pin XLR connectors.
   5. Optical system shall utilize a motorized zoom with a range of 15-to-40 degrees minimum.
   6. Acceptable product:
      a. E.T.C. ColorSource Fresnel V
      b. Vari-Lite VL800 ProPAR
      c. Altman Lighting Hydra PAR AIP200
      d. Others contingent on pre-approval.

E. Provide full-color LED multi-cell asymmetric cyc lights. Fixtures shall include the following:
   1. Corrosion resistant metal housing, mounting yoke, adjustable rubber feet for floor mounting. Provide with a black finish.
   2. Full color LED light engine that utilizes one of the following LED arrays:
      a. RGBA: Red-Green-Blue-Amber
      b. RGBALC: Red-Green-Blue-Amber-Lime-Cyan
   3. Built-in power supply with input voltage range of 100-240VAC, on-board processor, LED emitters with a minimum 50,000 hour L70 lamp life. Greater than 7,500 output lumens. Theatrical grade dimming with a 15-bit virtual dimming. Fixture shall be passively cooled without the use of fans.
   4. Power in and thru via powerCON or powerCON TRUE1 connectors. Power leads shall use a 5’ long powerCON (or TRUE1)-to-5-15P connector. DMX512 input and through connectors via 5-pin XLR connectors.
   5. Fixture shall utilize an asymmetrical reflector for producing a smooth even wash from top-to-bottom of vertical backdrop.
   6. Acceptable product:
      a. Altman Spectra Cyc 200 RGBA
      b. Vari-Lite CODA LED Cyc
      c. Others contingent on pre-approval by Theatre Consultant.

F. Provide warm-white LED wide flood work lights suitable for long throw worklight applications [stage overhead rehearsal lights or stage wing work lights]. Fixtures shall include the following:
   1. Corrosion resistant metal housing, mounting yoke. Fixture body shall contain an accessory slot with locking capability for an accessory such as a gel frames, diffuser, or barndoor. Provide with a black finish.
   2. Built-in power supply with input voltage range of 100-277VAC, on-board processor, LED emitter with a minimum 40,000 hour L70 lamp life. Greater than 10,000 output lumens. The fixtures shall have a CCT of 3,000 kelvin and a minimum CRI of 90. The fixture shall be passively cooled without the use of fans.
      a. LED light engine shall be dimmable via phase cut 2-wire dimming or via on-board local fader control.
   3. Power in and thru via powerCON connectors. Power leads shall use a 5’ long powerCON-to-L5-20P grounded twistlock connector.
   4. Fixture shall include a diffused lens in frame.
   5. Acceptable products:
      a. Altman Lighting Worklight II (#WL-90).
      b. Others contingent on pre-approval by Theatre Consultant.

G. Provide warm-white LED wide flood work lights suitable for long throw worklight applications [stage overhead rehearsal lights or stage wing work lights]. Fixtures shall include the following:
   1. Corrosion resistant metal housing, mounting yoke. Fixture body shall contain an accessory slot with locking capability for an accessory such as a gel frames, diffuser, or barndoor. Provide with a black finish.
   2. Built-in power supply with input voltage range of 100-277VAC, on-board processor, LED emitter with a minimum 40,000 hour L70 lamp life. Greater than 10,000 output lumens. The fixtures shall have a CCT of 3,000 kelvin and a minimum CRI of 90. The fixture shall be passively cooled without the use of fans.

a. LED light engine shall be dimmable via phase cut 2-wire dimming or via on-board local fader control.

3. Power in and thru via powerCON connectors. Power leads shall use a 5' long powerCON-to-L5-20P grounded twistlock connector.
4. Fixture shall include a diffused lens in frame.
5. Acceptable products:
   a. Altman Lighting Worklight II (#WL-90).
   b. Others contingent on pre-approval by Theatre Consultant.

H. Provide warm white LED fresnel/PAR-style wash light for long throw worklight applications [FOH Rehearsal lights]. Fixtures shall include the following:
1. Corrosion resistant metal housing or die cast aluminum, mounting yoke. Provide with a black finish.
2. Built-in power supply with input voltage of120VAC, on-board processor, LED emitter with a minimum 45,000 hour L70 lamp life. Greater than 10,000 output lumens. The fixtures shall have a CCT of 3,000 kelvin and a minimum CRI of 90. The fixture shall be cooled with low noise temperature-controlled cooling fans
   a. LED light engine shall be dimmable via phase cut 2-wire dimming or via DMX512 control. Fixture shall include DMX512 input and output data connections via XLR 5-pin connectors or via adaptor cables for precise control of dimming if desired.
   b. Fixture shall be capable of on/off control via line voltage relay switching without the need for a separate data connection. The fixture shall turn on and output light in less than 1 second from application of power.
3. Power in and thru via powerCON TRUE1 or powerCON connectors. Power leads shall use a 5' long powerCON-to-L5-20P grounded twistlock connector. DMX512 input and through connectors via 5-pin XLR connectors
4. Fixture shall have an adjustable beamspread from 15 to 85 degrees via a zoom mechanism, from 10-to-30 degree via manual stops or shall vary beamspread via interchangeable lenses.
5. Acceptable products:
   a. Electronic Theatre Controls: Source 4WRD PAR, Gallery Edition, with MFL and WFL lenses
   b. Vari-Lite VL800 EventPAR WW
   c. Altman Pegasus8 LED Fresnel
   d. Other contingent on pre-approval by Theatre Consultant.

I. Provide full-color LED PAR-style wash lights with variable beam [stage wing run lights]. Fixtures shall include the following:
1. Die cast all metal housing, mounting yoke, accessory slots with locking capability for two accessories. Provide with a black finish.
2. Full color LED light engine that utilizes one of the following LED arrays:
   a. RGIL: Red-Green-Indigo-Lime
   b. RGBA: Red-Green-Blue-Amber
3. Built-in power supply with input voltage range 100-240VAC, on-board processor, (40) Luxeon LED emitters with a minimum 50,000 hour L70 lamp life.
4. Theatrical grade dimming with a 15-bit virtual dimming. Low noise cooling via a variable speed, temperature controlled or user controllable fan settings.

5. Power in and thru via powerCON or powerCON TRUE1 connectors. Power leads shall use a 5' long powerCON-to-5-15P connector. DMX512 input and through connectors via 5-pin XLR connectors.
6. Beam shall be varied via interchangeable lenses or and adjustable a multi-stop lens assembly with beam angles of 10-30 degrees.
7. Acceptable product:
   a. E.T.C. ColorSource PAR (Deep Blue) with (1) narrow and (1) medium oblong lens per fixture.
   b. Vari-Lite VL800 EventPAR RGBA
   c. Others contingent on pre-approval.

J. Provide 600 Watt LED 120V Followspots. Fixtures shall include the following:
1. Followspots to include integral power supply, 10' cable with Edison receptacle, and illuminated on/off rocker switch. Other features include:
   a. 7 deg to 14.5 deg zoom
   b. 6-way self-cancelling color boomerang
   c. A-size gobo holder
   d. Fully-closing iris cassette
   e. Chopper kit
   f. Stainless steel trim shutters
   g. Telescoping floor stand with casters and leveling jacks
2. Acceptable products:
   a. Robert Juliat OZ 1169TC
   b. Lycian Stage Lighting #1280
   c. Strong iChip 600 LT
   d. Others contingent on pre-approval.

K. Provide a ghostlight fixture consisting of a 72" tall base and stand assembly with a medium screw base socket enclosed with a protective basket. Base to include 3 locking casters. Fixture shall include 15' of 12/3 type SJ power cord with a 5-15P parallel blade+ground connector installed. .
1. Supply with (1) medium screw base LED lamp, A-21 size, approximately 20 watts, Phillips #451906 or equal.
2. Basis of design: Altman Ghost-Light

L. STAGE LIGHTING FIXTURES EQUIPMENT LIST:
1. Stage lighting fixture quantities per schedules on project drawings.

2.06 STAGE LIGHTING ACCESSORIES

A. Provide stage lighting cable and accessories as indicated on the schedule of equipment quantities on project drawings. Cables shall be fabricated per the following criteria and per details on project drawings.
1. All extension cables shall be marked near each end for length identification per details on project drawings. Labels shall be covered with clear, shrink-wrap tubing. Utilize 3/4" wide Scotch 35 Color Coding Vinyl Electrical Tape for coloring. Length color code is as follows:
   a. 6' = Yellow
   b. 10' = Red
   c. 15' = (1) Yellow + (1) Red w/ 3/4" gap in-between

d. 20’ = (2) Red w/ 3/4” gap in-between
e. 25’ = Orange
f. 50’ = Brown
g. 75’ = (1) Brown + (1) Orange w/ 3/4” gap in-between

2. All data extension and adaptor cables utilizing XLR 3,4,5 or 6-pin connectors shall utilize Neutrik XX-series connectors with gold plated contacts, black shell and colored bushings to identify cable function. Network extension cables shall utilize Neutrik Ethercon connectors. Bushing colors shall be as follows:
   a. Network - XLR Ethercon = Blue
   b. DMX512 - XLR 5-pin = Violet
   c. DMX512 - XLR 3-pin = Gray
   d. Power/Data - XLR 4-pin = Green
3. DMX data cables and power supply/data cables shall be terminated with heat shrink tubing over the drain wire and clear heat shrink tubing over the portion of cable where the outer jacket has been stripped from individual conductors.
4. Provide and install a tie-line with each extension cable for securing cables when coiled. Tie-line shall be 1/8” black cotton trick line/tie-line, unglazed, attached to cables with clove hitch and half-hitch knots, minimum 36” long.
5. All extension, adaptor and miscellaneous cables shall be provided with a 3” long clear length of heat shrink tubing installed on cables for owner-provided labeling.

B. Extension cables
1. Provide CAT-5 Ethernet data portable extension cables with TMB ProPlex PCCAT5EP cable & Neutrik EtherCon RJ-45 connectors with black shells and colored bushing to identify cable function.
2. Provide portable DMX512 control extension cables constructed from TMB ProPlex PC224P cable with heavy-duty jacket and Neutrik 5-pin XLR connectors with gold plated contacts, black shells, and colored bushings to identify cable function.
3. Provide 12/3 type SO portable stage extension cables with male and female 20A 120V grounded stage pin connectors.
4. Provide 12/3 type SO portable stage extension cables with male and female grounded 5-15 Edison connectors.
5. Provide 12/3 type SO portable stage extension cables with male and female grounded L5-20 connectors.
6. Provide Neutrik powerCON or powerCON TRUE1 jumper cables for daisy-chain of LED light fixtures.
   a. Final quantity of each style of extension cable will be determined during submittals depending on what connector type submitted fixtures use.
7. All extension cables shall be marked near each end per details on project drawings. Labels shall be covered with 3” long, clear, shrink-wrap tubing. Install tie-line with each extension cable for securing cables when coiled. Provide colored bushings for data cables to identify functions per detail drawings. All data connectors shall be either Neutrik X-series (Network) or Neutrik XX-series (DMX512 cables).

C. Adaptor & Miscellaneous Cables
1. Provide molded-rubber-cable twofers with 20 amp grounded Edison connectors. Lengths and quantities per schedules on project drawings.

2. Provide 20 amp 12/3 male grounded stage-pin to female grounded Edison adaptors.
3. Provide DMX5-pin turnaround cables, XLR5M-to-XLR5M.
4. Provide DMX terminating plug, XLR5M with 120 ohm resistor across pins 2 and 3.
5. Provide PowerCon couplers for connecting two PowerCon extension cables together. Neutrik #NAC3MM-1.
6. All DMX data adaptor cables shall be fabricated from either Neutrik X-series or Neutrik XX-series connectors with gold plated contacts, black shell and colored bushings to identify cable function per detail drawings. All cables shall be fabricated with the same Neutrik series connector.

D. Provide stage lighting tophats to fit 19°, 26°, 36°, 50° profile spotlights. Sizes and quantities per schedules on project drawings. Tophats shall have a safety cable permanently-affixed.
   1. 50° tophats to be sized to be compatible with lens tube.

E. Provide 4-pane stage lighting barndoors to fit PAR style run lights and LED washlights. Barndoors shall have a safety cable permanently-affixed.

F. Tophats, barndoors, and color extenders shall have a safety cable permanently-affixed via a galvanized aircraft cable attached to the device with a loop terminated with a nicopress sleeve and with a snap hook captured at the other end via a loop and nicopress sleeve.

G. Provide template holder for ellipsoidal reflector spotlights for A-size or M-size patterns.

H. Provide 3,000’ spool of 1/8” black unglazed tieline.

I. Provide road cases for storage of portable stage circuit extension cables, control cables, two-fers, adaptors, and accessories. Road cases shall have the following features:
   1. Case construction shall conform to A.T.A. standards, specification 300, category 1.
   2. Case shall be of the hinged-lid, rolling variety. Approximate outside dimensions of case shall be 40” long by 25” wide. The storage section shall be 24” high with an upper hinged lid section. With casters the overall height of the case shall be approximately 30”.
   3. Cases shall be constructed from ½” plywood with a fiberglass laminate exterior surface bonded to plywood. Line the inside of the case with outdoor carpet or provide another method for limiting splintering along the inside walls of the case. Laminate surface color: BLACK.

4. All fittings and edges shall be fabricated with tapered aluminum and shall be attached via split steel rivets every 3”. Aluminum tongue-in-groove fittings shall be used at the perimeters of the lid to ensure positive alignment. A continuous length steel piano hinge shall be utilized for the lid along with 2 nylon straps to limit lid travel. (2) recessed spring loaded latches shall be provided opposite hinged side along with (4) recessed spring loaded handles with foam grips at the ends of the case. Steel ball corners shall be provided at each corner of the case. Provide (4) heavy duty ball-bearing casters with a minimum load bearing capacity of 225 pounds each. Attach casters to bottom of case with reinforcing caster plates. Install (4) caster cups in lid of case for ease of stacking cases.
5. Provide a removable wooden partition perpendicular to the long side of the case at the case center. Provide guides for the partition to slide into and a rounded rectangular hole near the top of the partition for a hand hold. Partition to be constructed from 1/2” wooden material that is resistant to splintering.
6. Stencil with white paint the top and 4 sides of the case with the name of the owner or auditorium (verify with Architect prior to fabrication), a unique case # (#1 though 3 or similar) and the text “STAGE LIGHTING” in 1” high block letters.
7. Case manufacturer shall be equal to Jan-al “Rhino ATA” or equivalent contingent on approval of the Theatre Consultant. Quantity per schedule on project drawings.

2.07 ACCEPTABLE STAGE LIGHTING EQUIPMENT MANUFACTURERS

A. Acceptable stage lighting dimming and control manufacturers
1. Electronic Theatre Controls (ETC)
   3031 Pleasant View Rd
   Middleton, WI 53562
   800-688-4116
2. Vari-Lite Lighting
   10911 Petal Street
   Dallas, TX 75238
   214-647-8031

B. Acceptable stage lighting fixture manufacturers
1. Electronic Theatre Controls (ETC)
2. Vari-Lite Lighting
3. Altman Stage Lighting

C. Acceptable dimmer circuit distribution equipment manufacturers
1. Electronic Theatre Controls (ETC)
2. Vari-Lite Lighting
3. SSRC
4. Altman Stage Lighting

PART 3 - EXECUTION

3.01 INSTALLATION

A. Contractor shall furnish and install a completely functioning dimming system. All equipment, fittings, and peripheral devices for correct system operation shall be quoted and supplied.

B. Installation shall be in conformance with local, state and N.E.C. codes specifications and in accord with manufacturer's recommendations.

C. All lighting instruments and items of equipment, and individual components where applicable standards have been established, shall be listed by Underwriter's Laboratories, Inc. and shall be the U/L or ETL label when delivered and installed on job.

D. All Ethernet cabling shall be category 5e UTP and shall conform to TIA-568B standard and shall be installed, terminated, and certified by The Systems Integrator.

E. No part of the system shall be energized before being checked and the installation approved.

F. Protection and cleaning:
1. Materials and Equipment: Cover all equipment stored or installed on the site with polyethylene sheets or approved equivalent, to protect equipment from dust, moisture, plaster, cement, paint or work of other trades.
2. Storage: Provide proper and adequate storage facilities.
3. Damage: Replace all damaged or defective work, materials, or equipment. Install sensitive or delicate equipment after major construction work is completed.
4. Site Cleaning: Regularly remove waste and rubbish and maintain order.
5. Equipment Finish: Clean and polish all surfaces.
6. Acceptance: Remove all debris, dirt, grease, and oil from building surfaces caused by installation work. Clean and vacuum all rooms in which installation work has occurred.

G. Installation Notes:
1. Each dimmer circuit requires a separate hot and separate neutral. NO COMMON NEUTRALS.
2. The theatrical stage lighting drawings are diagrammatic only. Do not scale the drawings to determine the location of equipment.
3. Do all drilling, cutting, channeling and patching required to install lighting equipment and electrical work as indicated or herein specified. All holes, curbs, etc. in floors, ceilings, and walls shall be patched, unless indicated otherwise. Paint all new exposed electrical raceways, cabinets, enclosures, and fittings to match in color adjacent surfaces in finished areas.
4. Seal all penetrations through fire rated walls, ceilings, floors, etc., to maintain the fire rating. Furnish and install fire rated enclosures for all equipment penetrating into fire rated envelopes, spaces, etc.
5. Location of all conduit runs and junction boxes must be approved by the Theatre Systems Consultant and Electrical Engineer prior to actual construction.

3.02 SYSTEMS INTEGRATOR INSTALLATION RESPONSIBILITIES

A. Systems integrator shall be responsible for the following:
   1. Verify mounting locations for all wiring devices with installing contactor.
   2. Verify all data cable types and wiring topologies with installing contractor based on system manufacturer requirements.
   3. Coordinate early release of backboxes or other equipment required for rough-in.
   4. Pre-configure and test all permanently installed intelligent architectural fixtures such as DMX-controlled fixtures that are connected to or controlled by the theatrical lighting systems.
   5. Make a minimum of 5 site visits prior to initial system commissioning to monitor jobsite progress and to coordinate with the installing contractor.
   6. Coordinate multi-cable and data cable installation supported by stage rigging with rigging contractor to ensure that cable is arranged per project drawings.
   7. Terminate all stage lighting data wiring connected to the stage lighting dimming and control equipment even if the Systems Integrator was not part of the chain-of-supply for select pieces of equipment (DMX or 0-10V controlled lighting fixtures).
   8. Test all Ethernet network segments and provide a detailed test report to Theatre Consulting.
      a. A report with individual test reports for all Ethernet cable segments shall be submitted to the consultant 5 days prior to commencement of the final punch list inspection. The report should be generated by a network analyzer similar to the Fluke DSP-4000 series
   9. As an authorized field service commissioning agent for the primary theatrical lighting equipment vendor, commission the entire theatrical lighting dimming and control system.
      a. Configure control data distribution system and architectural lighting control system with the following parameters:
         1) The control network and dimming system shall be configured so that architectural lighting circuits (work lights, rehearsal lights, running lights) are not controlled by the stage lighting console.
         2) The control network and dimming system shall be configured so that the stage preset pushbuttons can record all DMX addresses in universe #2 and all addresses in universe #1 except for the architectural lighting circuits.
         3) The programming of the architectural lighting touchscreen stations and all button and fader stations shall be configured and tested with offline software 4 weeks prior to the expected system commissioning date in conjunction with the Theatre Consultant.
            a) All pushbuttons at remote WCS and HCS stations shall utilize dim blue indicators when associated circuit(s) is off and bright green when on. All pushbuttons shall flash with a slow red indicator or use another scheme to indicate when a button is pressed that the station is locked out.
            b) Instructions for recording Houselight & Stage presets as well as general operation of architectural lighting control system. Instructions shall be provided as user selectable help screens on the 7” LCD touchscreen. Circuit #’s for architectural lighting circuits shall be listed along with help screens.

10. Verify that all manufactured items delivered to the project site are fabricated per approved submittal drawings prior to installation.
11. Coordinate receiving of portable theatrical equipment and prevent from loss or damage until time of installation or turnover.
12. Provide trained and highly qualified theatrical stage lighting technicians to properly hang and focus aim adjust the stage lighting spotlight fixtures. This installation shall consist of the following:
    a. Unpack light fixture, install lamp, bench focus fixture, install c-clamp, safety cable, and any related hardware or accessories, dispose of packing materials.
    b. Hang fixtures and connect to power circuit receptacles as noted on initial light plot. Install portable data cable for intelligent fixtures.
    c. Install any color filters noted on initial light plot in project drawings.
    d. For intelligent, programmable fixtures perform a complete setup including assigning DMX addresses and applying other profile settings as requested by Theatre System Consultant and as required to provide an integrated functioning system.
    e. Do not install fixtures until facility is reasonably dust free to prevent the accumulation of dust and dirt on lenses and reflectors. If facility is not dust free place plastic bags over fixtures and until time of checkout. Unplug fixtures to prevent accidental activation while fixtures are covered.
    f. Maintain an inventory of how many sheets of color have been used as well as any cable or accessories installed for the purpose of verifying inventory of system accessories at time of final checkout.
    g. Patch all lighting fixtures at control console and verify that entire light plot functions normally when controlled by primary control console and architectural control system. Verify that fixture profiles are installed for all intelligent fixtures provided as part of the project. Obtain missing profiles from the control console manufacturer or create full function profiles with a personality editor.
13. Provide training sessions to end-user as defined elsewhere in specification.
14. Deliver project closeout documents including O&M manuals for all theatrical lighting equipment as well as as-built submittal drawings. See additional requirements in project general conditions documents.

3.03 TESTING AND COMPLETION

A. Provide all instruments for testing and demonstrate in presence of the School's Representatives that all circuits and wiring tests free of shorts and grounds.

B. Furnish all labor, instruments, appliances, equipment, and materials necessary to demonstrate to the School that the installations perform as required and are as specified herein.

C. The School reserves the right to make independent tests of all equipment furnished to determine whether or not equipment complies with requirements specified herein and to accept or reject any or all equipment on basis of results thereby obtained.

D. Within 14 days of written request, the Systems Integrator shall provide a factory engineer to check installed systems and make any adjustments or modifications necessary for proper operation.

E. Should any follow-up checkout and inspection visits be required by the Architect, Electrical Engineer or Theatre Systems Consultant due to any installation caused matters after the approved completion of the project, the Contractor shall bear this cost at the Architect's, Engineer's and Consultant's standard hourly rates. This shall be scheduled and approved in writing.

3.04 TRAINING AND INSTRUCTION

A. The stage lighting equipment manufacturer and/or the Contractor shall provide operations and maintenance instruction to School personnel as follows:
   1. A minimum of two (2) and not to exceed four (4) hours of operations instruction for the School's faculty, staff, and students.
   2. A minimum of one (1) and not to exceed two (2) hours of maintenance instruction for the School District's maintenance staff

B. All training sessions shall be coordinated with the school schedule. Cost of such instructional services shall be part of the Contractor's bid.

C. Review of written operations and maintenance manuals and submittal drawings shall take place during these training sessions.

END OF SECTION

SECTION 27 05 00 - COMMON WORK RESULTS FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes furnishing materials, equipment, labor, supervision, coordination, tools and items necessary for the construction, installation, connection, integration, testing and operation of communications systems work for this project.

1.02 RELATED WORK

A. General requirements specifically applicable to Division 27 in addition to the provisions of Division 1.

1.03 REFERENCES

A. The latest published edition of a reference shall be applicable to this Project unless otherwise noted.

B. International Building Code (IBC)

C. California Building Code (CBC).

D. Los Angeles City Building Code

E. American National Standards Institute (ANSI).

F. ANSI/TIA-568 - Commercial Building Telecommunications Cabling Standard.

G. ANSI/TIA-569 - Telecommunications Pathways and Space Standard

H. ANSI/TIA-606 - Administrative Standard for Commercial Telecommunications Infrastructure.

I. ANSI/TIA-607 - Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises Standard.

J. ANSI/TIA-758 - Customer Owned Outside Plant Telecommunications Cabling Standard.

K. ANSI/TIA 1152 - Field Testing of Twisted Pair Communication Cables.

L. ANSI/TIA-4966 - Telecommunications Infrastructure Standard for Educational Facilities.

M. ANSI/TIA-5017 - Telecommunication Physical Network Security Standard.

N. ANSI/TIA-5071 - Field Testing Single Pair Cabling System.

O. ANSI/TIA TSB-184A – Guidelines for Supporting Power Delivery Over Balanced Twisted Pair Cabling.

P. ANSI/Building Industry Consulting Service International (BICSI) - Telecommunications Distribution Methods Manual (TDMM).

Q. ANSI/BICSI-N2-17 - Practices for the Installation of Telecommunication and ICT Cabling Intended to Support Remote Power Applications.

R. National Fire Protection Association (NFPA) Article 70, Article 72, Article 78.

S. National Electrical Code National (NEC).

T. National Electrical Safety Code (NESC).

U. Federal Communications Commission (FCC).

V. Underwriter's Laboratories (UL).

W. Local fire code, building code, mechanical code, electrical code, rules and interpretations required by the authority having jurisdiction (AHJ).

X. The referenced codes establish a minimum level of requirements. Follow the more stringent provision of the codes where there is a conflict between codes. Follow any code where there is a conflict between the code and the requirements of the Specifications. Compliance with code requirements shall not relieve the responsibility from complying with the requirements of the Specifications and the Drawings.

1.04 WORK OF OTHER TRADES

A. The Drawings do not show complete details of the building construction. Refer to the architectural, structural, civil, fire protection, mechanical, electrical, mill work and reflected ceiling Drawings for those details which may affect the execution of this Work.

B. Coordination: Conform to the requirements of Division 01. Failure to coordinate Work will be considered sufficient cause for Work to be altered at Contractor's expense, as directed by Architect.
   1. Plan and execute Work including, but not limited to conduits, back boxes enclosures and speakers in cooperation with other trades.
   2. Notify other trades of any Work affecting their Work to prevent conflicts or interference as to space requirements, dimensions, openings, block-outs, sleeves,

firestopping, painting, finishing, or other matters which will cause delays or necessitate work-around methods.

C. Visit the site to verify demolition Work. Coordinate with the Owner prior to commencement of Work. Maintain service to existing equipment and devices to be retained in area adjacent to the areas scheduled for Work.

D. Protect the installation of and the integrity of existing systems, devices and cables during demolition Work.

E. Protect existing buildings and spaces from water and dust seepage into the existing buildings and spaces.

F. Protect, maintain and re-rate fire stopping system for floor and walls involved in the Work.

G. Utilities and Services:
   1. Do not disturb existing utilities without Owner's written consent. Notify the Owner and Architect not less than 10 days prior to the scheduled work date.
   2. Prior to demolition, field-verify and document existing area, conduits, ducts, utility vaults, and handholes shown for demolition.
   3. Where the area, ducts, conduits, manholes, and handholes contain utilities not shown for permanent demolition, submit a re-routing plan to the Architect showing the ducts, conduits, utility vaults, handholes, conductors, boxes, wiring, and connections required to re-route the utilities outside of the area affected by the

demolition. Upon receiving written approval of the re-routing plan, re-route existing utilities and systems in accordance with the approved work plan.

4. Prior to trenching and excavation, use a utility locator to locate existing underground utilities. Excavate to avoid underground utilities.
5. Prior to core drilling, use ground penetrating radar, pachometer, X-ray or other suitable means to locate existing rebar, embedded conduit, post tensioning cables and other imbedded obstructions. Locate core drill to avoid obstructions.
6. Where the Drawings show existing services to be abandoned, terminate in conformance with requirements of the utility and authority having jurisdiction.
7. Install and test new services prior to demolishing existing services unless otherwise shown.
8. Failure to verify the existing conditions or submit re-routing plan will be considered sufficient cause for work to be altered at Contractor's expense, as directed by Architect.

1.05 CODES, PERMITS, INSPECTIONS, AND FEES

A. Conform to requirements of Division 1 [Section [01 41 00]].

B. Obtain permits and inspections and pay fees required by National, State and Local authorities. Make arrangements for inspections by the Architect, Owner or other authority as required. Submit 3 copies of certificates of compliance to the Architect.

C. Work and materials shall be in accordance with requirements of the latest adopted edition of applicable codes, regulations, ordinances, and local amendments.

D. Remove Work that is not in compliance with the codes, ordinances, or regulations.

E. Where Drawings or Specifications call for material or construction of a better quality or larger sizes than larger sizes than required by the above-mentioned rules and

regulations, the provisions of the Drawings or Specification shall take precedence over requirements of the rules and regulations.

F. Coordinate with the appropriate “Authorities Having Jurisdiction” for this Project.
   1. Arrange plans and shop drawing reviews.
   2. Schedule inspections.
   3. Notify the Architect of non-conformance issues.
   4. Proceed with changes suggested by the authorities having jurisdiction only with written authorization by the Architect.
   5. Make necessary corrections as required by the authorities having jurisdiction.

G. Comply with rules and requirements of telecommunication service providers.

1.06 SAFETY

A. Coordinate job site safety requirements with the Architect and Owner. Provide safety measures continuously during work.

B. Provide safety policies, training, retraining, equipment, safeguards, restraints, permit systems, and other safety measures required by federal, state, local, and the Owner’s site rules and regulations and for the safe performance of the Work.

C. Comply with the “Safety and Health Regulations for Construction,” 29 CFR 1926, by the U.S. Department of Labor.

D. Consult with the state or federal safety inspector for interpretation whenever in doubt as to whether safe conditions do or do not exist or whether the Contractor is or is not in compliance with state or federal regulations.

E. Notify the Architect and Owner of any unsafe conditions observed or experienced.

F. Perform safety audits, inspections, meetings, and personnel interviews in accordance with federal, state, local, and Owner site safety rules and regulations.

G. Do not use the Architect’s construction observations as a substitute for Contractor’s safety audits and inspection responsibilities.

1.07 SUBSTITUTIONS

A. Conform to requirements of Division 1 [Section [[01 25 00]].

B. Substitutions may be considered when a product becomes unavailable through no fault of the Contractor.

C. Document each request with complete data substantiating compliance of proposed substitution with Contract Documents. Include, in each request for substitution, the following.

1. Product identification, manufacturer's name and address.
2. Product Data: Description, performance and test data, reference standards, finishes, and colors.
3. Samples: Finishes.
4. Complete and accurate drawings indicating construction revisions required to accommodate substitutions.
5. Data relating to changes required in construction schedule.
6. Cost comparison between specified and proposed substitution.

D. When approved substitute equipment or material necessitates revisions to the Drawings or involves other trades, include drawings and details showing such changes, and coordinate and assume any liability from the affected trades.

E. Acceptance: The acceptance of a manufacturer's name or product by the Architect does not relieve the Contractor of the responsibility for providing materials and equipment which comply in detail with the requirements of the Contract Documents.

F. The Contractor shall be liable for costs incurred by the Owner, Architect, and Engineer for professional services resulting from substitutions.

G. Substitutions will not be considered when they are indicated or implied on Shop Drawings or product data submittals, without separate written request, or when acceptance will require revision to the Contract Documents.

H. The Owner will be the final judge of acceptability, with review by Owner, and the distribution of the acceptance by the Architect. No substitute shall be ordered, installed or utilized without the Architect's prior written verification of acceptance from the Owner.

1.08 SEISMIC PERFORMANCE:

A. Rack, ceiling and wall mounted equipment and devices and cable pathways shall withstand the effects of earthquake motions determined according to SEI/ASCE 7. The

term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified.

1.09 SUBMITTALS

A. Conform to requirements of Division 1, [Section [01 33 00]].

B. Refer to individual Division 27 Specification Sections for additional requirements for submittals.

C. Submit information that is specific to this Project. Do not submit generic information. Highlight with yellow or blue marker adequate information to demonstrate materials being submitted fully comply with Contract Documents.

D. Do not use the submittal process to request substitutions. Make requests for substitution in accordance with Division 1, [Section [01 25 00]].

E. Product Data: Submit for approval manufacturer's descriptive product information including catalog cuts and other information required to confirm compliance with the Drawings and Specifications, including size, dimensions, model number, electrical characteristics, support requirements, connection requirements and all applicable information verifying that submitted components comply with Contract Documents.

F. Shop Drawings: Submit for approval shop drawings including floor plans with devices identified, wall and rack elevations, sections, schedules, wiring diagrams, schematics, seismic installation instructions, mounting details and other information required to confirm compliance with the Drawings and Specifications.

G. Schedule: Submit for approval a detailed schedule of the installation, testing and hand off to Owner of the Work.

H. Network Connections: Submit for approval a list of devices that will connect to the Owner's wired or wireless networked including the MAC address of the device, the location to be installed and the port configuration needed for connectivity.

I. Samples: Submit for approval samples to the Architect for color and material selection where the color or material selection is not specified.

J. Seismic Design: Submit calculations, details, Shop Drawings, Product Data, and statement of special inspections for the seismic design of nonstructural components, in Division 27 to Architect for Architect's review. After Architect's review, Architect will submit the Architect's notification with the calculations, details, Shop Drawings, and statement of special inspections to the Building Official per California Building Code section 107.3.4.1. Do not start Work until the calculations, details, Shop Drawings, Product Data, and statement of special inspections have been approved by the Building Official. If the Contractor hired professional engineer licensed in the State of California determines that the CBC does not require some of the nonstructural equipment to be

seismically restrained, then submit a stamped and signed statement from the professional engineer to that effect.

1. Submit a written “Contractor’s Statement of Responsibility”, where such statement is required by Section 1704.4 of the California Building Code, to Architect and to Building Official for electrical nonstructural components listed in the statement of

special inspections per California Building Code prior to the commencement of Work on the system or component.

K. Submit seismic certification of electrical nonstructural components and designated seismic systems where such certification is required by Section 1705.13 of the California Building Code.

1.10 QUALITY ASSURANCE

A. Conform to requirements of Division 1. [Section [01 43 00]].

B. Provide materials and equipment that are new, unused, free of defects, and of current manufacture. Equipment and materials shall carry Underwriters Laboratory certification if required by local, state or national codes.

C. Adhere to the Telecommunications Industry Association (ANSI/TIA) and Building Industry Consulting Service International (BICSI) recommended installation practices and manufacturer's guidelines when installing communications components.

1.11 QUALIFICATIONS

A. Conform to requirements of Division 1, [Section [01 43 13].

B. Manufacturer: Company specializing in manufacturing products specified in this Division with minimum 5 years documented experience.

C. Installation Contractor:
1. Specializes in the installing of products specified in this Division with minimum 3 years documented experience, and with service facilities within 100 miles of this Project.
2. Have factory certified technicians to work on any system software and programming of any devices installed on this Project.
3. Are familiar with local codes and contract conditions pertaining to this Project.
4. Have been distributing and/or installing the specific brand and model line of system equipment for at least 3 years prior to the date on the Contract Documents.
5. Have in-house engineering and project management capabilities consistent with the requirements of the Work.
6. Have a project manager and field supervisor in place which oversees the entire Project until completion of the Project including coordination, scheduling, staffing, functional performance testing for this Project.
7. Have a service facility and organization with staffing capable of providing comprehensive maintenance and service to the specified systems within 4 hours after being called, 24 hours per day and 7 days a week.

D. Testing Agency: Company specializing in testing products specified in this Section with minimum 3 years documented experience.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Conform to requirements of [Division 1], [Section [01 60 00].

B. Deliver materials (except bulk materials) in manufacturer's unopened containers, fully identified with the manufacturer's name, trade name, type, class, grade, size and color.

C. Store materials suitably sheltered from the elements, but readily accessible for inspection until installed. Store items subject to moisture damage in dry spaces.

[Coordinate requirement for storage space with Owner and identify where they will be located in submittals.]

D. Remove debris, packaging and waste materials for recycling and disposal from the job site each day.

1.13 AMBIENT CONDITIONS

A. Conform to requirements of [Division 1], [Section [01 89 00].

B. Assemble equipment and materials off-site whenever possible.

C. Install materials and equipment after the following.
   1. Spaces are enclosed and weather tight.
   2. Wet work in spaces is complete and dry.
   3. Movement of trades and the installation of other materials and equipment will not damage Work.
   4. The installation of materials and equipment in ceiling areas above Work is complete.

1.14 PROJECT MANAGEMENT AND COORDINATION

A. Conform to requirements of [Division 1], [Section [01 31 00]].

B. Refer to the Work of the Division 26 and 28 Section for location of devices, cables and connections that will interface with Division 27 Work.

C. Coordinate Work with that of the other trades doing Work on the Project. Examine the Drawings and Specifications of other trades for construction details and coordination.

D. [Sequence work to [_____].]

E. Refer to the Architectural Drawings for the exact height and location of all back boxes and equipment.

F. Refer to the reflected ceiling plan Drawings for the ceiling construction and height information and for the location of all back boxes and equipment.

G. Identify Work affecting other trades to prevent conflicts or interference as to space requirements, dimensions, openings, block-outs, sleeves or other matters which will cause delays or necessitate work-around solutions.

H. Check space requirements and the physical confines of the area of work to ensure that all material and equipment can be installed in the spaces allotted thereto, including

conduits and cable supports. Bring space conflicts to the attention of the Architect for resolution.

I. [Due to the type of installation, a fixed sequence of operation is required to properly install the complete systems. Coordinate Project and schedule Work in accordance with the construction sequence. Maintain project schedules.]

J. [Attend construction meetings, at the Project site or other location, as requested by the Owner or Architect.]

K. Without extra charge, make reasonable modifications in the layout as needed to prevent conflict with work of other trades or for proper compliance with the design intent.

L. Room numbers as shown on Contract Documents may not be final room numbers. Final room numbers will be provided during construction. Use final room number for labeling and programming of cables and devices that references room numbers. Use final room number in the preparation of record documents and O & M documents.

1.15 RECORD DRAWINGS

A. Conform to requirements of [Division 1], [Section [01 78 39]].

B. Project Record Documents: Provide the following.
1. Plan drawings and room elevation drawings showing actual locations and sizes of Work.
2. Show location of equipment and size of conduits, raceways, pathways, ducts, and cable trays.
3. Locations of fire or smoke rated floors and walls where communication pathways and cable pass through.
4. Duct banks and conduits installed below-grade shall be shown with both horizontal and vertical dimensions at an accuracy of plus or minus 6 inches.
5. Approved modifications to equipment in the field shall be shown on the record drawings to reflect the “as-built” conditions.
6. Record drawings shall be consistent. Changes made to plans, elevations, sections, wiring diagrams, schematics, or functional diagrams shall be made to

related or otherwise affected plans, elevations, sections, wiring diagrams, schematics, or functional diagrams.

C. Record documents shall be indented as “RECORD DOCUMENTS or-AS BUILT with the date of their preparation.

1.16 CLOSEOUT SUBMITTALS

A. Conform to requirements of [Division 1], [Section [01 78 23]].

B. [Format for Operating and Maintenance Manuals:
   1. Compile product data and related information appropriate for Owner’s maintenance and operation. Prepare data in instructional manual form for use by Owner’s personnel. Modify data as required to accurately represent completed installations.
   2. PDF files stored on 3 USB drives.
   3. Binders: Commercial quality, 3-hole punched, vinyl covered hardboard binder, secured with aluminum screw posts, sized for 8-1/2 inch by 11-inch sheet format. Do not exceed 3-1/2-inch binder width.
   4. Binder Cover: Identify each Manual with printed title, “OPERATING AND MAINTENANCE INSTRUCTIONS”, Project Title, identification of subject matter contained in manual, and completion date of Project. Include names of Owner, Architect, Contractor, and major equipment suppliers.
   5. Binder Edge: The binder edge shall be imprinted with the name of the job, Owner, and completion date of Project.
   6. Provide tabbed dividers for each separate product and system, with typed description of product and major component parts of equipment.
   7. Text: Manufacturer’s printed data, or neatly typewritten information on 20 pound white or off-white paper.
   8. Drawings: Provide with reinforced punched binder tab. Bind in with text; fold larger drawings to size of text pages.]

C. Contents of Manuals:
   1. Project Directory: Indicate Project title and Project number. List Owner, Architect, [Commissioning Authority,]and Contractor with addresses, telephone numbers, and name of responsible parties.
   2. Product Directory: List names, addresses, and telephone numbers of subcontractors and suppliers. Included local sources of supplies and replacement parts. Provide information for re-ordering custom manufactured products.
   3. Product Data: Submit product literature. Mark each sheet to clearly identify specific products, models numbers, components parts, and data applied to

installation. Delete inapplicable information by marking out, striking out, or by notation.

4. Installation Instructions: Include instructions for installing equipment, devices, and systems. Instructions shall be specific to the installation and shall include pre-installation preparation, installation, and post-installation setup instructions.
5. Drawings and Diagrams: Include supplementing Product Data. Illustrate relations or components parts or equipment and systems. Show wiring, control, and flow diagrams. Do not use Project Record Documents as maintenance drawings.
6. Written Text: Include as necessary to supplement Product Data. Provide logical sequence of instructions for each procedure, incorporating manufacturer's instructions.
7. Provide information sheet for Owner's personnel indicating proper procedures in event of failure. Include instances which may affect validity of warranties.
8. Each Item of Equipment and Each System: Include description of system, and component parts. Include complete nomenclature and model number of replaceable parts. Identify the following.
   a. Normal functions.
   b. Normal operating characteristics.
   c. Limiting conditions.
9. Operating Procedures: Provide manufacturer's printed operation and maintenance instructions.
10. Maintenance Requirements: Include routine procedures and guide for preventive maintenance and troubleshooting; disassembling, repair, and reassemble instructions; and adjusting and checking instructions.
11. All warranty information shall include the following.
    a. Contractor/labor warranty (to include names and phone numbers).
    b. Parts/system/equipment specific warranties (to include complete list of components).]

1.17 WARRANTY

A. Refer to Division 01 for requirements for Warranties.

B. Provide originals of manufacturers' warranties to the Owner for Owner's records.

C. Register devices, components and systems with the manufacturer.

D. Provide a manufacturer's warranty for all work and all items of equipment and materials for a minimum period of one year, from the date of acceptance of the work, to cover for labor and material. Where a manufacturer's warranty is longer than one year, provide the extended warranty. Notify the Owner and Architect of any defective items. Repair or replace such items within 24 hours without cost to the Owner, all to the satisfaction of the Owner and Architect. If the failure exceeds 48 hours, the Owner reserves the right to

require the Contractor to provide on-site manufacturer support at no additional cost to Owner.

1.18 TRAINING FOR OWNER'S PERSONNEL

A. Refer to Division 01 for additional requirements for Training for Owner 's Personnel.

B. Refer to individual Division 27 Sections for additional requirements for Training for Owner's Personnel for specific systems.

C. Provide for approval a schedule of all Division 27 system training sessions prior to the commencement of training.

D. Provide qualified manufacturer trainers or qualified trainers certified by the manufacturers prior to the commencement of training.

E. Provide for approval qualifications for all Division 27 system trainers prior to the commencement of training.

F. Provide training materials for all training attendees.

G. General Description of Instruction Periods: Each period shall include preliminary discussion and presentation of information from operation and maintenance manuals with appropriate references to Drawings, followed by tours of equipment spaces explaining maintenance requirements, access methods, servicing, and maintenance procedures, temperature settings, and available system and equipment adjustments.

PART 2 - PRODUCTS

2.01 GENERAL

A. Subject to compliance with requirements, provide products by one of the manufacturers specified herein. Provide materials and equipment with performance levels and capacities as noted herein.

B. Part numbers provided in this Specification have been coordinated with the manufacturers' latest available product literature. Part numbers are subject to change without notice by the manufacturers. Where a specific part number is invalid, coordinate for approval products meeting component description.

C. Where specific items are called out in the Specification or indicated on the Drawings for a specific application, use those products or materials, or approved substitutes. Where no specific call outs are made, provide premium products and materials. All materials and equipment installed shall have been tested and listed by Underwriters Laboratories

or other approved testing organization and shall be so labeled unless otherwise permitted by the authority having jurisdiction (Inspector).

D. All materials to be new, free from defects and not less than quality herein specified. Materials shall be designated to ensure satisfactory operation and operational life in the environmental conditions which will prevail where they are being installed.

E. Each type of materials furnished shall be of the same make, be standard products of manufacturers regularly engaged in production of such materials and be the manufacturer's latest standard design.

2.02 EXAMINATION OF DOCUMENTS

A. Before submitting a bid, visit the Project Site and become familiar with conditions which may be pertinent to, or affect the cost of, the electrical installation.

B. Become acquainted with the Work of other installers whose activities will adjoin or be affected by the electrical Work. Consult with these other installers and study all pertinent Drawings in order to coordinate the Work and to avoid conflicts, omissions and delays.

C. Before submitting a bid, examine all pertinent Contract Documents for electrical requirements which are not necessarily indicated on the electrical Drawings and include in the bid a sum which is sufficient to cover the costs of these other requirements.

D. Should it be perceived that the Contract Documents do not sufficiently define the required electrical work, contact the Architect for clarification or further description. Failure to do this will be construed as evidence of an understanding of the required electrical systems and their installation.

2.03 PERMITS AND FEES

A. Contractor shall be responsible for obtaining and paying for all necessary electrical permits and fees.

B. The following section should be deleted if project is new construction.

2.04 EXISTING FACILITIES

A. Examine the drawings and specifications of the completed work and inspect the site to establish the scope of demolition work and new work to be provided under this sections and clarification of the phasing of the work.

B. Based on project phasing and scheduling, demolition work will be taking place in and around existing areas that are to remain in service. Where the work under this section affects or interferes with the operation of any existing areas to remain in service, or portions of the work already in operation, provide all necessary work and material including premium pay, required to avoid shutdown of these areas during normal

operations. Obtain Owner's approval for shutdown, in writing, 48 hours prior to shut down.

PART 3 - EXECUTION

3.01 GENERAL

A. Follow manufacturers' instructions for installing materials and equipment and adjusting equipment and cables. Where no instructions are included with the equipment, call manufacturer to obtain detailed instructions, document instructions, and follow those instructions.

B. Sequence, coordinate, install and integrate the various elements of these Specifications and Drawings.

C. Install equipment level and plumb.

D. Verify field conditions and dimensions in the field prior to commencement of Work. Do not block access or service clearance on equipment of these or of the Specifications of other Divisions.

E. Keep all items protected before and after installation, with dust and waterproof barrier materials as necessary. Maintain the integrity of the protective measures throughout the life of the Project.

F. Protect materials and equipment from damage. Do not install materials and equipment in the communications rooms or Work areas until the other trades have completed their Work in the areas so that the equipment will not be stepped on, moved, or damaged.

G. Provide and maintain safe ingress and egress from Work areas.

H. Deliver to Owner sets of specialty tools specifically needed for proper operation, adjustment and maintenance of cable and cable termination hardware installed under this Contract.

I. Attend meetings as scheduled by the Owner and Architect.

3.02 DEMOLITION AND REMOVAL

A. Cut, remove, and legally dispose of selected equipment, components, and materials [as indicated on the Drawings].

3.03 DRAWINGS

A. For purposes of clarity and legibility, the [Technology] Drawings are essentially diagrammatic. although the size and location of [Technology] equipment is drawn to

scale wherever possible, make use of all data in all the Contract Documents, and verify this at the Project Site. Determine the exact location of conduits, outlets and equipment by the study of details, shop drawings and/or the Architect's directions.

B. The [Technology] Drawings show the required size and points of termination of the conduits and the quantity and size of the conductors within. However, the Drawings do not show all the necessary conduit routing. Install conduits in such a manner as to conform to structure, avoid obstruction, preserve headroom and keep passageways and openings clear.

C. Locate outlets symmetrically with architectural elements, notwithstanding the fact that the locations shown of the electrical drawings may be distorted for clarity of representation.

D. The architectural Drawings take precedence over the electrical Drawings. Study the reflected ceiling plans and interior elevations to determine the exact location of lighting fixtures, wall-mounted devices and fixtures, etc. The Architect has taken a very active role in the placement of these items. Should there be a conflict between locations shown on the architectural and electrical drawings, contact the Engineer for clarification prior to rough-in.

3.04 VERIFICATION OF AVAILABLE SPACE

A. Throughout the course of construction, verify that sufficient space will be available for the equipment their required clearances to be installed. If conflict determined, contractor shall contact the design team for clarification on how to proceed.

3.05 EXISTING FACILITIES

A. Based on project phasing and scheduling, demolition work will be taking place in and around existing areas that are to remain in service. Where the work under this section affects or interferes with the operation of any existing areas to remain in service, or portions of the work already in operation, provide all necessary work and material including premium pay, required to avoid shutdown of these areas during normal

operations. Obtain Owner's approval for shutdown, in writing, 48 hours prior to shut down.

B. Existing electrical and signal facilities outside of the demolition area to remain in place and in-service during demolition.

C. Where areas of existing facilities are indicated to be demolished or remodeled, relocate electric and signal system equipment, and reroute or replace conduit and wiring as required to conform with new use of the area and maintain operation of adjacent areas.

D. Unless specifically noted or otherwise indicated or directed, remove all existing electrical equipment in the areas to be demolished. Deliver all equipment removed, including lighting fixtures, to the Owner's representative

E. Where remodeling of existing areas is indicated, provide all work indicated and required for a complete and operating facility. Where work is adjacent to existing fixtures or devices, provide matching products to present uniform appearance. Salvage demolished material and equipment and deliver to Owner as directed. Dispose of salvaged materials and equipment where so directed in writing by Owner. Patch all openings in existing walls or floors caused by removal of materials and/or equipment under this work.

3.06 WATERPROOFING

A. Wherever electrical Work pierces waterproofing or waterproofing membranes, install it in an approved watertight manner.

3.07 INSTALLATION

A. Comply with BICSI TDMM, and the TIA -568, TIA -569, TIA -606, and TIA 607-A standards.

B. Comply with applicable federal, state and local requirements, codes and ordinances of authorities having jurisdiction.

C. Comply with manufacturers' specifications, installation manuals, and published recommendations and best practices.

3.08 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver, store, and handle materials and equipment according to the manufacturer's recommendations, using means and methods that shall prevent damage, deterioration,

and loss, including theft. Handle equipment carefully to prevent damage, breakage, denting, and scoring of finishes. Replace damaged equipment.

B. Store products subject to damage by the elements above ground, undercover in a weather tight enclosure, with ventilation adequate to prevent condensation. Maintain temperature and humidity within range required by manufacturer's instruction.

3.09 CUTTING AND PATCHING

A. Provide core drilling, cutting and patching of existing construction and surfaces for the installation of communication systems. Concrete, asphalt or plaster surfaces which have been damaged by such drilling or cutting shall be patched and repaired to match the surrounding surface.

3.10 ADJUST AND CLEANLLL

A. Keep the Project Site free from accumulations of rubbish and debris. Remove such accumulations from the Project Site.

B. Thoroughly clean equipment and materials of plaster, cement and other foreign materials and leave smooth, clean and dry.

3.11 CYBERSECURITY PROTECTION

A. For installed systems that have internet connectivity, including but not limited to controls, monitoring, metering, sensors, or other remote access capabilities, the General Contractor is responsible to request from its subcontractors a cybersecurity risk mitigation plan. All cybersecurity risk mitigation plans shall be coordinated with the owner to verify functionality and compatibility with the owner’s network architecture and topology. Cybersecurity risks to be mitigated include intrusion, remote access, viruses, spy-ware, and malware. Put in-place and in-use effective protection and homogenous policies for infrastructure, servers, workstations, controllers, network connected equipment, internet connected systems/devices, Wi-Fi devices, IOT devices and mobile

devices. Where relevant and applicable, apply the requirements of ISO/IEC 27000 Series of Standards relating to “Information Technology - Security Techniques”.

B. For “highly secure environments” identified by the Owner, implement relevant jurisdiction-specific standards to be performed by an accredited Information Security advisor.

3.12 CONSTRUCTION ADMINISTRATION

A. Substitutions
   1. Refer to other Sections of these Specifications for substitution requirements.

B. Submittals
   1. All submittals shall be provided in electronic format for review.
   2. All submittals associated within a single specification section shall be submitted as a single package. Piecemeal submittals will be rejected as incomplete.
   3. Re-submittals shall only include the requested resubmittal documentation. A complete resubmittal including approved equipment and materials will be rejected.
   4. If an error in the submittals is not detected during the review process, this does not grant the contractor permission to proceed in error. Regardless of any information contained in the submittals, the requirements of the drawings and specifications must be followed and are not waived or superseded by the submittal review. Any

conflicting information shall be brought to the attention of the engineer and design team through the RFI process.

C. Requests for Information (RFIs)
   1. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified (refer to Division 1).
      a. Coordinate and submit RFIs in a prompt manner to avoid delays in Contractor's work or work of subcontractors.
      b. RFIs shall address single questions and related issues only.
      c. All RFIs shall be thoroughly reviewed and approved by the General Contractor and/or Construction Manager for accuracy and need for information required before submittal to Owner’s Design Representative.
   2. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:
      a. Project name.
      b. Project number.
      c. Date.
      d. Name of Contractor.
      e. Name of Architect [and Construction Manager].
      f. RFI number, numbered sequentially and unique.
      g. RFI subject.
      h. Specification Section number and title and related paragraphs, as appropriate.
      i. Drawing number and detail references, as appropriate.
      j. Field dimensions and conditions, as appropriate.
      k. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
      l. Contractor's signature.
      m. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
      n. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.
   3. Engineer’s Action: Engineer will review each RFI, determine action required, and respond. Allow a minimum three business days for Engineer's response for each RFI, plus additional time for Architect and General Contractor to review and

forward. RFIs received by Engineer after 1:00 p.m. will be considered as received the following working day.

a. The following Contractor-generated RFIs will be returned without action:
b. Incomplete RFIs or inaccurately prepared RFIs.
c. RFIs submitted without indication of review and approval for submission by General Contractor.
d. RFIs addressing multiple unrelated issues.
e. Requests for approval of submittals.
f. Requests for approval of substitutions.
g. Requests for approval of Contractor's means and methods.
h. Requests for information already indicated in the Contract Documents.
i. Requests for adjustments in the Contract Time or the Contract Sum.
j. Requests for interpretation of Engineer's actions on submittals.
k. Engineer's action may include a request for additional information, in which case Engineer's time for response will date from time of receipt of additional information.

D. Installation Drawings
1. Prepare dimensionally accurate floor plans of each electrical and signal room and/or closet, fire control room and the like, drawn to 1/4" scale minimum. Submit electronic copies for review with two prints for Architect's record. Indicate all equipment within the rooms to scale based on shop drawing data, include structural support for suspended equipment and description of seismic bracing and fastening. Indicate system and equipment grounding details as applicable. Review elevator machine room shop drawings and coordinate location of electrical gear to maintain clearances. Submit with shop drawings.
2. Where conduit runs, 2" trade size and larger, are run in exposed locations, prepare dimensionally accurate floor plans indicating routing, coordinated with work of other trades and the structure. Submit legible reproducible transparencies with two prints for review.

E. Project Record Documents
1. Maintain Record Documents which clearly indicate variances from the specified systems, and which accurately locate all underground electrical conduits and structures.

3.13 SEISMIC AND WIND RESTRAINTS

A. Seismic Restraints: Seismically restrain equipment, pull boxes, cable tray and conduit in accordance with the requirements of the California Building Code. Design of seismic restraints shall allow for the stress and thermal expansion of cable tray and conduit. Nonstructural components in Division 27 shall be as defined by ASCE 7.
1. Obtain the services of a professional engineer licensed in the State of California to prepare the seismic design for nonstructural components. The professional engineer licensed in the State of California shall also prepare a statement of special inspections per requirements of the California Building Code where such

statement is required by Code. Submit calculations, details, Shop Drawings, Product Data, and statement of special inspections for the seismic design of equipment, pull boxes, cable tray and conduit. If the professional engineer determines that the California Building Code does not require some of the nonstructural components be seismically restrained, then submit a stamped and signed statement from the professional engineer to that effect.

2. Seismic Certification of Nonstructural Components: Submit manufacturer's certification by analysis, testing, or experience for nonstructural components and designated seismic systems in accordance with Section 13.2 of ASCE 7, where such certification is required by Section 1705.13 of the California Building Code

B. Wind Restraints: Restrain components located outside in accordance with the wind requirements of the California Building Code.
   1. Obtain the services of a professional engineer licensed in the State of California to prepare wind restraint design for electrical equipment located outside. Submit

calculations, details, Shop Drawings, and Product Data for wind restraints for electrical equipment.

C. The professional engineer obtained by the Contractor shall prepare both seismic and wind designs.

3.14 FIRESTOPPING

A. Provide fire-stopping materials to penetrations of fire or smoke rated floor and wall assemblies to maintain fire-resistance rating of the associated assembly in accordance with Division 07 requirements.

B. Apply materials as part of an approved UL Certified Firestop system.

C. Apply materials in environmental conditions (temperature, humidity. vibration and cleanliness) acceptable to the Manufacturer of the firestop system.

D. Refer other Division 27 Specifications for the installation requirements for cables.

E. Provide labels at fire-stopped locations which indicate the UL system, material manufacturer and lot number, code and serial number.

3.15 CLEAN UP

A. Continually remove debris, cuttings, crates, cartons, etc., created by Work. Clean daily and at enough frequency to eliminate hazard to public, other workers, the building or Owner staff.

B. Perform final cleaning including the following.
1. Carefully clean cabinets, wiring devices, cover plates, etc. to remove dirt, dust, lubricant, cuttings, paint, plaster, mortar, concrete, etc.
2. Touch-up scratched or damaged finished surfaces to match factory finish.

END OF SECTION

SECTION 27 05 26 - GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes providing materials, equipment, labor, supervision, tools and items necessary for the construction, installation, connection, testing and operation of a grounding and bonding system for communications system.

1.02 REFERENCES

A. UL 467 (Underwriters Laboratory) – Grounding and Bonding Equipment.

B. ANSI/TIA 607 – Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises.

C. BICSI Telecommunications Distribution Methods Manual (TDMM), Fourteenth Edition.

1.03 ACTION SUBMITTALS

A. Product Data:
   1. Materials list.
   2. Technical data (cut sheets) for on each component.

B. Shop Drawings:
   1. Exact location of busbars in communication rooms, refer to Section 27 11 00.
   2. Route of bonding conductors and interconnection with the electrical systems grounding and bonding system.

1.04 INFORMATIONAL SUBMITTALS

A. As-Built Data: Plans showing as-built locations of grounding and bonding infrastructure, including the following:
   1. Main electrical bonding bus bar.
   2. Primary bus bar (PBB), secondary bus bars (SBBs) telecommunication bonding backbones (TBBs) and routing of their bonding conductors.

1.05 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual routing of backbone bonding conductors and bonding busbars.

B. Ground resistant test results

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
   1. Installation Supervision: Installation shall be under the direct supervision of ITS Technician, who shall be always present when Work of this Section is performed at Project site.
   2. Field Inspector: Currently registered by BICSI as a designer RCDD to perform the on-site inspection.

1.07 COORDINATION

A. Coordinate the bonding of communication bonding busbars and conductors with the Work of Division 26 05 26 Grounding and Bonding for Electrical Systems.

B. Coordinate the bonding of communication cable trays with the Work of Section 27 05 30 Hangars and Supports for Communication System Cables.

C. Coordinate the bonding of communication cable conduits and sleeves with the Work of Section 27 05 28 Conduits and Back Boxes for Communication Systems.

D. Coordinate the bonding of equipment rack and equipment cabinets in the communication rooms with the Work of Section 27 11 00 Communication Equipment Room Fittings.

PART 2 - PRODUCTS

2.01 COMPONENTS

A. Comply with UL 467 for grounding and bonding materials and equipment.

B. Comply with TIA-607

2.02 CONDUCTORS

A. Manufacturers::
   1. Harger Lightning & Grounding; business of Harger, Inc.
   2. Panduit Corp.
   3. TE Connectivity Ltd.

B. Insulated Conductors: Stranded copper wire, green or green with yellow stripe insulation, insulated for 600 V, and complying with UL 83.

2.03 CONNECTORS

A. Manufacturers:
   1. Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated.

2. Chatsworth Products, Inc.
3. Cooper B-Line.
4. ERICO.
5. Hubbell.
6. Panduit Corp.
7. TE Connectivity Ltd.

B. Irreversible connectors listed for the purpose. Listed by an NRTL as complying with NFPA 70 for specific types, sizes, and combinations of conductors and other items connected. Comply with UL 486A-486B.

C. Two Hole compression lugs/connectors: Crimp-and-compress connectors that bond to the conductor when the connector is compressed around the conductor. Comply with UL 467.
1. Electroplated tinned copper, C and H shaped.

D. Signal Reference Grid Connectors: Combination of compression wire connectors, bronze U-bolt grounding clamps, and copper split-bolt connectors, designed for the purpose.

E. Busbar Connectors: Cast silicon bronze, solderless compression or exothermic-type, mechanical connector; with a long barrel and two holes spaced on 5/8- or 1-inch (15.8- or 25.4-mm) centers for a two-bolt connection to the busbar.

2.04 BONDING BUSBARS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Chatsworth Products, Inc.
2. Harger Lightning & Grounding; business of Harger, Inc.
3. Panduit Corp.

B. Primary Bonding Busbar (PBB): Predrilled, wall-mounted, rectangular bars of hard-drawn solid copper, **1/4 by 4 inches (6.3 by 100 mm)** 20’’L in cross section, length as indicated on Drawings. The busbar shall be NRTL listed for use as TMGB and shall comply with TIA-607.
1. Predrilling shall be with double holes for use with lugs specified in this Section.
2. Mounting Hardware: Stand-off brackets that provide a 4-inch (100-mm) clearance to access the rear of the busbar. Brackets and bolts shall be stainless steel.
3. Stand-off insulators for mounting shall be Lexan or PVC. Comply with UL 891 for use in 600-V switchboards, impulse tested at 5000 V.

C. Secondary Bonding Busbar (SBB): Predrilled rectangular bars of hard-drawn solid copper, 1/4 by 2 inches (6.3 by 50 mm) 12’’ in cross section, length as indicated on Drawings. The busbar shall be for wall mounting, shall be NRTL listed as complying with UL 467, and shall comply with TIA-607.
1. Predrilling shall be with holes for use with lugs specified in this Section.

2. Mounting Hardware: Stand-off brackets that provide at least a 2-inch (50-mm) clearance to access the rear of the busbar. Brackets and bolts shall be stainless steel.
3. Stand-off insulators for mounting shall be Lexan or PVC. Comply with UL 891 for use in 600-V switchboards, impulse tested at 5000 V.

D. Rack and Cabinet Grounding Busbars: Rectangular bars of hard-drawn solid copper, accepting conductors ranging from No. 14 to No. 2/0 AWG, NRTL listed as complying with UL 467, and complying with TIA-607. Predrilling shall be with holes for use with lugs specified in this Section.
1. Cabinet-Mounted Busbar: Terminal block, with stainless-steel or copper-plated hardware for attachment to the cabinet.
2. Rack-Mounted Horizontal Busbar: Designed for mounting in 19- or 23-inch (483- or 584-mm) equipment racks. Include a copper splice bar for transitioning to an adjoining rack, and stainless-steel or copper-plated hardware for attachment to the rack.
3. Rack-Mounted Vertical Busbar: 72 or 36 inches (1827 or 914 mm) long, with stainless-steel or copper-plated hardware for attachment to the rack.

2.05 IDENTIFICATION

A. Manufacturer: ACP International, Part # CT100.

B. Plastic cable tags with “WARNING, DO NOT REMOVE THIS GROUND. SHOULD IT BECOME LOOSE OR NEED TO BE REMOVED, CONTACT FACILITIES.” and space for cable information, complete with cable ties.

C. Size: 1.5” x 3.0”

D. Color: Orange with black lettering.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine the AC grounding electrode system and equipment grounding for compliance with requirements for maximum ground-resistance level and other conditions affecting performance of grounding and bonding of the electrical system.

B. Inspect the test results of the ac grounding system measured at the point of bonding conductor connection.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with connection of the bonding conductor only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Include the AC utility power service entrance, the communications cable entrance, and the grounding electrode system to form a loop so that each element is connected to at least two others.

B. Comply with NECA 1.

C. Comply with TIA-607.

D. Bonding Conductors:
1. Provide bonding conductors as shown on the Drawings. Install bonding conductors in continuous lengths. Do not daisy-chain bonding conductors between bonding busbars with non-continuous bonding conductors.
2. Provide bonding conductors from the electrical primary bonding busbar to the communication primary bonding busbar.
3. Provide bonding conductors from the communication primary bonding busbar to the communication secondary bonding busbars.
4. Provide bonding conductors from the communication bonding busbars to:
   a. Building steel if available.
   b. The electrical panel serving the communication rooms.
   c. To the conduits entering the communication rooms. Refer to 27 05 30 for additional information.
   d. To the cable trays entering the communication rooms.
   e. To the cable trays in the communication rooms. Refer to 27 05 28 for additional information.
   f. To the equipment racks, cabinets and enclosures installed in the communication rooms. Refer to 27 11 00 for additional information.
   g. To the bonding busbar to a second communication room on the same floor of the building at the top of the building and every third floor.
5. Remove paint from painted metal components where bonding/ground lugs contact metallic components.
6. Apply antioxidant joint compound where metallic components contact bonding/ground lugs.
7. Using a crimping tool to connect the bonding conductors to the lugs. Do not use pliers or hammers. Use the proper die in the crimping tool to match the diameter of the lug/bonding conductor.
8. Visibly inspect the inspection port of the lug to ensure proper contact was made with the bonding conductor.
9. Provide a minimum 8-inch bend radius for bonding conductors connected to primary or secondary bonding busbars.
10. Provide a bending radius of a minimum 10X outside diameter of a bonding conductors along its run.

11. When inside a communication room, route bonding conductors toward the bonding busbar. Do make U-turns in the route of the grounding conductor.

E. Bonding Conductor, Telecommunication Bonding Backbone and Backbone Bonding Conducting Sizing Table:

Linear Length (Feet)	Conductor Size (AWG)
Less than 13	6
14-20	4
21-26	3
27-33	2
34-41	1
42-52	1/0
53-66	2/0
67-84	3/0
85-105	4/0
106-125	250 kcmil
126-150	300 kcmil
151-175	350 kcmil
176-250	500 kcmil
251-300	600 kcmil
Greater than 301	750 kcmil

1. The Telecommunication Bonding Conductor shall be the same size as the Telecommunication Bonding Backbone.
2. The Backbone Bonding Conductor shall be, as a minimum the same size as the largest Telecommunication Bonding Backbone to which it is connected.

F. Bonding Busbars:
1. Attach the bonding busbars to the walls in the communication rooms and equipment rooms at locations shown on the Drawings. Provide isolators and appropriate hardware according to the manufacturer's installation instructions.
2. Clean the bonding busbars with abrasive pads to remove oil and dirt.
3. Make connections with two-hole bolt-on compression lugs sized to fit the bonding busbar and the conductors. Connect each lug with stainless steel hardware after preparing the bond according to manufacturer recommendations and treating the bonding surface on the bonding busbar with antioxidant joint compound.

3.03 APPLICATION

A. Conductors: Install solid conductor for No. 8 AWG and smaller and stranded conductors for No. 6 AWG and larger unless otherwise indicated.
1. The bonding conductors between the BB and structural steel of steel-frame buildings shall not be smaller than No. 6 AWG.
2. The bonding conductors between the TMGB and structural steel of steel-frame buildings shall not be smaller than No. 6 AWG.

B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. 2 AWG minimum.

C. Conductor Terminations and Connections:
1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
3. Connections to Ground Rods at Test Wells: Bolted connectors.
4. Connections to Structural Steel: Welded connectors.

D. Conductor Support:
1. Secure grounding and bonding conductors at intervals of not less than 36 inches (900 mm).

E. Grounding and Bonding Conductors:
1. Install in the straightest and shortest route between the origination and termination point, and no longer than required. The bend radius shall not be smaller than eight times the diameter of the conductor. No one bend may exceed 90 degrees.
2. Install without splices.
3. Support at not more than 36-inch (900-mm) intervals.

4. Install grounding and bonding conductors in 3/4-inch (21-mm) PVC conduit until conduit enters a telecommunications room. The grounding and bonding conductor pathway through a plenum shall be in EMT. Conductors shall not be installed in EMT unless otherwise indicated.
    a. If a grounding and bonding conductor is installed in ferrous metallic conduit, bond the conductor to the conduit using a grounding bushing that complies with requirements in Section 270528 "Pathways for Communications Systems," and bond both ends of the conduit to a TGB.

3.04 GROUNDING ELECTRODE SYSTEM

A. The bonding conductor between the PBB and the AC service equipment ground shall not be smaller than No. 3/0 AWG.

3.05 GROUNDING BUSBARS

A. Indicate locations of grounding busbars on Drawings. Install busbars horizontally, on insulated spacers 2 inches (50 mm) minimum from wall, 12 inches (300 mm) above finished floor unless otherwise indicated.

B. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down; connect to horizontal bus.

3.06 CONNECTIONS

A. Bond metallic equipment in a communications equipment room to the grounding busbar in that room, using equipment grounding conductors not smaller than No. 6 AWG.

B. Stacking of conductors under a single bolt is not permitted when connecting to busbars.

C. Assemble the wire connector to the conductor, complying with manufacturer's written instructions and as follows:
    1. Use crimping tool and the die specific to the connector.
    2. Pre - twist the conductor.
    3. Apply an antioxidant compound to all bolted and compression connections.

D. Primary Protector: Bond to the PBB with insulated bonding conductor.

E. Interconnections: Interconnect all SBBs with the PBB with the telecommunications backbone conductor. If more than one PBB is installed, interconnect PBBs using the grounding equalizer conductor. The communications backbone conductor and grounding equalizer conductor size shall not be less than 2 kcmils/linear foot (1 sq. mm/linear meter) of conductor length, up to a maximum size of No. 3/0 AWG unless otherwise indicated.

F. Communications Enclosures and Equipment Racks: Bond metallic components of enclosures to the telecommunications bonding and grounding system. Install top-mounted rack grounding busbar unless the enclosure and rack are manufactured with the busbar. Bond the equipment grounding busbar to the BBs No. 2 AWG bonding conductors.

G. Structural Steel: Where the structural steel of a steel frame building is readily accessible within the room or space, bond each SBB and PBB to the vertical steel of the building frame.

H. Electrical Power Panelboards: Where an electrical panelboard for communications equipment is located in the same room or space, bond each BB to the ground bar of the panelboard.

I. Shielded Cable: Bond the shield of shielded cable to the BBs in communications rooms and spaces. Comply with TIA-568 when grounding shielded balanced twisted-pair cables.

J. Equipment Rack- and Cabinet-Mounted Equipment: Bond powered equipment chassis to the cabinet or rack grounding bar. Power connection shall comply with NFPA 70; the equipment grounding conductor in the power cord of cord- and plug-connected equipment shall be considered as a supplement to bonding requirements in this Section.

K. Equipment Room Signal Reference Grid: Provide a low-impedance path between telecommunications cabinets, equipment racks, and the reference grid, using No. 6 AWG bonding conductors.

3.07 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Duct-Bank Grounding Conductor: Bury 12 inches (300 mm) above duct bank when indicated as part of duct-bank installation.

B. Comply with IEEE C2 grounding requirements.

C. Grounding Utility Vaults and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches (100 mm) extends above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches (50 mm) above to 6 inches (150 mm) below concrete. Seal floor opening with waterproof, no-shrink grout.

D. Grounding Connections to Utility Vaults and Handholes Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each utility vault or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, bonding conductor. Train conductors to be level and plumb

around corners and fasten to utility vault or handhole walls. Connect grounding conductors to cable armor and cable shields according to written instructions by manufacturer of splicing and termination kits.

3.08 IDENTIFICATION

A. Affix a machine generated cable tag on backbone cables where they bond to bonding busbars. Affix a machine generated label with the following wording on all backbone cables where they bond to grounding busbars, “WARNING! TELECOMMUNICATIONS BONDING CONDUCTOR. DO NOT REMOVE OR DISCONNECT. IF CONNECTORS ARE LOOSE OR MUST BE REMOVED, CALL THE NETWORK/COMMUNICATION MANAGER FOR APPROVAL”.

B. Labels shall be preprinted or computer-printed type.
   1. Label PBB(s) with "fs-PBB," where "fs" is the telecommunications space identifier for the space containing the PBB.
   2. Label SBB(s) with "fs-SBB," where "fs" is the telecommunications space identifier for the space containing the SBB.

3.09 QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. The maximum acceptable connection resistance and AC loop current values are based on recommendations of BICSI TDMM.

D. Tests and Inspections:
   1. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
   2. Test the bonding connections of the system using an ac earth ground-resistance tester, taking two-point bonding measurements in each telecommunications equipment room containing a PBB and a SBB and using the process recommended by BICSI TDMM. Conduct tests with the facility in operation.
      a. Measure the resistance between the busbar and the nearest available grounding electrode. The maximum acceptable value of this bonding resistance is 100 milliohms.
   3. Test for ground loop currents using a digital clamp-on ammeter, with a full-scale of not more than 10 A, displaying current in increments of 0.01 A at an accuracy of plus/minus 2.0 percent.
      a. With the grounding infrastructure completed and the communications system electronics operating, measure the current in every conductor connected to the PBB and in each SBB. Maximum acceptable ac current level is 1 A.

E. Excessive Ground Resistance: If resistance to ground at the bonding conductors exceeds 5 ohms, notify Architect promptly and include recommendations to reduce ground resistance.

F. Grounding system will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

END OF SECTION

SECTION 27 05 28 – CONDUITS AND BACK BOXES FOR COMMUNICATION SYSTEM

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes materials, equipment, labor, supervision, tools, and items necessary for the construction and installation of conduits and back boxes for communication systems.

1.02 RELATED SECTIONS

A. Section 07 84 13, Penetration Firestopping.

B. Section 26 05 33, Raceways and Boxes.

C. Section 26 05 43, Underground Ducts and Raceways for Electrical Systems.

D. Section 27 05 00, Common Work Recuts for Communication Systems

E. Section 27 05 26 Grounding ad Bonding for Communication Systems.

F. Section 27 05 43, Underground Pathways and Structures for Communication Systems.

   4. UL 50-03 Enclosures for Electrical Equipment

5. UL 360-03 Liquid-Tight Flexible Steel Conduit
6. UL 467-01 Grounding and Bonding Equipment
7. UL 514A-01 Metallic Outlet Boxes
8. UL 514B-02 Fittings for Cable and Conduit
9. UL 514C-05 Nonmetallic Outlet Boxes, Flush-Device Boxes and Covers
10. UL 651-02 Schedule 40 and 80 Rigid PVC Conduit
11. UL 651A-03 Type EB and A Rigid PVC Conduit and HDPE Conduit
12. UL 797-03 Electrical Metallic Tubing
13. UL 1242-00 Intermediate Metal Conduit
14. UL-1479 Fire Tests of Through Penetration Firestops
15. UL 1684 Fiberglass Conduit Above Ground

1.04 ACTION SUBMITTALS

A. Product data:
   1. Materials list.
   2. Technical data (cut sheets) for on each component

B. Shop Drawings:
   1. Floor Plans showing the routes and locations of the following.
      a. Conduits with an internal diameter of greater than 2 inches.
      b. Conduit sleeves installed in the floor and ceiling of communication rooms.
      c. Conduits through smoke and fire rated floors and walls.
      d. Pull boxes.
      e. Conduit installed concealed in slab.
      f. Conduits installed above inaccessible ceilings.
      g. Conduit for floor boxes and poke through devices installed in the ceiling of the floor below.
      h. Conduit installed external to the building.
      i. Back boxes installed in fire rated walls.

C. Firestop design basis documentation for each type of communication penetration, type of building construction being penetrated including the hourly resistance rating of floor, wall, or other partition of building construction into which firestop design will be installed, and firestop device or system proposed for use.

D. Sample firestop system labels.

E. CLOSEOUT SUBMITTALS
   1. Project Record Documents: Record actual routing and locations of the following items:
      a. Conduits where any section of the conduit run meets the following conditions.
      b. Internal diameter greater than 2 inches.
      c. Installed in the floor and ceiling of communication rooms.
      d. Installed concealed in slab.
      e. Installed above inaccessible ceiling.

f. Installed outside of building.
g. Installed through fire or smoke rated walls or floors.

2. Pull boxes.
3. Locations where firestopping system have been applied.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect conduit from the entrance of dirt, dust, moisture, and debris.

1.06 COORDINATION

A. Coordinate installation of back boxes with back boxes installed under Sections 26 05 33

B. Coordinate mounting heights, orientation and locations of back boxes mounted above counters, benches, and backsplashes.

C. Obtain and review shop drawings for furniture systems and mill work where conduits will run into the furniture and mill work for cable distribution within.

D. Coordinate the installation of conduits in the floors, ceiling, or side wall of communication rooms with Section 27 11 00 Work.

E. Coordinate the installation of conduits in fire or smoke floors and walls with the Architect for acceptable spacing of conduits and methods of firestopping of the conduits and the cables to installed within.

F. Coordinate the bonding of sleeves and conduits with the bonding busbars installed under Sections 26 05 26 and 27 05 26.

G. Coordinate the installation of conduit in concrete slabs and other structural members. with the Division 03 Work prior to installation

PART 2 - PRODUCTS

2.01 METAL CONDUITS AND FITTINGS

A. Description: Metal raceway of circular cross section with manufacturer-fabricated fittings.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB, Electrification Business.
2. AFC Cable Systems; Atkore International.
3. Allied Tube & Conduit; Atkore International.
4. Alpha Wire.
5. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.

6. Plasti-Bond; Robroy Industries.
7. Prime.
8. Southwire Company.
9. Wheatland.

C. General Requirements for Metal Conduits and Fittings:
1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
2. Comply with ANSI/TIA-569.

D. GRC: Comply with ANSI C80.1 and UL 6.

E. ARC: Comply with ANSI C80.5 and UL 6A.

F. IMC: Comply with ANSI C80.6 and UL 1242.

G. PVC-Coated Steel Conduit: PVC-coated GRC.
1. Comply with NEMA RN 1.
2. Coating Thickness: 0.040 inch (1 mm), minimum.

H. EMT: Comply with ANSI C80.3 and UL 797.

I. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.
1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 1203 and NFPA 70.
2. Fittings for EMT:
a. Material: Steel or die cast.
b. Type: Compression.
3. Expansion Fittings: PVC or steel to match conduit type, complying with UL-467, rated for environmental conditions depending where installed, and including flexible external bonding jumper.
4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.

J. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

2.02 NONMETALLIC CONDUITS AND FITTINGS

A. Description: Nonmetallic raceway of circular section with manufacturer-fabricated fittings.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB, Electrification Business.
2. AFC Cable Systems; Atkore International.

3. Allied Tube & Conduit; Atkore International.
4. Cantex Inc.
5. CertainTeed LLC; Saint-Gobain North America.
6. Condux International, Inc.
7. Dura-Line.
8. Dura-Line Communications Group; Orbia Advance Corporation, S.A.B. de C.V.

C. General Requirements for Nonmetallic Conduits and Fittings:
1. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
2. Comply with ANSI/TIA-569.

D. RNC: Type EPC-40-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.

E. Rigid HDPE: Comply with UL 651A.

F. Continuous HDPE: Comply with UL 651A.

G. RTRC: Comply with UL 2515A and NEMA TC 14.

H. Fittings: Comply with NEMA TC 3; match to conduit or tubing type and material.

I. Solvents and Adhesives: As recommended by conduit manufacturer.

2.03 EXPANSION/DEFLECTION FITTINGS

A. Description: Non-Metallic expansion/deflection coupling to join PVC conduits across structural joints. Complete with inner sleeve couplers, neoprene outer jackets with tamperproof steel straps. Suitable for use to join Schedule 40 conduits. Allows ¾ inch axial or parallel deflection and 40-degree angular deflections.

2.04 OPTICAL-FIBER-CABLE PATHWAYS AND FITTINGS

A. Description: Comply with UL 2024; flexible-type pathway with a circular cross section, approved for plenum riser or general-use installation unless otherwise indicated.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB, Electrification Business.
2. Alpha Wire.
3. Endot Industries Inc.
4. IPEX USA LLC.
5. Maxcell

C. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

D. Comply with TIA-569-D.

2.05 METAL WIREWAYS AND AUXILIARY GUTTERS

A. Description: Sheet metal trough of rectangular cross section fabricated to required size and shape, without holes or knockouts, and with hinged or removable covers.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper B-line; brand of Eaton, Electrical Sector.
2. Hoffman; brand of nVent Electrical plc.
3. MonoSystems, Inc.
4. Square D; Schneider Electric USA.

C. General Requirements for Metal Wireways and Auxiliary Gutters:
1. Comply with UL 870 and NEMA 250, unless otherwise indicated, and sized according to NFPA 70.
2. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
3. Comply with TIA-569-D.

D. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

E. Wireway Covers: Hinged type unless otherwise indicated.

F. Finish: Manufacturer's standard enamel finish.

2.06 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS

A. Description: PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB, Electrification Business.
2. Allied Moulded Products, Inc.
3. Hoffman; brand of nVent Electrical plc.
4. Niedax Inc.

C. General Requirements for Nonmetallic Wireways and Auxiliary Gutters:
1. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
2. Comply with TIA-569-D.

D. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.

E. Solvents and Adhesives: As recommended by conduit manufacturer.

2.07 SURFACE METAL PATHWAYS

A. Description: Galvanized steel with snap-on covers, complying with UL 5.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. MonoSystems, Inc.
2. Niedax Inc.
3. Panduit Corp.
4. Wiremold; Legrand North America, LLC.

C. Finish: Manufacturer's standard enamel finish in color selected by Architect.

D. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

E. Comply with TIA-569-D.

2.08 SURFACE NONMETALLIC PATHWAYS:

A. Description: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB, Electrification Business.
2. MonoSystems, Inc.
3. Panduit Corp.
4. Quazite; brand of Hubbell Utility Solutions; Hubbell Incorporated.

C. Finish: Texture and color selected by Architect from manufacturer's standard colors.

D. Product shall comply with UL 94 V-0 requirements for self-extinguishing characteristics.

E. Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

F. Comply with TIA-569-D.

2.09 BOXES, ENCLOSURES, AND CABINETS

A. Description: Enclosures for communications.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. ABB, Electrification Business.
   2. Adalet.
   3. Arlington Fittings
   4. Bowers.
   5. Crouse-Hinds; brand of Eaton, Electrical Sector.
   6. EGS; Emerson Electric Co., Automation Solutions, Appleton Group.
   7. Erickson Electrical Equipment Company.
   8. FSR Inc.
   9. Hubbell.
   10. Orbit
   11. Raco.
   12. Randl.
   13. Steel City.

C. General Requirements for Back Boxes, Enclosures and Cabinets:
   1. Comply with TIA-569-D.
   2. Boxes and enclosures installed in wet locations shall be listed and labeled as defined in NFPA 70, by an NRTL, and marked for use in wet locations.
   3. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
   4. Device Box Dimensions: 4 inches square by 2-1/8 inches deep (100 mm square by 60 mm deep) 4 inches by 2-1/8 inches by 2-1/8 inches deep (100 mm by 60 mm by 60 mm deep).
   5. Size: 2-inch buy 4-inch, 2-1/2-inch-deep box, with knockouts for 3/4-inch, 1-inch, and 1 1/4-inch conduits and a 5/8-inch deep single, single gang mud ring.
   6. Size: 4-11/16-inch square, 2-1/2 inch deep, box, with knockouts for 3/4-inch, 1 inch, and 1 1/4-inch conduits and a 5/8 inch deep single gang mud ring.
   7. Size: 5-inch square 2-7/8-inch-deep box with knockouts for 1 inch, 1-1/4 inch, 1-1/2 inch and 2-inch conduits, with internal cable managers and a 5/8-inch-deep mud ring.
   8. Size: 5-inch square 3 1/4-inch-deep box with knockouts for 1-1/4 inch and 2-inch conduits and a 5/8-inch-deep mud ring.

D. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

E. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, aluminum, Type FD, with gasketed cover.

F. Metal Floor Boxes:
   1. Material: Cast metal or sheet metal.
   2. Type: Fully adjustable.
   3. Shape: Rectangular.

4. Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Nonmetallic Floor Boxes: Nonadjustable, round or rectangular.
1. Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

H. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

I. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, cast aluminum with gasketed cover.

J. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.

K. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, with continuous-hinge cover with flush latch unless otherwise indicated.
1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
2. Nonmetallic Enclosures:

L. Cabinets:
1. NEMA 250, Type 1, Type 3R, Type 12 galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
2. Hinged door in front cover with flush latch and concealed hinge.
3. Key latch to match panelboards.
4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.
6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.10 ACCESSIBLE CEILING T-BAR BACK BOX HANGAR
1. Manufacturers.
a. Caddy - Part # 51220A
b. Or approved equal.
2. Spanner bar to support back box above an accessible ceiling tile, complete with Tee bar mounting clips, back box mounting clip, fixture mount stabilizer clip and slack/drop wire to secure to structure above

2.11 GYPBOARD CEILING BACK BOX HANGAR

A. Manufacturers.
1. Caddy - Part # TCB
2. Or approved equal.

B. Spanner bar to support back box above a gypsum board ceiling, complete with spanner mounting clips, back box mounting clip, fixture mount stabilizer clip and slack/drop wire to secure to structure above

2.12 CABLE ENTRY PORTS/GLANDS

A. Manufacturers.
1. Leviton.
2. Panduit
3. Or approved equal.

B. Non-metallic, round or rectangle/square frame with cable ports with integrated water-sealing Polymer membranes, suitable for terminated and un-terminated cables.

2.13 CABLE ENTRY COVER

A. Manufacturers.
1. Arlington Fittings
2. Or approved equal.

B. Non-metallic, brushed cable entry device.

2.14 FLOOR BOXES

A. Refer to Section 26 05 33 – Raceways and Boxes for floor boxes.

2.15 WIRELESS ACCESS POINT BRACKETS

A. Manufacturer:
1. Oberon
2. Or approved equal.

B. Brackets to support and maintain a horizontal plane of an access point, suitable for use in gypsum board ceilings.

C. Brackets to support and maintain a horizontal plane of an access point, suitable for use in accessible tile ceilings.

D. Brackets to support and maintain a horizontal plane of an access point, suitable for use on wall accessible tile ceilings.

2.16 OUTDOOR RATED ENCLOSURE

A. Small Enclosures (12 inches by 12 inches):
1. 304 stainless steel NEMA 4R with screw on cover.

B. Large Enclosures (greater than12 inches by 12 inches):

1. 304 stainless steel, NEMA 4R hinged cover with keyed lock.

C. Wireless Access Point Enclosures:
1. Manufacturer:
2. Oberon part Number 1024-00 or approved equivalent.
3. Polycarbonate, radio frequency signal transparent, NEMA 4X, hinged cover with lock.

2.17 PULL AND JUNCTION BOXES

A. Manufacturers:
1. Hoffman.
2. Cooper B-Line.
3. Or approved equal.

B. Sheet Metal Boxes: NEMA OS 1, galvanized steel.
1. Screw on Cover: Where pull box covers are smaller than 576 square inches in surface area.
2. Hinged Cover: Where pull box covers are 576 square inches in surface area or larger.
3. Captive Cover Hardware: Where pull boxes opening faces downward or where dropping the cover has the potential for a safety hazard.

2.18 OUTLET DEVICE RING

A. Single gang device ring for wall phones communication outlets.

B. Double gang device ring for all communication outlets or as noted on the drawings.

2.19 DEVICE COVER PLATES

A. Refer to Section 26 27 26 for requirements to match the style, color and material for back box cover plates for all unwired or conduit only communication outlets.

B. Refer to Section 27 15 00 for communication outlet cover plate requirements.

2.20 STUD BUSHINGS

A. Plastic bushing to cover knock-outs in metal studs.

B. Manufacturer: Arlington Part # SB13, or approved equivalent.

2.21 FIRE RATED SLEEVES

A. Fire Rated Sleeve Assemblies Installed Through Rated Construction:
1. Meet the hourly rating of rated wall and or floor penetrated.
2. Be tested for the surrounding construction and cable types involved.

3. Have UL Systems permitting cable loads from; “Zero to 100% Visual Fill.”
4. Be “Zero-Maintenance”, zero-maintenance is defined as; No action required by cabling technician to open and/or close pathway for cable moves, adds or changes, such as, but not limited to the following.
   a. Opening or closing of doors.
   b. Spinning rings to open or close fabric liner.
   c. Removal and or replacement of any material such as, but not limited to, firestop caulk, putty, pillows, bags, foam muffins, foam, foam plugs, foam blocks, or foam closures of any sort.
5. Pathways shall be engineered such that two or more devices may be ganged together for larger cable capacities.
6. Pathways shall be engineered to be re-enterable, so they can be retrofitted and removed from around existing cables without cutting and re-splicing them.
7. Cable Pathway Devices passing vertically through floors shall have equal F & T Rating. (See UL System # F-A-3037, Item #4 “EZ-PATH Grid T-Rating Kit” Part # TRK444).

B. Square New:
1. 4 inches by 4 inches fire-rated sleeves, complete with intumescent material, associated frames and radius control modules].
2. Complete with wall plate, wall frames, brackets, floor grid frame, radius control modules and labels.
3. Manufacturer:
   a. Specified Technologies Inc., part number EZD44S2.
   b. Or approved equivalent.

C. Round New:
1. Manufacturer:
   a. Hilti Corporation, part number P653 4 inches Speed Sleeve.
   b. Or approved equivalent.
2. 4-inch round fire rated sleeves, complete with intumescent material and associated support rings.
3. Manufacturer:
   a. Hilti Corporation, part number CFS-SL GP, CFS-SL-GO, CFGS-MS CFS-SL GP gang plate.
   b. Or approved equivalent.

2.22 SMOKE AND ACOUSTICAL SLEEVES

A. Cable Assemblies Installed Through Non-Fire Rated Construction
1. Manufacturer:
   a. Specified Technologies Inc., part number NEZ33.
   b. Or approved equivalent.
2. 3 inches by 3 inches non-fire rated split sleeves, complete with acoustical material. Suitable for use in framed dry walls.
3. Complete with plates, frames, brackets and labels.

B. Cable Assemblies Installed Through Non-Fire Rated Construction
   1. Manufacturer:
      a. Specified Technologies Inc., part number NEZ44, NEZD344, NEZ44D544.
   2. Or approved equivalent.
   3. 4 inches by 3 inches non-fire rated split sleeves, complete with acoustical material. Suitable for use in framed dry walls.
   4. Complete with ganging frames and labels.

2.23 PATHWAY FIRESTOPPING WRAP

A. Manufacturer:
   1. Specified Technologies Inc., part number E-Wrap.
   2. Or approved equivalent.

B. Circuit Integrity Cable Pathways:

C. Conduit endothermic wrap incorporating foil scrim.

2.24 CABLE TRAY FIRE STOP DEVICE

A. Manufacturer:
   1. STI part # EZCTR612, EZCTR614, EZCTR616, EZCTR618,.
   2. Or approved equivalent.

B. UL Classified.

C. Product Description: Fire rated wall pass through flange and collar, suitable for retrofit application, suitable for use in concrete and gypsum board

2.25 BACK BOX FIRESTOPPING WRAP/INSERT

A. Back Boxes in Fire Rated Construction:
   1. Manufacturer:
      a. Specified Technologies Inc., part number, EP44, EP45.
      b. Or approved equivalent.
   2. Endothermic wrap/putty pads/inserts.

2.26 FIRESTOP PLUGS

A. Manufacturer:
   1. Specified Technologies Inc., part number 5GKD4 5GKD5.
   2. Or approved equivalent.

B. Re-enterable firestop plugs for insertion into conduits/sleeves.

C. UL classified.

2.27 CABLE SPILL WAYS

A. Manufacturers:
1. BEJED - Part # BJ-2049
2. Panduit – Part # CWF400.
3. Or approved equivalent.

B. Conduit spill way extensions with 90-degree bends, 12 inches long, with ratchets clamp connectors and Velcro straps for cable retention, suitable for use on 4-inch metallic conduit/sleeves.

2.28 SPLIT DUCT

A. Manufacturers:
1. Panduit – Part # CLT 188F-C20.
2. Or approved equivalent.

B. Constructions: Corrugated round duct, split entire length to wrap around communication cables.

C. Minimum inside diameter: 1.75 inches.

D. Color: Black

2.29 PULL CORDS

A. Nylon pull-cords with a minimum 200-pound tensile strength.

PART 3 - EXECUTION

3.01 GENERAL

A. Comply with manufacturer’s instructions for installation of products.

B. Verify outlet and pull box locations, and the routing of conduits prior to rough-in. Report space or access conflicts to the Architect.

C. Refer to Architectural drawings for ceiling construction and fire or smoke rated wall/floors construction locations and details.

3.02 PATHWAY APPLICATION

A. Outdoors: Apply pathway products as specified below unless otherwise indicated:
1. Exposed Conduit: GRC RNC, Type EPC-40-PVC RNC, Type EPC-80-PVC.
2. Concealed Conduit, Aboveground: GRC IMC EMT RNC, Type EPC-40-PVC.

3. Underground Conduit: RNC, Type EPC-40-PVC Type EPC-80-PVC, direct buried concrete encased.
4. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.

B. Indoors: Apply pathway products as specified below unless otherwise indicated:
1. Exposed, Not Subject to Physical Damage: EMT or RNC.
2. Exposed, Not Subject to Severe Physical Damage: EMT.
3. Exposed and Subject to Severe Physical Damage: GRC or IMC. Pathway locations include the following:
   a. Loading dock.
   b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
   c. Mechanical rooms.
   d. Gymnasiums
4. Concealed in Ceilings and Interior Walls and Partitions: EMT.
5. Damp or Wet Locations: GRC.
6. Pathways for Optical-Fiber or Communications Cable in Spaces Used for Environmental Air: Plenum-type, optical-fiber-cable pathway Plenum-type, communications-cable pathway EMT.
7. Pathways for Optical-Fiber or Communications-Cable Risers in Vertical Shafts: Riser-type, optical-fiber-cable pathway Riser-type, communications-cable pathway EMT.
8. Pathways for Concealed General-Purpose Distribution of Optical-Fiber or Communications Cable: General-use, optical-fiber-cable pathway Plenum-type, optical-fiber-cable pathway Plenum-type, communications-cable pathway EMT.
9. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel units in institutional and commercial kitchens and damp or wet locations.

C. Minimum Pathway Size: 3/4-inch (21-mm) trade size for copper and aluminum cables, and 1 inch (25 mm) for optical-fiber cables.

D. Pathway Fittings: Compatible with pathways and suitable for use and location.
1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
3. EMT: Use set-screw or compression, fittings. Comply with NEMA FB 2.10.

E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.

F. Install surface pathways where they indicated on Drawings.

G. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F (49 deg C) Insert temperature.

3.03 INSTALLATION

A. Comply with the following standards for installation requirements except where requirements on Drawings or in this Section are stricter:
   1. NECA 1.
   2. NECA/BICSI 568.
   3. TIA-569-D.

B. Comply with NFPA 70 limitations for types of pathways allowed in specific occupancies and number of floors.

C. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.

D. Comply with requirements in Section 270530 "Hangers and Supports for Communications Systems" for hangers and supports.

E. Keep pathways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal pathway runs above water and steam piping.

F. Complete pathway installation before starting conductor installation.

G. Arrange stub-ups so curved portions of bends are not visible above finished slab.

H. Install no more than the equivalent of two 90-degree bends in any pathway run. Support within 12 inches (300 mm) of changes in direction. Utilize long radius ells for all optical-fiber cables.

I. Conceal rigid conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.

J. Route exposed conduits parallel and perpendicular to walls.

K. Route conduits installed above accessible ceilings parallel and perpendicular to walls.

L. Cut conduit square using saw or pipe cutter. De-burr cut ends of conduits.

M. Provide insulated bushings on conduit ends.

N. Install fittings to accommodate expansion and deflection where conduits cross seismic, control and expansion joints.

O. Do not flexible conduits unless identified on the Drawings or identified herein.

P. Provide pull boxes where the length of conduit exceeds 100 feet, or the conduit run contains the equivalent of more than 180-degrees of bends, and as shown on the Drawings. Locate pull boxes in straight runs only. Do not use pull boxes in lieu of a conduit bend. Locate pull boxes to allow clearance/access for the installation of the cable routed within. Where pull box will be located above inaccessible ceilings, notify Architect and coordinate requirements for an access panel to be installed to allow access to the pull box. Where a pull box cannot be installed upsize the conduit one trade size for every additional bend or every additional 25 feet of run.

Q. Support conduits on a maximum interval of 96 inches.

R. Support conduits within 12 inches of changes in direction.

S. Support conduit within 12 inches (300 mm) of pull box or enclosures to which attached.

T. Where communications cable pass through full height wall, provide,, 4 inch conduit sleeves in the wall to support the installation of communication cables.

U. Where cable tray installed as part of the 27 05 28 Work passes through a full height wall, provide conduit sleeves in the wall equal to 125% of the volumetric equivalency of the cable tray.

V. Where communications cable pass through fire or smoke rated wall, provide 4 inch fire rated conduits/conduit sleeves in/thru walls to support the installation of communication cables.

W. Where non-fire rated conduits pass through fire or smoke rated wall and floors, provide a fire stopping system to re-rate the walls or floors.

X. Where communications cable pass from a room through full height walls in route to a communication room or cable tray, provide a 1 inch, 1 1/2 inch, 2 inch conduit sleeves in the walls to support the installation of communication cables.

Y. Where communications cable pass through fire or smoke rated walls, provide and affix adhesive wall label immediately adjacent to the cable pathway/device devices to communicate to future cable technicians, authorities having jurisdiction and others the manufacturer of the device and the corresponding UL System number installed.

Z. Where conduits smaller than 4 inches meet up with cable trays, secure the conduit to the cable tray so that cables can exit the conduit without exceeding the bend radius of the cables.

AA. Where 4-inch conduits meet up with cable trays, provide an 18 inch gap between the conduits and the cable trays.

BB. Where conduits and conduit sleeves pass through a wall in a corridor, extend the conduits a minimum of 18 inches from the wall.

CC. Where conduits and conduit sleeves pass through a fire rated floor, extend the conduits 3 inches above the finished floor. Fire stop around all conduit sleeves.

DD. Where conduits and sleeves pass through floors, extend the conduits in the ceiling below to a maximum height of 120 inches above the finished floor, or as shown on the Drawings. Fire stop around all conduit sleeves.

EE. Where conduits penetrate exterior membranes, walls, floors, ceilings or roofs, seal and grout conduits. Extend conduits into rated enclosure, rated pull box or goose neck exterior to the building. Coordinate method of sealing conduits and penetrations with the Architect.

FF. Provide pull cord in all conduits over 36 inches long. Leave a minimum of 12 inches of slack at each end of the pull cord. Attach and secure the pull cords to the conduits or back boxes.

GG. Paint exposed conduits to match the color of the wall or ceiling structure behind/above it. Coordinate paint color and method of application with the, Architect prior to commencement of Work.

HH. Maintain and repair fire-proofing material during the installation of conduits and supporting structure.

II. Coordinate the installation of concealed conduits, method of connection and exact location and routing with the Architect prior to commencement or Work.

JJ. Provide deflection couplers at expansion joints. Secure conduits to the slab, building on each side of an expansion joint.

KK. Provide pull boxes and flexible conduits at seismic joints. Secure pull boxes to the slab, building on each side of a seismic joint. Provide flexible conduits in between pull boxes.

LL. Do not daisy chain back boxes with a single conduit feed unless shown on the Drawings.

MM. In Communication Rooms.
1. Where conduits enter the room at a point above 12 feet above finished floor, bend the conduits down to a height of 120 inches above finished floor. Provide bushings on all conduits.
2. Where conduits enter the room at a point below 12 feet, provide cable spill ways on conduits.
3. Provide cable radius-control-module on square fire rated sleeves.
4. Bond the sleeves and conduits in the floors and walls of the communication rooms according to NFPA 70 and in compliance with Specification Section 27 05 26. Refer to Specification Section 27 05 26 for minimum bonding conductor sizing.
5. Seal empty conduits with a non-hardening re-enterable seal/ compound.

NN. Pathways Embedded in Slabs:

1. Run conduit larger than 1-inch (27-mm) trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure pathways to reinforcement at maximum 10-foot (3-m) intervals.
2. Arrange pathways to cross building expansion joints at right angles with expansion fittings. Comply with requirements for expansion joints specified in this article.
3. Arrange pathways to keep a minimum of 2 inches (50 mm) concrete cover in all directions.
4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.

OO. Stub-ups to Above Recessed Ceilings:
1. Use EMT, IMC, or RMC for pathways.
2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

PP. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of pathway and fittings before making up joints. Follow compound manufacturer's written instructions.

QQ. Coat field-cut threads on PVC-coated pathway with a corrosion-preventing conductive compound prior to assembly.

RR. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install insulated bushings on conduits terminated with locknuts.

SS. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure, to assure a continuous ground path.

TT. Cut conduit perpendicular to the length. For conduits of 2-inch (50-mm) trade size and larger, use roll cutter or a guide to ensure cut is straight and perpendicular to the length.

UU. Pathways for Optical-Fiber and Communications Cable: Install pathways, metal and nonmetallic, rigid and flexible, as follows:
1. 3/4-Inch (21-mm) Trade Size and Smaller: Install pathways in maximum lengths of 50 feet (15 m).
2. 1-Inch (25-mm) Trade Size and Larger: Install pathways in maximum lengths of 75 feet (23 m).
3. Install with a maximum of two 90-degree bends or equivalent for each length of pathway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.

VV. Install pathway-sealing fittings at accessible locations according to NFPA 70 and fill them with listed sealing compound. For concealed pathways, install each fitting in a flush steel

box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install pathway-sealing fittings according to NFPA 70.

WW. Install devices to seal pathway interiors at accessible locations. Locate seals, so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of pathways at the following points:
1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where an underground service pathway enters a building or structure.
3. Where otherwise required by NFPA 70.

XX. Comply with manufacturer's written instructions for solvent welding PVC conduit and fittings.

3.04 INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:
1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 312000 "Earth Moving" for pipe of less than 6 inches (150 mm) in nominal diameter.
2. Install backfill as specified in Section 312000 "Earth Moving."
3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches (300 mm) of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 312000 "Earth Moving."
4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through floor unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
   a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete around conduit for a minimum of 12 inches (300 mm) on each side of the coupling.
   b. For stub-ups at equipment mounted on outdoor concrete bases and where conduits penetrate building foundations, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of foundation or equipment base. Install insulated grounding bushings on terminations at equipment.
5. Underground Warning Tape: Comply with requirements in Section 270553 "Identification for Communications Systems."

3.05 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch (25 mm) above finished grade.

D. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.

3.06 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR COMMUNICATIONS PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling."

3.07 BACK BOXES - GENERAL

A. Provide back boxes at heights indicated on Drawings. If mounting heights are not shown, give priority to ADA requirements. Mount back boxes with height measured to center of box unless otherwise indicated.

B. Install individual back boxes. Do not gang back boxes together.

C. Recessed Boxes in Masonry Walls:
1. Saw-cut opening for back box in center of cell of masonry block and install back box flush with surface of wall. Prepare block surface to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.

D. Horizontally separate boxes mounted on opposite sides of walls, so they are not in the same vertical channel.

E. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.

F. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.

G. Set metal floor boxes level and flush with finished floor surface.

H. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

I. Coordinate location of back boxes in masonry walls, glass walls and metallic walls with Architect prior to placement or cutting.

J. Secure back boxes to interior wall and partition studs. Position back boxes to allow for the thickness of the finish surface.

K. Provide back boxes with a minimum of 6-inch separation in non-acoustical rated walls. For acoustical rated walls, comply with Article “BACK BOXES - ACOUSTICAL REQUIREMENTS” in this Section.

L. Provide stamped steel bridges to fasten back boxes between studs.

M. Provide adjustable steel channel fasteners back boxes in accessible ceiling areas. Do not fasten back boxes to ceiling support wires or to piping systems.

N. When using T-bar back box hangar to support a communication system device, secure the hangar to structure above with a minimum 14 AWG wire.

3.08 BACK BOXES - ACOUSTICAL REQUIREMENTS

A. Offset back-to-back boxes a minimum distance of 18 inches for single stud walls and a minimum offset of 36 inches for double stud walls, with at least one stud between the boxes. Do not install back boxes back-to-back within one stud cavity.

B. Fill the cavity around boxes with fiberglass insulation.

C. Seal between boxes and wallboard with acoustical sealant.

D. Seal openings in boxes and backboxes with acoustical sealant.

E. For double stud walls, run wiring on the side of the wall that it serves. Locate junction boxes to combine wiring outside of double walls.

F. Notify the Architect of conflicts that result in unavoidable connection between the two wall frames of a double wall. Notification shall be prior to wall closure.

3.09 BACK BOXES IN FIRE RATED WALLS AND CEILING

A. Confirm aggregate penetrations of back boxes are a given area in fire rated walls and ceilings for all Specification sections do not exceed the allowable aggregate penetrations for s given area/wall and ceiling area as per the IBC 711.32, with the Architect.

B. Provide UL rated assemblies in fire rated assemblies.

3.10 BACK BOXES IN INACCESSIBLE CEILING ARES

A. Provide an individual conduit from each back box to an inaccessible ceiling area in the corridor. Indelibly mark the conduit with the Outlet ID as identified on the drawings or in the approved cable termination schedules as required by 27 15 00.

B. Where pull boxes are required in an inaccessible ceiling area, provide an access panel so that the bull box cover can be removed, and the pull box accessed.

3.11 BACK BOXES IN UN-INSULATED INTERIOR WALLS WITH ACCESSIBLE CEILINGS

A. Provide an individual conduit from each back box to an accessible ceiling area.

3.12 BACK BOXES IN UN-INSULATED INTERIOR WALLS WITH INACCESSIBLE CEILINGS, EXTERIOR WALLS OR INSULATED INTERIOR WALLS

A. Provide an individual conduit from each back box to an accessible ceiling area in adjacent rooms or corridors.

B. Install conduits and back boxes without damaging wall insulation or reducing its effectiveness.

C. Label conduits at the accessible ceiling area to show the back box. Refer to Architectural Drawings for workstation ID.

3.13 BACK BOXES FOR MILL WORK CONNECTIONS - WITH COLUMNS

A. Provide conduit(s) from the in-feed of the millwork raceway to an accessible ceiling area.

3.14 BACK BOXES FOR MILL WORK CONNECTIONS - FREESTANDING

A. Provide conduit(s) from the in-fed of the millwork raceway in slab turned up a nearby wall to an accessible ceiling space.

B. Label conduits at the nearby wall to show the back box. Refer to Architectural Drawings for workstation ID.

3.15 UNDER CARPET / IN CARPET RACEWAY

A. Provide under carpet/in carpet wireway in rooms and area as shown the Drawings.

B. Coordinate the installation of in wall infeed conduits with the infeed electrical conduits to ensure space and spacing prior to commencement of Work.

C. Coordinate exact position of the raceway and the connector receptacles in a room or space with the Architect prior to commencement of work.

D. Coordinate the installation of the raceways with the installation of the communications cables and audiovisual cables prior to commencement of Work.

E. Coordinate the installation of the raceways with the installation of the carpeting to ensure a tight coupling of wireway with the carpeting, prior to commencement of Work.

3.16 ABOVE FLOOR RACEWAY

A. Provide above floor raceway in rooms and area as shown the Drawings.

B. Coordinate the installation of in wall infeed conduits with the infeed electrical conduits to ensure space and spacing prior to commencement of Work.

C. Coordinate exact position of the raceway and the connector receptacles in a room or space with the Architect prior to commencement of work.

D. Coordinate the installation of the raceways with the installation of the communications cables and audiovisual cables prior to commencement of Work.

E. Coordinate the installation of the raceways with the installation of the carpeting to ensure a tight coupling of wireway with the carpeting, prior to commencement of Work.

3.17 FLOOR BOXES

A. Provide individual conduits from each floor box or poke through device location to an accessible ceiling area. When the conduit is run in the ceiling of the floor below, stub the conduit up to the same floor as the communication outlet through a wall as shown on the Drawings. When the conduit is run in the floor slab, stub the conduit up the wall in proximity as the nearest cable tray as shown on the Drawings.

B. Label conduits at the accessible ceiling area to show the workstation location. Refer to Architectural Drawings for workstation ID.

3.18 FLOOR BOXES IN SLAB ON GRADE

A. Provide individual conduits from each floor box to a consolidation point location interior to the building within 25 feet of the point where the conduit exits the slab.

B. Label conduits at the accessible ceiling area to show the floor box location. Refer to Architectural Drawings for workstation ID.

3.19 CONDUIT SIZING TABLE

A. Provide conduits to back boxes for communication outlets to accessible ceiling areas sized as per the following.

Conduit Size (inches)

Wall Outlets (Except Wall Phones)	1
Wall Phone	3/4
Video Display Outlet	1-1/2

Wireless Access Point Outlet	1
Audio Speaker	3/4
Media Link Controller	1-1/4
Media Source Input Plate	1-1/4
Media Source Switcher	1-1/4
Intercom Station	1
Audiovisual (AV) System Outlet	1-1/4
Video Surveillance Camera Outlet	1
Multiple Gang Recessed Floor Box Outlet (Network)	1-1/4
Multiple Gang Recessed Floor Box Outlet (Network & AV)	1-1/4 & 1-1/2
Millwork - Per Every (2) Workstations	1
Millwork - Per Every (3) Workstations	1-1/4
Surface Metal Raceway - Per 8 Liner Feet of SMR	1

3.20 PULL BOX SIZING TABLE

A. Provide pull boxes based on the following table.

Pull Box Sizing (inches

Conduit Trade Size	Width	Length	Depth	Increase Width For Additional Conduits
1 or less	4	16	3	2
1 1/4	6	20	3	3
1 1/2	8	27	4	4
2	8	36	4	5
2-1/2	10	42	5	6
3	12	48	5	6
3-1/2	12	54	6	6
4	15	60	8	8

3.21 CONDUIT BENDS

A. Provide bends in the conduits based on the following chart:

Minimum Radius (inches)

Sizes of Con-duit Trade Size	Radius of Conduit Bends
3/4	6
1	6
1-1/4	7-1/5
1-1/2	9
2	12
2-1/2	25
3	30
3-1/2	36h
4	40

3.22 EXPANSION/DEFLECTION FITTINGS

A. Provide expansion fittings where conduits cross building or structure expansion joints.

B. Provide expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at time of installation. Provide conduit supports to allow for expansion movement.

C. Arrange pathways to cross building expansion joints at right angles with expansion fittings.

D. Provide fittings to match the type of conduit installed.

E. Provide in conduits run aboveground RNC that is located where environmental temperature change may exceed 30 deg F (17 deg C), and that has straight-run length that exceeds 25 feet (7.6 m). I

F. Provide in conduits run aboveground RMC and EMT that is located where environmental temperature change may exceed 100 deg F (55 deg C), and that has straight-run length that exceeds 100 feet (30 m).

G. Provide type and quantity of fittings that accommodate temperature change listed for each of the following locations:
   1. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F (70 deg C) temperature change.
   2. Outdoor Locations Exposed to Direct Sunlight: 155 deg F (86 deg C) temperature change.
   3. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F (70 deg C) temperature change.

H. Provide fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F (0.06 mm per meter of length of straight run per deg C) of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F (0.0115 mm per meter of length of straight run per deg C) of temperature change for metal conduits.

3.23 PULL CORDS

A. Provide a nylon, polypropylene or monofilament plastic pull cord with not less than 200-lb (90-kg) tensile strength, in conduits.

B. Leave at least 12 inches (300 mm) of slack at each end of pull wire. Secure pull wire, so it cannot fall into conduit. Cap pathways designated as spare alongside pathways in use.

3.24 FIRESTOPPING

A. Provide firestopping systems at rated walls and floors.

B. Comply with requirements in Section 07 84 13 "Penetration Firestopping."

C. Comply with TIA/EIA-569-A, Annex A, "Firestopping."

D. Comply with BICSI TDMM, "Firestopping Systems" Article.

E. Provide labels on each side of walls immediately adjacent to wall firestopping devices identifying the manufacturer, fire-stopping system and associated UL system description/number of the device used to re-rate the wall or floor.

F. Provide labels on the wall immediately adjacent to a floor firestopping device identifying the manufacturer, fire-stopping system and associated UL system description /number of the device used to re-rate the wall or floor.

3.25 CLEANING

A. Clean interior of boxes to remove dust, debris, and other material.

B. Clean exposed surfaces and restore finish.

3.26 PROTECTION

A. Protect coatings, finishes, and cabinets from damage or deterioration.
   1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
   2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION

SECTION 27 05 30 - HANGERS AND SUPPORTS FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes proving materials, equipment, labor, supervision, tools and items necessary for the construction, installation, connection, testing and operation of a hanger and support for communications system.

1.02 RELATED SECTIONS

A. Section 26 05 36 Cable Trays for Electrical Systems.

B. Section 27 05 26 Grounding ad Bonding for Communication Systems.

1.03 REFERENCES

A. ASTM A123 (ASTM International) - Specification for Zinc (Hot-Galvanized) Coatings on Products Fabricated from Rolled, Pressed, and Forged Steel Shapes, Plates, Bars, and Strip.

B. ASTM A510 (ASTM International) - Specification for General Requirements for Wire Rods and Coarse Round Wire, carbon Steel.

C. ASTM A525 (ASTM International) - General Requirements for Steel Sheet, Zinc-Coated Galvanized by the Hot-Dip Process.

D. ASTM A 580, - Standard Specification for Stainless Steel Wire.

E. ASTM A 591, - Specifications for Electrodepositing Coatings of Zinc on steel wire or sheets.

F. ASTM B633 (ASTM International) - Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

G. ASTM A 641, - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.

H. ASTM D3451, - Standard Guide for Testing Coating Powders and Powder Coatings.

I. NEMA FG-1 (National Electrical Manufacturers Association) - Fiberglass Cable Tray Systems.

J. NEMA VE-1 (National Electrical Manufacturers Association) - Metallic Cable Tray Systems.

K. NEMA VE-2 (National Electrical Manufacturers Association) - Metallic Cable Tray Installation Guidelines.

1.04 ACTION SUBMITTALS

A. Product Data
   1. Materials list.
   2. Technical data (cut sheets) for on each component.

B. Shop Drawings:
   1. Accessories and fittings.
   2. Dimensioned drawings.
   3. Lifting and support points.
   4. Installation drawings showing sizes of items, weights, and support points.
   5. Installation plan and schedule.
   6. Floor plans and sections, drawn to scale. Include scaled cable tray layout and relationships between components and adjacent structural, electrical, and mechanical elements.
      a. Vertical and horizontal offsets and transitions.
      b. Clearances for access above and to side of cable trays.
      c. Locations where clearances cannot be maintained.
      d. Interface points for conduits through fire rated walls.
      e. Vertical elevation of cable trays above the floor or bottom of ceiling structure.
      f. Connections to seismic restraints.
      g. Grounding methods of connection.

C. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, and installation of Product.

D. Seismic Qualification Data: Certificates, for hangers and supports for communications equipment and systems, accessories, and components, from manufacturer.
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.05 CLOSEOUT SUBMITTALS

A. Project Record Documents:
   1. Record actual routing of cable tray and main runs of J Hooks and locations of supports.
   2. Identify locations where firestopping system have been applied.

B. Visual inspection reports.

C. Test results.

1.06 COORDINATION

A. Coordinate the installation of cable trays outside of the communication rooms with the Work of other Divisions.

B. Coordinate the installation of cable trays inside the communication rooms with the Section 27 11 00 Work. Provide information for the completion of Section 27 11 00 Shop Drawings.

C. Coordinate the bonding of cable trays with the bonding busbars installed under Sections 26 05 26 and 27 05 26.

D. Coordinate requirements for seismic bracing of components with the Architect.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design hanger and support system.

B. Seismic Performance: Hangers and supports shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the supported equipment and systems will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event."
   2. Flame Rating: Class 1.
   3. Self-extinguishing according to ASTM D635.

2.02 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Preformed steel channels and angles with minimum 13/32-inch- (10-mm-) diameter holes at a maximum of 8 inches (200 mm) on-center in at least one surface.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Allied Tube & Conduit; Atkore International.
      b. CADDY; brand of nVent Electrical plc.
      c. Cooper B-line; brand of Eaton, Electrical Sector.
      d. G-Strut.
   2. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
   3. Material for Channel, Fittings, and Accessories: Galvanized steel.

4. Channel Width: Determined based on field conditions
5. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
6. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
7. Channel Dimensions: Selected for applicable load criteria.

B. Aluminum Slotted Support Systems: Extruded aluminum channels and angles with minimum 13/32-inch- (10-mm-) diameter holes at a maximum of 8 inches (200 mm) on-centerin at least one surface.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Cooper Industries, Inc.
   b. Flex-Strut Inc.
   c. Unistrut; Atkore International.
2. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
3. Channel Material: 6063-T6 aluminum alloy.
4. Fittings and Accessories Material: 5052-H32 aluminum alloy.
5. Channel Width: Selected for applicable load criteria 1-5/8 inches (41.25 mm) 1-1/4 inches (31.75 mm) 13/16 inches (20.64 mm).
6. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
7. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
8. Channel Dimensions: Selected for applicable load criteria.

C. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for nonarmored communications conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be made of malleable iron.

D. Structural Steel for Fabricated Supports and Restraints: ASTM A36/A36M steel plates, shapes, and bars; black and galvanized.

E. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
1. Powder-Actuated Fasteners: Threaded-steel stud for use in hardened Portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Hilti, Inc.
      2) ITW Ramset/Red Head; Illinois Tool Works, Inc.
      3) MKT Fastening, LLC.
      4) Simpson Strong-Tie Co., Inc.

2. Mechanical-Expansion Anchors: Insert-wedge-type stainless steel for use in hardened Portland cement concrete, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Cooper B-line; brand of Eaton, Electrical Sector.
      2) Empire Tool and Manufacturing Co., Inc.
      3) Hilti, Inc.
      4) ITW Ramset/Red Head; Illinois Tool Works, Inc.
      5) MKT Fastening, LLC.
3. Concrete Inserts: Steel or malleable-iron, slotted support system units are similar to MSS Type 18 units and comply with MFMA-4 or MSS SP-58.
4. Clamps for Attachment to Steel Structural Elements: MSS SP-58 units are suitable for attached structural element.
5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM F3125/F3125M,Grade A325 (Grade A325M).
6. Toggle Bolts: Stainless-steel springhead type.
7. Hanger Rods: Threaded steel.

2.03 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

B. Materials: Comply with requirements in Section 055000 "Metal Fabrications" for steel shapes and plates.

2.04 WIDE BASE CABLE SUPPORTS

A. Manufacturers:
   1. ERICO/Caddy
   2. Garvin
   3. ICC
   4. Panduit (J-Pro)
   5. Platinum Tools (MPH)
   6. MonoSystems

B. UL listed.

C. ANSI/TIA compliant for cable radius standards.

D. J-Hooks with wide base and flared/beveled edges, snap in latch gates/cable retainers and supporting structure. Complete with brackets, fasteners, clamps, C and Z Purlins,

hanger rods or support wires for attaching, securing and connecting to walls, slabs, beams and ceiling structures.

1. Color:
   a. White – Standard Cabling
   b. Green – Wireless Cabling
   c. Black – Security Cabling
2. Suitable for use in a plenum environment.
3. Size: 1”, 2” and 4”.
4. Finish:
5. Dry Locations - Galvanized.
6. Wet/Damp Locations - Stainless steel.

2.05 METAL WIRE MESH WITH SIDE WALLS CABLE TRAY

A. Manufacturers:
   1. B-Line.
   2. Chatsworth Products Inc.
   3. Cablofil.
   4. Cablobend
   5. Cope.
   6. Globetray.
   7. Hubbell.
   8. Husky.
   9. Siemon Company.
   10. Snake tray.
   11. T & B.
   12. Wire maid.

B. UL Classified.

C. Product Description: NEMA VE-1, Class 6A welded steel wire mesh segmented construction cable tray.

D. Finish: ASTM B633, SC2 galvanized.

E. Finish: ASTM A580 Type 304L, stainless steel.

F. Inside Width: As shown on Drawings.

G. Inside Depth: As shown on Drawings.

H. Material: ASTM A510 wire, .216-inch diameter flat/shaped cross-wires.

I. Complete with supports, no-splice supports, clamps, hangers, brackets, pre-formed bends, pre-formed tees, pre-formed intersections, pre-formed reducers, splice plates/bars, radius corner splices, vertical transitions, blind ends, barrier strip/dividers, steel flame retardant flat bottom liners/inserts, liners/inserts with side walls, covers,

connectors, bottom (perpendicular) cable drop outs, end/side wall (parallel) radius wall fall drop outs, grounding straps and associated nuts, bolts and washers.

2.06 METAL FLAT LADDER TYPE CABLE TRAY / CABLE RUNWAY

A. Manufacturers:
1. B-Line.
2. Chatsworth Products Inc.
3. Husky.
4. Hubbell.
5. Snake Tray.

B. UL Classified.

C. Product Description: NEMA VE-1, Class 20C, Constructed of, .375” x 1.5” rails and .065” thick rungs, rectangular steel tubing.

D. Finish: ASTM A525, mill galvanized before fabrication.

E. Inside Width: As shown on the Drawings.

F. Rung Spacing: 9 inches on center.

G. Rungs width: 1” minimum.

H. Complete with, radius (perpendicular) drop out guides (waterfalls), side wall (parallel) drop outs, heavy duty butt splice kits, heavy duty junction splice kits, tray corner brackets, equipment-rack-to-tray mounting kits, end feet, vertical wall brackets, cable retaining posts, protective end caps, grounding straps and associated nuts, bolts and washers.

2.07 METAL LADDER-TYPE WITH SIDE WALLS CABLE TRAY

A. Manufacturers:
1. B-Line.
2. Cope.
3. Globetray.
4. Husky.

B. UL Classified.

C. Product Description: NEMA VE-1, Class 12A ladder type tray.

D. Material: Aluminum.

E. Finish: ASTM A525, mill galvanized before fabrication.

F. Inside Width: As indicated.

D. Confirm that at locations where cable trays pass through walls, the wall penetrations have a framed opening to allow the cable tray to pass through and to allow the installation of:
   1. Fire stopping materials as an approved fire stopping system.
   2. Sound absorptive materials as an approved sound stopping system.

E. Coordinate non-compliant locations with the Architect for corrective action.

F. Install seismic restraints in accordance with Section 27 05 00 and 26 05 00.

G. Coordinate the installation of the cable trays with the installation of architectural, structural, lighting, power, mechanical and fire protection system components.

H. Utilize factory made preformed fittings (tee, cross, reducers, and 90-degree turns).

I. Maintain access clearance to cable trays, minimum of 18-inches above, 12-inches below, and 18-inches on at least one side every 6-feet. Provide 9-inches clearance between the cable tray and parallel walls. Provide 6-inches clearance between the cable tray and light fixtures.
   1. At areas where clearance above the cable tray may not be maintained:
   2. Transition the cable tray section to a wider but shallower cable tray section.
   3. Transition the cable tray to conduit.

J. Coordinate alternative solutions with the Architect.
   1. Install cable trays so that cables installed within the cable tray are separated from sources of electromagnetic interference by a minimum of the following.
   2. Open power conductors less than 2 kVa: 5-inches.
   3. Open power conductors less than 5 kVa: 12-inches.
   4. Open power conductors greater than 5 kVa: 24-inches.
   5. Electrical motors and transformers: 48-inches.
   6. Light fixture ballast: 5-inches.

K. Provide off-sets to avoid conflicts with other ceiling elements. Notify Architect of conflicts that cannot resolved by the installation off off-sets.

L. Provide cable tray with side walls in the open areas as shown on the Drawings. Mount bottom of cable trays overhead at approximately 6-inches above suspended ceilings unless otherwise shown on Drawings.
   1. Provide splice-kits where cable tray lengths require the joining of two sections, tee fittings, and reducers.
   2. Provide threaded-rod-ceiling-kits.
   3. Ground each cable tray section to the next and to approved grounding points.
   4. Provide accessories and special transitions with 12” minimum radius turns for all changes in direction and offsets. Use manufacturers standard fittings including bolting assemblies for all end-to-end connections.
   5. Provided drop outs where cables transition down to other infrastructure components.

G. Inside Depth: As indicated.

H. Straight Section Rung Spacing: 6 inches on center.

I. Inside Radius of Fittings: As indicated on Drawings.

J. Complete with clamps, hangers, brackets, splice plates, reducer plates, blind ends, barrier strips, connectors, and grounding straps.

2.08 WARNING SIGNS

A. Engraved Nameplates: 1” black letters on yellow laminated plastic nameplate, engraved with the following wording:

WARNING! DO NOT USE CABLE TRAY AS A WALKWAY, LADDER, OR SUPPORT. USE ONLY AS MECHANICAL SUPPORT FOR CABLES!

PART 3 - EXECUTION

3.01 GENERAL

A. Comply with manufacturers' instructions for installing components and systems. Where no instructions are included with the equipment, follow accepted industry best practices as identified in the BICSI Design and Installation Manual.

B. Verify the routing of cable tray prior to rough-in. Report space or access conflicts to the Architect.

C. Refer to Architectural drawings for ceiling construction and fire rated wall/floors construction locations and details.

3.02 INSTALLATION

A. Install cable tray in accordance with NEMA VE-1 and NEMA VE-2 requirements.

B. Install cable trays as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.

C. Examine the areas to receive the work and the conditions under which the Work would be performed. Remedy unsatisfactory conditions detrimental to the proper and timely completion of the Work. Where a remedy of unsatisfactory conditions is not available or possible, notify the Architect for resolution.

6. Provide interior surfaces which are smooth and free of offset edges, projections or misalignment. Assembly bolts for end-to-end connections shall have a pattern, which does not cause any damage to cable sheaths of jackets. All edges smooth, de-burred.
7. Support cable tray within 24-inches of cable tray section splices or intersections. Support intersections on all sides. Support cable tray on both sides of every change in elevation/direction. The weight of the load on the cable tray shall not exceed the stated limits per span in the manufacturer's published load table. Use additional supports where needed.
8. At a minimum, brace cable tray to structure with diagonal braces spaced 30-feet maximum on center.
9. Install expansion connectors where cable tray crosses a building expansion joint. Space connectors and set gaps according to NEMA VA 1.

M. Provide cable runway type trays in the communication rooms as shown on the Drawings.
1. Mount cable trays overhead at or as at the shown height on the Drawings.
2. Provide vertical sections mounted to the wall from the horizontal cable runway sections:
   a. To sleeves in the wall when the sleeves are greater than 30-inches away from the horizontal sections of cable runway.
   b. To conduit sleeves in the floor.
   c. To conduit sleeves in the slab above when the conduit sleeves are greater than 30-inches away from the horizontal sections of cable runway.
3. Install cable runways with the rungs facing down.
4. Provide radius drop out guides above the vertical cable managers installed on the sides of equipment racks.
5. Provide radius dropouts above the cable entrance ports in the top panels of equipment cabinets. Note that equipment cabinets have multiple cable entrance ports.
6. Provide splice-kits where cable tray lengths require the joining of two sections.
7. Provide cable retaining posts on each of the cable tray at 18-inch intervals.
8. Provide threaded-rod-ceiling-kits spaced 60-inches on center, within 24 inches of a splice to support the cable tray overhead.
9. Provide end-foot-kits and brackets to support the cable tray where it meets a wall.
10. Provide caps on exposed cable runways ends.
11. Provide caps on exposed threaded rod ends.
12. Ground each cable tray section to the next. Ground cable tray to the nearest grounding busbar located within the respective room.
13. Do not install triangle support wall brackets to support cable runway sections.

N. When cables are installed outside of conduits and are not supported by cable tray, provide the J- hooks to support cables.
1. 1-inch-wide J-hook for up to 10 cables.
2. 2-inch-wide J-hook for up to 24 cables.
3. 3-inch-wide J-hook for up to 48 cables.
4. 4-inch-wide J-hook for up to 72 cables.

O. Provide multiple J-hooks in a run of cables where cable count limits are exceeded or as per cable segregation requirements identified here-in.

P. Provide applicable accessories to independently support J-hooks from structure, including extender bracket/trees for mounting multiple J hooks on a single support, fasteners, and clamps for connecting to wall, beams, rods, dedicated support wires and C and Z Purlins as required for specific construction.

Q. Space cable supports and J-hooks at a maximum of 48-inch intervals and at each change of direction of the cables. Maintain a maximum of 12-inch sag in the cable between supports. Provide additional J-hooks when interval and or sag limits are exceeded.

R. At a minimum, brace multiple J-hook assemblies from structure with diagonal braces at each change of direction of the cable run.

S. Use installation tools and practices recommended by the manufacturer to field modify wire mesh cable tray intersections and changes in elevation.

T. Install firestopping in accordance with Section 27 05 28 to sustain ratings when passing cable tray through rated elements.

U. Maintain and repair fire-proofing material during the installation of cable tray and cable supporting structure.

V. Install warning signs at 20 feet centers along cable tray where the cable tray is open to the space above, located to be visible location.

W. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.

X. Comply with requirements for pathways specified in Section 270528 "Conduits and Back Boxes for Communications Systems."

Y. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMTs, IMCs, and RMCs as scheduled in NECA 1, where its Table 1 lists maximum spacings that are less than those stated in NFPA 70. Minimum rod size shall be 1/4 inch (6 mm) in diameter.

Z. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted or other support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
   1. Secure raceways and cables to these supports with two-bolt conduit clamps, single-bolt conduit clamps or single-bolt conduit clamps, using spring friction action for retention in support channel.

3.03 SUPPORT INSTALLATION

A. Raceway Support Methods: In addition to methods described in NECA 1, EMT IMC and RMC may be supported by openings through structure members, according to NFPA 70.

B. Strength of Support Assemblies: Where not indicated, select sizes of components, so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).

C. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten communications items and their supports to building structural elements by the following methods unless otherwise indicated by code:
1. To Wood: Fasten with lag screws or through bolts.
2. To New Concrete: Bolt to concrete inserts.
3. To Masonry: Use approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
4. To Existing Concrete: Use expansion anchor fasteners.
5. Instead of expansion anchors, powder-actuated-driven threaded studs, provided with lock washers and nuts, may be used in existing standard-weight concrete 4 inches (100 mm) thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches (100 mm) thick.
6. To Steel: Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts Beam clamps (MSS SP-58, Type 19, 21, 23, 25, or 27), complying with MSS SP-69 Spring-tension clamps.
7. To Light Steel: Sheet metal screws.

D. Drill holes for expansion anchors in concrete at locations and to depths that avoid the need for reinforcing bars.

3.04 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Section 055000 "Metal Fabrications" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor communications materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

D. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas, and apply galvanizing-repair paint to comply with ASTM A780.

3.05 CABLE TRAY GROUNDING

A. Bond the cable trays according to NFPA 70 and in compliance with Section 27 05 26. Refer to Section 27 05 26 for minimum bonding conductor sizing.

B. Thoroughly clean surfaces receiving connections for bonding.

C. Remove paint from painted metal components where bonding/ground lugs contact metallic components.

D. Apply antioxidant joint compound where metallic components contact bonding/ground lugs.

E. Bond cable tray section with splice plates or jumpers listed for grounding purposes.

3.06 FIELD QUALITY CONTROL

A. After installing cable trays and before cables have been energized, inspect for compliance with requirements.
   1. Inspect cable insulation for damage. Correct sharp corners and protuberances in cable tray. Eliminate causes of vibration and thermal expansion/contraction which may cause or have caused damage.
   2. Verify the number, size, and voltage of cables in cable tray do not exceed that permitted by NFPA 70. Verify that communication or data-processing circuits are separated from power circuits by barriers.
   3. Verify there is no intrusion of such items as pipe, hangers or other equipment that could damage cables.
   4. Inspect each cable tray joint and each ground connection for mechanical continuity. Check bolted connections between sections for corrosion. Clean and re-torque in suspect areas.
   5. Check for missing or damaged bolts, bolt heads, or nuts. When found, replace with specified hardware.
   6. Perform visual and mechanical checks for adequacy of cable tray grounding; verify that all takeoff raceways are bonded to cable tray.

B. Testing
   1. Test cable tray systems in accordance with NFPA 70B Chapter 21 for electrical continuity and connection to approved ground.
   2. Prepare and submit report of findings of visual inspections under Article “Closeout Submittals.

3.07 FIRESTOPPING

A. Provide firestopping systems at rated walls and floors.

B. [Comply with requirements in Section 07 84 13 "Penetration Firestopping".]

C. Comply with TIA/EIA-569-A, Annex A, "Firestopping."

D. Comply with BICSI TDMM, "Firestopping Systems" Article.

END OF SECTION

SECTION 27 05 43 - UNDERGROUND PATHWAYS AND STRUCTURES FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes furnishing materials, equipment, labor, supervision, tools, and items necessary for the construction and installation of an underground ducts and conduits for communication systems.

1.02 RELATED DOCUMENTS

A. BICSI Telecommunications Distribution Methods Manual (TDMM), Fourteenth Edition.

B. Section 26 05 45 - Underground Duct and Vaults

C. Section 27 05 28 - “Conduit Back Boxes for Communications Systems.”

1.03 SUMMARY

A. Section Includes:
   1. Metal conduit and fittings, including GRC and PVC-coated GRC.
   2. Utility structure accessories.

1.04 REFERENCES

A. ANSI C80.1 (American Society for Testing and Materials) - Rigid Steel Conduit, Zinc Coated.

B. ANSI/SCTE 77 (Society of Cable Telecommunication Engineers) Underground Enclosure Integrity.

C. ASTM A48 (American Society for Testing and Materials) - Gray Iron Castings.

D. ASTM C857 (American Society for Testing and Materials) - Minimum Structural Design Loading for Underground Precast Concrete Utility Structures.

E. ASTM C858 (American Society for Testing and Materials) - Underground Precast Concrete Utility Structures.

F. ASTM C891 (American Society for Testing and Materials) - Installation of Underground Precast Utility Structures.

G. ASTM C1037 (American Society for Testing and Materials) - Inspection of Underground Precast Utility Structures.

H. ASTM F512 (American Society for Testing and Materials) - Smooth-Wall Poly (Vinyl Chloride) (PVC) Conduit and Fittings for Underground Installation.

O. UL 651A (Underwriters Laboratories, Inc.) - Type EB and A PVC Conduit and HDPE Conduit.

1.05 DEFINITIONS

A. Controlled Density Fill (CDF): A low strength, flowable, self-consolidating, non-shrinking material.

B. Direct Buried: Duct or a duct bank that is buried in the ground, without any additional casing materials, such as controlled density fill or concrete.

C. Direct Buried: Duct or a duct bank that is buried in the ground, without any additional casing materials, such as concrete.

D. Duct: A single duct or multiple ducts. Duct may be either installed singly or as component of a duct bank.

E. Duct Bank:
   1. Two or more ducts installed in parallel, with or without additional casing materials.
   2. Multiple duct banks.

F. GRC: Galvanized rigid conduit.

G. IMC: Intermediate metal conduit.

H. RNC: Rigid nonmetallic conduit.

I. Trafficways: Locations where vehicular or pedestrian traffic is a normal course of events.

1.06 ACTION SUBMITTALS

A. Product Data:
   1. Technical data (cut sheets) for on each component.
   2. Trench base, back fill and encasement data including percentage mix of each material in the fill and the maximum diameters of particulates.

B. Calculations:
   1. Concrete mix strengths and calculations.

C. Shop Drawings:
   1. Scaled site plans showing:
      a. Location and routing of ducts and conduits.
      b. Conduit bend angles and radii.
      c. Transition points from one conduit material to another.
      d. Utility vaults and hand-holes.
      e. Means of utility vault and hand-hole drainage.
      f. Duct and conduit attachment points to existing structure and utility poles and new structures and utility poles.
      g. Duct and trench profiles and elevations.
   2. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:
      a. Dimensioned plans, sections, and elevations, and fabrication and installation details.
      b. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.
      c. Duct entry provisions, including location and duct size.
      d. Collars and cover.
      e. Grounding details.
   3. Manufacturer's Quality Control Reports: For precast structures, submit production quality control reports.
      a. Test procedures used.
      b. Test results that comply with requirements

1.07 INFORMATIONAL SUBMITTALS

A. Product Certificates: For concrete and steel used in precast concrete vaults and handholes, as required by ASTM C858.

1.08 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual routing and elevations of underground conduit and duct, and locations and sizes of utility vaults and hand-holes.

B. Report of mandrel test results of duct integrity.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Accept utility vaults and hand-holes on site. Inspect for damage.

B. Move and store in compliance with manufacturer’s instructions.

C. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.

D. Arrange so identification markings are visible.

1.10 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

1.11 FIELD CONDITIONS

A. Interruption of Existing Communications Service: Do not interrupt communications service to facilities occupied by Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary communications service according to requirements indicated:
   1. Notify Owner no fewer than two days in advance of proposed interruption of communications service.
   2. Do not proceed with interruption of communications service without Owner's written permission.

B. Ground Water: Coordinate ground level with civil engineer

1.12 COORDINATION

A. Coordinate the installation of conduit, utility vaults and hand-holes with the Work of Division 26 and 33.

B. Coordinate the installation of conduit, utility vaults and hand-holes with the existing underground utilities and structures.

C. Coordinate the installation of conduit, utility vaults and hand-holes with Telecommunication Service Providers existing and proposed underground and aerial facilities and structures.

PART 2 - PRODUCTS

2.01 METAL CONDUITS AND FITTINGS

A. GRC: Comply with ANSI C80.1 and UL 6.

B. PVC-Coated Steel Conduit: PVC-coated GRC.

1. Comply with NEMA RN 1.
2. Coating Thickness: 0.040 inch (1 mm), minimum.

C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB, Electrification Business.
2. AFC Cable Systems; Atkore International.
3. Allied Tube & Conduit; Atkore International.
4. Anaconda Sealtite; Anamet Electrical, Inc.
5. Calconduit; Atkore International.
6. Champion Fiberglass, Inc.
7. Electri-Flex Company.
8. FSR Inc.

D. General Requirements for Metal Conduits and Fittings:
1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
2. Comply with TIA-569-C and TIA-758-C.

2.02 RIGID NONMETALLIC CONDUITS

A. Underground Plastic Conduits: Type EPC-80-PVC and Type EPC-40-PVC RNC, complying with NEMA TC 2 and UL 651, with matching fittings complying with NEMA TC 3 by same manufacturer as duct.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ARNCO Corp.
2. Beck Manufacturing.
3. Cantex Inc.
4. CertainTeed LLC; Saint-Gobain North America.
5. Champion Fiberglass, Inc.
6. Condux International, Inc.
7. Crown Line Plastics.
8. ElecSys, Inc.

C. General Requirements for Nonmetallic Conduits and Fittings:
1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
2. Comply with TIA-569-C and TIA-758-C.

D. Solvents and Adhesives: As recommended by manufacturer.

TABLE 1 Vehicle and Pedestrian Load Designations

Designations	Maximum Loads	Uses
A-16 (HS20-44)[A]	16 000 lbf (71 172 N)/wheel	heavy traffic
A-12 (HS15-44)[A]	12 000 lbf (53 376 N)/wheel	medium traffic
A-8 (H10-44)[A]	8 000 lbf (35 586 N)/wheel	light traffic
A-0.3	300 lbf/ft^2(14.4 kPa)	walkways[B]

[A]The designations in parentheses are the corresponding AASHTO designations.
[B]Anticipated designs other than those listed should be designated by purchaser.

E. HDPE Conduit: Type EPEC 40-HDPE and Type EPEC 80-HDPE complying with NEMA TC 7 and UL 651A.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ABB, Electrification Business.
      b. ARNCO Corp.
      c. National Pipe & Plastics.
      d. Opti-Com Manufacturing Network, Inc (OMNI).
      e. Premier Conduit.
   2. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
   3. Comply with TIA-569-C and TIA-758-C.

2.03 CONDUIT ACCESSORIES

A. Fabric Innerduct: Continuous, polyester, multi -pocket fabric innerduct, with internal pull tape/cord and tracer wire.
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Maxcell.

B. Duct Spacers: Factory-fabricated rigid PVC interlocking spacers, sized for type and size of duct with which used, and selected to provide minimum duct spacing indicated while supporting duct during concreting or backfilling.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ABB, Electrification Business.
      b. Allied Tube & Conduit; Atkore International.
      c. Cantex Inc.
      d. IPEX USA LLC.

C. Underground-Line Warning Tape: Underground-line orange warning tape.

2.04 SOURCE QUALITY CONTROL

A. Test and inspect precast concrete utility structures according to ASTM C1037.

B. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of vaults and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
   1. Tests of materials shall be performed by an independent testing agency.
   2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.

PART 3 - EXECUTION

3.01 GENERAL

A. Comply with manufacturers' instructions for installing components, assembles and structure. Where no instructions are included with the equipment, follow accepted industry best practices as identified in the BICSI Outside Plant Design Reference Manual.

B. Comply with utility vault and hand hole manufacturer's instructions for lifting, moving, site preparation, excavation, and bedding

C. Keep items protected before and after installation, with dust and waterproof barrier materials as necessary. Maintain the integrity of the protective measures throughout the life of the project.

D. Maintain safe ingress and egress from work areas during the movement and installation of materials.

E. Examine the areas to receive the work and the conditions under which the Work would be performed. Remedy unsatisfactory conditions detrimental to the proper and timely completion of the Work. Where a remedy of unsatisfactory conditions is not available or possible, notify the Architect for resolution. Do not proceed until unsatisfactory conditions have been corrected.

F. Install pull-tape in continuous lengths. Do not splice pull-tapes.

3.02 PREPARATION

A. Coordinate layout and installation of duct, duct bank, vaults, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field. Notify Architect if there is a conflict between areas of excavation and existing structures or archaeological sites to remain.

B. Coordinate elevations of duct and duct-bank entrances into vaults, handholes, and boxes with final locations and profiles of duct and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and

elevations as required to suit field conditions and to ensure that duct runs drain to vaults and handholes, and as approved by Architect.

C. Clear and grub vegetation to be removed and protect vegetation to remain according to Section 311000 "Site Clearing."

D. Remove and stockpile topsoil for reapplication according to Section 311000 "Site Clearing."

3.03 EXISTING WORK

A. Maintain access to existing duct bank and other installations remaining active and requiring access.

3.04 DUCT APPLICATION

A. Duct for Communications: Type EPC-80-PVC, Type EPC-40-PVC, Type EB-20-PVC RNC, in concrete-encased duct bank unless otherwise indicated.

B. Duct for Communications: Type EPEC-40-HDPEor Type EPEC-80-HDPE duct in direct-bored duct bank unless otherwise indicated.

C. Underground Duct Crossing Paved Paths and Driveways: Type EPC-40-PVC RNC, encased in reinforced concrete.

3.05 EARTHWORK

A. Excavation and Backfill: Comply with Section 312000 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restoration: Replace area immediately after backfilling is completed or after construction in immediate area is complete.

C. Restore surface features at areas disturbed by excavation and re-establish original grades unless otherwise indicated.

D. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 329200 "Turf and Grasses" and Section 329300 "Plants."

E. Cut and patch existing pavement in the path of underground duct, duct bank, and utility structures according to the "Cutting and Patching" Article in Section 017300 "Execution."

3.06 DUCT AND DUCT-BANK INSTALLATION

A. Where indicated on Drawings, install duct, spacers, and accessories into the duct configuration shown. Duct installation requirements in this Section also apply to duct bank.

B. Install duct and duct bank according to NEMA TCB 2 and TIA-758-C.

C. Slope: Pitch duct and duct bank a minimum slope of 1:100 down toward vaults and handholes and away from buildings and equipment. Slope duct and duct bank from a high point in runs between two vaults, to drain in both directions.

D. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches (1200 mm) 12.5 feet (4 m) 25 feet (7.5 m), both horizontally and vertically, at other locations unless otherwise indicated.
   1. Duct and duct banks shall have maximum of two 90-degree bends, or the total of all bends shall be no more 180 degrees between pull points.

E. Transition from schedule PVC conduits to rigid galvanized steel conduits minimum of 10 feet where:
   1. A duct or conduit enters a building wall or beyond shear point of foundation excavation.
   2. A duct or conduit enter a utility tunnel.
   3. A duct or conduit enters a shear point of foundation excavation.
   4. A duct or conduit has a bend radius of less than 8 feet.

F. Joints: Use solvent-cemented joints in duct and fittings and make watertight according to manufacturer's written instructions. Stagger couplings, so those of adjacent ducts do not lie in same plane.

G. Installation Adjacent to High-Temperature Steam Lines: Where duct or duct banks are installed parallel to underground steam lines, perform calculations showing the duct or duct bank will not be subject to environmental temperatures above 40 deg C. Where environmental temperatures are calculated to rise above 40 deg C, and anywhere the duct or duct bank crosses above an underground steam line, install insulation blankets listed for direct burial to isolate the duct bank from the steam line.

H. End-Bell Entrances to Vaults and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 6 inches (150 mm) o.c. for 4-inch (100-mm) duct, and vary proportionately for other duct sizes.
   1. Begin change from regular spacing to end-bell spacing 10 feet (3 m) from the end bell without reducing duct slope and without forming a trap in the line.
   2. Expansion and Deflection Fittings: Install an expansion and deflection fitting in each duct in the area of disturbed earth adjacent to vault or handhole. Install an

expansion fitting near the center of all straight-line direct-buried duct and duct banks, with calculated expansion of more than 3/4 inch (19 mm).

3. Grout end bells into structure walls from both sides to provide watertight entrances.

I. Terminator Entrances to Vaults and Concrete and Polymer Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately 6 inches (150 mm) o.c. for 4-inch (100-mm) duct and vary proportionately for other duct sizes.

1. Begin change from regular spacing to terminator spacing 10 feet (3 m) from the terminator without reducing duct slope and without forming a trap in the line.
2. Expansion and Deflection Fittings: Install an expansion and deflection fitting in each duct in the area of disturbed earth adjacent to vault or handhole. Install an expansion fitting near the center of all straight-line duct or duct bank, with calculated expansion of more than 3/4 inch (19 mm).

J. Where conduits enter a vault or hand-hole, connect the conduits as low as possible into the ends of the vault or hand-holes Provide duct plugs on all conduits to withstand at least 15-psig hydrostatic pressure.

K. Where conduits stub up alongside of a utility pole, into a light pole or its base, into a pedestal or into an enclosure mounted at the base of a light pole, coordinate the placement of the conduit with the structure serving the structures. Extend conduits a minimum of 12 inches above a structure and a minimum of 96 inches alongside a utility pole. Locate conduits at the curb side and down traffic side of utility poles alongside vehicular roadways.

L. Building Wall Penetrations: Make a transition from underground duct to GRC at least 10 feet (3 m) outside the building wall, without reducing duct slope away from the building or forming a trap in the duct. Use fittings manufactured for RNC duct-to-GRC conduit transition. Install GRC penetrations of building walls as specified in Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling."

M. Sealing: Provide temporary closure at terminations of duct that has cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig (1.03-MPa) hydrostatic pressure.

N. Direct-Buried Duct and Duct Banks:

1. Excavate trench bottom to provide firm and uniform support for duct and duct bank. Comply with requirements in Section 312000 "Earth Moving" for preparation of trench bottoms for duct less than 6 inches (150 mm) in nominal diameter.
2. Install duct with a minimum of 3 inches (75 mm) between duct for like services and 6 inches (150 mm) between power and signal duct.
3. Depth: Install top of duct or duct bank at least 36 inches (900 mm) below finished grade unless otherwise indicated.
4. Set elevation of bottom of duct or duct bank below frost line.
5. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.

6. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 feet (6 m) of duct. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around duct or duct bank.
7. Elbows: Install manufactured duct elbows for stub-ups, at building entrances through floor, and at changes of direction in duct unless otherwise indicated. Encase elbows for stub-ups throughout length of elbow. Extend encasement minimum of 36 inches (900 mm) beyond elbow joints.
8. Install manufactured GRC elbows for stub-ups, at building entrances, and at changes of direction in duct.
    a. Couple GRC to duct with adapters designed for this purpose and encase coupling with 3 inches (75 mm) of concrete.
    b. For equipment mounted on outdoor bases, extend GRC horizontally a minimum of 60 inches (1500 mm) from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.
9. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving duct at end of run free to move with expansion and contraction, as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to 4 inches (100 mm) over duct and hand tamp. Firmly tamp backfill around duct to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 312000 "Earth Moving" for installation of backfill materials.
    a. Place minimum of 3 inches (75 mm) of sand as a bed for duct and duct bank. Place sand to a minimum of 6 inches (150 mm) above top level of duct and duct bank.
    b. Place minimum of 6 inches (150 mm) of engineered fill above concrete encasement of duct bank.

O. Underground-Line Warning Tape: Bury conducting underground-line warning tape no less than 12 inches (300 mm) above all concrete-encased duct and duct bank and approximately 12 inches (300 mm) below grade. Align tape parallel to and within 3 inches (75 mm) of centerline of duct bank. Provide an additional warning tape for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional tapes 12 inches (300 mm) apart, horizontally.

P. INSTALLATION OF INNERDUCTS
1. Provide four 1-inch round, One, two or three 3-cell fabric innerducts in each 4-inch duct and conduit,.
2. When installing multi-cell packs in a single conduit/duct, provide a different color-coded thread to differentiate one pack from another.

3. Provide a pull-cord in each inner-duct. Provide at least ten feet extension beyond each utility vault, hand-hole utility tunnel or building entrance. Securely tie innerducts end to support hardware at each at each end.

3.07 IDENTIFICATION

A. Identify ducts and conduits with numerically stamped stainless steel tags permanently attached to the inside of vaults adjacent to each duct entrance. Coordinate nomenclature of the identification numbers with the Architect, Owner.

3.08 GROUNDING

A. Ground underground duct, duct bank, and utility structures according to Section 270526 "Grounding and Bonding for Communications Systems."

3.09 FIELD QUALITY CONTROL

A. Test and inspect precast concrete utility vaults and hand-holes in according to ASTM C 1037.

B. Perform the following tests and inspections and prepare test reports:
1. Demonstrate capability and compliance with requirements on completion of installation of underground duct, duct bank, and utility structures.
2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide a minimum 12-inch-(300-mm-) long mandrel equal to duct size minus 1/4 inch (6 mm). If obstructions are indicated, remove obstructions and retest.
3. Test vault and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 270526 "Grounding and Bonding for Communications Systems."

C. Correct deficiencies and retest as specified above to demonstrate compliance.

3.10 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of duct until duct cleaner indicates that duct is clear of dirt and debris.

B. Clean internal surfaces of vaults, including sump.
1. Sweep floor, removing dirt and debris.
2. Remove foreign material.

END OF SECTION

SECTION 27 05 53 - IDENTIFICATION FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes materials, equipment, labor, supervision, tools and items necessary for the installation of identification labels for communication components, devices and cables.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. BICSI Telecommunications Distribution Methods Manual (TDMM), Fourteenth Edition.

C. Section 27 05 28 - “Pathways for Communications Systems.”

D. Section 27 11 00 - “Communication equipment room fittings”.

E. Section 27 13 00 - “Communications Backbone Cabling.”

F. Section 27 15 00 - “Communications Horizontal Cabling.”

1.03 REFERENCES

A. ANSI/TIA 606 Administrative Standard for Telecommunication Infrastructure

1.04 ACTION SUBMITTALS

A. Product Data:
1. Materials list.
2. Technical data (cut sheets) for each type of label.

B. Identification Schedule:
1. Outlets: Scaled drawings indicating location and proposed designation.
2. Backbone Cabling: Riser diagram showing each communications room, backbone cable, and proposed backbone cable designation.
3. Racks: Scaled drawings indicating location and proposed designation.
4. Patch Panels: Enlarged scaled drawings showing rack row, number, and proposed designations.

1.05 COORDINATION

A. Coordinate the final labeling nomenclature for cables, and termination devices with the Owner and Architect prior to installation of cable and device labels. Obtain Owner sign off prior to commencement.

B. Coordinate the format and schema of the cable termination schedules with the Owner and Architect prior to preparation of the schedules. Obtain Owner sign off prior to use on cables and termination devices.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Comply with NFPA 70 and TIA 606.

B. Comply with ANSI Z535.4 for safety signs and labels.

C. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
   1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 COLOR AND LEGEND REQUIREMENTS

A. Equipment Identification Labels:
   1. Black letters on a white field.

2.03 LABELS

A. Vinyl Wraparound Labels: Preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Brady Corporation.
      b. Champion America.
      c. Panduit Corp.
      d. Permanent, waterproof black ink marker recommended by tag manufacturer.
      e. Machine-printed, permanent, waterproof black ink recommended by printer manufacturer.
   2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Brady Corporation.
      b. Brother International Corporation.

c. emedco.
d. Panduit Corp.

3. Minimum Nominal Size:
   a. 1-1/2 by 6 inches (37 by 150 mm) for raceway and conductors.
   b. 3-1/2 by 5 inches (76 by 127 mm) for equipment.
   c. As required by authorities having jurisdiction.

2.04 UNDERGROUND-LINE WARNING TAPE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Brady Corporation.
   2. Brimar Industries, Inc.
   3. Ideal Industries, Inc.

B. Tape:
   1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground communications utility lines.
   2. Printing on tape shall be permanent and shall not be damaged by burial operations.
   3. Tape material and ink shall be chemically inert and not subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.

C. Color and Printing:
   1. Comply with ANSI Z535.1, ANSI Z535.2, ANSI Z535.3, and ANSI Z535.4.
   2. Inscriptions for Orange-Colored Tapes: "TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL-FIBER CABLE".

2.05 SIGNS

A. Baked-Enamel Signs:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Carlton Industries, LP.
      b. Champion America.
      c. emedco.
   2. Preprinted aluminum signs, high-intensity reflective, **punched** or drilled for fasteners, with colors, legend, and size required for application.
   3. 1/4-inch (6.4-mm) grommets in corners for mounting.
   4. Nominal Size: 7 by 10 inches (180 by 250 mm).

B. Laminated-Acrylic or Melamine-Plastic Signs:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Brady Corporation.
      b. Carlton Industries, LP.
      c. emedco.

d. Marking Services, Inc.

2. Engraved legend.
3. Thickness:
   a. For signs up to 20 sq. in. (129 sq. cm), minimum 1/16 inch (1.6 mm) thick.
   b. For signs larger than 20 sq. in. (129 sq. cm), 1/8 inch (3.2 mm) thick.
   c. Engraved legend with black letters on white face.
   d. Punched or drilled for mechanical fasteners with 1/4-inch (6.4-mm) grommets in corners for mounting.
   e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.06 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).

B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.01 PREPARATION

A. Self-Adhesive Identification Products: Before applying communications identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.02 INSTALLATION

A. Provide identification labels that are in accordance with the approved cable termination schedule.

B. Room numbers shown on the Drawings may not the final room numbers. Validate the final room numbers with the Architect prior to use in creating termination schedules, cable identification labels, cable record drawings, O&M documentation, and cable test reports.

C. Provide machine-generated labels on cables in black uppercase lettering on a permanent adhesive, white label stock, covered with a permanent water-resistant sealer. Place labels on both ends of each cable and no more than 6 inches from the point at which the cable is broken out into individual copper pairs or strands from the connector or termination block or patch panel. Install labels so that the labels are parallel with the

cable. Install labels so that labels are readily visible. Do not label cables with hand lettered labels.

D. Provide machine-generated labels on termination block with the cable ID and cable pair in uppercase lettering. Do not label devices with hand lettered labels.

E. Provide machine-generated labels on splice panel with the equipment rack or equipment cabinet ID and the rack unit position in uppercase lettering. Do not label devices with hand lettered labels.

F. Provide machine-generated labels on patch panel, with the cable ID and port number in uppercase lettering. Do not label devices with hand lettered labels.

G. Replace labels if at any time during the project, the label becomes illegible or is removed.

H. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.

I. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.

J. Install identifying devices before installing acoustical ceilings and similar concealment.

K. Verify identity of each item before installing identification products.

L. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.

M. Apply identification devices to surfaces that require finish after completing finish work.

N. Install signs with approved legend to facilitate proper identification, operation, and maintenance of communications systems and connected items.

O. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from the floor.

P. Vinyl Wraparound Labels:
   1. Secure tight to surface of raceway or cable at a location with high visibility and accessibility.
   2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to the location and substrate.
   3. Provide label 6 inches (150 mm) from cable end.

Q. Snap-Around Labels:
1. Secure tight to surface at a location with high visibility and accessibility.
2. Provide label 6 inches (150 mm) from cable end.

R. Self-Adhesive Wraparound Labels:
1. Secure tight to surface at a location with high visibility and accessibility.
2. Provide label 6 inches (150 mm) from cable end.

S. Self-Adhesive Labels:
1. On each item, install unique designation label that is consistent with wiring diagrams, schedules, and operation and maintenance manual.
2. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high letters on 1-1/2-inch- (38-mm-) high label; where two lines of text are required, use labels 2 inches (50 mm) high.

T. Snap-Around, Color-Coding Bands: Secure tight to surface at a location with high visibility and accessibility.

U. Underground-Line Warning Tape:
1. During backfilling of trenches, install continuous underground-line warning tape directly above cable or raceway at 6 to 8 inches (150 to 200 mm) below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope **exceeds** 16 inches (400 mm) overall.
2. Limit use of underground-line warning tape to direct-buried cables.
3. Install underground-line warning tape for direct-buried cables and cables in raceways.

V. Cable Ties: General purpose, except as listed below:
1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

3.03 IDENTIFICATION SCHEDULE

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations with high visibility. Identify by system and circuit designation.

C. Accessible Fittings for Raceways and Cables within Buildings: Identify covers of each junction and pull box with self-adhesive labels containing wiring system legend.
1. System legends shall be as follows:
a. Standard Data
b. Wireless
c. Security

D. Faceplates: Label individual faceplates with self-adhesive labels. Place label at top of faceplate. Each faceplate shall be labeled with its individual, sequential designation, numbered clockwise when entering room from primary egress, composed of the following, in the order listed:
   1. Standard Data = “IDF”-D-”Number” (White Jacks)
   2. Wireless = “IDF”-AP-”Number” (Green Jacks)
   3. Security = “IDF”-SC-”Number” (Black Jacks)

E. Equipment Room Labeling:
   1. Racks, Frames, and Enclosures: Identify front and rear of each with self-adhesive labels containing equipment designation.
   2. Patch Panels: Label individual rows in each rack, starting at top and working down, with self-adhesive labels. Label individual rows and outlets, starting at to left and working down, with self-adhesive labels.
   3. Data Outlets: Label each outlet with a self-adhesive label indicating the following, in the order listed:
      a. Standard Data = “IDF”-D-”Number” (White Jacks)
      b. Wireless = “IDF”-AP-”Number” (Green Jacks)
      c. Security = “IDF”-SC-”Number” (Black Jacks)

F. Backbone Cables: Label each cable with a vinyl-wraparound label indicating the location of the far or other end of the backbone cable. Patch panel or punch down block where cable is terminated should be labeled identically.

G. Horizontal Cables: Label each cable with a vinyl-wraparound label indicating the following, in the order listed:
   1. Standard Data = “IDF”-D-”Number” (White Jacks)
   2. Wireless = “IDF”-AP-”Number” (Green Jacks)
   3. Security = “IDF”-SC-”Number” (Black Jacks)

H. Locations of Underground Lines: Underground-line warning tape for copper, coaxial, hybrid copper/fiber, and optical-fiber cable.

I. Instructional Signs: Self-adhesive labels.
   1. Apply to exterior of door, cover, or other access.

J. Equipment Identification Labels:
   1. Indoor Equipment: Self-adhesive label, Baked-enamel signs, Laminated-acrylic or melamine-plastic sign.
   2. Outdoor Equipment: Laminated-acrylic or melamine-plastic sign, Stenciled legend 4 inches (100 mm) high.
   3. Equipment to Be Labeled:
      a. Communications cabinets.
      b. Uninterruptible power supplies.
      c. Computer room air conditioners.
      d. Fire-alarm and suppression equipment.
      e. Egress points.

f. Power distribution components.

END OF SECTION

SECTION 27 11 00 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes materials, equipment, labor, supervision, tools and items necessary for the construction and installation of communication equipment room fittings.

1.02 RELATED SECTIONS

A. Section 27 05 26 - Grounding and Bonding for Communication Systems.

B. Section 27 05 36 – Hangars and Supports for Communications Systems" for cable trays and accessories.

1.03 ACTION SUBMITTALS

A. Product Data:
   1. Materials list.
   2. Technical data (cut sheets) for on each component, including finishes and weights.

B. Calculations.

C. Requirements for device network switch port access.

D. Shop Drawings: For communications equipment room fittings. Include plans, elevations, sections, details, and attachments to other work.
   1. Details of seismic strengthening of components and equipment rack and cabinets
   2. Enlarged plans of communication rooms as they are framed and constructed. Indicate ancillary items on floor, walls, and ceiling inside the room. Indicate locations, size, weight and mounting height for bonding bars, equipment racks and cabinets, conduits, sleeves, cable trays and wall mounted enclosures, panels and termination devices to be installed in the communication rooms provided under the related Division 23, 26, 27 and 28 Work.
   3. Enlarged elevations for communication rooms. Indicate equipment racks and cabinets and wall mounted equipment to be installed in the communication rooms provided under related Division 26, 27 and 28 Work.

E. Manufacturer's Installation Instructions: Submit application conditions and limitations of use stipulated by Product testing agency specified under Regulatory Requirements.

Include instructions for storage, handling, protection, examination, preparation, and installation of Product.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, qualified layout technician, installation supervisor, and field inspector.

B. Seismic Qualification Data: Certificates, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions. Base certification on the maximum number of components capable of being mounted in each rack type. Identify components on which certification is based.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.05 CLOSEOUT SUBMITTALS

A. Project Record Documents:
1. Product information
2. Record actual location, size, dimension, height of the following.
a. Equipment racks and cabinets.
b. Plywood.
c. Vertical cable trays.
d. Horizontal cable trays.
e. Vertical conduits.
f. Horizontal conduits and sleeves.
g. Elevations of equipment, devices and receptacles mounted in the equipment racks and cabinets, noting the rack unit numbers.
h. Elevations of equipment, devices and receptacles mounted on the walls.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Cabling installer must have personnel certified by BICSI on staff.
1. Layout Responsibility: Preparation of Shop Drawings shall be under direct supervision of RCDD.
2. Installation Supervision: Installation shall be under direct supervision of Technician Installer 2, Copper or Fiber, who shall be present at all times when Work of this Section is performed at Project site.
3. Field Inspector: Currently registered by BICSI as RCDD to perform the on-site inspection.

1.07 COORDINATION

A. Coordinate the Work of Division 23, Division 26, Division 27 and Division 28 Work components and cable to be installed in communication rooms.

B. Validate specific dimensions of all equipment being installed in the communication equipment rooms. Use specific dimension in the preparation of the coordinated Shop Drawings.

C. Coordinate layout and installation of communications equipment with Owner's telecommunications and systems Contractors and Vendors.

D. Coordinate service entrance arrangement with various Telecommunication Service Providers.

E. Meet jointly with telecommunications and LAN equipment suppliers, local exchange carrier representatives and Owner to exchange information and agree on details of equipment arrangements and installation interfaces. Record agreements reached in meetings and distribute them to meeting participants and the Architect

F. Coordinate the bonding of equipment racks and cabinets with the bonding busbars installed under Sections 26 05 26 and 27 05 26.

G. Coordinate the nomenclature and schema of identification labels for the equipment cabinets and racks with the Owner.

H. Coordinate the installation of networked devices with the Owner and their network engineers for network port access, provisioning, and IP network address requirements.

1.08 PRE-INSTALLATION CONFERENCE

A. Convene minimum 7 days prior to commencing work of this Section to include the Owner, Architect, Engineer, and the Division 23, 26, 27 & 28 installers. Validate field conditions, equipment dimensions, and spaces allocated for the installation of all equipment in the rooms.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Equipment shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified."

2.02 PLYWOOD BACKBOARDS

A. Void free, fire-retardant treated, 3/4 by 48 by 96 inches (19 by 1220 by 2440 mm).

2.03 BOXES AND ENCLOSURES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. ABB, Electrification Business.
   2. Adalet.
   3. Crouse-Hinds; brand of Eaton, Electrical Sector.
   4. FSR Inc.
   5. Hoffman; brand of nVent Electrical plc.

B. General Requirements for Boxes, Enclosures, and Cabinets: Boxes, enclosures, and cabinets shall be listed and labeled for intended location and use.

C. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

D. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.

E. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

F. Box extensions used to accommodate new building finishes shall be of same material as recessed box.

G. Device Box Dimensions: 4 inches square by 2-1/8 inches deep (100 mm square by 60 mm deep).

H. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1 with continuous-hinge cover with flush latch unless otherwise indicated.
   1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
   2. Nonmetallic Enclosures: Plastic or Fiberglass.
   3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

2.04 FREE STANDING EQUIPMENT RACKS

A. Description: Two- and four- post racks with threaded rails designed for mounting network and communications equipment.
   1. Width is compatible with EIA/ECIA 310-E, 19-inch (482.6-mm) equipment mounting with an opening of 17.72-inches (450-mm) between rails.
   2. Height / Rack Mount Unit (RU) - 84 inch / 45 RU, with RUs marked on the vertical rails.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Middle Atlantic
   2. Chatsworth Products Inc.

C. General Requirements:

1. Comply with UL2416.
2. 2-post equipment rack.
3. Rails: C shaped 3, inch channels with standard EIA-310-D hole spacing pattern.
4. Mounting holes: Tapped 12-24, both sides.
5. Heavy duty flanged base for floor mounting.
6. Top mounted jumper trough.
7. Punched to allow attachment of vertical cable managers along the sides or for rack-to-rack baying.
8. Finish: Manufacturer's standard, baked-polyester powder coat.
9. Color: Black.
10. Two-Post Load Rating: , 1,500 lb.
11. Four-Post Load Rating: , 1,500 lb.

D. Cable Management:
1. Metal, with integral wire retaining fingers.
2. Baked-polyester powder coat finish.
3. Vertical cable management panels shall have front and rear channels, with covers.
4. Provide horizontal crossover cable manager at the top of each equipment rack, with a minimum height of two rack units each.

2.05 EQUIPMENT RACKS & CABINETS ACCESSORIES

A. Manufacturers:
1. Chatsworth Products Inc.
2. Leviton

B. Environmental monitor with sensors
1. Mount: Horizontal with mounting hardware.
2. Operation: Set thresh holds for monitoring and alert notification.
3. Sensors: Temperature, humidity, dew point, air flow, water detection, door position, smoke sensors, analog dry contact.
4. Local LED display.
5. Web interface via Ethernet network connection.

2.06 CABLE MANAGEMENT

A. Manufacturers:
1. Chatsworth Products Inc.
2. Leviton

B. Vertical Cable Management:
1. double sided to match the height of the approved equipment rack with mounting hardware.
2. Plastic edge cabling guides. Openings shall align with Rack Mount Unit (RU) spacing.
3. Front and rear removable, reversible swing doors
4. Plastic materials meet UL 94V-O Resistant Standard.

5. Width: see drawings for size
6. Edge protected pass through ports between front and rear sections.
7. Cable tie down points along central divider.
8. Color to match equipment rack or cabinet.

2.07 EQUIPMENT RACK/CABINET-MOUNT BONDING BUSBAR

A. Manufacturers:
1. Chatsworth.
2. ERICO.
3. Cooper B-Line.
4. Hubbell.
5. Tyco Electronics / AMP NETCONNECT.

B. Horizontal Rack Bonding Busbar, UL Listed:
1. Material: Hard-drawn electrolytic tough pitch 110 alloy copper.
2. Size: Minimum of 3/16 inches thick and 3/4 inches high by 19 inches long for mounting on EIA standard equipment racks.
3. Attachment Points: Tapped ground mounting holes for the attachment of two hole grounding lugs.

C. Vertical Rack Bonding Busbar, UL Listed:
1. Material: Hard-drawn electrolytic tough pitch 110 alloy copper.
2. Size: Minimum of 3/16 inches thick and 3/4 inches high by 84 inches long for mounting on EIA standard equipment racks.
3. Attachment Points: Tapped ground mounting holes for the attachment of two hole grounding lugs.

2.08 CABLE TIES

A. Product Description:
1. Hook and Loop (i.e. Velcro™) style cable ties.

2.09 LABELING

A. Comply with TIA-606-B and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers. Machine printed - self-adhesive and smudge resistant.

PART 3 - EXECUTION

3.01 GENERAL

A. Install equipment in the communications rooms as per the coordinated Shop Drawings.

B. Comply with manufacturers' instructions for installing components and adjusting equipment. Where no instructions are included with the equipment, follow accepted industry best practices as identified in the BICSI design and installation manual.

C. Provide equipment and component mounting hardware.

D. Keep items protected before and after installation, with dust and waterproof barrier materials. Maintain the integrity of the protective measures throughout the life of the project.

E. Do not install equipment in communications rooms until all wet work (i.e. painting, floor sealing, etc.) is complete.

F. Maintain safe ingress and egress from work areas during the movement and installation of materials.

G. Examine the areas to receive the work and the conditions under which the Work would be performed. Remedy unsatisfactory conditions detrimental to the proper and timely completion of the Work. Where a remedy of unsatisfactory conditions is not available or possible, notify the Architect for resolution.

H. Clean up and remove all debris generated by installation activities. Keep the communication rooms free of debris always.

I. Deliver to Owner two sets of specialty tools specifically needed for proper operation, adjustment and maintenance of components installed under this Work.

J. Coordinate requirements for network switch ports and IP addresses with Owner to support the installation of components.

K. Coordinate layout and installation of equipment in the equipment racks and cabinets in the rooms. Coordinate service entrance configuration with service provider.
   1. Meet jointly with systems providers, equipment suppliers, and Owner to exchange information and agree on details of equipment configurations and installation interfaces.
   2. Record agreements reached in meetings and distribute them to other participants.
   3. Adjust configurations and locations of distribution frames, cross-connects, and patch panels in equipment rooms to accommodate and optimize configurations and space requirements of communications equipment.
   4. Adjust configurations and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in equipment room.

3.02 PLYWOOD BACKBOARDS

A. Comply with requirements for plywood backing panels specified in Division 06, [Section [06 10 00]] "Rough Carpentry

B. Provide plywood backboards in the communication room as shown on the Drawings. Install plywood 6 inches above finished floor with the top at 8 feet 6 inches above finished floor, unless otherwise noted. Paint the plywood backboards with fire retardant, non conductive, light colored semi-gloss paint with a patch of each sheet of plywood unpainted revealing the fire rating stamp.

C. Provide additional plywood backboards in the communication room in areas where cable runways are to be attached to walls and full sizes plywood are not required. Size plywood backboards to cover the attachment of the cable runways and extend to closest vertical wall stud.

D. Comply with requirements in Division 09, [Section [09 91 23]] "Interior Painting" for painting plywood backboards.

E. Paint plywood backboards prior to the installation of other Division 27 or Division 28 Work components or cable. Notify Architect if painting will occur after the commencement of the installation of components or cables for additional instructions.

3.03 EQUIPMENT RACKS/CABINETS

A. Install equipment racks and cabinets plumb and level.

B. Equipment Racks:
1. Provide equipment racks in the communication rooms as shown on the Drawings. Anchor equipment racks at 4 points to the floor as described below. Secure the top of equipment racks to the cable trays mounted above.
2. Secure the equipment racks to the overhead cable runway with standoff brackets.
3. Provide a vertical, grounding busbar each equipment rack according to the manufacturer’s installation instructions. Remove paint on each equipment rack to allow a good connection for grounding components. Clean the surface with an abrasive pad and apply antioxidant compounds between the rack and the busbar to prevent corrosion at the bond.
4. Provide vertical wire mangers in between the equipment racks and at the ends of the equipment rack rows as shown on the Drawings

C. Bonding:
1. Remove paint on the equipment rack and cabinet to allow a good connection for bonding components. Clean the surface with an abrasive pad and apply antioxidant joint compounds between the rack and the busbar to prevent corrosion at the bond.
2. Attach bonding busbars to the equipment racks and cabinets using 2-hole lugs according to the manufacturer’s installation instructions.
3. Bond the bonding busbars to the room bonding busbar with a bonding conductor sized at a minimum 6 AWG. Refer to Specification 27 05 26 for exact bonding conductor sizes.
4. Do not daisy chain the bonding of the equipment racks and cabinets with a common bonding conductor.

3.04 RACK ANCHORING

A. Provide anchoring suitable for installation in the seismic zone of the building. Confirm seismic zone classification with the Architect prior to commencement of anchoring.

B. Anchor equipment racks and cabinets in accordance with manufacturer instructions.

C. When equipment racks and cabinets are anchored to house-keeping pads, coordinate methodology of anchoring with the Architect and Structural Engineer.

D. Verify all slab depths prior to embedment of any anchor and ensure that no rebar or post tension cables will be compromised during installation of anchors.

E. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Exercise care in coring or drilling to avoid damaging existing reinforcing or embedded items. Notify the Architect if reinforcing steel or other embedded items are encountered during drilling.

F. Anchor 2-post equipment racks with 1/2-inch Hilti TZ Anchor Stainless Steel expansion anchors or equal embedded 2.5 inches at each corner.

G. Anchor 4-post equipment racks and equipment cabinets with 3/8-inch Hilti TZ Anchor Stainless Steel expansion anchors or equal embedded 2.5 inches at each corner.

H. When placed over a raised floor, pass the threaded rods through the raised floor tile to the structural floor below

3.05 IDENTIFICATION

A. Provide machine-generated identification labels on the top of equipment racks and cabinets that are in accordance with the approved Shop Drawings, both front and rear side of equipment racks and cabinets.

B. Provide machine-generated laminated labels, 3-inch wide, black uppercase lettering on a permanent adhesive, white label stock.

3.06 CABLE TIES

A. Provide hoop and loop cable tries in the communication rooms to loosely bundle and secure cables to the equipment racks and cable tray. Do not use plastic cable tie-wraps.

3.07 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI's "Information Technology Systems Installation Methods Manual," "Firestopping Practices".

D. Refer to specification 27 05 28 for requirements for labeling of each side of floors and walls with fire rated pathways.

3.08 TRAINING

A. Provide (X) Y hour session(s) of instruction to the Owner on the programming, operation and maintenance of the UPS.

B. Provide (X) Y hour sessions of instruction to the Owner on the programming, operation and maintenance of the power distribution units.

3.09 CLEANING

A. Remove debris, mortar, garbage, wire clippings, dirt and dust from all equipment and room surfaces including, but not limited to, the following.
1. Floors.
2. Walls.
3. Top of equipment racks and cabinets.
4. Top of enclosures.
5. Top of cable trays.
6. Inside of enclosures.
7. Inside of patch panels.

3.10 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI's "Information Technology Systems Installation Methods Manual," "Firestopping Practices" Ch.

END OF SECTION

SECTION 27 13 00 - COMMUNICATIONS BACKBONE CABLING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes materials, equipment, labor, supervision, tools and items necessary for the construction, installation, labeling and testing of a communication backbone cabling system.

1.02 REFERENCES

A. TIA 455 (Telecommunication industry Association/Electrical Industries Association) Fiber Optic Test Standards.

B. TIA 526 (Telecommunication industry Association/Electrical Industries Association) Optical Fiber Systems Test Procedures.

1.03 DEFINITIONS

A. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.

B. EMI: Electromagnetic interference.

C. F/FTP: Overall foil screened cable with foil screened twisted pair.

D. FTP: Shielded twisted pair.

E. F/UTP: Overall foil screened cable with unscreened twisted pair.

F. IDC: Insulation displacement connector.

G. Jack: Also commonly called an "outlet," it is the fixed, female connector.

H. LAN: Local area network.

I. Plug: Also commonly called a "connector," it is the removable, male telecommunications connector.

J. RCDD: Registered Communications Distribution Designer.

K. Screen: A metallic layer, either a foil or braid, placed around a pair or group of conductors.

L. S/FTP: Overall braid screened cable with foil screened twisted pair.

M. Shield: A metallic layer, either a foil or braid, placed around a pair or group of conductors.

N. S/UTP: Overall braid screened cable with unscreened twisted pairs.

O. UTP: Unscreened (unshielded) twisted pair.

1.04 ACTION SUBMITTALS

A. Product Data:
1. Factory test information for fiber optic cable spools.
2. Materials list.
3. Technical data (cut sheets) for on each component, including finishes and weights.

B. Shop Drawings: Reviewed and stamped by RCDD.
1. Wall and equipment rack elevations for termination, splicing and patching equipment installed under this Work, provided in coordination with the similar Work identified in Sections 27 11 00 and 27 15 00.
2. Sample backbone cable termination schedules for of each type of cable installed under this work. Schedules to include for each cable pair or strand.
a. Building ID.
b. Room ID (location of each end of the cable).
c. Cable ID.
d. Size of Cable.
e. Cable Type.
f. Cable Category.
g. Pair #.
h. Strand #.
i. Rack ID.
j. Wall.
k. Patch panel ID.
l. Termination Block ID.
m. Connector Port #.
n. Connector Type.
o. Row #.
p. Pair #.
q. Associated enlarged communication room drawing.

C. Deferred Submittals:
1. Copies of factory provided cable spool test results.
2. Sample cable test results for each type of cable installed.
3. Sample optical fiber connector face inspection check list.
4. Optical fiber connector cleaning procedures.
5. Statement of field tester apparatus is using the current software or firmware, include software or firmware date.
6. Statement of field tester apparatus last calibration date.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For RCDD, Installer, installation supervisor, and field inspector.

B. Source quality-control reports.

C. Product Certificates: For each type of product.

D. Field quality-control reports.

1.06 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual information of the installed work.
   1. Cable termination schedules in Microsoft Excel format (latest version).
   2. Backbone schematics annotated with the approved cable identification numbers.
   3. Cable tests results. Submit cable test results one day after handing off the respective communication rooms to the Owner.
   4. Optical fiber connector face inspection check list.
   5. Factory provided cable spool test results.
   6. Enlarged communication room with equipment rack and wall elevations for cable termination devices.

B. Maintenance Data: For splices and connectors to include in maintenance manuals.

1.07 QUALITY ASSURANCE

A. Testing procedures and field-test instruments shall comply with applicable requirements of:
   1. ANSI Z136.2, ANS For Safe Use of Optical Fiber Communication Systems Utilizing Laser Diode and LED Sources
   2. ANSI/TIA 526, Optical Power Loss Measurement of Installed Multimode Fiber Cable Plant with full OTDR descriptions
   3. ANSI/TIA 526 Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant
   4. TIA-TSB-4979, Practical Considerations for Implementation of Multimode Launch Conditions in the Field
   5. ANSI/TIA-568, Generic Telecommunications Cabling for Customer Premises
   6. ANSI/TIA-568, Optical Fiber Cabling and Components Standard
   7. ANSI/TIA-606, Administration Standard for Commercial Telecommunications Infrastructure, including the requirements specified by the customer, unless the customer specifies their own labeling requirements

B. Trained technicians who have successfully attended an appropriate training program, which includes testing with an OLTS and an OTDR and have obtained a certificate as proof thereof shall execute the tests. These certificates may have been issued by any of the following organizations or an equivalent organization:
   1. Manufacturer of the fiber optic cable and/or the fiber optic connectors.

2. Manufacturer of the test equipment used for the field certification or representative.
3. Training organization:
   a. BICSI.
   b. Association of Cabling Professionals.
   c. Cabling Business Institute.

C. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.

D. Layout Responsibility: Preparation of Shop Drawings and cabling administration Drawings, cabling administration Drawings, and field-testing program development by an RCDD.

E. Installation Supervision: Installation shall be under the direct supervision of Technician or Level 2 Installer, who shall be present at all times when Work of this Section is performed at Project site.

F. Testing Supervisor: Currently certified by BICSI as a Technician to supervise on-site testing.

G. Testing Agency Qualifications: Testing agency must have personnel certified by BICSI on staff.
   1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Protect material from the entrance of dirt, dust, moisture and debris.

B. Maintain attachment of ferrule protector caps on optical fiber couplers and connectors and all pre-terminated cables.

1.09 COORDINATION

A. Coordinate layout and installation of the communication backbone cabling with Owner's telecommunications and network equipment and service suppliers.

B. Coordinate the Work of communications backbone cables in the communication rooms with the 27 11 00 Work to validate that communication equipment rooms are prepared, fitted and ready to receive, terminate, test and protect cables.

C. Coordinate the Work of communication backbone cables with the 27 05 28 Work and the 27 05 30 Work to validate that conduits, sleeves, cable trays, hangars and supports are in place to support and protect cables.

D. Coordinate the final labeling nomenclature for cables, and termination devices with the Owner and Architect prior to installation of cable and device labels. Obtain Owner sign off prior to commencement.

E. Coordinate the format and schema of the cable termination schedules with the Owner and Architect prior to preparation of the schedules. Obtain Owner sign off prior to use on cables and termination devices.

PART 2 - PRODUCTS

2.01 TWISTED PAIR CABLE

A. Performance Requirements
   1. General Performance: Backbone cabling system shall comply with transmission standards in TIA-568, when tested according to test procedures of this standard.
   2. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
      a. Flame-Spread Index: 25 or less.
      b. Smoke-Developed Index: 450 or less.
   3. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with the applicable standard and NFPA 70 for the following types:
      a. Communications - Plenum Rated: Type CMP complying with UL 1685 or Type CMP in listed plenum communications raceway or Type CMP in listed cable routing assembly.
      b. Communications - Riser Rated: Type CMP or Type CMR in listed plenum or riser communications raceway.
   4. RoHS compliant.

B. Description: 25-pair binder balanced-twisted pair cable, superior to the individual characteristics established in TIA 568 for category 3 cable performance. Complies with ICEA S-90-661 and NEMA WC 63.1.

C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Belden
   2. Molex

D. Exterior Rated.
   1. Physical Specifications: 24 AWG, solid copper conductors, 100 Ohm nominal impedance +/ 15 percent.
   2. Cable Construction: Dual insulated with foam skin and plastic, encapsulated with water blocking gel compound, individually insulated conductors, grouped in 25 pair binder units, surrounded by a corrugated aluminum shield, under a common outside plant, duct rated sheath.
   3. NFPA 70 type CMX (rated for use in a wet environment).
   4. Type: ALPESH.
   5. Refer to drawings for pair count.

E. Interior Rated.

1. Physical Specifications: 24 AWG, solid copper conductors, 100 Ohm nominal impedance +/ 15 percent.
2. Electrical Characteristics: Superior to the individual characteristics established in TIA 568 for category 3 cable performance.
3. Cable Construction: individually insulated conductors, grouped in 25-pair binder units under a common sheath. Cable size and noted on the drawings.
4. NFPA 70 type, CMR.
5. Refer to drawings for pair count.

2.02 OPTICAL FIBER CABLES

A. Performance Requirements
1. General Performance: Backbone cabling system shall comply with transmission standards in TIA-568, when tested according to test procedures of this standard.
2. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
3. Flame-Spread Index: 25 or less.
4. Smoke-Developed Index: 450 or less.
5. Standards:
   a. Comply with ICEA S-83-596 for mechanical properties.
   b. Comply with TIA-568 for performance specifications.
   c. Comply with TIA-492AAAC for detailed specifications

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Corning.

C. Single-Mode Optical Fiber Cable (FREEDM® One Tight-Buffered Cable, Riser 6 F, ClearCurve® ZBL, Single-mode (OS2)) :
1. Physical Specifications: 8.3 micron/125 micron, OS2 compliant.
2. Performance Characteristics:

	1310nm	1550nm
a. Maximum Attenuation(dB/km)	.34	.22

3. Cable Construction: Tight buffer, reinforced with a fibrous type strength member, under a common OFNR, OFNP or CMX rated sheath, with no metallic components. Strand count as noted on the drawings.
4. Cable Jacket Color: Yellow,.

2.03 PATCH CORDS

A. LC Duplex Patch Cords:
1. Physical Specifications: 2-strand single-mode optical fiber cable duplex LC connectors with strain relief on both ends.
2. Performance Characteristics: Superior to the individual characteristics established in TIA 568 cable performance.
3. Cable Jacket Color: Aqua.
4. Gender.

2.04 CABLE TERMINATION HARDWARE

A. Description: Hardware designed to connect, splice, and terminate twisted pair copper communications cable.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Leviton Manufacturing Co., Inc.

C. Electrical Protection Blocks:
   1. Electrical protection blocks, 110 in - 110 out, complete with solid state connectors, designation strips and grounding/bonding lugs.
   2. Sized to terminate specified cable.
   3. Steel lockable cover.
   4. Mount: Wall.

D. 8-Pin Modular Patch Panel:
   1. 19-inch rack mounted patch panels with 110 connections on the back suitable for the termination of the approved 25-pair binder cables. Complies with TIA-568 category 3, performance. Complete with rear removable cable management/strain relief bars and designation strips.
   2. Universal T568A and T568B wiring labels.
   3. Labeling areas adjacent to conductors.
   4. 24, 48 ports

E. Optical Fiber Patch Panel Enclosure:
   1. 19-inch rack mounted patch panel enclosure with quick release hinged front door, hinged rear door, front facing label panel, designation strips and the following.
      a. Slide out splice trays.
      b. Slide out shelf with, LC, duplex coupler panels and, LC, couplers.
      c. Modular cassette shelves.
      d. Modular cassettes.
      e. Color: White

F. Optical Fiber Pigtail Connectors:
   1. Optical fiber pigtails with LC connectors, suitable for splicing onto the approved optical fiber backbone cables. Insertion loss < 0.2db

2.05 CABLE STORAGE RING

A. Manufacturers:
   1. Leviton.

B. Cable Storage Ring
   1. Surface wall mounted circular ring,
   2. 16-gauge sheet metal.

3. Size: 12-inch diameter with re-closeable/removable 3-inch hook and loop style straps.
4. Size: 24-inch diameter with re-closeable/removable 9-inch hook and loop style straps.

2.06 CABLING IDENTIFICATION

A. Manufacturers:
1. Brady.
2. Panduit.
3. Leviton

B. Comply with TIA-606 and applicable requirements in this section.

C. Machine printed self-adhesive, smudge resistant labels for cables and faceplates. Labels shall be appropriately sized for cable diameter. Labels shall be appropriately colored for face-plate color contrast. Submit sample labels for approval.

2.07 CABLE TAGS

A. Manufacturer:
1. ACP International, Part # CT100

B. Construction: Plastic cable tags with “Caution Fiber Optic Cable” and space for cable information, complete with cable ties.

C. Size: 1.75” x 3.875”

D. Color: Yellow with black lettering (single-mode cable)

2.08 CABLE MECHANICAL PROTECTION

A. Manufacturers:
1. Carlon.
2. Maxcell.
3. Milliken Infrastructure.
4. Prymid.

B. Round Innerduct
1. Construction: Ribbed wall
2. Construction: Multi cell fabric type.
3. Capacity: 3 inch, 3-cell assembly
4. Rating: CMP, CMR or OSP.

C. Fabric Mesh Innerduct:
1. Non-biodegradable outdoor rated fabric mesh, multi-cell, inner duct packs.
2. Each cell provided with a sequential footage marked pull tape.

3. Type 2” wide, 3-cell pack.
4. Rating: OSP.

2.09 GROUNDING

A. Comply with requirements in Section 270526 "Grounding and Bonding for Communications Systems" for grounding conductors and connectors.

B. Comply with TIA-607.

2.10 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.

B. Factory test cables on reels according to TIA-568.

C. Factory test cables according to TIA-568.

D. Cable will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.01 GENERAL

A. Comply with manufacturers' instructions for installing components and adjusting equipment and telecommunication cables. Where no instructions are included with the equipment, follow accepted industry best practices as identified in the BICSI design and installation manual.

B. Keep items protected before and after installation, with dust and waterproof barrier materials. Maintain the integrity of the protective measures throughout the life of the project.

C. Protect communication cables and termination devices from damage during the construction. Do not install communication cables and termination devices in the communications rooms until after the non-Division 27 Work has been completed so that the equipment will not be moved or damaged. Do not install communication cable and termination devices in communications rooms until after plywood backboards have been painted.

D. Maintain safe ingress and egress from work areas during the movement and installation of materials.

E. Examine the areas to receive the work and the conditions under which the Work would be performed. Remedy unsatisfactory conditions detrimental to the proper and timely completion of the Work. Where a remedy of unsatisfactory conditions is not available or possible, notify the Architect for resolution.

F. Examine pathway elements intended for the installation and support of communication cables.
   1. Verify the proposed routes of communication cables prior to commencement.
   2. Validate that hangars, conduits, sleeves, conduit/sleeves bushings, cable trays, cable supports, and other elements are in place prior to commencement of any Work. Do not install cable where the cables can be subsequently damaged by other Work.
   3. Validate that the cabling can be installed without subjecting the installed cables to electromechanical interference (EMI). Do not install cable where the cables can be affected by EMI energy.
   4. Validate that the load capacity of cable support structures is adequate to support the cables. Where a cable support is not rated for the required capacity of cables, notify the General Contractor for resolution. Do not proceed until unsatisfactory conditions have been corrected.

G. Clean up and remove all debris generated by installation activities. Keep the communication rooms free of debris.

H. Deliver to Owner two sets of specialty tools specifically needed for proper operation, adjustment and maintenance of cable termination hardware installed under this Contract.

3.02 SURVEY AND PREPARATION

A. Survey and inspect cable trays, conduits, and cable routes prior to commencement of Work and report discrepancies and issues with the use of these for cable installation to the Architect. Failure to perform this inspection and submit the report holds the Contractor at cost risk for corrective actions and schedule impacts later in the Work.

3.03 METHODS AND PROCEDURES

A. Install components in accordance with this Specification, the approved Cable Termination Schedule, the manufacturer’s recommendations and the Drawings.

B. Ensure that communications cable supports (J-hooks, cable tray, conduits, etc.) are fully installed before proceeding with cable installation. Do not allow cables to be installed and left unsupported and or unprotected laying on the floor. Do not tie-wrap cables to any other supporting structure in lieu of specified cable supports. Do not bundle or tie-

wrap the cables even within the approved cable supports. Do not allow the cable to sag more than 12 inches.

C. When anchoring cables to cable supports, use hoop and loop straps only. Do not bundle cables with tie-wraps.

D. When bundling cables, use hook & loop style straps only. Do not bundle cables with tie wraps.

E. Protect cables during installation, especially when cables are laying on the floor, including when inside dedicated communication rooms/spaces. Provide rigid protection for cables left on the floor. Design protection to prevent pressure on cables from walking, equipment placement, or rolled/dragged construction equipment and materials.

F. When installing cables through lateral conduits and sleeves and conduits and sleeves are stacked in more than one row, route cables through the lower row(s) before proceeding to the upper row(s).

G. Support vertical runs of cable with hook and loop straps or split mesh grips on a minimum of 12-foot intervals.

H. When installing cables with metallic strength/protection members, ground the metal member.

I. When installing armored cable, cut the armor with an armor cutting tool designed for cutting armored cables.

J. When installing armored cables, use pulling grips/eyes.

K. When using a pulling grip/eye, use a swivel pull eye.

L. Maintain a minimum bend radius of 20X for interbuilding cables and 15X for interbuilding cables or manufacturer's minimum bend radius of the cables, whichever is greater.

M. Do not stretch, stress, tightly coil, bend or crimp the cables during the installation or when leaving them out of the way of other trades during the staging of the work. Replace abused or stressed cables.

N. When laying cables on a surface during installation, use figure-8 loops to prevent twisting the cables.

O. After dressing the cable to its final location, remove only enough jacketing to allow the conductors to be splayed and terminated in a neat and uniform fashion. Maintain jacketing integrity.

P. When installing twisted pair cable, maintain manufacturers twisting of the cable pairs through to the point of termination.

Q. Install cable in continuous runs without splices or mechanical couplers between the cable points of origin and termination unless identified herein or on the drawings.

R. When pulling cables through conduits, leave in-place drag-lines for future use.

S. Cross communication cables cross over electrical cables and conduits at 90-degree angles. When running twisted pair cables parallel electrical cables or conduits, separate cables by the following minimum distances.
1. Open cables and open power conductors less than 2 kVa: 5 inches.
2. Open cables and open power conductors between 2 kVa and 5 kVa: 12 inches.
3. Open cables and open power conductors greater than 5 kVa: 24 inches.
4. Grounded cable conduits and open power conductors less than 2 kVa: 3 inches.
5. Grounded cable conduits and open power conductors between 2 kVa and 5 kVa: 6 inches.
6. Grounded cable conduits and open power conductors greater than 5 kVa: 12 inches.
7. Grounded cable conduits and grounded power conduits less than 2 kVa: 0 inches.
8. Grounded cable conduits and grounded power conduits less than 5 kVa: 3 inches.
9. Grounded cable conduits and grounded power conduits greater than 5 kVa: 6 inches.
10. Cables and electrical motors and transformers: 48 inches.
11. Cables and fluorescent light fixtures: 5 inches.

3.04 INNERDUCT

A. Provide plastic tube Innerducts in the inter-building conduits. Stub the innerducts into the utility vaults and communications rooms and secure to structure. Provide, four 1 inch.

B. Provide plastic tube. Stub the innerducts into the communications rooms and secure to structure.

3.05 CABLING

A. Refer to the Drawings for cable sizes and quantities.

B. Coordinate Work in the existing communications rooms with the Owner prior to the commencement of Work.

C. Do not cause any harm to the existing operations in the communications room.

D. Do not cause harm to existing cables along the cable route.

E. Provide 10-foot service loops in utility vaults and hand holes.

F. Provide 10-foot service loops in communication rooms. Provide cable storage rings to manage the service loops. Locate service loops on the wall 24 inches above the cable tray.

G. Provide 10-foot service loops in pull boxes installed at structural expansion joints.

H. Route the cables through the inter-building and intra-building backbone pathway system as shown on the Drawings.

I. Provide inter-building twisted pair backbone cables as shown on the Drawings. Terminate the cables onto electrical protection blocks on both ends.

J. Provide twisted pair tie cables from electrical protection blocks to the corresponding termination blocks in the communication rooms to match all inter-building backbone cables installed under this work.

K. Provide twisted pair backbone cables as shown on the Drawings. Terminate the cable onto, 8-pin modular patch panels (1-pair per port, terminated on pins 4 & 5) in the communication rooms and onto, 8-pin modular patch panels in the main communication rooms.

L. Provide inter-building single-mode optical fiber cables as shown on the Drawings. Splice the cables onto LC, pigtailed connectors. Mount the connectors in optical fiber patch panels on both ends. Refer to Drawings for conduit routes.

M. Support vertical runs of cable with hook and loop straps or split mesh grips.

N. Ground metallic strength members of cables.

3.06 TERMINATION DEVICES

A. Coordinate location of termination devices in the communication room with the coordinated 27 11 00 Shop Drawings prior to commencement of Work.

B. Coordinate the location of new termination devices installed in the existing equipment racks with the Owner prior to commencement of Work.

C. Provide electrical protection blocks in the communication rooms for the termination of inter-building twisted pair cables installed under this Work. Mount the protection blocks onto the plywood backboards. Provide protection blocks complete with cable identification strips and solid-state protectors. Turn over unused protectors to the Owner at the project completion. Ground all electrical protection blocks per manufacturer's recommendations.

D. Provide termination blocks in the communication rooms for the termination of twisted pair cables installed under this Work. Mount the termination blocks onto the plywood backboards in the communication rooms. Provide termination blocks complete with cable identification strips and legs.

E. Provide patch panels in communication rooms for the termination of all twisted pair cables installed under this work. Mount the patch panels onto the equipment racks. Provide patch panels complete with connectors and cable identification strips.

F. Provide optical fiber patch panels in the communications rooms for the termination of optical fiber cables installed under this Work. Mount the patch panels onto the equipment racks in the communication rooms. Provide patch panels complete.

3.07 PIGTAIL/CONNECTORS

A. Provide LC pigtailed connectors for splicing of single-mode optical fiber cables installed under this Work.

3.08 PATCH CORDS

A. Provide optical fiber patch cords for Owners use.
1. Single-mode LC to LC duplex patch cords, Length - 12 feet. Quantity – 24.

B. Visually inspect patch cords as described in 3.10 Field Quality Control prior to Owner's installation of patch cords. Coordinate the scheduling of patch cord installation with Owner so that the visual inspection and the installation occur at the same time.

C. Install patch cords as directed by the Owner. Visually inspect patch cords as described in 3.10 Field Quality Control.]

3.09 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569, Annex A, "Firestopping."

C. Comply with "Firestopping Systems" Article in BISCI's "Telecommunications Distribution Methods Manual."

3.10 GROUNDING

A. Install grounding according to the "Grounding, Bonding, and Electrical Protection" chapter in BICSI's "Telecommunications Distribution Methods Manual."

B. Comply with TIA-607 and NECA/BICSI-607.

C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall, allowing at least a 2-inch (50-mm) clearance behind the grounding bus bar. Connect

grounding bus bar to suitable electrical building ground, using a minimum No. 4 AWG grounding electrode conductor.

D. Bond metallic equipment to the grounding bus bar, using not smaller than a No. 6 AWG equipment grounding conductor.

3.11 IDENTIFICATION

A. Provide identification labels that are in accordance with the approved cable termination schedule.

B. Room numbers shown on the Drawings may not the final room numbers. Validate the final room numbers with the Architect prior to use in creating termination schedules, cable identification labels, cable record drawings, O&M documentation, and cable test reports.

C. Provide machine-generated labels on cables in black uppercase lettering on a permanent adhesive, white label stock, covered with a permanent water-resistant sealer. Place labels on both ends of each cable and no more than 6 inches from the point at which the cable is broken out into individual copper pairs or strands from the connector or termination block or patch panel. Install labels so that the labels are parallel with the cable. Install labels so that labels are readily visible. Do not label cables with hand lettered labels.

D. Provide machine-generated labels on termination block with the cable ID and cable pair in uppercase lettering. Do not label devices with hand lettered labels.

E. Provide machine-generated labels on splice panel with the equipment rack or equipment cabinet ID and the rack unit position in uppercase lettering. Do not label devices with hand lettered labels.

F. Provide machine-generated labels on patch panel, with the cable ID and port number in uppercase lettering. Do not label devices with hand lettered labels.

G. Replace labels if at any time during the project, the label becomes illegible or is removed.

H. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.

3.12 FIELD QUALITY CONTROL

A. Provide an updated cable test plan submitted and approved as part of the Submittals process. Refer to article 1.03.E.3.

B. Notify the Architect, Owner and Engineer a minimum of 5 days in advance of the commencement of cable testing so that they can meet the cable tester at the site to observe the tester setup and the initial testing of cables.

C. Follow safety precautions in accordance with ANSI Z136.2 when performing test on optical fiber cabling that use a test set with a VCSEL, laser or LED.

D. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords and labeling of components.

E. Use testers that have been factory recalibrated within the last 12 months.

F. Use test instruments that meet or exceed applicable requirements in TIA 568.

G. Use testers with current test firmware installed within.

H. Comply with TIA 1152 Field Test Standard.

I. Set cable testers to reject Pass* (star) results.

J. Use connector insertion loss limits as identified by the connector manufacturer (as opposed to the TIA worst case limit) when comparing actual optical fiber cable test results with the expected optical cable test results.

K. Use pigtail connector insertion loss limits as identified by the pigtail connector manufacturer (as opposed to the TIA worst case limit) when comparing actual optical fiber cable test results with the expected optical cable test results.

L. Use splice insertion loss limits as identified by the splice manufacturer (as opposed to the TIA worst case limit) when comparing actual optical fiber cable test results with the expected optical cable test results.

M. Twisted Pair Cable Test:
   1. Test all cable, all pairs.
   2. Test category 3 twisted pair cables for wire map and continuity.

N. Tier 1 Optical Fiber Cable/Connector Test and Certification:
   1. Test all cables, all strands.
   2. Acceptable test value calculation:
      a. Coordinate and establish an approved optical fiber cable loss budget with the Engineer prior commencement of cable testing.
      b. Use connector insertion loss limits as identified by the connector manufacturer (as opposed to the TIA worst case limit) when comparing actual optical fiber cable test results with the expected optical cable test results.
      c. Use pigtail connector insertion loss limits as identified by the pigtail connector manufacturer (as opposed to the TIA worst case limit) when

comparing actual optical fiber cable test results with the expected optical cable test results.

d. Use splice insertion loss limits as identified by the splice manufacturer (as opposed to the TIA worst case limit) when comparing actual optical fiber cable test results with the expected optical cable test results.

3. When using a connector end-face cleaning solvent, use a non-IPA solvent.
4. When using a connector end face wipe or swab, use lint-free non-static wipes or swabs.
5. Use a light source and power meter (LS/PM) tester that meet or exceed applicable requirements in TIA 526-14-C-2015, TIA 527-7A and TIA-568 requirements to test optical return loss, length and polarity (fiber mapping).
6. Use referenced-grade launch cords and adapters approved by the test equipment manufacturer for channel or link tests.
7. Allow tester light sources to warm up and stabilize before commencing tests.
8. Utilize reference grade jumper reference cords.
9. Test reference test cords and replace if the reference test cords are out of tolerance.
10. Multi-mode cable: Conduct an end -to-end attenuation test at 850 nm and 1300 nm in accordance with TIA-526-14-A, Method A, and one reference jumper. Attenuation test results shall be less than that calculated according to equation in TIA-568.
11. Single-mode cable: Conduct an end -to-end attenuation tests at 1310 nm and 1550 nm in accordance with TIA-526-7 Method A, and one reference jumper. Attenuation test results shall be less than that calculated according to equation in TIA-568B.
12. After a fiber strand test is complete, immediately replace dust cap onto the connectors/ couplers.
13. Save test results in tester native file format.
14. Include the tester loss limit in the tester result fields.
15. Include the tester calibration date in the tester result fields.
16. Include the tester firmware date in the tester result fields.
17. Include the tester application limits in the tester result fields.
18. After testing is complete, and just prior to hand off to the Owner,
    a. Remove connector and couplers ferrule protector caps and store in a dust free container and immediately commence cable tests.
    b. Clean the end faces of the connectors.
    c. Visually inspect connectors, cassettes and bulkheads using a powered inspection-microscope in accordance with IEC 61300-3-35.
    d. After testing is complete, and just prior to hand off to the Owner, visually inspect the end faces of connectors, cassettes and bulkheads at each end of the cables using a powered visual inspection probe with a field of view

425 µm x 320 µm. Record end face images and upload to a PC for review. The following test limits shall be used
1) Multi-mode connectors; Table 6 of IEC 61300-3-35 Edition 1.0
2) Single-mode field polished connectors; Table 5 of IEC 61300-3-35 Edition 1.0
3) Single-mode factory polished connectors; Table 3 of IEC 61300-3-35 Edition 1.0
4) Angled Physical Contact (APC) connectors; Table 4 of IEC 61300-3-35 Edition 1.0

e. Clean connectors if dirt/particles were observed.
f. Replace connectors if scratches or defects larger or at a quantity higher than allow in IEC 61300-3-35 were observed.
g. Re-inspect connector end faces

O. Tier 2 Optical Fiber Cable Test and Certification (installed):
1. Remove connector and couplers ferrule protector caps and store in a dust free container and immediately commence cable tests.
2. Use an optical time domain reflectometer (OTDR) tester that meet or exceed applicable requirements in TIA 526-14-C-2015, TIA 527-7A and TIA-568 requirements.
3. Use referenced-grade launch cords and adapters approved by the test equipment manufacturer for channel or link tests, minimum length of 10 meters.
4. Allow tester light sources to warm up and stabilize before commencing tests.
5. Utilize reference grade jumper launch cords.
6. Test reference test cords and replace if id the reference test cords are out of tolerance.
7. Multi-mode cable: Conduct an end -to-end attenuation test at 850 nm and 1300 nm in accordance with TIA-526-14-A, Method A, and one reference jumper. Attenuation test results shall be less than that calculated according to equation in TIA-568.
8. Single-mode cable: Conduct an end -to-end attenuation tests at 1310nm and 1550 nm in accordance with TIA-526-7, Method A and one reference jumper. Attenuation test results shall be less than that calculated according to equation in TIA-568.
9. Test cable strands cables longer than 300 meters or cables with splices using an OTDR.
10. Print visual map (screen shot) of scope screen.
11. After test is complete, immediately replace ferrule protector caps onto connectors and couplers.
12. Include the tester reflectance limit in the tester result fields.
13. Include the tester calibration date in the tester result fields.
14. Include the tester firmware date in the tester result fields.
15. After testing is complete, and just prior to hand off to the Owner,
    a. Remove connector and couplers ferrule protector caps and store in a dust free container and immediately commence cable tests.
    b. Clean the end faces of the connectors.

c. Visually inspect connectors, cassettes and bulkheads using a powered inspection-microscope in accordance with IEC 61300-3-35.
d. After testing is complete, and just prior to hand off to the Owner, visually inspect the end faces of connectors, cassettes and bulkheads at each end of the cables using a powered visual inspection probe with a field of view 425 µm x 320 µm. Record end face images and upload to a PC for review. The following test limits shall be used
    1) Multi-mode connectors; Table 6 of IEC 61300-3-35 Edition 1.0
    2) Single-mode field polished connectors; Table 5 of IEC 61300-3-35 Edition 1.0
    3) Single-mode factory polished connectors; Table 3 of IEC 61300-3-35 Edition 1.0
    4) Angled Physical Contact (APC) connectors; Table 4 of IEC 61300-3-35 Edition 1.0
e. Clean connectors if dirt/particles were observed.
f. Replace connectors if scratches or defects larger or at a quantity higher than allow in IEC 61300-3-35 were observed.
    1) Re-inspect connector end faces.
g. Replace ferrule protector caps on optical fiber couplers and connectors.

P. If at any time optical fiber ferrule protector caps are removed from the couplers or connectors, re-test the cable before re-installing the ferule protector caps.

Q. Repair or remove/replace cabling where test results do not comply with specified requirements. Retest repaired cables

R. Test Reports:
1. Document test data for each cable test measurement.
2. Provide a summary report that is formatted consistent with Table 10.1 in BICSI TDM.
3. Provide a link to tester manufacturer’s website to access cable test results.
4. Provide a USB Flash Drive containing the cable test reports in the PDF format.
5. Provide a USB Flash Drive containing individual cable reports in the native file structure of the test instrument(s). Provide software to display and print individual and summary cable test reports from the native test files.

S. After the installation is complete, in addition to any other required testing as described herein, and at such times as the Owner/Engineer directs, the Contractor shall be present while the Owner conducts an operating test of network components for approval. The installation shall be demonstrated to be in accordance with the requirements of this

specification. Any defects revealed shall be corrected promptly at the Contractor's expense and the tests performed again.

T. Testing Agency: Engage a qualified testing agency to perform tests and inspections.]

END OF SECTION

SECTION 27 15 00 - COMMUNICATIONS HORIZONTAL CABLING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes furnishing materials, equipment, labor, supervision, tools and items necessary for the construction, installation, labeling and testing of a communication horizontal cabling system.

B. The horizontal cable system shall be a complete certified system as offered by a single manufacturer. The system cables and components shall be performance matched, approved for use with a single manufacturer and guaranteed by the manufacturer.

1.02 REFERENCES

A. Section 27 11 00 Communication Equipment Room Fittings.

1.03 SUMMARY

A. Section Includes:
1. Category 6 and 6a twisted pair cable.
2. Twisted pair cable hardware, including 8-pin patch panels, modular plugs and connectors.
3. Cable management system.
4. Cabling identification products.
5. Grounding provisions for twisted pair cable.
6. Source quality control requirements for twisted pair cable.

1.04 DEFINITIONS

A. Bundle: A group of cables that are lashed/tied together or in contact with one another in a closely packed configuration for at least 36 inches

B. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.

C. EMI: Electromagnetic interference.

D. FTP: Shielded twisted pair.

E. F/FTP: Overall foil screened cable with foil screened twisted pair.

F. F/UTP: Overall foil screened cable with unscreened twisted pair.

G. IDC: Insulation displacement connector.

H. LAN: Local area network.

I. Connector: Also commonly called a "Jack", female communications cable connector.

J. RCDD: Registered Communications Distribution Designer.

K. Screen: A metallic layer, either a foil or braid, placed around a pair or group of conductors.

L. Shield: A metallic layer, either a foil or braid, placed around a pair or group of conductors.

M. S/FTP: Overall braid screened cable with foil screened twisted pair.

N. S/UTP: Overall braid screened cable with unscreened twisted pairs.

O. Terminated Link: Also commonly called a "plug", male communication cable connector.

P. UTP: Unscreened (unshielded) twisted pair.

1.05 ACTION SUBMITTALS

A. Manufacturer’s Instructions:
1. Submit application conditions and limitations of use stipulated by the manufacturer.
2. Submit manufacturer’s instructions for storage, handling, protection, examination, preparation, operation and installation of product.
3. A letter from the cable termination hardware component Manufacturer, stating that the product set offered, with the identified system installers meet the Manufacturer’s requirements to provide a Performance Warranty to the Owner at the completion of the project.

B. Product Data:
1. Materials list.
2. Technical data (cut sheets) for on each component.

C. Shop Drawings:
1. Wall and equipment rack elevations for termination and patching equipment installed, provided in coordination with the similar work identified in Sections 27 11 00 and 27 13 00.
2. Floor plans showing the communication outlets and their associated cable identification number.
3. Sample horizontal cable termination schedules for of each type of cable installed. Schedules to include for each cable pair or strand.
4. Sample horizontal cable termination schedules for of each type of cable installed under this work.
   a. Building ID.

b. Room ID.
c. Cable Category.
d. Cable ID.
e. Outlet ID.
f. Outlet Port #.
g. Communication Room ID.
h. Rack.ID
i. Patch Panel ID.
j. Patch Panel Port #
k. Termination Block ID.
l. Pair.
m. Row.

5. Sample cable test results for each type of cable installed.
6. Sample cable labels.
7. Associated enlarged communication room drawing.
8. Associated floor plan drawing.

D. Deferred Submittal
1. Statement of field tester apparatus is using the current software or firmware, include software or firmware date.
2. Statement of field tester apparatus last calibration date.
3. Cable performance test plan, procedure, and schedule. Identifying tester manufacturer and model, and date of the last tester calibration. Note that cable tests with Pass * (star) results will not be accepted.

E. Qualifications:
1. Submit resumes and certifications of technicians and project managers who will support the installation.

F. Field Quality-Control Submittals:
1. Field quality-control reports.

1.06 INFORMATIONAL SUBMITTALS

A. Manufacturer’s Certification and Qualification Data: For RCDD, installers, installation supervisor, and system tester.

B. Source quality-control reports.

1.07 CLOSEOUT SUBMITTALS

A. Provide in accordance with Section 27 05 00 - Common Work Results for Communication Systems.

B. Project Record Documents:
1. Record actual information of the installed Work.

2. Floor plans showing the communication outlets and devices and their associated cable identification number. Identify locations where cables pass through fire-rated walls.
3. Cable termination schedules in Microsoft Excel format (latest version).
4. Cable tests results. Submit cable test results prior to handing off the respective communication rooms to the Owner.
5. Enlarged communication room with equipment rack and wall elevations for cable termination devices.

C. Certificate of acceptance testing.

D. Cable Performance Warrantees.

1.08 QUALITY ASSURANCE

A. All testing procedures and field-test instruments shall comply with applicable requirements of:
1. ANSI/TIA-1152, Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling
2. ANSI/TIA-568, Generic Telecommunications Cabling for Customer Premises.
3. ANSI/TIA-568, Commercial Building Telecommunications Cabling Standard
4. ANSI/TIA 568, Balanced Twisted-Pair Telecommunications Cabling and Components Standards.
5. ANSI/TIA 568, Balanced Twisted-Pair Telecommunications Cabling and Components Standards.
6. ANSI/TIA-606, Administration Standard for Commercial Telecommunications Infrastructure, including the requirements specified by the customer, unless the customer specifies their own labeling requirements.

B. Use trained technicians who have successfully attended an appropriate training program and have obtained a certificate as proof thereof to execute cable tests. These certificates may have been issued by any of the following organizations or an equivalent organization:
1. Manufacturer of the connectors or cable.
2. Manufacturer of the test equipment used for the field certification.
3. Training organizations
   a. BICSI.
   b. Association of Cabling Professionals.
   c. Cabling Business Institute.

C. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
1. Layout Responsibility: Preparation of Shop Drawings, cabling administration Drawings, and field-testing program development by an RCDD.
2. Installation Supervision: Installation shall be under the direct supervision of Technician or Level 2 Installer, who shall be present at all times when Work of this Section is performed at Project site.

D. Testing Agency Qualifications: Testing agency must have personnel certified by BICSI on staff.
   1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD.

1.09 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Protect material from the entrance of dirt, dust, moisture and debris

1.11 COORDINATION

A. Coordinate the Work of communication horizontal cables in the communication rooms with the 27 11 00 Work to validate that communication equipment rooms are prepared, fitted and ready to receive, terminate and protect cables.

B. Coordinate the Work of communication horizontal cables with the installation of elevator cabs to support communication devices, cameras and video displays.

C. Coordinate the Work of communication horizontal cables in the ceiling and workstation areas with the 27 05 28 Work and the 27 05 36 Work to validate that conduits, sleeves, cable trays, hangars and supports are in place to supported and protect cables.

D. Coordinate the Work of communication horizontal cables to video surveillance cameras with the 28 13 01 to validate how cameras may be mounted at the end of wall, ceiling, pole and parapet mounting brackets and arms.]

E. Coordinate the final labeling nomenclature for cables, and termination devices with the Owner and Architect prior to installation of cable and device labels. Obtain Owner sign off.

F. Coordinate the format and schema of the cable termination schedules with the Owner and Architect prior to preparation of the schedules. Obtain Owner sign off prior to use on cables and termination devices.

G. Coordinate layout and installation of communications and network equipment and cabling with Owner's communications and network equipment and service suppliers.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. General Performance: Horizontal cabling system shall comply with transmission standards in TIA-568, when tested according to test procedures of this standard.

B. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with the applicable standard and NFPA 70.

C. RoHS compliant.

2.02 UNSHIELDED TWISTED PAIR CABLE

A. Description: Four-pair, balanced-twisted pair cable.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Belden
2. Berk-Tek.
3. CommScope
4. General Cable; Prysmian Group North America.
5. Mohawk.
6. Superior Essex Inc.
7. Systimax.
8. Or approved Equivalent

C. Unshielded Twisted Pair:
1. Physical specifications: 4 twisted pair, 22 AWG, solid copper conductors, 100 Ohm nominal impedance and impedance tolerance plus or minus 15 percent. Comply with UL 444.
2. Electrical characteristics: Superior to the individual characteristics established in TIA 568 for category 6 cable performance.
3. Cable construction: round cable, individually insulated conductors under a common sheath.
4. NFPA 70 type CMP,.
5. Cable Jacket Color: Blue.

D. Unshielded Twisted Pair:
1. Physical specifications: 4 twisted pair, 22 AWG, solid copper conductors, 100 Ohm nominal impedance and impedance tolerance plus or minus 15 percent. Comply with UL 444.
2. Electrical characteristics: Superior to the individual characteristics established in TIA 568 for category 6 cable performance.
3. Cable construction: round cable, individually insulated conductors under a common sheath.
4. NFPA 70 type CMX, CMR-CMX, CMP-CMX (rated for installation in a

E. Cable Unshielded Twisted Pair Limited Power:

1. Physical specifications: 4 twisted pair, 22 AWG, solid copper conductors, 100 Ohm nominal impedance and impedance tolerance plus or minus 15 percent. Comply with UL 444.
2. Electrical characteristics: Superior to the individual characteristics established in TIA 568 for category 5e cable performance.
3. Cable construction: round cable, individually insulated conductors under a common sheath.
4. Compliant with IEE802.3bt 4PPOE requirements in support of 100 watts power delivery to devices.
5. UL limited power (LP) certified for temperature rating.
6. NFPA 70 type CL2P CL3P, CL2R, CL3R.
7. Cable Jacket Color: Blue.

F. Unshielded Twisted Pair:
1. Physical specifications: 4 twisted pair, 22 AWG, solid copper conductors, 100 Ohm nominal impedance and impedance tolerance plus or minus 15 percent. Comply with UL 444.
2. Electrical characteristics: Superior to the individual characteristics established in TIA 568 for category 6 cable performance.
3. Cable construction: round cable, individually insulated conductors under a common sheath.
4. UL limited power (LP) certified for temperature rating.
5. NFPA 70 type CL2P CL3P, CL2R, CL3R.
6. Cable Jacket Color: Blue.

2.03 SHIELDED TWISTED-PAIR CABLES

A. Description: Four-pair, balanced-twisted pair cable.

B. Approved Manufacturers:
1. Berk-Tek.
2. Belden.
3. General Cable.
4. Mohawk.
5. Systimax.

C. Shielded Twisted Pair:
1. Physical specifications: 4 twisted pair, 22 AWG, solid copper conductors, 100 Ohm nominal impedance and impedance tolerance plus or minus 15 percent. Comply with UL 444.
2. Electrical characteristics: Superior to the individual characteristics established in TIA 568 for category 6 cable performance.
3. Cable construction: round cable, foil shield, individually insulated conductors under a common sheath.
4. NFPA 70 type CMP, CMR.
5. Cable Jacket Color: Blue.

D. Shielded Twisted Pair:
   1. Physical specifications: 4 twisted pair, 22 AWG, solid copper conductors, 100 Ohm nominal impedance and impedance tolerance plus or minus 15 percent. Comply with UL 444.
   2. Electrical characteristics: Superior to the individual characteristics established in TIA 568 for category 6 cable performance.
   3. Cable construction: round cable, overall shield, with individually shielded insulated conductors under a common sheath.
   4. NFPA 70 type CMP, CMR.
   5. Cable Jacket Color: Blue.

E. Shielded Twisted Pair:
   1. Physical specifications: 4 twisted pair, 23 AWG, solid copper conductors, 100 Ohm nominal impedance and impedance tolerance plus or minus 15 percent. Comply with UL 444.
   2. Electrical characteristics: Superior to the individual characteristics established in TIA 568 for category 6 cable performance. 600AWM rated.
   3. Operating temperature range: -40 degree F to 167 degrees F.
   4. Cable construction: round cable, overall shield, with individually shielded insulated conductors under a common sheath with drain wire.
   5. NFPA 70 type CMX/CMR.
   6. Cable Jacket Color: Black

F. Shielded Twisted Pair:
   1. Physical specifications: 4 twisted pair, 22 AWG, solid copper conductors, 100 Ohm nominal impedance and impedance tolerance plus or minus 15 percent. Comply with UL 444.
   2. UL limited power (LP) certified for temperature rating.
   3. Cable construction: round cable, XTP or non-continuous (intermitted) - variable length segment foil/shield, individually insulated conductors under a common sheath.
   4. NFPA 70 type CMP, CMR.
   5. Cable Jacket Color: Blue.

2.04 PATCH CORDS AND EQUIPMENT CORDS

A. Manufacturers – Match the manufacturer of the approved cable or the approved patch panel.

B. 8-Pin Modular-to-8-pin Modular UTP, Patch/Equipment Cords:
   1. Physical Specifications: 4-pair cable, with male 8-pin modular plugs with insert molded strain relief on both ends.
   2. Performance Characteristics: Superior to the individual characteristics established in TIA 568 for category 6 cable performance.
   3. 24 AWG.
   4. Cable Jacket Color: Blue.

C. Antibacterial 8-Pin Modular-to-8-pin Modular UTP Patch/Equipment Cords:
1. Physical Specifications: 4-pair cable, with permanent antibacterial jacketing and antibacterial male 8-pin modular plugs with insert molded strain relief on both ends.
2. Performance Characteristics: Superior to the individual characteristics established in TIA 568 for category 6 cable performance.

2.05 CABLE TERMINATION HARDWARE

A. Description: Hardware designed to connect, splice, and terminate horizontal communications cable.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Leviton

C. 8-Pin Modular Patch Panel (Flat QUICKPORT™ Patch Panel, 24-Port, 1RU, Black.) :
1. 48, 24-port, 19-inch rack mounted, with 110 connections on the back suitable to terminate on the approved 4-pair cables. Comply with TIA-568-B category 6. performance. Wired with T568 B pinning. Complete with rear removable cable management/strain relief bars, and designation strips.

D. 8-Pin Modular Connectors:
1. 100-ohm, balanced, 8-pin modular connectors suitable to terminate on the approved 4-pair cables. Comply with TIA- 568 category 6. performance. Outlet wired with standards compliant T568- B pinning.
a. Standard Data = White
b. Wireless = Green
c. Security = Black

E. Faceplate:
1. High-impact plastic or stainless steel. Single gang with one, two or four ports for 8-pin modular connectors. Coordinate color and material with Architect.
2. High-impact plastic. Single gang with one, two or four ports for 8-pin modular connectors housed at 45 degrees to the wall. Coordinate color and material with Architect.
3. High-impact plastic or stainless steel. Double gang with four, six or more ports for 8-pin modular connectors. Coordinate color and material with Architect.
4. High-impact plastic or stainless steel. Single gang with ports for one 8-pin modular, one F connector and one nurse call system connector.
5. Stainless steel faceplate, single gang with two mounting studs to support wall mounted telephone with one 8-pin modular connector.
6. High-impact plastic mounting (106 frame) plate, suitable to mount one, two or four approved 8-pin modular connectors and mount behind a NEMA type mounting plate in a floor box, poke through device or surface mounted raceway.
7. Snap on dust covers for unused faceplate ports.

2.06 DIN RAIL

A. DIN rail mounting track, 1.38-inches (35-mm) wide, 6-inches deep, 36 inches long, complete with mounting, flat brackets, flange adapter and isolators.

B. Material: Steel.

2.07 WIRE DUCT.

A. Large finger wire duct, 3/4-inches wide, 2-inches deep with snap on cover.

2.08 CABLE MANAGEMENT HARDWARE

A. Approved Manufactures:
1. Chatsworth.
2. CommScope.
3. Leviton.
4. Ortonics.
5. Panduit.
6. Siemon Company.
7. Systimax.

B. Horizontal Cable Management:
1. 19-inch rack mount,, single, double-sided full width. 1, 2, RU height.
2. Split 6-inch-deep D-ring cable guides.
3. Tee shaped cable guides, with snap on front cover, reversible hinged front cover.
4. Color to match the equipment rack or cabinet Rack Mounted Wire Management.

C. Horizontal Lacer Bar
1. 19-inch rack mount.
2. 3/8 -inch round.
3. Depth: Minimum 4-inches.
4. Material: Steel.

2.09 CABLE MANAGEMENT STRAPS

A. Reusable hook and loop type (Velcro style) reusable straps, 3/4 inch wide.

2.10 IDENTIFI IDENTIFICATION LABELS

A. Approved Manufactures:
1. Panduit.
2. Brady.

B. Comply with TIA-606 and applicable requirements in this section.

C. Machine printed self-adhesive, smudge resistant labels for cables, patch panels and faceplates. Labels shall be appropriately sized for relative cable diameters. Labels shall be appropriately colored for face-plate color contrast. Submit sample labels for approval.

2.11 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.

B. Factory test cables on reels according to TIA-568.

C. Factory test twisted pair cables according to TIA-568.

D. Cable will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.01 GENERAL

A. Comply with manufacturers' instructions for installing components and adjusting equipment and telecommunications cables. Where no instructions are included with the equipment, follow accepted industry best practices as identified in the BICSI design and installation manual.

B. Provide equipment and component mounting hardware.

C. Keep items protected before and after installation, with dust and waterproof barrier materials as necessary. Maintain the integrity of the protective measures throughout the life of the project.

D. Comply with 27 05 30 Hangars and Supports for Communication System Cables" for requirements for the installation of cables supports:
   1. Size.
   2. Spacing.
   3. Access.
   4. Cable bundles.

E. Protect communications cable and termination devices from damage during the construction. Do not install communication cables and termination devices in the communications rooms until the other trades have completed their work in the areas so that the equipment will not be moved or damaged. Do not install communication cable and termination devices in communications rooms until after plywood backboards have been painted.

F. Maintain safe ingress and egress from work areas during the movement and installation of materials.

G. Examine the areas to receive the work and the conditions under which the Work would be performed. Remedy unsatisfactory conditions detrimental to the proper and timely

completion of the Work. Where a remedy of unsatisfactory conditions is not available or possible, notify the Architect for resolution. Do not proceed until unsatisfactory conditions have been corrected.

H. Examine pathway elements intended for the installation and support of communication cables.
   1. Verify the proposed routes of communication cables prior to commencement.
   2. Validate that hangars, conduits, sleeves, conduit/sleeves bushings, cable trays, cable supports, and other elements are in place prior to commencement of any Work. Do not install cable where the cables can be subsequently damaged by the Work of other Trades.
   3. Validate that the cabling can be installed without subject the cables to electromechanical interference (EMI). Do not install cable where the cables can be affected by EMI energy.
   4. Validate that the load capacity of cable support structures is adequate to support the cables. Where a cable support is not rated for the required capacity of cables, notify the Architect for resolution. Do not proceed until unsatisfactory conditions have been corrected.

I. Deliver to Owner two sets of special tools specifically needed for proper operation, adjustment and maintenance of cable and cable termination hardware installed under this Contract.

3.02 SURVEY AND PREPARATION

A. Survey and inspect cable trays, conduit paths and routes prior to commencement of Work and report discrepancies and issues with the use of these for cable installation. Failure to perform this inspection and submit the report holds the Contractor at cost risk for corrective actions and schedule impacts later in the Work.

3.03 METHODS AND PROCEDURES

A. Install components in accordance with this Specification, the approved Cable Termination Schedule, the manufacturer's recommendations, and the Telecommunications Distribution Drawings.

B. Ensure that telecommunications cable supports (J-hooks, cable tray, conduits, etc.) are fully installed before proceeding with cable installation. Do not allow cables to be installed and left unsupported. Do not allow cables to be supported to other supporting structure in lieu of specified cable supports.

C. When anchoring cables to cable supports, use hoop & loop straps only. Do not use tie wraps.

D. When bundling cables, use hook & loop style straps only. Do not bundle cables with tie wraps or cable mesh/socks.

E. Do not group more than 24 cables in a single bundle. Create multiple bundles when the size of a bundle exceeds 24 cables.

F. Continuously protect cables during installation, especially when the cables are coiled on floor(s), including dedicated communication spaces. Provide rigid protection for cables left on floor at any time during construction. Design protection to prevent pressure on cables from walking, equipment placement, or rolled/dragged construction equipment and materials.

G. When installing cables through lateral conduits and sleeves and conduits and sleeves are stacked in more than one row, route cables through the lower row(s) before proceeding to the upper row(s).

H. When installing cables through vertical conduits and sleeves and conduits and sleeves are stacked in more than one row, route cables through the back row(s) before proceeding to the forward row(s).

I. Provide J-Hooks where no other cable supports are available. Refer to 27 05 30 “Hangars and Supports for Communication System Cables” for additional information.
   1. Install J-Hooks so that cables are supported at maximum intervals of 48 inches.
   2. Install J-Hooks so that the sag in the cables between the J-Hooks is less than 12 inches.
   3. Install J-Hooks at a height above the finished ceiling so that the sag in the cables between J-hooks is greater than 5 inches above the top of the ceiling tile or light fixtures.

J. Maintain manufacturer's recommended minimum bend radius of the cables. Do not stretch, stress, tightly coil, bend or crimp the workstation cables during the installation or when leaving them out of the way of other trades during the staging of the work. The Contractor, at the Contractors expense shall replace abused or stressed cables.

K. After dressing the cable to its final location, remove only enough jacketing to allow the conductors to be splayed and terminated in a neat and uniform fashion. Maintain jacketing integrity by removing only as much jacketing as is practical, to accomplish termination. For twisted pair cables, maintain the manufacturers twisting of the wire pairs through to the point of termination.

L. Install cable in continuous runs without splices or mechanical couplers between the cable points of origin and termination for the inter-building and intra-building cable.

M. Terminate cables neatly, with enough slack (3 inches to 9 inches) to pull off, test and re-terminate each cable as needed.

N. Provide an 18-inch service loop in the ceiling above the communication outlet.

O. Provide a 24 inch service loop in the cable bundles in the cable tray above the equipment racks stored in a figure-8 configuration.

P. When pulling cables through conduits, leave in-place drag-lines for future use.

Q. Cross communication cables cross over electrical cables/conduits at 90-degree angles.

R. When running twisted pair cables parallel electrical cables/conduits, separated cables by a minimum of the following.
1. Open cable and open power conductors less than 2 kVa: 5 inches.
2. Open cable and open power conductors less than 5 kVa: 12 inches.
3. Open cable and open power conductors greater than 5 kVa: 24 inches.
4. Grounded cable conduits and open power conductors less than 2 kVa: 3 inches.
5. Grounded cable conduits and open power conductors less than 5 kVa: 6 inches.
6. Grounded cable conduits and open power conductors greater than 5 kVa: 12 inches.
7. Grounded cable conduits and grounded power conduits less than 2 kVa: 0 inches.
8. Grounded cable conduits and grounded power conduits less than 5 kVa: 3 inches.
9. Grounded cable conduits and grounded power conduits greater than 5 kVa: 6 inches.
10. Cables and electrical motors and transformers: 48 inches.
11. Cables and fluorescent light fixtures: 5 inches.

3.04 CABLING

A. Schedule a meeting with the Architect and Owner to identify and discuss and confirm how cables will be routed, dressed and bundled into the cable tray and equipment racks, vertical cable managers and horizontal cable managers installed with the communication rooms prior to commencement of cable termination.

B. Provide 4-pair UTP cables from the respective communication rooms to the wall mounted communication outlets as shown on the drawings. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular connectors at the outlet location. Route the cable in the accessible ceiling areas. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

C. Provide 4-pair UTP cables from the respective communication rooms to the communication outlets for wireless access point devices as shown on the drawings. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular plugs at the device location. Route the cable in the accessible ceiling areas. Provide 15-feet of slack in the ceiling. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

D. Provide 4-pair UTP cables from the respective communication rooms to the communication outlets for room scheduler devices as shown on the drawings. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin

modular plugs at the device location. Route the cable in the accessible ceiling areas. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

E. Provide 4-pair UTP cables from the respective communication rooms to the communication outlets for video surveillance cameras as shown on the drawings. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular plugs at the device location. Route the cable in the accessible ceiling areas. Provide 15-feet of slack in the ceiling. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

F. Provide 4-pair UTP cables from the respective communication rooms to the communication outlets for video projectors as shown on the drawings. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular connectors at the outlet. Route the cable in the accessible ceiling areas. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

G. Provide 4-pair UTP cables from the respective communication rooms to the communication outlets for room schedulers as shown on the drawings. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular connectors at the outlet. Route the cable in the accessible ceiling areas. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

H. Provide 4-pair UTP cables and coaxial cables from the respective communication rooms to the wall mounted communication outlets as shown on the drawings. Terminate the UTP cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular connectors at the outlet location. Terminate the coaxial cable with an F connector on each end. Coil coaxial cables in the communication room at one location. Route the cable in the accessible ceiling areas. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

I. Provide 4-pair UTP cables from the respective communication rooms to the communication outlets in the floor box/poke through devices as shown on the drawings. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular connectors with a mounting plate at the outlet location. Route the cable in conduits through the slab and up a wall to an accessible ceiling area. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

J. Provide outdoor rated 4-pair UTP cables from the respective communication rooms to the communication outlet at floor boxes located in areas with slab-on-grade. Where the cable run is exposed for more than 50 feet inside the building, interconnect the cable to an indoor rated cable so that the maximum length of outdoor rated cable is less than 50 feet. Provide a metallic enclosure in the ceiling area to house the interconnection device. Terminate the cables onto 8-pin modular patch panels in the communication rooms and

onto 8-pin modular plugs or connectors at the outlet location. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

K. Provide 4-pair cables from cables from the respective communication rooms to the communication outlets in case work, millwork and modular furniture as shown on the drawings. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular connectors at the outlet location. Route the cables down the conduit stub-up or up from a conduit sleeve into the in-feed of the raceway internal to the casework, millwork or modular furniture. Route the cables into and within the raceway of the casework, millwork or modular furniture to the outlet location. Coordinate Work with the installation of the casework and millwork and the furniture system vendor prior to commence of work. Terminate and test the cables after the final casework, millwork and modular furniture assembly is complete.

L. Provide outdoor rated 4-pair UTP cables from the respective communication rooms to the communication outlet at the locations exterior to the building as shown on the drawings. Where the cable run is exposed for more than 50 feet inside the building, interconnect the cable to an indoor rated cable so that the maximum length of outdoor rated cable is less than 50 feet. Provide a metallic enclosure in the ceiling area to house the interconnection device. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular plugs or connectors at the outlet location. Support the cables with J-hooks installed at a maximum separation of 48 inches in route back to the cable trays.

M. Provide 4-pair cables from cables from the respective communication rooms to communication outlets or devices in
1. Elevator control panels/enclosures, three cable for each elevator cab.
2. Building management system panels/enclosures.
3. Energy management system panels/enclosures.
4. Lighting control panels/enclosures.
5. Fire alarm control system panels/enclosures.
6. Access control system panels/enclosures.
7. Photovoltaic inverters/enclosures.
8. Irrigation controllers/enclosures.
9. EV automobile charging stations.

N. Terminate the cables onto 8-pin modular patch panels in the communication rooms and onto 8-pin modular connectors at the outlet or device location. Route the cables across the ceiling of the rooms and into the in-feed of the equipment room. Route the cables into and within the raceway of the booms to the outlet location. Coordinate work with boom vendor. Terminate and test the cables after the final boom assembly is complete.

3.05 CONNECTORS/FACEPLATES

A. Provide 8-pin modular connectors for the termination of 4-pair cables.]

B. Provide an accompanying faceplate, mounting plate or surface mount box at the appropriate outlet location. Install faceplates level and align to adjacent outlet faceplates. Provide dust caps on an unused port. Coordinate color and material with Architect.

C. Provide an accompanying faceplate suitable to mount an 8-pin modular connector and an F connector at the TV locations. Install faceplates level and align to adjacent outlet faceplates.

3.06 MODULAR PLUG TERMINATED LINK]

A. Provide 8-pin modular plugs for the direct termination of 4-pair cables as identified above.

3.07 PATCH PANELS

A. Coordinate location of termination devices in the communication room equipment racks with the coordinated 27 11 00 Shop Drawings prior to commencement of work.

B. Coordinate the location of new termination devices installed in the existing equipment racks with the Owner prior to commencement of Work.

C. Provide 8-pin modular patch panels in the communication rooms for the termination of 4pair cables installed. Mount the patch panels into the equipment racks. Provide patch panels complete with Outlet ID designation strips.

D. Provide bulkhead panel in the communication rooms to mount 8-pin modular connectors for the termination of the 4-pair cables installed. Mount the patch panels into the equipment racks. Provide panels complete with Outlet ID designation strips.

E. Provide horizontal wire management panels in the equipment racks in the communication rooms on top of, in between and below the 8-pin modular patch panels installed in the equipment racks.

F. Provide lacer bars behind the patch panels to support the cables entering the patch panels.

3.08 PATCH AND EQUIPMENT CORDS

A. Provide for Owners use, category 6, 8-pin-modular-to-8-pin-modular patch cords for use in communication rooms.
   1. Manufacturer: Match the manufacturer of the patch/equipment cords with the manufacturer of the 8-pin modular connectors.
   2. Length: 4 feet, 6 feet, 8 feet and 10 feet. Coordinate the exact quantity of each length with the Owner.
   3. Color:
      a. Standard Data = White

b. Wireless = Green
c. Security = Black

3.09 IDENTIFICATION

A. Provide identification labels that are in accordance with the approved cable termination schedule.

B. Room numbers shown on the Drawings are not the final room numbers. Validate the final room numbers with the Architect prior to use in creating termination schedules, cable identification labels, cable record drawings, O&M documentation and cable test reports.

C. Provide machine-generated labels on cables in black uppercase lettering on a permanent adhesive, white label stock, covered with a permanent water-resistant sealer. Place labels on both ends of each cable and no more than 6 inches from the point at which the cable is broken out into individual copper pairs or strands from the connector or termination block or patch panel. Install labels so that the labels are parallel with the cable. Install labels so that labels are readily visible. Do not label cables with hand lettered labels.

D. Provide machine-generated labels on faceplates with the cable ID, in uppercase lettering. Label shall be of a contrasting color to the faceplate color. Do not label cables with hand lettered labels.

E. Provide machine-generated labels on patch panels with the equipment rack or cabinet ID and the rack unit position in uppercase lettering. Do not label devices with hand lettered labels.

F. Provide machine-generated label on patch panels with the cable ID and port number in uppercase lettering. Do not label devices with hand lettered labels.

G. Replace labels if at any time during the project, the label becomes illegible or is removed.

3.10 FIRESTOPPING

A. Provide Firestopping systems as rated walls and floors.

B. Comply with requirements in Division 07, [Section 078413 "Penetration Firestopping"].

C. Comply with TIA-569 “Firestopping".

D. Comply with "Firestopping Systems" Article in BISCI's "Telecommunications Distribution Methods Manual."

3.11 FIELD QUALITY CONTROL

A. Provide an updated cable test plan submitted and approved as part of the Submittals process. Refer to article 1.02.D.2.

B. Notify the Architect, Owner and Engineer a minimum of 5 days in advance of the commencement of cable testing so that they can meet the cable tester at the site to observe the tester setup and the initial testing of cables.

C. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch/equipment cords, and labeling of components. Do not test cables until final dressing and labeling of the cables are in place.

D. Use testers that have been factory recalibrated within the last 12 months.

E. Use testers with current test firmware installed within.

F. For modular plug terminated links, use a Permanent Link Adapter on the Main Unit and a Patch Cord Adapter on the Far End or Remote Test Equipment. Do not use Channel adapters.

G. Comply with TIA 1152 Field Test Standard.

H. Perform inspections and permanent link tests and prepare test reports for 4-pair cable.
   1. Use a UL level 4 field test instrument.
   2. Use test instruments meet or exceed applicable requirements in TIA-568. Perform tests with a tester that complies with performance requirements in Annex I, complying with measurement accuracy specified in Annex H. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
   3. Set the tester to the specific cable performance parameters as identified by the cable manufacturer for the specific cable being tested. Do not use generic cable test settings.
   4. Set test to reject Pass* (star) results.
   5. Test parameters for category 5e, 6 and 6A cables:
      a. Wire Map.
      b. Length.
      c. Propagation Delay.
      d. Delay Skew.
      e. DC Loop Resistance.
      f. DC Resistance Unbalanced Within a Pair.
      g. DC Resistance Unbalanced Between Pairs.
      h. Insertion Loss.
      i. Return Loss.
      j. NEXT (Near-End Crosstalk).
      k. PS NEXT (Power Sum Near-End Crosstalk).
      l. ACR-N (Attenuation to Crosstalk Ratio Near-End).
      m. ACR-F (Attenuation to Crosstalk Ratio Far-End).
      n. PSACR-N (Power Sum Attenuation to Crosstalk Ratio Near-End).

o. PSACR-F (Power Sum Attenuation to Crosstalk Ratio Far--End).
p. TCL (Transverse Conversion Loss).
q. ELTCT. (Equal Level Transverse Conversion Loss).
r. Shield path.

6. Additional test parameters for category 6A cables:
   a. PSAACR-F (Average).
   b. PSANEXT (Average).
7. Test category 5e cables and conductors from 1 to 100 MHz with a tester that complies with TIA 1152 performance requirements in TIA-568, Level II. Include tests for longitudinal or transverse conversion loss.
8. Test category 6 cables and conductors from 1 to 250 MHz with a tester that complies with TIA 1152 performance requirements in TIA-568, Level III. Include tests for longitudinal or transverse conversion loss.
9. Test category 6A cables and conductors from 1 to 500 MHz with a tester that complies with TIA 1152 performance requirements in TIA-568, Level IIIE. Include tests for longitudinal or transverse conversion loss.
10. Test directly terminated cables with a field plug test adaptor with a plug on one end and a modular connector on the end patch cord adapter on the tester.
11. Provide evidence of testing apparatus has been calibrated within the last 12 months.
12. Provide evidence of replacement of consumable testing apparatus, including modular jacks, per the tester manufacturer's recommendations.
13. Provide evidence that the testing apparatus software or firmware has been updated to current revision/version.
14. Perform permanent link tests for cable length, insertion loss, near-end crosstalk loss, power sum near-end crosstalk loss, equal-level far-end crosstalk loss, power sum equal-level far-end crosstalk, return loss, propagation delay, and delay skew. Performance shall comply with minimum criteria in TIA-568.

I. Test Reports:
   1. Document test data for each measurement, including:
      a. Test parameters identified above.
      b. The overall Pass evaluation of the link-under-test.
      c. The date and time the test results were saved in the memory of the tester.
      d. The identification of the customer site as specified by the Owner.
      e. The name of the test limit selected to execute the stored test results.
      f. The name of the personnel performing the test.
      g. The version of the test firmware and the version of the test limit database held within the test instrument.
      h. The manufacturer, model and serial number of the field-test instrument.
      i. The adapters used.
      j. The factory calibration date.
   2. Provide a summary report that is formatted consistent with Table 10.1 in BICSI TDMM stating that cables meet the associated category performance requirements.
   3. Provide a link to tester manufacturer’s website to access cable test results.

4. Provide a printed report for each individual cable that tests within the instrument tolerance band for any parameter, i.e., for any parameter that would not pass if the instrument tolerance were taken as worst case.
5. Provide a USB Flash Drive containing the cable test reports in the PDF format.
6. Provide a USB Flash Drive containing the individual cable test reports in the native file format of the test instrument(s). Provide the software for the Owner's unlimited use in inspecting and printing test summary and individual cable test results.

J. Remove and replace cabling where test results do not comply with specified requirements. Retest and inspect cabling to determine compliance of replaced or additional work with specified requirements.

K. Upon review of the results of the completed tests, the Owner/Engineer reserves the right to witness the retesting of up to 10 percent of the installed cables, utilizing the Contractor's tester and the Contractor's labor. Retesting of cables shall stop when retested cables match the printed results.

L. After the installation is complete, in addition to any other required testing as described herein, and at such times as the Owner/Engineer directs, the Contractor shall be present while the Owner conducts an operating test for approval. The installation shall be demonstrated to be in accordance with the requirements of this specification. Any defects revealed shall be corrected promptly at the Contractor's expense and the tests performed again.

M. Provide test results to the Manufacturer for the processing of the performance warrantees afforded to the Owner.

3.12 CLEANING

A. Cover patch panel ports with dust proof barriers until acceptance by Owner.

3.13 CERTIFICATION & WARRANTY

A. Submit required drawings and cable test results to the manufacturer to secure System performance warrantees.

B. Provide a manufacturer's "Permanent Link" performance warranty of TIA 568 category 6, cables for a minimum period of, twenty-five years, from Owner acceptance of the completed system. Where a manufacturer's warranty is longer than, twenty-five years, offer the longer warranty.

C. The Permanent Link Performance Warranty shall be issued and signed by the Component Manufacturer (not the cable installation company) and shall list the Owner as the holder of the warranty.

D. The Permanent Link Performance Warranty shall cover the testing and replacement, including labor and material for "Permanent Link" components.

END OF SECTION

SECTION 27 41 16 – INTEGRATED AUDIOVISUAL SYSTEMS AND EQUIPMENT

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes materials, equipment, labor, supervision, tools and items necessary for the construction, installation, connection, programming, licensing, testing and operation of an integrated audiovisual systems and equipment.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Section 27 41 16.10 Audiovisual System Systems and Equipment List.

C. ANSI/AVIXA V201.01:2021 - Image System Contrast Ratio.

D. ANSI/AVIXA S601.012021 - Audiovisual Systems Energy Management.

E. ANSI/INFOCOMM 10:2013 - Audiovisual Systems Performance Verification.

F. INFOCOMM F501.01:2015 - Cable Labeling for Audiovisual Systems.

G. ANSI/INFOCOMM V202.01:2016 - Display Image Size for 2D Content in Audiovisual Systems.

H. AVIXA RP-C303.01:2018 - Recommended Practices for Security in Networked AV Systems.

I. ANSI/IES/AVIXA RP-38-17 - Recommended Practice for Lighting Performance for Small to Medium Sized Videoconferencing Rooms.

J. AVIXA F502.01:2018 - Rack Building for Audiovisual Systems

K. AVIXA F502.02:2020 - Rack Design for Audiovisual (AV) Systems Standard

L. ANSI/INFOCOMM A102.01:2017 - Audio Coverage Uniformity in Listener Areas

M. NFPA 70, National Electrical Code, as adopted and amended by the local jurisdiction

N. IBC, International Building Code as adopted and amended by the local jurisdiction.

1.03 SUMMARY

A. Section Includes:
   1. Video equipment performance requirements.
   2. Infrastructure performance requirements.
   3. Basis-of-Design equipment list.

1.04 SYSTEM DESCRIPTION

A. Responsibilities of this section include
   1. Provision of complete and working systems as described in the project documents and drawings.
   2. Complete integration with systems, architectural features and equipment provided by others.
   3. Generation of submittals and documentation as described in the project documents and drawings.
   4. Provision and on-site installation of subject systems, including equipment, cabling, furniture, interfaces, infrastructure and appurtenances as required to deliver a complete system.
   5. Coordination with Owner for staging, cleaning, refurbishment and delivery of Owner furnished equipment.
   6. Coordination with general Contractor, Owner, audiovisual systems consultant and other disciplines.
   7. Initial adjustment of the systems and provision of test equipment for system checkout and acceptance tests.
   8. Training in the operation and maintenance of the systems for personnel designated by the Owner Space Description provided on the contract drawings.

1.05 ACTION SUBMITTALS

A. Factory certifications of contractor’s active personnel. Refer to section 1.4 for qualification submittal requirements. Contractor is responsible to notify the Architect of any personnel changes resulting in a loss of qualifications and provide a plan of action and timeline to reinstitute active personnel with the required factory certification. Upon reinstitution of active personnel, contractor is responsible to reissue an action submittal.

B. Manufacturer’s Instructions:
   1. Application conditions and limitations of use stipulated by the manufacturer.
   2. Installation manuals.

C. Product Data:
   1. System data.
   2. Materials list.
   3. Technical data (cut sheets) for on each component, including dimensions, finishes and weights.
   4. Where product datasheets show multiple items, options, or accessories, indicate on the datasheet the particular item/options/accessories that will be provided

D. Shop Drawings:

1. Description of system operation.
2. Network connections and network bandwidth requirements.
3. Coordinated reflected ceiling plans.
4. Source switching diagrams.
5. Single line/system block diagrams showing equipment and detailed connections between components. Include designators for equipment and cabling runs to correspond with those in floorplans.
6. Scaled floor plans with equipment, cabling, conduits, and back boxes. Indicate cabling quantities and types and pathway quantities and sizes.
7. Scaled reflected ceiling plans with equipment, cabling, conduits, and back boxes. Indicate cabling quantities and types and pathway quantities and sizes.
8. Scaled and dimensioned drawings of custom assemblies, including I/O panels, control panels, mounting structures, furniture, equipment racks and riggings.
9. Layouts/elevations of equipment cabinets and racks.
10. Electrical power loads and receptacles requirements for devices and equipment cabinets and racks.
11. Drawings of touchscreen/user interface pages and popups, indicating functionality of all buttons and logical links between pages/popups.
    a. Overview/flowchart for the proposed layout and architecture of the control interface.
    b. Annotated screenshots of all proposed pages, indicating functions for each button. Indicate which pages are accessible to general users and which are accessible only to technicians/authorized users. Provide a description of system behavior during standby, startup, and shutdown
    c. Fusion list of attributes to be incorporated into the management software.

E. Plans, elevations, diagrams, details, and attachments to other work, including rack elevations, custom plates, labelling, and finishes.
   1. Detail equipment assemblies and indicate dimensions, method of field assembly, and lo- cation of each component.
   2. Wiring Diagrams: For power, signal, and control wiring. Identify input/output terminals to facilitate installation, operation, and maintenance.
   3. List of attributes to be incorporated into the management software.

F. System Sequence of Operations:
   1. For each type of room, a description of how the system and its devices will be programmed, controlled, switched and used by the end user and managed by system mangers:
      a. Computer/laptop video display.
      b. Video/audio source switching.
      c. Programmed sound amplification.
      d. Presenter voice amplification.
      e. Assisted listening.
      f. Video conference near end.
      g. Video conference far end.

G. Documentation:
   1. Software license description.
   2. Software license list, including quantities provided and duration of authorization

H. Deferred Submittals:
   1. Installation plan and schedule.
   2. Training plan and schedule.

1.06 CLOSEOUT SUBMITTALS

A. Comply with close out submittals as per Section 27 05 00 - Common Work Results for Communication Systems.

B. Project Record Documents
   1. Record actual information of the installed Work.
   2. Floor plans and reflected ceiling plans identifying final locations of equipment, components and devices, cabling, and cable pathways. devices, devices IDs and raceway routing.
   3. Cable termination schedules.
   4. System sequence of operations.
   5. System programming manual/sheets.
   6. Component programming manual/sheets.
   7. Test procedures and results.

C. Operation and Maintenance Manuals:
   1. Job name, completion date, and names and contact information of Owner, Architect, Engineer, and Contractor. Operation and Maintenance manual shall include.
   2. Operation instructions for components of the system as a whole and each component in detail. Include software and hardware operation and programming. Write manuals to aid in training of new system operation personnel and as a guide in clarifying operational procedures.
   3. System operation instructions for the installed system.
   4. Product datasheet.
   5. Manufacturer’s operation manuals for installed equipment.
   6. System block diagrams.
   7. List of equipment serial numbers.
   8. List of consumable parts and contact information for ordering spares.
   9. Maintenance program and service instructions for components of the system as a whole and each component, function and operation in detail. Manuals shall include illustrations, mounting instructions, wiring diagrams, parts lists, operating

instructions and a trouble-shooting chart for the system, including a list of troubles, causes and recommended remedies.
10. Video recording of Owner training session(s).
11. Custom code created for the project, in uncompiled and editable format

D. Certificate of acceptance testing by the Owner.

E. Warrantees and warranty information, including warranty contract and contact information for engaging warranty service from the Contractor responsible for the work of this section, and manufacturer warranty information for installed equipment.

1.07 CONTRACT DRAWINGS

A. Coordinate back box and camera mounting requirements with system manufacturer/supplier. Refer to the Architectural drawings to understand wall and ceiling construction details. Notify Architect prior to installation if conflicts occur between:
1. Back box depth and wall thickness.
2. Wall construction.
3. Back box location.
4. Ceiling construction.

B. DELIVERY, STORAGE, AND HANDLING
1. Protect material from the entrance of dirt, dust, moisture, and debris

1.08 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer:
1. Factory-authorized dealer for the major components specified system with a minimum three years documented experience.
2. Factory certified for the programing of installed equipment, including control systems, DSPs, encoders, decoders, etc. The following certifications are required:
3. Have at least one systems technician certified by AVIXA as a Certified Technology Specialist – Installation.
4. Licensed, bonded, and insured to perform this work in the project location.

1.09 COORDINATION

A. Confirm exact installation location of devices with Architect and Owner prior to rough-in, including, but not limited to equipment installed in front of house spaces, equipment installed in custom assemblies, and equipment installed or routed through millwork / casework.

B. Coordinate layout and installation of system components and suspension system with other construction that penetrates ceilings or is supported by them, including, but not

limited to, light fixtures, HVAC equipment, fire-suppression system, and partition assemblies. This includes coordination to confirm moving objects have a clear path of travel and confirmation that projected image paths are clear from obstruction.

C. Refer to the Architectural drawings for wall elevations, wall and ceiling design details and reflected ceiling plans.

D. Coordinate the installation of wall, ceiling, millwork, and podia mounted devices and components with the Architect.

E. Coordinate the location of wall, ceiling, millwork, and podia mounted devices and components with the Architect.

F. Coordinate finishes with Architect for exposed devices including speakers, wall- plates, etc.

G. When installing 24” square speakers in the space of 24” by 48” tile, coordinate requirements for additional sections of ceiling system T-Bar with The Architect.

H. Coordinate the location of wall, ceiling and podia mounted devices and components electricals connection with the Division 26 Work.

I. Coordinate requirements for 4-pair network cables/patch cords, color schemes, to connect with devices and equipment with the Work 27 15 00 Communication Horizontal Cabling.

J. Coordinate nomenclature and labeling scheme of enclosures, devices, components and cable devices with the Architect and Owner.

K. Coordinate media link control button programming and set up with the Architect and Owner for their preferred appearance, programming, and sequence of operation.

L. Coordinate the application and registration of software licenses with the Architect and Owner.

1.10 WARRANTY

A. The warranty shall include labor and equipment to maintain the integrated system in full operation for a period of one year for hardware from the date of final system acceptance.

PART 2 - PRODUCTS

2.01 GENERAL

A. UL listed.

B. Equipment powered by 120V AC, single phase circuits.

C. Unless otherwise noted, equipment accessories shall be manufactured by the manufacturer of the equipment that they accessorize.

2.02 VIDEO PERFORMANCE SPECIFICATIONS

A. Fixed Lens Projector
   1. Acceptable Manufacturer
      a. Optoma ZW403
   2. Performance Requirements
      a. Type: Laser DLP
      b. Operation Hours: 30,000 Hours
      c. Resolution: 1280 x 800
      d. Minimum Lumens: 4,500
      e. Aspect Ratio 16:10
      f. Pole Mount

B. Projector Screen
   1. Acceptable Manufacturer
      a. Da-lite
      b. Drapper
   2. Performance Requirements
      a. Type: Motorized tensioned
      b. Color: Matte White
      c. Aspect Ratio: 16:10
      d. Black top drop: 12”

C. Receiver
   1. Acceptable Manufacturer
      a. Hall Technologies DSCV-70-RX
   2. Performance Requirements
      a. Type: 4K @ 60Hz
      b. HDBT 2.0
      c. RS232

D. Transmitter / Wall Plate
   1. Acceptable Manufacturer
      a. Hall Technologies DSCV2–70–TX-US
   2. Performance Requirements
      a. Type: 4K @ 60Hz
      b. HDBT 2.0
      c. USB-C
      d. (2) HDMI Ports

E. Amplifier
   1. Acceptable Manufacturer

a. Hall Technologies AMP-7040
2. Performance Requirements
a. Type: 70V Amp
b. RS232

F. Speakers
1. Acceptable Manufacturer
a. Belden
b. Boden
2. Performance Requirements
a. Type: 2’ x 2’ Tile Speakers
b. Suspended

G. Ceiling Box
1. Acceptable Manufacturer
a. Chief CMS492
b. Equal
2. Performance Requirements
a. Type: 2’ x 2’ Ceiling box
b. Suspended

2.03 EQUIPMENT MOUNTING

A. Provide mounting hardware as required for a finished installation of all equipment, including speakers, projectors, flat panel displays, rack-mounted equipment, control panels, and others. Where mounting hardware is not scheduled, it is nonetheless assumed to be included in the bid documents. Provide accessories for equipment racks as required for a complete installation, including power distribution and covers

PART 3 - EXECUTION

3.01 GENERAL

A. Comply with manufacturers' instructions for installing cable and equipment and adjusting equipment.

B. Keep items protected before and after installation, with dust and waterproof barrier materials as necessary. Maintain the integrity of the protective measures throughout the life of the project.

C. Protect equipment from damage until their handoff to the Owner.

D. Examine the areas to receive the Work (walls, ceilings, floor, podia) and the conditions under which the Work would be performed. Identify damaged items and provide a list to the Architect prior to the commencement of Work.

E. Coordinate how and where podia, device, components, cables, connectors, faceplates will be installed prior to commencement of Work. Remedy unsatisfactory conditions detrimental to the proper and timely completion of the Work.

F. Provide requirements for network access, IP addresses, MAC addresses with the Owner a minimum of 3 weeks in advance of required network access.

G. Materials and equipment installed under the work of this section must be produced by manufacturers with a minimum of 5 years' experience, and whose product literature demonstrates compliance with this section and the referenced codes and standards.

H. Manufacturers and model numbers used in the basis of design are indicated in the audiovisual equipment schedules. Unless otherwise noted, specified equipment is the basis of design and not intended to indicate sole sourcing of equipment. See below for equipment substitution requests.

I. Materials and equipment provided shall be new and meet or exceed performance requirements of those listed in the audiovisual equipment schedules.

J. If specified material or equipment has reached end of life at the time of procurement, Contractor shall provide current equivalent model.

K. Interface and coordinate the work of this section with that of other trades and examine drawings and specifications of other trades including mechanical, electrical, telecommunications, architectural, and structural for construction details and coordination.

L. Confirm exact installation location of all devices with the Owner / Architect / interior designer prior to rough-in, including, but not limited to equipment installed in front of house spaces, equipment installed in custom assemblies, and equipment installed or routed through millwork / casework.

M. Coordinate layout and installation of system components and suspension system with other construction that penetrates ceilings or is supported by them, including, but not limited to, light fixtures, HVAC equipment, fire-suppression system, and partition assemblies. This includes coordination to confirm moving objects have a clear path of travel and confirmation that projected image paths are clear from obstruction.

3.02 PREPARATION

A. Obtain system device programming templates from the Manufacturer(s). Coordinate programming parameter options with the Architect and Owner prior to programming.

B. Schedule a meeting(s) with Architect and Owner:
   1. Present project planning documents and review, adjust, and prepare final setup documents. Use final documents to set up the system and system and device software.

2. Confirm the exact location of devices.
3. Confirm the system of operation for each system and device and component.
4. Coordinate how devices and rooms shall be controlled.
5. Coordinate how system shall be integrated.
6. Coordinate requirements to interface to videoconferencing systems and applications.
7. Coordinate software and license requirements and acceptance.
8. Coordinate default system and devices logins and passwords, and how they will be changed to Owner logins and passwords.
9. Coordinate network switch port requirements to connect devices into the network.
10. Coordinate device network address requirements.
11. Coordinate cable and device naming and labeling nomenclature.
12. Review system sequence of operations.

C. Record and share decisions for approval and acceptance by the Architect and Owner.

3.03 NETWORKING

A. Where Owner provided active and passive networking equipment is used as a part of the audio- visual installation, coordinate with Owner's representatives to ensure said networking equipment meets or exceeds specifications and is configured as required by the manufacturers of the audio- visual equipment that will reside on the network.

3.04 INSTALLATION

A. Coordinate finishes with Architect for exposed equipment, including speakers, wall-plates, etc.

B. Provide plenum rated cable and devices for installation of cable, devices, and components in ceiling areas.

C. When installing cable in a conduit, label both end s of the conduit noting the location of the other end.

D. If a pull cord is missing from a conduit, notify the installer of the 27 05 28 Conduit and Back Boxes for Communication System Work to have it installed.

E. When installing cable in a conduit, leave the pull cords in place after installing the cable.

F. Provide wall mount enclosures for installation of devices and components on walls. Provide grommeted knockouts inside of enclosure to allow passage of cables and cords

G. Provide ceiling tile mount enclosures for installation of devices and components in ceiling areas. Coordinate location and interconnection of power modules with the installation of power conductors and conduits.

H. Provide surface mount back boxes for installation of devices in podia.

I. Provide wall mounted back boxes for installation of devices on walls.

J. Provide accessories for equipment racks as required for a complete installation, including power distribution and covers.

K. Provide mounting hardware to secure equipment, components, and devices, including speakers, projectors, flat panel displays, rack-mounted equipment, control panels, and others.

L. Secure equipment and devices with permanent hardware adequate to support the equipment with a 3x weight multiplier safety factor.

M. Provide bracing for seismic activity as required by the Authorities Having Jurisdiction.

N. Provide accessories, backboxes, pathways, mounting hardware, decorative trim, escutcheons cabling, and ancillary equipment to provide a complete and functioning system.

3.05 CABLING

A. When wiring within an enclosures, bundle, lace, and train cables to terminal points with only the necessary excess and without exceeding manufacturer's limitations on bending radii. Provide proper cable slack and management within slide-out and rotating racks to allow for maintenance access while system is still operational.

B. Provide color-code cables/conductors and provide machine printed labels as identified herein to designate wires and cables so they identify media in coordination with system wiring diagrams.

C. Provide complete termination of conductors at outlets/connectors and terminals. Do not leave conductors unterminated.

D. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, and terminals.

E. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cables that are damaged during installation and replace it with new cable.

F. Maintain maximum separation from line voltage conductors. Where line voltage conductors must cross signal cabling, cross at right angles.

G. Separate line-level, speaker-level, and power wiring runs Install in separate raceways or, where exposed or in same enclosure, separate by at least 4 inches, ordered such that voltage differentials in adjacent cable runs are minimized. Separate other audio-video equipment conductors as recommended by equipment manufacturer.

H. When wiring within an enclosures, bundle, lace, and train cables to terminal points with only the necessary excess and without exceeding manufacturer's limitations on bending radii. Provide proper cable slack and management within slide-out and rotating racks to allow for maintenance access while system is still operational.

I. Provide patch cords/cable to provide a fully functioning system.

3.06 WIRELESS SYSTEMS

A. Confirm frequency range of specified wireless systems and equipment is appropriate for local regulations and is free from interference. Coordinate licensing for wireless systems as required.

B. Where multiple wireless systems are present, coordinate frequency ranges to prevent interference between systems.

C. Provide remote antenna(s), mounting, cabling and appurtenances as required for wireless transmitters/receivers as needed to ensure wireless system performance is free from dropouts, bad reception, static, and interference.

3.07 PROGRAMMING.

A. Program the system and controllers based the requirements coordinated and confirmed at the Preparation Meetings with Architect and Owner.

3.08 CUSTOM SOFTWARE / USER INTERFACE

A. Provide a system user interface (UI) that is consistent for all systems, even where control systems/panels from multiple manufacturers may be provided.

B. Provide color printouts of all UI pages and popups for review. Coordinate with Owner for audio- visual control system UIs, including Owner’s branding.

C. Obtaining final approval in wiring and signed from the Owner for control system UI screens.

3.09 LABELING

A. Provide cable labels corresponding with cable schedule and shop drawings.

B. Label cabling in accordance with AVIXA F501.01:2015.

C. Provide permanent machine printed labels to each end of power cables.

D. Provide permanent machine printed labels to each end of system cables.

E. Barcode labels are acceptable if accompanied by a text label readable without machine assistance. Text height shall be minimum 2.5mm, and label shall be within 1-12 inches of termination, the end of unterminated cable, or the exit of cable jacketing or strain-relief.

3.10 LICENSES

A. Register, secure and provides licenses to the Owner to provide a fully functioning and integrated system.

3.11 FIRESTOPPING

A. Provide Firestopping systems as rated walls and floors.

B. Comply with requirements in Division 07 "Penetration Firestopping."

C. Comply with TIA-569 "Firestopping."

D. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.12 FIELD QUALITY CONTROL

A. Visually inspect cable placement, cable termination, grounding and bonding, equipment, and patch cords, and labeling of all devices and components.

B. Check programming scripts match Owner requirements.

C. Use manufacturers' maintenance or installation manuals for initial set up to tune the test image and sound spectrum.

D. Check for proper polarity of speakers.

E. Adjust images setting for balance, alignment and to free of hum, distortion, and artifacts.

3.13 SYSTEM PERFORMANCE CRITERIA

A. Conduct tests and measurements in accordance with AV9000:2011 Quality Management System for the Audio-Visual Technology Industry and ANSI/Infocomm 10:2013, AV Systems Performance Verification to ensure acceptable system performance.

B. Measure and document system performance against the following minimum criteria. Where system performance criteria are not met, take corrective action as required to bring system performance into compliance with criteria listed here and in the referenced

performance documents. Where criteria listed below and those in the referenced performance documents are in disagreement, the more stringent are in effect.

1. Audio
    a. Ambient Noise level (A weighted).
    b. Conference Rooms and enclosed offices: 42 dB, or as specified by acoustic consultant.
    c. Common areas, open office areas: 50 dB, or as specified by acoustic consultant
    d. Voice reinforcement and program audio signal levels: ≥ ambient noise level + 25 dB.
    e. Steady state sound coverage uniformity, measured with random noise signal in 4000 Hz octave band at seated ear height: ≤±3 dB at all conference room seats or at 10-foot grid spacing in open areas (Lobby, On Site Off Site, etc.).
    f. Head room level: 10 dB.
    g. Audio electrical SNR: ≥60 dB.
    h. Audio system output level variance: ≤±1 dB.
    i. Program audio signal sources should be balanced at the input stage to generate a level variance not to exceed ±1 dB.
    j. The system under test shall produce a flat frequency response (+/-0.5dB) from 20 Hz to 20 kHz.
    k. Speech Transmission Index: ≥0.66.
    l. Audio power amplifier channels shall not be loaded beyond their rated capacity.
    m. Voice reinforcement shall be stable. No audible feedback is acceptable.
    n. Balance/adjust audio and videoconferencing microphone gains and lobes such that standard voices (60dB, 1m) at each seated conferencing position produce a signal level variance of ≤±3 db.
    o. Audio only system latency: ≤2 ms.
    p. Total Harmonic Distortion: <1%.
    q. Acoustic echo cancellation: no perceptible echo (>55dB cancellation).
2. Video
    a. Display resolution: per specified displays in Display Schedule.
    b. Camera resolution: per specified cameras in Audiovisual Equipment Schedules.
    c. Display luminance: ≥500 nits.
    d. Digital displays shall be free from artifacts and faithfully display program content.
    e. Confirm optimal brightness, contrast and color in displays using SMPTE source with PLUGE display.
    f. Where multiple displays are visible in the same area, demonstrate color consistency throughout.
    g. Confirm that displayed images are free from visible distortion.
    h. 0-pixel failures per display.
    i. Confirm even illumination across displays. No location shall be measured to be greater than +10% or -5% the average illumination.

j. Test all digital video signal chains to ensure HDCP is carried through, enabling display of protected content at all locations, U.O.N.
k. Audio/video system latency (lip sync) shall not exceed +20 ms/-40ms.

3. Control, Power, Compatibility, Other
   a. Confirm the system components are powered up and down in sequence. Audio power amplifiers shall power up last and power down first. Control processors should never power down.
   b. Confirm the manufacturer's recommended cable bend radii are not exceeded.
   c. Demonstrate audio and video teleconferencing compatibility with all anticipated far-end hard and soft codecs, including, at a minimum, Teams, Zoom, Bluejeans, Webex, Jabber, SIP/H.323, etc.
   d. Confirm the control system performs listed functions as indicated and described in the contract documents while remaining synced with audiovisual system components and external system hardware and software
   e. Coordinate with Owner and manufacturers to ensure manufacturer logos are not visible on installed digital displays
   f. Confirm the audio systems will mute program content in response to input from life safety and emergency paging systems.
   g. Control system latency, as measured from user input to user feedback or completed system operation shall not exceed 100 ms.

3.14 STARTUP SERVICE

A. Perform startup service.
   1. Verify that electrical wiring installation complies with manufacturer's submittal and installation requirements.
   2. Complete installation and startup check according to manufacturer's written instructions.
   3. Conduct system verification tests to ensure system performs as intended. Reference "Infocomm Audiovisual Systems Performance Verification Checklist," available at http://www.infocomm.org/cps/rde/xbcr/infocomm/CAVSP_Checklist.pdf. Indicate PASS/FAIL/NOT APPLICABLE for listed criteria and include as System Verification Test Report in Operation and Maintenance submittal. Reference section 1.

3.15 ACCEPTANCE TESTING

A. At completion of startup service and acceptance of system verification test report, schedule site visit with Architect and Owner.
   1. Make available the following during acceptance testing
      a. Final 'as-built' drawings, shop drawings, floor plans, block diagrams, and equipment manufacturer's operation/setup manuals
      b. Source and measurement media/equipment to demonstrate all functions of audio- visual systems

2. Adjust including physically re-mounting/re-aligning equipment, adjusting gain, equalization, control system GUI, etc.
3. Failed acceptance tests requiring rework which cannot be completed during the scheduled acceptance test visit will be grounds for non-acceptance and shall require additional acceptance testing at a future date to demonstrate compliance with the project documents.
4. Reimburse the Architect and Engineer for their time expenses for additional site visits due to acceptance test failures.

3.16 ADJUSTING]

A. On-Site Assistance: Engage a factory-authorized service representative to provide on-site assistance in adjusting sound levels, resetting transformer taps, and adjusting controls to meet occupancy conditions.

3.17 DEMONSTRATION AND TRAINING

A. Conduct a walking tour of Project with the Architect and Owner. Describe function, operation, control, and maintenance of each component.

B. Assist the Owner in their testing of the activated system for control, signal routing, content image display and performance and sound performance.

C. Conduct a training session with the Owner during which programming, use, maintenance and operational aspects of the system, devices and components are described and demonstrated.

D. Use submitted operation and maintenance manual as reference during demonstration and training.

E. Provide a minimum of one 4-hour classroom training session(s) for the Owner’s systems operators and network managers at the Owner’s site. The sessions shall include the following.
1. Training outline, agenda and training material for (#) people.
2. System operation manuals.
3. System programming manuals.
4. Demonstrate system operations, management, features, and component programming.
5. Set up.

F. Demonstrate how to use, control, operate, adjust and maintain the system.

Record and provide to the Owner the recording on a USB flash drive or digitally.

3.18 WARRANTY

A. Complete registrations and proof of purchases required to activate the manufacturer's warranty.

B. Invoke manufacturer's warranties as necessary during the warranty period. Obtain Return-Merchandise-Authorization for shipping defective material back and receiving replacements materials.

3.19 CLEANING

A. Cover devices with dust proof barriers until acceptance by Owner.

END OF SECTION

SECTION 27 41 16 - INTEGRATED AUDIO-VIDEO SYSTEMS AND EQUIPMENT

PART 1 - GENERAL

1.01 SUMMARY

A. Provisions of Division 1 apply to this section.

B. Section Includes:
1. Provide all labor, materials, transportation and equipment to complete the furnishing, installation, assembly, set up, and testing of the Audio, Video and Control Systems work indicated on the drawings and specified herein. Notwithstanding any detailed information in this Section, provide complete, working systems. General design intent for this project is shown on the drawings and described in the specification.
2. All equipment requiring coordination with other trades must be tested and verified for proper operation. Contractor is fully responsible for the coordination and must resolve all conflicts with AV equipment that connect or interact with other systems.
3. If an operational function is specified that requires hardware or software to complete that specific function, then consider that software or hardware part of this specification. The cost of any omissions of software or hardware necessary to complete all operational functions outlined in this specification shall be borne by the contractor providing this system.
4. Design, engineer and provide complete means of support, suspension, attachment, fastening, bracing, and seismic restraints (hereinafter "support") of the Work of this Section, including future installed equipment, in accordance with local building codes and regulations. Provide engineering of such support by parties licensed to perform work of this type in the Project jurisdiction. Contractor shall obtain the services of an engineer licensed to perform this work within the state or jurisdiction it is to be performed.
5. The Contractor shall include all costs associated with structural engineering required by code for work in this section.
6. Use skilled mechanics that can return surfaces to the appearance of new work when modifying millwork.
7. Conduit and common back boxes including four square, pull boxes, junction boxes, etc. are supplied and installed by Division 26 Electrical Contractor. Connection panels that install in these boxes are supplied by AV Contractor.
8. Provide Power Over Ethernet switches and injectors where required.
9. Provide all cable and wire associated with this specification section and related documents.
10. All systems shall be completely installed with all the necessary interconnection, power supplies, patch cords, snakes, portable equipment cables and wiring to provide a fully functioning system.
11. The governing overall requirement for this project is a complete and functional system.
12. Include work not usually shown or specified, but necessary for proper installation and operation of the system or piece of equipment.

C. Products Supplied But Not Installed Under This Section

1. Loose equipment or products supplied but not installed shall be turned-over to the Owner immediately upon delivery. Contractor is to supply a signed statement of transfer of this equipment to the consultant for record. Client must sign this statement acknowledging receipt of this equipment.
2. Specialty floor boxes, back boxes including but not limited to Crestron, AMX, Extron, FSR, Steel City and speaker back boxes shall be provided to the General Contractor for installation.

D. Related Sections
1. Division 1.
2. Division 9.
3. Division 10.
4. Division 11.
5. Division 26.

E. Allowances
1. Refer to section 2.1.E for related requirements.

F. Measurement Procedures
1. Product quantity is as required. If a quantity is given, the Contractor will provide at least the given amount. Some products listed under this section may not be required to fulfill the obligations of the work.

1.02 REFERENCES

A. Comply with all applicable governing codes.

1.03 DEFINITIONS

A. Definitions of Terms: The following definitions and conditions apply to each of the respective parameters and the measurements of those parameters, unless specifically stated otherwise:
   1. Frequency Response: The minimum acceptable frequency band over which the amplitude response is within 3 dB (or any specified range), or the specified limits of the response relative to the reference frequency (1 kHz for audio, 1.0 MHz for video) under design load conditions, at any operating level up to and including the specified maximum output while fully in compliance with all other performance specifications.
   2. Maximum Output Level: The minimum acceptable maximum signal output level (voltage, current or power) attained under design load conditions attained while fully in compliance with all other performance specifications.
   3. Harmonic Distortion: The maximum acceptable harmonic distortion measured at any operating level, up to and including the specified maximum output, with an applied sine wave signal of any frequency in the range of the specified frequency response.
   4. Audio Intermodulation Distortion: The maximum acceptable intermodulation distortion resulting from the introduction of 60 Hz and 7 kHz signals in a ratio of 4:1 under design load conditions at any operating level up to and including the specified maximum output level.
   5. Signal to Noise Ratio: The minimum acceptable ratio of signal to noise levels derived from broadband measurements under design load at maximum output over the entire range of the specified frequency response.
   6. Clipping Level: The minimum acceptable maximum level of signal applied to the device under design load conditions while fully in compliance with all other performance specifications.
   7. Sensitivity: The maximum acceptable level of input signal applied to the device that is necessary to provide the maximum output under design load conditions.
   8. Design Load: The load (in ohms) specified by usage of the particular device input or output.

B. Signal Levels: The following voltage levels shall be considered the standard operating levels for the particular circuitry, unless specifically noted otherwise (0.775 Volt = O dBu = O dBm for a 600 ohms terminated circuit):
   1. Microphone Circuits: -30 dBu or less.
   2. Audio Line Level Circuits: -30 dBu to +24 dBu; equivalent to -30 dBm to +24 dBm for a 600 ohms terminated circuit.
   3. Loudspeaker Level Circuits: More than +24 dBu.
   4. Video Line Level Circuits: 1.0 Volt, peak to peak composite signal.

C. Characteristic Impedances: The following operating impedances shall be considered to be the standard operating impedances for the particular circuitry, unless specifically noted otherwise:
   1. Microphone Circuits: 50-250 ohms source, 150-1500 ohms terminating, electrostatically and electromagnetically balanced to ground.
   2. Audio Line Level Circuits: 600 ohms maximum source, 600 ohms minimum. terminating, line to line, electrostatically and electromagnetically balanced to ground.
   3. Video Line Level Circuits: 75 ohms maximum source, 75 ohms minimum terminating to shield and signal ground, with Vertical Standing Wave Ratio (VSWR) not to exceed 1.2.

1.04 SYSTEM DESCRIPTION

A. Design Requirements
   1. General
      a. The EMUSD Arroyo High School Theater audio-visual system.
      b. All audio processing functions for the system shall be implemented with Digital Signal Processing equipment (DSP). The system shall connect to the Local Area Network for monitoring. Functions provided by this system include but are not limited mixing, level control, automatic mixing, equalization, adaptive equalization, delay, routing, dynamics, filters, processors, presets, etc.
      c. The audio system shall include a DTMF module that will act as an interface between the paging system and the telephone system. Dialing a pre-defined sequence of numbers into the telephone will allow a zone or an all page to occur. The system will suppress background music during paging.
      d. Fire Alarm Interface: Sound System shall mute under zone control from the Project Fire Alarm System. Provide connection between fire alarm panel and audio system for automatic muting of signal upon trigger of alarm. Coordinate with work of Fire Alarm section.
      e. Infrastructure shall be provided for the installation of AV equipment that will be installed at a future date. This infrastructure shall be labeled to allow easy identification of these devices. Back boxes shall be labeled with Device ID. Conduit shall be labeled as follows: AV-CTRL = Control, AV-SPK = Speaker, AV-AUD = Audio, AV-VID = Video, AV = Both Audio & Video.
      f. An integrated web-enabled central control system shall be used to control all aspects of the audio and video system's functions, signal routing, and audio levels.
   2. Sound Reinforcement
      a. The sound reinforcement system for the Theater shall provide natural, unobtrusive augmentation of the inherent acoustics in the space.
      b. The system shall be utilized for theatrical, instrumental music performances and presentations as required and to provide reproduction of electronic and pre-recorded program material. The audio system shall be controlled by either a designated operator at the front of house position, or remotely by a presenter or coordinator in the stage area.
      c. The main sound reinforcement system for the Theater shall include a stereo line-array speaker system arranged per the audio system drawings. Subwoofers will be provided as part of the line-array rig for extended low

frequency coverage. The Contractor is to field verify all speaker aiming angles before permanent installation of speaker clusters.

d. The audio processing equipment will provide automatic mixing of selected inputs for events where an operator may not be required.
e. The frontend of the digital audio distribution system utilizes a Dante network. The audio consoles, networked stage boxes and the Control Room computer workstation shall connect to this network. This system will provide the user with virtual patching allowing for flexible routing to and from any endpoint. Contractor to provide I/O routing matrix page at the Control Room computer workstation.
f. The main digital signal processor shall include a touch panel control located adjacent to the mixing console to allow control of the microphone preamps from the control room.
g. Microphone inputs shall be located throughout the Theater Orchestra Pit, stage, and various facility panels. Having multiple input locations will allow for flexibility in the number and location of microphones to serve different types of performances and to avoid long exposed cable runs.
h. A multi-channel wireless microphone system shall provide for individual use of belt pack and hand-held transmitters for theatrical and vocal performance.
i. A digital mixing console shall provide mixing and routing of all audio inputs. The console shall be located in the control room. The console shall feature provisions for onboard processing and effects. It shall include integrated Wi-Fi to allow control from IOS devices. The console shall include on board effects processing. The Contractor shall provide factory training for the console and its auxiliary features for the client's user group.
j. Powered audio monitors shall be provided adjacent to the mixing console.
k. To provide the best possible auditory experience for audience members with certain types of hearing impairment, and to satisfy the requirements of the Americans with Disabilities Act, an IR wireless Assistive Listening system shall be provided. This system will transmit a mix from the sound system to headsets which may be checked out by audience members as needed.
l. The main audio system must mute when a signal from the campus wide paging is present in the auditorium. A signal from the campus paging system will mute the auditorium sound system to allow paging speakers to be heard. This feature shall be programmed in the main control processor to allow only priority pages to mute the system. Standard pages shall not mute the system.
m. The intercom system will be used by the production staff, show director, lighting director, sound system operator, lighting operators, orchestra conductor, and other personnel involved in rehearsals and productions. The intercom system shall provide a minimum of four channels. The main intercom station will be located in the Control Room. Connection points for belt-pack stations with microphone/headsets shall be provided at the sound and lighting operators' locations. Wall mounted stations with integral loudspeakers and microphones will be provided in the Schene Shop, Band Room, Choral Room, Dressing Rooms, and Drama Classrooms. Belt pack receptacles shall be provided as shown in the drawings.

3. Video System

a. The video projection system shall consist of a Laser type video/graphics projector with a 16:10 aspect ratio and native resolution of 2,560 x1,600.
b. The projection screen shall be sized per drawing with 16:10 aspect ratio and mounted as shown in the drawings.
c. Built-in video source equipment shall include a Blu-Ray / DVD player. An input for a laptop computer shall be provided at various locations on the stage and in the control room.
d. Automatic digital video scaling shall be employed to re-size the various image formats to fit the native resolution of the video projector.
e. All video and computer switching shall be accomplished with video switching equipment located in the main equipment rack and remotely controlled from the main control room.
f. A video camera shall be mounted in the Theater and used for monitoring and distributing a video feed of stage activity to the Control Room, lobby, and Dressing Rooms.
g. A video display located in the Lobby shall have the ability to display digital signage content. Digital signage players are school provided and installed by The Contractor, coordinate this effort.

4. Control System
   a. An integrated web-enabled central control system shall be used to control all aspects of the audio and video system's functions and signal routing. The system shall consist of touch screen panels located as per the drawings. The touch panels located on the stage area would allow presenters to control the speech reinforcement and video systems for events which do not require a full-time operator. This user interface will allow control of the overall volume of lectern microphones, source equipment transport and lighting presets.

B. Software Programming
   1. General
      a. Except when otherwise agreed in writing the client shall retain legal and beneficial ownership of all Intellectual Property, including source code, created by the Contractor, their employees, and sub-contractors.
      b. The Contractor must allow sufficient time for the programming of all software configurable audio, video and control systems. Contractors must evaluate the systems functional requirements and user interface and then allow time in their bid accordingly. The system description as well as the end user interview will provide the Contractor with the necessary information needed to proceed with the programming. Any questions as to the systems functional requirements must be sent in written RFI form to the Consultant. All programming schemes must be submitted to the Consultant for approval before programming starts. This includes the appearance of all user interfaces, touch panel layouts, preset and sub-preset information (acquired through client interviews), and speaker control schemes. The Contractor will also submit a narrative for the control system concept to the Consultant for approval. The Contractor is to interview the Owner and their representatives to acquire the necessary information needed to allow for the proper programming of this system. The Contractor, after interviewing the Owner, will then submit a written report stating his interpretation of the client's requirements for approval by Consultant. Only after the Client and Consultant have approved the

programming report may the Contractor proceed with the programming of this system.

c. All equipment that is connected to the Client's local area network and is configurable via the local area network must have its equipment software installed onto dedicated computers provided by the Client. The Contractor is to allot time to install and test equipment software onto a minimum of two of the Client's computers which are to be identified by the Client and/or Consultant. The computers shall be programmed to emulate user interfaces throughout the facility. The Contractor shall coordinate all software deployment over IP with the Client's Information technology department.

2. Control system minimum programming outlined below:
   a. The Contractor shall allot 8 hours for on-site control system programming with the Client's representative.
   b. The Control System in this project shall connect to the Client's Local Area Network (LAN). This connection will provide desktop computers control of the audio-visual system as well as make available remote troubleshooting via the internet. The Contractor shall provide time to install control system interface software on at least one desktop computers. Coordinate work with Client's Information Services personnel.
   c. Provide password protection to each control surface in this facility. Pushbutton panels shall be activated by holding the lower two buttons down for 5 seconds. Deactivation will automatically take place 120 seconds after control panel was last gestured. Touch panels shall be activated and deactivated by password. Upon start up a password dialog box shall be presented to the user to enter his/her password. Only after entering a password will the user have access to the system. The system shall be programmed to shut down automatically after being idle for a time to be specified by the user.
   d. All control panels shall be programmed with a technical user mode that allows technical personnel to access a second level of control. A push button volume adjust/source select control interface usually includes various sources that may be played into the zone under control. These sources enter a mixer in the DSP allowing control of both input and output of this mixer. Normal, user level, operation of volume control at a user interface shall permit only the output of the mixer to be controlled. This allows a user the ability to control the output of the mixer to raise and lower the volume of all source devices simultaneously. Pressing any of the source select buttons shall bring up a dialog box that will allow a technician to enter a password and allow technical personnel access to a second level of control functionality. This will permit a technician to balance levels at the inputs of the mixer when required. After sixty seconds of inactivity the panel will automatically default back to user level control.
   e. Touch panel layout design will conform to the InfoComm International "Dashboard for Controls" guidelines. Touch panel designs are to be custom to this project. Re-purposed touch panel designs are not acceptable.
   f. Technical users shall have the ability to access individual speaker zone controls via the touch panel interface.

g. The contractor shall provide a default audio level preset button, in the control system user interface, to allow a user or technician to recall all gain levels that were set when the system was commissioned.
h. Control Help File: Each touch panel will include a help file that will explain each layer of the touch-panel control scheme.
i. Control system shall utilize help desk software to provide:
    1) Real-time monitoring of:
        a) Control system.
        b) Device monitoring.
        c) System online status.
    2) Remote system diagnostics via Contractors help desk.
    3) Remote system control.
    4) Event scheduling.
    5) Fault reporting via email alert.
    6) Logging of help request.
    7) User access control via password protection.
    8) Event logging, report, and chart generation.
j. The help desk software shall be placed on the desktop computers of each audio-visual maintenance person as well as key personnel of the Client. The Contractor shall train maintenance and operations persons to use this software feature.
k. All serial controlled devices must have bi-directional communication with the control system. All control functions locally available on each device must be accessible via the remote-control system. All locally gestured control functions must mirror on the control system user interface. In other words, if a volume control is adjusted on a DSP interface that adjustment must register on the control interface.
l. Control system shall be used to power up and down connected equipment at control system start up and shut down.
m. The control system shall monitor the connected power amplifiers and report overheating that may occur.

3. Digital Signal Processor (DSP) minimum programming outlined below:
    a. A user-friendly graphical interface programmed by the Contractor will allow for easy operation of the system. This interface shall allow novice users the control of main system components without having to access the digital schematic diagram. These main system components will include master volume control, zone volume control, room combining, routing, switching, source-equipment level control and any other control necessary for the system to function properly from a user standpoint.
    b. When applicable contractor shall configure IGMP Snooping with a querier to mitigate Multicast issues.
    c. The main digital processor shall be programmed to act as the clock master for the system.
    d. All audio processing functions for the system shall be implemented with Digital Signal Processing equipment (DSP). The system shall connect to the Local Area Network for monitoring. Functions provided by this system include but are not limited to mixing, level control, automatic mixing, equalization, adaptive equalization, delay, routing, dynamics, filters, processors, presets, etc.
    e. Volume control must be applied to device inputs as well as mixer outputs. Each piece of source equipment shall have a volume control to allow input

level balancing. A main volume control and mute button will allow for overall adjustment of the composite mix.

f. DSP unit shall be programmed to route all input and output signal to the rack mounted audio monitor. This routing controller shall be labeled clearly identifying the input devices and output zones it controls. This control shall be accessible only from the touch panel in the main equipment room. Provide a separate page to allow this feature.
g. Provide automatic level control at the input of all line level source equipment.
h. Signal present indicators shall be placed on the graphical user interface to allow monitoring of all inputs and outputs to the audio system.
i. Meters shall be placed along strategic points in the signal chain to allow for monitoring signal level.
j. Schematic diagram shall be arranged so wire paths are easily traced. All inputs and output shall be clearly labeled.
k. Rooms combining of audio signal shall be accomplished through presets that control the various room arrangements. These presets shall include signal routing, level change, delay, combining and separation of the audio signal. Wall mounted control stations shall track each other while in a combine mode and provide individual control of rooms when separated.
l. The DSP system shall connect to the Local Area Network for control and programming.
m. The DSP system shall include levels of security for system operation and maintenance privileges.
    1) A first level of security shall be available to a user that has privileges which requires no password, limited to source select and volume control.
    2) A second level of security shall grant an operator privileges that include System shut down, run hardware diagnostics, access on line help and adjust settings. This is reserved for maintenance personnel.
    3) A third level of security shall grant supervisor privileges and allow all that is outlined above plus the ability to change system options and edit user list.
    4) A fourth level of security shall grant designer privileges and allow all that is outlined above plus the ability to modify the base file. This should be reserved to the AV contractor only.
n. The Contractor is to allow programming time for at least 5 different presets as directed by the Owner and their representative.
o. The Contractor shall allot 8 hours for on-site digital signal processor programming with the client's representative.

4. Complexity of Programming:
    a. It is required that the Contractor be experienced in programming systems this complicated. Contractors shall allow enough time in their bid to permit extensive programming of all software configurable audio, video and control systems to the requirements of the client and consultant. Contractor shall break out cost associated with programming of these systems for review by the Consultant. By submitting this bid, the Contractor agrees that they understand systems of this type and that all programming services are included to the satisfaction of the Client and Consultant. The Contractor further agrees that they will not make any claim

for additional monies because of misinterpretation of programming requirements.

C. System Performance Standards and Requirements (meet or exceed)
   1. Audio Systems:
      a. Electrical Performance; Source Input to Power Amplifier Output:
         1) Frequency Response (Equalizer flat): +/- 0.2 dB 20 Hz to 20 kHz.
         2) Total Harmonic Distortion (THD): Less than 0.05%, 20 Hz to 20 kHz, 4 ohms.
         3) Noise: At least -105 dB, 20 Hz to 20 kHz, referenced to input of +4 dBm.
         4) Crosstalk: At least -60 dB, 20 Hz to 20 kHz.
         5) Damping Factor: Greater than 500 (below 1 kHz)
      b. Electro/Acoustic Performance; Distributed Systems: 103 dB Consistent with devices specified herein.
         1) Equipment: Specified individually.
         2) Audio signal paths: Shall not degrade performance of connected equipment.
      c. NEC - Article 640: Audio Signal Processing, Amplification and Reproduction Equipment.
   2. Video Systems:
      a. Video signal system: ATSC 1.0 or 3.0, where applicable.
      b. Video signal paths: To EIA RS-250C short haul where equalized or fiber optic transmission, otherwise to the performance limit of the specified video cable.
      c. ANSI IT7.228 (ANSI Lumens): Measurement method for light output of fixed resolution video projection systems.
      d. ANSI IT7.228 (ANSI Contrast Ratio): Measurement method for the contrast ratio of fixed resolution video projection systems.
      e. JPEG: Joint Photographic Experts Group. Proposes and publishes video standards for Still Images.
      f. MPEG: Motion Picture Experts Group. Proposes and publishes video standards for Broadcast.
      g. EIA RS 170 & 170A The original specs for Monochrome and Color TV in the US. Has been replaced by SMPTE 170M.
      h. EIA 770-1: The US spec for Enhanced Component video, similar to ITU-R BT1197/ETSI 300 294 for PAL-Plus.
      i. EIA 770-2: The US specs for Standard Definition TV (SDTV) Baseband Component Video.
      j. EIA 770-3: The US spec for High-Definition TV (HDTV) Baseband Video.
      k. ITU-R BT.470: Harmonized spec for SDTV worldwide, including NTSC, PAL, and SECAM.
      l. ITU-R BT.601: Universal Sampling spec for SDTV and HDTV Broadcast Video. Similar to SMPTE125M.
      m. ITU-R BT1197/ETSI 300 294: Spec for PAL Plus Enhanced TV in Europe.
      n. SMPTE 125M: Similar to ITU-R BT.601.
      o. SMPTE 170M: Has replaced EIA RS 170A, color spec for NTSC.
      p. SMPTE 253M: RGB Analog Video Interface spec for SDTV Studio applications.
      q. SMPTE 274M: Component spec for 1920x1080 HDTV.
      r. SMPTE 296M: Spec for 1280 x 720 RGB and YPbPr Baseband Video. Similar to PAL Plus.

3. Data and Communications Systems:
   a. TIA/EIA 568-C series: Commercial Building Telecommunications Cabling Standard.
   b. ANSI J-STD-607-A: Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications.
   c. Comply with ITU-T (International Telecommunications Union – Telecom) for video conferencing systems.
4. Control Systems:
   a. RS485 (TIA-485): Electrical characteristics of generators and receivers for use in balanced digital multipoint systems.
   b. RS232 (TIA-232): Interface between data terminal equipment and data circuit-terminating equipment employing serial binary data interchange.
   c. RS 422 (TIA-422): Electrical characteristics of balanced voltage digital interface circuits.

1.05 SUBMITTALS

A. General
   1. In addition to the requirements of Division 1, submit all materials for review arranged in the same order as the Specification, individually referenced to the Specification paragraph and Contract Drawing number. Submit 8 1/2" x 11" items bound in volumes and drawings in edge-bound sets. Submit all drawings on sheets of the same size.
   2. The Contractor is to provide two copies of each hardcopy submittal and an electronic format copy (Shop drawings must be submitted as .DWF. All other submittals shall be provided as .PDF). All submittals must be original files or documents, scanned copies will not be accepted.
   3. Make each specified submittal as a coordinated package complete with all information specified herein. Incomplete or uncoordinated submittals will be returned with no review action.
   4. Should the Contractor proceed with the Work of this Section in the absence of submittals for such work submitted and returned with action "No Exception Taken" or "Make Corrections As Noted", the Contractor proceeds at the Contractor's sole risk.
   5. If the Contractor deviates from the design shown on the Contract Documents when preparing their shop drawings, the Contractor shall indicate with architectural style clouding, those deviations. The Contractor shall also submit with the Shop Drawings, a list of those deviations and substitutions, including the following:
      a. The deviation item number which shall also correspond to a number designation applied to each cloud on the shop drawings.
      b. Section of the specification that applies to these changes.
      c. The applicable shop drawing sheet number for each item.
      d. The corresponding audio-visual Contract Document sheet number for each item.
      e. A clear description of the deviation.
      f. The Contractor’s rational for the deviation (i.e. what benefit the deviation provides, why it is required, any cost impact, etc.).

B. Infrastructure
   1. Provide drawings indicating boxes conforming and non-conforming to Consultant’s AV drawings.

C. Product Data
   1. Manufacturer's Product Data
      a. Contractor is to submit submittal in electronic format (i.e. PDF)
      b. List of materials (i.e. Table of Contents) categorized by room type: For each item specified in PART 2, include:
         1) Drawing device ID code.
         2) Manufacturer.
         3) Model number.
         4) Listing: UL or other lab.
         5) Quantity.
      c. In sequence of List of Materials, provide a data sheet for each item, including all accessories marked for the proposed product.

D. Shop Drawings
   1. Field (Installation) Drawings: Collate in sequence:
      a. Contractor is to submit shop drawings in .DWF format.
      b. Drawing index/symbol sheet.
      c. Floor plans. At scale of Contract Documents. Show:
         1) Device rough-in boxes with ID number.
         2) Mounting height.
         3) Conduit size.
         4) Wire type.
         5) Wire fill.
      d. Sections/Elevations. At scale of Contract Documents:
         1) Mounting location reference to nearest gridline.
            a) Provide sections for each room containing AV equipment.
            b) Provide elevations for each wall in rooms containing AV equipment.
            c) Show all equipment, including speakers, monitors, projectors, podium, floor boxes, facility boxes, etc.
            d) Provide vertical dimensions referenced above finished floor to each piece of equipment.
            e) Provide horizontal dimensions reference to gridlines.
      e. Enlarged Plans. At scale of Contract Documents or larger as required for trade coordination. Show:
         1) Items indicated in "floor plans" above.
         2) Architectural features.
         3) Rack cabinets.
            a) Ventilation details.
            b) Power distribution detail.
         4) System furniture.
         5) Clearances required by applicable Code.
      f. System Conduit Riser Drawing, Show:
         1) Terminal cabinets.
         2) Coordination with floor plans.
         3) Wire runs not shown on floor plans.
         4) Wire type.
         5) Wire fill.
      g. Mounting details:
         1) Stamped and signed by an Engineer licensed in the Project jurisdiction for work of this type, where required by code.

2) Show loads, type and strength of connections, sizes, dimensions, materials, etc.
3) Show calculations on drawings or in bound volume for review by Authorities having jurisdiction.
4) Provide details for:
a) Equipment rack anchorage.
b) Loudspeaker mounts.
c) Video projector mounts.
d) Video display mounts
e) Projection screens, both fixed and motorized.
f) Attachment to building structure.

h. Installation details as required:
1) Terminal cabinets: Terminations.
2) Audio-Visual panel details.

i. Wire run sheets. Show:
1) Wire number.
2) Source.
3) Designation.
4) Signal type.
5) Wire type.
6) Operating level or voltage.
7) Timing reference, where applicable.
8) Physical length.

2. Shop (Fabrication) Drawings: Collate in sequence:
a. Contractor is to submit shop drawings in .DWF format.
b. Drawing index/symbol sheet (if separate set from Field Drawings).
c. System functional drawings. Submit separate drawings for each system/subsystem. Show at least:
1) Equipment:
a) Function, make, model.
b) Rack number, module frame and slot number.
2) Field device information
a) Terminal cabinets.
b) Pull boxes.
c) Audio-visual panel connector designations.
3) Wiring
a) Wire number.
b) Wire type.
4) Shield condition at both ends (float, ground, location of ground).
5) Connector wiring details, each type.
6) Audio: Nominal operating level, Polarity. Note deliberate polarity inversions where required to maintain absolute polarity.
7) Video: Physical length. Electrical length in nanoseconds or degrees of sub-carrier, as applies. Equalization required.
8) Twisted pair, transmit and received devices: Transmission range at 60 Hz., cable length and signal quality.

d. Provide drawings for the following systems, if applicable:
1) Audio.
2) Video.
3) Control.
4) Data transmission.

5) Coordinated grounding scheme.

e. Equipment rack elevations: Show:
   1) All racks scaled at 1 1/2" equals 1 foot, or larger.
   2) Rack: Make, model.
   3) Equipment: Function, make, model.

f. Rack wiring drawings: For each rack, show:
   1) Power strip: Receptacles, circuiting.
   2) Sequencing power and surge suppression systems.
   3) Equipment.
   4) Grounding.
   5) Wiring, all systems.
   6) Wiring harness scheme.
   7) Ventilation detail.

g. Fabrication details: Submit for:
   1) Receptacles.
   2) Panels.
   3) Special mounting provisions.

h. Legends/engraving details. Half or full size:
   1) Receptacles.
   2) Audio-visual panels.
   3) Equipment designations.

i. Patchbay elevations: Show:
   1) Patchbay elevations to be half-size scale.
   2) Equipment: Function, make, model.
   3) Patchbay type.
   4) Patchbay number.
   5) Connector configuration.
   6) Connector type.

E. Samples
   1. Of all finishes/materials that will be visible to the public, including but not limited to:
      a. Receptacles and controls with associated trim plate.
      b. Each type of loudspeaker baffle and/or grille.
      c. All audio-visual panels.
      d. Audio-visual devices in public areas.

F. Programming
   1. Control Programming Scheme Submittal
      a. Contractor is to provide submittal in electronic format (i.e. PDF)
      b. Provide a password-protected link to a folder on the Contractor's network to remotely access the touch panel from the Consultant's computer. Contractor is to have a dedicated control processor utilized on their network or provide an emulation file of each control system interface that will allow reviewer to operate the interface as if operating the actual device.
      c. Provide a graphic layout of each user control interface (touch panels, push buttons, etc.).
      d. Provide a list of devices that are controlled by each control user interface, including:
         1) Device.
         2) Brand.
         3) Model Number.

4) Control Method.
e. Provide a logic tree for each page for each control interface.
f. Provide a system routing sheet for each control user interface, including:
1) Source.
2) Switcher / device input.
3) Switcher / device output.
4) Final destination.
g. Provide help file content on each user interface.

G. Shop and Project Site Test Reports
1. Contractor is to provide submittal in electronic format (i.e. PDF)
2. Schedule: Submit test reports in a timely manner relative to the Project schedule such that the representative of the Owner may conduct Verification of Submitted Test Data without delay of progress.
a. Shop test report: Submit prior to shipping completed equipment racks to Project Site.
b. Project Site test report: Submit project site test report for this section after system completion and prior to Acceptance Review and Testing.
3. Content: Include at least:
a. Time and date of start of burn-in.
b. Time and date of test.
c. Personnel conducting test.
d. Test equipment, including serial and date of calibration.
e. Procedures used.
f. Results of test - numerical or graphical presentation.

H. Close Out Submittal
1. Contractor is to provide submittals in electronic format (i.e. PDF)
2. Operation and Maintenance Manuals
a. Index.
b. Systems operating instructions.
c. Reduced set of system Record Drawings.
d. Key schedule.
e. Maintenance and spare parts schedules.
f. Shop and Field Test Reports.
g. Equipment manuals. Collate alphabetically by manufacturer. Provide manufacturer's original operation, instruction and service manuals in color for each equipment item. Provide tabbed dividers between each product. Manuals provided by the Manufacturer in an individual binder may be submitted in that form.
3. Framed Operating and Maintenance Instructions: Provide adjacent to each ensemble of equipment racks. Provide sturdy frame with clear glass or non-scratching plastic cover. Provide permanent, non-fading media. Blueprints shall not be acceptable. Include:
a. Sequence for system start-up and shutdown.
b. System Functional Diagrams.
c. Signal levels and impedance at accessible system signal and test ports, where applicable.
4. Record Drawings
a. As work progresses, maintain records of "as installed" conditions. Update the set at least weekly. After successful completion of Project Site testing specified herein, and after completion of Punch List corrections, copy all

records of "as installed" conditions on to final Record Document drawings, as specified in Division 1.

b. Content: All drawings required under "Field and Shop Drawings". Show "as installed" condition. Where room designations according to Project permanent signage differ from construction designations in the Contract Documents, show both designations.

5. Provide four copies on SD card containing the “as built” drawings, all manuals, training manual and programming code.
   a. Submit un-compiled programming code.
6. Training Submittal
   a. Provide all training materials for review prior to scheduling training sessions.
      1) Training manual.
      2) Agenda for the training session.
      3) The final punch list, indicating that all equipment is fully functional.
   b. See the section under Owner’s Instructions for training manual requirements.
   c. No training session will be scheduled until final punch list is completed and submitted.
7. Warranty Certificates
   a. Comply with Division 1.

1.06 QUALITY ASSURANCE

A. Qualifications
   1. The bidder shall, prior to the bid, in accordance with the Instruction to Bidders, submit at least the following information to verify that the bidder has the necessary experience and qualifications to perform the specified work:
      a. A detailed brochure describing the bidder’s capabilities in terms of facilities, personnel (include a personnel organization chart followed by resumes), experience, background, examples of similar installations (at least two projects within the past two years), distribution arrangements with manufacturers and financial capability, including certificates of insurance and satisfaction of the project bonding requirements.
      b. Contractor must, at the time of this bid submittal, have distribution or a dealership agreement with all manufactures whose products are specified in the bid documents. Contractor must also have completed manufactures training and certification before bids are submitted.
      c. AIA Document A305 “Contractor’s Qualification Statement”.
      d. Information identifying any and all local agents and/or subcontractors that will assist in the work and their role in the project.
      e. Identification of sources of labor for all fabrication and installation throughout the duration of the project.
      f. Evidence that he has acquired all necessary licenses, certificates, and approvals to perform the specified work within the state or jurisdiction the work is to be performed.
   2. Projects that include Digital Signal Processing (DSP) equipment will require the Contractor to submit evidence of qualification from the manufacturer of said equipment. This would include completion of manufacturer’s training courses, the name of the person or persons who completed said training and prior projects completed using DSP technology. If the Contractor is not approved for

the DSP programming, they may hire a qualified programmer approved by the consultant.

3. Projects that include networked audio or video systems will require the Contractor to submit the name of the person, in their employment, qualified to perform this work. This person shall have certification in computer network technology and hold one of the following certifications:
   a. CNP – Certified Network Professional Program.
   b. Computing Technology Industry Association - Network+ certification.
   c. MCSE – Microsoft Certified Systems Engineer.
   d. CNE – Certified Systems Engineer.
   e. CCNA – Cisco Certified Network Associate.
4. Projects that include software configurable, integrated central control systems must include a factory authorized programmer who is fully engaged in the work of system programming 8 hours a day 5 days a week. This person shall hold the highest level of certification from the manufacture of the equipment being programmed.
5. It the contractor does not employ a programmer that meets the above requirement, the Contractor is to enter an agreement utilizing the authorized independent programmer as a sub-contractor. Under this agreement, the Contractor will retain all the responsibility for a complete and working system. The Contractor must include in their bid time to work out any programming bugs that may occur in the initial programming stage. These items include working through the initial and final programming stage with the authorized independent programmer to provide a functional system, testing the programmer's graphical user interface for intended functionality and provide onsite support for the programmer in the uploading and testing of programming revisions.
6. The control systems programmer shall be present either by web meeting or in person at the end user interviews to acquire information firsthand. The control systems programmer shall submit a report outlining the meeting results to Contractor for approval. Only when the Contractor approves this report shall it be submitted to the consultant for review.
7. The Contractor shall provide information on how and by whom the requirements of the warranty period will be fulfilled.
8. The submittal must justify, in the judgment of the Consultant, the Architect, and the Owner, that the Contractor has the capability to manage and install a project of this size and scope and that he is capable of the necessary business and technical arrangements for this installation and the pursuant warranty service. Contractor may be disqualified as a bidder if all of the submittal does not meet the approval of the Owner and his/her representative.
9. Company: Work of this Section shall be performed by a Sound or Audio-Visual Systems Contractor who has at least five years direct experience with the devices, equipment and systems of the type and scope specified herein, and who has a fully staffed and equipped maintenance and repair facility, and who is licensed to perform work of this type in the Project jurisdiction.
10. Personnel: Use adequate numbers of skilled workers who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the Work of this Section. Supervisors shall have at least five years direct experience in similar work. Installation and maintenance personnel shall have at least three years direct experience in similar work.

11. Designated Supervisor: Provide a designated supervisor present and in responsible charge in the fabrication shop and on the Project Site during all phases of installation and testing of the Work of this Section. This supervisor shall be the same individual throughout the execution of the Work unless illness, loss of personnel, or other circumstances reasonably beyond the control of the Contractor intervene.
12. Staff Engineer: The Contractor shall have on his full-time payroll at least one staff engineer having five years minimum experience as an electronics engineer covering systems and projects comparable in substance and complexity to the project described herein. The staff engineer shall have NICET certification in Electrical/Electronics Engineering Technology and Audio Systems or equivalent. The signature of that engineer shall appear on all shop drawings and submittals.
13. Coordination: Coordinate the Work of this Section with the Work of all other Separate Contracts. Comply with Division 1.
14. Help Desk: The Contractor must employ a fully staffed help desk department that shall provide knowledgeable responses to inquiries regarding system operation. This department must have the ability to provide remote diagnostics to identify equipment faults for troubleshooting.

B. Cutting and Patching
1. Cut, patch, and extend existing work using skilled mechanics that are capable of matching existing quality of workmanship.
2. Assign work of moving, removal, cutting and patching, to trades qualified to perform the work in a manner to cause least damage to each type of work, and provide means of returning surfaces to appearance of new work.
3. Perform cutting and removal work to remove minimum necessary, and in a manner to avoid damage to adjacent work. Cut finish surfaces such as masonry, tile, plaster, or metals, by methods to terminate surfaces in a straight line at a natural point of division.
4. When new work abuts or finishes flush with existing work, make a smooth and workmanlike transition. Patched work shall match existing adjacent work in texture and appearance so that the patch or transition is invisible.
5. Protect existing finishes, equipment, and adjacent work that are scheduled to remain, from damage.
6. Promptly repair damages caused to adjacent facilities by demolition operations, at no change in Contract Amount.

C. Painting
1. Use skilled mechanics that are capable of painting audio-visual equipment and hardware to match architectural surroundings, where applicable.

D. Regulatory Requirements
1. Regulations Applicable: including but not limited to those defined in Division 1.
2. Comply with all applicable federal, state, and local labor regulations, and applicable local union and trade regulations.
3. Installation practices shall be in accordance to industry-accepted standards (ANSI, Cal-OSHA, IEC, IEEE, FCC, NEC, NFPA, ICIA, NSCA, CEDIA, BICSI) or local acts, codes and standards enforced at the place of work, whichever is most stringent.
4. Procure and pay for all necessary permits, licenses, inspections, and observe any requirements stipulated therein.

5. Provide UL/ULC fire rated enclosures around all audio-visual floor and back boxes where required by code.

E. Programming
1. User Group Interview:
a. Conduct interviews with the end-users to acquire programming requirements. Submit written results of the interview and the requirements set forth by the user group. Associate the user group requirements into the programming of each sub system. Submit to the Consultant a report that outlines the interviews conducted.

F. Pre-installation Meetings
1. Attend a pre-installation meeting at the project site with the Owner and his representatives in order to coordinate related work and scheduling issues.

G. Verification
1. Verify dimensions and conditions at the Project Site. Submit any conflicts in timely manner for resolution.

H. Shop Fabrication and Testing
1. Assemble and fully wire equipment racks at a fabrication shop off the Project Site. Burn-in for not less than 120 hours. Following burn-in, perform specified adjustment procedures. Provide test equipment and test according to procedures specified herein. Submit verification of shop test in timely manner. Following verification of shop test and when installation locations are ready as specified herein, deliver equipment racks and equipment to the Project Site and install.

I. Project Site Installation and Testing
1. Install as specified herein.
a. Perform specified adjustment procedures. Provide test equipment and test according to procedures specified herein. Request verification of Project Site test in timely manner.

J. Verification of Submitted Test Data
1. Re-test in presence of designated representative(s) of the Owner at reasonable mutual convenience. Provide services of the designated supervisor and an additional technician familiar with work of this Section. Provide all test equipment. Provide complete set of latest stamped submittals of record for reference. Provide complete set of Shop and Project Site Test Reports, as applies. Provide a complete set of manufacturer's original operation, instruction and service manuals for each equipment item for reference.

K. Reference/Project Record Documents
1. At all times when the work is in progress, maintain at the workplace, fabrication shop or Project Site as applies, a complete set of the latest stamped, action submittals of record for reference. Also maintain a separate, clean, undamaged set for preparation of Project Record Documents. Also maintain at the workplace a complete set of manufacturer's original operation, instruction and service manuals for each equipment item for reference.

1.07 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling and Unloading
1. The Contractor shall take receipt of all Owner Furnished Equipment at the project site or at a local warehouse.
2. Deliver materials in manufacturer's original undamaged packages or in bulk packing which provides equivalent protection from rough handling, dust and dirt.
3. Deliver all assembled equipment racks in custom manufactured wood crates to avoid damage during shipping.
4. All packing, shipping, insurance, handling and storage costs of equipment and materials shall be the responsibility of the Contractor.
5. The Contractor shall be responsible for insuring all equipment and installation materials stored in their shop facilities until it is delivered to the Project Site and a delivery acknowledgement is received from the Owner or its authorized representative.
6. Equipment unpacked for inspection but not ready for permanent installation must be returned into its protective packing.
7. The Contractor shall be responsible for furnishing a temporary substitute for equipment that could not be delivered in time for system operation. All costs associated for renting, shipping, and handling temporary substitute equipment shall be the responsibility of the Contractor.
8. In the event the equipment or installation material delivery is delayed, the Contractor must employ the fastest means of delivery service available to deliver the equipment on time. All costs for expediting the delivery of equipment shall be the responsibility of the Contractor.
9. Store packaged materials off the ground or slab in a manner to protect them from elements, especially moisture damage.
10. Deliver completed, wired, tested equipment racks to associated equipment rooms at the Project Site when major work of all other separate contracts is complete, equipment room ventilation is operating with clean filters in place, the area is clean and free from airborne contaminates, and continuing work of other trades will not produce airborne contaminates or permit transport of such airborne contaminates to the equipment rooms.

B. Acceptance at Site
1. All equipment and installation material delivered to the Owner shall be properly documented in the form of delivery receipts.
2. Equipment delivered to the Project Site must include a delivery acknowledgement receipt signed by the Owner or its representative. Issue a signed copy of the delivery receipt to the Owner and file the signed copy for future reference.
3. The Contractor shall be responsible for the insurance coverage and security of equipment delivered to the Project Site until it receives an acknowledgement of delivery from the Owner or its authorized representative.

C. Storage and Protection
1. The Contractor shall provide a safe and secure storage location for all equipment and installation materials until they are delivered to the Project Site and it receives an acknowledgement of delivery from the Owner or its authorized representative.

2. For equipment assembled and tested at the Contractor's shop facility and delivered to the Project Site, ensure that the equipment is properly protected from improper handling, rain, water, humidity, moisture, heat, direct exposure to sunlight, dust and dirt during delivery and storage on or off the Project Site.
3. Do not remove protective packing from equipment until they are ready to be installed.
4. If, after equipment is installed, the Project Site cannot be cleaned or is still not clean because of on-going work by others, provide protective covering and protection to prevent airborne dust and dirt originating from damaging equipment.

1.08 PROJECT SITE CONDITIONS

A. Environment Requirements
1. The spaces where audio-visual system assemblies are installed shall meet the following requirements:
a. Free from dust generated from construction.
b. The room temperature shall be within the specified operating temperature recommended by the manufacturer.

1.09 SEQUENCING

A. Submit all testing documentation to the Owner's Representative for review prior to requesting the Fabrication Inspection and Substantial Completion inspections.

B. Allow adequate time for corrections to be made after inspections to maintain the Project Schedule.

1.10 SCHEDULING

A. Comply with the Project schedule.

B. Make all Submittals specified herein in a timely manner. Failure to make timely submittals complete as specified herein is considered to be lack of substantial progress of the Work of this Section. Contractor is to work around client schedule throughout the duration of the project.

C. Deliver all equipment, devices and materials required for the Work of this Section and install, test and ready all work for Acceptance Testing at least fourteen days prior to the completion date for the associated area of the Project, unless specifically instructed otherwise by the Owner.

D. Temporary Equipment: Provide and operate, without claim for additional cost or time, temporary equipment and/or systems to provide reasonably equivalent function, as determined by the Owner, in lieu of the Work of this Section which is incomplete or found not in conformance with the Contract Documents as of seven days prior to the completion date. Provide such temporary equipment until Acceptance of the Work of this Section. Thereafter, remove such temporary equipment.

E. It shall be a common understanding that there is a time constraint when executing this work. The Contractor shall use all means and resources to complete this project on or before the specified schedule at no additional cost to the Owner. This includes

working beyond normal business hours and days, additional manpower, additional tools, etc.

1.11 WARRANTY SERVICE

A. Warrant all Work of this Section to be free from defects in materials and workmanship for a minimum of 1 year from the date of Owner acceptance of the Work of this Section.

B. All manufacturers' equipment warranties shall be activated in the Owner's name and shall commence on the date of system acceptance. In the case of Contractor modified equipment, the manufacturer's warranty may be voided. In such cases, provide a warranty equivalent to that of the original manufacturer.

C. All high-level software shall follow the warranty conditions specified by the manufacturer. Immediately update or upgrade the Owner's installed software as soon as new versions, updates or patches become available from the manufacturer at no additional cost to the Owner within this warranty period.

D. Response Time: Provide a qualified technician familiar with the work at the Project Site within 12 hours after receipt of a notice of malfunction. Provide the Owner with the telephone number attended 8 hours a day, 5 days a week, and an answering service or equivalent facility attended 24 hours a day, 7 days a week, to be called in the event of a malfunction. Provide repairs at no expense to the Owner and at the Owner's request, alternate facilities, services, and systems for the duration of the repairs to any defective work of this Section. Provide a complete and operational System, within 48 hours after notification of a malfunction.

E. All work requested due to warranty issues shall be performed during regular working hours unless the Owner agrees to pay the difference in labor rates for overtime or nighttime work.

F. The Contractor shall use qualified service personnel to respond to all warranty issues or calls.

G. Off Site Service: Conduct all warranty repairs and services at the Project Site, unless in violation of manufacturer's standard product warranty. Provide substitute systems, equipment, and/or devices acceptable to the Owner for the duration of off-site repairs. Provide transportation for substitute and/or test systems, equipment, devices, materials, parts, and personnel to and from the Project Site.

1.12 OWNER'S INSTRUCTIONS

A. General
   1. Conduct training on the completed system at a reasonable convenience of the Owner during normal Owner business hours. Contractor is to assess the complexity of the system and shall fully train the operation and maintenance staff named by the Owner.
   2. Do not start training until all systems have been commissioned, training manuals are approved and an agenda along with schedule of each departmental training session has been submitted to the owner.

3. Training shall be conducted in the actual room that is the topic of the training session.
4. The client asserts legal and beneficial ownership of all training materials which are specifically commissioned for this project.

B. Operator Training – Do not start training before system is in full operation and all components have been signed off by owner's representative. Use the items covered in the commissioning portion of this specification as a basis for the training curriculum.
   1. At least two 4-hour sessions of instruction will be given to familiarize the Owner and staff with the operation of the system.

C. Maintenance Training
   1. At least two 4-hour sessions of instruction will be given in order to learn how to maintain and troubleshoot the system. A maintenance binder shall be provided by the Contractor with all manufacturer-specific operating and maintenance information for each piece of equipment used. On large jobs, the binders will be sub-divided into individual audio, video and control binders. Provide training on at least the following system features:
      a. Firmware upgrades
      b. Helpdesk features
      c. Complete use of system as outlined in the Commissioning section plus advanced troubleshooting.

D. Training Video
   1. A training video shall be produced and cover all aspects of the systems operation.
   2. Each page of all user interfaces shall be explained and recorded while gestures are made on the screen. Each button on the user interface shall be explained and demonstrated.
   3. All portable equipment that connects to the system shall be demonstrated both in their physical connection and routing method at the user interface.
   4. All patch bays shall be explained and demonstrated.
   5. All source equipment shall be explained in both physical loading of media and transport control as well as user interface control.
   6. Demonstrate on basic troubleshooting.
   7. Provide training on items as outlined in the Commissioning section of this document.
   8. Demonstrate system start up and shut down.
   9. Explain and demonstrate help files associated with touch panels.
   10. Audio and video files shall be combined and burned to DVD for distribution to each department.
   11. Provide professional MP4 with searchable index of topics covered.
   12. Provide label with client's logo, room name/number, title, length and topics covered.

E. A training manual specific to this system will be written covering the basic and advanced functional techniques necessary to operate the system in a reliable and fully functional condition. The Contractor shall submit hard color copies of the training manual as well as a soft copy in PDF or DOC format. Provide a hard copy of the training manual for each person to be trained. This manual shall include:
   1. All contact information, including emergency and after-hours phone and pager numbers, for requesting service assistance from the Contractor.

2. A 11x17 set of as-built drawings of the completed project (a full-sized set will be issued to the client for their use, a half-size set will be attached to the inside back door of the main equipment rack).
3. A table of contents at the beginning of the manual.
   a. The manual will begin by explaining basic information such as manual references, abbreviations, any assumptions made by the author, prerequisites required, numbering convection, etc.
   b. It will then proceed to the manual objectives.
   c. Explain what the end user should understand after reading the manual.
   d. It will cover the basics of the user interface including start up and shut down procedures, log on procedures, access privileges, operator password, levels of security, file structure, etc.
   e. The manual shall proceed to describe each user interface and its function. It will cover every layer of the interface and how to navigate through them.
   f. Each of the system presets shall be explained and the physical setup of the equipment and floor plan during presets shall be illustrated. Source equipment shall have their routing scheme explained and illustrated. Portable equipment and its connection to the system shall be explained and illustrated.
   g. The manual will end by explaining basic troubleshooting procedures and equipment care instruction.
4. The Contractor's maintenance instructions, which will include the manufacturer's maintenance instructions found on the factory manuals to keep the manufacturer's warranty in force.
5. A list of consumables (fuses, batteries, etc.) required to keep the system operating over time, along with sources of supply (if not readily available).
6. The Contractor shall compile and submit all factory warranty registration forms or cards for each piece of equipment furnished for this project.
7. A form requesting feedback from the end user as to how the manual can be improved and a section to report errors discovered.
   a. The Contractor shall make the corrections and improvement suggestions after receiving feedback from the users. This will be completed at no charge to the client. The manual will contain a date stamp and version number. Each feedback and error correction manual reissue will include a new version number.

F. Initial Use Support
   1. Provide standby trainer/system engineer during the first two public events.

1.13 MAINTENANCE

A. The Contractor shall, within the warranty period, schedule two visits to inspect and perform preventive maintenance on the system. The first visit shall be six months after the commencement of the warranty period. The last visit shall be just prior to the end of the warranty period.

B. Cache for event logging must be set to record unlimited events until the Contractor's first maintenance site visit. After the Contractor's first maintenance site visit, the cache can be limited to the Owner specified level.

C. The Contractor shall use qualified service personnel to conduct all maintenance work.

D. All maintenance work shall be performed during regular working hours unless the Owner agrees to pay the difference in labor rates for overtime or night time work.

PART 2 - PRODUCTS

2.01 GENERAL

A. Quality of Products
1. Materials and equipment specified herein have been selected as the basis of acceptable quality and performance and have been coordinated to function as components of the specified systems.
2. Where a particular material, device, piece of equipment or system is specified directly, the current manufacturer's specification for the same shall be considered to be a part of these specifications, as if completely contained herein in every detail.
3. Each material, device or piece of equipment provided herein shall comply with all of the manufacturer's published specifications for that item.
4. Equipment shall be from the manufacturers' current stock and shall not be stored longer than 1 year prior to installation, unless written approval to do otherwise is provided by the manufacturer and submitted for review by the Owner.
5. All products shall be a product of firms regularly engaged in the manufacturing of electrical, electronic or optical equipment. The equipment shall be the latest model or type offered which meets the applicable specifications at the time of the submittal. Discontinued items replaced by newer models or versions are prohibited and should not be submitted for review.
6. Quality of workmanship and fabrication of all equipment and components, which are custom fabricated, shall be comparable to professional equipment produced by specialized manufacturers of the trade involved and will be verified by inspection. Only firms having 5 years of experience in all aspects of the fabrication and installation of similar systems will be allowed to perform the work.
7. All materials and products shall be new and of professional quality. Unless specifically stated in the drawings or specifications, no existing or used materials will be installed.

B. Quantity
1. Provide the quantity of products as shown on the Contract Drawings, or as otherwise indicated herein.
2. The equipment listed in section 2.2 consists of all major equipment for the project. The Contractor shall integrate into the system design and provide any additional components, wiring, programming, etc., to complete a functional system operating as described within the specifications and the for construction drawings.
3. Components or equipment not specified or indicated on the drawings that are required to make a fully functional systems per the Owner's requirements and the design intent, shall be furnished and installed by the Contractor, and shall be submitted for Owner review.

C. Preference
   1. Where more than one manufacturer is listed herein as acceptable or equivalent, no preference is intended or implied by the order of listing.

D. In the event that a specified piece of equipment or product has been superseded, discontinued or is no longer available from the manufacturer, the Contractor shall submit a request for substitution of the originally specified product. The substitute product shall be the manufacturer's most current model of the specified product, or if the line has been discontinued, a product by the same manufacturer with specifications meeting or exceeding, and as close as possible to those of the originally specified product. Refer to Alternatives and Substitutes section for clarification.

E. Provide Complete
   1. Provide all auxiliary and incidental materials and equipment necessary for the operation and protection of the Work of this Section as if specified in full herein.

F. Provide New
   1. All materials provided under the Work of this Section shall be new, shall be the manufacturer's latest design/model, and shall be permanently labeled with the manufacturer's name, model number and serial number.
   2. Products and materials shall be clean, free of defects, damage and corrosion.

G. Similar
   1. Similar devices shall be of the same manufacturer, unless specifically noted otherwise in these specifications.

H. Safety Agency Listing
   1. All devices provided under the Work of this Section that are connected to the Project electrical system shall be listed by Underwriters Laboratories (UL) or other Nationally Recognized Electrical Testing Laboratory acceptable to the Authorities having jurisdiction at the Project site and shall be so labeled. Absent such listing, comply with Regulatory Requirements applicable to Unlisted Equipment.

I. Power Rating
   1. All devices provided under the Work of this Section that are connected to the Project electrical system shall provide stable performance in full accordance with these specifications when operated on main service which complies with ANSI standard tolerances for voltage, frequency, transients, and related parameters.

J. Circuit Protection
   1. All active devices shall include integral fuse or circuit breaker protection.
   2. All circuit breakers shall be fully magnetic.
   3. Protection devices shall be located to facilitate examination, resetting and/or replacement without the need to disassemble or demount the associated device.
   4. Contractor-fabricated items shall be provided with either indicating type circuit breakers or fuses of the clear glass cartridge type, mounted in fuse holders which will indicate a blown or defective fuse.

K. Continuous Use
1. All active circuitry shall be solid state and shall be rated for continuous use. All circuit components shall be operated in full compliance with the manufacturer's recommendations and shall contain sufficient permanent identification to facilitate replacement.

L. Construction
1. All electronic equipment shall be of the "dead-front" type and shall be designed for standard 19" EIA rack mounting, unless otherwise indicated.
2. Steel frames and enclosures shall be designed and wired to eliminate all induced currents within both the units and the systems.
3. All bolted connections shall be made with self-locking devices.
4. Coordinate all consoles and panels so that the general appearance is similar, or as directed by the Owner.
5. All operating panels shall be at least 1/8" thick aluminum.
6. Provide locking panel covers on all recessed, semi-recessed or surface mounted control panels not located in the equipment rooms, unless specifically noted otherwise. Panel locks shall be flush with no protrusions beyond the panel face when the door is closed. Recessed control panels shall be recessed within the back box to a depth sufficient to permit a locking hinged panel cover to completely close without affecting any device within the enclosed area.

M. Circuit Boards/Modules
1. All printed circuit boards or modules shall be mechanically secured by bolt or friction-loading guide, in addition to any electrical connector attachment, and shall include an integral extraction grip.
2. Printed circuit boards shall be connected to associated circuitry via soldered connections or precious metal positively keyed card edge connectors.
3. All Contractor-fabricated printed circuit boards shall be at least 1/16" thick G-10 glass fabric epoxy base, copper plated to a minimum density of 2.0 oz./sq. ft. on one or both sides and finished with 60/40 tin/lead solder either hot rolled or plated over the copper. All holes through the boards shall be plated through and solder filled. All boards shall be permanently identified with a designation that matches that of the mating connector or board position in the assembly.

N. Identification
1. Provide permanent intelligible identification on, or adjacent to, all connectors, receptacles, controls, fuses, circuit breakers, patching jacks, and the like. This identification shall clearly and distinctly indicate the function of the item and shall be numbered or lettered to correspond with the function, circuit and location consistent with field and shop drawings.

O. Modular Products
1. The drawings show conventionally packaged components to convey design intent.
2. Card cages to have front and rear closure panels to provide a finished appearance.
3. Except as noted below, modules of different functional types are permitted to share the same card cage/mounting frame and/or power supplies as applicable and if mechanically and electrically compatible.
4. With amplifier input driven 10 dB beyond input level required to produce full rated output, amplifier shall withstand indefinitely any of the following load

conditions without instability of operation of main over current protection (i.e. no blown fuses or circuit breakers).
a. "Short" circuit of 0.1 ohm.
b. Open circuit (no load).
c. Rated load impedance.

5. Maintain sense of signal polarity from input to output.

P. Keys
1. Key all boxes, cabinets, enclosures, panels, controls, doors and related provided for similar usage within a system identically. For each unique key type, provide a quantity of ten. Stamp each key with a reference designation.
2. Submit a schedule of keying to the Owner. Where so noted, provide Project Standard lock cylinders and keys; coordinate with the work of other Sections.

Q. Lectern Power Cord
1. The power outlet connecting the lectern to the floor box must be twist-lock type. The power cord connecting the podium to the floor box must be 12 inches shorter that the low voltage cable connecting it. This will protect the low voltage cable from damage if the podium was to be moved inadvertently without disconnecting the cables. The power cable shall include a wire-rope strain relief to keep the power cord from damage. See cable detail on plan-set for more information.

R. Assistive Listening System (IR)
1. An assistive listening system using Infrared type headsets will provide personal monitoring of the audio program for the hearing impaired. A frequency agile transmitter with no less than 2 channel capability will broadcast the main audio program to personnel headsets. The system and quantity of headsets supplied shall conform to the ADA requirements (section 219 and 706) for the space. Stereo headset type and hearing aid compatible (T-Coil) listening devices will be provided; ear bud type devices are not acceptable. A drop-in type battery charging system capable of servicing multiple receivers simultaneously will be supplied with this system. Provide enough battery charging capacity to charge each receiver supplied simultaneously. Follow the table below for quantity requirements.

Capacity of Seating in Assembly Area	Minimum Number of Required Receivers	Minimum Number of Required Hearing Aid Compatible Receivers
50 or Less	2	2
51 to 200	2, plus 1 per 25 seats over 50 Seats *1	2
201 to 500	2, plus 1 per 25 seats over 50 Seats *1	1 per 4 Receivers *1
501 to 1000	20, plus 1 per 33 seats over 500 *1	1 per 4 Receivers *1
1001 to 2000	35, plus 1 per 50 seats over 1000 seats *1	1 per 4 Receivers *1

2001 and over	55, plus 1 per 100 seats over 2000 seats *1	1 per 4 Receivers *1

*1 Or fraction thereof

S. Projection Screens
   1. Provide extra screen material drop to locate the projection screen at the optimum viewing angle where required. Verify screen drop requirements with architectural sections and elevations.

T. Provide enclosure systems including, but not limited to racks, cabinets, cases and related panels and accessories as specified herein, or approved equivalent. Provide size and quantity as shown on drawings. Provide color as specified by Architect. If no color is shown on drawings, submit manufacturer's standard color chips for selection.

U. Cable Tray: Provide aluminum ladder style cable tray with flange in side rails where called out in drawings. Size the cable tray to accommodate all wire that must pass through it. Provide all supporting hardware and accessories.
   1. Ladder Style Cable Tray
      a. P-W Industries.
      b. Equal by Hubbell.
      c. Approved equal.

V. Floor Mounted Equipment Racks: Provide each bay with basic frame, vented locking rear door, top panel with single 10” fan, certified seismic floor anchor kit, ganging hardware, except where otherwise indicated, at each ensemble of bays, provide end (side) panels to provide complete enclosure.
   1. Rack cabinet, heavy duty welded 14ga. CRS, single bay of maximum dimensions 83-1/8"(H) x 24"(W) x 32.5"(D); floor supported with accessory louvered side rack side panel.
      a. Mid Atlantic WRK Series.
      b. Equal by Atlas/Soundolier.
      c. Approved equal.
   2. Turret cabinet:
      a. Mid Atlantic Slim 2 Series.
      b. Equal by Atlas/Soundolier.
      c. Equal by Hammond Manufacturing.
   3. Wall cabinet, tilt out:
      a. Atlas/Soundolier AWR Series.
      b. Mid Atlantic WRS Series.
      c. Equal by House of Metal Enclosures (HOME).
      d. Equal by Hammond Manufacturing.
   4. Wall Mounted cabinet:
      a. Atlas/Soundolier 300 Series.
      b. Mid Atlantic DWR Series.
      c. Equal by Hammond Manufacturing.
   5. Floor mounted pivoting rack:
      a. Mid Atlantic SR-40-22 Swing Rack.
      b. Equal by Atlas/Soundolier.

W. Rack Panels and Accessories: Rack Mounting Screws: Screws 10-32; length as required for at least 1/4" excess when fully seated; oval head with black plastic non marring cup washer or equivalent ornamental head; nickel, cadmium or black plated; Phillips, Allen Hex, Square-Tip or Torx drive. Slotted screws are not acceptable.
   1. Blank Panels:
      a. Atlas/Soundolier S19 Series.
      b. Zero ZP112000 Series.
      c. House of Metal Enclosures (HOME) Series PM.
      d. Middle Atlantic Products BL, SB or HBL Series.
   2. Vent Panels:
      a. Middle Atlantic ETF Series.
      b. Equal by Atlas/Soundolier.
      c. Equal by Zero.
      d. Equal by House of Metal Enclosures (HOME).
   3. Shelf:
      a. Middle Atlantic Products U Series.
      b. Atlas/Soundolier SH19 Series.
      c. Zero A52 Series.
   4. Drawer:
      a. Atlas/Soundolier SD Series.
      b. Middle Atlantic Products UD Series.
      c. House of Metal Enclosures (HOME) SD Series.
      d. Zero A43/A36 Series.
   5. Rackmount Computer Keyboard: Middle Atlantic RM-KB.
   6. Equipment Custom Rackmount Shelf: Middle Atlantic Products Model RSH-4A Series.
   7. Rackmount Computer Keyboard.
      a. Mid Atlantic RM-KB series.
      b. Approved equal.
   8. Computer Monitor Rackmount.
      a. Mid Atlantic RM-MM series.
      b. Approved equal.
   9. Horizontal Lacer Bars
      a. Mid Atlantic LBP-IR4, LBP-1S, LBP-1P.
      b. Equal by Atlas/Soundolier.

X. Equipment Enclosure Ventilation: Provide UL Recognized devices. Connect to enclosure power, comply with applicable Codes.
   1. Fan panel, 5 1/4" high painted steel rack panel with 4" diameter fans, each fan with chrome plated finger guard, low speed air flow, two fans per panel, total 120 CFM:
      a. Mid Atlantic QFP-2 Series.
      b. Atlas/Soundolier ES/IS Series.
      c. BGW Systems.
   2. Thermostatic Fan control module, user definable temperature range with status LED’s, temperature sensing probe.
      a. Middle Atlantic FC Series.
      b. Atlas/Soundolier CFT Series.

Y. Equipment Enclosure Power and Signal Grounding: Comply with applicable Codes and applicable portions of Division 26. Provide UL Listed devices, Specification or Hospital Grade. Provide all junction boxes, raceway, fittings, wire, supports and

fastenings as required for complete installation. Unless otherwise noted, provide receptacles of NEMA 5-15R configuration.

1. Full height receptacle strip, Isolated Ground:
   a. Wiremold 3000 Plugmold IG Series.
   b. Middle Atlantic PD series vertical power strips.
2. Full height receptacle strip, three or more circuits, Isolated Ground:
   a. Wiremold 3000 Series with Specification Grade IG 5262 Series receptacles.
   b. Middle Atlantic PD series vertical power strip.
3. Wireway, lay in, NEMA 1: Any meeting NEMA 1 and UL870. Size as required.
4. Flexible metal conduit: Comply with Division 26.
5. Sequencing Power System:
   a. The Contractor is to design and build power sequencing and surge suppression systems that will control and distribute power in the equipment racks. The system will be designed to sequentially connect power to all of the audio-visual equipment in the equipment racks. Outlets are mounted to the unit's back plate or on a remote strip. If the project utilizes a control system, the sequencing power system will be controlled by the software configurable control system. The touch panel's shut down button will prompt a second time asking, "Are you sure you want to shut the system down?" A positive response will activate system shut down. A push button control station's shut down button will be pressed twice to shut down the system. If the project does not include a control system, the Contractor is to provide a dedicated sequential controller in the equipment racks.
      1) 15 amp or greater power capacity.
      2) 3-prong 15 amp 120VAC isolated ground outlets (provide required amount).
      3) Individual sequencing steps for each outlet.
      4) Adjustable power-up time delay and outlet sequencing intervals.
      5) Modular power raceway systems shall be constructed of 18-gauge min-spangle galvanized steel.
      6) Remote controllable via contact closures (if applicable).
      7) Status indicator on touch panel (if applicable).
   b. Approved subject to above:
      1) Middle Atlantic RLM-XX, RM-XX, R-XX or M-XX Modular Power Raceway Series.
      2) Middle Atlantic USC-6R Universal Sequencing Controller.
      3) Equal by Atlas Soundolier.
6. Signal Grounding bus bar, insulated from enclosure frame:
   a. Atlas/Soundolier BBG Series mounted on standoff insulators.
   b. Zero A32 Series.
   c. Middle Atlantic.
   d. Panelboard Isolated Ground bus kit by manufacturer of Project Panelboards specified in Division 26.
7. Multi-Outlet Assembly, Surge Suppressing, UL Listed. Comply with ANSI/IEEE C62.41-1980. Provide at least six receptacles. Provide equivalent to:
   a. Surgex SX RT series.
   b. EFI Electronics Corporation Model 153.
   c. MCG Electronics, Inc. Model 296 (subject to UL Listing).
8. Computer Grade Uninterruptible Power System, UL Listed. Provide continuous, no-break power with sine wave output. Provide Transient Over-

Voltage (TOV) Surge Suppression; comply with ANSI/IEEE C62.41-1980, Category A and Category B. Provide complete isolation from Line. Provide output voltage regulation to ANSI C84.1 for computing equipment. Provide output KVA, switch-mode power supply rated, not less than 150% of connected load indicated. Provide one for each Central Processing Unit, Digital Signal Processor, and automated control console. Provide equivalent to:

a. Best Power Technology, Inc. "Micro-Ferrups" Series.
b. Best Power Technology, Inc. "Axxium" Series.

Z. Audio Patching and Related:

1. Audio Patching Jack Assemblies; jackfield two times forty-eight (2x48) jacks: Factory pre-wired to insulation displacement connection system, normals brought out to connection system, connection system on backplane of jackfield chassis or a separate unit on cable harness, 2 row by two times forty-eight (2x48) jack array of Bantam Plugs:
   a. ADC Pro Patch Mark IV (Bantam).
   b. Bittree Audio TT (Bantam).
   c. Switchcraft TTP96FA (Bantam).
2. Audio Patching Jack Assemblies; jackfield 48 jacks: Factory pre-wired to insulation displacement connection system, normals brought out to connection system, connection system on backplane of jackfield chassis or a separate unit on cable harness, 2 row by 24 jack array of 1/4" tip-ring-sleeve Longframe pattern jacks:
   a. ADC Pro Patch Mark IV Long Frame.
   b. Bittree Audio Long Frame ¼”.
3. Audio Patching Cords: Manufactured to match mechanically, electrically and materials with audio patching jack assemblies specified herein. Flexible shielded cable, length as required. Provide with non-corroding metal. Provide equivalent to:
   a. ADC Pro Patch ¼” Long Frame Patch Cords.
   b. ADC Pro Patch Bantam.
   c. Bittree ¼” Long Frame Patch Cords.
   d. Bittree Audio TT (Bantam) Patch Cords.
   e. Provide Quantity:
      1) Two foot: Eight for each 2x24 Audio Jackfield.
      2) Two foot: Sixteen for each 2x48 Audio Jackfield.
4. Audio Patching Cords, Adapter: Manufactured to match mechanically, electrically and materials with audio patching jack assemblies specified herein. Flexible shielded cable, length six feet. Provide with non-corroding metal 1/4" tip-ring-sleeve longframe pattern plug one end equivalent to Neutrik. Provide opposite end, Circular Audio Connector, Cord, as specified herein. Provide equivalent to:
   a. Patch to Male:
      1) Audio-Line 310 Series.
      2) Pro Co Sound C-PJ/MXB-B-6-P2H.
   b. Patch to Female:
      1) Audio-Line 310 Series.
      2) Pro Co Sound C-PJ/FXB-B-6-P2H.
   c. Provide Quantity:
      1) Patch to Male: Provide 12.
      2) Patch to Female: Provide 12.

5. Patching Cord Holders: Provide adjacent to each jackfield. Provide quantity as required to store patching cords specified herein:
   a. Audio Accessories Maxi Holder.
   b. Trompeter Electronics Model CH-50.
   c. Pomona Electronics 4408.

AA. Video Patching and Related:
1. Video Patching Jack Assemblies; jackfield (2x32) isolated jacks: 75 Ohm digital and analog capable, ((2x32) jack array, 3GHz bandwidth, SMPTE 259M and 292M compliant:
   a. Canare (MD-Series)
   b. Bittree (Mini-WECO)
   c. ADC (PV-Series)
2. Video Patching Cords: Manufactured to match mechanically and electrically with video patching jack assemblies specified herein. Flexible shielded cable, length as required. Provide with non-corroding metal. Provide equivalent to:
   a. Canare (Mid-size Video Patch Cord)
   b. Bittree (Mini-WECO Patch Cord)
   c. ADC (ST series Patch Cord)
   d. Provide Quantity:
      1) Two foot: twelve for each 2x32 Video Jackfield.

BB. Data Patching and Related:
1. Data Patching Jack Assemblies; jackfield two times twenty four (2x24) jacks. Meet or exceed Category 6 requirements described in TIA/EIA-568-C.2-1 as well as the Class E requirements described in ISO/IEC 11801-B.:
   a. Leviton eXtreme 6+ Quickport Patch Panel (or equal).
2. Provide patch cords for patch points as required.

CC. Fiber Patching and Related:
1. Fiber Patching Jack Assemblies. Meet or exceed all TIA/EIA-568-C requirements:
   a. Leviton Opt-X Ultra Fiber Rack Mount Enclosure (or equal).
2. LC type adapters.
3. Provide patch cords for patch points as required.

DD. Basic Microphone Package
1. Provide basic microphone package to consist of:
   a. Two handheld vocal microphones equal to Shure SM58-LC
   b. One handheld vocal microphone equal to Shure Beta 58A.
   c. One instrument microphone equal to Shure SM57.
   d. One instrument microphone equal to Shure KSM137.
   e. One instrument microphone equal to Shure Beta 27.
   f. Supply 25 ft cable for each microphone equal to Shure C25B.
   g. Supply six microphone stands equal to Ultimate Support Pro-SB.

2.02 PRODUCTS

A. Major System Components

B. The above list of Major System Components only outlines the major items necessary to allow the system to function as designed. It lists no power supplies, balancing transformers, power splitters, modular cards or other auxiliary components required to achieve a functioning system. Contractor is required to supply all components needed to provide a complete and operable system as outlined in the contract documents. The full set of construction documents are to be used when preparing a bid. This list is not intended to provide a full bill of materials.

C. Patch bays shown on plans and elevations are for placeholder information only. Contractor is to determine the exact amount of patch needed as per single line diagrams.

2.03 FINISHES

A. Any item or component of the Work of this Section which is visible shall comply with the following. Finishes noted or scheduled on the Contract Drawings shall take precedence. Submit all color samples of all items visible to public for approval.
   1. Where finishes are not noted or otherwise defined in the Contract Documents, submit manufacturer's standard finish samples for selection by the Owner.
   2. Paint loudspeaker cabinets to match exactly the surrounding and adjacent surfaces. Submit paint sample to Owner’s representative for approval.
   3. Unless otherwise noted, receptacle or device plates subject to connection or operating force shall be stainless steel or hard anodized aluminum. Provide plates which generally match the appearance of project standard receptacle or device plates in view in the same area. For anodized aluminum, submit samples of standard colors for selection by Owner.
   4. Operating panels shall be steel, primed, painted with thermosetting epoxy paint, with legends silk-screened in contrasting color, and coated with clear epoxy thermosetting coating; or aluminum, hard anodized, with legends engraved and filled with contrasting color, all coated with clear epoxy thermosetting coating.

5. All steel surfaces shall be treated with primer equivalent to zinc phosphate and finish painted with baked enamel or painted with a thermo setting epoxy paint.
6. All aluminum surfaces, except those used as operating surfaces, shall be anodized and then painted with a thermo setting epoxy paint.

B. Custom Fabricated Plate Screws
1. Match the finish of the screws used to mount the custom fabricated plates with the finish of the custom fabricated plate.

C. Ceiling Loudspeaker Grilles
1. Paint loudspeaker grilles to match exactly the surrounding and adjacent surfaces (when speakers are recessed). Apply paint to permit servicing of loudspeakers without damage to finish of adjacent or adjoining surfaces. Provide uniform appearance. Do not obstruct grille openings with paint. Submit paint sample to Owner's representative for approval.

D. Equipment or Cover Plates
1. Paint equipment or cover plate to match exactly the surrounding and adjacent surfaces when require by architect.

E. Manufacturer's logos
1. Remove all manufacturers' names, logos, or other symbols from speakers or other objects placed in view of the public.

2.04 ALTERNATES AND SUBSTITUTES

A. Substitutions of equal equipment beyond the alternatives listed will be permitted only in accordance with Division 1. If a requested substitution requires a change in any of the contract drawings, a revised drawing must be submitted as part of the substitution request. The Owner's Representative shall be the final judge of the acceptability of substitutions. The burden of proof of equivalence is the responsibility of the Contractor.

B. Acceptance of a product shall not, in any form or manner, relax the system performance requirements of this Specification and the performance characteristics of the product.

C. The Contractor shall submit for review a complete list of proposed substitutions for approved equipment listed in Part 2.

D. For all substitutions, the Contractor shall provide the manufacturer's independent test data to demonstrate that the proposed alternatives to the approved equipment comply with the specifications. Specifications shall contain at least all information available for the specified product.

E. The Contractor shall submit a description and drawings showing all changes to the Contract Documents that the proposed substitution will require for proper functionality and operation.

F. Proposed substitutions shall not affect dimensions shown on the Contract Document except as submitted for review and approved by the Owner.

G. Any redesign or construction costs required to integrate the proposed substitution shall be the responsibility of the Contractor. Any costs incurred by the Owner, Owner's representatives, Architect, Engineers or Consultants attributable to the integration of a proposed substitution shall be borne by the Contractor.

H. Any proposed substitution shall have no adverse effect on other trades, the construction schedule or specified warranty requirements.

I. The functionality, performance, general appearance and quality of the proposed substitution shall be equivalent to or superior to those of the specified item.

J. Any change to the Contract (deductive or additive cost) associated with a proposed substitution shall be submitted to the Owner for review at the time the substitution is proposed and accompanying a substitution request documentation.

K. The Contractor shall provide the same warranty for the substitution that the Contractor would for the specified product.

L. The Contractor shall coordinate the installation of the accepted substitute, making such changes as may be required for the Work to be complete in all respects equal to the designed system before the substitution was made. In the event that the substituted material or equipment fails to meet performance testing standards after installed, the Contractor shall replace substituted material or equipment with those initially specified.

PART 3 - EXECUTION

3.01 GENERAL

A. Perform the Work of this Section in accordance with acknowledged industry and professional standards and practices, and the procedures specified herein.

B. Furnish and install (herein, "provide") all materials, devices, components, and equipment required for complete, operational systems.

C. Contractor is to supervise the installation of back boxes and terminal cabinets installed by the Division 26 Contractor. Contractor is to verify that correct boxes are installed in their proper locations before any drywall has been installed.

3.02 EXAMINATION

A. Immediately report to the Consultant any discrepancies between the specifications and drawings. This includes discrepancies between the technical specification documents and actual field dimensions or findings that may hinder installation work, conflict with other trades, or cause delays.

B. Carefully examine all details that affect all aspects of the systems described in the specifications and drawings.
   1. Examine, coordinate and confirm all drawings and details.
   2. Examine, coordinate and confirm all electrical power requirements, conduits, raceways, boxes, and etc.
   3. Examine, coordinate and confirm work of other trades that may influence the outcome of the design, specification, and performance of the systems.

3.03 PREPERATION

A. This installation section is only meant as a guideline for the Contractor. The Contractor shall be responsible for executing all installation work in a manner that is in accordance to industry-accepted standards or governing codes, whichever is more stringent. Installation activities shall be executed in an organized and orderly manner. These steps include, but are not limited to, pre-delivery testing, delivery, unloading, installation, equipment / cable labeling, programming, set-up / calibration / alignment / adjustment, testing, commissioning, training, and documentation.

B. Protect all existing work surfaces, furniture, equipment, fixtures and etc. before commencing installation work. Any damage to the existing physical and electrical property due to installation work shall be the responsibility of the Contractor.

C. Immediately hand over any de-installed equipment to the Owner for safe-keeping if equipment is to be reused.

D. Carefully remove any obstructions such as fixed seating, ceiling tiles, furniture, equipment and etc. that would obstruct or hinder the installation work. Damage caused by undue care in moving these items shall be responsibility of the Contractor.

E. Examine, coordinate, and confirm the cleanliness of the work site before commencing the portion the installation work that involves dust-sensitive electronic or electrical equipment such as audio mixers, switchers, projectors, control processors, computers, cameras, etc. Dust-sensitive equipment that is installed in a work site with air borne dust and dirt shall be properly protected. For example, a video camera on a wall-mounted bracket is protected by a clean plastic bag to prevent dust from contaminating it. Seal the bag’s opening using adhesive tape.

F. Prior to commencing installation work, ensure that the surrounding areas are clean and promote ease of installation work.

G. Ensure that all equipment rack and equipment locations are clean before commencing installation work.

H. Unless specified otherwise, furnished products / equipment shall be tested, delivered and installed. And, all systems shall be tested and commissioned to fully operational and properly configured condition.

I. All electrical equipment shall be burned-in or tested at the Contractor’s shop before delivery. This pre-installation test shall reveal any equipment that is faulty, malfunctioning, or dead out of the box ahead of time.

J. All radio frequency (RF) operated devices shall be tested on-site prior to installation to determine blind spots, RF interference, or any other transmission / reception problems. The Contractor shall be responsible for costs associated with providing additional support or accessory equipment (antennas, amplifiers, cables, etc.) and / or services to improve signal transmission / reception.

K. Provide all support equipment (ladders, man-lifts, tools, etc.) required to complete the installation work in a safe and expeditious manner.

L. Obtain any plan approvals, permits and licenses required by inspection authorities prior to execution of any installation work. The Contractor shall be responsible for all associated fees and costs incurred while fulfilling this requirement.

M. Ensure that all equipment is accessible for operation and maintenance work. Under no circumstance shall equipment be inaccessible or inconveniently located.

N. Aside from the systems' operational features, provide equal attention to the overall aesthetics of the installed equipment and cabling. Special attention to aesthetics shall be extended to equipment or cabling in public spaces.

O. Firmly secure all fixed equipment and hardware in place and ensure that they are plumb and / or square. An exception to this shall be portable or movable equipment.

P. Structurally mounted equipment: All equipment shall be mounted in accordance to all applicable safety codes, standards and practices. The one that provides for the most stringent rule shall prevail. All mounting hardware shall have a load rating by, at least, a factor of 5 (500% or greater) in reference to the weight of the equipment to be mounted or suspended. An exception to the rule shall be existing local safety codes or standards requiring greater load capacities.

Q. Seismic restraints: Abide by all the seismic restraint requirements described in all applicable building codes in force at the work site. If no provisions exist for a particular situation, follow these minimal recommendations.
   1. Fixed equipment: Mount and brace to the building structure to minimize potential hazards to personnel and damage to property during any kind of seismic event.
   2. Floor mounted equipment: Bolt equipment securely to the floor to prevent from toppling during any kind of seismic event.
   3. Vertical-mounted columns: Apply braces to the vertical column in four opposing directions back to the mounting surface. This will minimize sway in any direction. Provide a separate, flexible restraint (e.g. aluminum braided aircraft cable) with a capacity of 5 times the weight of the total mounting system. The same applies to the anchor to which the flexible restraint is attached and the method of attachment to the structure.
   4. No equipment, equipment supports, or mounts must fail before the structure fails.
   5. Seismic restraint measure must not interfere with fire stopping.
   6. Notwithstanding compliance with these minimum recommendations, it is the Contractor's responsibility to ensure that the seismic restraint measures taken are adequate for the circumstances, including, if required, verification by an independent structural engineer. The cost of all such engineering shall be the responsibility of the Contractor.
   7. Penetration of the Slab: Verify that any mounting or restraint work that requires deep or thorough penetration of the slab shall not damage embedded materials including, but not limited to, slab tensioning devices or conduit. Verify the slab by X-ray or other method before proceeding. The Contractor shall be responsible for all costs associated with this investigation.

3.04 INSTALLATION

A. Follow manufacturer's instructions for installing, operating, configuring, and programming their equipment. Do not perform modifications to equipment that would void its warranty.

B. Pull and terminate all cables and interconnect all equipment and components in accordance with approved drawings. Install audio-visual cover plates and faceplates onto all boxes.

C. Loudspeaker Assembly Installation
   1. Loudspeakers:
      a. Verify proper installation of loudspeaker enclosures and related support.
      b. Verify that no loudspeaker assembly is subjected to stresses or loading effects in any way contributing to possible extraordinary failure.
      c. Connect loudspeaker assemblies to the appropriate 70 volt-line transformer tap as applies. Verify specified polarity. Use insulated crimp connectors or insulated "bobtail" splices applied with manufacturer's recommended ratchet tooling. Wago Wall-Nuts 773 Series or equal are acceptable. Wire nuts or "Scotchlock" connectors shall not be acceptable.
      d. Verify that loudspeaker grille openings and loudspeaker components are clear of paint after finishing.
      e. Perform preliminary loudspeaker tests specified herein. Correct non-conforming conditions.
      f. Adjust 70 volt-line transformer taps as required to realize uniform sound pressure level as specified herein. Document final 70 volt-line transformer taps on the Record Drawings.
      g. Correct all conditions giving rise to noise, rattle or other extraneous sounds owing to operation of a loudspeaker assembly under any specified operating condition.
   2. Packaged Loudspeakers:
      a. Design, engineer and provide complete, all means of support, suspension, attachment, fastening, bracing, and restraint (hereinafter "support") of packaged loudspeakers. Provide engineering of such support by parties licensed to perform work of this type in the Project jurisdiction. Submit in timely manner.
         1) Comply with applicable Code and the requirements of the Authorities having jurisdiction.
         2) Provide safety factor greater than six or as required by Code, whichever is greater.
      b. Mounting shall:
         1) Permit each packaged loudspeaker to be re-oriented at least plus or minus 5o from angles shown on the Contract Drawings for optimum coverage.
         2) Maintain precise location and orientation of each packaged loudspeaker component after such adjustment when subject to vibration of loudspeaker components due to operation at full specified system output level, and when subject to normal building motion and Code defined seismic induced building motion.
         3) Use rigid metal support members, such as threaded rod with locking nuts.

c. Test each packaged loudspeaker prior to installation at design locations. Test at least polarity and freedom from buzzes, rattles and objectionable distortion, using procedures specified herein. Correct non-conforming conditions.
d. Do not apply any load to building structure without first obtaining written approval of the Owner. Obtain per Project procedures.
e. During Acceptance Testing, adjust orientation of packaged loudspeakers as directed to achieve optimum coverage. Provide workers and ladders as required. Perform such adjustment with no claim for additional cost or time.
f. Do not suspend or orient the loudspeaker cluster prior to verification by the Owner or Owner's representative, that the intended location is correct with respect to as-built conditions such as the final dimensions of the space.

D. Video Projectors
1. Projectors shall be centered laterally to the projection screens.
2. Projectors shall be mounted such that digital keystone compensation will not be required.
3. Projectors shall be mounted such that their optical zoom settings shall not be set at either their widest nor narrowest extreme, but shall be used in their mid-range.

3.05 LABELING AND IDENTIFICATION

A. All cables and connecting blocks shall be clearly, logically and permanently marked and identified by the following means:
1. Use cable labels similar to the Panduit Polyolefin Self-laminating Labels for inkjet or LaserJet printers or any other means acceptable to the Consultant. Cable labels should be machine printed and not handwritten.
2. Cable labels should be placed approximately 12 cm. from each end of the cable.
3. Labeling conventions shall be clear, logical, and must be acceptable to the Consultant.
4. Include all cable identification numbers on all wiring diagrams and cable schedules.
5. For fiber optic cables, use cable identification products such as the Panduit Label Core series or any other means acceptable to the Consultant.
6. For connector and terminal blocks, label using Wago, Phoenix or any means acceptable to the Consultant.

B. All cover plate, switches, panels, outlets, etc. labeling shall be engraved and filled, or silk-screened or by any other means acceptable to the Consultant. Do not use Dymo, Brother Ptouch, or other similar labeling products.

C. Protective Devices
1. Identification of fuses and circuit breakers shall indicate protected circuitry, rating of protective device and voltage across open circuited protected device.

D. Panels and Receptacles
1. Panel surfaces shall be engraved and filled or silk screened with identification, or shall be provided with 1/16 inch (minimum) thick laminated plastic labels with engraved block characters at least 1/8 inch high fastened to the equipment by

stainless steel screws or rivets. Provide white characters on black background unless otherwise noted. Do not use Dymo, Brother Ptouch, or other similar labeling products.

E. All equipment shall be labeled in a clear, logical manner or by any other means acceptable to the Consultant.
   1. For equipment identification, use 'badges' made of aluminum or plastic or any other acceptable material with engraved and filled, or silk-screened labeling. Stick these badges using industrial-strength doubled-sided 3M adhesive tape. Label schemes should be clear, logical, and simple or by any other means acceptable to the Consultant. Indicate equipment labeling schemes on all elevation and plan drawings showing the front and / or rear of the equipment racks. The reader should be able to easily reference the label description to specific equipment in the Operation and / or Maintenance Manuals. Do not use Dymo, Brother Ptouch, or other similar labeling products.

3.06 WIRING

A. General
   1. This section does not apply if the drawings incorporate a wire schedule.

B. Audio Signal Wiring Classification:
   1. Type A-I: Microphone level wiring less than -30 dBu, 20 Hz to 20 kHz.
   2. Type A-2: Line level wiring -30 dBu to +24 dBu, 20 Hz to 20 kHz.
   3. Type A-3: Loudspeaker level or circuit wiring greater than +24 dBu, from 20 Hz to 20 kHz.

C. Video/Graphics and Related Signal Wiring Classification:
   1. Type V-1: Baseband and composite video wiring 1 volt peak-to-peak into 75 ohms, 0 to 100.0 MHz.
   2. Type V-2: Synchronization and switching pulse wiring 4 volts peak-to-peak into 75 ohms, 15.62 to 15.75 kHz.
   3. Type V-3: Color subcarrier wiring 0 to 4 volts peak-to-peak into 75 ohms, 3.57 to 4.43 MHz.

D. Control Signal Wiring Classifications:
   1. Type C-1: DC control wiring 0 to 50 volts.
   2. Type C-2: Synchronous control or data wiring 0 to 40 volts, peak-to-peak.
   3. Type C-3: AC control wiring 0 to 48 volts, 60 Hz.

E. Additional Wiring Classifications:
   1. Type M-1: DC power wiring 0 to 48 volts.
   2. Type M-2: AC power wiring greater than 50 volts, 60 Hz.

F. Wiring Combinations: Except as indicated herein, conduit, wire ways and cable bundles shall contain only wiring of a single classification. The following combinations are acceptable in conduit, or cable harnesses. Additional acceptable combinations may be indicated on the Contract Drawings.
   1. Types A-1, C-1, and M-1.
   2. Types A-2, C-I, C-2, and M-I, runs less than 20 feet.
   3. Types A-2, C-1, and M-1.
   4. Types A-3, C-1, C-2, and M-1.

5. Types A-2, V-1, and V-3.
6. Types V-1, V-2, V-3, and C-1.
7. Types M-2 and C-3.

3.07 WIRE AND CABLE INSTALLATION

A. Provide permanent identification of run destination at all raceway terminations.

B. All wire and cable shall be continuous and splice-free for the entire length of run between designated connections or terminations.

C. All shielded cables shall be insulated. Do not permit shields to contact conduit, raceway, boxes, panels, connector shell or equipment enclosures.

D. Within buildings, make splices only in designated terminal cabinets and/or on designated equipment backboards. Outside buildings, make splices only in designated manholes and/or hand holes. Protect splices outside of buildings with splicing kits equivalent to Scotch-cast Re-enterable. Make splices only with connectors or terminal devices specified herein. Document all splices on Record Drawings.

E. Verify that all raceway has been de-burred and properly joined, coupled, and terminated prior to installation of cables. Verify that all raceway is clear of foreign matter and substances prior to installation of wire or cable.

F. Inspect all conduit bends to verify proper radius. Comply with Code for minimum permissible radius and maximum permissible deformation.

G. Apply a chemically inert lubricant to all wire and cable prior to pulling in conduit. Do not subject wire and cable to tension greater than that recommended by the manufacturer. Use multi-spool rollers where cable is pulled in place around bends. Do not pull reverse bends.

H. Provide a box loop for all wire and cable routed through junction boxes or distribution panels. Provide tool formed thermal expansion loops at cable at manholes, handholes and at both sides of all fixed mounted equipment. Cable loops and bends shall not be bent at a radius greater than that recommended by the manufacturer.

I. Secure all wire and cable run vertically for continuous distances greater than 30 feet. Secure robust non-coaxial cables with screw-flange nylon cable ties or similar approved devices appropriate to weight of cable. For all other cables, provide symmetrical conforming nonmetallic bushings or woven cable grips appropriate to weight of cable.

J. All Category type cable, connectors and plugs shall be color coded for easy visual distinction. Color coded insert type boots shall be installed on all Category type plugs. A colored coded ring will be provided on all chassis connectors (i.e. Neutrik ACRF-#). Cable connecters shall be equipped with Neutrik BSE-# color coded bushings. The Color code shall be as follows if there is no standard, coordinate this effort with client:
   1. Data LAN = Yellow
   2. HDBaseT = Green

3. Audio Network = Red
4. AV LAN = Orange
5. KVM-USB Extenders = Grey
6. AV UTP = White
7. AV STP = Blue

3.08 CONNECTOR AND SIGNAL POLARITY CONVENTION

A. Maintain consistent absolute signal polarity at all connectors, patch points and connection points accessible in the system. Where applicable, a positive polarity electrical signal shall yield positive acoustic pressure from the loudspeakers.

B. Audio signal connector convention: AES14-1992 (ANSI S4.48-1992) AES standard for professional audio equipment - Application of connectors, Part 1, XLR-type polarity, and gender.

Signal	Connector	Wire
Signal Phase	Pin 2	Red or White
Signal Anti-Phase	Pin 3	Black
Signal Ground	Pin 1	Drain Wire

C. Video and RF/MATV Connector Convention:

Signal	Connector	Wire
Signal Phase	Center Pin	Center conductor
Signal Anti-Phase	Shell	Shield
Signal Ground	Shell	Shield

D. Voice/Data Connector Convention: Comply with EIA/TIA-568C.

E. Speaker Patch Panels: These panels shall be loaded with Neutrik NL4MP panel jacks. Wire amplifier side to +1 & -1, wire speaker side to +2 & -2. Provide crossover patch cables for each amplifier. These crossover cables will prevent amplifier to amplifier connections.

3.09 WIRING PRATICE

A. Land all non-coaxial field wiring entering each equipment rack at specified terminal devices prior to connection to any equipment or devices within racks. At Contractor's option, such terminals may be located in the equipment racks or at backboards provided. Coordinate such selection with Project construction sequence and test procedures specified herein.

B. Identify all wire and cable clearly with permanent labels wrapped about the full circumference within one inch of each connection. Indicate the number designated on the associated field or shop drawing or run sheet, as applies. Assign wire or cable

designations consistently throughout a given system. Each wire or cable shall carry the same labeled designation over its entire run, regardless of intermediate terminations. Provide any of the following:

1. Continuous permanent imprint; equivalent to Clifford of Vermont, Inc. "Quik-Pull".
2. Direct hot stamp.
3. Heat shrinkable factory hot stamped; equivalent to Brady sleeve Heat shrink.
4. Adhesive strip printed labels wrapped the full circumference of the wire and sealed with clear heat shrink tubing; equivalent to Thomas and Betts or Panduit Insta-code with clear heat-shrunk tubing equivalent to Alpha.

C. Apply all crimp connectors only with manufacturer's recommended ratchet type tooling and correct crimp dies for connector and wire size. Plier type crimp tooling shall not be acceptable.

D. Coordinate insulation displacement (quick connect) terminal devices with wire size and type. Comply with manufacturer's recommendations. Make connections with automatic impact type tooling set to recommended force.

E. Make all connections to screw-type barrier blocks with insulated crimp-type spade lugs. Lugs are not required at captive compression terminal type blocks. Provide permanent designation strips designed for use with the terminal blocks provided. Make neat, intelligible markings with indelible markers equivalent to "Sharpie".

F. Tin terminated shield drain wires and insulate with heat shrinkable tubing.

G. Use only rosin core 60/40 tin/lead solder for all solder connections.

H. Dress, lace or harness all wire and cable to prevent mechanical stress on electrical connections. No wire or cable shall be supported by a connection point. Provide service loops where harnesses of different classes cross, or where hinged panels are to be interconnected.

I. Termination and build out resistors and related circuit correction components shall be visible. Do not install in connector shells or internally modify equipment. Show locations on Record Drawings.

J. Correct any and all of the following unacceptable wiring conditions:

1. Deformed, brittle or cracked insulation.
2. Insulation shrunken or stripped further than 1/8-inch away from the actual point of connection within a connector, or on a punch block.
3. Cold solder joints.
4. Flux joints.
5. Solder splatter.
6. Non-grommet, non-bushed, or non-insulated wire or cable entries.
7. Deformation or improper radius of wire or cable

3.10 SIGNAL GROUNDING PROCEDURES

A. Comply with National Electrical Code.

B. Unless otherwise noted maintain a unipoint ground scheme.

C. Signal and electrical system grounds shall be isolated except at the Project ground field connection.

D. Equipment enclosures shall not be permitted to touch each other unless bolted together and electrically bonded.

E. Ground and bond equipment racks and similar equipment enclosures containing powered equipment exclusively via the Isolated Ground conductors provided under Division 26. INSULATE RACK MOUNTING, ANCHORAGE, AND RACEWAY CONNECTIONS.

F. At each rack, provide an Isolated Ground bus within the rack. At each rack, provide a lug bonded to the rack frame with a #8 TW stranded wire to the rack Isolated Ground bus.

G. At each ensemble of racks, provide a single labeled Isolated Ground tubular-clamp bus bar terminal strip to land the individual rack Isolated Ground bus ground conductors. Connect the main Isolated Ground conductor from the Technical Power panel board at this point.

H. Equipment signal ground shall be to the Isolated Ground System via the green wire of the equipment power cord. Where equipment uses two wire power cord, provide #12 green bond wire to rack IG bus bar. At equipment, provide crimp lug and suitable hardware for bonding.

I. Shielded cables of this section shall be grounded exclusively to Isolated Ground by a single path. Shield shall be tied to Isolated Ground at one end only, i.e., at the low potential (receiving) end of run, unless otherwise noted.

J. Unless otherwise noted, at audio jackfields, tie source shield at jackbay frame. Float shields at connections to output jacks. Bus each row of jack frames and run individual #12 green ground wire for each row to rack IG bus bar.

K. Signal Ground provisions shall realize less than 0.15 ohms to the primary ground connection.

3.11 EQUIPMENT ENCLOSURE (RACK) AND EQUIPMENT BACKBOARD FABRICATION

A. Combustible material, other than incidental trim of indicated equipment, is prohibited within equipment racks.

B. Within each equipment enclosure, provide a full-height multi-circuit ISOLATED GROUND outlet strip with branch circuit count as shown on drawings; locate on the left side of the equipment enclosure, as viewed from the rear. In each enclosure provide number of receptacles required by present and future equipment indicated on drawings, plus at least two spare receptacles. Provide flexible steel raceway and junction box for connection of power service. Bond internal raceway to rack frame.

C. Provide a permanent label on the front of each equipment rack including the rack designation, and the circuit breaker number and associated electrical distribution panel designation servicing same.

D. Maintain separation of wiring classifications as specified herein. Separately dress, route and land microphone and line level cables and related on the right side of the equipment enclosure, as viewed from the rear; dress, route, and land loudspeaker level and control cables on the left side of the equipment enclosure, as viewed from the rear.

E. Access shall not require demounting or de-energizing of equipment. Install access covers, hinged panels, or pull-out drawers to insure complete access to terminals and interior components.

F. Fasten removable covers containing any wired component with a continuous hinge along one side, with associated wiring secured and dressed to provide an adequate service loop. Provide an appropriate stop locks to hold all hinged panels and drawers in a serviceable position.

G. Provide permanent labels for all equipment and devices. Where possible, fasten such labels to the rack frame or to blank or vent panels which will remain in place when active equipment is removed for possible service.

H. At jackfields, provide service loop to permit removal of jackfields from rack sufficient to conveniently access all jack contacts for routine cleaning and maintenance. Organize the service loop and harness such that reasonable reconnection of jacks and jack normals is possible without cutting apart the harness.

I. Coordinate the design and execution of wire harnessing of multi-bay rack ensembles with conditions of delivery to installation locations at Project Site, and with the requirement herein for test of the completely wired system in the shop prior to delivery to the Project Site. Organize the wiring harnesses such that they will fold within one shippable unit without risk of damage, or provide polarized multipin connectors and related interconnect systems as specified elsewhere herein.

J. At each equipment backboard, provide UL Listed surge suppressing multi-outlet assembly with at least six receptacles.

3.12 ADJUSTING AND TESTING

A. Test Equipment
   1. Furnish, store and maintain test equipment at the fabrication shop and the job site for both routine and Acceptance Testing of the Work of this Section. Maintain all test equipment at the job site while work is in progress from installation of equipment racks until Owner Acceptance of this Work; thereafter remove all of this test equipment from the job site. Provide all required test cables, jigs and adapters. Provide at least one of the following items or approved functional equivalents:
   2. Audio Systems:
      a. Wide Band Oscilloscope (Tektronix THS700 Series).
      b. True RMS Analog / Digital Volt-Ohm Multimeter (Fluke 187 Series or equal).
      c. Low Distortion Audio Frequency Sine Wave Oscillator (Gold Line TS1).
      d. Measurement Microphones (Earthworks M30, Bruel & Kjaer 4007, Josephson 550).

e. Sound System Optimization and Acoustic Measurement Analyzer (Goldline TEF, Meyers SIM, SIA Smaart, WinMLS, EASERA).
f. Harmonic Distortion Analyzer (Sound Technology or Tektronix AA 501A) or Swept Spectrum Analyzer, HP 3580A, or Swept Test System, Audio Precision or Neutrik).

3. Video Systems:
   a. Wide Band Oscilloscope (Tektronix THS700 Series).
   b. Sync & Test Generator (Tektronix 1470).
   c. Waveform/Vector Monitor (Tektronix 1740).
   d. Color Picture Monitor, Precision.
4. Communications and Related:
   a. Level II, Cat5e Cable Pair Tester (Microtest, HP, Scope, Fluke or Siemons set up to meet Category 5e parameters).
   b. Outside Plant Voice Cabling Plant Tester – capable of detecting shorts, opens, reversals, mis-wiring and crosstwists (Siemon STM-8 or equal by Mod-Tap).
   c. Metallic cable pair tester (Wavetek Corporation, Instruments Division, model LANTech 100).
   d. Tone Test Set.
   e. Optical Time Domain Reflectometer (OTDR) for fiber optics.
   f. Any other items of equipment or materials required to demonstrate conformance with the Contract Documents.

B. System Performance Testing and Adjusting Procedures
1. Upon completion of the installation of all equipment in an area, perform the following tests and record results. Verify safe and proper operation of all components, devices, or equipment, establish nominal signal levels within the systems and verify the absence of extraneous or degrading signals. Make all preliminary adjustments and document the setting of all controls, parameters of all corrective networks, voltages at key system interconnection points, gains and losses, as applicable. Submit test report. Correct all non-conforming conditions prior to requesting Acceptance Review and Testing. Perform at least the following procedures:
2. Mechanical: Verify:
   a. Integrity of all support provisions.
   b. Absence of debris of any kind, tools, etc.
3. Power and Isolated Ground: Verify:
   a. Isolation of Isolated Ground system from raceway and related ground.
   b. Grounding of devices and equipment. Integrity of signal and technical power system ground connections.
   c. Proper provision of power to devices and equipment.
4. Signal Wiring: Verify:
   a. Integrity of all insulation, shield terminations and connections.
   b. Integrity of soldered connections. Absence of solder splatter, solder bridges.
   c. Routing and dressing of wire and cable.
   d. Continuity, including conformance with wire designations on running sheets, field, and shop drawings.
   e. Absence of ground faults.
   f. Polarity.
5. Use the proper sequence of energizing systems to minimize the risk of damage.
6. Audio Systems:

a. Electronic Tests; confirm:
   1) Gain at 1 kHz.
   2) Maximum output.
   3) Input clipping level.
   4) Frequency response.
   5) Total harmonic distortion.
   6) Signal-to-Noise ratio.
   7) Signal-to-Crosstalk ratio.

b. Electro/Acoustic Tests:
   1) Uniformity of coverage.
   2) Electronic and acoustic frequency response/one-third octave equalization. Transfer function measurement shall be as close to flat as possible. Measure at ear level. Representative of the Owner will direct final adjustment.
   3) Maximum continuous sound pressure level (in the reverberant field). Drive systems with broadband pink noise. Sustain for at least five minutes with no system damage. Measure for "A" and "C" weightings at ear level on loudspeaker axis. Turn off noise.
   4) Acoustic signal-to-noise ratio referenced to the specified maximum continuous sound pressure level in the reverberant field. Measure for "A" and "C" weightings at ear level on loudspeaker axis with mechanical systems operating. Present comparison with previous measurement.
   5) Acoustic gain before feedback. Locate acoustic source (4 inch loudspeaker/pink noise generator) two feet from system microphone. Measure at system microphone position and at most distant listener position at ear level. Present comparison.

7. Video Systems:
   a. Video Monitors:
      1) Apply crosshatch. Verify linearity.
      2) Apply red field. Adjust purity.
      3) Apply SMPTE bars and PLUGE. Adjust to standards.
   b. Video Path Test: Use NTC-7 procedures. Use full field or line signals. Alternately, conduct copper time domain reflectometer test.
8. Fiber System:
   a. Fiber:
      1) Conduct optical loss test.
      2) Conduct optical time domain reflectometer test.
9. Diagnostic Monitoring System:
   a. Demonstrate complete operation.
10. System Overall:
   a. Verify levels.
   b. Provide permanent "wedge" type labels on all controls, as applies, to indicate correct settings after systems performance testing and adjustment procedures have been successfully completed.

C. Loudspeaker Assembly Testing and Adjusting Procedures
1. Upon completion of the installation of all loudspeakers in an area, perform the following tests and record results. Correct non-conforming conditions, unless the cause is clearly outside the Work of this Section, in which case submit the apparent cause to the Owner.

2. Loudspeaker Line Impedance: At terminal cabinets at equipment rooms, measure the impedance of each loudspeaker line. Sweep from at least 20 Hz to at least 16 kHz.
3. Loudspeaker Polarity: Test the acoustic polarity of all loudspeakers using an Acoustic Polarity Tester.
4. Freedom From Buzzes, Rattles and Objectionable Distortion: Individually apply to each loudspeaker line a slow sine wave sweep from 50 Hz to 5 kHz at a level of 6 dB below rated power amplifier output voltage. Listen carefully for buzzes, rattles and objectionable distortion.
5. Uniformity of Coverage: Apply broadband Pink Noise. Adjust level to approximately 70-80 dBA at measurement locations. Measure in 4 kHz octave band at ear level. Adjust loudspeaker aiming and 70 Volt loudspeaker taps for uniformity of coverage.

D. Equipment Rack and Equipment Testing and Adjusting Procedures
1. Conduct procedures in fabrication shop. Verify safe and proper operation of all components, devices, or equipment, establish nominal signal levels within the systems and verify the absence of extraneous or degrading signals. Make all preliminary adjustments and document the setting of all controls, parameters of all corrective networks, voltages at key system interconnection points, gains and losses, as applicable. Submit test report with color photographs of each equipment rack, front and back. Request and coordinate verification of submitted test data by the representative of the Owner. Correct all non-conforming conditions prior to shipment to Project Site. Perform at least the following procedures:
2. Preliminary: Verify:
   a. Grounding of devices and equipment. Integrity of signal and electrical system ground connections.
   b. Proper provision of power to devices and equipment.
   c. Integrity of all insulation, shield terminations and connections.
   d. Integrity of soldered connections. Absence of solder splatter, solder bridges.
   e. Absence of debris of any kind, tools, etc.
   f. Routing and dressing of wire and cable.
   g. All wiring, including polarity and continuity, including conformance with wire designations on running sheets, field and shop drawings.
   h. Mechanical integrity of all support provisions.
3. Rig temporary power and grounding: Comply with all applicable Codes, regulations and ordinances.
4. Determine the proper sequence of energizing systems to minimize the risk of damage. Energize. Burn in for at least 120 hours.

E. Telecommunications Cabling Testing
1. Perform telecommunications cabling inspection, verification, and performance tests in accordance with TIA-568-C.1, TIA-568-C.2 and TIA-568-C.3. Perform optical fiber field inspection tests via attenuation measurements on factory reels and provide results along with manufacturer certification for factory reel tests. Remove failed cable reels from project site upon attenuation test failure.
2. Visually inspect UTP and optical fiber jacket materials for UL or third party certification markings. Inspect cabling terminations in telecommunications rooms and at workstations to confirm color code for T568A or T568B pin assignments, and inspect cabling connections to confirm compliance with TIA-

568-C.1, TIA-568-C.2 and TIA-568-C.3. Visually confirm Category 6 marking of outlets, cover plates, outlet/connectors, and patch panels.

3. UTP backbone copper cabling shall be tested for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors, and between conductors and shield, if cable has overall shield. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connected.
4. For multimode optical fiber, perform optical fiber end-to-end attenuation tests in accordance with TIA-568- C.3 and TIA-526-14-A using Method A, Optical Power Meter and Light Source for multimode optical fiber. For single-mode optical fiber, perform optical fiber end-to-end attenuation tests in accordance with TIA-568- C.3 and TIA-526-7 using Method A, Optical Power Meter and Light Source]. Perform verification acceptance tests.
5. Perform testing for each outlet as follows:
   a. Perform Category 6 link tests in accordance with TIA-568-C.1 and TIA/EIA-568-B.2. Tests shall include wire map, length, insertion loss, NEXT, PSNEXT, ELFEXT, PSELFEXT, return loss, propagation delay, and delay skew.
   b. Optical fiber Links. Perform optical fiber end-to-end link tests in accordance with TIA-568-C.3. E. Final Verification Tests
   c. Perform verification tests for UTP and optical fiber systems after the complete telecommunications cabling and workstation outlet/connectors are installed.

3.13 CLEANING

A. Clean each section or area of where the work was conducted after completion to permit immediate use of the area. Remove and discard all refuse, rubbish, and debris.

B. The Contractor shall ensure that all recyclable and environmentally hazardous waste materials are disposed properly.

C. Make good all existing structures, surfaces, and utilities affected by cutting, coring, mounting, drilling, or other new work.

D. Clean all furnished equipment of dust, dirt, fingerprints, smudge, and other material prior to calling for a Substantial Performance of Work Review or Completion of Work Review.

3.14 PROTECTION

A. During the installation phase and up to the date of achieving Substantial Performance of Work, protect finished or unfinished work against damage or loss. In the event of such damage or loss, immediately replace or repair such work or equipment at no cost to the Owner.

3.15 ACCEPTANCE REVIEW, TESTING PROCEDURES AND COMMISIONING

A. Complete all Work of this Section. Submit Test Report. Submit review copies of Operating and Maintenance Manuals, less reduced set of Record Drawings. Notify the Owner in writing that the Work of this Section is complete and fully complies with

the Contract Documents. Request Acceptance Review and Testing by returning Attachment "A" to the Design Consultant. The representative of the Owner will conduct Verification of Submitted Test Data, and otherwise direct testing and adjustment of this Work. These Procedures may be performed at any hour of the day or night as required by the representative of the Owner to comply with the Project Schedule and avoid conflict with these procedures from possible ongoing work of other Separate Contracts and/or the Owner's operations. Provide all specified personnel and equipment at any time without claim for additional cost or time.

B. Personnel: Provide services of the designated supervisor and additional technicians familiar with work of this Section. Provide quantity of technicians as required to comply with Project Schedule.

C. In Addition, Provide:
   1. Set of hand and power tools appropriate for performance of adjustment of and corrections to this Work.
   2. Include spare wire and connectors and specified tooling for application.
   3. Ladders, scaffolding and/or lifts as required to access loudspeakers and other high devices.
   4. Test equipment to include but not limited to:
      a. Dual channel FFT-based audio analyzer
      b. Video test generator with color bars, grayscale, alternating pixel, multi-burst, crosshatch and % windows.
      c. InfoComm Projection Shoot-Out DVD
      d. Digital Video Essential Professional DVD
      e. Category cable tester, cable length, short, open and miswire test.
   5. Complete set of latest stamped, actioned submittals of record for reference.
   6. Complete set of Shop and Project Site Test Reports.
   7. Complete set of manufacturer's original operation, instruction, and service manuals for each equipment item for reference.

D. Demonstrate: Complete operation of all systems and equipment, including Portable Equipment.
   1. General
      a. Configure room for each type of event and demonstrate audio-visual system.
      b. Connection of portable equipment. (Laptop, document camera, etc.)
      c. Demonstrate to the Consultant that all functions and equipment for the system work properly when installed as a complete system.
      d. The Contractor shall demonstrate the satisfactory operation of all controls and adjustment circuits of the system.
      e. Demonstrate system startup and shut down procedures.
   2. Audio
      a. Route audio to program speakers.
      b. Route audio to monitor speakers.
      c. Patch each audio tie line into system.
      d. Route audio signal to auxiliary speakers.
      e. Connect microphone to each panel input and route through system.
      f. Demonstrate and document gain structure through the system.
      g. Demonstrate and document with a dual channel FFT-based audio meter the following:
         1) Polarity of each driver in each cabinet.

2) Crossover point of high, mid and low section of each loudspeaker.
3) dB SPL levels from 1-4 kHz at various position in the audience area.
4) dB SPL level of high, mid, low and sub frequency bandwidth at crossover.
   a) Audio routed to ceiling speakers.
   b) Audio Conferencing.
   c) Wireless microphones.
   d) Demonstrate that the audio system is properly time aligned and equalized.
   e) Assistive listening system.
   f) Production intercom system.

3. Video
   a. Route source equipment (DVD, TV tuner, test generators, etc.) to video displays and projector.
   b. Set up room for each type of event that may take place and demo each.
4. Control
   a. Communication between control system and AV equipment, including feedback if device supports 2-way communication
   b. User interface operation.
   c. Password protection of user interface.
   d. Video conference remote control.
   e. Touch panel features and each page of control.
   f. Touch panel help file.
   g. Help desk features.
   h. All programmed presets.
5. The Contractor 's personnel and test equipment shall be made available to the Consultant in order that:
   a. Selected tests and measurements previously made by the Contractor can re-run.
   b. Other tests may be made at Consultant's discretion.
   c. Additional tests or measurements may be made due to changes in field conditions.
6. It is estimated that the acceptance tests and demonstrations will require approximately four hours unless construction or installation problems or deviations from the specifications are discovered.

E. Adjust: As directed by the representative of the Owner.

F. Correct: In timely manner, failure to comply with the Contract Documents, as reasonably determined by the representative of the Owner.

G. Acceptance Documentation
1. Official acceptance of the system covered by this specification will occur when the Design-Builder receives the following written documents:
   a. A letter from the Consultant to the Architect acknowledging Final Acceptance of the system stating compliance with all articles of the specifications.
   b. A letter from the Architect to the Contractor stating that all related work has been completed to his satisfaction. Until these documents are received, the installation is not formally complete. The official date of acceptance shall be the date of the letter from the Architect to the Contractor described above.

3.16 CLOSEOUT

A. Punch List: Perform any and all remedial work, at no claim for additional cost or time. Where required, retest and submit Test Report. Notify Owner of completion of Punch List.

B. Portable Equipment: Furnish all portable equipment and spares to the designated representative of the Owner, along with complete documentation of the materials presented. Where applicable, furnish portable equipment in the original manufacturer's packing.

C. Operating and Maintenance Data: Install framed operating and maintenance instructions. Submit Manuals.

D. Project Record Documents: Submit.

E. Keys: If applicable, replace construction locks with permanent locks. Transmit keys to Owner.

F. Training: Conduct specified training and submit training manuals.

G. Warranty: Submit Warranty dated to run from date of Acceptance of the Work of this Section.

3.17 OWENER’S RIGHT TO USE EQUIPMENT

A. Acceptance of the Work of this Section will be after completion of corrections and adjustments required by the "Punch List" which results from Acceptance Review and Testing of the completed installation. The Owner reserves the right to use equipment, material and services provided as part of the Work of this Section prior to Acceptance without incurring any obligation to Accept any equipment or completed systems until all Punch List work is complete and all systems comply with the Contract Documents; or accept any claim for additional cost or time.

Attachment "A"

NOTICE OF COMPLETION
&
REQUEST FOR FINAL INSPECTION

We hereby give notice that the work associated with the Audio-Visual system, at the project named below, is completed and fully complies with the contract documents issued to the Contractor. The required submittals below have been marked as completed.

- ☐ Programming
- ☐ Test Reports
- ☐ Operation Manual
- ☐ Maintenance Manual
- ☐ Training Manual
- ☐ Training
- ☐ Warranty Certificates
- ☐ Record Drawings

We request commissioning and verification testing be scheduled with the Owner's Representative for final system sign off. Attached is a list of test equipment for review and acceptance.

PROJECT INFORMATION

Project Name:	Project Phase:	
Project Address:		

CONTRACTOR INFORMATION

Name:	Company:	
Address:		
Signature:	Date:	

Note to Contractor: Provide all test equipment for final inspection as described in the specification.

Please complete and fax or email this form to

END OF SECTION

SECTION 27 51 14 - INTERNET PROTOCOL OVERHEAD PAGING SYSTEM

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes materials, equipment, labor, supervision, tools and items necessary for the construction, installation, connection, testing and operation of an Internet protocol overhead paging system.

1.02 RELATED DOCUMENTS

A. Specifications throughout all Divisions of the Project Manual are directly applicable to this Section, and this Section is directly applicable to them, including but not limited to the following.
   1. Section 28 46 21.11 - Addressable Fire Alarm System.

1.03 SYSTEM DESCRIPTION

A. The overhead paging system shall provide.
   1. Network base signal transport and control.
   2. Storage and playback of prerecorded messages
   3. Provide sound coverage of the areas indicated on the drawings
   4. Interface to telephony system for paging initiation.
   5. Interface to handheld microphones for paging initiation.
   6. The system shall allow the following.
      a. One-way paging by zone.
      b. Fire alarm system override.
      c. Distribution of background music.

B. The system shall interface to the existing system to allow building wide paging.

C. This section includes but is not limited to the following equipment and the associated installation thereof.
   1. Loudspeakers.
   2. Network switches (Owner provided).
   3. Mounting Brackets
   4. Conduits.
   5. Cable provided under Section 27 15 00 Work.
   6. Patch cords [refer to Section 27 15 00 Work].
   7. Software & programming.
   8. Testing.
   9. Final adjustment.
   10. Documentation.

1.04 DEFINITIONS

A. Channels: Separate parallel signal paths, from sources to loudspeakers or loudspeaker zones, with separate amplification and switching that permit selection between paths for speaker alternative program signals.

B. POE: Power over Ethernet standard that pass data and power over a structured network cable connection from a POE network switch.

C. SIP: Session Internet Protocol is a signaling protocol used for initiating, maintaining, modifying and terminating real-time communications sessions between Internet Protocol (IP) devices.

D. Virtual Private Network (VPN) - Secure passage of network traffic over the network.

E. VoIP: Voice over Internet Protocol technology that allows voice calls using a broadband Internet connection in lieu of an PBX or analog phone line.

F. Zone: Separate group of loudspeakers and associated supply wiring that may be arranged for selective switching between different channels.

1.05 ACTION SUBMITTALS

A. Manufacturer’s Instructions:
   1. Submit application conditions and limitations of use stipulated by the manufacturer.

B. Product Data:
   1. System data.
   2. Materials list.
   3. Technical data (cut sheets) for on each component, including finishes and weights.
   4. Manufacturer’s instructions for storage, handling, protection, examination, preparation, operation, and installation of product.

C. Equipment design considerations for future expansion when indicated.

D. Shop Drawings:
   1. Description of system operation.
   2. Conduit and back box schedule (including unique back boxes).
   3. Coordinated reflected ceiling plan views for all devices shown on floor plans.
   4. Test Reports: Indicate procedures and results for specified field testing and inspection.
   5. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
   6. Installation plan and schedule.
   7. Training plan and schedule.

E. Deferred Submittals:

1. Network connection requirements.
2. Network address requirements.
3. Manufacture's system installation instructions and programming templates.
4. Cable patching (patch panel to network switch) schedules.
5. System test plan and schedule.
6. System training plan and schedule.

1.06 CLOSEOUT DOCUMENTS AND MATERIALS

A. Refer to Section 27 05 00 - Common Work Results for Communications for additional requirements.

B. Record actual location of system components including the following:
   1. Floor plans with speaker locations, master/lead speaker ID s, MAC addresses and SIP server IP addresses.
   2. Speaker schedules with:
      a. Location.
      b. Zone.
      c. Zone ID.
      d. Master/lead vs follower designation.
      e. Subnet.
      f. VLAN
      g. IP address.
      h. Static/DHCP.
      i. IDF room.
      j. Structured cable ID.
      k. Speaker ID.
      l. Network switch ID.
      m. MAC address.
      n. Unicast/Multicast routing.
   3. Cable and equipment labeling and cable termination schedules.
   4. Zone configuration and zone extensions.
   5. Interface to the existing overhead paging system.
   6. Product data.
   7. Operational manuals.
   8. Maintenance manuals.
   9. Test procedures and results.

C. Warrantees.

D. System service contact information including service desk representative, service desk manager and operations manager.

E. Operating Manuals:

1. Preventive operation instructions for components of the system as a whole and each component in detail. Manual shall include software and hardware operation and programming. Manuals shall be written to aid in training of new security and operating personnel and as a guide in clarifying operational procedures.

F. Maintenance Manuals:
1. Preventive maintenance program and service instructions for components of the system as a whole and each component, function and operation in detail. Manuals shall include illustrations, mounting instructions, wiring diagrams, parts lists, operating instructions, and a trouble-shooting chart for the system, including a list of troubles, causes and recommended remedies.
2. Spare Parts List. Submit a list of spare parts and components of critical items for consideration of purchase by the Owner.

1.07 CONTRACT DRAWINGS

A. The contract drawings indicate the general nature of the system layout, but do not show all components required. Rough-in requirements are shown on the contract drawings but do not show all conduit and back boxes. Conduits, routing and wiring are not shown on the drawings. Provide as per system requirements and shop drawings.

B. Coordinate back box and speaker mounting requirements with system manufacturer/supplier. Refer to the Architectural drawings to understand wall and ceiling construction details. Notify Architect prior to installation if conflicts occur between:
1. Back box depth and wall thickness.
2. Wall construction.
3. Back box location.
4. Ceiling construction.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Protect material from the entrance of dirt, dust, moisture and debris.

1.09 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer:
1. Company specializing in installing the products specified.
2. Authorized or franchised installer of the specified system with a minimum three years documented experience.
3. Employed technicians are trained and certified by the specified system manufacturer.
4. Employed software technicians are trained and certified by the specified system manufacturer.
5. Located with sales and service facilities with 4 hours travel time of the Project site.

C. System Testing and Adjustment: Qualified technicians with prior knowledge of the items of equipment, and general knowledge of audio systems alignment and troubleshooting, and knowledge of the specific systems and installations of this project.

1.10 COORDINATION

A. Coordinate the installation of the intercom system with the Owner and their network engineers for network port access, provisioning and IP network address requirements.

B. Coordinate the installation of ceiling mounted speakers with the ceiling installation Work. Refer to the Architectural reflected ceiling plan drawings for ceiling details.

C. Coordinate the integration of the overhead paging system with the telephony system for annunciation for paging requests with the Owner IT Staff prior to commencement of any work.

D. Coordinate application server requirements with the Architect and Owner.

E. Coordinate the patching of horizontal cable termination to Owner’s network switches in the communication rooms with the Architect and Owner.

F. Coordinate the installation of speakers with the Section 27 15 00 Communication Horizonal Cabling Work.

G. Coordinate the installation of wall and rack mounted components in the communication rooms with the 27 11 00 Work. Provide information for the completion of Section 27 11 00 Shop Drawings.

H. Coordinate the installation of overhead paging system with the Section 28 46 21.11 Addressable Fire Alarm System Work.

1.11 MAINTENANCE SERVICE

A. Furnish service and maintenance of overhead paging system equipment for one year from the date of Owner Acceptance.

1.12 WARRANTY

A. All equipment shall be guaranteed to be free of defect or faulty workmanship for a minimum period of one year from the date of final acceptance. If any equipment shall fail or found to be inoperative within this period, the contractor shall repair and/or replace within (1) day of the notification with no expense to the owner. Any required maintenance

for the equipment that falls within this warranty period shall also be performed by the contractor at no expense to the owner.

PART 2 - PRODUCTS

2.01 MANUFACTURER:

A. Algo. (Owner Furnished Contractor Installed)

2.02 SPEAKERS

A. UL 2043 rated for use in plenum ceiling and spaces.

B. Support for Session Internet Protocol signaling:
1. Peer to peer.
2. Integrated with SIP/PBX.

C. Open API for software integration.

D. Minimum sound pressure level: 85 db.

E. POE+ powered integrated 7-watt class D amplifier with 8-pin modular outlets.

F. Built in microphone with integrated signal test tone feedback microphone for remote health monitoring and system testing

G. Built in:
1. Digital signal processor.
2. Memory to support pre-recorded messages 256 MB RAM, 512MB Flash
3. Passive infrared sensor motion detection sensor - 20 foot range.

H. Supported protocols: UDP, TCP, TLS, RTP, SRTP

I. Speaker for Classrooms:
1. Algo 8190S Algo InformaCast IP Speaker

J. Ceiling Speaker
1. Algo 8188 Algo InformaCast IP Ceiling Speaker

K. Wall Speaker
1. Algo 8180 Algo InformaCast IP Ceiling Speaker

L. Dual-Sided Display Speaker
1. Algo 8420 Algo InformaCast IP Clock Ceiling Speaker

M. Outdoor Speaker

1. Algo 8186 Algo InformaCast IP Horn Speaker

2.03 CEILING SUPPORT BRACKET

A. Bracket to secure speaker to accessible ceiling tile T-bar or gypboard ceiling joist.

B. Algo part # 8188TBR

2.04 PATCH CORDS

A. By Owner

PART 3 - EXECUTION

3.01 GENERAL

A. Comply with manufacturers' instructions for installing cable and equipment and adjusting equipment. Where no instructions are included with the equipment, follow accepted industry best practices as identified in the BICSI design and installation manual.

B. Keep items protected before and after installation, with dust and waterproof barrier materials as necessary. Maintain the integrity of the protective measures throughout the life of the project.

C. Comply with Section 27 05 28 for requirements for the installation of cables supports, conduits and pack boxes.

D. Protect cable and equipment from damage, at all times during the construction. Do not install cables and equipment in the communications rooms until the other trades have completed their work in the areas so that the equipment will not be moved or damaged.

Do not install cable and equipment in communications rooms until after plywood backboards have been painted.

E. Clean up and remove all debris generated by installation activities. Keep the communications rooms free of debris at all times.

F. Maintain safe ingress and egress from work areas during the movement and installation

G. Examine the areas to receive the Work and the conditions under which the Work would be performed. Remedy unsatisfactory conditions detrimental to the proper and timely completion of the Work.

3.02 PREPARATION

A. Obtain system programming templates from the Manufacturer(s). Coordinate programming parameter options with the Architect and Owner prior to programming.

B. Schedule a meeting(s) with Architect and Owner:
1. Present project planning documents and review, adjust, and prepare final setup documents.
2. Confirm the exact location of network switches, patch panels, equipment, consoles, and speakers.
3. Confirm location of wet/damp rooms scheduled for the installation of speakers.
4. Confirm extent of paging zones.
5. Coordinate zone identification numbers/zone names for system programming.
6. Coordinate how to access to the system annunciate live or recorded messages via the console microphone, cellular phone, VoIP phone station, workstation computer and web browser.
7. Coordinate how messages can be created and recorded.
8. Coordinate how messages can be scheduled and activated to
    a. A speaker.
    b. To a zone.
    c. To a group of zones.
    d. To all zones.
9. Coordinate how speaker volume can be controlled and balanced.
10. Coordinate how the system can be monitored.
11. Coordinate software and license requirements and acceptance.
12. Coordinate default system and devices logins and passwords, and how they will be changed to Owner logins and passwords.
13. Coordinate network switch port requirements to connect equipment into the network.
14. Coordinate network bandwidth requirements and the impact the overhead paging multi-cast traffic will have on the network.
15. Coordinate how virtual private networks shall be established.
16. Coordinate network access control requirements.
17. Coordinate the installation of equipment in the communication room(s).
18. Coordinate equipment and speaker network address requirements.

19. Coordinate equipment, speaker and cable identification labeling nomenclature.
20. Coordinate how speaker identification and zone identification will be provided in a computer-based map view.
21. Coordinate the interfacing of the system with the input/output relay modules with the fire alarm control panel and fire alarm system, and how signal from the fire alarm control panel will temporary shunt/start audio pages

C. Coordinate the Work schedule and the sequence of Work.

D. Coordinate a plan for system testing, startup, and demonstration.

E. Record and share decisions for approval and acceptance by the Architect and Owner.

3.03 INSTALLATION

A. Validate the locations of speakers and the routing of cables and conduits prior to rough-in.

B. Integrate the overhead paging system with the fire alarm system to mute, shunt or override the system when.

C. Ceiling Loudspeakers:
1. Speaker locations indicated on the drawings are approximate and are to be verified depending on other ceiling equipment locations and other conflicting devices to ensure they will work properly. Refer to architectural reflected ceiling plans (RCPs) for additional information including the following.
   a. Accessible ceiling areas.
   b. Gypsum board ceiling areas.
   c. Architectural ceiling areas.
   d. Open ceiling areas.
   e. Lighting fixtures location.
   f. HVAC diffuser locations.
   g. HVAC grill locations.
   h. Access panel locations.
   i. Special molding locations.
   j. Sprinkler head locations.
   k. Fire alarm device locations.
2. Do not support flush speaker enclosures with lay-in tiles or gypsum board. Provide support (using attachments to structural elements and/or metal mounting bars) for mounting brackets so that no perceptible sag will occur once speaker and grille are mounted. Provide seismic (slack wires) supports to the speakers. Seismic connections to structure alone shall not constitute speaker support.

D. Conduit & Sparker Back Boxes:
1. Provide a conduit to speakers to areas with inaccessible ceilings. Comply with Section 27 05 28.

E. Cabling:
   1. Coordinate cable installation requirements with the 27 15 00 cable installers.

F. Provide an input/output relay in the fire command center. Connect the relay with fire alarm control panel.

G. Labeling:
   1. Provide identification labels that are in accordance with the approved equipment schedule and cable termination schedule.
   2. Label IDs shall show equipment location number in correspondence with the as built diagrams.
   3. Provide machine-generated labels on cables in black uppercase lettering on a permanent adhesive, white label stock, covered with a permanent water-resistant sealer. Place labels on both ends of each cable and no more than 6 inches from the point at which the cable is connected to a device so that the labels are parallel with the cable. Install labels so that labels are readily visible. Do not label cables with hand lettered labels.
   4. Room numbers shown on the Drawings are not the final room numbers. Validate the final room numbers with the Architect prior to use in creating termination schedules, cable identification labels, cable record drawings, O&M documentation, and system test reports.

3.04 PROGRAMMING

A. Assist the Owner in setting up software, setting up SIP routing protocols, creating paging groups, pre-recorded messages, play list, schedules, and user profiles for paging access.

B. Set rules for speaker volume control.

C. Set rules for paging source prioritization.

D. Set rules for fire alarm system prioritization.

E. Set rules for relay module shunting of overhead paging during the duration of a fire alarm message or a fire alarm annunciation, and removal of the shunt upon deactivation of the fire alarm system.

F. Set rule for message delay and queuing.

3.05 LICENSES

A. Register, secure and provides licenses to the Owner to provide a fully functioning and integrated system

3.06 FIELD QUALITY CONTROL

A. Provide a quality control and testing and acceptance plan, and an associated schedule to the Architect and Owner, a minimum of 2 weeks before the commencement of the testing. Include tester credentials and test documentation templates.

B. Receive and review horizontal cable.

C. Visually inspect speakers, cable placement, cable termination, patch cords and labeling of all components.

D. Schedule tests with at least seven days' advance notice of test performance.

E. Schedule tests with at least seven days' advance notice of the fire alarm system sequence signal shunting.

F. Use current manufacturers' maintenance or alignment manuals during testing and adjustment procedures.

G. Provide sound levels at the following.
   1. Normal voice paging - 60 dB minimum.
   2. Mechanical spaces - 10 dB above ambient sound levels.

H. Measure and record sound power levels at all speaker locations.

I. Operational Test:
   1. Set up zones.
   2. Calibrate speakers and run remote speaker tests.
   3. Conduct pages from phone, microphone, and computer sources.
   4. Verify boundaries of zones.
   5. Conduct pages to individual zone, to multiple zones and all zones.
   6. Check speaker PIR features.
   7. Fire alarm system shunting.

3.07 STARTUP SERVICE

A. Verify that wiring installation complies with manufacturer's submittal and installation requirements.

B. Complete installation and startup check according to manufacturer's written instructions.

3.08 ADJUSTING

A. Adjust sound levels and adjusting controls to meet anticipated occupancy conditions.

B. Within 3 months of date of Substantial Completion or after one month of patient occupancy, re-adjust the system to suit actual occupied conditions.

3.09 DEMONSTRATION AND TRAINING

A. Provide a training plan to Architect and Owner in advance of commencement of the training sessions. Include trainer credentials, training schedules with quantity of classes and durations and training materials for approval by the Owner.

B. Conduct a walking tour of Project with the Architect and Owner. Describe function, operation, and maintenance of each component.

C. Conduct a 4-hour training session with the Owner to describe and demonstrate
   1. All maintenance and operational aspects of the system.
   2. Messages are created, stored, schedules and activated.
   3. How zones are created and changed.

D. Use submitted operation and maintenance manual as reference during demonstration and training.

3.10 WARRANTY

A. Register and provide proof-of-purchases required to activate Manufacturer's warranty.

B. The warranty shall include labor and equipment to maintain the integrated system in full operation for a period of one year for hardware from the date of Owner acceptance.

C. The warranty shall provide:
   1. A contact number for service call during the warranty period that is answered 24 hours 7 days a week. Service calls made outside of normal working hours and received by an answering service shall be returned within 1 hour.
   2. Standard on-site service calls within 12 hours.
   3. Emergency on-site service calls within 4 hrs.
   4. The end-user will notify the contractor of the appropriate response time required. This warranty may be enhanced by the contractor but cannot be taken away from this supersedes all other warranties.

D. Invoke manufacturer's warranties as necessary during the warranty period. Obtain Return-Merchandise-Authorization for shipping defective material back and receiving replacements materials.

END OF SECTION

SECTION 27 51 56 - ASSISTIVE LISTENING SYSTEM

PART 1 - GENERAL

1.1 SCOPE OF WORK

A. The work under this section includes all final design, all labor, material, equipment, supplies, labor, testing, and accessories required to furnish and install a complete permanent Assistive Listening System (ALS) as indicated on the drawings and as specified herein.

1. Provide portable receivers in quantities as required in the 2019 California Building Code. Quantity of receivers shall accommodate a minimum of 4% of the total number of seats as shown on the system drawings, and architectural drawings.

2. Twenty-five percent of the receivers shall include hearing-aid compatible neck loops.

3. Provide a portable system for student(s) to carry to classrooms and connect to classroom AV system designated output.

B. It is the intent of the Drawings and Specifications, which are presented in a "design-build" format, for the Contractor to design, provide and install a complete, fully operational, and tested system.

C. All miscellaneous system components including, but not limited to, cables, termination equipment, punch blocks, patch panels, backboards, cabinets, power strips, mounts, fasteners, and any other related items shall be furnished and installed complete under this section, such that the system shall perform all functions listed herein in compliance with all of the specified requirements.

D. The Assistive Listening System shall include, but not be limited to, the following subsystems / products:

1. See Products Section.

1.2 RELATED WORK

A. Documents affecting work of this section include, but are not necessarily limited to, General Conditions, Supplementary Conditions and sections of Divisions 1 and 27 of these specifications.

B. All applicable portions of Section 26 00 00 shall apply to this section as though written herein completely.

1.3 GENERAL REQUIREMENTS

A. The Contractor shall hold a valid State of California C-7 Low-Voltage license, shall have completed at least 5 projects of equal scope, shall have been in business of furnishing and installing systems of this scope and magnitude for at least five years, and capable of being bonded to assure the Owner of performance and satisfactory service during the guarantee period.

B. The Contractor shall hold all other licenses required by the legally constituted authorities having jurisdiction over the work.

C. All work shall be performed under the supervision of a company accredited by the basic equipment manufacturer and such accreditation must be presented.

D. The installing Contractor shall be a factory authorized distributor and warrantee station for the brand of equipment offered and shall maintain a fully equipped service organization capable of furnishing adequate repair service to the equipment.

E. All of the equipment in this specification shall be furnished and installed by the Authorized Factory Distributor of the equipment. The Contractor shall also furnish a written guarantee from the manufacturer that they will have a service representative assigned to this area for the life of the equipment.

1.4 QUALITY ASSURANCE

A. In order to maintain a high degree of quality assurance, the Contractor shall, without exception, use the parts and supplies as specified on the drawings and in this specification.

B. For any proposed product substitution or when the Contractor intends to include an “or equal” product in the bid pricing, provide a substitution request submittal to the Owner’s Project Manager for review no later than fifteen (15) calendar days prior to Bid submittal. This report shall include:

1. Description of how the proposed product(s) will impact meeting the project completion date, indicate item(s) with lead times and expected delivery date(s).

2. Itemized cost comparisons between the proposed product(s) and the listed product(s).

3. Detailed technical analysis of the electrical and mechanical specification differences between the proposed product(s) and the listed product(s).

4. ETL “Verified” or UL “Verified” test lab documentation for the proposed product(s), component(s) and assemblies.

5. Proposed product identification, manufacturer literature (specifications and cut sheets).

6. Name, address and contact information of several similar projects where the proposed product(s) have been used.

7. Name, address and contact information of the proposed product(s) manufacturer's local representative.

8. Sample proposed product(s) manufacturer's warranty.

C. The Owner's Design Team/Project Manager must approve any proposed product(s) substitution item in writing. The Owner's Design Team/Project Manager reserves the right to require a complete sample of any proposed product(s) and may request a sample tested by an independent testing consultant to prove equality. The decision of the Owner's Design Team/Project Manager regarding equality of proposed product(s) items will be final.

D. It is a mandatory requirement that a single Contractor perform the work described in this specification.

1.5 SUBMITTAL AND MANUAL

A. Comply with all requirements of the General Conditions, Supplementary Conditions and applicable sections of Divisions 1 and 26 of these specifications.

B. Additional requirements of this section are:

1. Within fifteen (15) calendar days after the date of award of the Contract, the Contractor shall submit eight (8) copies of the complete submission to the Architect for review.

2. The submission shall consist of five (5) major sections with each section separated with index tabs. Each page in the submission shall be numbered chronologically and shall be summarized in the index.

3. The first section shall be the "index" which shall include the project title and address, name of the firm submitting the proposal and name of the Architect.

4. The second section shall a list of 5 projects of equal or greater scope, and a list of proposed instrumentation to be used by the Contractor. In addition, provide a written notice guarantying the provision of the requested warranty.

5. The third section shall contain the comparative specification listing, including a complete listing of the characteristics of the equipment to be furnished next to all of the specified equipment's features and functions as stated in the specifications and data sheets.

6. The fourth section shall contain an original factory data sheet for every component in the specifications.

7. The fifth section shall contain a designation schedule for each Structured Cabling System location and complete 1/8" = 1'-0" scale drawing showing system wiring plans.

C. Failure to comply with all of the requirements listed above will result in the rejection of the entire submittal package.

D. The Contractor shall provide two copies of an "Operating and Servicing Manual" for the system. The manuals shall be bound in flexible binders. All data shall be printed material or typewritten. Each manual shall include the following: Instructions necessary for the proper operation and servicing of the system; complete as-built installation drawings of the system; a wiring destination schedule for each circuit leaving for each piece of equipment; a schematic diagram of major components with all transistor and IC complements and replacement number.

1.6 GENERAL SYSTEM PRODUCT WARRANTY

A. Prior to Owner acceptance, the Contractor shall provide to Owner, a manufacturer's product warranty. On behalf of the Owner, the Contractor shall submit the required warranty registration form within ninety (90) days of Contractor's purchase. The Owner will only acknowledge acceptance upon submittal of a valid manufacturer's warranty.

B. The warranty shall commence from the date of final written acceptance by the Owner.

C. All conditions for obtaining the manufacturers warranty shall be the sole responsibility of the Contractor.

D. The manufacturer shall warrant the transmitter and receivers to be free from defects in workmanship and material under normal use and conditions for the useful lifetime of the product from date of purchase. Useful lifetime is defined as five (5) years from date of purchase. All other products and accessories shall have a one (1) year limited warranty to be free from defects in workmanship and material under normal use and conditions from date of purchase.

E. Any material showing mechanical or electrical defects shall be replaced promptly at no expense to the Owner.

F. A typewritten notice shall be posted at the equipment rack(s) that shall indicate the firm, address and telephone number to call when service is necessary. The notice shall be mounted in a neatly finished metal frame with a clear plastic window and securely attached to the inside of the door.

PART 2 - SYSTEM EQUIPMENT SPECIFICATION

2.1 ACCEPTABLE MANUFACTURERS

A. All equipment listed herein will be by Listen Technologies, cabinet by Chatsworth or approved equal.

B. It is the responsibility of the bidder to insure that the proposed product meets or exceeds every standard set forth in these specifications and the equipment's technical data sheets.

C. The functions and features specified are vital to the operation of this facility. Therefore, inclusion of a component's manufacturer in the list of acceptable manufacturers does not release the Contractor from strict compliance with the requirements of this specification.

D. All basic electronic equipment (not including cable) specified herein shall be produced by a single manufacturer of established reputation and experience who shall have produced similar apparatus for at least three or more years and who shall be able to refer to similar installations rendering satisfactory service.

2.2 SYSTEM FUNCTIONS AND CAPABILITIES:

A. The FM wireless ALS is for use by the hearing-impaired.

B. The ALS system shall be capable of broadcasting on 57 channels and be frequency agile.

C. The ALS shall have 80 dB SNR or greater, end-to-end.

D. Portable receivers shall be frequency agile and frequency set with a “seek” button and shall incorporate an LCD display that indicates battery status, RF signal strength and channel.

E. Portable receivers shall incorporate a stereo headset jack that allows the user to plug in either to a mono or stereo headset and listen to the audio normally.

F. Portable receivers shall incorporate automatic battery charging circuitry for the recharging of NiMH batteries.

G. Audio signal inputs shall consist of 3.5mm jacks, located in wall or floor boxes as indicated on the plan drawings.

2.3 PRODUCTS:

The following is to be used as a GUIDE, and are to be included, but not limited to, in the system(s) to be supplied.

A. Listen Technologies LT-800 Stationary Transmitter

1. The stationary FM transmitter shall be capable of broadcasting on 57 channels. The transmitter shall have a signal-to-noise ratio (SNR) of 80dB or greater. The output power shall be adjustable to quarter, half or full and channel tuning shall be capable of being locked. The device shall broadcast on both wide and narrow band channels. The device shall have an audio frequency response of 50Hz to 15kHz, ± 3dB at 72MHz, or of 50hz to 10kHz, ± 3dB at 216Mhz. It shall have two mixing audio inputs. The device shall have the following audio controls: input level, mix level, and an adjustable low pass filter. The device shall have an audio processor that is capable of automatic gain control and limiting.

2. Provide quantity of one (1).

B. Listen Technologies LA-122 Universal Antenna Kit

1. The antenna shall work on both 72 MHz and 216 MHz, with a transmission range of up to 1,500 feet (at 72 MHz) and 3,000 feet (at 216 MHz). The antenna shall include multiple options, monopole, dipole, wall or ceiling mounting option, fasteners, mounts, etc. Contractor shall provide coax cable from antenna to the FM transmitter, use RG58 for cable runs less than 100 feet or RG8 for cable runs more than 100 feet (50 Ohm), or as recommended by the manufacturer.

2. Provide quantity of one (1).

C. Listen Technologies LT-700 Portable FM Transmitter

1. The portable FM transmitter shall be capable of broadcasting on 57 channels. The unit shall incorporate a microphone sensitivity switch. The device shall broadcast on both wide and narrow band channels with a SNR of 80dB or greater. The device shall have an audio frequency response of 50Hz to 15kHz (± 3dB) at 72MHz, or of 50Hz to 10kHz, (± 3dB) at 216MHz. The device will incorporate a mute switch and the battery door shall be capable of being mechanically locked. The device shall incorporate an LCD display that indicates channel, battery level, low battery, battery charging, and RF signal strength. The portable transmitter shall incorporate automatic battery charging circuitry for the recharging of NiMH batteries, with the ability to charge via a wall transformer or drop in charging case. Each portable transmitter shall come equipped with its own patch cable allowing them to easily interface with the input of a stationary sound system anywhere on campus. Include one (1) line input cable with each portable transmitter. Listen Technologies part number LT-700-072, LT-700-216.

2. Provide quantity required per 2019 CBC 11b-219 ALS requirements.

D. Listen Technologies LR-4200 Portable Receiver

1. The FM receiver shall be capable of receiving on 57 wide and narrow band channels. The receiver shall tune to a single channel and user shall not be able to change the channel. The receiver shall have a signal-to-noise (SNR) ratio of 80 dB or greater (70dB for the 216MHz models) and shall have an audio frequency response of 50 Hz - 15 kHz (±3 dB). The receiver shall employ a unique DSP SQTM noise reduction technology. The receiver shall have a programmable squelch circuit. The receiver shall incorporate a multi-functional display (OLED) that indicates battery status, inventory number, volume level and customizable channel names. The receiver shall have the option of being lanyard or belt clip worn and the lanyard shall incorporate an integrated neck loop for compatibility with T-coil hearing aids. The receiver shall be intelligent and provide customized audio to either earphones or the integrated neck loop based upon which is connected. The receiver shall have two (2) 3.5 mm (TRRS) connectors to drive the integrated neck loop lanyard or up to two (2) mono or stereo earphones. The receiver shall be fully programmable via supplied software. The receiver shall have a micro USB connector used for programming/setup, inventory control, charging, and firmware upgrades. The receiver shall incorporate automatic battery charging circuitry and use a non-proprietary lithium ion (Li-ion) battery. The receiver shall automatically turn on when removed from the charging device and automatically turn off when returned to the charging device. The receiver shall have additional charging contacts to allow multiply charging options. The receiver shall be covered by a hassle free limited lifetime warranty. Listen Technology part numbers LT-4200-072, LT-4200-216.

2. Provide quantity required per 2019 CBC 11b-219 ALS requirements.

E. Listen Technologies LA-166 Neck Loop (hearing-aid compatible), for wireless connection to hearing aids equipped with a “T” coil. PROVIDE quantity required per 2019 CBC 11b-219.3 ALS requirements.

F. Listen Technologies LA-164 Ear Speaker, over-the-ear design, single ear clip. Provide one (1) ear speaker device for each portable receiver.

G. Listen Technologies LA-311-01, 16-Unit Charging/Carrying case. Case shall have drop-in charging stations for simultaneous charging of up to 16 portable receivers. Case shall have auto shut-off feature to prevent over-charging receivers. Case shall be hard-sided and lockable. Provide quantity as required to charge and store all portable devices.

H. Listen Technologies LA-362 NiMH rechargeable batteries, Provide two (2) batteries for each portable device.

I. Listen Technologies LA-304 Notification signage kit(s), or as directed by Architect. See Architect drawings for quantity. PROVIDE QUANTITY AND LOCATIONS PER 2019 CBC 11B-216.10

J. Chatsworth Products #11900-724 Wall Mount Cabinet. Cabinet shall include a lockable Plexiglas front door. Dimensions shall be 24”x24”x24”. Provide quantity of one (1).

K. Extron 3-channel audio mixer #60-737-01. Mixer shall be able to combine three line level mono audio sources into a single line level mono output. It shall accept balanced or unbalanced input signals, and provide a balanced or unbalanced output. Three input gain controls shall enable adjustment of mix levels from -80dB to +20dB. Provide quantity of one (1).

L. Extron rack mount shelf #60-190-20. Shelf shall be 1 rack-unit high to support the 3-channel mixer. Provide quantity of one (1).

M. Extron #70-1173-01, 3.5mm female jack on white Decora faceplate, or RDL #D-MJPT mini-jack pass-through plate. Faceplate shall include 3.5mm jack (1/8”) for input connections, and mount into a flush wall or floor box. Provide quantity as noted on the plan drawings.

N. Portable Listen Technologies System LS-05-072 / LS-05-216, Personal FM System. System shall include (1) LT-700 portable FM transmitter, (1) LA-261 lavalier microphone, (1) LR-400 portable FM receiver, (1) LA-164 ear speaker, (1) LA-306 soft case, (2) LA-361 high capacity AA alkaline batteries (two sets), and (2) portable chargers. This portable system will be for student to carry to indivudual classes.

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

A. The wiring of the system shall be executed in accordance with the drawings and the equipment manufacturer's wiring diagrams. Should any variations in these requirements occur, the Contractor shall notify the architect before making any change. It shall be the responsibility of the factory-authorized distributor of the approved equipment to install the equipment and guarantee the system to operate as per plans and specifications.

B. Furnish all conduit, junction boxes, conductors, cables, faceplates, equipment plugs, terminal strips, etc., and labor to install a complete and operable system.

C. The cables within the rack or cabinets shall be carefully wrapped and strapped with Velcro tie straps. Nylon type “zip ties” or tie-raps are prohibited. All cables shall be numbered for identification at both ends. Cable numbering shall be provided on final as-built drawings.

D. The Contractor shall thoroughly clean all equipment and materials. All exposed parts of the equipment, cabinets, and other equipment shall be left in a clean condition, unblemished and free of all dirt, dust, smudges, spots, fingerprints, etc. The Contractor shall remove all debris and rubbish occasioned by the electronic systems work from

the site. The Contractor shall thoroughly clean all buildings of any dirt, debris, rubbish, marks, etc., caused by the performance of this work.

E. The system must meet all local and other prevailing codes.

F. The system must meet all 2019 CBC code section 11B-219 and 11B-706 Assistive Listening Systems requirements.

G. The system shall accommodate a minimum of 4 percent of the total number of seats in the required area.

H. Contractor shall provide Assistive Listening System signage in the quantities and locations as indicated on the architectural drawings, and as required by 2019 CBC and the 2010 ADA Standards.

I. Prior to ordering equipment, Contractor shall perform a radio frequency (RF) test to determine and identify any potential RF interference. Contractor shall be responsible to select ALS system radio frequencies that do not receive RF interference from other building systems such as lighting, power, generators, HVAC, computers, audio paging, etc. Final system testing shall be conducted with all building systems (lighting, HVAC, etc.) turned on to verify the ALS system is free of any building system interference. If RF interference is detected within the first 30 days after project completion, Contractor shall replace ALS equipment with equipment on another frequency at no additional cost to the Owner. Contractor shall include all costs in base bid.

J. All cabling shall be splice free.

K. Plenum rated cable may be run exposed above ceilings, provided the cabling is supported independent of other utilities such as conduits, pipes, and the ceiling support systems. The cables shall not be laid directly on the ceiling panels. The use of cable ties shall be done in accordance with the cable manufacturer's requirements. The cable jacket composition must meet local and all other prevailing fire and safety codes.

L. All firewalls penetrated by structured cabling shall be sealed by use a non-permanent fire blanket or other method in compliance with the current edition of National Fire Protection Association (NFPA) and the California Electric Code (CEC) or other prevailing code. The Contractor must not use concrete or other non-removable substance for fire stopping on cable trays, wireways or conduits. Contractors who use this method will be required to replace all cables affected and provide the original specified access to each effected area.

M. All equipment racks and cabinets shall be installed on painted 3/4” A/C-grade plywood backboard and bolted to the building structure by the Contractor.

N. Install antennas where indicated on plans or as necessary to cover areas required for assistive listening. Coordinate final antenna location(s) in field with Owner or Architect prior to rough-in.

O. The installer shall, upon completion of the system, orient all antennas, adjust all controls, etc., to provide a system operating at maximum capability.

P. Submit block diagram and as-built drawing of all equipment.

Q. 120 Volt AC power for rack/cabinet(s) shall be provided by the Electrical Contractor.

3.2 GENERAL TESTING REQUIREMENTS

A. Provide all instruments for testing and demonstrating in the presence of the Owner's inspector that the frequency response is as stated in the factory data sheets, and that the system covers all areas of the room(s) where intended. Check all circuits and wiring to verify they are free of shorts and grounds.

3.3 FINAL ACCEPTANCE

A. The Owner or Owner's representative may visit the site during the installation of the system to ensure that correct installation practices are being followed.

B. The Owner or Owner's representative will conduct a final job review once the Contractor has finished the job. This review will take place within one week after the Contractor notifies the Owner.

C. Two (2) copies of all certification data and drawings for all identifications shall be provided to Owner before the Owner's review.

D. The Owner or Owner's representative will review the installation and certification data prior to the system acceptance.

E. The Owner or Owner's representative may test some of the systems features to ensure that the certification data is correct. If a substantial discrepancy is found, the Owner reserves the right to have an independent consultant perform a certification of the entire system. If such a procedure is undertaken, the cost of the testing will be billed back to the Contractor.

F. In the event that repairs or adjustments are necessary, the Contractor shall make these repairs at his own expense. All repairs shall be completed within ten (10) days from the time they are discovered.

G. The Contractor shall provide not less than eight (8) hours for site instruction of personnel in the operation and maintenance of the installed systems. This instruction time shall be divided as directed by the Owner.

H. The Contractor shall hand to the Owner a copy of any applicable installation specific software configurations in compact disk (CD) or USB thumb drive format.

END OF SECTION

SECTION 28 05 00 - COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY SYSTEMS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes furnishing materials, equipment, labor, supervision, tools and items necessary for the construction, installation, connection, testing and operation of an Electronic Safety and Security systems.

1.02 RELATED WORK

A. General requirements specifically applicable to Division 28 in addition to the provisions of Division 1.

B. Specifications throughout all Divisions of the Project Manual are directly applicable to this Section, and this Section is directly applicable to them, including but not limited to the following.
   1. Section 01 Seismic Requirement for Non-Structural Components & Systems.
   2. Division 07 Penetration Fire Stopping.
   3. Division 07 Door Hardware.
   4. Section 27 15 00 Communications Horizontal Cabling.
   5. Section 27 11 00 Communications Equipment Room Fittings.

1.03 REFERENCE

A. The latest published edition of a reference shall be applicable to this Project unless otherwise noted.

B. International Building Code (IBC)

C. American National Standards Institute (ANSI).

D. ANSI/TIA-568 - Commercial Building Telecommunications Cabling Standard.

E. ANSI/TIA TSB-184A – Guidelines for Supporting Power Delivery Over Balanced Twisted Pair Cabling

F. ANSI/TIA-569 - Telecommunications Pathways and Space Standard

G. ANSI/TIA-606 - Administrative Standard for Commercial Telecommunications Infrastructure.

H. ANSI/TIA-607 – Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises Standard.

I. ANSI/TIA-862 Building Automation Systems Cabling Standard.

J. ANSI/TIA 942 - Telecommunications Infrastructure Standard for Data Centers.

K. ANSI/TIA 1152 Field Testing of Twisted Pair Communication Cables.

L. ANSI/TIA-5017 – Telecommunication Physical Network Security Standard.

M. T-758 Outside Plant

N. T-862 Intelligent Building

O. T-942 Data Center

P. T-1179 Healthcare

Q. T-4966 Education

R. T5017 Telecommunication Physical Network Security

S. ANSI/Building Industry Consulting Service International (BICSI) - Telecommunications Distribution Methods Manual (TDMM).

T. ANSI/BICSI - Electronic Safety and Security Design Reference Manual (ESSDRM).

U. ANSI/BICSI-N2-17 - Practices for the Installation of Telecommunication and ICT Cabling Intended to Support Remote Power Applications.

V. National Fire Protection Association (NFPA) Article 70, Article 78.

W. National Electrical Code National (NEC).

X. California Title 24 Electrical Code.

Y. National Electrical Safety Code (NESC).

Z. Federal Communications Commission (FCC).

AA. Underwriter's Laboratories (UL).

BB. UL 294 (Underwriters Laboratories) - Access Control System Units.

CC. National Defense Authorization Act (NDAA) Section 889.

DD. Federal Information Processing Standards (FIPS).

EE. Local fire code, building code, mechanical code, electrical code, rules and interpretations required by the authority having jurisdiction (AHJ).

FF. The referenced codes establish a minimum level of requirements. Follow the more stringent provision of the codes where there is a conflict between codes. Follow any code where there is a conflict between the code and the requirements of the Specifications. Compliance with code requirements shall not relieve the Contractor from complying with the requirements of the Specifications and the Drawings

1.04 WORK OF OTHER TRADES

A. The Drawings do not show complete details of the building construction. Refer to the architectural, structural, civil, fire protection, mechanical, electrical, security, audiovisual, mill work and reflected ceiling Drawings for those details which may affect the execution of this Work.

B. Coordination: Conform to the requirements of Division 01. Failure to coordinate Work will be considered sufficient cause for Work to be altered at Contractor's expense, as directed by Architect.
1. Plan and execute Work including, but not limited to conduits, back boxes enclosures and speakers in cooperation with other trades.
2. Notify other trades of any Work affecting their Work to prevent conflicts or interference as to space requirements, dimensions, openings, block-outs, sleeves, firestopping, painting, finishing, or other matters which will cause delays or necessitate work-around methods.

1.05 EXISTING CONDITIONS

A. Visit the site prior to bidding to become familiar with existing conditions and other factors which may affect the execution of the Work.

B. Visit the site to verify demolition Work. Coordinate with the Owner prior to commencement of Work. Maintain service to existing equipment and devices to be retained in area adjacent to the existing areas scheduled for renovation.

C. Protect the installation of and the integrity of existing systems, devices and cables during demolition Work.

D. Protect existing buildings and spaces from water and dust seepage into the existing buildings and spaces.

1.06 CODES, PERMITS, INSPECTIONS, AND FEES

A. Conform to requirements of Division 01, [Section [01 41 00]].

B. Obtain permits and inspections and pay fees required by National, State and Local authorities. Make arrangements for inspections by the Architect, Owner or other authority as required. Submit 3 copies of certificates of compliance to the Architect.

C. Work and materials shall be in accordance with requirements of the latest adopted edition of applicable codes, regulations, ordinances, and local amendments.

D. Remove Work that is not in compliance with the codes, ordinances, or regulations.

E. Where Drawings or Specifications call for material or construction of a better quality or larger sizes than required by the above-mentioned rules and regulations, the provisions of the Drawings or Specifications shall take precedence over requirements of the rules and regulations.

F. Coordinate with the appropriate “Authorities Having Jurisdiction” for this Project.
1. Arrange plans and shop drawing reviews.
2. Schedule inspections.
3. Notify the Architect of non-conformance issues.
4. Proceed with changes suggested by the authorities having jurisdiction only with written authorization by the Architect.
5. Make necessary corrections as required by the authorities having jurisdiction.

1.07 SAFETY

A. Coordinate job site safety requirements with the Architect and Owner. Provide safety measures continuously during work.

B. Provide safety policies, training, retraining, equipment, safeguards, restraints, permit systems, and other safety measures required by federal, state, local, and the Owner’s site rules and regulations and for the safe performance of the Work.

C. Comply with the “Safety and Health Regulations for Construction,” 29 CFR 1926, by the U.S. Department of Labor.

D. Consult with the state or federal safety inspector for interpretation whenever in doubt as to whether safe conditions do or do not exist or whether the Contractor is or is not in compliance with state or federal regulations.

E. Notify the Architect and Owner of any unsafe conditions observed or experienced.

F. Perform safety audits, inspections, meetings, and personnel interviews in accordance with federal, state, local, and Owner site safety rules and regulations.

G. Do not use the Architect’s construction observations as a substitute for Contractor’s safety audits and inspection responsibilities

1.08 SUBSTITUTIONS

A. Conform to requirements of Division 01, [Section [01 25 00]].

B. Substitutions may be considered when a product becomes unavailable through no fault of the Contractor.

C. Document each request with complete data substantiating compliance of proposed substitution with Contract Documents. Include, in each request for substitution, the following.
   1. Product identification, manufacturer's name and address.
   2. Product Data: Description, performance and test data, reference standards, finishes, and colors.
   3. Samples: Finishes.
   4. Complete and accurate drawings indicating construction revisions required to accommodate substitutions.
   5. Data relating to changes required in construction schedule.
   6. Cost comparison between specified and proposed substitution.

D. When approved substitute equipment or material necessitates revisions to the Drawings or involves other trades, include drawings and details showing such changes, and coordinate and assume any liability from the affected trades.

E. Acceptance: The acceptance of a manufacturer's name or product by the Architect does not relieve the Contractor of the responsibility for providing materials and equipment which comply in detail with the requirements of the Contract Documents.

F. The Contractor shall be liable for costs incurred by the Owner, Architect, and Engineer for professional services resulting from substitutions.

G. Substitutions will not be considered when they are indicated or implied on Shop Drawings or product data submittals, without separate written request, or when acceptance will require revision to the Contract Documents.

H. The Owner will be the final judge of acceptability, with review by Owner, and the distribution of the acceptance by the Architect. No substitute shall be ordered, installed or utilized without the Architect's prior written verification of acceptance from the Owner

1.09 SEISMIC PERFORMANCE:

A. Rack, ceiling and wall mounted equipment and devices and cable pathways shall withstand the effects of earthquake motions determined according to SEI/ASCE 7. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified.

1.10 SUBMITTALS

A. Conform to requirements of Division 01, [Section [01 33 00]].

B. Refer to individual Division 28 Specification Sections for additional requirements for submittals.

C. Submit information that is specific to this Project. Do not submit generic information. Highlight with yellow or blue marker adequate information to demonstrate materials being submitted fully comply with Contract Documents.

D. Do not use the submittal process to request substitutions. Make requests for substitution in accordance with Division 01, [Section [01 25 00]].

E. Product Data: Submit for approval manufacturer's descriptive product information including catalog cuts and other information required to confirm compliance with the Drawings and Specifications, including size, dimensions, model number, electrical characteristics, support requirements, connection requirements and all applicable information verifying that submitted components comply with Contract Documents.

F. Shop Drawings: Submit for approval shop drawings including floor plans with devices identified, wall and rack elevations, sections, schedules, wiring diagrams, schematics, seismic installation instructions, mounting details and other information required to confirm compliance with the Drawings and Specifications.

G. Schedule: Submit for approval a detailed schedule of the installation, testing and hand off to Owner of the Work.

H. Network Connections: Submit for approval a list of devices that will connect to the Owner's wired or wireless networked including the MAC address of the device, the location to be installed and the port configuration needed for connectivity.

I. Samples: Submit for approval samples to the Architect for color and material selection where the color or material selection is not specified.

1.11 SEISMIC PERFORMANCE:

A. Seismic Design: Submit calculations, details, Shop Drawings, Product Data, and statement of special inspections for the seismic design of nonstructural components, in Division 28 to Architect for Architect's review. After Architect's review, Architect will submit the Architect's notification with the calculations, details, Shop Drawings, and statement of special inspections to the Building Official per California Building Code section 107.3.4.1. Do not start Work until the calculations, details, Shop Drawings, Product Data, and statement of special inspections have been approved by the Building Official. If the Contractor hired professional engineer licensed in the State of California determines that the IBC does not require some of the nonstructural equipment to be seismically restrained, then submit a stamped and signed statement from the professional engineer to that effect.
   1. Submit a written "Contractor's Statement of Responsibility", where such statement is required by Section 1704.4 of the California Building Code, to Architect and to Building Official for electrical nonstructural components listed in the statement of

special inspections per California Building Code prior to the commencement of Work on the system or component.

B. Submit seismic certification of electrical nonstructural components and designated seismic systems where such certification is required by Section 1705.13 of the California Building Code.

C. Wind Restraints: Submit calculations, details, Shop Drawings, and Product Data for the wind design of components located outside. After Architect's review, Architect will submit the Architect's notification with the calculations, details, and Shop Drawings to the Building Official per CBC section 107.3.4.1. No Work shall be started until the calculations, details, Shop Drawings, and Product Data have been approved by the Building Official.

1.12 QUALITY ASSURANCE

A. Conform to requirements of Division 01, [Section [01 43 00]].

B. Materials and equipment installed under this Contract shall be new, unused, free of defects, and of current manufacture. Equipment and materials shall carry Underwriters Laboratory certification if required by local, state or national codes.

C. Equipment and materials shall be of the quality and manufacture indicated. The equipment specified is based upon the acceptable manufacturers listed. Where "approved equivalent" is stated or a substitution is requested, equipment shall be

equivalent in every way to that of the equipment specified. All substitutions are subject to the control and approval of the Owner or Architect.

1.13 QUALIFICATIONS

A. Conform to requirements of Division 01, [Section [01 43 13].

B. Manufacturer: Company specializing in manufacturing products specified in this Division with minimum five years documented experience.

C. Contractor:
1. Specializes in the installing of products specified in this Division with minimum 3 years documented experience, and with service facilities within 100 miles of this Project.
2. Have factory certified technicians to work on any system software and programming of any devices installed on this Project.
3. Are familiar with local codes and contract conditions pertaining to this Project.
4. Have been distributing and/or installing the specific brand and model line of system equipment for at least 3 years prior to the date on the Contract Documents.
5. Have in-house engineering and project management capabilities consistent with the requirements of the Work.
6. Have a project manager and field supervisor in place which oversees the entire Project until completion of the Project including coordination, scheduling, staffing, functional performance testing for this Project.
7. Have a service facility and organization with staffing capable of providing comprehensive maintenance and service to the specified systems within 4 hours after being called, 24 hours per day and 7 days a week.

D. Testing Agency: Company specializing in testing products specified in this Section with minimum 3 years documented experience.

1.14 DELIVERY, STORAGE, AND HANDLING

A. Conform to requirements of Division 01, [Section [01 60 00]].

B. Deliver materials (except bulk materials) in manufacturer's unopened containers, fully identified with the manufacturer's name, trade name, type, class, grade, size and color.

C. Store materials suitably sheltered from the elements, but readily accessible for inspection until installed. Store items subject to moisture damage in dry spaces. Coordinate requirement for storage space with Owner and identify where they will be located in submittals.

1.15 AMBIENT CONDITIONS

A. Conform to requirements of Division 01, [Section [01 89 00]].

B. Assemble equipment and materials off-site whenever possible.

C. Install materials and equipment after the following.
   1. Spaces are enclosed and weather tight.
   2. Wet work in spaces is complete and dry.
   3. Movement of trades and the installation of other materials and equipment will not damage Work.
   4. The installation of materials and equipment in ceiling areas above Work is complete.

D. Remove debris, packaging and waste materials for recycling and disposal from the job site each day.

1.16 PROJECT MANAGEMENT AND COORDINATION

A. Conform to requirements of Division 01, [Section [01 31 00]].

B. Refer to the Work of the Divisions 07, 26 and 27 Sections for location of devices, cables and connections that will interface with Division 28 Work.

C. Refer to the Architectural Drawings for the exact height and location of all back boxes and equipment.

D. Refer to the reflected ceiling plan Drawings for the ceiling construction and height information and for the location of all back boxes and equipment.

E. Identify Work affecting other trades to prevent conflicts or interference as to space requirements, dimensions, openings, block-outs, sleeves or other matters which will cause delays or necessitate work-around solutions.

F. Check space requirements and the physical confines of the area of work to ensure that all material and equipment can be installed in the spaces allotted thereto, including conduits and cable supports.

G. Due to the type of installation, a fixed sequence of operation is required to properly install the complete systems. Coordinate Project and schedule Work in accordance with the construction sequence. Maintain project schedules.

H. Attend all construction meetings, at the Project site or other location, as requested by the Owner or Architect.

I. The Contractor shall, without extra charge, make reasonable modifications in the layout as needed to prevent conflict with work of other trades or for proper compliance with the design intent.

J. Room numbers as shown on Contract Documents may not be the final room numbers. Final room numbers will be provided during construction. Use final room number for labeling and programming of cables and devices that references room numbers.

1.17 RECORD DRAWINGS

A. Conform to requirements of Division 01, [Section [01 78 39]].

B. Project Record Documents: Provide.
1. Plan Drawings and room elevations Drawings showing actual locations and sizes of Work.
2. Approved modifications to equipment in the field shall be shown on the record drawings to reflect the “as-built” conditions.
3. Record drawings shall be consistent. Changes made to plans, elevations, sections, wiring diagrams, schematics, or functional diagrams shall be made to related or otherwise affected plans, elevations, sections, wiring diagrams, schematics, or functional diagrams.

1.18 CLOSEOUT SUBMITTALS

A. Conform to requirements of Division 01, [Section [01 78 23]].

B. [Format for Operating and Maintenance Manuals:
1. Compile product data and related information appropriate for Owner’s maintenance and operation. Prepare data in instructional manual form for use by Owner’s personnel. Modify data as required to accurately represent completed installations.
2. Binders: Commercial quality, 3-hole punched, vinyl covered hardboard binder, secured with aluminum screw posts, sized for 8-1/2 inch by 11 inch sheet format. Do not exceed 3-1/2 inch binder width.
3. Binder Cover: Identify each Manual with printed title, “OPERATING AND MAINTENANCE INSTRUCTIONS”, Project Title, identification of subject matter contained in manual, and completion date of Project. Include names of Owner, Architect, Contractor, and major equipment suppliers.
4. Binder Edge: The binder edge shall be imprinted with the name of the job, Owner, and completion date of Project.
5. Provide tabbed dividers for each separate product and system, with typed description of product and major component parts of equipment.
6. Text: Manufacturer’s printed data, or neatly typewritten information on 20 pound white or off-white paper.
7. Drawings: Provide with reinforced punched binder tab. Bind in with text; fold larger drawings to size of text pages.

C. Contents of Manuals:
1. Project Directory: Indicate Project title and Project number. List Owner, Architect, and Contractor with addresses, telephone numbers, and name of responsible parties.

2. Product Directory: List names, addresses, and telephone numbers of subcontractors and suppliers. Included local sources of supplies and replacement parts. Provide information for re-ordering custom manufactured products.
3. Product Data: Submit product literature. Mark each sheet to clearly identify specific products, models numbers, components parts, and data applied to installation. Delete inapplicable information by marking out, striking out, or by notation.
4. Installation Instructions: Include instructions for installing equipment, devices, and systems. Instructions shall be specific to the installation and shall include pre-installation preparation, installation, and post-installation setup instructions.
5. Drawings and Diagrams: Include supplementing Product Data. Illustrate relations or components parts or equipment and systems. Show wiring, control, and flow diagrams. Do not use Project Record Documents as maintenance drawings.
6. Written Text: Include as necessary to supplement Product Data. Provide logical sequence of instructions for each procedure, incorporating manufacturer's instructions.
7. Provide information sheet for Owner's personnel indicating proper procedures in event of failure. Include instances which may affect validity of warranties.
8. Each Item of Equipment and Each System: Include description of system, and component parts. Include complete nomenclature and model number of replaceable parts. Identify the following.
    a. Normal functions.
    b. Normal operating characteristics.
    c. Limiting conditions.
9. Operating Procedures: Provide manufacturer's printed operation and maintenance instructions.
10. Maintenance Requirements: Include routine procedures and guide for preventive maintenance and troubleshooting; disassembling, repair, and reassemble instructions; and adjusting and checking instructions.
11. All warranty information shall include the following.
    a. Contractor/labor warranty (to include names and phone numbers).
    b. Parts/system/equipment specific warranties (to include complete list of components).]

1.19 WARRANTY

A. Refer to Division 01 for requirements for Warranties.

B. Provide originals of manufacturers' warranties to the Owner for Owner's records.

C. Register devices, components and systems with the manufacturer.

D. Provide a manufacturer's warranty for all work and all items of equipment and materials for a minimum period of one year, from the date of acceptance of the work, to cover for labor and material. Where a manufacturer's warranty is longer than one year, provide the extended warranty. Notify the Owner and Architect of any defective items. Repair or

replace such items within 24 hours without cost to the Owner, all to the satisfaction of the Owner and Architect. If the failure exceeds 48 hours, the Owner reserves the right to require the Contractor to provide on-site manufacturer support at no additional cost to Owner.

1.20 TRAINING FOR OWNER'S PERSONNEL

A. Refer to Division 01 for additional requirements for training for Owner's personnel.

B. Refer to individual Division 28 sections for additional requirements for training for Owner's personnel for specific systems.

C. Provide for approval a schedule of all Division 28 system training sessions prior to the commencement of training.

D. Provide qualified manufacturer trainers or qualified trainers certified by the manufacturers prior to the commencement of training.

E. Provide for approval qualifications for all Division 28 system trainers prior to the commencement of training.

F. Provide training materials for all training attendees.

G. General Description of Instruction Periods: Each period shall include preliminary discussion and presentation of information from operation and maintenance manuals with appropriate references to drawings, followed by tours of equipment spaces explaining maintenance requirements, access methods, servicing, and maintenance procedures, temperature settings, and available system and equipment adjustments.

PART 2 - PRODUCTS

2.01 GENERAL

A. Subject to compliance with requirements, provide products by one of the manufacturers specified herein. Provide materials and equipment with performance levels and capacities as noted herein.

B. Part numbers provided in this Specification have been coordinated with the manufacturers' latest available product literature. Part numbers are subject to change without notice by the manufacturers. Where a specific part number is invalid, coordinate for approval products meeting component description.

C. Where specific items are called out in the Specification or indicated on the Drawings for a specific application, use those products or materials, or approved substitutes. Where no specific call outs are made, provide premium products and materials. All materials and equipment installed shall have been tested and listed by Underwriters Laboratories

or other approved testing organization and shall be so labeled unless otherwise permitted by the authority having jurisdiction (Inspector).

D. All materials to be new, free from defects and not less than quality herein specified. Materials shall be designated to ensure satisfactory operation and operational life in the environmental conditions which will prevail where they are being installed.

E. Each type of materials furnished shall be of the same make, be standard products of manufacturers regularly engaged in production of such materials and be the manufacturer's latest standard design.

2.02 EXAMINATION OF DOCUMENTS

A. Before submitting a bid, visit the Project Site and become familiar with conditions which may be pertinent to, or affect the cost of, the electrical installation.

B. Become acquainted with the Work of other installers whose activities will adjoin or be affected by the electrical Work. Consult with these other installers and study all pertinent Drawings in order to coordinate the Work and to avoid conflicts, omissions and delays.

C. Before submitting a bid, examine all pertinent Contract Documents for electrical requirements which are not necessarily indicated on the electrical Drawings and include in the bid a sum which is sufficient to cover the costs of these other requirements.

D. Should it be perceived that the Contract Documents do not sufficiently define the required electrical work, contact the Architect for clarification or further description. Failure to do this will be construed as evidence of an understanding of the required electrical systems and their installation.

2.03 PERMITS AND FEES

A. Contractor shall be responsible for obtaining and paying for all necessary electrical permits and fees.

B. The following section should be deleted if project is new construction.

2.04 EXISTING FACILITIES

A. Examine the drawings and specifications of the completed work and inspect the site to establish the scope of demolition work and new work to be provided under this sections and clarification of the phasing of the work.

B. Based on project phasing and scheduling, demolition work will be taking place in and around existing areas that are to remain in service. Where the work under this section affects or interferes with the operation of any existing areas to remain in service, or portions of the work already in operation, provide all necessary work and material including premium pay, required to avoid shutdown of these areas during normal

operations. Obtain Owner's approval for shutdown, in writing, 48 hours prior to shut down.

PART 3 - EXECUTION

3.01 GENERAL

A. Follow manufacturers' instructions for installing materials and equipment and adjusting equipment and cables. Where no instructions are included with the equipment, call manufacturer to obtain detailed instructions, document instructions, and follow those instructions.

B. Sequence, coordinate, install and integrate the various elements of these Specifications and Drawings.

C. Install equipment level and plumb.

D. Verify field conditions and dimensions in the field prior to commencement of Work. Do not block access or service clearance on equipment of these or of the Specifications of other Divisions.

E. Keep all items protected before and after installation, with dust and waterproof barrier materials as necessary. Maintain the integrity of the protective measures throughout the life of the Project.

F. Protect all materials and equipment from damage, at all times during the construction. Do not install materials and equipment in the telecommunications areas until the other trades have completed their Work in the areas so that the equipment will not be stepped on, moved, or damaged.

G. Provide and maintain safe ingress and egress from Work areas.

H. Deliver to Owner sets of specialty tools specifically needed for proper operation, adjustment and maintenance of cable and cable termination hardware installed under this Contract.

I. Attend Project meetings as scheduled by the Owner.

3.02 DRAWINGS

A. For purposes of clarity and legibility, the Technology Drawings are essentially diagrammatic. although the size and location of Technology equipment is drawn to scale wherever possible, make use of all data in all the Contract Documents, and verify this at

the Project Site. Determine the exact location of conduits, outlets and equipment by the study of details, shop drawings and/or the Architect's directions.

B. The Technology Drawings show the required size and points of termination of the conduits and the quantity and size of the conductors within. However, the Drawings do not show all the necessary conduit routing. Install conduits in such a manner as to conform to structure, avoid obstruction, preserve headroom and keep passageways and openings clear.

C. Locate outlets symmetrically with architectural elements, notwithstanding the fact that the locations shown of the electrical drawings may be distorted for clarity of representation.

D. The architectural Drawings take precedence over the electrical Drawings. Refer to the reflected ceiling plans and interior elevations to determine the exact location of lighting fixtures, wall-mounted devices and fixtures, etc. The Architect has taken a very active role in the placement of these items. Should there be a conflict between locations shown on the architectural and electrical drawings, contact the Engineer for clarification prior to rough-in.

3.03 VERIFICATION OF AVAILABLE SPACE

A. Throughout the course of construction, verify that sufficient space will be available for the equipment their required clearances to be installed. If conflict determined, contractor shall contact the design team for clarification on how to proceed.

3.04 EXISTING FACILITIES

A. Based on project phasing and scheduling, demolition work will be taking place in and around existing areas that are to remain in service. Where the work under this section affects or interferes with the operation of any existing areas to remain in service, or portions of the work already in operation, provide all necessary work and material including premium pay, required to avoid shutdown of these areas during normal operations. Obtain Owner's approval for shutdown, in writing, 48 hours prior to shut down.

B. Existing electrical and signal facilities outside of the demolition area to remain in place and in service during demolition.

C. Where areas of existing facilities are indicated to be demolished or remodeled, relocate electric and signal system equipment, and reroute or replace conduit and wiring as required to conform with new use of the area and maintain operation of adjacent areas.

D. Unless specifically noted or otherwise indicated or directed, remove all existing electrical equipment in the areas to be demolished. Deliver all equipment removed, including lighting fixtures, to the Owner's representative

E. Where remodeling of existing areas is indicated, provide all work indicated and required for a complete and operating facility. Where work is adjacent to existing fixtures or devices, provide matching products to present uniform appearance. Salvage demolished material and equipment and deliver to Owner as directed. Dispose of salvaged materials and equipment where so directed in writing by Owner. Patch all openings in existing walls or floors caused by removal of materials and/or equipment under this work.

3.05 WATERPROOFING

A. Wherever electrical Work pierces waterproofing or waterproofing membranes, install it in an approved watertight manner.

3.06 INSTALLATION

A. Comply with BICSI TDMM, and the TIA -568, TIA -569, TIA -606, and TIA 607-A standards.

B. Comply with applicable federal, state and local requirements, codes and ordinances of authorities having jurisdiction.

C. Comply with manufacturers' specifications, installation manuals, and published recommendations and best practices.

3.07 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver, store, and handle materials and equipment according to the manufacturer's recommendations, using means and methods that shall prevent damage, deterioration, and loss, including theft. Handle equipment carefully to prevent damage, breakage, denting, and scoring of finishes. Replace damaged equipment.

B. Store products subject to damage by the elements above ground, undercover in a weather tight enclosure, with ventilation adequate to prevent condensation. Maintain temperature and humidity within range required by manufacturer's instruction.

3.08 CUTTING AND PATCHING

A. Provide core drilling, cutting and patching of existing construction and surfaces for the installation of electrical systems. Concrete, asphalt or plaster surfaces which have been damaged by such drilling or cutting shall be patched and repaired to match the surrounding surface.

3.09 ADJUST AND CLEAN

A. Keep the Project Site free from accumulations of electrical rubbish and debris. Remove such accumulations from the Project Site.

B. Thoroughly clean electrical equipment and materials of plaster, cement and other foreign materials and leave smooth, clean and dry.

3.10 CYBERSECURITY PROTECTION

A. For installed systems that have internet connectivity, including but not limited to controls, monitoring, metering, sensors, or other remote access capabilities, the General Contractor is responsible to request from its subcontractors a cybersecurity risk mitigation plan. All cybersecurity risk mitigation plans shall be coordinated with the owner to verify functionality and compatibility with the owner's network architecture and topology. Cybersecurity risks to be mitigated include intrusion, remote access, viruses, spy-ware, and malware. Put in-place and in-use effective protection and homogenous policies for infrastructure, servers, workstations, controllers, network connected equipment, internet connected systems/devices, Wi-Fi devices, IOT devices and mobile devices. Where relevant and applicable, apply the requirements of ISO/IEC 27000 Series of Standards relating to "Information Technology - Security Techniques".

B. For "highly secure environments" identified by the Owner, implement relevant jurisdiction-specific standards to be performed by an accredited Information Security advisor

3.11 INSTALLATION

A. Comply with BICSI TDMM, BICSI ESSDRM and the TIA/EIA-569, TIA/EIA-606, and TIA/EIA 607-A standards.

B. Comply with applicable federal, state and local requirements, codes and ordinances of authorities having jurisdiction.

C. Comply with manufacturers' specifications, installation manuals, and published recommendations and best practices.

3.12 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver, store, and handle materials and equipment according to the manufacturer's recommendations, using means and methods that shall prevent damage, deterioration, and loss, including theft. Handle equipment carefully to prevent damage, breakage, denting, and scoring of finishes. Replace damaged equipment.

B. Store products subject to damage by the elements above ground, undercover in a weather tight enclosure, with ventilation adequate to prevent condensation. Maintain temperature and humidity within range required by manufacturer's instruction.

3.13 CONSTRUCTION ADMINISTRATION

A. Substitutions
1. Refer to other Sections of these Specifications for substitution requirements.

B. Submittals
   1. All submittals shall be provided in electronic format for review.
   2. All submittals associated within a single specification section shall be submitted as a single package. Piecemeal submittals will be rejected as incomplete.
   3. Re-submittals shall only include the requested resubmittal documentation. A complete resubmittal including approved equipment and materials will be rejected.
   4. If an error in the submittals is not detected during the review process, this does not grant the contractor permission to proceed in error. Regardless of any information contained in the submittals, the requirements of the drawings and specifications must be followed and are not waived or superseded by the submittal review. Any conflicting information shall be brought to the attention of the engineer and design team through the RFI process.

C. Requests for Information (RFIs)
   1. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified (refer to Division 1).
      a. Coordinate and submit RFIs in a prompt manner to avoid delays in Contractor's work or work of subcontractors.
      b. RFIs shall address single questions and related issues only.
      c. All RFIs shall be thoroughly reviewed and approved by the General Contractor and/or Construction Manager for accuracy and need for information required before submittal to Owner’s Design Representative.
   2. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:
      a. Project name.
      b. Project number.
      c. Date.
      d. Name of Contractor.
      e. Name of Architect and Construction Manager.
      f. RFI number, numbered sequentially and unique.
      g. RFI subject.
      h. Specification Section number and title and related paragraphs, as appropriate.
      i. Drawing number and detail references, as appropriate.
      j. Field dimensions and conditions, as appropriate.
      k. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
      l. Contractor's signature.
      m. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
      n. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

3. Engineer’s Action: Engineer will review each RFI, determine action required, and respond. Allow a minimum three business days for Engineer's response for each RFI, plus additional time for Architect and General Contractor to review and forward. RFIs received by Engineer after 1:00 p.m. will be considered as received the following working day.
   a. The following Contractor-generated RFIs will be returned without action:
   b. Incomplete RFIs or inaccurately prepared RFIs.
   c. RFIs submitted without indication of review and approval for submission by General Contractor.
   d. RFIs addressing multiple unrelated issues.
   e. Requests for approval of submittals.
   f. Requests for approval of substitutions.
   g. Requests for approval of Contractor's means and methods.
   h. Requests for information already indicated in the Contract Documents.
   i. Requests for adjustments in the Contract Time or the Contract Sum.
   j. Requests for interpretation of Engineer's actions on submittals.
   k. Engineer's action may include a request for additional information, in which case Engineer's time for response will date from time of receipt of additional information.

D. Installation Drawings
   1. Prepare dimensionally accurate floor plans of each electrical and signal room and/or closet, fire control room and the like, drawn to 1/4" scale minimum. Submit electronic copies for review with two prints for Architect's record. Indicate all equipment within the rooms to scale based on shop drawing data, include structural support for suspended equipment and description of seismic bracing and fastening. Indicate system and equipment grounding details as applicable. Review elevator machine room shop drawings and coordinate location of electrical gear to maintain clearances. Submit with shop drawings.
   2. Where conduit runs, 2" trade size and larger, are run in exposed locations, prepare dimensionally accurate floor plans indicating routing, coordinated with work of other trades and the structure. Submit legible reproducible transparencies with two prints for review.

E. Project Record Documents
   1. Maintain Record Documents which clearly indicate variances from the specified systems, and which accurately locate all underground electrical conduits and structures.

3.14 SEISMIC AND WIND RESTRAINTS

A. Seismic Restraints: Seismically restrain equipment, pull boxes, cable tray and conduit in accordance with the requirements of the California Building Code. Design of seismic

restraints shall allow for the stress and thermal expansion of cable tray and conduit. Nonstructural components in Division 28 shall be as defined by ASCE 7.

1. Obtain the services of a professional engineer licensed in the State of California to prepare the seismic design for nonstructural components. The professional engineer licensed in the State of California shall also prepare a statement of special inspections per requirements of the California Building Code where such statement is required by Code. Submit calculations, details, Shop Drawings, Product Data, and statement of special inspections for the seismic design of equipment, pull boxes, cable tray and conduit. If the professional engineer determines that the California Building Code do not require some of the nonstructural components be seismically restrained, then submit a stamped and signed statement from the professional engineer to that effect.
2. Seismic Certification of Nonstructural Components: Submit manufacturer's certification by analysis, testing, or experience for nonstructural components and designated seismic systems in accordance with Section 13.2 of ASCE 7, where such certification is required by Section 1705.13 of the California Building Code.

B. Wind Restraints: Restrain components located outside in accordance with the wind requirements of the California Building Code.
   1. Obtain the services of a professional engineer licensed in the State of California to prepare wind restraint design for electrical equipment located outside. Submit calculations, details, Shop Drawings, and Product Data for wind restraints for electrical equipment.

C. The professional engineer obtained by the Contractor shall prepare both seismic and wind designs

3.15 FIRESTOPPING

A. Provide fire-stopping materials to penetrations of fire or smoke rated floor and wall assemblies to maintain fire-resistance rating of the associated assembly in accordance with Division 07 requirements.

B. Apply materials as part of an approved UL Certified Firestop system.

C. Apply materials in environmental conditions (temperature, humidity. vibration and cleanliness) acceptable to the Manufacturer of the firestop system.

D. Refer other Division 27 Specifications for the installation requirements for cables.

E. Provide labels at fire-stopped locations which indicate the UL system, material manufacturer and lot number, code and serial number.

3.16 CLEAN UP

A. Continually remove debris, cuttings, crates, cartons, etc., created by Work. Clean daily and at enough frequency to eliminate hazard to public, other workmen, the building or Owner staff.

B. Perform final cleaning including the following.
   1. Carefully clean cabinets, wiring devices, cover plates, etc. to remove dirt, dust, lubricant, cuttings, paint, plaster, mortar, concrete, etc.
   2. Touch-up scratched or damaged finished surfaces to match factory finish.

END OF SECTION

SECTION 28 13 00 - CREDENTIALED ACCESS CONTROL MANAGEMENT SYSTEM

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes furnishing materials, equipment, labor, supervision, tools, software, licenses, and items necessary for the design, construction, installation, connection, programming, integration, testing and operation of a credentialed access control management system.

B. The Work under this Section includes working in buildings during hours where staff, students, conduct business and travel between building, floors, and areas.

C. Owner provided-owner installed items under this section.]
1. Application servers.
2. Workstations.
3. Badging stations.

1.02 SYSTEM DESCRIPTION

A. This section includes but is not limited to the following equipment and the associated installation thereof:
1. Control panel.
2. Power supplies.
3. Enclosures.
4. Card readers.
5. Card reader/keypads.
6. Door Detectives.
7. Magnetic door contact sensors.
8. Request-to-exit devices.
9. Strobe lights.
10. Cable.
11. Uninterruptable power supply/battery system.
12. Conduit.
13. Backboxes.
14. System programming.
15. Testing.
16. Final adjustment.
17. Documentation.

B. The Owner is currently using the following.
1. A credentialed access control management system by Verkada Allegiance.
2. A video management system by Verkada Allegiance.

C. The system shall be expanded as identified to accommodate new access management system, video management system, intrusion detection management and Intercom system devices.

D. The software and licensing is to be provided by the owner and installed by the contractor.

1.03 RELATED DOCUMENTS

A. Division 07 Firestopping.

B. Division 08 Doors.

C. Division 08 Door Locking Hardware.

D. Division 08 Door Operator Hardware.

E. Division 11 Parking Control Equipment.

F. Division 14 Elevators.

G. Division 14 Elevator Control System.

H. Division 27 Communication Equipment Room Fittings.

I. Division 28 Video Management System.

J. Division 28 Video Surveillance Cameras.

K. Division 28 Intrusion Detection Management System.

L. Division 28 Infant Protection System.

M. Division 28 Fire Alarm System.

N. Division 32 Metal Fences and Gates

1.04 CODES AND STANDARDS

A. Federal Information Processing Standards (FIPS):
   1. Advanced Encryption Standard (AES) (FIPS 197).
   2. FIPS 201: Personal Identity Verification (PIV) of Federal Employees and Contractors.

B. Homeland Security Presidential Directive 12 (HSPD-12).

C. Underwriters Laboratories (UL):
   1. UL294 - Access Control System Units.

2. UL1076 - Proprietary Burglar Alarm Units and Systems.

D. Underwriters' Laboratories, Inc. Listed for meeting the requirements of UL-294, "Standards for Access Control System Control Units".

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.05 ACTION SUBMITTALS

A. Qualifications:
1. Resumes and certifications of technicians and project managers who will support the installation.

B. Manufacturer’s Instructions:
1. Application conditions and limitations of use stipulated by the manufacturer.
2. Manufacturer’s instructions for storage, handling, protection, examination, preparation, operation, and installation of product.

C. Product Data:
1. System data.
2. Materials list.
3. Technical data (cut sheets) for on each component, including finishes and weights
4. Reference each product to a location on Drawings. Test and evaluation data presented in Product Data shall comply with SIA BIO-01.

D. Calculations.

E. Shop Drawings:
1. Description of system operation
2. Equipment design considerations for future expansion.
3. Coordinated floor plans showing devices with their point numbers and all terminal-to-terminal wiring.
4. Coordinated reflected ceiling plans showing devices with their point numbers and all terminal-to-terminal wiring. .
5. Coordinated site drawings for areas with parking and pedestrian control gates showing devices with their point numbers and all terminal-to-terminal wiring.
6. Cable diagrams for power, signal and control cables showing interface circuits for each piece of equipment, termination, and connection, including wire numbers.
7. Conduit and back box schedules
8. Power requirements.
9. Battery and charger calculations for power supplies, controllers, and input/output modules.
10. Details of seismic strengthening of components and enclosures.
11. Sequence of operation.
12. Device schedules.

13. Detailed system head end layouts (plan and elevations) for components, enclosures and power supplies installed in the communication rooms.
14. Server requirements.
15. Sequence of operation.
16. Network diagrams.
17. Recessed Mounted Card Reader. Provide card reader cut out size and mounting information to the appropriate subcontractor.

F. Deferred Submittals:
1. Network connection requirements.
2. Network address requirements.
3. Manufacture’s system installation instructions and programming templates.
4. System test plan and schedule.
5. System training plan and schedule
6. Documentation:
7. License description.
8. License list, including quantities provided and duration of authorization.

G. Certifications:
1. Certificates of training by the Manufacturer for technicians assigned and working on the Project.

H. Schedule of Values:
1. A schedule of values for furnished and installed unit costs for each basic and optional system component and software component. The schedule of values shall include hardware components, software components, component part numbers, component quantities, and furnish & install unit prices.

1.06 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.07 CLOSEOUT SUBMITTALS

A. Provide in accordance with Section 28 05 00 - Common Work Results for Electronic Safety and Security Systems.
1. Project record Documents
2. Record actual and factual location of system components including conduit and cabling.
3. Product data.
4. Floor plans identifying devices, devices IDs, raceway routing and signage locations.
5. Cable diagrams for power, signal and control cables showing interface circuits for each piece of equipment, termination, and connection, including wire numbers.
6. Conduits, pull boxes and cable routing shown on enlarged door plans and floor plans.
7. Cable termination schedules for cables and components.

8. System and component programming manual/sheets.
9. Test procedures and results.
10. Certificate of acceptance testing.
11. Labeled keys to enclosures and cabinets.
12. Spare fuses.
13. Tools for tamper-resistant enclosures.
14. Tools for manual resetting devices.

B. Test procedures and results.

C. Certificate of acceptance testing.

D. Software licenses.

E. Software and firmware service agreements.

F. Warrantees.

G. System service contact information including service desk representative, service desk manager and operations manager.

H. Operating Manuals:
1. Preventive operation instructions for components of the system as a whole and each component in detail. Manual shall include software and hardware operation and programming. Manuals shall be written to aid in training of new security and operating personnel and as a guide in clarifying operational procedures.

I. Maintenance Manuals:
1. Preventive maintenance program and service instructions for components of the system as a whole and each component, function, and operation in detail. Manuals shall include illustrations, mounting instructions, wiring diagrams, parts lists, operating instructions, and a trouble-shooting chart for the system, including a list of troubles, causes and recommended remedies.
2. Spare Parts List. Submit a list of spare parts and components of critical items for consideration of purchase by the Owner.

1.08 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Alarm Printer Black/Red Ribbons: Package of twelve.
2. Laser Printers: Three toner cassettes and one replacement drum unit.
3. Credential card blanks, ready for printing. Include enough credential cards for all personnel to be enrolled at the site plus an extra 50 percent for future use.
4. Fuses of all kinds, power and electronic, equal to 10 percent of amount installed for each size used, but no fewer than three units.

1.09 QUALITY ASSURANCE

A. Systems Manufacturer:
   1. Company specializing in manufacturing products specified in this section with minimum five years documented experience.
   2. Capability in assisting in the preparation of engineering and production documentation.
   3. Capability in assisting in the development of testing program and interpretation of test results.
   4. Capable of providing manufacturer-employed field service personnel for installation assistance.
   5. Capable of providing technical service assistance to the Owner upon acceptance of the Work by the Owner.
   6. Capable of providing remote technical service to the Owner upon acceptance of the Work by the Owner.

B. Contractor:
   1. Specializing in the installation, maintenance and support of the system and products specified.
   2. Authorized or franchised installer of specified manufacturer with minimum three years documented experience.
   3. Staff:
      a. System design and Shop Drawings preparation technician certified by the specified Manufacturer.
      b. System device and cable installation technician certified by the specified Manufacturer.
      c. Software installation, programming and integration technicians certified by the specified Manufacturer.
      d. System training technicians certified by the specified Manufacturer. Refer to Part 3, Training and Demonstration.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Store materials indoors, in a clean, dry area in accordance with manufacturer's instructions.

C. Protect material from damage and the entrance of dirt, dust, moisture, and debris.

D. Handling: Protect materials during handling and installation to prevent damage.

1.11 CONTRACT DRAWINGS

A. The contract drawings indicate the general nature of the system layout, but do not show all components required. Rough-in requirements are shown on the contract drawings but

do not show all conduit and back boxes. Conduits, routing, and wiring are not shown on the drawings. Provide as per system requirements and shop drawings.

B. Coordinate back box requirements with system manufacturer/supplier. Study the Architectural drawings to understand wall and ceiling details. Notify Architect prior to installation if conflicts occur between:
1. Back box depth and wall thickness.
2. Wall construction.
3. Back box location.
4. Ceiling construction.
5. Door construction.

1.12 PROJECT CONDITIONS

A. Environmental Conditions: System shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
1. Control Station: Rated for continuous operation in ambient conditions of 60 to 85 deg F (16 to 30 deg C) and a relative humidity of 20 to 80 percent, noncondensing.
2. Indoor, Controlled Environment: NEMA 250, Type 1 enclosure. System components, except the central-station control unit, installed in temperature-controlled indoor environments shall be rated for continuous operation in ambient conditions of 50 to 105 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing.
3. Indoor, Uncontrolled Environment: NEMA 250, Type 3R enclosures. System components installed in non-temperature-controlled indoor environments shall be rated for continuous operation in ambient conditions of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing.
4. Outdoor Environment: NEMA 250, NEMA 250, Type 3R Type 3S Type 4 enclosures. System components installed in locations exposed to weather shall be rated for continuous operation in ambient conditions of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation where exposed to rain as specified in NEMA 250, winds up to 85 mph (137 km/h) and snow cover up to 24 inches (610 mm) thick.
5. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.

1.13 WARRANTY

A. System shall be warranted to be free of defect or faulty workmanship for a minimum period of one year from the date of final acceptance. If any equipment shall fail or found to be inoperative within this period, the contractor shall repair and/or replace within (1) day of the notification with no expense to the owner. Any required maintenance for the

equipment that falls within this warranty period shall also be performed by the contractor at no expense to the owner.

B. After the acceptance of the system(s) service shall be provided on the following basis:

C. Emergency Service - Provided 24 hours a day. When a total or catastrophic failure of equipment is reported to vendor / contractor, within 4 hours of notification, a service person will be on site. (An example of a catastrophic failure would be a hub failure or a master station/console.)

D. Routine Service - Provided within four business hours (9 a.m. to 5 p.m., Monday through Friday, excluding holidays) of notification. When a minor failure of equipment is reported to vendor / contractor, a service person will be on site within 24 hours of notification.

E. Warranty Period: Two years from date of Substantial Completion.

1.14 MAINTENANCE SERVICE

A. Provide service and maintenance of the Physical Identify Access Management System for one year from Date of System Acceptance by the Owner.

1.15 COORDINATION

A. Coordinate the installation of wall and rack mounted components in the existing communication rooms with the Architect and Owner.

B. Coordinate the installation and programming of the system with the doors, gates, and fire barriers Work of Division 07

C. Coordinate the installation and programming of the system with the door hardware Work of Division 08.

D. Coordinate the installation of the system with the Division 26 Work.

E. Coordinate the installation of wall and rack mounted components in the communication rooms with the 27 11 00 Work. Provide information for the completion of Section 27 11 00 Shop Drawings.

F. Coordinate the installation of ceiling mounted sensors, speakers, and strobe lights with the ceiling installation Work. Refer to the Architectural reflected ceiling plan drawings for ceiling details.

G. Coordinate the installation and programming of the system with Section 28 05 30 Work.

H. Coordinate the installation and programming of the system with Section 28 23 00 Video surveillance system Work.

I. Coordinate the programming of the unlocking of doors with Division 28 Fire Alarm System Work.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. Verkada AD Series (Owner Provided Contractor Installed)

2.02 DESCRIPTION

A. Fully integrated and functional access control system with card readers, keypad and key fob reader at each door designated in the security drawings.

B. Scalable platform to support additional credentials, doors, buildings, and sites, then those shown on the Drawings.

C. PC-based central station, one or more networked PC-based workstations, and field-installed controllers, connected by a LAN.

D. System Software: Based on 64-bit, Windows server operating system, and application software. Software shall have the following capabilities:
   1. Multiuser and multitasking to allow for independent activities and monitoring to occur simultaneously at different workstations.
   2. Graphical user interface to show pull-down menus and a menu-tree format that complies with interface guidelines of Microsoft Windows.
   3. System license for the entire system including capability for future additions that are within the indicated system size limits specified in this Section.
   4. Open-architecture system that allows importing and exporting of data and interfacing with other systems that are compatible with Microsoft Windows.
   5. Password-protected operator login and access.
   6. Open-database-connectivity compliant.

E. Network connecting the central station and workstations shall be a LAN using Microsoft Windows-based TCP/IP with a capacity of connecting up to 99 workstations. System shall be portable across multiple communication platforms without changing system software.

F. Network(s) connecting PCs and controllers shall consist of one or more of the following:
   1. Local area, IEEE 802.3 Fast Ethernet Gigabit-Ethernet, star topology network based on TCP/IP.
   2. Direct-connected, RS-232 cable from the COM port of the central station to the first controller, then RS-485 cable to interconnect the remaining controllers at that Location.

3. Dial-up and cable modem connection using a standard cable or dial-up telephone line, for redundancy only.

2.03 OPERATION

A. Security access system shall use a single database for access-control and credential-creation functions.

B. Distributed Processing: A fully distributed processing system.
1. Access-control information, including time, date, valid codes, access levels, and similar data, shall be downloaded to controllers so each controller can make access-control decisions.
2. Intermediate controllers for access control are prohibited.
3. In the event that communications with the central controller are lost, controllers shall automatically buffer event transactions until communications are restored, at which time buffered events shall be uploaded to the central station.

C. Number of Locations:
1. Support at least 1,000 separate Locations using a single PC with combinations of direct-connect, dial-up, or TCP/IP LAN connections to each Location.
2. Each Location shall have its own database and history in the central station.
3. Locations may be combined to share a common database.

D. System Network Requirements:
1. System components shall be interconnected and shall provide automatic communication of status changes, commands, field-initiated interrupts, and other communications required for proper system operation.
2. Communication shall not require operator initiation or response and shall return to normal after partial- or total-network interruption such as power loss or transient upset.
3. System shall automatically annunciate communication failures to the operator and shall identify the communications link that has experienced a partial or total failure.
4. Communications controller may be used as an interface between the central-station display systems and the field device network. Communications controller shall provide functions required to attain the specified network communications performance.

E. Central station shall provide operator interface, interaction, display, control, and dynamic and real-time monitoring. Central station shall control system networks to interconnect all system components, including workstations and field-installed controllers.

F. Field equipment shall include controllers, sensors, and controls.
1. Controllers shall serve as an interface between the central station and sensors and controls.
2. Data exchange between the central station and the controllers shall include down-line transmission of commands, software, and databases to controllers.

3. The up-line data exchange from the controller to the central station shall include status data such as intrusion alarms, status reports, and entry-control records.
4. Controllers are classified as alarm-annunciation or entry-control type.

G. System Response to Alarms:
1. Field device network shall provide a system end-to-end response time of 500milli second(s) or less for every device connected to the system.
2. Alarms shall be annunciated at the central station within one second of the alarm occurring at a controller or at a device controlled by a local controller, and within 100 ms if the alarm occurs at the central station.
3. Alarm and status changes shall be displayed within 100 ms after receipt of data by the central station.
4. All graphics shall be displayed, including graphics-generated map displays, on the console monitor within five seconds of alarm receipt at the security console.
5. This response time shall be maintained during system heavy load.

H. False-Alarm Reduction: The design of the central station and controllers shall contain features to reduce false alarms.

I. Error Detection:
1. Use a cyclic code method to detect single- and double-bit errors, burst errors of eight bits or fewer, and at least 99 percent of all other multibit and burst errors between controllers and the central station.
2. Interactive or product error-detection codes alone will not be acceptable.
3. A message shall be in error if one bit is received incorrectly.
4. Retransmit messages with detected errors.
5. Allow for an operator-assigned two-digit decimal number to each communications link representing the number of retransmission attempts.
6. Central station shall print a communication failure alarm message when the number of consecutive retransmission attempts equals the assigned quantity.
7. Monitor the frequency of data transmission failure for display and logging.

J. Data Line Supervision: System shall initiate an alarm in response to opening, closing, shorting, or grounding of data transmission lines.

K. Door Hardware Interface:
1. Comply with requirements in Division 08 Sections for door hardware required to be monitored or controlled by the security access system.
2. Electrical characteristics of controllers shall match the signal and power requirements of door hardware.

2.04 APPLICATION SOFTWARE

A. System Software: Based on 64-bit, Microsoft Windows central-station and workstation operating system and application software.
1. Multiuser multitasking shall allow independent activities and monitoring to occur simultaneously at different workstations.

2. Graphical user interface shall show pull-down menus and a menu-tree format.
3. Capability for future additions within the indicated system size limits.
4. Open architecture that allows importing and exporting of data and interfacing with other systems that are compatible with operating system.
5. Password-protected operator login and access.

B. Application Software: Interface between the alarm annunciation and entry-control controllers to monitor sensors and DTS links, operate displays, report alarms, generate reports, and help train system operators.
1. Reside at the central station, workstations, and controllers as required to perform specified functions.
2. Operate and manage peripheral devices.
3. Import custom icons into graphics to represent alarms and I/O devices.
4. Globally link I/O so that any I/O can link to any other I/O within the same Location without requiring interaction with the host PC. This operation shall be at the controller.
5. Globally code I/O links so that any access-granted event can link to any I/O with the same Location without requiring interaction with the host PC. This operation shall be at the controller.
6. Selectable poll frequency and message time-out settings shall manage bandwidth and latency issues for TCP/IP, RF, and other PC-to-controller communications methods by changing the polling frequency and the amount of time the system waits for a response.
7. Automatic and encrypted backups for database and history backups shall be automatically stored at the central-control PC server and encrypted with a nine-character alphanumeric password that must be used to restore or read data contained in backup.
8. Operator audit trail for recording and reporting all changes made to database and system software.
9. Support network protocol and topology, TCP/IP, Novel Netware, Digital Pathworks, Banyan Vines, LAN/WAN, and RAS.

C. Client Workstation Software:
1. Password levels shall be individually customized at each workstation to allow or disallow operator access to program functions for each Location.
2. Workstation event filtering shall allow user to define events and alarms that will be displayed at each workstation. If an alarm is unacknowledged (not managed by another workstation) for a preset amount of time, the alarm will automatically appear on the filtered workstation.

D. Controller Software:
1. Controllers shall operate as autonomous, intelligent processing units.
   a. Controllers shall make decisions about access control, alarm monitoring, linking functions, and door-locking schedules for their operation, independent of other system components.
   b. Controllers shall be part of a fully distributed processing-control network.

c. The portion of the database associated with a controller, and consisting of parameters, constraints, and the latest value or status of points connected to that controller, shall be maintained in the controller.

2. The following functions shall be fully implemented and operational within each controller:
   a. Monitoring inputs.
   b. Controlling outputs.
   c. Automatically reporting alarms to the central station.
   d. Reporting of sensor and output status to the central station on request.
   e. Maintaining real time, automatically updated by the central station at least once a day.
   f. Communicating with the central station.
   g. Executing controller resident programs.
   h. Diagnosing.
   i. Downloading and uploading data to and from the central station.
3. Controller Operations at a Location:
   a. Up to 64 controllers connected to TIA 485-A communications loop. Globally operating I/O linking and anti-passback functions between controllers within the same Location without central-station or workstation intervention. Linking and anti-passback shall remain fully functional within the same Location even when the central station or workstations are off-line.
   b. In the event of communication failure between the central station and a Location, there shall be no degradation in operations at the controllers at that Location. Controllers at each Location shall be connected to a memory buffer with a capacity to store up to 10,000 events; there shall be no loss of transactions in system history files until the buffer overflows.
   c. Buffered events shall be managed in a first-in-first-out mode of operation.
4. Individual Controller Operation:
   a. Controllers shall transmit alarms, status changes, and other data to the central station when communications circuits are operable. If communications are not available, controllers shall function in a stand-alone mode; operational data, including the status and alarm data normally transmitted to the central station, shall be stored for later transmission to the central station. Storage capacity for the latest 1024 events shall be provided at each controller.
   b. Card-reader ports of a controller shall be custom configurable for at least 120 different card-reader or keypad formats. Multiple reader or keypad formats may be used simultaneously at different controllers or within the same controller.
   c. Controllers shall provide a response to card readers or keypad entries in less than 0.25 seconds, regardless of system size.
   d. Controllers that are reset, or powered up from a non-powered state, shall automatically request a parameter download and reboot to their proper working state. This shall happen without any operator intervention.

e. Initial Startup: When controllers are brought on-line, database parameters shall be automatically downloaded to them. After initial download is completed, only database changes shall be downloaded to each controller.
f. On failure for any reason, controllers shall perform an orderly shutdown and force controller outputs to a predetermined failure-mode state, consistent with the failure modes shown and the associated control device.
g. After power is restored, following a power failure, startup software shall initiate self-test diagnostic routines, after which controllers shall resume normal operation.
h. After controller failure, if the database and application software are no longer resident, controllers shall not restart but shall remain in the failure mode until repaired. If database and application programs are resident, controllers shall immediately resume operation. If not, software shall be restored automatically from the central station.

5. Communications Monitoring:
a. System shall monitor and report status of TIA 485-A communications loop of each Location.
b. Communication status window shall display which controllers are currently communicating, a total count of missed polls since midnight, and which controller last missed a poll.
c. Communication status window shall show the type of CPU, the type of I/O board, and the amount of RAM for each controller.

6. Operating systems shall include a real-time clock function that maintains seconds, minutes, hours, day, date, and month. The real-time clock shall be automatically synchronized with the central station at least once a day to plus or minus 10 seconds. The time synchronization shall be automatic, without operator action and without requiring system shutdown.

E. PC-to-Controller Communications:
1. TCP/IP.

2.05 SYSTEM DATABASE

A. Database and database management software shall define and modify each point in database using operator commands. Definition shall include parameters and constraints associated with each system device.

B. Database Operations:
1. System data management shall be in a hierarchical menu-tree format, with navigation through expandable menu branches and manipulated with use of menus and icons in a main menu and system toolbar.
2. Navigational Aids:
a. Toolbar icons for add, delete, copy, print, capture image, activate, deactivate, and muster report.
b. Point and click feature to facilitate data manipulation.

c. Next and previous command buttons visible when editing database fields to facilitate navigation from one record to the next.
d. Copy command and copy tool in the toolbar to copy data from one record to create a new similar record.

3. Data entry shall be automatically checked for duplicate and illegal data and shall be verified for valid format.
4. System shall generate a memo or note field for each item that is stored in database, allowing the storing of information about any defining characteristics of the item. Memo field is used for noting the purpose for which the item was entered, reasons for changes that were made, and the like.

C. Operator Passwords:
1. Support up to 100 individual system operators, each with a unique password.
2. One to eight alphanumeric characters.
3. Allow passwords to be case sensitive.
4. Passwords shall not be displayed when entered.
5. Passwords shall have unique and customizable password profile and allow several operators to share a password profile. Include the following features in the password profile:
a. Predetermine the highest-level password profile for access to all functions and areas of program.
b. Allow or disallow operator access to any program operation, including the functions of View, Add, Edit, and Delete.
c. Restrict doors to which an operator can assign access.
6. Operators shall use a username and password to log on to system. This username and password shall be used to access database areas and programs as determined by the associated profile.
7. Make provision to allow the operator to log off without fully exiting program. User may be logged off, but program will remain running while displaying the login window for the next operator.

D. Access Card/Code Operation and Management: Access authorization shall be by card, by a manually entered code (PIN), or by a combination of both (card plus PIN).
1. Access authorization shall verify the facility code first, the card or card-and-PIN validation second, and the access level (time of day, day of week, date), anti-passback status, and number of uses last.
2. Use data-entry windows to view, edit, and issue access levels. Access-authorization entry-management system shall maintain and coordinate all access levels to prevent duplication or the incorrect creation of levels.
3. Allow assignment of multiple cards/codes to a cardholder.
4. Allow assignment of up to four access levels for each Location to a cardholder. Each access level may contain any combination of doors.
5. Each door may be assigned four time zones.
6. Access codes may be up to 11 digits in length.
7. Software shall allow the grouping of locations so cardholder data can be shared by all locations in the group.

8. Visitor Access: Issue a visitor badge for data tracking or photo ID purposes without assigning that person a card or code.
9. Cardholder Tracing: Allow for selection of cardholder for tracing. Make a special audible and visible annunciation at control station when a selected card or code is used at a designated code reader. Annunciation shall include an automatic display of the cardholder image.
10. Allow each cardholder to be given either an unlimited number of uses or a number from one to 9999 that regulates the number of times the card can be used before it is automatically deactivated.
11. Provide for cards and codes to be activated and deactivated manually or automatically by date. Provide for multiple deactivate dates to be preprogrammed.

2.06 CONTROLLERS

A. Controllers: Intelligent peripheral control unit, complying with UL 294, that stores time, date, valid codes, access levels, and similar data downloaded from the central station or workstation for controlling its operation.

B. Subject to compliance with requirements in this article, manufacturers may use multipurpose controllers.

C. Battery Backup: Sealed, lead acid; sized to provide run time during a power outage of 90 minutes, complying with UL 924.

D. Alarm Annunciation Controller:
1. The controller shall automatically restore communication within 10 seconds after an interruption with the field device network, with dc line supervision on each of its alarm inputs.
   a. Inputs: Monitor dry contacts for changes of state that reflect alarm conditions. Provides at least eight alarm inputs, which are suitable for wiring as normally open or normally closed contacts for alarm conditions.
   b. Alarm-Line Supervision:
      1) Supervise the alarm lines by monitoring each circuit for changes or disturbances in the signal, and for conditions as described in UL 1076 for line security equipment by monitoring for abnormal open, grounded, or shorted conditions using dc change measurements. System shall initiate an alarm in response to an abnormal current, which is a dc change of 5 percent or more for longer than 500 ms.
      2) Transmit alarm-line-supervision alarm to the central station during the next interrogation cycle after the abnormal current condition.
   c. Outputs: Managed by central-station software.

E. Entry-Control Controller:
1. Function: Provide local entry-control functions including one- and two-way communications with access-control devices such as card readers, keypads, biometric personnel identity-verification devices, door strikes, magnetic latches, gate, and door operators, and exit push buttons.

a. Operate as a stand-alone portal controller using the downloaded database during periods of communication loss between the controller and the field-device network.
b. Accept information generated by the entry-control devices; automatically process this information to determine valid identification of the individual present at the portal:
    1) On authentication of the credentials or information presented, check privileges of the identified individual, allowing only those actions granted as privileges.
    2) Privileges shall include, but are not limited to, time of day control, day of week control, group control, and visitor escort control.
c. Maintain a date-, time-, and Location-stamped record of each transaction. A transaction is defined as any successful or unsuccessful attempt to gain access through a controlled portal by the presentation of credentials or other identifying information.

2. Inputs:
    a. Data from entry-control devices; use this input to change modes between access and secure.
    b. Database downloads and updates from the central station that include enrollment and privilege information.
3. Outputs:
    a. Indicate success or failure of attempts to use entry-control devices and make comparisons of presented information with stored identification information.
    b. Grant or deny entry by sending control signals to portal-control devices and mask intrusion-alarm annunciation from sensors stimulated by authorized entries.
    c. Maintain a date-, time-, and Location-stamped record of each transaction and transmit transaction records to the central station.
    d. Door Prop Alarm: If a portal is held open for longer than 20 seconds, alarm sounds.
4. With power supplies sufficient to power at voltage and frequency required for field devices and portal-control devices.
5. Data Line Problems: For periods of loss of communication with the central station, or when data transmission is degraded and generating continuous checksum errors, the controller shall continue to control entry by accepting identifying information, making authentication decisions, checking privileges, and controlling portal-control devices.
    a. Store up to 1000 transactions during periods of communication loss between the controller and access-control devices for subsequent upload to the central station on restoration of communication.
6. Controller Power: NFPA 70, Class II power-supply transformer, with 12- or 24-V ac secondary, backup battery and charger.
    a. Backup Battery: Premium, valve-regulated, recombinant-sealed, lead-calcium battery; spill proof; with a full one-year warranty and a pro rata 9-year warranty. With single-stage, constant-voltage-current, limited battery charger, comply with battery manufacturer's written instructions for battery

terminal voltage and charging current recommendations for maximum battery life.

b. Backup Battery: Valve-regulated, recombinant-sealed, lead-acid battery; spill proof. With single-stage, constant-voltage-current, limited battery charger, comply with battery manufacturer's written instructions for battery terminal voltage and charging current recommendations for maximum battery life.

c. Backup Power-Supply Capacity: 90 minutes of battery supply. Submit battery and charger calculations.

d. Power Monitoring: Provide manual, dynamic battery-load test, initiated and monitored at the control center; with automatic disconnection of the controller when battery voltage drops below controller limits. Report by using local controller-mounted digital displays and by communicating status to central station. Indicate normal power on and battery charger on trickle charge. Indicate and report the following:
   1) Trouble Alarm: Normal power-off load assumed by battery.
   2) Trouble Alarm: Low battery.
   3) Alarm: Power off.

2.07 CARD READERS, CREDENTIAL CARDS

A. Powered from its associated controller, including its standby power source, and shall not dissipate more than 5 W.

B. Card reader shall respond to passage requests by generating a signal that is sent to the controller. Response time shall be 800 ms or less, from the time the card reader finishes reading the credential card until a response signal is generated.

C. Enclosure: Suitable for surface, semi-flush, pedestal, or weatherproof mounting. Mounting types shall additionally be suitable for installation in the following locations:
   1. Indoors, controlled environment.
   2. Indoors, uncontrolled environment.
   3. Outdoors, with built-in heaters or other cold-weather equipment to extend the operating temperature range as needed for operation at the site.

D. Digital visual indicator shall provide visible and audible status indications and user prompts. Indicate power on or off, whether user passage requests have been accepted or rejected, and whether the door is locked or unlocked.

E. Proximity Readers:
   1. Active-detection proximity card readers shall provide power to compatible credential cards through magnetic induction and shall receive and decode a unique identification code number transmitted from the credential card.
   2. Passive-detection proximity card readers shall use a swept-frequency, RF field generator to read the resonant frequencies of tuned circuits laminated into compatible credential cards. The resonant frequencies read shall constitute a unique identification code number.

3. The card reader shall read proximity cards in a range from direct contact to at least 6 inches (150 mm) from the reader.

2.08 CARD READER, CARD READER/KEYPAD.

A. MultiCLASS SE SEOS.

B. Size:
1. Standard U.S. switch plates size.
2. Window mullion mount.

C. Communications:
1. Open supervised device protocol (OSDP).
2. Wiegand.

D. Outdoor IP65 rated, complete with rubbers gaskets.

E. Power requirements: 5-16 VDC.

F. Dimensions: 4.7 inch by 3.0 inch by 0.68 inch.

G. Read Range: up to 5.5 inch.

H. Manufacturer:
1. Verkada Allegiance

2.09 DOOR WIRELESS LOCKING HARDWARE WITH INTEGRATED CARD READER (REFER TO DIVISION 8)

2.10 REQUEST-TO-EXIT SENSOR

A. Manufacturers:
1. Verkada Allegiance

B. Passive infrared motion detector with trim plate with dry contact indication to the access control system.
1. Adjustable timed relay output.
2. Swivel mount for attachment to wall, ceiling, or door frame.
3. Double pole, double throw relay contacts.

2.11 CREDENTIAL CARDS

A. Credential Card: Owner Provided

2.12 AUTO DOOR CONTROLLER (REFER TO DIVISION 8)

2.13 MAGNETIC DOOR CONTACT/SENSOR

A. 3/4-inch diameter, magnetic contact., wire leads single pole/single throw with 3/8-inch gap.

B. Color: Coordinate with the Architect.

C. Manufacturer List:
1. Verkada Allegiance

2.14 DURESS-ALARM SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following.
1. Verkada Allegiance

B. Description: A switch with a shroud over the activating lever that allows an individual to covertly send a duress signal to master control unit, with no visible or audible indication when activated. Switch shall lock in activated position until reset with a key.
1. Minimum Switch Rating: 50,000 operations.
2. Foot Rail: Foot activated, floor mounting.
3. Push Button: Finger activated, suitable for mounting on horizontal or vertical surface.

C. Power: Push-button switches shall be powered from their associated controller, using DC control.

2.15 REMOTE DOOR CONTROLLER

A. Door controller.

B. Supported via 4-pair cable connected to a network switch.

2.16 POWER SUPPLIES, TRANSFORMERS AND BATTERY BACK UP

A. NFPA 70, Class II control transformers, NRTL listed.

2.17 DOOR AND GATE HARDWARE INTERFACE

A. Exit Device with Alarm: Operation of the exit device shall generate an alarm and annunciate a local alarm. Exit device and alarm contacts are specified in Division 08 Section "Door Hardware."

B. Exit Alarm: Operation of a monitored door shall generate an alarm. Exit devices and alarm contacts are specified in Division 08 Section "Door Hardware."

C. Electric Door Strikes: Use end-of-line resistors to provide power-line supervision. Signal switches shall transmit data to controller to indicate when the bolt is not engaged and the strike mechanism is unlocked, and they shall report a forced entry. Power and signal shall be from the controller. Electric strikes are specified in Division 08 Section "Door Hardware."

D. Electromagnetic Locks: End-of-line resistors shall provide power-line supervision. Lock status sensing signal shall positively indicate door is secure. Power and signal shall be from the controller. Electromagnetic locks are specified in Division 08 Section "Door Hardware."

E. Vehicle Gate Operator: Interface electrical operation of gate with controls in this Section. Vehicle gate operators shall be connected, monitored, and controlled by the security access controllers. Vehicle gate and accessories are specified in Division 32 Section "Chain Link Fences and Gates."

2.18 FLOOR-SELECT ELEVATOR CONTROL

A. Elevator access control shall be integral to security access.
   1. System shall be capable of providing full elevator security and control through dedicated controllers.
   2. Access-control system shall enable and disable car calls on each floor and floor-select buttons in each elevator car, restricting passengers' access to the floors where they have been given access.
   3. System setup shall, through programming, automatically and individually secure and unsecure each floor-select button of a car by time and day. Each floor-select button within a car shall be separately controlled so that some floors may be secure while others remain unsecure.
   4. When a floor-select button is secure, it shall require the passenger to use his or her access code and gain access to that floor before the floor-select button will operate. The passenger's credential shall determine which car call and floor-select buttons are to be enabled, restricting access to floors unless authorized by the system's access code database. Floor-select button shall be enabled only in the car where the credential holder is the passenger.

B. Destination Dispatch Software Integration to support Bid Alternate No. 1, referenced in Alternates Section 01 23 00, Part 1.04.A: Ensure Software Integration exists between Johnson Controls and the successful selected elevator manufacturer referenced in Section 14 20 10, Part 1.12.A.

C. Security access system shall record which call button is pressed, along with credential and time information.
   1. System controller shall record elevator access data.
   2. The controller shall reset all additional call buttons that may have been enabled by the user's credential.
   3. The floor-select elevator control shall allow for manual override from a workstation PC either by individual floor or by cab.

D. CABLES
1. Cables compliant with requirements as recommended by system manufacturer for installation and integration.
2. Composite cable consisting of 4-conductor (18 AWG), 4-conductor (22 AWG), 3 pair (22 AWG) and 2 conductor (22 AWG shielded) shall be provided from access control/power supply panels to doors being fitted with card reader or card reader/keypads.
3. Cables rated for the environment of which they are installed.

E. PLYWOOD BACKBOARDS
1. 3/4-inch fire treated, exterior grade Douglas Fir A-C plywood, void free, sized with a minimum of 6 inches of clearance on all sides of wall mounted devices.
2. Plywood backboards stamped by the manufacturer to identify fire rating.

PART 3 - EXECUTION

3.01 GENERAL

A. Comply with vendor’s/manufacturers' instructions for installing components, devices, accessories, cable, and wire and for adjusting and programming the components.

B. Keep items protected before and after installation, with dust and waterproof barrier materials, as necessary. Maintain the integrity of the protective measures throughout the life of the project.

C. Protect cable and equipment from damage, at-all-times during the construction. Do not install cables and equipment in the communications rooms until the other trades have completed their work in the areas so that the equipment will not be moved or damaged. Do not install cable and equipment in communications rooms until after plywood backboards have been painted.

D. Examine conduit and back box rough-in provisions for doors to support cable and equipment to validate actual requirements prior to installation. Refer to door rough-in detail drawings for conduit and back box -in provisions. Identify required deviations to conduit and back box provisions to meet specific door requirements and coordinate changes to the conduit and back box requirements with the Section 28 05 30 Work prior to commencement of Work.

E. Provide safety slack wires from ceiling mounted devices to structure above as per applicable codes.

F. Maintain safe ingress and egress from work areas during the movement and installation. Examine the areas to receive the work and the conditions under which the Work would be performed. Remedy unsatisfactory conditions detrimental to the proper and timely completion of the Work. Where a remedy of unsatisfactory conditions is not available or

possible, notify the Architect for resolution. Do not proceed until unsatisfactory conditions have been corrected.

3.02 INTERFACE WITH FIRE ALARM SYSTEM

A. Interface the system with the fire alarm system to unlock doors upon activation of the fire alarm system as required by Codes

3.03 PREPARATION

A. Obtain detailed Project Planning forms and templates from the Manufacturer(s). Develop and customize the forms and templates to suit the Project. Publish as Project Planning Documents for review and approval.

B. Prior to commencement of the system installation, schedule meetings with Architect and Owner:
   1. Present project planning documents and review, adjust, and prepare setup documents. Use final documents to set up and program the system and video surveillance software.
   2. Review and discuss current electronic security system policies and procedures.
   3. Confirm exact location of door controller and power supply enclosures in the communication room. Record setup of controller features and access requirements.
   4. Confirm exact location of gates, controller motors, and power supply enclosures near the gates. Record setup of controller features and access requirements.
   5. Confirm exact location of card readers and door interface devices.
   6. Coordinate how wireless locks with integrated card readers, will be installed, connected to the Owner’s network, and programmed into the expanded system.
   7. Coordinate how auto-door operators will integrate and be controlled by card reader(s).
   8. Coordinate how fire doors/barriers and associated operators will integrate into and be controlled by card reader(s).
   9. Coordinate how roll up gate and associated operators will integrate into and be controlled by card reader(s).
   10. Coordinate how vehicular and pedestrian gate operators will integrate into and be controlled by card reader(s).
   11. Coordinate door profiles and schedules.
   12. Coordinate rules, response actions and schedules.
   13. Coordinate updating system map-views
   14. Coordinate pin codes for dual authorization keypads.
   15. Confirm start and stop times for time zones and holidays and match up access levels for doors.
   16. Set up groups, facility codes, linking, and list inputs and outputs for each controller.
   17. Develop user-defined fields.
   18. Develop screen layout formats.
   19. Assign action message names and compose messages.

20. Set up alarms.
21. Establish interlocks between alarms, intruder detection, and video surveillance features.
22. Coordinate the system response to fire alarm system activation.
23. Coordinate the system response to call for “lock down” activation.
24. Assign action message names and compose messages.
25. Prepare and install alarm graphic maps.
26. Coordinate graphical user interface screen layout formats
27. Coordinate how door activation/alarms will trigger video surveillance camera screen pop-ups on security office video displays.
28. Coordinate how management reports and incident reports will set up and managed.
29. Coordinate software and license requirements and acceptance.
30. Coordinate setup data for control station and workstations.
31. Coordinate credential/badge layout options and design.
32. Propose setups for guard tours and key control.
33. Coordinate default system and devices logins and passwords, and how they will be changed to Owner logins and passwords.
34. Coordinate network switch port requirements to connect video surveillance cameras into the network.
35. Coordinate controller network address requirements.
36. Coordinate cable, controller, and card reader labeling nomenclature.
37. Coordinate video surveillance camera naming for video management system programming
38. Coordinate card reader and door naming for system programming.
39. Coordinate a plan for system testing, startup, and demonstration.
40. Develop acceptance test concept and, on approval, develop specifics of the test.
41. Record and share decisions for approval and acceptance by the Architect and Owner.
42. Coordinate the Work schedule and the sequence of Work.

C. Secure software licenses.

3.04 EXISTING WORK

A. Extend existing access control system using materials and methods compatible with existing installations, or as specified.

B. Coordinate the interfacing of the new system components with the existing systems with the Owner prior to the commencement of any work.

3.05 EXISTING SYSTEM

A. Conduct a site visit with the Architect and Owner prior to commencement of Work.
   1. Review the build and performance of the system server(s) currently in use.
   2. Suggest modifications to the current system server to enhance current performance and to enhance performance of the expanded system.

3. Review the build and performance of the management workstation currently in use.at the security desk.
4. Suggest modifications to the current management workstation to enhance current performance and to enhance performance of the expanded system.
5. Review operation and setup of the current security desk currently in use.
6. Suggest modifications to the current security desk to enhance current operation and to enhance operation of the expanded system.
7. Review operational parameters of the system.
8. Review conditions of the field panels currently in use and confirm that the field panels were professionally installed.
9. Suggest modifications to the current field panel installation that were not professionally installed.

B. Perform operational tests to confirm that the system is properly functioning and to set a minimum base line for final system acceptance.

C. Confirm that the system database is properly backed up. Create a second backup of the system database in case of a failure to properly load the primary database.

D. Expand the existing access control system using materials and methods compatible with existing installations.

E. When tying into existing power supplies, confirm existing loads and new loads do not exceed the rating of the power supplies.

F. Update Credentialed Access Control Management System software to the latest software release.

3.06 INSTALLATION

A. Coordinate the integration of the access control with the Architect, Owner and other Division 28 system identified herein.

B. Coordinate the interfacing of the new system components with the existing systems with the Owner prior to the commencement of Work. Identify impact to operations and provide a schedule of Work.

C. Integrate magnetic door contact/sensors into the access control system and intrusion system.

D. Confirm compatibility of the new devices with the existing system. Report compatibility issues to the Architect.

E. Drawings and Specifications indicate major system components, and may not show every component, connector, module, or accessory that may be required to support the operation specified. Provide components needed for a complete system.

F. Door Hardware Interface:
   1. Comply with requirements in Divisions 01 and 08 for door hardware required to be monitored or controlled by the credentialed access control management system, including request to exist devices and latch-bolt monitor devices.
   2. Match the electrical characteristics of controllers with the signal and power requirements of door hardware.

G. Gate Hardware Interface:
   1. Comply with requirements in Divisions 01, 11 and 32 for gates and gate hardware required to be monitored or controlled by the credentialed access control management system, including request to exist devices and buttons, induction loops, gate motors and gate position monitor devices.
   2. Match the electrical characteristics of controllers with the signal and power requirements of gate hardware.

H. Provide controllers, relays, power supplies, battery backup and enclosures in identified rooms and mount onto new plywood back board. Dress cables entering the rooms with strain relief and anti-chaffing equipment; separated from the cabling for other devices not associated with the access control equipment. Do not obstruct equipment controls or indicators with wire or cable. Route wire and cable away from heat producing components such as resistors, regulators, and the like.

I. If replacing the access control system, provide new controllers/enclosures in identified rooms and mount onto new plywood back board. Re-dress the cables.

J. Provide card readers, magnetic door contact/sensors, relays, sounders, power supplies, controllers, and enclosures. Ground the system components as required.

K. Provide new magnetic door contact/sensors to replace the existing magnetic door contact/sensors and cable the magnetic door contact/sensors to both the access control controller and the intrusion detection controller. Modify door frame to accommodate new contact/sensors.

L. Provide electronic door operator relays/enclosures at doors with existing electronic door operators. Locate the relays/enclosures above the accessible ceilings above the doors. Where the ceiling above the doors is in-accessible, locate the relays/enclosures near the door.

M. Provide a cable termination scheduled for cable and terminations installed under this Work. Coordinate schedule schema with Architect prior to commencement. Record cable schedules in an excel spreadsheet. Provide a copy of the spreadsheet on a CD to Owner prior to Project Close-out.

N. Provide cable and wire to interconnect devices. Size cable and wire to maintain voltage drop and resistance, at levels acceptable to the manufacturer and for proper installation of the system.

O. Route cables from the doors to the controllers in conduits, raceway, and cable trays. Provide J-hooks to support the cables in accessible ceiling areas were where conduits and cable tray are not available.

P. Provide plenum rated cable in environmental airspaces, including plenum ceilings.

Q. Install cables in continuous length. Do not splice cables.

R. Provide cables to network the access control system controllers to Owner network switches in the communication rooms. Refer to Section 27 15 00.

S. Provide cables to network the access control system controllers to the existing access control system presently installed in the buildings.

T. Label devices signifying equipment location number in correspondence with the cable termination schedule and the as-built diagram with machine generated self-laminating labels.

U. Label cables at each end signifying equipment location number in correspondence with the cable termination schedule and the as-built diagram with machine generated self-laminating labels

3.07 SYSTEM PROGRAMMING

A. Load background files into the credentialled access control management system to include the site, building, floors, and doors.

B. Program the existing access control system software to include new controllers, doors, gates, card readers, and wireless locks with integrated card readers .Coordinate programming requirements with the Owner:
1. Door type grouping.
2. Door locking:
   a. Fail secure/fail safe.
   b. Normally open/normally closed.
   c. Multiple points of control.
3. Operating hours.
4. Interface to remote operation devices:
   a. Lock down buttons.
   b. Remote unlock buttons.
   c. Intercom stations.
5. Door alarm reporting.
6. Door alarm shunting reset period.
7. Delayed egress.
8. Staff type access to each door.
9. Interface to auto door operators.
10. Device operations sequencing.]

C. Program the existing credentialled access control management system software to include new devices. Coordinate # nomenclature and room number nomenclature with Owner prior to commencement.

D. Program operational sequence of door:
   1. Time of operation for securing doors.
   2. Time of operation for un-securing doors.
   3. Timeframe for door open in a non-alarm condition.

E. Program credential templates for access levels. Coordinate door/department/credential access level with Owner prior to commencement.

F. Provide initial programming and configuration of the system including: the definition of the following.
   1. Hardware.
   2. Doors.
   3. Fire doors/barriers .
   4. Gates.
   5. Monitor points.
   6. Clearance codes.
   7. Time codes.
   8. Door groups.
   9. Alarm groups.
   10. Operating sequences.
   11. Camera call-ups.

G. Coordinate operating parameters with Architect and Owner.

H. Prefer to minutes of meetings from Preparation meetings for other programming requirements.

I. Develop and input system graphics, maps and standby screens using Architect provided floor plan. Development of maps shall include the creation of icons for all doors, monitor points, and tamper circuits.

J. Input credential data for each access card. Coordinate credential information parameters with Owner.

K. Maintain hard copy worksheets of the system program and configuration until final acceptance by Owner. Worksheets shall be subject to inspection and approval by Owner. Provide final copies to Owner prior to Project Close-out.

L. Maintain electronic backups of the system configuration and cardholder database until final Acceptance by Owner. Provide back-up tapes at final acceptance.

M. Approximately sixty (60) days after occupancy, provide on-site follow-up assistance with system configuration. Contractor shall include an allowance of sixteen (16) hours of labor for follow-up assistance in his Base Bid price.

3.08 APPLICATION SERVERS

A. If replacing the access control system, provide an application server(s) for the replacement Access Control System software and database storage. Coordinate location of server(s) with the Owner prior to installation.

3.09 CABLING

A. Comply with NECA 1, "Good Workmanship in Electrical Construction."

B. Install cables and wiring according to requirements in Division 28 Section "Conductors and Cables for Electronic Safety and Security."

C. Wiring Method:
1. Install wiring in conduits and cable tray except within consoles, cabinets, desks, and counters.
2. Provide NRTL-listed plenum cable in environmental airspaces, including plenum ceilings.

3.10 CONDUIT AND BACK BOXES

A. Provided lockable enclosures pull boxes where enclosures and pull boxes are accessible to employees or to the public. Refer to Section 28 05 28 for additional information.

B. Card Readers and Keypads:
1. Install number of conductor pairs recommended by manufacturer for the functions specified.
2. Unless manufacturer recommends larger conductors, install No. 22 AWG wire if maximum distance from controller to the reader is 250 ft. (75 m), and install No. 20 AWG wire if maximum distance is 500 ft. (150 m).
3. For greater distances, install "extender" or "repeater" modules recommended by manufacturer of the controller.
4. Install minimum No. 18 AWG shielded cable to readers and keypads that draw 50 mA or more.

3.11 GROUNDING

A. Comply with Division 26 Section "Grounding and Bonding for Electrical Systems."

B. Comply with IEEE 1100, "Recommended Practice for Power and Grounding Electronic Equipment."

C. Ground cable shields, drain conductors, and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.

D. Bond shields and drain conductors to ground at only one point in each circuit.

E. Signal Ground:
   1. Terminal: Locate in each equipment room and wiring closet; isolate from power system and equipment grounding.
   2. Bus: Mount on wall of main equipment room with standoff insulators.
   3. Backbone Cable: Extend from signal ground bus to signal ground terminal in each equipment room and wiring closet.

3.12 IDENTIFICATION

A. In addition to requirements in this article, comply with applicable requirements in Division 26 section "Identification for Electrical Systems" and with TIA/EIA 606-A.

B. Label each terminal strip and screw terminal in each cabinet, rack, or panel.

C. All wiring conductors connected to terminal strips shall be individually numbered, and each cable or wiring group being extended from a panel or cabinet to a building-mounted device shall be identified with the name and number of the device as shown.

D. Each wire connected to building-mounted devices is not required to be numbered at the device if the color of the wire is consistent with the associated wire connected and numbered within the panel or cabinet.

E. Label control and power supply panels in accordance with the approved Shop Drawings with machine generated self-laminating labels.

F. Label card readers in the inside of the devices in accordance with the approved Shop Drawings with machine generated self-laminating labels.

3.13 FIRESTOPPING

A. Provide Firestopping systems at rated walls and floors where system’s cables are run.

B. Comply with requirements in Division 01, [Section [07 84 13]] "Penetration Firestopping."

C. Comply with TIA-569 "Firestopping."

D. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.14 FIELD QUALITY CONTROL

A. Provide a quality control and testing plan to the Owner a minimum of 2, weeks in advance of commence of the testing. Include tester credentials, and system test schedules and system test documentation templates.

B. Test each circuit and component of each system. Measure the power-supply output under maximum load, signal loop resistance, and leakage to ground where applicable. System components with battery backup shall be operated on battery power for a period of not less than 10 percent of the calculated battery operating time.

C. Perform field inspections and operational test on each component or item of equipment and on the overall system. Minimum system testing shall include the following.
   1. Operation of each card reader.
   2. Operation of each door.
   3. Operation of fire doors/barriers .
   4. Operations of vehicular and pedestrian gates.
   5. Operations of roll up gates.
   6. Operation of each duress & alarm station.
   7. Operation of each intercom station remote door release.
   8. Operation of the system in a lock down alarm sequence.
   9. Operation of the system in an active fire alarm activation sequence.
   10. Operation of the system in infant security system activation sequence.
   11. Operation of elevator cab-recall alarm sequence.
   12. Operation of the system in a manual operation mode.
   13. Operation of all safety features of the systems.
   14. Operation of system under power failure conditions.
   15. Operation of system under central control unit failure.

D. Validate the end user permission programming at the viewing stations scheduled for the security desks.

E. Assess each circuit and component of each system. Tests shall include measurements of power-supply output under maximum load, signal loop resistance, and leakage to ground where applicable. System components with battery backup shall be operated on battery power for a period of not less than 10 percent of the calculated battery operating time. Provide special equipment and software if testing requires special or dedicated equipment.

F. After installation of cables and connectors, demonstrate product capability and compliance with requirements. Assess each signal path for end-to-end performance from each end of all pairs installed. Remove temporary connections when tests are completed.

G. Inspect the system to verify that components devices are labeled, and the interconnecting cables, wires and terminals are labeled and identified.

H. Prepare test and inspection reports and submit under Article “Closeout Submittals.”

3.15 STARTUP SERVICE

A. Complete installation and startup checklist according to approved procedures developed in "Preparation" Article and with manufacturer's written instructions.

B. Adjust system controls and programming to achieve proper operation

3.16 DEMONSTRATION

A. Provide a training plan to Architect and Owner a minimum of six weeks in advance of commence of the training sessions. Include trainer credentials, training schedules with quantity of classes and durations and training materials for approval by the Owner.

B. Demonstrate system operation to the Owner’s Security Staff and Facilities Engineer.

C. Conduct walking tour of Project with the Architect and Owner to describe and review function, operation, maintenance, and warranty of each component.

D. Provide a minimum of two, 4-hour classroom training session(s) for the Owner’s systems operators on the Owner’s site. The sessions shall include:
1. Training outline, agenda, and training material for (#) people.
2. System operation manuals.
3. System programming manuals.
4. Demonstrate system operations, management, features, and component programming.
5. Cover operating features of the system, including the following.
    a. Data base back up procedures and scheduling.
    b. System set-up and cardholder database configuration.
    c. Access control features.
    d. Alarm monitoring features.
    e. Report generation and searches.
    f. Card management.

E. Use submitted operation and maintenance manual as reference during demonstration and training.

3.17 END OF S OPERATION AND MAINTENANCE MANUALS

A. Provide product, user and operation manuals provided by the manufacturer to contain the following.
1. Preventive maintenance program.
2. Service instructions for components of the system and each component, function, and operation in detail.
3. Illustrations, mounting instructions, wiring diagrams, parts lists, operating instructions, and a trouble-shooting chart for the system, including a list of troubles,

causes and recommended remedies. Include wiring diagram showing all components.

B. Manuals shall be written to aid in training of new security and operating personnel and as guide clarifying operational procedures.

C. Spare Parts List. Submit list of spare parts and components of critical items for consideration of purchase by Owner.

3.18 WARRANTY

A. Register and provide proof-of-purchases required to activate Manufacturer's warranty.

B. The warranty shall include labor and equipment to maintain the integrated system in full operation for a period of one year for hardware from the date of Owner acceptance.

C. The warranty shall provide:

D. A contact number for service call during the warranty period that is answered 24 hours 7 days a week. Service calls made outside of normal working hours and received by an answering service shall be returned within 1 hour.
1. Standard on-site service calls within 12 hours.
2. Emergency on-site service calls within 4 hrs.
3. The end-user will notify the contractor of the appropriate response time required. This warranty may be enhanced by the contractor but cannot be taken away from this supersedes all other warranties.

E. Invoke manufacturer's warranties as necessary during the warranty period. Obtain Return-Merchandise-Authorization for shipping defective material back and receiving replacements materials

END OF SECTION

SECTION 28 23 00 - VIDEO SURVEILLANCE MANAGEMENT SYSTEM

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. The Work under this Section includes furnishing materials, equipment, labor, supervision, tools, licenses and items necessary for the design, construction, installation, connection, programming, integration, licensing, programming, testing and operation of video surveillance management system.

B. The Work under this Section includes furnishing materials, equipment, labor, supervision, tools, licenses and items necessary for the design, construction, installation, connection, programming, integration, licensing, programming, testing and operation of video surveillance cameras.

1.02 SYSTEM DESCRIPTION

A. Video surveillance cameras integrated into an existing video management system.

B. The Owner is currently using the following.
   1. A Video Management System by Verkada
   2. Credentialed Access Control Management System (CACMS) by Verkada

C. The Video Management System programming modified for new video surveillance cameras, storage/server/network video recorder devices.

D. The Video Management System updated to the latest offered version available.

E. The firmware on existing video surveillance cameras updated to the latest offered version.

F. Video image storage updated or added to accommodate new video surveillance cameras.

G. Licenses associated with new components and software.

1.03 RELATED WORK

A. Division 07, Section “Firestopping.

B. Section 27 11 00, Communication Equipment Room Fittings.

C. Section 27 1500, Communication Horizontal Cabling.

D. Section 28 13 00, Credentialed Access Control Management System.

1.04 REFERENCES

A. Abbreviations
1. AGC - Automatic Gain Control
2. API – Applications Programming Interface
3. ARP – Address Resolution Protocol
4. AWB - Automatic White Balance
5. BLC – Back Light Compensation
6. CBR – Constant Bit Rate
7. CCD: Charge-coupled device.
8. CVBR – Constant and Variable Bit Rate
9. DHCP - Dynamic Host Configuration Protocol
10. DNR – Digital Noise Reduction
11. DNS - Domain Name Server

   3. Emissions
      a. FCC (Class A) – 47 CFR Part 15
      b. CE – EN 55022 (Class A), EN 50130-4, EN 60950-1
      c. ICES-003, Class A
   4. Environmental Models
      a. ANSI / IEC 60529 – Degrees of Protection Provided by Enclosures – IP66
      b. IK10 (20J) Impact Resistance / IEC62262
      c. National Electrical Manufacturers Association, NEMA 250-2003, 4X Enclosure Definition
   5. Electrical Components, Devices, and Accessories:
      a. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.05 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Video surveillance system shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

1.06 ACTION SUBMITTALS

A. Product Data:
   1. Materials list.
   2. Technical data (cut sheets) for on each component, including finishes and weights.

B. Calculations:
   1. Network bandwidth projected requirements by camera, by communication room.
   2. UPS sizing.

C. Shop Drawings:
   1. Description of system operation
   2. Plan views for all devices shown on floor plans coordinated with the Architectural reflected ceiling plans.

3. Wiring and cabling diagrams.
4. Conduit and back box schedules.
5. Details for video surveillance camera seismic supports where seismic supports are required by Codes.
6. Detail equipment assemblies of devices and camera mounts and enclosures.

D. Equipment List: Include equipment by model number, manufacturer, serial number, location, and date of original installation. Add pretesting record of each piece of equipment, listing name of person testing, date of test, set points of adjustments, name and description of the view of preset positions, description of alarms, and description of unit output responses to an alarm.

E. Deferred Submittals:
1. Network connection requirements.
2. Network address requirements.
3. Manufacture's system installation instructions and programming templates.
4. System test plan and schedule.
5. System training plan and schedule.

F. Documentation:
1. Software license description.
2. Software license list, including quantities provided and duration of authorization.

G. Certifications:
1. Certificates of training by the Manufacturer for technicians assigned and working on the Project.

H. Schedule of Values:
1. A schedule of values for furnished and installed unit costs for each basic and optional system component and software component. The schedule of values shall include hardware components, software components, component part numbers, component quantities, and furnish & install unit prices.

1.07 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Certificates: For video surveillance, cameras, camera-supporting equipment, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Field quality-control reports.

C. Warranty: Sample of special warranty.

1.08 CLOSEOUT SUBMITTALS

A. Provide in accordance with Section 28 05 00 - Common Work Results for Electronic Safety and Security Systems.

B. Project Record Documents
1. Record actual information of the installed Work.
2. Product data.
3. Floor plans identifying devices, devices IDs and raceway routing.
4. Cable termination schedules for associated horizontal cables.
5. System sequence of operations.
6. System programming manual/sheets.
7. Component programming manual/sheets.
8. Test procedures and results.

C. Certificate of acceptance testing.

D. Warrantees.

E. System service contact information including service desk representative, service desk manager and operations manager.

F. Operating Manuals:
1. Preventive operation instructions for components of the system as a whole and each component in detail. Manual shall include software and hardware operation and programming. Manuals shall be written to aid in training of new security and operating personnel and as a guide in clarifying operational procedures.

G. Maintenance Manuals:
1. Preventive maintenance program and service instructions for components of the system as a whole and each component, function and operation in detail. Manuals shall include illustrations, mounting instructions, wiring diagrams, parts lists, operating instructions and a trouble-shooting chart for the system, including a list of troubles, causes and recommended remedies.
2. Spare Parts List. Submit a list of spare parts and components of critical items for consideration of purchase by the Owner.

1.09 CONTRACT DRAWINGS

A. The contract drawings indicate the general nature of the system layout, but do not show all components required. Rough-in requirements are shown on the contract drawings but do not show all conduit and back boxes. Conduits, routing and wiring are not shown on the drawings. Provide as per system requirements and shop drawings.

B. Coordinate back box and camera mounting requirements with system manufacturer/supplier. Refer to the Architectural drawings to understand wall and ceiling construction details. Notify Architect prior to installation if conflicts occur between:

1. Back box depth and wall thickness.
2. Wall construction.
3. Back box location.
4. Ceiling construction.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Protect material from the entrance of dirt, dust, moisture and debris

1.11 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with NECA 1.

C. Comply with NFPA 70.

D. Electronic data exchange between video surveillance system with an access-control system shall comply with SIA TVAC.

E. Systems Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

F. Contractor:
1. Company specializing in the installation, maintenance and support of the system and products specified.
2. Authorized or franchised installer of specified manufacturer with minimum three years documented experience.
3. Staff:
   a. System design and Shop Drawings preparation technician certified by the specified Manufacturer.
   b. System device and cable installation technician certified by the specified Manufacturer.
   c. Software installation, programming and integration technicians certified by the specified Manufacturer.
   d. System training technicians certified by the specified Manufacturer. Refer to Part 3, Training and Demonstration.

1.12 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Control Station: Rated for continuous operation in ambient temperatures of 60 to 85 deg F (16 to 29 deg C) and a relative humidity of 20 to 80 percent, noncondensing.
2. Interior, Controlled Environment: System components, except central-station control unit, installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
3. Interior, Uncontrolled Environment: System components installed in non-temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing. Use NEMA 250, Type 3R enclosures.
4. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph (137 km/h) and snow cover up to 24 inches (610 mm) thick. Use NEMA 250, Type 3R Type 4 enclosures.
5. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
6. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use NEMA 250, enclosures.
7. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

1.13 COORDINATION

A. Coordinate the installation and programming of the video surveillance cameras into the existing video management system with the with the Architect and Owner.

B. Coordinate the patching of horizontal cable termination to Owner network switches in the existing communication rooms with the Architect and Owner.

C. Coordinate the installation of video surveillance cameras with the Section 27 15 00 (Horizonal Cable) Work.

D. Coordinate the integration of the video surveillance cameras with the Section 28 13 00 (Credential Access Control) Work.

E. Coordinate the installation of the video surveillance cameras with the Owner and their network engineers for network port access, provisioning and IP network address requirements.

1.14 WARRANTY

A. The warranty shall include labor and equipment to maintain the integrated system in full operation for a period of one year for hardware from the date of final system acceptance.

B. The warranty shall provide:
   1. A contact number for service call during the warranty period that is answered 24 hours 7 days a week. Service calls made outside of normal working hours and received by an answering service shall be returned within 1 hour.
   2. Standard on-site service calls within 12 hours.
   3. Emergency on-site service calls within 4 hrs.
   4. The end-user will notify the contractor of the appropriate response time required. This warranty may be enhanced by the contractor but cannot be taken away from this supersedes all other warranties.

C. The warranty shall provide a one (1) year parts/labor warranty for the system with the option to extend for up to two (2) years at an additional cost. Maintenance and/or repairs shall be handled directly under this Work during this warranty period. Warranty period will begin on system acceptance by the Owner of a commissioned system.

D. Register and provide proof-of-purchases required to activate Manufacturer's warranty.

E. Invoke Manufacturer's warranties as necessary during the warranty period. When required, obtaining Return Merchandise Authorization when shipping defective material and receiving replacements.

1.15 SYSTEM PRICING:

A. Provide a schedule of values for furnished and installed unit costs for each basic and optional system component and software component by part number.

1.16 SERVICE CONTRACT

A. Provide a one-year service contract to commence after acceptance of installation without additional cost. Service to include two semi-annual visits to the site for routine adjustment and maintenance of all equipment. Provide a preliminary schedule for the semi-annual visits.

B. Toward the end of each year's Service Contract, provide the owner with a proposal for continued service during the next year.

1.17 MAINTENANCE SERVICE

A. Provide service and maintenance of the upgraded video management system for one year from Date of System Acceptance by the Owner.

PART 2 - PRODUCTS

2.01 SYSTEM REQUIREMENTS

A. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor's entry connection to components.
   1. Minimum Protection for Power Connections 120 V and More: Auxiliary panel suppressors complying with requirements in Division 26 Section "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits."
   2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Connections: Comply with requirements in Division 26 Section "Transient-Voltage Suppression for Low-Voltage Electrical Power Circuits." as recommended by manufacturer for type of line being protected.

B. Tamper Protection: Tamper switches on enclosures, control units, pull boxes, junction boxes, cabinets, and other system components shall initiate a tamper-alarm signal when unit is opened or partially disassembled. Control-station, control-unit alarm display shall identify tamper alarms and indicate locations.

2.02 NETWORK CAMERAS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings and specified herein:
   1. Verkada (Owner Provided Contractor Installed)

B. System shall provide high-quality delivery and processing of IP-based video, audio, and control data using standard Ethernet-based networks
   1. System shall have seamless integration of all video surveillance and control functions.
   2. Graphical user interface software shall manage all IP-based video matrix switching and camera control functions, two-way audio communication, alarm monitoring and control, and recording and archive/retrieval management. IP system shall also be capable of integrating into larger system environments.
   3. System design shall include all necessary compression software for high-performance, dual-stream, video. Unit shall provide connections for all video cameras, camera PTZ control data, bidirectional audio, discreet sensor inputs, and control system outputs.
   4. All camera signals shall be compressed, encoded, and delivered onto the network for processing and control by the IP video-management software.
   5. Camera system units shall be ruggedly built and designed for extreme adverse environments, complying with NEMA Type environmental standards.
   6. System interconnect cables, workstation PCs, PTZ joysticks, and network intermediate devices shall be provided for full performance of specified system.

C. Transmission

1. HTTP (Unicast)
2. HTTPS (Unicast)
3. RTP (Unicast & Multicast)
4. RTP over RTSP (Unicast)
5. RTP over RTSP over HTTP (Unicast)

D. Support Quality of Service (QoS) to prioritize traffic.

E. Video streaming
   1. Multiple, individually configurable streams in H.264 and H.265
   2. Controllable frame rate and bandwidth
   3. VBR/ABR/MBR H.264

F. Password protection, IP address filtering, HTTPS encryption, IEEE 802.1X (EAP-TLS) network access control, digest authentication, user access log, centralized certificate management, brute force delay protection, signed firmware

G. Supported protocols :IPv4, IPv6 USGv6, ICMPv4/ICMPv6, HTTP, HTTP/2, HTTPS, TLS, QoS Layer 3 DiffServ, FTP, CIFS/SMB, SMTP, mDNS (Bonjour), UPnP, SNMP v1/v2c/v3 (MIB-II), DNS/DNSv6, DDNS, NTP, RTSP, RTP, SRTP, SFTP, TCP, UDP, IGMPv1/v2/v3, RTCP, ICMP, DHCPv4/v6, ARP, SOCKS, SSH, LLDP, CDP, MQTT v3.1.1, Syslog, Link-Local address (ZeroConf)

H. Open application programming interface (API) for software integration

I. Supporting ONVIF® Profile G, ONVIF® Profile S and ONVIF® Profile T.

J. Event triggers:
   1. Detectors, hardware, input signal, storage, system, time, analytics, edge storage events MQTT subscribe.

K. Fixed Indoor, Day/Night Camera:
   1. Comply with UL/EN 60950-1 and UL 60950-22.
   2. Power: Power over Ethernet (PoE) IEEE 802.3af, Class 3.
   3. Video:
      a. Provide simultaneous Motion JPEG and H.264 streams
      b. Provide at least two video streams in HDTV 720p at up to 30 frames per second (60Hz mode).
      c. The H.264 implementation shall include both unicast and multicast functionality and support Constant Bit Rate (CBR) as well as Variable Bit Rate (VBR).
   4. Network functionality:
      a. IPv4 and IPv6
      b. Support both static IP addresses and addresses from a DHCP-server.
      c. Support for Quality of Service (QoS)
      d. Equipped with a RJ45 100BASE-TX Ethernet port.

5. Sensitivity: Camera shall provide usable images in low-light conditions, delivering an image at a scene illumination of 2 lux at, with camera AGC off.
6. Sensitivity: Must provide images down to 0.2 lux in color and 0.04 in B/W.
7. Motion Detector: Built-in video and audio detection, with ability to provide external source input.
8. Standardization/Compatibility: Conform to ONVIF Profile S or ONVIF Version 1.01 or higher as defined by ONVIF organization and be upgradeable at any time.
9. On board storage: The camera shall support microSD/microSDHC/microSDXC, memory up to 64GB.
10. BOD Camera Models:

L. Outdoor Fixed Color Dome Camera, tamper resistant with IR Illuminator:
1. Comply with UL/EN 60950-1 and UL 60950-22.
2. Power: Power over Ethernet (PoE) IEEE 802.3af, Class 3, Max 12.1W.
3. IP 66, IP 67, NEMA 4X rated, IK09 impact resistant casing.
4. Video:
   a. Provide simultaneous Motion JPEG and H.264 streams
   b. Provide at least two video streams in HDTV 720p at up to 30 frames per second (60Hz mode).
   c. The H.264 implementation shall include both unicast and multicast functionality and support Constant Bit Rate (CBR) as well as Variable Bit Rate (VBR).
5. Network functionality:
   a. IPv4 and IPv6
   b. Support both static IP addresses and addresses from a DHCP-server.
   c. Support for Quality of Service (QoS)
   d. Equipped with a RJ45 100BASE-TX Ethernet port.
6. Impact Resistance: Meet IEC 62262 Class IK10
7. IR Illumination:
   a. Built-in IR LED’s with adjustable angle of illumination and intensity
   b. Range of 30m (100ft).
   c. Emit light with a wavelength of 850nm.
8. Motion Detector: Built-in video and audio detection, with ability to provide external source input.
9. Standardization/Compatibility: Conform to ONVIF Profile S or ONVIF Version 1.01 or higher as defined by ONVIF organization and be upgradeable at any time.
10. On board storage: The camera shall support microSD/microSDHC/microSDXC, memory up to 64GB.
11. BOD Camera Models:

2.03 POWER SUPPLIES

A. Low-voltage power supplies matched for voltage and current requirements of cameras and accessories, and of type as recommended by manufacturer of camera, infrared illuminator, and lens.
1. Enclosure: NEMA 250, Type 3.

2.04 CAMERA-SUPPORTING EQUIPMENT

A. Minimum Load Rating: Rated for load in excess of the total weight supported times a minimum safety factor of two.

B. Mounting Brackets for Fixed Cameras: Type matched to items supported and mounting conditions. Include manual pan-and-tilt adjustment.

C. Protective Housings for Fixed and Movable Cameras: Steel or 6061 T6 aluminum enclosures with internal camera mounting and connecting provisions that are matched to camera/lens combination and mounting and installing arrangement of camera to be housed.
   1. Tamper switch on access cover sounds an alarm signal when unit is opened or partially disassembled. Central-control unit shall identify tamper alarms and indicate location in alarm display. Tamper switches and central-control unit are specified in Division 28 Section "Intrusion Detection."
   2. Duplex Receptacle: Internally mounted.
   3. Alignment Provisions: Camera mounting shall provide for field aiming of camera and permit removal and reinstallation of camera lens without disturbing camera alignment.
   4. Built-in, thermostat-activated heater and blower units. Units shall be automatically controlled so the environmental limits of the camera equipment are not exceeded.
   5. Sun shield shall not interfere with normal airflow around the housing.
   6. Mounting bracket and hardware for wall or ceiling mounting of the housing. Bracket shall be of same material as the housing; mounting hardware shall be stainless steel.
   7. Finish: Housing and mounting bracket shall be factory finished using manufacturer's standard finishing process suitable for the environment.
   8. Enclosure Rating: NEMA 4 with an IP66 impact rating for outdoors, NEMA 3R for indoors.

2.05 CAMERA MOUNTS

A. Camera mount suitable to support approved cameras at the location shown on the Drawings. Complete with mounting plates, T-bar brackets, back boxes, threaded rods, adapters, slack wires, etc. to securely mount and anchor a camera to walls, ceilings and structure.

B. Refer to drawing T1.01 – Video Surveillance Camera Schedule for camera position and camera mount requirements.

2.06 CAMERA ENCLOSURES

A. Camera enclosures suitable to support approved cameras at the location shown on the Drawings. Complete with weather guards, sun shields to protect the video surveillance camera and its operation matched to perform in the associated weather condition.

2.07 NETWORK VIDEO RECORDERS

A. Owner provided / Existing.

B. Manufacturers:
1. Verkada Allegiance

C. Recording parameters:
1. Full-Featured Search Capabilities: Search based on camera, time, or date.
2. Automatic data replenishment to ensure recording even if network is down.
3. Digital certification by watermarking.
4. Compression H2.64 and H.265.
5. Resolution-Refer to camera schedule.
6. FPS: Refer to video surveillance camera schedule.
7. Hours of Activity: 24 hrs.
8. Percent of Motion: 80 percent.
9. Bitrate-Manufacture Recommended.
10. Storage Timeframe: 30 Days.
11. Video recording up to 1 Gbps for internal storage and up to 10 Gbps for external storage.
12. Duplex Operation: Simultaneous recording and playback.
13. Continuous and alarm-based recording

D. Recorder Requirements:
1. Dual Power Supplies.
2. Dual NIC cards.
3. Raid 6 configuration.
4. Storage capacity based on finalized calculation.
5. Hot swappable drives.

PART 3 - EXECUTION

3.01 GENERAL

A. Comply with manufacturers' instructions for installing components, devices, accessories, cable and for programming and adjusting the components.

B. Keep items protected before and after installation, with dust and waterproof barrier materials as necessary. Maintain the integrity of the protective measures until Owner Acceptance.

C. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.

D. Protect cable and equipment from damage, at-all-times during the construction. Do not install cables and equipment in the communications rooms until the other trades have completed their work in the areas so that the equipment will not be moved or damaged. Do not install cable and equipment in communications rooms until after plywood backboards have been painted.

E. Examine conduit and back box rough-in provisions in wall, ceiling and exterior areas for video surveillance cameras. Report adverse conditions to the Architect prior to installation.

F. Provide safety slack wires from ceiling mounted devices to structure above as per applicable codes.

G. Maintain safe ingress and egress from work areas during the movement and installation. Examine the areas to receive the work and the conditions under which the Work would be performed. Remedy unsatisfactory conditions detrimental to the proper and timely completion of the Work. Where a remedy of unsatisfactory conditions is not available or possible, notify the Architect for resolution. Do not proceed until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Obtain video surveillance camera programming templates from the Manufacturer(s). Coordinate programming parameter options with the Architect and Owner prior to programming.

B. Schedule a meeting(s) with Architect and Owner:
1. Present project planning documents and review, adjust, and prepare final setup documents. Use final documents to set up the system and video surveillance software.
2. Confirm the exact location of cameras.
3. Confirm proposed video surveillance cameras and lenses to support camera objective.
4. Confirm video surveillance camera’s view.
5. Coordinate requirements for guard tour plans and schedules.
6. Coordinate software and license requirements and acceptance.
7. Coordinate default system and devices logins and passwords, and how they will be changed to Owner logins and passwords.
8. Coordinate storage calculations and requirements.
9. Coordinate network switch port requirements to connect video surveillance cameras into the network.
10. Coordinate network bandwidth requirements and the impact the video streaming traffic will have on the network.
11. Coordinate network access control requirements.
12. Coordinate requirements for storing video streams from the video surveillance cameras onto the Owner provided virtualized servers and recorders.
13. Coordinate installation of video storage devices in the communication rooms.

14. Coordinate video surveillance cameras network address requirements.
15. Coordinate cable and video surveillance cameras labeling nomenclature.
16. Coordinate video surveillance camera naming for video management system programming.
17. Coordinate video surveillance camera programming requirements with the Architect and Owner to include.
    a. Recording setting:
        1) Schedules for continuous recording.
        2) Frame rates.
        3) Recording rules.
        4) Storage retention.
        5) Local recording.
    b. Analytic options and settings of rules.
    c. Analytic triggers and response and system response.
    d. Analytic alert detection.
    e. Analytic alarm detection.
    f. Alarm:
        1) Recognition.
        2) Annunciation.
        3) Communication.
        4) Action response.
18. Coordinate how security staff workstations shall be set up and programmed.
19. Coordinate the interfacing of the new system components with the existing system.
20. Coordinate the unification of video surveillance cameras added to the video management system with other electronic security systems:
    a. Activation of door forced open or held open alarm associated with a video surveillance camera shall switch a video surveillance camera stream to a spot monitor at the Security Workstation.
    b. Activation of video surveillance camera license plate recognition authentication shall allow activation of parking control gate controls.
    c. Activation of infant security system door controller alarm associated with a video surveillance camera shall switch a video surveillance camera stream to a spot video display at the Security Workstation and to a video display at associated nurse stations.
    d. Activation of intrusion detection system sensor alarms associated with a video surveillance camera shall switch a video surveillance camera stream to a spot video display at the Security Workstation.
    e. Activation of video surveillance camera analytic alerts shall switch a video surveillance camera stream to a spot monitor at the Security Workstation
    f. Activation of video surveillance camera analytic alarms shall switch a video surveillance camera stream to a spot monitor at the Security Workstation.
21. Coordinate a plan for system testing, startup, and demonstration.
22. Record and share decisions for approval and acceptance by the Architect and Owner.
23. Coordinate the Work schedule and the sequence of Work.

C. Secure software and video surveillance camera licenses.

3.03 EXISTING WORK

A. Confirm with the Owner the inventory and functionality of video surveillance cameras.

3.04 EXISTING SYSTEM

A. Conduct a site visit with the Architect and Owner prior to commencement of Work.
   1. Review the build and performance of the system server(s) and network video recorders currently in use.
   2. Suggest modifications to the current system server to enhance current performance and to enhance performance of the expanded system.
   3. Review the build and performance of the video management system workstation currently in use.at the security desk.
   4. Suggest modifications to the current management workstation to enhance current performance and to enhance performance of the expanded system.
   5. Review the operation and setup of the current security desk currently in use.
   6. Suggest modifications to the current security desk to enhance current operation and to enhance operation of the expanded system.
   7. Review the operational parameters of the video management system.
   8. Review the conditions of the installed video surveillance cameras currently in use and confirm that the video surveillance cameras were properly installed.
   9. Suggest modifications to the current video surveillance camera installation that were not properly installed.

B. Perform operational tests to confirm that the video management system is properly functioning and to set a minimum base line for final system acceptance.

C. Perform operational tests to confirm that the video management system is properly integrated with other Division 28 system and to set a minimum base line for final system acceptance.

D. Confirm that the video management system database is properly backed up.

E. Update video management system to include added and replace video surveillance cameras.

F. Update video management system to the latest software release.

G. Update video surveillance cameras firmware to the latest firmware release.

H. Coordinate the interfacing of the new system components with the existing systems with the Owner prior to the commencement of any work.

3.05 INSTALLATION

A. Provide a horizontal cable termination scheduled for cable and terminations devices installed under this Work.

B. Route cables in conduits, raceway and cable trays as shown on the drawings.

C. Provide J-hooks to support the cables in accessible ceiling areas were where conduits and cable tray are not available.

D. Provide plenum rated cable in environmental airspaces, including plenum ceilings.

E. Confirm that horizontal communication cables are terminated, labeled and tested before connecting cables to camaras.

F. Provide patch cords fand equipment cords for video surveillance cameras.

G. Provide video surveillance cameras. Mount the cameras to back boxes, to associated camera mounts or to enclosures to support and position the camera for optimal viewing.

H. Provide safety slack wires from ceiling mounted cameras and devices to structure above as per Codes.

I. Provide and ground electrostatic discharge surge protectors on exterior cameras. Follow manufacturers installation requirements.

J. Provide network video recorders/servers in the Owner’s communication room.

3.06 SYSTEM PROGRAMMING

A. Load background files to show new site, buildings, floors and cameras.

B. Program the video surveillance cameras and video management system to include the new building and new video surveillance cameras:
1. Frame rate.
2. Compression.
3. Recording schedule.
4. Resolution
5. View angle.
6. Orientation.
7. Motion.
8. Alarm/alerts triggers.
9. Alarm/alert trigger action response.

C. Calibrate camera settings including:
1. Position.
2. Mount.

3. Orientation.
4. Focal length.
5. Height.
6. Tilt.
7. Roll.
8. Light level.

D. Calibrate camera settings for activation of camera and video management system analytics including:
1. Sensor size.
2. Focal length.
3. Light level.
4. Camera height
5. Field of view.
6. Angle of field of view.
7. Type of object.
8. Size of object.
9. Speed of object.
10. Direction of object travel.
11. Area of interest.
12. Audio threshold.
13. Audio spectrographs.
14. Sound classification.
15. Decision rules.
16. Alert filters.
17. Alert triggers.

3.07 LICENSES

A. Register, secure and provides licenses to the Owner to provide a fully functioning and integrated system

3.08 IDENTIFICATION

A. Label cables at each end signifying equipment location number in correspondence with the approved cable termination schedule and the Shop Drawings with machine generated self-laminating labels.

B. Label video surveillance cameras in accordance with the approved Shop Drawings with machine generated self-laminating labels.

3.09 FIRESTOPPING

A. Provide Firestopping systems as rated walls and floors where system’s cables are run.

B. Comply with requirements in Division 01, [Section [07 84 13]] "Penetration Firestopping."

C. Comply with TIA-569 "Firestopping."

D. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.10 FIELD QUALITY CONTROL

A. Provide a quality control and testing and acceptance plan, and an associated schedule to the Architect and Owner, a minimum of 2 weeks before the commencement of the testing. Include tester credentials and test documentation templates.

B. Engage a qualified testing agency to perform tests and inspections

C. Receive and review horizontal cable.

D. Inspect cameras and mounts to confirm they are ready for performance testing, are secured to structure and are labeled.

E. Confirm network parameters have been coordinated with the Owner and have been set and the network is ready image transport.

F. Perform operational tests on the completed (installed and programmed) to confirm proper image capture performance and operation. Conduct tests at varying lighting levels, including day and night scenes. Confirm cameras performance meets program and video surveillance camera schedule objectives including:
1. Camera view objective.
2. Camara focus.
3. Pixel density/objective detail.
4. Image orientation.
5. Angle of view.
6. Camera pre-set positions.
7. PTZ camera pre-set positions.
8. Guard tour plan and schedule.
9. Light levels and uniformity.
10. Lighting interference.
11. Back light interference.
12. Auto-iris lens operation.
13. Image quality.
14. Recording parameters.
15. Analytic trigger objectives.
16. Analytic set points.
17. Analytic alarm/alert responses.
18. Final map view backgrounds.
19. Camera common name identification.
20. Video management system workstation programming.
21. Operation of system management station is unified with the Division 28 system identified herein.
22. System integration.

23. System database backup and recovery parameters are set.
24. System database backup.
25. Video storage prediction.

G. Report negative performance test results to the Architect for direction and resolution.

H. Prepare test and inspection reports and submit under Article “Closeout Submittals”.

3.11 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of system Owner Acceptance, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two, visits to the Project site during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:
1. Check cable connections.
2. Check proper operation of cameras and lenses. Verify operation of auto-iris lenses and adjust back-focus as needed.
3. Adjust all preset positions; consult Owner's personnel.
4. Recommend changes to cameras, lenses, and associated equipment to improve Owner's use of video surveillance system.
5. Provide a written report of adjustments and recommendations.

3.12 DEMONSTRATION AND TRAINING

A. Provide a training plan to Architect and Owner in advance of commencement of the training sessions. Include trainer credentials, training schedules with quantity of classes and durations and training materials for approval by the Owner.

B. Demonstrate system operation to the Owner’s Security Staff and Facilities Engineer.

C. Conduct a walking tour of Project with the Architect and Owner to describe, demonstrate and review function, operation, maintenance and warranty of each component.

D. Provide a minimum of two, 4-hour classroom training session(s) for the Owner’s systems operators. The session shall be conducted on the Owner’s site. The sessions shall include the following.
1. Training outline, agenda and training material for (#) people.
2. System operation manuals.
3. System programming manuals.
4. Demonstrate system operations, management, features, and component programming.
5. Operating features of the video surveillance cameras and video management system,
    a. Set up.
    b. Camera set up and naming.
    c. Analytic functions.

d. Alert/alarm identification.
e. Video management system list view and map view assignment.
f. Integration with the:
g. Physical Identity & Access Management System.

E. Provide a video recorder and record the training sessions. Provide to Owner 2, copies of the training sessions on a USB and digital video.

F. Use submitted operation and maintenance manual as reference during demonstration and training.

3.13 OPERATION AND MAINTENANCE MANUALS

A. Provide product, user and operation manuals provided by the manufacturer to contain the following.
1. Preventive maintenance program.
2. Service instructions for components of the system as a whole and each component, function and operation in detail.
3. Illustrations, mounting instructions, wiring diagrams, parts lists, operating instructions and a trouble-shooting chart for the system, including a list of troubles, causes and recommended remedies. Include wiring diagram showing all components.

B. Manuals shall be written to aid in training of new security and operating personnel and as guide clarifying operational procedures.

C. Spare Parts List. Submit list of spare parts and components of critical items for consideration of purchase by Owner.

3.14 MAINTENANCE AND SERVICE

A. General Requirements: Provide services, materials, and equipment necessary for the successful operation of the system for a period of one year after completion of acceptance testing, the completion of system commissioning, Owner acceptance. Provide necessary material required for the Work. Minimize impacts on facility operations when performing scheduled adjustments and nonscheduled Work.]

B. Description of Work: The adjustment and repair of the system includes computer equipment, software updates, transmission equipment, card readers and control devices. Provide the manufacturer's required adjustments and Work.

3.15 WARRANTY

A. Register and provide proof-of-purchases required to activate Manufacturer’s warranty.

B. The warranty shall include labor and equipment to maintain the integrated system in full operation for a period of one year for hardware from the date of Owner acceptance.

C. The warranty shall provide:
   1. A contact number for service call during the warranty period that is answered 24 hours 7 days a week. Service calls made outside of normal working hours and received by an answering service shall be returned within 1 hour.
   2. Standard on-site service calls within 12 hours.
   3. Emergency on-site service calls within 4 hrs.
   4. The end-user will notify the contractor of the appropriate response time required. This warranty may be enhanced by the contractor but cannot be taken away from this supersedes all other warranties.

D. Invoke manufacturer's warranties as necessary during the warranty period. Obtain Return-Merchandise-Authorization for shipping defective material back and receiving replacements materials.

3.16 CLEANING

A. Clean system components, including camara lenses, camera-housing windows, lenses, and monitor screens. using methods and materials recommended in writing by manufacturer

END OF SECTION

SECTION 28 31 11 - DIGITAL, ADDRESSABLE FIRE-ALARM SYSTEM

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Fire alarm system shall consist of fire alarm control panel, of the same make and CSFM (California State Fire Marshal) listed for the application.

B. Labor, equipment, materials, connections, testing, and performance of operations in the installation of fire alarm system

1.02 RELATED DOCUMENTS

A. Division 01 – General Requirements

B. Division 23 – Mechanical Systems

C. Section 26 00 00 – Electrical

1.03 QUALITY ASSURANCE

A. Manufacturer: Company specializing in smoke detection and fire alarm systems with ten years' experience.

B. Installer: A factory-authorized Electrical or Security Contractor licensed with the State and local jurisdiction with five years' experience in the design, installation, and maintenance of fire alarm systems by that manufacturer.

C. Qualifications: The person managing/overseeing the preparation of shop drawings and the system installation/programming/testing shall be trained and certified by the system manufacturer and shall be Fire Alarm Certified by NICET, minimum Level 2. This person's name and certification number shall appear on the start-up and testing reports.

1.04 SUMMARY

A. Section Includes:

1. Fire-alarm control unit.
2. Manual fire-alarm boxes.
3. System smoke detectors.
4. Projected Beam smoke detectors.

5. Heat detectors.
6. Notification appliances.
7. Device guards.
8. Magnetic door holders.
9. Remote annunciator.
10. Addressable interface device.
11. Network communications.

1.06 DEFINITIONS

A. CSFM: California State Fire Marshal

B. DSA: Department of State Architects

C. EMT: Electrical Metallic Tubing.

D. FACP: Fire Alarm Control Panel.

E. HLI: High Level Interface.

F. NICET: National Institute for Certification in Engineering Technologies.

G. PC: Personal computer.

H. UL: Underwriters Laboratory

1.07 SUBMITTALS

A. Product Catalog Data Sheets:

1. Provide a product catalog data sheet for each item shown on the Electrical Symbols List and for each piece of equipment that is not shown on the drawings but required for the operation of the system.
2. Where a particular Electrical Symbols List item has one or more variations (such as those denoted by subscripts, etc.) a separate additional product catalog data sheet shall be provided for each variation that requires a different part number to be ordered. The corresponding Electrical Symbols List symbol shall be shown on the top of each sheet.
3. Where multiple items and options are shown on one data sheet, the part number and options of the item to be used shall be clearly denoted.
4. In addition to the above requirements, provide submittals to meet any additional requirements of the DSA.

B. Shop Drawings:

1. Comply with recommendations and requirements in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
2. Provide the following: manufacturer’s wiring requirements (manufacturer, type, size, etc.) and voltage drop calculations.
3. Provide information on the system batteries as follows: total battery capacity, total capacity used by all devices on this project, total available future capacity.
4. Voice Alarm Communication System: Submit equipment rack or console layout, grounding schematic, amplifier power calculations, and wiring diagram.
5. Include plans, elevations, sections, details, and attachments to other work as necessary.
6. Include input/output matrix.
7. Verify that each duct detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
8. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits and point-to-point wiring diagrams.

C. General Submittal Requirements:

1. Submittals shall be approved by DSA.
2. System shall be UL or FM listed.
3. System shall be CSFM listed.
4. Shop Drawings shall be prepared by persons with the following qualifications:

a. Trained and certified by manufacturer in fire-alarm system design.
b. NICET-certified, fire-alarm technician; Level III minimum.

1.08 SYSTEM DESCRIPTION

A. Performance Statement: This specification section and the accompanying fire alarm specific design documents describe the minimum material quality, required features, and operational requirements of the system. These documents do not convey every wire that must be installed and every equipment connection that must be made. Based on the equipment described and the performance required of the system, as presented in these documents, the Vendor and the Contractor are solely responsible for determining all wiring, programming and miscellaneous equipment required for a complete and operational system.

B. This section of the specifications includes the furnishing, installation and connection of the microprocessor controlled, intelligent reporting, fire alarm equipment required to form a complete coordinated system that is ready for operation. It shall include, but is not limited to, alarm initiating devices, voice evacuation equipment, control panels, auxiliary control devices, annunciators, power supplies, and wiring as indicated on the drawings and specified herein.

C. Fire Alarm System: NFPA 72; Automatic and manual fire alarm system, non-coded, analog- addressable with automatic sensitivity control of certain detectors, multiplexed signal transmission.

D. Campus Network: A complete fire alarm Copper connection shall be provided. Monitoring of new fire alarm system since a different manufacturer for the fire alarm panel is being installed. The new fire alarm control panel will only provide alarm, trouble and supervisory signals to the campus main panel via relays. Three (3) new monitor modules will be provided from the existing fire alarm campus panel.

E. Voice Communication: The facility shall have an emergency voice alarm communication system. The digitized recorded voice message shall notify occupants that a fire condition has been reported. Emergency manual voice override shall be provided.

F. Emergency Communication System (ECS): A system capable of reproduction of prerecorded, synthesized, or live messages with voice intelligibility to indicate the existence of an emergency situation and communicating information necessary to facilitate an appropriate response and action.

G. System Supervision: Provide electrically supervised system, with supervised Signal Line Circuit (SLC) and Notification Appliance Circuit (NAC). Occurrence of single ground or open condition in initiating or signaling circuit places circuit in TROUBLE mode. Component or power supply failure places system in TROUBLE mode.

H. Alarm Reset: Key-accessible RESET function resets alarm system out of ALARM if alarm initiating circuits have cleared.

I. Lamp Test: Manual LAMP TEST function causes alarm indication at each zone at fire alarm control panel and at annunciator panels.

J. Fire alarm systems and components shall be of the latest technology.

1. The model shall be the latest version put out by the manufacturer.
2. Parts must be readily available for five (5) years.
3. System shall be supported by the manufacturer for five (5) years.

K. System must have the capability to be viewed remotely. The remote viewing shall be Web based.

L. Any contractor that modifies the fire alarm system database takes full responsibility for the entire fire alarm system database.

1.09 OPERATION AND MAINTENANCE DATA

A. Include operating instructions, and maintenance and repair procedures.

B. Include results of testing of all devices and functions.

C. Include manufacturer’s representative's letter stating that system is operational.

D. Include the CAD floor plan drawings.

E. Include shop drawings as reviewed by the Architect/Engineer and DSA.

1.10 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals.

1. In addition to items specified for "Operation and Maintenance Data," include the following:

a. Comply with the "Records" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
b. Provide "Fire Alarm and Emergency Communications System Record of Completion Documents" according to the "Completion Documents" Article in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
c. Complete wiring diagrams showing connections between all devices and equipment. Each conductor shall be numbered at every junction point with indication of origination and termination points.
d. Riser diagram.
e. Device addresses.

f. Submit test results of sound pressure level (dBA) and intelligibility (STI) with the rooms tested designated on the floor plan.
g. Record copy of site-specific software.
h. Provide "Inspection and Testing Form" according to the "Inspection, Testing and Maintenance" chapter in NFPA 72, and include the following:

1) Equipment tested.
2) Frequency of testing of installed components.
3) Frequency of inspection of installed components.
4) Requirements and recommendations related to results of maintenance.
5) Manufacturer's user training manuals.

i. Manufacturer's required maintenance related to system warranty requirements.
j. Abbreviated operating instructions for mounting at fire-alarm control unit and each annunciator unit.

B. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On magnetic media or compact disk, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.

1.11 DOCUMENT STORAGE CABINET

A. The cabinet shall have all fire alarm system documents, including record drawings, wiring diagrams, operation manuals, etc. A legend sheet permanently attached to the door shall contain system passwords and inspection logs. The enclosure shall also provide two (2) key ring holders for system keys and a location for a standard-sized business card with service contact information. The cabinet will have, permanently and securely mounted inside, a digital flash memory device with a minimum of 4 GB of storage capacity and a standard USB B connector for uploading and downloading electronic versions of record documents and system programming information.

B. The cabinet shall be red in color with an identification label reading “FIRE ALARM DOCUMENTS”. The cabinet shall be lockable.

C. The final version of the system database program shall be stored within the cabinet.

1.12 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Provide quantity equal to 2 percent (2%) of amount of each type installed, but no less than two (2) units of each type.

    a. Smoke and heat detectors, manual fire alarm box, monitor modules, control modules and relays.
    b. Notification appliances: Speakers, speaker strobes, and strobes.
    c. In addition to the above, an additional 5% of component parts shall be provided as added stock.

2. Keys: The installing contractor shall collect all equipment spare keys provided with each lockable or resettable device/cabinet [minimum of one (1) set each] and shall turn over to the Owner upon completion.
3. All spare parts shall be housed in metal cabinet labeled “Fire Alarm Spare Parts”.
4. Trouble shooting and cleaning kits shall be provided.

1.13 QUALITY ASSURANCE

A. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project.

B. Installer Qualifications: Installation shall be by personnel certified by NICET as fire-alarm Level II technician.

C. Installer shall furnish a letter from manufacturer of equipment certifying equipment has been installed according to factory standards and that system is operating properly.

D. Certifications: Installer shall submit certification from the equipment manufacturer indicating that installer is an authorized representative of the equipment manufacturer, is trained on network applications.

E. Materials and equipment installed shall be new.

F. At the time of installation, the most current software package available shall be provided.

G. System startup and testing shall be performed under the direct observation of the Project Inspector and Owner Authorized Representative (OAR). Provide a legible half size reproduction of the original completed fire alarm red-line drawings (this copy will be retained by the Owner), an accurate copy of the fire alarm system points list, and a copy of the construction drawings on CD in AutoCAD format.

H. Provide a backup copy of the most current software revision, in disk format. This copy shall be delivered to the OAR.

1.14 RECORD DOCUMENTS

A. Include location of end-of-line devices.

B. Provide a CAD drawing of each area of the building (minimum scale of 1/16” = 1’-0”) showing each device on the project and its address. The devices shall be shown in their installed location and shall be labeled with the same nomenclature as is used in the fire alarm panel programming.

C. Contractor shall develop and submit a campus map showing the entire system, including the location of all devices.

D. Contractor shall provide a list of the location of all devices. In addition, all fire alarm devices shall be tagged.

E. System be integrated with school drawings and match current room number signage.

F. Copies of the video training shall be supplied.

G. The Fire Alarm System must pass commissioning prior to acceptance.

H. Four (4) hours of in-person training shall be provided.

1.15 ANNUAL INSPECTION/TESTING AND SERVICE CONTRACT

A. Provide cost to furnish service, inspect, and test all devices of the fire alarm system per the requirement of NFPA for one (1) year, starting one year after the Date of Substantial Completion. Submit written reports of inspection testing per NFPA 72, Chapter 14.

B. Provide an alternate cost for a complete inspection/testing and service/maintenance contract for the fire alarm system for one (1) year two (2) years, starting one year after the Date of Substantial Completion. Submit sample contract terms and conditions for review with shop drawings.

C. The Owner may enter into a contract directly with the vendor after shop drawing submittals. This specification is not a contract between the Owner and the vendor to perform these services.

1.16 WARRANTY

A. Provide one (1) year warranty on all materials and labor from Date of Substantial Completion.

B. Warranty requirements shall include furnishing and installing all software upgrades issued by the manufacturer during the one (1) year warranty period.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURER

A. Silent Knight.

B. Source Limitations for Fire-Alarm System and Components: Components shall be compatible and provided with and operate as an extension to existing Campus main fire alarm panel.

2.02 SYSTEM DESCRIPTION

A. Provide system manufacturer's certification that all components provided have been tested as, and will operate as, a system.

B. Noncoded, UL certified and CSFM approved addressable system, with multiplexed signal transmission and voice/strobe evacuation.

C. Automatic sensitivity control of certain smoke detectors.

D. All components provided shall be listed for use with the selected system.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.03 SYSTEMS OPERATIONAL DESCRIPTION

A. Fire-alarm signal initiation shall be by one or more of the following devices and systems:

1. Manual fire alarm box.
2. Heat detectors.
3. Smoke detectors.
4. Projected beam smoke detector.
5. Automatic sprinkler system waterflow.

B. Fire-alarm signal shall initiate the following actions:

1. Continuously operate alarm notification appliances.
2. Identify alarm and specific initiating device at fire-alarm control unit, connected network control panels and remote annunciator.
3. Transmit an alarm signal to the main campus fire alarm control panel via relay which is then sent via AES wireless transmitter to central station.
4. Unlock electric door locks in designated egress paths.
5. Release fire and smoke doors held open by magnetic door holders.

6. Activate voice/alarm communication system.
7. Switch heating, ventilating, and air-conditioning equipment controls to fire-alarm mode.
8. Close smoke dampers in air ducts of designated air-conditioning duct systems.
9. Record events in the system memory.

C. Supervisory signal initiation shall be by one or more of the following devices and actions:

1. Valve supervisory switch.
2. User disabling of zones or individual devices.
3. Fire pump running
4. Fire pump loss of power
5. Fire pump power phase reversal
6. Loss of communication with any panel on the network.
7. Transmit a supervisory signal to the main campus fire alarm control panel via relay which is then sent via AES wireless transmitter to central station.

D. System trouble signal initiation shall be by one or more of the following devices and actions:

1. Open circuits, shorts, and grounds in designated circuits.
2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
3. Loss of communication with any addressable sensor, input module, relay, control module or remote annunciator.
4. Loss of primary power at fire-alarm control unit.
5. Ground or a single break in internal circuits of fire-alarm control unit.
6. Abnormal ac voltage at fire-alarm control unit.
7. Break in standby battery circuitry.
8. Failure of battery charging.
9. Abnormal position of any switch at fire-alarm control unit or annunciator.
10. Voice signal amplifier failure.
11. Transmit a trouble signal to the main campus fire alarm control panel via relay which is then sent via AES wireless transmitter to central station.

E. System Supervisory Signal Actions:

1. Identify specific device initiating the event at fire-alarm control panel and remote annunciator.
2. Transmit a supervisory signal to the main campus fire alarm control panel via relay which is then sent via AES wireless transmitter to central station.

2.04 FIRE-ALARM CONTROL UNIT

A. Silent Knight

B. General Requirements for Fire-Alarm Control Unit (FACU):

1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864.

    a. System software and programs shall be held in nonvolatile flash, electrically erasable, programmable, read-only memory, retaining the information through failure of primary and secondary power supplies.
    b. Enclosure shall be minimum 0.060 steel with provisions for electrical conduit connections into the sides and top. The door shall provide a key lock and shall include a glass or other transparent opening for viewing of all indicators.
    c. Include a real-time clock for time annotation of events on the event recorder.
    d. The central processing unit (CPU) shall communicate with the monitor and control all other modules in the panel. Removal, disconnection or failure of any control panel module shall be detected and reported to the CPU.
    e. Provide communication between the FACU and remote circuit interface panels, annunciators, and displays.
    f. All power for the unit shall be supervised and supplied by the FAP.
    g. The FACU shall be listed for connection to a central station signaling system service.
    h. The CPU and display interface board shall be augmented by non-volatile field programmable memory. EPROM memory will also be allowed provided the memory is burned in with minimum expansion capability equal to the total system capacity of the panel. Memory shall not be lost upon primary and secondary power failure.
    i. Serial Interface Board: The board shall provide interfaces to a printer, LCD display and other monitoring devices through RS-232 connections. The minimum operational distance between the board and the peripheral devices shall be 500 feet. Up to three (3) RS-232 outputs shall be supported.

2. Each Signaling Line Circuit (SLC loop) shall not be loaded over 80% of the maximum device capacity. For example, in the minimum system capacity column listed below, if the fire alarm manufacturer's system capacity of analog sensors per loop is 99 devices, then no more than 79 devices shall be wired on that loop. The minimum system capacity shall be as follows:

Minimum Total Addressable Points:	250	500	2000			
Minimum Total SLC loops (including Board, ready for field connections):	1	2	4	6	8	10
Panel Expansion Capacity, Minimum	10 Total SLC loops:					
Minimum Node capacity for Network	100 Systems:					

3. Signal Line Circuit (SLC) and Notification Appliance Circuit (NAC) Boards:

    a. Each board shall communicate directly with each addressable analog sensor and binary input to determine normal, alarm, or trouble conditions.

Analog signals would be used for automatic test and determination of maintenance requirements.

b. Each board shall contain its own microprocessor and shall be provided to monitor addressable inputs and to control addressable outputs (addressable relays). The board shall communicate and provide power to all devices on its loop over a single pair of wires, except where 4-wire devices require a separate power circuit.

C. Interconnection of Multiple Fire Alarm Panels:

1. The pathways of interconnected fire alarm panels or systems shall be as follows:

2. Pathway Class X: Circuits with redundant pathways capable of transmitting an alarm signal during an open or a non-simultaneous single ground fault on a circuit conductor wiring system. Wiring of outgoing and return conductors shall be physically separated by a minimum of 50 feet or by a two-hour rated enclosure.

3. Fire Alarm System shall be connected to the central panel.

   a. System must register on the main panel.

4. System shall be installed with a copper network.

5. Building must be integrated into the existing main high school campus system via relays for the monitoring of an alarm, trouble and supervisory signal. Three (3) monitor modules shall be provided from the existing campus fire alarm control panel for the monitoring of these points.

D. Display.

1. The board shall provide all controls and indicators used by the system operator and may also be used to program all control panel parameters.
2. The board shall provide an alphanumeric array for display of custom alphanumeric labels for all addressable points. It shall also provide indicators for AC Power, System Alarm, System Trouble, Display Trouble and Signal Silence.
3. Displayed descriptions of addressable points shall include actual room names/numbers selected by the Owner. This information shall be obtained prior to programming. Room names/numbers shown on floor plans shall not be used.
4. The board shall provide a touch keypad with control capability to command all system functions and entry of any alphanumeric information. Twenty different passwords with four levels of security shall be supported to prevent unauthorized manual control or programming.

E. Initiating-Device, Notification-Appliance, and Signaling-Line Circuits:

1. Pathway Class Designations: NFPA 72, Class B.
2. Pathway Survivability: Level 0.
3. Serial Interfaces: (if applicable)

a. One dedicated RS 485 port for remote station operation using point ID DACT.
b. One RS 485 port for remote annunciators, Ethernet module, or multi-interface module (printer port).
c. One RS 323 port for PC configuration.
d. One RS 232 port for voice evacuation interface.

F. Notification-Appliance Circuit:

1. Audible appliances shall sound in a three-pulse temporal pattern, as defined in NFPA 72.
2. Notification appliances shall provide an alarm signal 15 dB above the average ambient sound level or 5 dB above the maximum sound level, and/or at least 75 dBA.
3. Visual alarm appliances shall flash in synchronization where multiple appliances are in the same field of view, as defined in NFPA 72.

G. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke-barrier walls shall be connected to fire-alarm system.

H. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory signals shall be powered by 24-V dc source.

1. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.

I. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.

J. Power Supply:

1. Input power shall be 120 VAC, 60 Hertz. Output power shall be as noted on the device specifications and drawings. Each component of the fire alarm system requiring 120 VAC input power shall be served from a dedicated emergency branch circuit. Provide two #12 conductors and one #12 ground in 3/4" conduit to a dedicated 20A/1P circuit breaker with a red handle and a manufacturer's standard handle lock-on device. Identify/label breaker and branch circuit in accordance with NFPA requirements.
2. Adequate to supply 125% of all control panel and peripheral power needs as well as 125% of power required for all external audio-visual devices. The power supply may be increased as needed by adding additional modular expansion power supplies. Over-current protections shall be provided on all power outputs.
3. All power supplies shall be designed and installed to meet UL and NFPA requirements for power-limited operation on all external initiating and indicating circuits.
4. The power supply shall provide integral charger for use with internal batteries. Battery capacity shall be sufficient for operation of the entire system for 24 hours

in a non-alarm state followed by alarm mode for 15 minutes, plus 25% spare capacity for future devices.

K. Surge Protection:

1. All fire alarm control panels, NAC panels, etc. shall be provided with a surge protection device (SPD). The SPD shall be UL listed to Standard 1449 Rev 3. The unit should be clearly labeled in accordance with Identification Section 26 05 53. The SPD shall have thermal fuses to protect against fire in short circuit conditions. The unit shall provide visual indication that the unit is protecting and functioning.
2. Any communications or signaling circuits associated with the fire alarm system, which leave or enter a facility, shall be provided with a surge protection device. The devices shall be as recommended by the fire alarm system manufacturer.

L. Digitized Voice Command Center (VCC):

1. The Digitized Voice Command Center (VCC) shall contain all equipment required for all audio control, signaling, and supervisory functions. This shall include digital voice units and microphones.
2. The Voice Command Center equipment shall perform the following functions:

    a. Operate as a supervised single channel automatic digitized voice evacuation system with manual emergency voice communication system.
    b. Audibly and visually annunciate the active or trouble condition of every signal circuit.
    c. Audibly and visually annunciate any trouble condition of tone generators and digital voice units required for normal operation of the system.
    d. Provide all-call activities through activation of a single control switch.
    e. Provide automatic, digitally recorded voice messages and tones.

3. Audio Amplifiers:

    a. The audio amplifiers will provide a single channel audio power at 25/70 volts RMS for distribution to speaker circuits.
    b. Provide multiple audio amplifiers mounted in the main fire alarm control panel, either to supply incremental audio power, or to function as an automatically switched backup amplifier(s).
    c. The audio amplifier shall include an integral power supply, and shall provide the following controls and indicators:

        1) Normal Audio Level LED
        2) Incorrect Audio Level LED
        3) Battery Trouble LED
        4) Amplifier Trouble LED
        5) Audio Amplifier Gain Adjust.

    d. Includes audio input and amplified output supervision backup input.

4. Audio Message Generator (Digitized Voice):

   a. Each initiating zone or intelligent device shall interface with an emergency voice communication system capable of transmitting a digitized voice message to all speakers in the building.
   b. Actuation of any alarm initiating device shall cause a digitized message to sound over the speakers. The message shall be repeated four (4) times.
   c. A built-in microphone shall be provided to allow paging through speaker circuits.
   d. The audio message generator shall have the following controls and indicators to allow for proper operator understanding and control:

      1) All Call LED
      2) On-Line LED
      3) All Call Switch

5. Voice Messages:

   a. A pre-programmed custom digital voice message shall be used for notification appliance speaker circuits. The messages shall be approved by the Authority Having Jurisdiction (AHJ). Voice messages shall be from a male voice.

   b. Message shall be preceded by a tone and message shall be repeated four times until silenced.

   c. Messages shall be annunciated by a single channel in all evacuation signal zones throughout the building.

   d. Message shall be as shown in the following table. These messages are not intended to specify the exact wording required, but to specify the minimum information conveyed by the message:

Alarm Type	NAC Area	Preceding Tone	Message
Fire Alarm	Single Channel-all areas	Three Chimes	May I have your attention please? A fire emergency has been reported in the building. Proceed calmly to the nearest exit and leave the building immediately.
Test	All areas	One Chime	“May I have your attention please? May I have your attention please? This is a test of the building emergency alarm system. This is only a

			test."
All Clear	All areas	One Chime	"May I have your attention please? May I have your attention please? The reported emergency has been investigated and normal conditions have been restored. You may re-turn to all areas of the building."

6. Speaker Circuit Control Switches/Indicators:

   a. The speaker circuit control switches/indicators shall include visual indication of active and trouble status for each speaker circuit in the system.
   b. The speaker circuit control panel shall include switches to manually activate or de-activate each speaker circuit in the system.

2.05 MANUAL FIRE ALARM BOXES

A. Silent Knight.

B. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.

C. Manual fire alarm boxes shall match the description on the drawings symbol legend. The station shall be mounted where shown on the drawings and be provided with all necessary mounting hardware. Use surface mount only on precast concrete or structure.

D. Addressable, double action with plastic break rod, reset key lock, semi-flush mount, red high abuse plastic construction with white lettering.

E. Manual fire alarm boxes shall connect directly to an SLC loop.

2.06 SYSTEM SMOKE DETECTORS

A. Silent Knight.

B. General Requirements for System Smoke Detectors:

1. Comply with UL 268; operating at 24-V dc, nominal.

2. Analog Photoelectric Type Sensor: Shall use the photoelectric principle to measure smoke density and send data to the control panel representing the analog level of smoke density measured.
3. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
4. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
5. Integral Visual-Indicating Light: LED type, indicating detector has operated and power on status.
6. Each smoke detector shall connect directly to an SLC loop.
7. Remote Control: Unless otherwise indicated, detectors shall be digital-addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by the fire-alarm control unit.
8. Where operation is noted as required below 32ºF and/or above 120ºF, a conventional device shall be installed with a unique monitor module located in the nearest available location with maintained temperatures between 32ºF and 120ºF.
9. A subscript is used to identify the device with a specific sequence of operation as follows: D=HVAC Control, SW=Stairwell, CR=Computer Room, SD=Smoke Dampers, DH=Door Hold Release.
10. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
11. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:

    a. Primary status.
    b. Device type.
    c. Present average value.
    d. Present sensitivity selected.
    e. Sensor range (normal, dirty, etc.).

2.07 PROJECTED BEAM SMOKE DETECTORS

A. Projected Beam Light Source/Receiver: Designed to accommodate small angular movements and continue to operate and not cause nuisance alarms.

B. This device shall utilize photoelectric analog smoke sensor technology. Provide with transmitter and reflector. Microprocessor-based detector shall provide a minimum of eight sensitivity levels, temperature and dirt compensation, and automatic gain control. Sensor to contain beam alignment adjustments and receiver calibration.

C. Detector shall be provided with multiple monitor modules, as required, to connect to the SLC loop and for monitoring alarm and trouble output contacts. The detector shall be provided complete with all mounting hardware provided and installed where indicated on the drawings.

D. Detector Address: Accessible from fire-alarm control unit and able to identify the detector's location within the system and its sensitivity setting.

E. Provide with remote test/indicator panel providing LED indications of alarm and trouble.

F. For system projected beam smoke detectors (if addressable), an operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:

1. Primary status.
2. Device type.
3. Present average value.
4. Present sensitivity selected.
5. Sensor range (normal, dirty, etc.).

2.08 HEAT DETECTORS

A. Silent Knight.

B. General Requirements for Heat Detectors: Comply with UL 521.

1. Temperature sensors shall test for and communicate the sensitivity range of the device.

C. Combination rate of rise and 135°F fixed temperature analog thermal type sensor. Factory programmed to alarm at 135ºF and at 15ºF per minute rate-of-rise. Sensor shall measure heat level and send data to the control panel representing the analog level of thermal measurement and rate-of-rise.

1. Mounting: Twist-lock base interchangeable with smoke-detector bases.
2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

D. Heat detectors shall connect directly to SLC loops. Where fixed temperature or explosion proof detectors are used, one monitor module may be used to monitor all detectors in one room/area.

2.09 NOTIFICATION APPLIANCES

A. System Sensor – SpectrAlert.

B. General Requirements for Notification Appliances: Connected to notification-appliance signal circuits, zoned as indicated, equipped for mounting as indicated, and with screw terminals for system connections.

1. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting as indicated, and with screw terminals for system connections.

C. Device Color:

1. Wall Mounted: White housing with red lettering.

2. Ceiling Mounted: White housing with red lettering.

D. Visible Notification Appliances: strobe lights complying with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch-high letters on the lens.

1. Rated Light Output:

a. 15/30/75/110 cd, selectable in the field.

2. Candela rating shall be visible from exterior of the device.
3. Candela rating shall be visible from exterior of the device
4. Mounting: Wall mounted unless otherwise indicated.
5. Flashing shall be in a temporal pattern, synchronized with other units.
6. Strobe Leads: Factory connected to screw terminals.
7. Mounting Faceplate: Factory finished, white.
8. Device, housing, and backbox shall be UL listed for fire alarm/emergency applications.

E. Voice/Tone Notification Appliances:

1. Comply with UL 1480.
2. Speakers for Voice Notification: Locate speakers for voice notification to provide the intelligibility requirements of the "Notification Appliances" and "Emergency Communications Systems" chapters in NFPA 72.
3. High-Range Units: Rated 2 to 15 W.
4. Low-Range Units: Rated 1/4 to 2 W.
5. Sound rating shall be dependent on the tap (wattage) setting.
6. Tap settings shall be available in 3 dBA increments.
7. A minimum of four (4) tap settings should be available to allow field adjustment of the sound output across a minimum range of 78 to 87 dBA, 400Hz to 4KHz (6 dBA cutoff) frequency range
8. Mounting: Flush, and surface.
9. Matching Transformers: Tap range matched to acoustical environment of speaker location.
10. Speakers shall clearly reproduce a signal consisting of a live or prerecorded human voice with voice intelligibility.
11. Speaker, housing, and backbox shall be UL listed for fire alarm/emergency applications.

F. Combination Audio (Voice) and Visual Notification Device:

1. Combine speaker and visual components into a single device. Refer to the corresponding paragraphs above for requirements of each component.

G. Weatherproof Visual Notification Device:

1. High intensity strobe, square housing, 75 candela rating, suitable for wet locations. Provide with weatherproof back box.
2. Mounting: Semi-flush wall.
3. Conduit shall not be exposed.

H. Weatherproof Voice/Visual Notification Device:

1. Speaker with high intensity 75 candela rated strobe. A minimum of four (4) tap settings which shall allow field adjustment of the sound output across a minimum range of 78 to 87 dBA (UL 1480), 400 Hz to 4 KHz (6dBA cutoff) frequency range.
2. Mounting: Semi-flush wall.
3. Conduit shall not be exposed.

2.10 MAGNETIC DOOR HOLDERS

A. Description: Units are equipped for wall or floor mounting as indicated and are complete with matching doorplate.

1. Electromagnets: Require no more than 3 W to develop 25-lbf holding force.
2. Wall-Mounted Units: Flush mounted unless otherwise indicated.
3. Rating: 24-V ac or dc.

B. Material and Finish: Match door hardware.

2.11 REMOTE POWER SUPPLIES (RPS)

A. Silent Knight.

B. As shown on the plans furnish and install NAC extender panels as necessary to provide remote power supply for notification appliance circuits (NAC).

C. Each RPS shall be self-contained remote power supply with batteries, and battery charger mounted in a surface lockable cabinet. Battery capacity shall be sufficient for operation for 24 hours in a non-alarm state followed by alarm for 15 minutes, plus 25% spare capacity for future devices. Each RPS provides a minimum of up to 4 outputs, 2A continuous, or 10A full load total capacity.

D. Power for each RPS shall be from a local 120 VAC emergency circuit. Provide two #12 conductors and one #12 ground in 1/2" conduit to each NEP from a dedicated 20A/1P circuit breaker with a red handle and a manufacturer’s standard handle lock-on device.

E. Mounting: Surface.

2.12 REMOTE ANNUNCIATOR

A. Description: Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.

1. Mounting: Flush cabinet, NEMA 250, Type 1.

2. Communications and power to the annunciators shall be supervised. The annunciator shall receive power from the fire alarm control panel.
3. Minimum 80-character display.
4. A single key switch shall enable all switches on the annunciator.

B. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.

2.13 ADDRESSABLE INTERFACE DEVICE

A. Monitor Modules:

1. Monitor Module shall connect directly to an SLC loop and receive power from a separate 24 VDC circuit. It shall interface initiating devices with the control panel using Style D or Style B circuits. Contractor option: Use an interface module (2-wire operation) for Style B circuits connected to normally-open dry contacts, such as a flow switch.
2. The module shall be mounted in an enclosure located in an accessible service location as near as possible to the device(s) being monitored, or where shown on the drawings. All mounting hardware shall be provided.
3. Store an internal identifying code for control panel use to identify the module type.
4. Listed for controlling HVAC fan motor controllers.
5. Microelectronic module providing a system address for alarm-initiating devices for wired applications with normally open contacts

B. Addressable Relays:

1. Relay that represents an addressable control point used primarily for the control of auxiliary devices as indicated on the drawings. Contractor to provide additional slave relay(s), as required, rated for the electrical load being controlled (contractor to match voltage, amps, etc.
2. Allow the control panel to switch the relay contacts on command.
3. Relay shall connect directly to an SLC loop and receive power from a separate 24 VDC circuit.

4. The relay shall supply 24 VDC power to the device(s) being controlled, unless otherwise indicated on the drawings.

C. Control Modules:

1. Operate notification appliances.

2.14 ETHERNET NETWORK COMMUNICATIONS (If applicable)

A. School Ethernet IP Network: A complete fire alarm Ethernet network shall be provided. The network shall be Class X wiring, Resilient Ethernet Protocol (REP) 100BaseTX / 100 Mbps that shall be able to operate with any single break and restore network communications.

B. The IP network shall be fiber optic cable, single or multi-mode fiber. The TCP/IP network switches shall be industrial grade managed switching hubs. Network switches shall be UL864 listed, shall provide a minimum of four (4) or a maximum of eight (8) 10/100 Mbps shielded RF-45 connectors for Ethernet connections, and selectable multi-mode or single- mode fiber ports. The switches shall operate on a nominal 24 VDC supplied from a battery backed up fire alarm control panel or booster power supply to ensure power to the switch is always available. Switches shall provide LED indicators for data rate, activity/link integrity, power, and loop detection.

C. Provide network communications for fire-alarm system according to fire-alarm manufacturer's written requirements.

D. Provide network communications pathway per manufacturer's written requirements and requirements in NFPA 72 and NFPA 70.

E. Provide integration gateway using BACnet for connection to building automation system.

2.15 CONNECTIONS TO AUXILIARY DEVICES PROVIDED BY OTHERS (if applicable)

A. Smoke Damper: Motorized type, 120 VAC, furnished and installed by Mechanical Contractor (MC). Fire alarm control and power connections by Electrical Contractor (EC). A subscript is used to identify the device with a specific air handler or zone for its sequence of operation.

B. Smoke or Fire/Smoke Damper Controller: Provide an enclosure and equipment for interface of dampers with the fire alarm system and temperature control system.

C. Flow Switch: Connection to flow switch to monitor fire protection flow switch or discharge output contacts. Normally open dry contacts for fire alarm interface. Furnished and installed by MC; wired by EC.

D. Monitor Switch: Connection to monitor switch to monitor fire protection system supervisory switches or output contacts. Normally open dry contacts for fire alarm interface. Furnished and installed by MC; wired by EC.

E. Post Indicator Valve/Double Check Valve: Connection to post indicator valve for sprinkler system supervisory notification. Normally open dry contacts for fire alarm interface. Furnished and installed by MC; wired by EC. Provide surge protection device as recommended by the fire alarm system manufacturer on line entering/leaving the facility.

F. Electronic Bell: Electronic bell for sprinkler alarm, electro-mechanical type, 24Vdc. Furnished and installed by FAC. Fire alarm control and power connections by EC.

2.16 DEVICE GUARDS (if applicable)

A. Description: Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.

1. Factory fabricated and furnished by device manufacturer.
2. Finish: Paint of color to match the protected device.

2.17 WIRING

A. Fire alarm wiring/cabling shall be furnished and installed by the Contractor in accordance with the manufacturer’s recommendations and pursuant to National Fire Codes. Cabling shall be UL listed and labeled as complying with NFPA 70, Article 760 for power-limited fire alarm signal service.

B. All network wiring shall be copper or fiber and installed in conduit.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions for compliance with requirements for ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment and wiring are installed before installation begins.

B. Examine roughing-in for electrical connections to verify actual locations of connections before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SYSTEM INSTALLATION

A. Install required conductors to devices indicated on Drawings. Provide required conductor terminations to devices for a complete system to function as specified and indicated on Drawings.

B. Splices are not allowed in junction boxes. Terminations shall be in terminal cabinets or on equipment terminals. Wire-nuts are not acceptable; all splices shall be made on terminal strips.

C. Conductors shall be installed within conduits, boxes, and terminal cabinets in a totally enclosed installation. Furnish and install conductors required to connect incoming and outgoing circuits, including spare conductors, to terminal strips within terminal cabinets.

D. Wiring within equipment and terminal cabinets shall be installed to conform to contract documentation and NFPA 72 standards and shall be terminated on terminal blocks having terminals for required connections. Wiring shall be cabled, laced, and securely fastened in place so that no weight is imposed on equipment or terminals.

E. Install required terminal blocks within terminal cabinets. Terminal blocks shall be installed on inside back of cabinets only, not on side. Incoming wiring shall be terminated on the left side of terminal blocks; outgoing wiring shall be terminated on the right side of the terminal blocks.

F. Conductors shall be color-coded wires and tagged with code markers at terminal cabinets, and equipment. A wire index shall be typed and installed on terminal cabinet doors. Index shall be covered with clear plastic adhesive covers. Wiring shall be identified as to building and location of devices in the index.

G. Wiring within equipment and terminal cabinets shall be carefully strapped and shall be formed in rectangular configuration. Wires shall be properly numbered in numerical order and shall maintain same number throughout the Project site.

H. Comply with NFPA 72 and requirements of authorities having jurisdiction for installation and testing of fire-alarm equipment. Install all electrical wiring to comply with requirements in NFPA 70 including, but not limited to, Article 760, "Fire Alarm Systems."

1. Devices placed in service before all other trades have completed cleanup shall be replaced.
2. Devices installed but not yet placed in service shall be protected from construction dust, debris, dirt, moisture, and damage according to manufacturer's written storage instructions.

I. Connecting to Existing Equipment: Verify that the existing fire-alarm system is operational before making changes or connections.

1. Connect new equipment to existing monitoring equipment at the supervising station.

2. Expand, modify, and supplement existing monitoring equipment as necessary to extend existing monitoring functions to the new points. New components shall be capable of merging with existing configuration without degrading the performance of either system.

J. Install wall-mounted equipment, with tops of cabinets not more than 78 inches above the finished floor.

1. Comply with requirements for seismic-restraint devices specified in Section 26 05 48 "Seismic Controls for Communications Systems."

K. Manual Fire-Alarm Boxes:

1. Mount manual fire-alarm box on a background of a contrasting color.
2. The operable part of manual fire-alarm box shall be between 42 inches and 48 inches above floor level. All devices shall be mounted at the same height unless otherwise indicated.

L. Smoke- or Heat-Detector Spacing:

1. Comply with the "Smoke-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for smoke-detector spacing.
2. Comply with the "Heat-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for heat-detector spacing.
3. Smooth ceiling spacing shall not exceed 30 feet.
4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Annex A in NFPA 72.
5. HVAC: Locate detectors not closer than 36 inches from air-supply diffuser or return-air opening.
6. Lighting Fixtures: Locate detectors not closer than 36 inches from any part of a lighting fixture and not directly above pendant mounted or indirect lighting.

M. Install a cover on each smoke detector that is not placed in service during construction. Cover shall remain in place except during system testing. Remove cover prior to system turnover.

N. Remote Test and Alarm Indicator: Install in a visible location near the projected beam.

O. Audible Alarm-Indicating Devices: Install not less than 6 inches below the ceiling. Install all devices at the same height unless otherwise indicated.

P. Visible Alarm-Indicating Devices: Install at least 6 inches below the ceiling. Install all devices at the same height unless otherwise indicated.

Q. Device Location-Indicating Lights: Locate in public space near the device they monitor.

3.03 PATHWAYS

A. Pathways above recessed ceilings and in inaccessible locations may be routed exposed.

1. Exposed pathways located less than 96 inches above the floor shall be installed in EMT.

B. Pathways shall be installed in EMT.

C. Exposed EMT shall be painted red enamel.

3.04 CONNECTIONS

A. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements for "Door Hardware." Connect hardware and devices to fire-alarm system.

1. Verify that hardware and devices are listed for use with installed fire-alarm system before making connections.

B. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 36 inches from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.

1. Smoke dampers in air ducts of designated HVAC duct systems.
2. Magnetically held-open doors.
3. Electronically locked doors and access gates.
4. Supervisory connections at valve supervisory switches.
5. A/V equipment shutdown.

3.05 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 27 05 53 "Identification and Administration."

B. Install framed instructions in a location visible from fire-alarm control unit.

3.06 GROUNDING

A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

B. Ground shielded cables at the control panel location only. Insulate shield at device location.

3.07 FIELD QUALITY CONTROL

A. Field tests shall be witnessed by DSA IOR.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.

D. Perform the following tests and inspections with the assistance of a factory-authorized service representative.

1. Visual Inspection: Conduct visual inspection prior to testing.

    a. Inspection shall be based on completed record Drawings and system documentation that is required by the "Completion Documents, Preparation" table in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
    b. Comply with the "Visual Inspection Frequencies" table in the "Inspection" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.

2. System Testing: Comply with the "Test Methods" table in the "Testing" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
3. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
4. Test visible appliances for the public operating mode according to manufacturer's written instructions.
5. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" section of the "Fundamentals" chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

E. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.

F. Fire-alarm system will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

H. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.

I. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

3.08 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

1. Include visual inspections according to the "Visual Inspection Frequencies" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
2. Perform tests in the "Test Methods" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
3. Perform tests per the "Testing Frequencies" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

3.09 SOFTWARE SERVICE AGREEMENT

A. Comply with UL 864.

B. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for two (2) years.

C. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within two (2) years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least 30 days to allow Owner to schedule access to system and to upgrade computer equipment if necessary.

END OF SECTION 28 31 11

SECTION 31 10 00 - SITE CLEARING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Removal of vegetation, grass, grass roots, shrubs, tree stumps, trees, upturned stumps, weed growth, tree roots, brush, masonry, concrete, rubbish, debris and other materials.

2. Removal of concrete and bituminous surfaces.

3. Removal of existing fences and gates.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 31 2200 - Grading.

3. Section 31 2313 - Excavation and Fill.

4. Section 31 2316 - Excavation and Fill for Pavement.

5. Section 31 2319 - Excavation and Fill for Structures.

6. Section 31 2323 - Excavation and Fill for Utilities.

7. Section 31 2326 - Base Course.

8. Section 32 3113 - Chain Link Fences and Gates.

9. Section 32 9000 - Planting.

1.02 SUBMITTALS

A. Shop Drawings: Submit site plan indicating extent of site clearing.

1.03 QUALITY ASSURANCE

A. Comply with Standard Specifications for Public Works Construction, current edition, as a minimum requirement.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION

3.01 TREE AND STUMP REMOVAL

A. Remove trees and stumps indicated or required to be removed. Remove trees, together with bulk of roots, to a minimum depth of 4 feet below required grade, and within a radius of approximately 7 feet beyond perimeter of trunk at grade.

B. Fill and compact excavation from tree and stump removal. Fill in 6 inch layers, each compacted to 90 percent of maximum density in accordance with ASTM D1557.

1. Back filling shall not commence until the excavation is inspected and tested.

3.02 CONCRETE AND BITUMINOUS SURFACING REMOVAL

A. Break up and completely remove existing concrete surfacing, curbs, gutters, walks and bituminous surfacing to indicated limits. Cutting shall be performed to a neat and even line with proper tools or a concrete cutting saw. Minimum depth of cut shall be 1 1/2-inch, unless otherwise indicated. Remove concrete broken beyond the indicated limits to the nearest joint or score line and replace with new concrete to match existing.

3.03 FENCING

A. Existing fences scheduled to remain may be removed to facilitate the Work, provided they are installed to their original condition in accordance with requirements of Section 32 3113 - Chain Link Fences and Gates.

B. Fencing indicated to be removed and not reinstalled shall be completely removed, including footings. Fill and compact excavations.

C. Install chain link fencing indicated to be relocated or reset in accordance with applicable requirements specified under Section 32 3113 - Chain Link Fences and Gates.

3.04 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 31 22 00 - GRADING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. General exterior grading, cutting and filling, including grading for building area, paving, planting areas, banks and hillsides.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 31 1000 - Site Clearing.
3. Section 31 2313 - Excavation and Fill.
4. Section 31 2316 - Excavation and Fill for Pavement.
5. Section 31 2319 - Excavation and Fill for Structures.
6. Section 31 2323 - Excavation and Fill for Utilities.
7. Section 31 2326 - Base Course.
8. Section 32 9000 - Planting.

1.02 PROJECT REQUIREMENTS

A. General:

1. Fees: Pay as required by authorities having jurisdiction over the area.
2. Bonds: Post as required by authorities having jurisdiction over the area.
3. Haul Routes and Restrictions: Comply with requirements of authorities having jurisdiction over the area.
4. Before grading, contact Underground Service Alert of Southern California (USASC) for information on public buried utilities and pipelines. Retain the services of an underground utility locator for on-site utilities.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Materials shall conform to requirements specified in this and related sections.

PART 3 - EXECUTION

3.01 PREPARATION

A. Protect and maintain installed stakes until their removal is required for the Work. Provide replacement grade or location stakes lost or disturbed.

B. Install grade stakes and compare to indicated grades. If discrepancies are found between existing grades and grades indicated on Drawings, do not proceed until discrepancies are resolved.

3.02 ROUGH AND FINE GRADING

A. Rough grade area sufficiently high to require cutting by fine grading:

1. Grade area for bituminous surfacing and other paving to the indicated grades, equal to the section of the indicated base and pavement.

2. Slope banks to required finish grades as cut progresses or leave cuts full and finish grade by mechanical equipment to provide grades and soil densities indicated on the Drawings.

3. Rough grade, fill and compact banks beyond indicated finish grades. Finish grade banks and slopes to indicated grades and specified soil densities.

4. Grade Only Areas: In areas not indicated to receive pavement, rough grade to approximate finish grades and then scarify, moisten and roll to obtain required density and indicated finish grades.

5. Tolerances: Finish grades shall be within a tolerance of 0.05 inch per foot above or below grades indicated. Provide an average grade as indicated.

B. Base or Subgrade:

1. After subgrade has been constructed to approximate required grades, scarify to a depth of at least 6 inches:

a. After scarifying, process loosened material to a finely divided condition and adjust moisture content to optimum condition by addition of water, addition and blending of dry suitable material, or by drying of existing material.

b. Subgrade material shall be compacted by tamping, sheepsfoot rollers or pneumatic tire rollers. Required relative compaction shall be [**90**] percent minimum for the top 6 inches below subgrade.

c. Install base course in accordance with Section 31 2326 - Base Course.

2. Tolerance of completed grades of base or subgrade shall not vary more than 0.03 inch per foot from grades indicated. Provide an average grade as indicated.

3.03 SHORING

A. Provide shoring as necessary to properly and safely support earth sides of excavations, and existing curbs, sidewalks, gutter, drives and stairs, against movement and collapse.

B. Design and Calculations: Provide in accordance with requirement of CalOHSA.

C. Remove shoring upon completion of the Work of this section or when no longer needed unless required otherwise by authorities having jurisdiction.

3.04 EXCESS MATERIAL DISPOSAL

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.05 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 31 22 19 - LANDSCAPE GRADING

PART 1 - GENERAL

1.1 SUMMARY

A. General: This Section includes materials, labor, apparatus, tools, equipment, temporary construction, transportation, and services necessary for and incidental to performing the proper completion of Work for Finished Grading in Landscape Planting Areas, as shown in the Contract Drawings, and as specified herein this Section.

B. Work under this Section consists of, but is not necessarily limited to, furnishing and installing the following;
   1. Finish Grading of Landscape Planting Areas.

1.2 SITE CONDITIONS

A. Dust Nuisance: Contractor shall assume full responsibility for alleviation or prevention of dust as a result of Work under this Section.

B. Excessive rock, dead or declining vegetation, trash, debris, or other items that has accumulated shall be removed from the Project Site by the Contractor, and as directed by the Landscape Architect, prior to completion of Finish Grading operations.

C. Work under this Section shall be performed only during the period when beneficial and optimum Landscape Grading results may be obtained. If the moisture content of the soil should reach such a level that working it would destroy soil structure or cause compaction. Landscape Grading operations shall be suspended until, in the opinion of the Landscape Architect, the moisture content is increased or reduced to acceptable levels and the desired results are likely to be obtained.

D. Soil moisture level prior to Landscape Grading shall be no less than 75% of field capacity. The determination of adequate soil moisture for Landscape Grading shall be in the sole judgment of the Landscape Architect.

1.3 QUALITY ASSURANCE AND CONTROL

A. Installer Qualifications:
   1. Valid California C-27 (Landscaping Contractor) License.

B. Engage a 10 year experienced, licensed Contractor who has completed landscaping work similar in material, design, and extent to that indicated for this Project and with a record of successful landscape establishment.

C. Installer's Field Supervision: Contractor shall maintain an experienced, full-time landscape supervisor/superintendent at the Project site during times that landscaping operations identified herein the Contract are in progress.

1.4 COORDINATION, SCHEDULING AND OBSERVATIONS

A. Complete Finish Grading prior to installation of Irrigation system (Refer to Section 328400 – Landscape Irrigation) in each area graded.

B. Re-grade, as required, to acceptable landscape Grades established by Landscape Architect once irrigation system is installed.

C. Utilities: Determine location of above grade and underground utilities and perform Work in a manner which will avoid damage to utilities. Hand excavate, as required. Maintain grade stakes until removal is mutually agreed upon by parties concerned.

D. Excavation: When conditions detrimental to adequate Finish Grading operations are encountered, such as rubble fill, adverse drainage conditions, or obstructions, cease operations and notify Landscape Architect for further direction.

E. Perform Finish Grading operations only when weather and soil conditions are suitable in accordance with locally accepted practices.

F. Construction Site Observations: Periodic site observations shall be made by the Landscape Architect during the installation of Work under this Section for compliance with requirements. Landscape Architect retains right to observe Work for defects and to reject unsatisfactory or defective work under this Section at any time during progress of Work. The Contractor shall request, in writing, at least one (1) week in advance of the time when mandatory site observation(s) by the Landscape Architect are required.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Verify that the following items have been completed prior to commencement of Landscape Grading:
   1. Installation of (stockpiled) topsoil and soil preparation, including debris removal.

2. Incorporation of soil amendments.

3.2 INSTALLATION

A. Finish Grading:

1. Provide Finish Grades for natural runoff of water without low spots or pockets. Accurately set flow line grades at a two-percent (2%) minimum gradient, unless otherwise noted in the Contract Drawings.
2. Finish Grades shall be smooth, even, and on a uniform plane with no abrupt changes, pits, or undulations of the surface. Slope grades uniformly between given spot elevations.
3. Finish grades not otherwise indicted shall be uniform levels or slopes between points where elevations are given, or between points established by walks, paving, curbs or catch basins.
4. Tops and toes of slopes shall be gently rounded or feathered to produce a gradual and natural-appearing transition between relatively level areas and slopes, per the satisfaction of the Landscape Architect.

B. Tolerances:

1. Planting areas, including areas planted with turf grasses. Shall be true to grade within one-inch (1”) when tested with a ten-foot (10’) straightedge.
2. Hold Finish Grades in landscape planting areas below top of adjacent pavement, headers, curbs, or walls 9where applicable), as follows:
   a. Shrub, Annual and Groundcover Areas: One and one-half inches (1-1/2”).

END OF SECTION

SECTION 31 23 13 - EXCAVATION AND FILL

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Excavating, filling, backfilling, and compacting for Project site pavement, planting areas, buildings, and other structures.

2. Trenches for utility lines such as water, gas, irrigation, storm drain and sewer lines, concrete-encased conduits, manholes, vaults, valve boxes, catch basins, underground tanks, thrust blocks, yard boxes, pull boxes, and other utility appurtenances.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 01 4524 - Environmental Import/Export Materials Testing.

3. Section 31 1000 - Site Clearing.

4. Section 31 2200 - Grading.

5. Section 31 2326 - Base Course.

6. Section 32 0117 - Pavement Repair.

7. Section 32 1313 - Site Concrete Work.

8. Section 32 3113 - Chain Link Fences and Gates.

9. Section 32 8413 - Potable Water Irrigation.

10. Section 32 8426 - Reclaimed Water Irrigation.

11. Section 32 9000 - Planting.

12. Section 33 1100 - Site Water Distribution Utilities.

13. Section 33 3000 - Site Sanitary Sewer Utilities.

14. Section 33 4000 - Storm Drainage Utilities.

15. Division 22 - Plumbing.

16. Division 26 - Electrical.

1.02 PROJECT REQUIREMENTS

A. Import and Export of Earth Materials:

1. Fees: Pay as required by authorities having jurisdiction over the area.

2. Bonds: Post as required by authorities having jurisdiction over the area.

3. Haul Routes and Restrictions: Comply with requirements of authorities having jurisdiction over the area.

1.03 SUBMITTALS

A. Shoring calculations as required in Article 3.03 of this Section.

1.04 QUALITY ASSURANCE

A. Comply with the Standard Specifications for Public Works Construction, current edition, except as modified herein.

B. Sampling, testing, and certification of imported and exported soils shall be performed in accordance with Section 01 4524, Environmental Import/Export Materials Testing.

1.05 TESTING

A. OWNER will retain a Geotechnical Engineer as an OWNER Consultant who will provide observations, tests, inspections and approvals identified in the Contract Documents as being responsibility of OWNER.

B. Imported Soils: The Geotechnical Engineer will obtain initial product Sample for testing in accordance Article 3.05 of this Section.

1.05 PROJECT CONDITIONS

A. Information on Drawings or in soil investigation report does not constitute a guarantee of accuracy or uniformity of soil conditions over the Project site.

PART 2 - PRODUCTS

2.01 FILL AND BACKFILL MATERIALS

A. Fill and backfill material shall be a granular material previously removed from excavation or imported fill material, free of clods and stones larger than 3 inches, (2½ inches for utility trenches) foreign materials, vegetable growths, sod, expansive soils, rubbish and debris. Material shall conform to these specified requirements and related sections.

B. Fill material exhibiting a wide variation in consistency and moisture content shall be blended and aerated to stabilize and upgrade the material.

C. Bedding material from trench bottom to one foot above the pipe:

1. Sand, gravel, crushed aggregate or native free-draining granular material providing a sand equivalent of at least 30 or a coefficient of permeability greater than 1.4 inches per hour.

2. Sand complying with the Specifications for cement concrete aggregates.

D. Brick rubble and broken concrete originating from the Project site shall be legally disposed of off the Project site No such material shall be imported from outside the Project site.

E. Permeable Backfill:

1. Provide permeable backfill material behind retaining structures consisting of gravel, crushed gravel, crushed rock, natural sands, manufactured sand, or combinations of these materials conforming to the following gradations:

Sieve Size:	Percentage Passing:
3/4 inch (19mm)	100
3/8 inch (10mm)	80 to 100
No. 100	0 to 8
No. 200	0 to 3

2. Those portions of fill material passing a No. 4 sieve shall provide a sand equivalent of at least 60.

3. Provided backing for weep-holes shall consist of two cubic feet of aggregate in burlap sacks, securely tied. Aggregate shall conform to requirements for No. 3 concrete aggregate as specified in subsection 200-1.4 of the Standard Specifications for Public Works Construction.

4. Permeable Backfill Alternate Materials: Instead of the materials specified for retaining structures backfill, a drainage matting system Miradrain by Mirafi, Inc., American Wick Drain, JDR Enterprises, or equal, may be provided if reviewed and approved by the ARCHITECT.

F. Cement-sand slurry shall be provided with one sack of cement per cubic yard of the mixture.

2.02 BASE MATERIALS

A. Concrete Slabs on Grade: Provide "Crushed Aggregate Base" as specified in Standard Specifications for Public Works Construction, Section 200 - Rock Materials, with 3/4 inch maximum size aggregates. Provide 3 inch thick base, unless noted otherwise.

B. Bituminous Surfacing: Provide as indicated on Drawings and specified in Section 31 2326 Base Course.

PART 3 - EXECUTION

3.01 GENERAL

A. Before initiating intrusive activities, contact Underground Service Alert of Southern California (USA or Dig Alert) to obtain a Dig Alert ticket for location information on buried public and USA member utilities and pipelines at least 48-hours prior to beginning work. A copy of the Dig Alert ticket shall be forwarded to the OWNER. For on-site utilities, retain a state-licensed third party underground utility locating service.

B. Where the Work includes a building extension or addition on an occupied Project site, perform Work in such a manner, and at such times, as not to disrupt performance of existing utility services to existing Project site facilities. Where an interruption is necessary, obtain review from the OAR before proceeding.

C. Remove concrete or bituminous pavement to straight lines by saw cutting.

3.02 PROTECTION

A. Protect and guard excavations against danger to life, limb, and property as required by, but not limited to, OSHA regulations.

B. Protect existing improvements including landscaping against damage. Repair or replace damaged items.

C. Protect existing utility services and distribution systems from damage or displacement.

D. Remove conduits or pipes not in service, exposed during Work, unless a minimum cover of two feet is provided. Remove concrete, clay or other non-metallic pipe over 8 inches in diameter, unless otherwise indicated.

E. Shore, crib, or lag excavations and earthen banks as necessary to prevent cave in, erosion or gullying of sides.

F. Provide excavations free from standing water by pumping, draining, or providing protection against water intrusion. If soil becomes soft, soggy, or saturated, excavate to firm undisturbed earth and fill as required. Slope adjacent grades away from excavations to minimize entry of water.

3.03 SHORING

A. Provide shoring as necessary to properly and safely support earth sides of excavations, and existing curbs, sidewalks, gutter, drives and stairs, against movement and collapse.

B. Design and Calculations: Provide in accordance with requirement of governing Cal-OSHA requirements.

C. Remove shoring upon completion of the Work of this Section or when no longer needed unless required otherwise by authorities having jurisdiction.

3.04 EXCAVATION

A. Unclassified Excavations: Comply with the Standard Specifications for Public Works Construction, Section 300: "Earthwork", except as modified herein.

B. Form sides of footings, pads, grade beams, and slab foundations, unless otherwise indicated. Provide excavations of sufficient size to permit installation and removal of forms and other required Work.

C. Machine-drill excavation for round footings to size and depth indicated. Provide a collar or casing, or other adequate protection, to exclude dirt and debris. Protect excavations with plank covers until concrete is placed.

D. Provide excavation bottoms level and free from loose material. Excavate to indicated or required elevations of undisturbed earth.

E. Barricade trenches, ditches, pits, sumps, and similar Work outside the barricaded working area with chain link fence as specified in Section 01 5000 - Construction Facilities and Temporary Controls, and in accord with Cal-OSHA standards and requirements.

F. Trenches over five feet in depth shall comply with the Construction Safety Orders of the California Division of Industrial Safety.

G. Where indicated or required to excavate in lawn areas, protect adjoining lawn areas outside of the Work area. Replace or install removed sod upon completion of backfill by installing sod level with adjacent lawns. If installation of removed sod fails, furnish sod and install to match existing lawns.

H. For Structures:

1. Calculate excavation quantities based on elevations or depths indicated on Drawings.

2. Provide 2,000 psi concrete for backfill of over-excavated areas to indicated or required elevations.

3. Special preparation of bottom of excavated planes areas: Excavate areas shown on Drawings as bottom of excavated planes (B.E.P.), by excavating and filling to indicated grades and elevations.

I. For Utilities:

1. Excavate trenches to required depth for utility lines, such as pipes, conduits, and tanks, with minimum allowance of 6 inches at the bottom and 6 inches at the sides for bedding or concrete encasement as indicated on Drawings. Grade bottom of trenches to a uniform smooth surface. Remove loose soil from the excavation before placing sand bedding or concrete encasement.

2. Do not install piping lengthwise under concrete walks without review by the ARCHITECT.

3. Do not excavate trenches parallel to footings closer than 18 inches from the face of the footing or below a plane having a downward slope of two horizontal to one vertical, from a line 9 inches above bottom of footings.

   a. Unless otherwise indicated on Drawings, depth of excavations outside buildings shall provide for a minimum coverage above top of piping, tank or conduit measured from the lowest adjoining finished grade, as follows:

Steel Pipe	24 inches below finish grade
Copper Water Tube	18 inches below finish grade
Cast-Iron, Pressure Pipe	36 inches below finished grade
Plastic Pipe (other than waste)	30 inches below finished grade
Tanks or other structure	36 inches below finished grade
	Soil, sewer and storm drain minimum 18 inches below finished grade, and as required for proper pitch and traffic load. Install polypropylene sewer pipe with at least 24 inches of coverage.
Irrigation Pipe:	Non-pressure pipe - 12 inches, pressure pipe - 24 inches.

   b. Trench width shall provide space for fitting and joining. Excavate for piping bells and fittings, bell and spigot pipe and other fittings.

4. Where portions of existing structures, walks, paving, or other improvements are removed or cut for piping or conduit installation, replace the material with equal quality, finished to match adjoining existing improvements. Repair pavement as specified in Section 32 0117 - Pavement Repair.

5. Provide a minimum clear dimension of 2 inches from sides of wall excavation to outer surfaces of buried pipes or conduits placed in the same trench or outside surfaces of containers and tanks.

3.05 IMPORT/EXPORT OF MATERIALS

A. Unclassified Fill and Compaction: Comply with the Standard Specifications for Public Works Construction, Section 300 - Earthwork, except as modified herein. Install and compact fill in layers not to exceed 6 inches in thickness.

B. Provide fill materials as specified in Part 2- Products. If excavated materials from the Project site are not of required quality or sufficient quantity, import additional materials as necessary.

C. In addition to the requirements of this Section, import and/or exported materials shall comply with the requirements of Section 01 4524, Environmental Import/Export Materials Testing.

D. Imported fill materials shall be sampled by the Geotechnical Engineer, for compliance with the requirements of Part 2 of this Section.

E. The Geotechnical Engineer, will submit the samples to an independent DSA approved testing laboratory for testing.

F. Initial sampling and testing shall be performed before importing material to the Project site. Identify the location of the source site in addition to the address, name of the person and entity responsible for the source site. The Geotechnical Engineer, will obtain both the initial and additional samples from the identified site and submit samples for required testing.

G. The Geotechnical Engineer will perform additional sampling during import operations. If the total quantity of import is determined to be greater than 1000 cubic yards of material, one sample shall be obtained and submitted for testing for each 250 cubic yards of imported material. If the total quantity of import is determined to be less than 1000 yards, one sample shall be obtained and submitted for testing for each 100 cubic yards of imported material.

H. The independent approved testing laboratory will perform the required tests and report results of tests noting if the tested material passed or failed such tests and will furnish copies to the Project Inspector, ARCHITECT, OAR, DSA, CONTRACTOR, and others as required. Report shall state tests were conducted under the responsible charge of a licensed State of California professional engineer and the material was tested in accordance with applicable provisions of the Contract Documents, California Building Code, and the DSA. Upon completion of the Work of this Section, the independent testing laboratory and Geotechnical Engineer will submit a verified report to the DSA as required by the CBC.

I. Bills of lading or equivalent documentation will be submitted to the Project Inspector on a daily basis.

J. Upon completion of import operations, provide the OAR a certification statement attesting that imported material has been obtained from the identified source site.

3.06 INSTALLATION OF MATERIALS

A. Pavement: Fill or backfill materials shall be installed in horizontal layers of 6 inches, unless otherwise required. Each layer shall be evenly placed and moistened or aerated as necessary. Unless otherwise reviewed by the Geotechnical Engineer, each layer of fill material shall cover the length and width of the area to be filled before the next layer of material is installed. Top surface of each layer shall be installed to an approximate level with a crown or crossfall of at least 1 in 50, but not more than 1 in 20. Provide adequate drainage at all times during installation of the Work of this Section.

B. Structures:

1. After concrete has been placed, forms removed, and concrete Work inspected, backfill excavations with earth to indicated or required grades. Backfill simultaneously on each side of walls or grade beams. Remove rubbish, debris and other waste materials from excavations before placing backfill.

2. Before placing backfill, adequately cure concrete and provide bracing, if required to stabilize structure. Protect waterproofing or damp-proofing against damage during backfilling operations, with required protection board. Remove bracing as backfill operation progresses.

3. Do not furnish or install expansive soils for retaining wall backfill.

4. Rigidly control the amount of water to be installed to provide optimum moisture content for type of fill material furnished. Do not over-saturate or compact by flooding or jetting.

5. Install wall backfill before installing railings and fences on walls.

6. Install weep hole drainage at the backside of walls so the backing completely covers the weep holes, is horizontally centered and extends at least 12 inches above the bottom of the weep opening. Provide an 8-inch square section of 1/4 inch galvanized or aluminum screen, with a minimum wire diameter of 0.03 inch, and install at the backside of each weep hole before installing the backfill material.

7. Where a reviewed drainage matting system is provided instead of permeable backfill for retaining structures, install in accordance with the manufacturer recommendations.

C. Utilities:

1. Do not install backfill until the Work of this Section has been inspected and tested. Do not furnish or install materials excavated from the Project site containing materials not permitted for backfill.

2. Backfill electrical or other excavated utility trenches located outside of barricaded installation areas within 24 hours after inspection by the IOR.

3. Install backfill in layers not exceeding 4 inches in thickness, except cement-sand slurry.

4. If materials excavated from the Project site are not permitted for trench backfill in paved areas, backfill trenches with a cement-sand slurry mix. Install backfill to an elevation of the existing undisturbed grades plus one inch.

3.07 COMPACTING

A. Each layer of fill material shall be compacted by tamping, sheepsfoot rollers, or pneumatic-tired rollers to provide specified relative compaction. At inaccessible locations, provide specified compaction by manually held, operated and directed compaction equipment.

B. Install and compact sand bedding to provide a uniform bearing under the full length of piping and conduits.

C. Unless otherwise indicated, compact each layer of fill material to a relative compaction of at least ninety percent.

D. When fill materials, or a combination of fill materials, are encountered or provided which develop densely packed surfaces as a result of installation or compacting operations, scarify each layer of compacted fill before installing the next succeeding layer.

3.08 INSPECTION AND TESTING

A. The Geotechnical Engineer will inspect and test excavations, sample material quality for testing as set required in Part 2 and observe installation and compaction of fill materials.

B. The Geotechnical Engineer will sample imported fill materials from their designated source and submit samples to the independent approved testing laboratory before delivery to the Project site.

C. Installation of backfill shall be observed by the Geotechnical Engineer.

D. The Geotechnical Engineer will inspect and test excavation Work before the installation of fill and other materials.

E. Compaction: Test compaction in accordance with ASTM D1557, Method C.

F. The Project Inspector will inspect foundation excavations when completed and ready for forms, after forms are in place, and before first placement of concrete.

3.09 PROTECTION

A. Protect the Work of this Section until Substantial Completion.

3.10 CLEANING

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 31 23 16 - EXCAVATION AND FILL FOR PAVING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Excavating, backfill, and compacting for paved areas.
2. Installation of fill materials.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 01 4524 - Environmental Import/Export Materials Testing.
3. Section 31 1000 - Site Clearing.
4. Section 31 2200 - Grading.
5. Section 31 2323 - Excavation and Fill for Utilities.
6. Section 32 2326 - Base Course.
7. Section 32 0117 - Pavement Repair.
8. Section 32 1216 - Asphalt Paving.
9. Section 32 1313 - Site Concrete Work.

1.02 PROJECT REQUIREMENTS

A. Import and Export of Earth Materials:

1. Fees: Pay as required by authorities having jurisdiction over the area.
2. Bonds: Post as required by authorities having jurisdiction over the area.
3. Haul Routes and Restrictions: Comply with requirements of authorities having jurisdiction over the area.

1.03 QUALITY ASSURANCE

A. Comply with Standard Specifications for Public Works Construction, current edition, except as modified herein.

B. Sampling, testing, and certification of imported and/or exported soils shall be performed in accordance with Section 01 4524 - Environmental Import/Export Materials Testing.

1.04 TESTING

A. OWNER will retain a Geotechnical Engineer as an OWNER Consultant who will provide observations, tests, inspections and approvals identified in the Contract Documents as being responsibility of OWNER.

B. Imported Soils: The Geotechnical Engineer will obtain initial product Sample for testing in accordance Article 3.05 of this Section.

1.05 PROJECT CONDITIONS

A. Information on Drawings or in soils report does not constitute a guarantee of accuracy or uniformity of soil conditions over the Project site.

PART 2 - PRODUCTS

2.01 BASE MATERIALS

A. Concrete Slabs On Grade: Provide “Crushed Aggregate Base “as specified in the Standard Specifications for Public Works Construction, Section 200: “Rock Materials,” with ¾ inch maximum size aggregates. Provide 3-inch thick base, unless noted otherwise.

B. Bituminous Surfacing: As indicated on Drawings and specified in Section 31 2326 - Base Course.

2.02 FILL AND BACKFILL MATERIALS

A. Fill and backfill materials shall be previously excavated materials or imported fill material, free of clods and stones larger than 3-inch, foreign materials, vegetable growths, sod, expansive soils, rubbish and debris. Material shall conform to these specified requirements and related sections.

B. Fill material exhibiting a wide variation in consistency and moisture content shall be blended or aerated to stabilize and upgrade the material.

C. Imported Fill Material:

1. Provide suitable materials obtained from Project site excavations for earthwork and fill materials. If excavated materials are not of suitable quality or sufficient quantity, import additional materials as necessary.

2. Imported fill shall be a granular material with sufficient binder to form a firm and stable unyielding subgrade and shall not have more than 60 percent of fines passing 200 mesh sieve. Material shall have a coefficient of expansion of not

more than 2 percent from air dry to optimum moisture content and not more than 6 percent from air dry to saturation. Imported material shall be clean and free of rubbish, debris, and toxic or hazardous contaminants. Adobe or clay soils are not permitted.

D. Brick rubble and broken concrete originating from the Project site shall be legally disposed of off the Project site. No such materials shall be imported from outside the Project site.

E. Permeable Backfill:

1. Provide permeable backfill material behind retaining structures consisting of gravel, crushed gravel, crushed rock, natural sands, manufactured sand, or combinations of these materials conforming to the following gradations:

Sieve Size:	Percentage Passing:
3/4 inch (19mm)	100
3/8 inch (10mm)	80 to 100
No. 100	0 to 8
No. 200	0 to 3

2. Those portions of fill material passing a No. 4 sieve shall provide a sand equivalent of at least 60.

3. Provided backing for weep holes shall consist of two cubic feet of aggregate in burlap sacks, securely tied. Aggregate shall conform to requirements for No. 3 concrete aggregate as specified in subsection 200-1.4 of the Standard Specifications for Public Works Construction.

4. Permeable Backfill Alternate Materials: Instead of the materials specified for retaining structures backfill, a drainage matting system, Miradrain by Mirafi, Inc., or equal, may be provided if reviewed and approved by the ARCHITECT.

PART 3 - EXECUTION

3.01 GENERAL

A. Before initiating intrusive activities, contact Underground Service Alert of Southern California (USA or Dig Alert) to obtain a Dig Alert ticket for location information on buried public and USA member utilities and pipelines at least 48-hours prior to beginning work. A copy of the Dig Alert ticket shall be forwarded to the OWNER. For on-site utilities, retain a state-licensed third party underground utility locating service.

B. Clear the Project site as indicated in Section 31 1000 - Site Clearing.

3.02 PROTECTION

A. Protect and guard excavations against danger to life, limb, and property as required by, but not limited to, Cal-OSHA regulations.

B. Protect adjacent existing improvements including landscaping against damage.

3.03 EXISTING UTILITY LINES

A. Protect existing utility lines from damage or displacement.

B. Remove conduits or pipes not in service, exposed during Work, unless a minimum cover of 2 feet is provided. Remove concrete, clay or other non-metallic pipe over 8 inches in diameter, unless otherwise indicated.

3.04 EXCAVATION

A. Unclassified Excavations: Comply with the Standard Specifications for Public Works Construction, Section 300: "Earthwork," except as modified herein.

3.05 FILL

A. Unclassified Fill and Compaction: Comply with the Standard Specifications for Public Works Construction, Section 300: "Earthwork," except as modified herein.

B. Provide fill materials as specified in Part 2 - Products. If excavated materials from the Project site are not of required quality or sufficient quantity, import additional materials as necessary.

C. In addition to the requirements of this Section, import and/or exported materials shall comply with the requirements of Section 01 4524 - Environmental Import/Export Materials Testing.

D. Imported fill materials will be sampled by the Geotechnical Engineer for compliance with the requirements of Part 2 of this Section.

E. The Geotechnical Engineer will submit samples to a DSA approved independent approved testing laboratory for testing.

F. Initial sampling will be performed by the Geotechnical Engineer before importing material to the Project site. Identify the location of the source site in addition to the address, name of the person and/or entity responsible for the source site. The Geotechnical Engineer will obtain both the initial and additional samples from the identified site and will submit samples to the approved independent testing laboratory for testing.

G. The Geotechnical Engineer will perform additional sampling during import operations. If the total quantity of import is determined to be greater than 1,000 cubic yards of material, one sample shall be obtained and submitted for testing for each 250 cubic

yards of imported material. If the total quantity of import is determined to be less than 1,000 yards, one sample shall be obtained and submitted for testing for each 100 cubic yards of imported material.

H. The independent approved testing laboratory will perform the required tests and report results of tests noting if the tested material passed or failed such tests and will furnish copies to the Project Inspector, ARCHITECT, OAR, DSA, CONTRACTOR, and others as required. Report shall state tests were conducted under the responsible charge of a licensed State of California professional engineer and the material was tested in accordance with applicable provisions of the Contract Documents, CBC, and the DSA. Upon completion of the Work of this Section, the independent testing laboratory and Geotechnical Engineer shall submit a verified report to the DSA as required by CBC.

I. Bills of lading or equivalent documentation will be submitted to the Project Inspector on a daily basis.

J. Upon completion of import operations, provide the OAR a certification statement attesting that imported material has been obtained from the identified source site.

3.06 INSTALLATION OF MATERIALS

A. Fill or backfill materials shall be installed in horizontal layers of 6 inches, unless otherwise required. Each layer shall be evenly placed and moistened or aerated as necessary. Unless otherwise reviewed by the Geotechnical Engineer, each layer of fill material shall cover the length and width of the area to be filled before the next layer of material is installed. Top surface of each layer shall be installed to an approximate level with a crown or crossfall of at least 1 in 50, but no more than 1 in 20. Provide adequate drainage at all times during construction of the Work of this Section.

3.07 COMPACTING

A. Each layer of fill material shall be compacted by tamping, sheepsfoot rollers, or pneumatic-tired rollers to provide specified relative compaction. At inaccessible locations, provide specified compaction by manually held, operated and directed compaction equipment.

B. Unless otherwise indicated, compact each layer of earth fill to a relative compaction of at least 90 percent.

C. When fill materials, or a combination of fill materials, are encountered or provided which develop densely packed surfaces as a result of installation or compacting operations, scarify each compacted layer before installing the next succeeding layer.

3.08 INSPECTION AND TESTING

A. The Geotechnical Engineer will inspect and test excavations, sample material quality as required in Part 2, and observe installation and compaction of fill materials.

B. The Geotechnical Engineer will sample imported fill materials from their designated source before delivery to the Project site.

C. Installation of backfill will be observed by the Geotechnical Engineer.

D. The Geotechnical Engineer will inspect and test excavation Work before the installation of fill and/or other materials.

E. Compaction: Test compaction in accordance with ASTM D1557, Method C.

3.09 PROTECTION

A. Protect the Work of this Section until Substantial Completion.

3.10 CLEANING

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 31 23 19 - EXCAVATION AND FILL FOR STRUCTURES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Excavating, backfilling, and compacting for buildings and structures.
2. Fill materials.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 01 4524 - Environmental Import/Export Materials Testing.
3. Section 31 1000 - Site Clearing.
4. Section 31 2200 - Grading.
5. Section 31 2616 - Excavation and Fill for Paving.
6. Section 31 2323 - Excavation and Fill for Utilities.

1.02 PROJECT REQUIREMENTS

A. Import and Export of Earth Materials:

1. Fees: Pay as required by authorities having jurisdiction over the area.
2. Bonds: Post as required by authorities having jurisdiction over the area.
3. Haul Routes and Restrictions: Comply with requirements of authorities having jurisdiction over the area.

1.03 SUBMITTALS

A. Imported Soils: A Geotechnical Engineer, retained by the Owner as an Owner Consultant, will obtain initial product Sample for testing in accordance with the terms of Article 3.05 of this Section.

B. Shoring calculations as required in Article 3.03 of this Section.

1.04 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works Construction, current edition, except as modified herein.

B. Sampling, testing, and certification of imported and/or exported soils shall be performed in accordance with Section 01 4524 - Environmental Import/Export Materials Testing.

1.05 TESTING

A. OWNER will retain a Geotechnical Engineer as an OWNER Consultant who will provide observations, tests, inspections and approvals identified in the Contract Documents as being responsibility of OWNER.

B. Imported Soils: The Geotechnical Engineer will obtain initial product Sample for testing in accordance Article 3.05 of this Section.

1.06 PROJECT CONDITIONS

A. Information on Drawings or in soils report does not constitute a guarantee of accuracy or uniformity of soil conditions over the Project site.

PART 2 - PRODUCTS

2.01 FILL AND BACKFILL MATERIALS

A. Fill and backfill materials shall be a granular material previously removed from excavation, or imported fill material, free of large clods and stones larger than 3 inches, foreign materials, vegetable growths, sod, expansive soils, rubbish and debris. Material shall conform to these specified requirements and related sections.

B. Fill material exhibiting a wide variation in consistency and or moisture content shall be blended and/or aerated to stabilize and upgrade the material.

C. Imported Fill Material:

1. Provide suitable materials obtained from Project site excavations for earthwork and fill materials. If excavated materials are not of suitable quality or sufficient quantity, import additional materials as necessary.

2. Imported fill shall be a granular material with sufficient binder to form a firm and stable unyielding subgrade and shall not have more than 60 percent of fines passing 200 mesh sieve. Material shall have a coefficient of expansion of not more than two percent from air dry to optimum moisture content and not more than six percent from air dry to saturation. Imported material shall be clean and free of rubbish, debris and toxic or hazardous contaminants. Adobe or clay soils are not permitted.

D. Brick rubble and broken concrete originating from the Project site shall be legally disposed of off the Project site No such materials shall be imported from outside the Project site.

E. Permeable Backfill:

1. Provide permeable backfill material behind retaining structures consisting of gravel, crushed gravel, crushed rock, natural sands, manufactured sand, or combinations of these materials conforming to the following gradations:

Sieve Size	Percentage Passing
3/4 inch	100
3/8 inch	80 to 100
No. 100	0 to 8
No. 200	0 to 3

2. Those portions of fill material passing a No. 4 sieve shall provide a sand equivalent of at least 60.

3. Provided backing for weep-holes shall consist of two cubic feet of aggregate in burlap sacks, securely tied. Aggregate shall conform to requirements for No. 3 concrete aggregate as specified in subsection 200-1.4 of the Standard Specifications for Public Works Construction.

4. Permeable Backfill Alternate Materials: Instead of the materials specified for retaining structures backfill, a drainage matting system, Miradrain by Mirafi, Inc., or equal, may be provided if reviewed and approved by the ARCHITECT.

PART 3 - EXECUTION

3.01 GENERAL

A. Before initiating intrusive activities, contact Underground Service Alert of Southern California (USA or Dig Alert) to obtain a Dig Alert ticket for location information on buried public and USA member utilities and pipelines at least 48-hours prior to beginning work. A copy of the Dig Alert ticket shall be forwarded to the OWNER. For on-site utilities, retain a state-licensed third party underground utility locating service.

B. Clear the Project site as indicated in Section 31 1000 - Site Clearing.

3.02 PROTECTION

A. Protect and guard excavations against danger to life, limb, and property as required by, but not limited to, Cal-OSHA regulations.

B. Protect adjacent existing improvements including landscaping against damage.

C. Shore, crib, or lag excavations and earthen banks as necessary to prevent caving-in, erosion or gullying of sides.

D. Divert or de-water excavations until concrete is placed, forms are removed, and backfilling is complete.

3.03 SHORING

A. Provide shoring as necessary to properly and safely support earth sides of excavations, curbs, sidewalks, gutter, drives and stairs, against movement and collapse.

B. Design and Calculations: Provide in accordance with requirement of Cal-OHSA. Remove shoring upon completion of Work, or when no longer needed.

3.04 EXCAVATION

A. Form sides of footings, pads, grade beams, and slab foundations, unless otherwise indicated. Provide excavations of sufficient size to permit installation and removal of forms and other Work as required.

B. Machine-drill excavation for round footings to size and depth indicated. Provide a collar or casing, or other adequate protection, to exclude dirt and debris. Protect excavations with plank covers until concrete is placed.

C. Provide excavation bottoms level and free from loose material. Excavate to indicated or required elevations of undisturbed earth.

D. Provide excavations free from standing water by pumping, draining, or providing protection against water intrusion. If soil becomes soft, soggy, or saturated, excavate to firm undisturbed soil and fill as required. Slope adjacent grades away from excavations to minimize entry of water.

E. Calculate excavation quantities based on elevations or depths indicated on Drawings.

F. Provide 2,000 psi concrete for backfill of over-excavated areas to indicated or required elevations.

G. Special preparation of bottom of excavated planes areas: Excavate areas designated on Drawings as bottom of excavated planes (B.E.P.), by excavating and filling to indicated grades and elevations.

3.05 IMPORT/EXPORT OF MATERIALS

A. Provide fill materials as specified in Part 2- Products. If excavated materials from the Project site are not of required quality or sufficient quantity, import additional materials as necessary.

B. In addition to the requirements of this Section, import and/or exported materials shall comply with the requirements of Section 01 4524 - Environmental Import/Export Materials Testing.

C. Imported fill materials will be sampled by the Geotechnical Engineer for compliance with the requirements of Part 2 of this Section.

D. The geotechnical engineer will submit all samples to a DSA approved independent testing laboratory for testing.

E. Initial sampling will be performed by the Geotechnical Engineer before importing material to the Project site. Identify the location of the source site in addition to the address, name of the person and/or entity responsible for the source site. The Geotechnical Engineer will obtain both the initial sample and additional samples from the identified site and will submit samples to the approved independent testing laboratory for testing.

F. The Geotechnical Engineer will perform additional sampling during import operations. If the total quantity of import is determined to be greater than 1,000 cubic yards of material, one sample shall be obtained and submitted for testing for each 250 cubic yards of imported material. If the total quantity of import is determined to be less than 1,000 yards, one sample shall be obtained and submitted for testing for each 100 cubic yards of imported material.

G. The independent approved testing laboratory will perform the required tests and report results of tests noting if the tested material passed or failed such tests and will furnish copies to the Project Inspector, ARCHITECT, OAR, DSA, CONTRACTOR, and others as required. Report shall state tests were conducted under the responsible charge of a licensed State of California professional engineer and the material was tested in accordance with applicable provisions of the Contract Documents, CBC and the DSA. Upon completion of the Work of this Section, the independent testing laboratory and Geotechnical Engineer will submit a verified report to the DSA as required by CBC.

H. Bills of lading or equivalent documentation will be submitted to the Project Inspector on a daily basis.

I. Upon completion of import operations, provide the OAR a certification statement attesting that all imported material has been obtained from the identified source site.

3.06 BACKFILLING

A. After concrete has been placed, forms removed and concrete Work inspected, backfill excavations to indicated or required grades. Backfill simultaneously on each side of walls or grade beams. Remove rubbish, debris, and other waste materials from excavations before placing backfill.

B. Before installing backfill, adequately cure concrete and provide bracing to stabilize structures. Protect waterproofing or dampproofing against damage during backfilling

operations with required protection board. Remove bracing as backfill operation progresses.

C. Do not furnish or install expansive soils for below grade building walls.

D. Install each layer of material in a not to exceed thickness of 6 inches, unless otherwise required.

E. Rigidly control the amount of water to be installed to provide optimum moisture content for type of fill material furnished. Do not over-saturate or compact by flooding or jetting.

F. Install wall backfill before installing railings and fences on walls.

G. Impervious backfill materials shall be installed in layers along with and by the same methods specified for structure backfill. Impervious backfill materials shall be at the approximate grade and elevation and where exposed to erosion, shall be covered with at least a 12-inch layer of fill material as reviewed by the Geotechnical Engineer.

H. Install weep hole drainage at the backside of walls so the backing completely covers the weep holes, is horizontally centered and extends at least 12 inches above the bottom of the weep opening. Provide an 8-inch square section of 1/4 inch galvanized or aluminum screen, with a minimum wire diameter of 0.03 inch, and install at the backside of each weep hole before installing the backfill material.

I. Where a reviewed drainage matting system is provided instead of permeable backfill for retaining structures, install in accordance with the manufacturer recommendations.

3.07 COMPACTING

A. Compact each layer of fill material by tamping, sheepsfoot rollers or pneumatic-tired rollers, to such extent as to provide specified relative compaction. At inaccessible locations, compact to specified requirements with hand-held, operated and directed compaction equipment.

B. Unless otherwise indicated, compact each layer of fill material to a relative compaction of at least 90 percent.

C. Do not compact by flooding or jetting.

D. When fill materials, or a combination of fill materials, are encountered or provided which develop densely packed surfaces as a result of installation or compacting operations, scarify each layer of compacted fill before installing the next succeeding layer.

3.08 INSPECTION AND TESTING

A. The Geotechnical Engineer will inspect and test excavations, sample material quality as required in Part 2, and observe installation and compaction of fill materials.

B. The Geotechnical Engineer will sample imported fill materials from their designated source before delivery to the Project site.

C. Installation of backfill shall be observed by the Geotechnical Engineer.

D. The Geotechnical Engineer will inspect and test excavation Work before the installation of fill and/or other materials.

E. Compaction: Test compaction in accordance with ASTM D1557, Method C.

F. The Project Inspector will inspect foundation excavations when completed and ready for forms, after forms are in place and before first placement of concrete.

3.09 PROTECTION

A. Protect the Work of this Section until Substantial Completion.

3.10 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 31 23 23 - EXCAVATION AND FILL FOR UTILITIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Excavating, backfilling, and compacting utility trenches such as water, gas, irrigation, storm drain, sewer lines, concrete-encased conduits, and manholes, vaults, valve boxes, catch basins, underground tanks, thrust blocks, yard boxes, pull boxes and other utility appurtenances.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 01 4524 - Environmental Import/Export Materials Testing.
3. Section 31 1000 - Site Clearing.
4. Section 31 2200 - Grading.
5. Section 31 2316 - Excavation and Fill for Paving.
6. Section 31 2319 - Excavation and Fill for Structures.
7. Section 32 0117 - Pavement Repair.
8. Section 32 1313 - Site Concrete Work.
9. Section 32 8413 - Potable Water Irrigation.
10. Section 32 8426 - Reclaimed Water Irrigation.
11. Section 33 1100 - Site Water Distribution Utilities.
12. Section 33 3000 - Site Sanitary Sewer Utilities.
13. Section 33 4000 - Storm Drainage Utilities.
14. Division 22 - Plumbing.
15. Division 26 - Electrical.

1.02 PROJECT REQUIREMENTS

A. Import and Export of Earth Materials:

1. Fees: Pay as required by authorities having jurisdiction over the area.

2. Bonds: Post as required by authorities having jurisdiction over the area.

3. Haul Routes and Restrictions: Comply with requirements of authorities having jurisdiction over the area.

1.03 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works construction, current edition except as modified herein.

B. Sampling, testing, and certification of imported and/or exported soils shall be performed in accordance with Section 01 4524 - Environmental Import/Export Materials Testing.

1.04 TESTING

A. OWNER will retain a Geotechnical Engineer as an OWNER Consultant who will provide observations, tests, inspections and approvals identified in the Contract Documents as being responsibility of OWNER.

B. Imported Soils: The Geotechnical Engineer will obtain initial product Sample for testing in accordance Article 3.02 of this Section.

1.05 PROJECT CONDITIONS

A. Information on Drawings or in soils report does not constitute a guarantee of accuracy or uniformity of soil conditions over the Project site.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Bedding material from trench bottom to one foot above the pipe:

1. Sand, gravel, crushed aggregate or native free-draining granular material providing a sand equivalent of at least 30 or a coefficient of permeability greater than 1.4 inches per hour.

2. Sand complying with the Specifications for cement concrete aggregates.

B. Backfill Materials:

1. Excavated trench material to be installed for backfilling shall be clean, free of large clods, and stones larger than 2 ½-inch in any dimension.

2. Cement-sand slurry shall be provided with one sack of cement per cubic yard of the mixture.

3. Imported Fill Material: Imported fill material shall be a granular material with sufficient binder to form a firm and stable unyielding subgrade and shall not have more than 60 percent of fines passing a 200 mesh sieve. Material shall provide a coefficient of expansion of not more than two percent from air dry to optimum moisture content and not more than six percent from air dry to saturation. Imported materials shall be clean and free of rubbish, debris, and toxic or hazardous contaminants. Adobe or clay soils are not permitted.

PART 3 - EXECUTION

3.01 GENERAL

A. Before initiating intrusive activities, contact Underground Service Alert of Southern California (USA or Dig Alert) to obtain a Dig Alert ticket for location information on buried public and USA member utilities and pipelines at least 48-hours prior to beginning work. A copy of the Dig Alert ticket shall be forwarded to the OWNER. For on-site utilities, retain a state-licensed third party underground utility locating service.

B. Barricade trenches, ditches, pits, sumps, and similar Work outside the barricaded working area with chain link fence as specified in Section 01 5000, Construction Facilities and Temporary Controls, and in accordance with Cal-OSHA standards and requirements.

C. Saw-cut concrete or bituminous paving for trench installation.

D. Trenches over 5 feet in depth shall conform to the Cal-OSHA.

E. Where indicated and required to excavate in lawn areas, protect adjoining lawn areas outside of the Work area. Replace or install removed sod upon completion of backfill by installing sod level with adjacent lawns. If installation of removed sod fails, furnish sod and install to match existing lawns.

F. Backfill over excavations to the required elevations with earth, gravel, sand, or concrete and compact as required. Provide excavations free from standing water by pumping, draining, or providing protection against water intrusion. Slope adjacent grades away from excavations to minimize entry of water.

G. Do not install piping lengthwise under concrete walks without review by the ARCHITECT.

H. Do not excavate trenches parallel to footings closer than 18 inches from the face of the footing or below a plane having a downward slope of two horizontal to one vertical, from a line 9 inches above bottom of footings.

1. Unless otherwise indicated on Drawings, depth of excavations outside the buildings shall allow for a minimum coverage above top of pipe, tank, or conduit measured from the lowest adjoining finished grade, as follows:

Steel Pipe	24 inches below finished grade
Copper Water Tube	18 inches below finished grade
Cast-Iron Pressure Pipe	36 inches below finished grade
Plastic Pipe (other than waste)	30 inches below finished grade
Tanks or other structures	36 inches below finished grade
Soil, Sewer & Storm Drain	minimum 18 inches below finished grade, and as required for proper pitch and traffic load. (Install polypropylene sewer pipe with at least 24 inches coverage)
Irrigation Pipe:	nonpressure pipe 12 inches, pressure pipe 24 inches

2. Trench width shall provide ample space for fitting and joining. Excavate for piping bells and fittings, bell and spigot pipe and other fittings.

I. Unless indicated otherwise, excavate trenches to the required depths for utilities, such as pipes, conduit and tanks, with minimum allowances of 6 inches at the bottom and 6 inches at the sides for bedding of unprotected piping or as required for concrete encasement of conduits as indicated on Drawings. Grade bottom of trenches to a uniform smooth surface. Remove loose soil from the excavation before installing sand bedding or concrete encasement.

J. Provide excavations free from standing water by pumping, draining, or providing protection against water intrusion. If soil becomes soft, soggy, or saturated, excavate to firm undisturbed soil and fill as required. Slope adjacent grades away from excavations to minimize entry of water.

K. Provide a minimum clear dimension of 2 inches from sides of wall excavation to outer surfaces of buried pipes or conduits installed in the same trench or outside surfaces of containers and tanks.

L. Do not install backfill until required inspections and testing is completed.

M. Backfill electrical or other excavated utility trenches located outside of barricaded installation areas within 24 hours after inspection by the Project Inspector.

N. Install backfill materials in layers not exceeding 4 inches in thickness and compact to 90 percent of the maximum density.

O. If materials excavated from the Project site are not permitted for trench backfill in paved areas, backfill trenches with a cement-sand slurry mix. Install backfill to an elevation of the existing undisturbed grade plus one inch.

P. Install and compact sand bedding to provide a uniform full length bearing under piping and conduits.

Q. Where portions of existing structures, walks, paving, or other improvements are removed or cut for piping or conduit installation, replace the material with equal quality, finished to match adjoining existing improvements. Repair pavement as specified in Section 32 0117, Pavement Repair.

3.02 IMPORT/EXPORT OF MATERIALS

A. Provide fill materials as specified in Part 2, Products. If excavated materials from the Project site are not of required quality or sufficient quantity, import additional materials as necessary.

B. In addition to the requirements of this Section, import and exported materials shall comply with the requirements of Section 01 4524, Environmental Import/Export Material Testing.

C. Imported fill materials will be sampled by the Geotechnical Engineer for compliance with the requirements of Part 2 of this Section.

D. The Geotechnical Engineer will perform the tests by utilizing an independent approved testing laboratory.

E. Initial sampling will be performed by the Geotechnical Engineer before importing material to the Project site. Identify the location of the source site in addition to the address, name of the person and/or entity responsible for the source site. The Geotechnical Engineer will obtain both the initial sample and additional samples from the identified site and shall submit all samples to the approved independent testing laboratory.

F. The Geotechnical Engineer will perform additional sampling during import operations. If the total quantity of import is determined to be greater than 1,000 cubic yards of material, one sample shall be obtained and submitted for testing for each 250 cubic yards of imported material. If the total quantity of import is determined to be less than 1,000 yards, one sample shall be obtained and submitted for testing for each 100 cubic yards of imported material.

G. The independent approved testing laboratory will perform the required tests and report results of all tests noting if the tested material passed or failed such tests and will furnish copies to the Project Inspector, ARCHITECT, OAR, DSA, CONTRACTOR, and others as required. Report shall state tests were conducted under the responsible

charge of a licensed State of California professional engineer and the material was tested in accordance with applicable provisions of the Contract Documents, CBC and the DSA. Upon completion of the Work of this Section, the independent testing laboratory and Geotechnical Engineer will submit a verified report to the DSA as required by CBC.

H. Bills of lading or equivalent documentation will be submitted to the Project Inspector on a daily basis.

I. Upon completion of import operations, provide the OAR a certification statement attesting that imported material has been obtained from the identified source site.

3.03 INSPECTION AND TESTING

A. The Geotechnical Engineer will inspect and test excavations, sample material quality as required in Part 2, observe installation and compaction of fill materials.

B. Compaction test shall be performed in accordance with ASTM D1557, method "C."

3.04 PROTECTION

A. Protect the Work of this Section until Substantial Completion.

3.05 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 31 23 26 - BASE COURSE

PART 1 - GENERAL

A. Related Sections

1. 01 45 24: Environmental Import Materials Testing
2. 01 45 25: Environmental Export Materials Testing
3. 31 23 00: Excavation and Backfill
4. 32 12 16: Asphalt Paving
5. 32 12 36: Seal Coats

B. Reference Standards

1. Conform to Section 200,2.2 of the Standard Specifications for Public Works Construction.
2. Conform to site specific geotechnical report for specified thickness.

PART 2 – PRODUCTS

A. Base Material

1. Use crushed aggregate base (CAB). Crushed miscellaneous base is not acceptable.
2. Crushed Aggregate Base Material shall conform to with the requirements of Standard Specifications for Public Works Construction, Section 200 – Rock Materials.
3. All import material must meet Department of Toxic Substance Control (DTSC) requirements. The District has experience with a few of the larger facilities for the import of construction materials that have been tested and accepted. For a current list of those facilities contact the District.

PART 3 – EXECUTION

A. Install aggregate base course material in layers not exceeding 4-inches.

B. Compact per the requirements of the soils report and drawings, or 95 percent if not noted.

END OF SECTION

SECTION 32 12 16 - ASPHALT PAVING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Paving for playground, parking areas, areas between buildings, synthetic track surfacing adjacent to planting and turf areas as indicated.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 31 2200 - Grading.
3. Section 32 0117 - Pavement Repair.
4. Section 31 2326 - Base Course.
5. Section 32 1236 - Seal for Bituminous Surfacing.
6. Section 32 1313 - Site Concrete Work.

1.02 SUBMITTALS

A. Shop Drawings: Submit site plan indicating extent of paving and accessories.

B. Product Data: Manufacturer’s technical data for materials and products.

1.03 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works Construction.

1.04 PROJECT CONDITIONS

A. Information on Drawings or in soils report does not constitute a guarantee of accuracy or uniformity of soil conditions over the Project site.

B A copy of the soils report is available for examination in the office of the Architect during regular office hours of the Architect.

PART 2 - PRODUCTS

2.01 BITUMINOUS MATERIALS

A. Provide materials of the class, grade, or type indicated on the Drawings, conforming to relevant provisions of Section 203 - Bituminous Materials of the Standard Specifications for Public Works Construction.

2.02 HEADERS

A. Concrete: Per specification Section 32 1313 - Site Concrete Work.

B. Wood:

1. Redwood, Construction Heart Grade, size 2 by 6, unless otherwise indicated.

2. Stakes: 2 by 4 redwood or 2 by 3 Douglas fir, Construction Grade.

3. Nails: Common, galvanized, 12d minimum.

PART 3 - EXECUTION

3.01 HEADERS

A. Install headers along edge of bituminous surfacing abutting turf, earth, or planting area, unless indicated otherwise.

B. Install headers so the bottom surface has continuous bearing on solid grade. Where excavation for headers is undercut, thoroughly tamp soil under the header. Compact backfill on both sides of header to the density of adjacent undisturbed earth.

C. Where wood headers are indicated on drawing, fasten headers in place with redwood or Douglas fir stakes of length necessary to extend into solid grade a minimum of 12 inches. Stakes shall be of sound material, neatly pointed, driven vertically, and securely nailed to headers. Space stakes, not to exceed 4 feet on center with top of stakes set one inch below top of header. Provide a minimum of two 12d galvanized common nails through each stake.

D. Remove existing headers where new surfacing is installed adjacent to existing surfacing.

E. Install temporary headers at transverse joints of paving where continuous paving operations are not maintained.

F. Provide additional stakes and anchorage as required to fasten headers in place.

3.02 CONSTRUCTION OF ASPHALT CONCRETE PAVEMENT

A. Thickness of Surfacing: Unless otherwise indicated on Drawings or specified, install bituminous surfacing to a compacted thickness of 2 inches.

B. Provide surfacing material over base course as specified in Section 31 2326 - Base Course.

C. Surfaces of walls, concrete, masonry, or existing bituminous surfacing indicated to be in direct contact with installed bituminous surfacing shall be cleaned, dried and uniformly coated with an asphaltic emulsion film.

D. Thicken edges of bituminous surfacing that do not abut walls, concrete, or masonry, and edges joining existing bituminous surfaces. Remove headers at existing bituminous surfacing where new bituminous surfacing is to be installed. Thicken edges an additional 2 inches and taper to the indicated or specified thickness 6 inches back from such edges.

E. Provide adequate protection for concrete, planting areas, and other finish Work adjacent to areas indicated to receive bituminous surfacing.

F. Placing:

1. Do not install bituminous surfacing when atmospheric temperature is below 40 degrees F; or when fog or other unsuitable weather conditions are present. Temperature of mixture at time of installation shall not be lower than 260 degrees F in warm weather or higher than 320 degrees F in cold weather.

2. Where 2-inch or 3-inch thick surfacing is indicated or specified, install surfacing in one course. Where surfacing is indicated or specified 4 inches or more in thickness, except for thickened edges, install bituminous surfacing in courses of approximately equal thickness, each course not exceeding 2 ½ inches in thickness.

G. Stakes or Screeds: Provide grade or screed stakes spaced not more than 15 feet apart in flow lines with grades of less than one percent. Continuous screeds may be provided instead of stakes.

H. Spreading: Install bituminous surfacing in a manner to cause least possible handling of mixture. In open areas and wherever practicable, install by mechanical means with a self-propelled mechanical spreader. In confined or restricted areas, install mixture with hot shovels and rakes, and smooth with lutes.

I. Joints: Provide vertical joints between successive runs. Install joints true to line, grade, and cross section. Lapped joints are not permitted.

J. Rolling:

1. Finish roll with a self-propelled tandem roller weighing at least 8 tons. Break down roll with a self-propelled roller weighing between 1 ½ tons and 8 tons.

2. Roll in a manner that preserves flow lines and the established finished grades. Break down roll in areas adjacent to flow lines parallel to flow lines. Break down roll after bituminous surfacing is installed without shoving or cracking of mixture under roller. Continue finish rolling until surfacing is unyielding, true to grade, and meets requirements for specified smoothness. Areas inaccessible to finish roller may be finish rolled with breakdown roller or tamped with hot tamping irons and smoothed with hot smoothing irons or hand roller.

3. Where bituminous surfacing abuts concrete, masonry, walks or paving, tamp joint smooth, if necessary, as described above to obtain a uniformly even joint, true to line and grade. Tamp and smooth to properly compact.

4. Compacted bituminous surfacing shall be provided with a bulk specific gravity of at least 2.31 when tested in accordance with ASTM D1188.

3.03 TOLERANCE

A. Smoothness: Surface of bituminous surfacing after rolling, shall be even, smooth and uniform in texture with no voids or rock pockets, free of roller marks or other irregularities, and not varying by more than 0.03 foot, except at local depressions or raised areas as indicated, when a 10-foot straightedge is placed on surface.

B. Grade: Finished grade shall not vary more than 0.02 foot above or below required grade. Variations within prescribed tolerance shall be compensating so that average grade and cross-section are provided.

C. Premium paving tolerances and requirements for synthetic track:

1. General: Test in-place asphalt concrete courses for compliance with requirements or thickness and surface smoothness. Repair or remove and replace unacceptable paving as directed by Owner's representative.

2. Thickness: Tolerances for thickness shall be ¼ inch, plus or minus.

3. Planarity: The asphalt substrate shall not vary from the planned cross slope by more than plus or minus 0.1 percent. The finished asphalt shall not vary, plus or minus, under a 10 feet straight edge greater than 1/8 inch. Flood test the surface with the use of a water truck. If, after 30 minutes on a 70 degree F day, "bird baths" are evident at a depth more than 1/8 inch repair using the best method of correction.

4. Corrective Measures: Determine if the planarity, cross slopes, and general specifications have been met. If all of the conditions have been met notify the Owner in writing of the acceptance of the asphalt paving.

5. No slurry or fog seals are to be applied to areas of asphalt paving that are to receive synthetic track surfacing.

3.04 TESTING

A. After first coat of surface seal has been installed and after a 24 hour period, the flood test shall be completed of the bituminous surfacing in presence of the Project Inspector. Repair areas of standing water or puddles and flood test locally; install surface seal and retest as necessary.

3.05 SURFACE SEALING

A. After bituminous surfacing has passed flood test, clear and allow to dry and provide one more coat of surface seal as specified in Section 32 1236 - Seal for Bituminous Surfacing.

B. Where indicated, provide multiple coats of surface seal to existing bituminous surfacing.

C. Where new bituminous surfacing joins existing bituminous surfacing, overlap surface seal a minimum of 12 inches onto existing bituminous surfacing.

3.06 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.07 CLEANUP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 32 12 36 – SEAL BITUMINOUS SURFACING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Surface sealer over bituminous surfacing.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 32 0117 - Pavement Repair.
3. Section 32 1216 - Asphalt Paving.
4. Section 32 1723 - Pavement Marking.

1.02 SUBMITTALS

A. Product Data: Submit manufacturer's product information and application procedures for bituminous surfacing.

1.03 QUALITY ASSURANCE

A. Comply with the Standard Specifications For Public Works Construction, current edition.

B. Agitate bulk materials during transport.

1.04 MAINTENANCE

A. Extra Materials: Provide 10 gallons in unopened containers.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Provide one of the following surface seals:

	Product Name	Manufacturer
1.	Guard-Top	CALMAT / Industrial Asphalt
2.	Over Kote	Diversified Asphalt Product
3.	Park Top	Western Colloid Products
4.	Sure Seal	Asphalt Coating Engineering
5.	Super Drive Top.	SAF– T Seal. Inc.

6. Equal.

PART 3 - EXECUTION

3.01 SURFACE PREPARATION

A. Thoroughly wash surfaces with water to remove dirt, debris, excessive oil and grease, or other foreign matter.

3.02 APPLICATION

A. Install seal coat in strict accordance with manufacturer's written directions and recommendations.

B. Install two coats of surface seal to new bituminous surfacing. First coat shall be installed before flood testing. Clean surface and allow to dry before installing second coat. Second coat shall be installed after bituminous surfacing has passed flood test.

C. Where new bituminous surfacing is installed adjacent to existing bituminous surfacing, overlap surface seal a minimum of 12 inches onto existing bituminous surfacing.

D. Where existing bituminous surfacing is indicated to be patched and sealed, install two coats of surface seal after patching. Refer to Section 32 1216 - Asphalt Paving.

3.03 PROTECTION OF SURFACES

A. Protect sealed and unsealed surfaces from damage and traffic during performance of the Work of this section and until surface seal has thoroughly set and cured. Do not permit traffic of any kind for at least 24 hours after completion of installation.

B. Protect the Work of this section until Substantial Completion.

3.04 TESTING

A. Owner reserves the right to obtain samples, perform tests to ensure compliance with the Specifications, and to review weight slips and invoices of materials delivered to the Project site.

3.05 CLEAN UP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 32 13 13 – SITE CONCRETE WORK

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: On-site concrete work:

1. Portland cement concrete pavement, driveways, curbs, gutters and mowing strips.
2. Ramps and stairs on grade.
3. Footings for fence posts, bollards, flagpoles, shade structures, light standards and athletic and playground equipment.
4. Pipe encasements, thrust blocks, and equipment pads.
5. Retaining walls, planter walls and concrete benches.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 03 3000 – Cast-in-Place Concrete.
3. Section 07 9200 – Joint Sealants.
4. Division 23 - HVAC.
5. Division 26 - Electrical.
6. Section 31 2200 – Grading.
7. Section 31 2316 - Excavation and Fill for Pavement.
8. Section 31 2326 - Base Course.
9. Section 32 1216 - Asphalt Paving.
10. Section 32 1723 – Pavement Markings.
11. Section 32 3113 - Chain Link Fences and Gates.

1.02 REFERENCES

A. Structural work, such as retaining walls, planter walls, cast-in-place benches, equipment pads, and footings for playground equipment, fences, walls, shade structures and flagpoles shall conform to the following Sections:

1. Section 03 3000 Cast-in-Place Concrete.

B. Flatwork, such as walkways, driveways, ramps and steps on grade, swales, curbs, mow strips and utility related concrete, conform to:

1. Standard Specifications for Public Works Construction, The “Greenbook”, except reclaimed aggregates and processed miscellaneous base are not allowed.

C. Imported or exported earthwork shall conform to Section 01 4524 Environmental Import / Export Materials Testing.

D. National Ready Mixed Concrete Association (NRMCA):

1. Checklist for the Concrete Pre-Construction Conference.

1.03 QUALITY ASSURANCE

A. Source Limitations for Exposed Concrete: Obtain each color, size, type, and variety of concrete material and concrete mixture from single manufacturer with resources to provide concrete of consistent quality in appearance and physical properties. Secure material required for the duration of the project as needed to ensure consistent quality in appearance.

B. Pre-Installation Conference:

1. CONTRACTOR shall coordinate and conduct pre-installation conference in conformance to Section 01 3119 Project Meetings.

2. CONTRACTOR shall use the NRMCA “Checklist for the Concrete Pre-Construction Conference” as the meeting agenda.

C. Mockup:

1. Build 8 feet by 8 feet mockups of full-thickness sections of concrete paving using processes and techniques intended for use on permanent work, including curing procedures.

2. Build mockups to demonstrate typical joints; surface finishes and standard of workmanship.

3. Obtain ARCHITECT’s approval of mockup before proceeding with work of this Section.

4. Mockup shall remain through completion of the work for use as a quality standard for finished work.

5. Remove mockup when directed by the OAR.

D. Field applied primers, paintings, sealers, sealants, caulking, leveling and patching compounds, crack/joint repair compounds adhesives and similar products shall be approved by the OWNER's Office of Environmental Health and Safety (OEHS).

1.04 SUBMITTALS

A. Flatwork: Submit mix design in conformance to the Greenbook.

B. Shop Drawings: Submit drawings indicating the locations of concrete joints, including construction joints, expansion joints, isolation joints, and contraction joints.

C. Submit concrete Sample of each specified color.

D. Submit full range of manufacturer's standard and custom range colors and products for ARCHITECT's review and selection.

1.05 DELIVERY, STORAGE AND HANDLING

A. Store cement and aggregate materials so to prevent their deterioration or intrusion by foreign matter. Deteriorated or contaminated materials shall not be furnished.

B. Packaged materials shall bear the manufacturers and brand name label and shall be stored in their original unbroken package in a weather tight place until ready for use in the work.

C. Avoid exposure of reinforcing steel bars, wire, and wire fabric to dirt, moisture or conditions harmful to reinforcing.

D. Reinforcing steel bars, wire, and wire fabric shall be stored on the Project site to permit easy access for examination and identification of each shipment. Material of each shipment shall be separated by size and shape.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Structural Work: Conform to the applicable requirements of the following Sections, except as otherwise specified:

1. Section 03 1000 Concrete Forming.

2. Section 03 2000 Concrete Reinforcing.

3. Section 03 3000 Cast-in-Place Concrete.

4. Section 07 9200 Joint Sealants.

B. Flatwork: Conform to the applicable requirements of the Greenbook, Section 201, except as follows:

1. Water/cement ratio for concrete flatwork shall be 0.50 maximum.

2. Base course shall conform to Section 32 3226 Base Course.

3. Reclaimed concrete material shall not be used.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that gradients and elevations of base are correct. Maintain subgrade clean and in a smooth, compacted condition until the concrete is placed.

B. Maintain subgrade in a smooth, compacted condition in conformity with the required section and established grade until the concrete is placed. Earth surface shall be kept moist by frequent sprinkling up to the time of placing concrete.

3.02 CONSTRUCTION OF FORMS

A. Flatwork Forming: Set forms to the indicated alignment, grade and dimensions. Hold forms rigidly in place by a minimum of 4 stakes per form placed at intervals not to exceed two feet. Use additional stakes and braces at corners, deep sections, and radius bends, as required. Use clamps, spreaders, and braces where required to ensure rigidity in the forms.

B. Wall Formwork: Forms shall be constructed to conform to final concrete shape, lines and dimensions of members required by Drawings and Specifications. Forms shall be sufficiently tight to prevent leakage of concrete and properly braced or tied together to maintain position and shape.

3.03 STEEL REINFORCEMENT INSTALLATION

A. Fabricate bars of the indicated sizes and bend and form to required shapes and lengths by methods not injurious to materials. Do not heat reinforcement for bending. Bend bars No. 6 size and larger in the shop only. Bars with unscheduled kinks or bends are not permitted.

B. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

C. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces, and lace splices with wire.

D. Clean reinforcement of loose rust and mill scale, earth, or bond-reducing materials.

3.04 PREPARATION FOR CONCRETE PLACEMENT

A. Surfaces to receive concrete shall be free of debris, standing water, and any other deleterious substances before start of concrete placing.

B. Do not place concrete until forms, reinforcement, pipe, conduits, outlet boxes, anchors, sleeves, bolts, and other embedded materials are securely fastened in place. Maintain a minimum of two inches clearance between said items and any part of the concrete reinforcement.

C. Adjust pull boxes, meter boxes, valve covers and manholes to proposed finish grade prior to placement of concrete. Anchor bolts shall be accurately set and maintained in position by templates while being embedded in concrete.

D. Clean thoroughly the surfaces of metalwork to be in contact with concrete, remove dirt, grease, loose scale and rust, grout, mortar, and other foreign substances before the concrete is placed.

E. Moisten subbase to provide a uniform dampened condition at time concrete is placed.

3.05 CONCRETE PLACEMENT

A. Place, compact, screed, float and trowel concrete as indicated in Section 03 3000 Cast-in-Place Concrete.

B. Finish: After straight edging, when most of the water sheen has disappeared and just before the concrete hardens, finish the surface with a wood or magnesium float or darby to a smooth and uniformly fine granular or sandy texture free of waves, irregularities, or tool marks. Produce a scored surface by brooming with a fiber-bristle brush in a direction transverse to that of the traffic, followed by edging.

1. Provide medium broom finish on surfaces up to six percent slope by striating surface 1/32 to 3/64 inch deep with a soft bristle broom across concrete surface to provide a uniform fine line texture.

2. Provide heavy broom finish on surfaces over six percent by striating surface 1/16 inch to 1/8 inch deep with a stiff-bristled broom.

3.06 JOINTS

A. Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated. Align curb, gutter, and sidewalk joints.

B. Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour.

1. Continue steel reinforcement across construction joints unless otherwise indicated on the Drawings.

2. Provide tie bars at sides of paving strips where indicated on the Drawings

3. Butt Joints: Use bonding agent or epoxy-bonding adhesive at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

4. Keyed Joints: Provide preformed keyway-section forms or bulkhead forms with keys unless otherwise indicated. Embed keys at least 1-1/2 inches into concrete.

5. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, other fixed objects, and where indicated on the Drawings.

D. Expansion Joints:

1. Provide premolded joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together. Extend expansion joint fillers full-width and depth of joint, and 1/4" below finished surface where joint filler is indicated. If no joint sealer is indicated place top of premolded joint filler flush with top of concrete or curb.

2. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

E. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints to a depth equal to at least one-fourth of the concrete thickness, as follows:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a 1/4-inch radius. Repeat grooving of contraction joints after applying surface finishes. Remove grooving-tool marks on concrete surfaces.

2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.

3. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

F. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch radius. Repeat tooling of edges after applying surface finishes. Remove edging-tool marks on concrete surfaces.

G. Where concrete is to be cast against old concrete, (greater than 60 days of age), the surface of the old concrete shall be thoroughly cleaned and roughened by sand-blasting, exposing the aggregate. The hardened surface shall be cleaned of latent foreign material and washed clean, prior to the application of an epoxy bonding agent.

3.07 STAIRS AND RAMPS

A. Install support post sleeves into the perimeter concrete curbing during the installation process of the curbing. Sleeves shall be three-inch diameter, schedule 40 PVC with a cap solvent welded to the bottom of the sleeve. Drill a half-inch weep hole on the bottom of the cap. Sleeve and cap shall be Nibco products or approved equal. Sleeves shall be embedded into concrete a minimum of nine inches and spaced at a maximum of four feet, or as indicated on the Drawings. Fill sleeve with non-shrink grout Quickcrete #1585-01 when setting posts. Provide control joints into the concrete on both sides for each post.

3.08 CURB AND GUTTER CONCRETE PLACEMENT AND FINISHING

A. Formed Curb and Gutter: Place concrete to the required section in a single lift. Consolidate concrete using approved mechanical vibrators. Finish curve shaped gutters with a standard curb mule or concrete slipformed curb paving equipment.

B. Concrete Finishing: Float and finish exposed surfaces with a smooth wood float until true to grade and section and uniform in texture. Brush floated surfaces with a fine-hair brush using longitudinal strokes. Round the edges of the gutter and top of the curb with an edging tool to a radius of 1/2 inch. Immediately after removing the front curb form, rub the face of the curb with a wood or concrete rubbing block and water until blemishes, form marks, and tool marks have been removed. Brush the front curb surface, while still wet, in the same manner as the gutter and curb top. Finish the top surface of gutter to grade with a wood float.

C. Surface and Thickness Tolerances: Finished surfaces shall not vary more than 1/4 inch from the testing edge of a 10-foot straightedge. Permissible deficiency in section thickness will be up to 1/4 inch.

3.09 CLEAN UP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project Site.

3.10 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 32 13 16 – LANDSCAPE SITE CONCRETE PAVING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Furnishing of services, labor, materials, transportation, tools and equipment necessary to perform the work indicated on the Drawings and specified herein as required to properly complete the work in this contract.

B. Related Documents: The Condition of the Contract and Division 1 apply to this section as fully as if repeated herein.

C. Related Work Specified Elsewhere:
1. 03 3310 Landscape Site Concrete Walls
2. 12 9300 Site Furnishings
3. 31 1000 Site Clearing
4. 31 2000 Earth Moving
5. 32 1413 Unit Paving
6. 32 3116 Fence and Gate
7. 32 8400 Landscape Irrigation
8. 32 9316 Exterior Plants
9. 33 4100 Storm Utility Drainage Piping

1.02 REFERENCES

A. Conform to the following codes and standards:
1. American Concrete Institute (ACI)
2. American Society for Testing and Materials (ASTM): The specifications and standards hereinafter referred.
3. Standard Specifications for Public Works Construction Current Edition.

1.03 SUBMITTALS

A. Comply with Section 01 33 00 Submittal Procedures.

B. Product Data: Furnish manufacturer’s product specifications and installation instructions for the following:
1. Color admixture
2. Reinforcement
3. Sealer and Sealants
4. Finish Retardants
5. Expansion joint filler material
6. Plastic Dowel Sleeves

C. Design Data: Furnish certified reports of proposed mix design for each type of concrete installation.

D. Submit delivery slips.

E. Submittals for above items shall be made in one package. If submittals are judged incomplete or non-responsive to the directions of the University's Representative after three (3) submissions the Contractor shall be back charged for the University's Representatives costs to process additional Submittals. Additional Submittal Procedures are specified in Section 01 33 00.

1.04 FIELD MOCK-UPS

A. Mock-up: Prepare at the job site, a sample panel not less than 4 feet by 4 feet of each color and finish indicated. If multiple colors and finishes are specified, all samples shall be prepared for review at the same time. Include joints and joint materials, caulking, and scoring treatments specified on the plans.

B. The Mock-ups shall be reviewed and approved by the University's Representative before proceeding with the work. Mock-ups that do not demonstrate all specified joints and joint materials, caulking, and scoring treatments will be rejected. Remove and reconstruct the mock- ups until approved. The Contractor shall be back charged for the costs of the University's Representative to review more than two (2) mock-up attempts. Approved mock-ups shall serve as standard of acceptance for paving work and remain available for the duration of the project.

C. Demolish and remove mock-ups at the completion of the project.

1.05 QUALITY ASSURANCE

A. Formwork: Comply with Recommended Practice for Concrete Formwork, ACI 347.

B. Qualifications: Refer to Section 01 43 00 Quality Assurance Requirements.

1.06 DELIVERY AND HANDLING

A. Conform to Section 01 60 00 Product Requirements.

B. Deliver, store, and handle reinforcement to prevent damage.

1.07 REGULATORY REQUIREMENTS

A. Testing: Slump tests shall be taken to certify compliance with mix design. Slump shall be in accordance with ASTM C 143.

B. Mix design shall be in accordance with ACI 211-6.

C. Conform to applicable laws, codes, and regulations required by authorities having jurisdiction over the work.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Coarse Aggregate: Aggregate composed of gravel, crushed rock, or a blended mixture conforming to Standard Specifications Section 200-1.4. Aggregates shall be washed clean, uniformly screen graded, and contain not more than 2% by weight of deleterious materials such as shale, schist, alkali, clay lumps, earth loam, mica, or similar materials.

B. Fine Aggregate: Sand shall consist of a natural or manufactured granular material, or combination thereof, free of deleterious amounts of organic material, mica, loam, clay and other substances not suitable for the purpose intended. Sand shall be washed and conform to Standard Specifications Section 200-1.5.3.

C. Portland Cement: ASTM C 150, Type II. Portland cement concrete paving shall be stable, firm, and slip resistant and shall comply with CBC Sections 11B-302 and 11B-403 and TITLE 24, Part 2, Section 3305(e).

D. Water: Clean and free from deleterious amounts of acids, alkali, oil, or organic materials.

E. Base Material: Crushed aggregate consisting entirely of crushed rock and rock dust, uniformly graded and meeting the requirements of Standard Specifications Section 200-2.2. At the time of spreading, the material shall have a moisture content sufficient to obtain the required compaction.

2.02 MIX DESIGN, COLOR, AND FINISH

A. Provide mix design in accordance with ACI 318. Mix designs shall be the responsibility of the Contractor.
   1. Contractor shall employ a Testing Laboratory approved by the Architect under the active direction of a Civil Engineer, who shall determine mix designs to fulfill the specified requirements for strength, aggregate size and workability of concrete, and such designs shall be used in proportioning all structural concrete.
      a. Mix designs shall be submitted to the Architect for review at least 10 days prior to scheduled concrete pour.
      b. Review by the Architect shall not be considered unqualified approval and shall not relieve the Contractor of his responsibility to furnish concrete of proper consistency and specified strengths.
   2. Provide concrete of the strengths indicated in the structural general notes.

B. COLOR MATERIALS
   1. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable,[free of carbon black, nonfading, and resistant to lime and other alkalis.

2. Integral Color: Integrally color concrete in colors, blending mixtures and application rates necessary to create colors, gradations, and variations to match Owner's Authorized Representative's mock-up.
3. Manufacturers:
   a. Trademark Concrete Systems
   b. Davis Colors.

C. Paving Types:
1. Concrete Paving Type 1: Refer to Landscape Construction Schedule and Plan.
2. Concrete Paving Type 2: Refer to Landscape Construction Schedule and Plan.
3. Concrete Paving Type 3: Refer to Landscape Construction Schedule and Plan.
4. Concrete Paving Type 4: Refer to Landscape Construction Schedule and Plan.
5. Concrete Paving Type 5: Refer to Landscape Construction Schedule and Plan.

2.03 SEALER

A. Clear siloxane or silane penetrating sealer. Acceptable products include, but not limited to:
1. "Pentane"
2. "Weather Worker J-26 WB"

2.04 SURFACE RETARDER

A. Surface retarder: shall be liquid compound that delays surface hydration of concrete surface, such as Topcast Surface Retarder, by Grace Products, distributed by Innovative Concrete; (949)498- 7077, or approved equal.

2.05 OTHER MATERIALS

A. JOINT MATERIALS
1. Expansion Material: Premoulded material, 3/8" thick, depth as required by slab, of resilient, non-bituminous material.
2. Joint Sealant: A one part moisture curing polyurethane sealant designed for caulking applications of exterior horizontal joints. Self-leveling and compatible for uses with the expansion material. Color to match adjacent paving.
   a. Acceptable manufacturers include:
      1) Polytite
      2) Tremco
      3) Sonneborn

B. REINFORCING MATERIALS
1. Welded Wire Fabric: 6 x 6 x W4.0 x W4.0 conforming to ASTM A 185. Furnished in flat sheets, not rolls, unless otherwise accepted by the University's Representative.
2. Steel Bars: Grade 40 or 60 billet steel conforming to ASTM A 626/615M. Bending process shall conform to the Manual of Standard Practice of the Concrete Reinforcing Steel Institute. Kinked bars shall not be used.

3. Dowels: Speed Dowels or equal

C. Forms:
1. Either steel or wood, of size and strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal. Use forms that are free of distortion and defects.
2. Flexible spring steel forms, laminated boards, or bender boards to form radius bends as required. (No transfer of form irregular surfaces is acceptable)
3. Form Release Agent: A non-staining form release compound that will not discolor or deface the surface of the concrete.

PART 3 - EXECUTION

3.01 PREPARATION

A. General: Examine the site and verify that no defects or errors are present that would cause defective installation or latent defects in the workmanship and function. Report unsatisfactory conditions to the University's Representative. Do not begin paving work until unsatisfactory conditions have been corrected and the area is ready to receive the work. Continuing with the installation constitutes acceptance of the unsatisfactory conditions and responsibility for satisfactory performance.
1. Subgrade Preparation: Unless noted otherwise, subgrades shall be compacted to a relative density as specified in the soils report, and to elevations necessary to achieve the finished surface indicated. Semi-porous subgrades shall be sprinkled sufficiently with water to eliminate suction and extremely porous subgrades shall be sealed in an approved manner.
2. Base Preparation: Where indicated, aggregate base material shall be deposited at a uniform quantity that will provide the required compacted thickness within ¼" above or below the grade determined from the Drawings. The relative compaction of the base material shall not be less than specified in the soils report. Compacted areas that do not conform to the requirements specified, shall be reworked, watered, and thoroughly re- compacted to conform to the specified requirements.
3. Coordinate with other trades, placement of accessories, chases, and other embedded items. Provide sufficient time to complete installation of their work.

B. Formwork: Shall conform to the shape, lines, and dimensions as called for on the Drawings.
1. Horizontal Tolerances: Formwork shall be constructed to assure the top of the form will not vary more than 1/8" in 10 feet along a straight edge.
2. Vertical Tolerances: Vertical faces shall not vary more than 1/8" in 10 feet along a straight edge.
3. Joints and Corners: Construct forms such that joint occur at approved locations. Form intersecting planes to provide true, crisp corner, with no edge grain of forms exposed to face of concrete. Construct exposed corners to produce smooth, solid, unbroken lines. Provide means to seal forms at joints and corners.

4. Completed formwork shall be free of hardened concrete, washed clean and shall have excess water removed, reinforcement secured in place, expansion joint material and other embedded items positioned, forms shall be thoroughly cleaned, washed out with water, and made tight. Before reinforcing steel is placed on top of or adjacent to forms that have been sealed, the surface sealer shall be wiped off so that none may be tracked over, or in any way come in contact with the reinforcing steel. Bottoms of forms shall be cleaned and wet down before placing concrete.
5. Forms shall have been completed, and the entire preparation approved one (1) working day prior to the placing of concrete.

C. Reinforcing: Sized and placed where indicated on the Drawings as indicated by Civil details.
1. Wire Mesh: Panels shall be spliced not less than two (2) mesh openings, and shall be in placed on (1) working day prior to placing concrete. While the concrete is still plastic, the mesh shall be carefully lifted into position as specified on the Drawings.
2. Reinforcing Bars: Bars shall be place in accordance with the size and spacing shown of the Drawings. The bars shall be firmly and securely wired together and held in place with concrete or metal chairs. The complete work shall be in place and approve a minimum of one (1) working day prior to placing of concrete.

3.02 CONCRETE PLACEMENT AND FINISHES

A. Conveying Equipment:
1. Concrete shall be handled from the mixer to the place of final deposit as rapidly as practicable by methods that will prevent separation or loss of ingredients.
2. Conveying equipment shall be of size and design to ensure a continuous flow of concrete at the delivery end. The inner surfaces of the conveying equipment shall be free of hardened concrete and foreign materials.
3. Concrete shall be deposited continuously, or layers of such thickness that no concrete will be deposited on concrete which has hardened sufficiently to cause the formation of seams, planes, or weakness within the section, or visible pour lines in the finish surface.
4. Concrete shall be consolidated by spading, rodding, or forking, so that the concrete is thoroughly worked around the reinforcement and into corners of forms, eliminating air or stone pockets which may cause honeycombing, pitting or planes of weakness.
5. At the end of a work day, or when more than two hours may elapse between concrete pours, installation shall terminate at an expansion joint or other transition as shown on the Drawings.
6. Removal of Forms: The supporting forms shall not be disturbed until the concrete has hardened sufficiently to permit their removal with safety.

B. CONCRETE FINISHING
1. Edge forms and intermediate screed strips shall be set accurately to produce the elevations and contours in the finished surface.

2. After placing concrete, tamp with heavy grille tamper until at least 3/8" of mortar has been brought to the surface, as soon as the surface becomes workable, push down all coarse aggregate, filling all holes and leveling surface to a true and even surface.
3. Sand Finish:
   a. Sand finish paving to match approved mock up. Expose fine aggregate with no exposure of course aggregate – 1/16" reveal.
   b. Ensure that paving surfaces receiving sand finish are hand trowelled before final concrete set.
   c. Wrap adjacent improvements that may be etched during operations such as metal work, stone, plant material, etc.
   d. Apply topcast with sprayer per manufacturer's instructions.
   e. Note Manufacturer's recommendations on light etches.
   f. Wash concrete to remove topcast.
   g. Use water for clean up.
   h. Finishes shall have uniform color and texture over entire area. Surfaces shall be free of ruts, grooves, dimples, or swirl marks resulting from etching or washing procedures.
   i. Edges shall be crisp and true to lines and have finishes consistent with the field.
4. Medium Washed Aggregate Finish:
   a. Washed Aggregate Finish paving to match approved mock up. Expose coarse aggregate to 3/16" or more as determined by field mock-up.
   b. Wrap adjacent improvements that may be etched during operations such as metal work, stone, plant material, etc.
   c. Apply topcast with sprayer per manufacturer's instructions.
   d. Note Manufacturer's recommendations on light etches.
   e. Wash concrete to remove topcast.
   f. Use water for clean up.
   g. Finishes shall have uniform color and texture over entire area. Surfaces shall be free of ruts, grooves, dimples, or swirl marks resulting from etching or washing procedures.

C. Joints in Concrete: Locate as indicated on the Drawings.
1. Expansion Joints: Expansion material shall be placed at the appropriate elevation to achieve the depth of the sealant indicated on the Drawings. The top of the finished sealant shall be between 1/8" and 1/4" below the finished surface.
2. Saw Cut Scorelines: The saw shall be fitted with diamond blades. Joints shall be a wet saw cut, applied within 24 hours of placing the concrete. Joints shall meet the size and depth indicated on the Drawings and the completed groove at the finished surface shall not vary more than 1/32" of the width indicated.
3. Tooled Edges: The joints shall be constructed to the size and depth indicated on the Drawings. Joints shall be true to the lines and shapes shown on the Drawings, and shall not vary more than 1/16" from true. Grooves shall be smooth, uniform, and to the size and dimension indicated on the Drawings.

4. Joint Sealant: Prior to applying the sealant, the joints shall be cleaned of all mortar, laitance, scale, dirt, dust, oil, curing compound and other foreign materials. The joints and adjacent surfaces shall be dry and where called for by the manufacturer, prepared with a primer. The joints shall be filled from bottom to top without voids. All adjoining surfaces shall be protected during the sealing operations and all stains, marks, and damage resulting from the sealant operations shall be corrected.

D. Protection and Curing: Provide and apply a sheet curing material that conforms to ASTM C 171, Standard Specifications for Sheet Material Curing Concrete. Protect concrete from defacement. All defaced concrete shall be replaced between expansion joints at no additional expense to the Owner.

E. Sealers: Prepare the finished surface and apply the penetrating sealer as recommended by the manufacturer.

END OF SECTION

SECTION 32 31 13 - CHAIN LINK FENCES AND GATES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Chain-link fences.
   2. Horizontal-slide gates.

B. Related Sections:
   1. Section 03 30 53 "Miscellaneous Cast-in-Place Concrete" for cast-in-place concrete post footings.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:
      a. Fence and gate posts, rails, and fittings.
      b. Chain-link fabric, reinforcements, and attachments.
      c. Gates and hardware.

B. Shop Drawings: For each type of fence and gate assembly.
   1. Include plans, elevations, sections, details, and attachments to other work.
   2. Include accessories, hardware, gate operation, and operational clearances.

C. Design Data Submittal: For structural performance of chain-link fence and gate frameworks, including analysis data signed and sealed by the professional engineer responsible for their preparation.

1.03 FIELD CONDITIONS

A. Field Measurements: Verify layout information for chain-link fences and gates shown on Drawings in relation to property survey and existing structures. Verify dimensions by field measurements.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Hoover Fence Company.
   2. Master Halco, Inc.

MasterSpec Copyright © 2023 by the American Institute of Architects, portions Copyright © 2023 by HMC Architects for Arroyo HS New Construction - Package 2. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

2.02 PERFORMANCE REQUIREMENTS

A. Structural Performance: Chain-link fence and gate frameworks shall withstand the design wind loads and stresses for fence height(s) and under exposure conditions indicated according to ASCE/SEI 7.
   1. Design Wind Load: As indicated on Drawings.
      a. Minimum Post Size and Maximum Spacing: Determine according to CLFMI WLG 2445, based on mesh size and pattern specified.

2.03 CHAIN-LINK FENCE FABRIC

A. General: Provide fabric in one-piece heights measured between top and bottom of outer edge of selvage knuckle or twist according to "CLFMI Product Manual" and requirements indicated below:
   1. Fabric Height: As indicated on Drawings.
   2. Steel Wire for Fabric: Wire diameter of 0.148 inch , unless indicated otherwise.
      a. Mesh Size: 2 inches, unless indicated otherwise.
      b. Zinc-Coated Fabric: ASTM A392, Type II, Class 2, 2.0 oz./sq. ft. with zinc coating applied before weaving.
   3. Selvage: Knuckled at both selvages.

2.04 FENCE FRAMEWORK

A. Posts and Rails: ASTM F1043 for framework, including rails, braces, and line; terminal; and corner posts. Provide members with minimum dimensions and wall thickness according to ASTM F1043 or ASTM F1083 based on the following:
   1. Fence Height: As indicated on Drawings.
   2. Heavy-Industrial-Strength Material: Group IA, round steel pipe, Schedule 40 orGroup IC, round steel pipe, electric-resistance-welded pipe.
   3. Horizontal Framework Members: ASTM F1043.
   4. Brace Rails: ASTM F1043.
   5. Metallic Coating for Steel Framework:
      a. Type A: Not less than minimum 2.0-oz./sq. ft. average zinc coating according to ASTM A123/A123M or 4.0-oz./sq. ft. zinc coating according to ASTM A653/A653M.
      b. Type B: Zinc with organic overcoat, consisting of a minimum of 0.9 oz./sq. ft. of zinc after welding, a chromate conversion coating, and a clear, verifiable polymer film.
      c. External, Type B: Zinc with organic overcoat, consisting of a minimum of 0.9 oz./sq. ft. of zinc after welding, a chromate conversion coating, and a clear, verifiable polymer film. Internal, Type D, consisting of 81 percent, not less than 0.3-mil- thick, zinc-pigmented coating.
      d. Type C: Zn-5-Al-MM alloy, consisting of not less than 1.8-oz./sq. ft. coating.
      e. Coatings: Any coating above.

MasterSpec Copyright © 2023 by the American Institute of Architects, portions Copyright © 2023 by HMC Architects for Arroyo HS New Construction - Package 2. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

2.05 HORIZONTAL-SLIDE GATES

A. General: ASTM F1184 for gate posts and single sliding gate types.

B. Pipe and Tubing:
1. Zinc-Coated Steel: Protective coating and finish to match fence framework.
2. Gate Posts: ASTM F1184. Provide round tubular steel posts.
3. Gate Frames and Bracing: Round tubular steel .

C. Frame Corner Construction: Welded.

D. Hardware:
1. Hangers, Roller Assemblies, and Stops: Fabricated from galvanized steel.
2. Latch: Permitting operation from both sides of gate with provision for padlocking accessible from both sides of gate.

2.06 FITTINGS

A. Provide fittings according to ASTM F626.

B. Finish:
1. Metallic Coating for Pressed Steel or Cast Iron: Not less than 1.2 oz./sq. ft. of zinc.

PART 3 - EXECUTION

3.01 EXAMINATION

3.02 CHAIN-LINK FENCE INSTALLATION

A. Install chain-link fencing according to ASTM F567 and more stringent requirements specified.

B. Post Setting: Set posts in concrete at indicated spacing into firm, undisturbed soil.
1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
2. Concrete Fill: Place concrete around posts to dimensions indicated and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.

C. Chain-Link Fabric: Apply fabric to enclosing framework. Leave 2-inch bottom clearance between finish grade or surface and bottom selvage unless otherwise indicated. Pull fabric taut and tie to posts, rails, and tension wires. Anchor to framework so fabric remains under tension after pulling force is released.

MasterSpec Copyright © 2023 by the American Institute of Architects, portions Copyright © 2023 by HMC Architects for Arroyo HS New Construction - Package 2. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

D. Tie Wires: Use wire of proper length to firmly secure fabric to line posts and rails. Attach wire at one end to chain-link fabric, wrap wire around post a minimum of 180 degrees, and attach other end to chain-link fabric according to ASTM F626. Bend ends of wire to minimize hazard to individuals and clothing.
   1. Maximum Spacing: Tie fabric to line posts at 12 inches o.c. and to braces at 24 inches o.c.

E. Fasteners: Install nuts for tension bands and carriage bolts on the side of fence opposite the fabric side.

3.03 GATE INSTALLATION

A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach fabric as for fencing. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation.

3.04 ADJUSTING

A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Lubricate hardware and other moving parts.

END OF SECTION

MasterSpec Copyright © 2023 by the American Institute of Architects, portions Copyright © 2023 by HMC Architects for Arroyo HS New Construction - Package 2. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

SECTION 32 31 19.55 - DECORATIVE METAL SECURITY GATES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Decorative metal security gates.

B. Related Sections:
   1. Division 03 Section "Cast-in-Place Concrete" for concrete footings.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For gates.
   1. Include plans, elevations, sections, gate locations, post spacing, andmounting details.

1.03 CLOSEOUT SUBMITTALS

A. Maintenance Data: For gate operators to include in maintenance manuals.

PART 2 - PRODUCTS

2.01 DECORATIVE METAL SECURITY GATES

A. Decorative Metal Gates:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      a. Ametco Manufacturing Corp.
      b. A&T Iron Works, Inc.
      c. Fortress Building Products.
      d. Omega II Fence Systems.

B. Galvanizing: For components indicated to be galvanized, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.

C. Finish: Powder coating.

MasterSpec Copyright © 2023 by the American Institute of Architects, portions Copyright © 2023 by HMC Architects for Arroyo HS New Construction - Package 2. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

2.02 SWING GATES

A. Gate Configuration: As indicated.

B. Gate Frame Height: As indicated.

C. Gate Opening Width: As indicated.

D. Galvanized-Steel Frames and Bracing: Fabricate members from square tubes formed from minimum 0.105-inch nominal-thickness steel and hot-dip galvanized after fabrication.

E. Frame Construction: Welded.

F. Infill: Match adjacent fence.

G. Hardware: Latches permitting operation from both sides of gate, hinges, and keepers for each gate leaf more than 5 feet wide. Provide center gate stops and cane bolts for pairs of gates. Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.

H. Hinges: BHMA A156.1, Grade 1, suitable for exterior use.
1. Function: 39 - Full surface, triple weight, antifriction bearing.
2. Material: Wrought steel, forged steel, cast steel, or malleable iron; galvanized.

I. Cane Bolts: Provide for inactive leaf of pairs of gates. Fabricated from 3/4-inch-diameter, round steel bars, hot-dip galvanized after fabrication. Finish to match gates. Provide galvanized-steel pipe strikes to receive cane bolts in both open and closed positions.

J. Finish exposed welds to comply with NOMMA Guideline 1, Finish #3 - partially dressed weld with splatter removed.

K. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.

2.03 STEEL AND IRON

A. Plates, Shapes, and Bars: ASTM A36/A36M.

B. Tubing: ASTM A500/A500M, cold-formed steel tubing.

C. Uncoated Steel Sheet: Hot-rolled steel sheet, ASTM A1011/A1011M, Structural Steel, Grade 45 or cold-rolled steel sheet, ASTM A1008/A1008M, Structural Steel, Grade 50.

MasterSpec Copyright © 2023 by the American Institute of Architects, portions Copyright © 2023 by HMC Architects for Arroyo HS New Construction - Package 2. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

2.04 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Nonshrink Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M and specifically recommended by manufacturer for exterior applications.

2.05 METALLIC-COATED-STEEL FINISHES

A. Galvanized Finish: Clean welds, mechanical connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

B. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a zinc-phosphate conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A780/A780M.

C. Powder Coating: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat finish consisting of epoxy prime coat and TGIC polyester topcoat to a minimum dry film thickness of 2 mils. Comply with coating manufacturer's written instructions to achieve a minimum total dry film thickness of 4 mils.
1. Color and Gloss: Match Architect's sample.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.

B. Do not begin installation before final grading is completed unless otherwise permitted by Architect.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

MasterSpec Copyright © 2023 by the American Institute of Architects, portions Copyright © 2023 by HMC Architects for Arroyo HS New Construction - Package 2. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

B. Post Excavation: Drill or hand-excavate holes for posts in firm, undisturbed soil. Excavate holes to a diameter of not less than 4 times post size and a depth of not less than 24 inches plus 3 inches for each foot or fraction of a foot that fence height exceeds 4 feet.

C. Post Setting: Set posts in concrete at indicated spacing into firm, undisturbed soil.
   1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
   2. Concrete Fill: Place concrete around posts and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
   3. Posts Set in Concrete: Extend post to within 6 inches of specified excavation depth, but not closer than 3 inches to bottom of concrete.

3.03 ADJUSTING

A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Lubricate hardware and other moving parts.

END OF SECTION

SECTION 32 84 00 – LANDSCAPE IRRIGATION

PART 1 - GENERAL

1.1 SUMMARY

A. General: This Section includes the Irrigation System in accordance with Contract Documents.

B. Summary of Work: Provide all labor, equipment and materials required to procure and install the irrigation system, complete, as indicated on Drawings and as specified herein.

C. Refer to specification section 01 81 13 for LEED credits

1.2 SUBMITTALS

A. Materials List:

1. Contractor shall furnish the articles, equipment, materials, or processes specified by name on Drawings and in Specifications. No substitution will be allowed without prior written approval by Landscape Architect.
2. Complete Materials List shall be submitted prior to performing any work. Materials List shall include the manufacturer, model number, and description of all materials and equipment to be used.
3. Although manufacturer and other information may be different, the following is a guide to proper submittal format:

Item No.	Description	Manufacturer	Model No.
1	Back Flow Preventer	FEBCO	825YA
2	Master Valve	SUPERIOR	3100
3	Flow Sensor	FLOMEC	QS-200
4	Automatic Controller	HUNTER	A2C-2400-SS
5	Remote Control Valve	HUNTER	IBV-101-FS
6	Quick Coupler Valve	HUNTER	HQ-44LRC
7	Shut Off Valve	NIBCO	T-111
8	Etc.	<Etc.>	<Etc.>

4. Irrigation submittal must be specific and complete. All items must be listed and shall include solvent/primer, wire, wire connectors, valve boxes, etc. Copies of manufacturers' literature (catalog cuts) are not required as submittal information.
5. Contractor may submit substitutions for equipment and materials listed on the Irrigation Drawings by following procedures as outlined in Article 1.5 of these Specifications.

6. Equipment or materials installed or furnished without prior approval of Landscape Architect may be rejected and Contractor may be required to remove such materials from the site at his own expense.
7. Approval of any item, alternative or substitute indicates only that the product or products apparently meet the requirements of Drawings and Specifications on the basis of the information or samples submitted.
8. Manufacturers' warranties shall not relieve Contractor of his liability under the guarantee. Such warranties shall only supplement the guarantee.

B. Record Drawings:
1. Contractor shall provide and keep up-to-date a complete record set of prints which shall be corrected daily, showing every change from the original Drawings and Specifications and the exact installed locations, sizes, and kinds of equipment. Prints for this purpose may be obtained from Landscape Architect at cost. This set of Drawings shall be kept on the site and shall be used only as a record set.
2. These Drawings shall also serve as work progress sheets and shall be the basis for measurement and payment for work completed. These Drawings shall be available at all times for observation and shall be kept in a location designated by Landscape Architect. Should the record blueline drawing progress sheets not be available for review or not be up-to-date at the time of any observation (refer to Article 3.10, Site Observation Schedule below), it will be assumed no work has been completed and Contractor will be assessed the cost of that site visit at the current billing rate of Landscape Architect. No other observations shall take place prior to payment of that assessment.
3. Contractor shall make neat and legible notations on their record drawing progress sheets daily as the work proceeds, showing the work as actually installed. For example, should a piece of equipment be installed in a location that does not match the plan, Contractor must indicate that equipment has been relocated in a graphic manner so as to match the original symbols as indicated in the Irrigation Legend. The relocated equipment and dimensions will then be transferred to the original record drawing plan at the proper time.
4. Before start of Landscape Maintenance, Contractor shall provide the completed irrigation red lined set of "As-Built" Record Drawings to Landscape Architect for review and approval. After review and approval of the red lined set of "As-Built" Record Drawings by Owner, "As-Built" information shall be transferred to AutoCAD electronic drawing files. Electronic files of irrigation system will be provided by Owner. Dimensions shall be made so as to be legible even on the final Controller Chart. Provide AutoCAD submittal plot for Landscape Architect's review and approval prior to fabricating the Controller Charts. Update AutoCAD electronic files of "As-Built" Record Drawings in accord with Landscape Architect's requirements.
5. Contractor shall be responsible for preparation of irrigation "As-Built" Record Drawings in AutoCAD format. Contractor shall pay all costs involved for preparation of the irrigation "As-Built" Record Drawings in AutoCAD format. This cost shall be included as a part of Contractor's bid and no additional compensation shall be paid to Contractor by Owner.
6. Contractor shall dimension from 2 permanent points of reference, such as building corners, sidewalk edges, road intersections, etc., the location of the following items:

a. Connection to existing water lines.
b. Connection to existing electrical power.
c. Gate valves.
d. Routing of irrigation pressure lines (dimension max. 100 feet along routing and at each change of direction).
e. Location of additional sleeves/conduits.
f. Electric control valves.
g. Routing of control wiring.
h. Quick coupling valves.
i. Other related equipment as directed by Landscape Architect.

7. Prior to the start of maintenance, Contractor shall deliver full-size bond plot(s) of Landscape Architect-reviewed, corrected and completed AutoCAD computer plots of "As-Built" Record Drawings along with AutoCAD electronic files on compact disk, to Owner as part of Contract closeout. Delivery of plots will not relieve Contractor of the responsibility of furnishing required information that may have been omitted from the prints.

C. Controller Charts:
1. “As-Built” Record Drawings shall be reviewed by Landscape Architect before Controller Charts are prepared.
2. Provide 2 Controller Charts for each controller supplied.
3. The chart shall show the area controlled by the automatic controller and shall be the maximum size, which the controller door will allow.
4. The chart is to be a reduced drawing of the actual installed system. However, in the event the controller sequence is not legible when the drawing is reduced, it shall be enlarged to a size that will be readable.
5. The chart shall be a blackline print and a different color shall be used to indicate the area of coverage for each station.
6. When completed and approved, the chart shall be hermetically sealed between two pieces of plastic, each piece being a minimum 10 mils.
7. These charts shall be completed and approved prior to the Final Field Observation of the irrigation system.

D. Operation and Maintenance Manuals:
1. Prepare and deliver to Landscape Architect within 10 calendar days prior to completion of construction, 2 Maintenance Manuals in hardcover, three-ring binders containing the following information:
a. Index sheet which states Contractor's name, address, and telephone number, and which lists each installed equipment and material item, including names and addresses of manufacturers' local representatives.
b. Catalog and parts sheets on every material and equipment item installed under this Contract.
c. Complete operating and maintenance instructions on all major equipment.
d. Guarantee statement.

2. In addition to the above-mentioned Maintenance Manuals provide Owner's Maintenance Personnel with instructions for major equipment and show evidence in writing to Landscape Architect at the conclusion of the project that this service has been rendered.

E. Equipment to be Furnished:
   1. Supply as a part of this contract the following tools:
      a. One (1) set of special tools required for removing, disassembling and adjusting each type of sprinkler and valve supplied on this project.
      b. A minimum of two (2) five-foot keys for operation of gate valves. Provide 2 keys for each type of operating device (2-inch operating nut, cross handle, etc.).
      c. Two (2) keys for each automatic controller.
      d. One (1) quick coupler key and matching hose swivel for every 5 or fraction thereof of each type of quick coupling valve installed.
      e. Operation and maintenance manuals.
      f. Automatic controller and other central computer control components certification letter from manufacturer for each automatic controller and other central control components installed under this contract.
      g. Central irrigation computer control system manuals for any components installed under this contract.
      h. Two (2) color-coded Controller Charts laminated between two (2) pieces of 10 mil plastic each – Provide two (2) charts for each controller.
      i. “As-Built” Record Drawing per this Specification Section.
      j. Irrigation booster pump certification and warranty information.
      k. Completed Irrigation Guarantee Statement.
      l. Electric utility company billing information. (If required)
      m. Water district billing and water meter information. (If required)
      n. Water district recycled water cross connection contamination certification
      o. Health department Cross Connection certification.
      p. Acceptance document to be signed by Landscape Architect.
   2. Drip Spare Parts:
      a. Two (2) Plastic handled punch.
      b. 500 feet of dripper tubing for each dripper interval and discharge rate.
      c. 25 barbed couplings.
      d. 25 barbed 90-degree elbows fittings.
      e. 25 barbed tee fittings.
      f. 180-degree two-way adapter tees.
      g. 25 male adapters with 3/4 inch FPT.
      h. Five (5) spare filter element of the mesh size indicated on the Irrigation Legend.
      i. Five (5) line-flushing valves.
      j. 10 regulator springs of the colored and regulating pressure indicated on the Irrigation Legend.
      k. 25 dripper plug rings.

3. The above-mentioned equipment shall be turned over to Owner prior to start of landscape maintenance. Before landscape maintenance and final observation to start can occur, evidence that Owner has received these items must be shown to Landscape Architect. Refer to Article 1.12, Turnover and Acceptance Form in this Specification for additional information.

F. Checklist:
1. Complete the following checklist at the end of each segment of the project, using the format shown and on the forms provided:
   a. Plumbing permits: If none required, so state.
   b. Materials approvals.
   c. Pressure line tests: By whom approved and date.
   d. Materials furnished: Recipient and date.
   e. Manufacturers' warranties, if required: Recipient and date.
   f. Written guarantee: Recipient and date.
   g. Lowering of heads in lawn areas: If not complete, so state and include anticipated completion date.
   h. Install anti-drain valve protection as required to prevent low head drainage.
2. The checklist for the irrigation system information shall be submitted and filed with Owner prior to start of the next segment of work in the construction sequence.

1.3 QUALITY ASSURANCE & REQUIREMENTS

A. Permits and Fees: Contractor shall obtain and pay for any and all permits and all inspections required by permits.

B. Manufacturers' Directions: Manufacturers' directions and detailed drawings shall be followed in all cases where the manufacturers of articles used in this Contract furnish directions covering points not indicated on Drawings and in Specifications.

C. Ordinances and Regulations: All local, municipal and state laws, and rules and regulations governing or relating to any portion of this work are hereby incorporated into and made a part of these Specifications and their provisions shall be carried out by Contractor. Anything contained in these Specifications shall not be construed to conflict with any of the above rules, regulations, or requirements. However, when these Specifications and Drawings call for or describe materials, workmanship, or construction of a better quality, higher standard, or larger size than is required by the above rules and regulations, the provisions of these Specifications and Drawings shall take precedence.

D. Explanation of Drawings.
1. Due to the scale of Drawings, it is not possible to indicate all offsets, fittings, sleeves, etc., which may be required. Contractor shall carefully investigate the structural and finished conditions affecting all of his work and plan his work accordingly, furnishing such fittings, etc. as may be required to meet such conditions. Drawings are generally diagrammatic and indicative of the work to be installed. The work shall be installed in

such a manner as to avoid conflicts between the irrigation system, planting, utilities and architectural features.

2. All work called for on Drawings by notes or details shall be furnished and installed whether or not specifically mentioned in Specifications.
3. Contractor shall not install the irrigation system as indicated on Drawings when obstructions, grade differences, or discrepancies in area dimensions exist that might not have been considered in engineering. Such obstructions or differences should be brought to the attention of Landscape Architect. In the event this notification is not performed, Contractor shall assume full responsibility for any revision necessary.

E. Reference Specifications and Standards.
1. ASTM: D1784 Rigid Polyvinyl Chloride (PVC) Compounds and Chlorinated.
2. ASTM: D1785 Polyvinyl Chloride (PVC) Plastic Pipe, Schedules 40, 80 and CL200.
3. ASTM: F441 Chlorinated Polyvinyl Chloride (CPVC) Plastic Pipe, Schedules 40, 80 and CL200.
4. ASTM: 2464 Threaded Polyvinyl Chloride (PVC) Plastic Pipe Fittings, Schedule 80.
5. ASTM: F437 Threaded Polyvinyl Chloride (CPVC) Plastic Pipe Fittings, Schedule 80.
6. ASTM: D2466 Socket-Type Polyvinyl Chloride (PVC) Plastic Pipe Fittings, Schedule 40.
7. ASTM: F438 Socket-Type Chlorinated Polyvinyl Chloride (CPVC) Plastic Pipe Fittings, Schedule 40.
8. ASTM: 2564 Solvent Cements for Polyvinyl Chloride (PVC) Plastic Pipe and Fittings.
9. ASTM: F493 Solvent Cements for Chlorinated Polyvinyl Chloride (CPVC) Plastic Pipe and Fittings.

F. Qualifications: Contractor and its on-site job superintendent shall have regularly engaged and specialized, for the preceding 5 years, in the installation of irrigation systems of similar scope, size and complexity as the system being installed under this contract.
1. Potable water piping from the point of connection to the backflow device shall be installed by a firm licensed to perform this work.
2. Non-Potable water piping from the point of connection to the irrigation water meter shall be installed by a firm licensed to perform this work.
3. Electrical power (110 volts & above) shall be installed by a firm licensed to perform this work.
4. Demonstrate completion of the manufacturer’s installation certification program for the computer-controlled irrigation system.
5. Upon Owner’s request, supply a list of references listing successfully completed commercial computer-controlled irrigation systems

1.4 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Handling of PVC Pipe and Fittings: Contractor is cautioned to exercise care in handling, loading, unloading, and storing PVC pipe and fittings. All PVC pipe shall be transported in a vehicle, which allows the length of pipe to lie flat so as not to subject it to undue bending

or a concentrated external load at any point. Any section of pipe that has been dented or damaged will be discarded, and if installed, shall be replaced with new piping at no additional cost to the Owner.

1.5 SUBSTITUTIONS

A. If Contractor wishes to substitute any equipment or materials for the equipment or materials listed on Drawings and in Specifications, they may do so by providing the following information to Landscape Architect for review.
   1. Provide a statement indicating the reason for making the substitution. Use a separate sheet of paper for each item to be substituted.
   2. Provide descriptive catalog literature, performance charts and flow charts for each item to be substituted.
   3. Provide the amount of cost savings if the substituted item is approved.

B. Landscape Architect shall have the sole responsibility in accepting or rejecting any substituted item as an approved equal to the equipment and materials listed on Drawings and in Specifications.

1.6 BACKFLOW REGISTRATION

A. Provide a Backflow Report Form completed by a Certified Backflow Tester. The test shall be done in the presence of District Inspector. A copy of the Backflow Report Form shall be submitted to the District Inspector

1.7 PROJECT CONDITIONS

A. Owner reserves the right to make temporary repairs as necessary to keep the irrigation system equipment in operating condition. This in no way alters the requirements of Contract Documents.

B. Coordinate Work with that of other trades, all underground improvements, the location and planting of specimen trees and all other planting. Verify location of all planting that requires excavations 24 inches in diameter and larger with the general contractor prior to installation of irrigation main lines.

C. Provide temporary irrigation at all times to maintain plant materials. All temporary irrigation shall remain unless specifically directed to be removed by Landscape Architect

1.8 SEQUENCING AND SCHEDULING

A. Acceptance: Do not install main line trenching prior to acceptance by Landscape Architect of rough grades completed under another Section.

B. Coordination: Coordinate with the work of other sections to insure the following sequence of events.

1. Sleeves and Conduits: Installation of all sleeves and conduits to be located under paving (and through walls and footings) prior to placement of those materials.
2. Bubbler Heads in Tree Planter Pockets: Install after placement of tree, but prior to backfill with planter soil mix.
3. Reclaimed water valve and main line trenching and installation of sleeving to allow for appropriate construction sequencing to comply with all Health Code requirements relative to horizontal and vertical clearances from potable water lines.

1.9 MAINTENANCE

A. Maintenance: Inspect and adjust all spray valves and control valves including raising or lowering of spray valve heights to accommodate plant growth, to achieve uniform irrigation at all times. Verify correct operating pressure.

B. Controller Maintenance: Inspect regularly for power interruption and reset clock as required. Adjust station timing to accommodate changes in plant growth.

C. Drip Irrigation Maintenance: All of above plus keep strainer clean. Flush lines as required. Inspect emitters for proper flow, and check moisture level at plant root ball weekly for the first month of operation and monthly thereafter.

D. System Failure: Perform all repairs within 1 operating period. Replacements shall match removed products and materials in all respects. Report promptly all damage not resulting from Contractor's operations. Repair all damage caused by Contractor at no expense to Owner.

E. Weather Change: Do not run the irrigation system during the rainy season. Set and program automatic controllers in response to seasonal requirements and requirements of newly planted materials.

1.10 GUARANTEE

A. The guarantee for the irrigation system shall be made in accordance with the attached form. The General Conditions and Supplementary Conditions of these Specifications shall be submitted and filed with Owner prior to acceptance of the irrigation system.

B. A copy of the guarantee form shall be included in the operations and maintenance manual.

C. The guarantee form shall be re-typed on Contractor's letterhead and shall contain the following information:

GUARANTEE FOR IRRIGATION SYSTEM

We hereby guarantee that the irrigation system we have furnished and installed for the Project is free from defects in materials and workmanship, and the work has been completed in accordance with Drawings and Specifications, ordinary wear and tear and

unusual abuse, or neglect expected. We agree to repair or replace any defects in material or workmanship which may develop during the period of one (1) year from date of acceptance and also to repair or replace any damage resulting from the repairing or replacing of such defects at no additional cost to Owner. We shall make such repairs or replacements within a reasonable time, as determined by Owner, after receipt of written notice. In the event of our failure to make such repairs or replacements within a reasonable time after receipt of such written notice from Owner, we authorize Owner to proceed to have said repairs or replacements made at our expense and we will pay for the costs and charges therefore upon demand.

PROJECT:

TELEPHONE:

DATE OF ACCEPTANCE:

1.11 TURNOVER TO OWNER

The following checklist, turnover and acceptance forms shall be re-typed on Contractor's letterhead. The form shall be completed by Contractor and shall contain the all of the information shown on this sample checklist form and turned over to Owner prior to start of maintenance:

TURNOVER AND ACCEPTANCE FORM

PROJECT: _____

LOCATION: _____

TURNOVER ITEMS:

- ☐ Operation and Maintenance Manuals.
- ☐ Automatic Controller Certification Letter for each Calsense automatic controller installed under this contract.
- ☐ Two (2) keys for each automatic controller.
- ☐ One (1) set of special tools required for removing, disassembling and adjusting each type of sprinkler and valve supplied on this project.
- ☐ A minimum of one (1) five-foot key for operation of gate valves. Provide one (1) key for each type of operating device (2-inch operating nut, cross handle, etc.).
- ☐ Two (2) quick coupler keys and matching hose swivel for each type of quick coupling valve installed.

- ☐ Irrigation Controller Manuals.
- ☐ Color-Coded Controller Charts laminated between 2 pieces of 10 mil plastic each – Provide two (2) charts for each Controller.
- ☐ "As-Built" Record Drawings per this Irrigation Specification.
- ☐ Completed Irrigation Guarantee Statement.

DELIVERED BY:	ACCEPTED BY:
_____ Name of Contractor	_____ Name of Owner
_____ Name of Contractor's Authorized Representative	_____ Name of Owner's Authorized Representative
_____ Signature of Contractor's Authorized Representative	_____ Signature of Owner's Authorized Representative
_____ Date of Delivery to Owner	_____ Date of Acceptance by Owner's Authorized Representative

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Use only new materials of brands and types noted on Drawings and as specified herein, or approved equals.

B. PVC Pressure Main Line Pipe and Fittings:
   1. Pressure main line piping for sizes 2-inch and larger shall be PVC SCH 40.
   2. Class 315 pipe shall be made from an NSF approved Type I, Grade I, PVC compound conforming to ASTM resin specification D1784. All pipe must meet requirements as set forth in Federal Specification PS-22-70, with an appropriate standard dimension (S.D.R.) (Solvent-weld Pipe).
   3. Pressure main line piping for sizes 1-1/2 inches and smaller shall be PVC Schedule 40 with solvent welded joints.
   4. Schedule 40 pipe shall be made from NSF approved Type I, Grade I PVC compound conforming to ASTM resin specification D1785. All pipe must meet requirements as set forth in Federal Specification PS-21-70.
   5. PVC solvent-weld fittings shall be Schedule 40, 1-2, II-I NSF approved, conforming to ASTM test procedure D2466.

6. Solvent cement and primer for PVC solvent-weld pipe and fittings shall be of type and installation methods prescribed by the manufacturer.
7. All PVC pipe must bear the following markings:
   a. Manufacturer's name
   b. Nominal pipe size
   c. Schedule or class
   d. Pressure rating in P.S.I.
   e. NSF (National Sanitation Foundation) approval
   f. Date of extrusion
8. All fittings shall bear the manufacturer's name or trademark, material designation, size, applicable I.P.S. schedule and NSF seal of approval.
9. Color to be purple to denote reclaimed water, if applicable.
10. Refer to sheet 14-100 for additional notes relative to Health Code requirements.

C. PVC Non-Pressure Lateral Line Pipe and Fittings
1. Non-pressure buried lateral line piping shall be PVC Schedule 40 with solvent-weld joints when installed in planting areas. Minimum pipe size shall be 3/4-inch diameter.
2. Non-pressure lateral line piping installed under paved areas shall be PVC Schedule 40 with solvent welded joints. Minimum pipe size shall be 3/4-inch diameter.
3. Pipe shall be made from NSF approved, Type I, Grade II PVC compound conforming to ASTM resin specification D1784. All pipe must meet requirements set forth in Federal Specification PS-22-70 with an appropriate standard dimension ratio.
4. Except as noted in Paragraphs 1, 2, and 3 of this Article 2.1 C of these Specifications, all requirements for non-pressure lateral line pipe and fittings shall be the same as for solvent-weld pressure main line pipe and fittings as set forth in Article 2.1 B of these Specifications.
5. Color to be purple to denote reclaimed water, if applicable.
6. Refer to sheet 14-100 for additional notes relative to Health Code requirements.

D. Brass Pipe and Fittings:
1. Where indicated on Drawings, use red brass screwed pipe conforming to Federal Specification #WW-P-351.
2. Fittings shall be red brass conforming to Federal Specification #WW-P-460.

E. Copper Pipe and Fittings:
1. Pipe: Type K, hard tempered. See plans for locations.
2. Fittings: Wrought copper, solder joint type.
3. Joints shall be soldered with silver solder, 45% silver, 15%copper, 16% zinc, 24% cadmium, solidus at 1125 degrees F. and liquidus at 1145 degrees F.

F. Isolation Valve:
1. Ball valves 3-inch and smaller shall meet the following requirements:
   a. Ball valve shall be size and type as indicated on Drawings.
   b. Ball valve shall be similar to those manufactured by Lasco or approved equal.

2. All gate valves shall be installed per installation details.

G. Quick Coupling Valve:
   1. Quick coupling valves shall have a brass, two-piece body designed for working pressure of 150 P.S.I.
   2. Quick coupling valve shall be operable with a quick coupler key. Key size and type shall be as indicated on Drawings.

H. Check Valve:
   1. Swing check valves 2-inch and smaller shall be 200-pound W.O.G. bronze construction with replaceable composition, neoprene, or rubber disc and shall meet or exceed Federal Specification WW-V-51D, Class A, Type IV.
   2. Anti-drain valves shall be of heavy-duty virgin PVC construction with F.P.T. thread inlet and outlet. Internal parts shall be stainless steel and neoprene. Anti-drain valve shall be field adjustable against draw out from 4 to 32 feet of head. Anti-drain valve shall be similar to the Hunter HCV, or approved equal.

I. Control Wiring:
   1. Wire requirements are as follows:
      a. 12 gauge colored wire. Control wires to be red and common wire to be white.
      b. Flow sensor wire to be shielded wire.
      c. Unless otherwise noted, connections between an automatic controller and its corresponding electric control valves shall be made with direct burial copper wire AWG-U.F. 600-volt.
      d. Control wires shall be a different color wire for each automatic controller. Common wires shall be white with a different color stripe for each automatic controller. Color of stripe shall match color of control wires. Spare wire shall be a different color than the control wire color.
      e. Install in accordance with valve manufacturer's specifications and wire chart. In no case shall wire size be less than #14 for control wires and #14 for common wires.
      f. Provide separate control and common wires for operation of each automatic gate valve. Install wires within the same conduit as its related flow sensor cable.
   2. Wiring shall occupy the same trench and shall be installed along the same route as pressure supply or lateral lines wherever possible.
   3. Where more than 1 wire is placed in a trench, the wiring shall be taped together at intervals of 10 feet.
   4. An expansion curl shall be provided within 3 feet of each wire connection. Expansion curl shall be of sufficient length at each splice connection at each electric control valve, so that in case of repair, the valve bonnet may be brought to the surface without disconnecting the control wires. Control wires shall be laid loosely in trench without stress or stretching wire conductors.
   5. All splices within shall be made with, 3M "DBY" direct bury splice kits or approved equal. Make only one splice with each connector.
   6. Field splices between the automatic controller and electric control valves will not be allowed without prior approval of Landscape Architect.

J. Automatic Controller:
   1. Automatic controller(s) shall be of size and type as indicated on Drawings.
   2. Final location of automatic controller(s) shall be approved by Landscape Architect.
   3. Unless otherwise noted on Drawings, the 120-volt electrical power to each automatic controller location is to be furnished by a contractor licensed to perform this work. The final electrical hook-up shall be the responsibility of Contractor.
   4. Each automatic irrigation controller shall be included as a component part of the specified stainless steel vandal-resistant controller enclosure assembly. See Article 2.1 Q of these Specifications for additional information.

K. Valve Box:
   1. All valve boxes shall be black in color and have a black lid with recycled water identification embossed.
   2. Use 10-inch x 10-1/4-inch round box for all gate valves, NDS with black bolt-down cover or approved equal. Extension sleeve shall be PVC with minimum size of 6 inches.
   3. Use 11-3/4-inch x 17-inch x 11-inch rectangular box for all electric control valves, NDS with black bolt-down cover.
   4. Use 10-inch diameter x 10-1/4-inch deep round plastic valve box for all quick coupling valves, NDS with black bolt-down cover.

L. Sprinkler Head:
   1. All sprinkler heads shall be of the same size, type, and deliver the same rate of precipitation with the diameter (or radius) of throw, pressure, and discharge as indicated on Drawings and/or as specified herein.
   2. Spray heads shall have a screw adjustment.
   3. Riser units shall be fabricated in accordance with the installation details.
   4. Riser nipples for all sprinkler heads shall be the same size as the riser opening in the sprinkler body.
   5. All sprinkler heads of the same type shall be by the same manufacturer.

M. Identification Tags:
   1. Identification tags for electric control valves shall be manufactured from Polyurethane Behr Desopan. Use Christy's (or approved equal) standard tag hot-stamped with black letters on purple background. Tags shall be numbered to match programming as indicated on Drawings. Provide one tag for each electric control valve. Color of tags shall comply with local Health Codes to be purple or yellow in color to denote reclaimed water.
   2. Special order tags from T. Christy Enterprises, 655 East Ball Road, Anaheim, California 92805. Tel: (714) 507-3300.

N. Sub-Surface Drip Irrigation System:
   1. Drip tubing shall be of nominal sized one-half inch low density, ultra-violet-resistant, linear polyethylene tubing with internal pressure-compensating, self-cleaning, integral drippers at a specified interval. The tubing shall be brown with purple stripe for use in

reclaimed water systems and shall conform to an outside diameter (O.D.) of 0.710 inches and an inside (I.D.) diameter of 0.62 inches. The low volume tubing shall be capable of a discharge rate of 0.4 gallons per hour (GPH) between operating pressures of 7 to 70 psi for each individual dripper. Dripper tubing shall be sub-surface drip line as indicated on Drawings.

2. The individual self-cleaning, pressure-compensating drippers shall be welded to the inside of the tubing wall. The drippers are constructed of 3 individual pieces:
   a. Black-colored dripper containing a filtration system on the inlet side, compensation cell, and recessed chamber with a water outlet.
   b. Hard plastic diaphragm retainer (colored red (0.61) or black (0.92) depending on the discharge rate), with chamfered edges and a recessed groove in the center the full length of the diaphragm.
   c. Flexible black rubber diaphragm that allows excessive pressure to build up within the chamber to purge sediment or other debris that may not have been captured by the disc filter.
3. Spacing of Dripper shall be 12 inches on center.
4. All insert barbed fittings shall be constructed of molded, ultra-violet-resistant, brown-colored plastic having a nominal inside dimension (I.D.) of 0.57 inches (17 mm). Each fitting shall have a minimum of two ridges or barbs per outlet. All fittings shall be available in one of the following end configuration:
   a. Barbed insert fittings.
   b. Male pipe threads (MPT) with barbed insert fittings or female pipe threads (FPT) with barbed insert fittings.
5. Non-pressure supply and exhaust headers shall be Rain Bird QF header. Size as required.
6. The line-flushing valve shall be constructed of brown molded plastic and shall be a normally open hydraulic valve which flushes based on volumetric quantities of water. Inlet and outlet configurations shall be 1/2-inch MPT.
7. The line-flushing valve shall be serviceable by removing a threaded cover from a base, exposing the internal components. The internal components of the line-flushing valve shall consist of a molded diaphragm retainer, a high density plastic flush regulator, and a diaphragm 2 inches in diameter. The line-flushing valve shall be capable of automatically operating during initial system pressure build-up to discharge approximately one gallon of water per 15 gpm demand at 50 psi maximum, or 1.5 psi minimum inlet pressure.
8. Pressure regulation valve shall be a spring-operated piston type with an externally accessible regulation unit that can be serviced without removing the valve from the system. The valve shall be constructed from molded black plastic with 6 different colored tops with interchangeable springs denoting different pressure regulation and flow ranges. The regulator shall have a built-in indicator that shows when the proper outlet pressure is reached. Operating ranges for the valves shall be from 15 to 50 psi in 5 psi increments. Inlet and outlet ports of the valve shall be a combination of male/female threads.
9. The screen filter body shall be molded of black plastic with male pipe threads (MPT) for both the inlet and outlet ports. A threaded cap on one end of the body shall be

capable of periodic servicing by unscrewing the cap or releasing the latched band from the main filter body.

10. The filter elements shall be screen-type with 150 mesh filter.
11. Air/vacuum relief valves shall be constructed of gray plastic with an internal sliding poppet valve that is capable of venting air or vacuum to the atmosphere only. The main body shall have a 1/2-inch male pipe thread (MPT). Operating pressure range for the air/vacuum relief valve shall be 7 psi minimum to 140 psi maximum.
12. Tubing clamps shall be constructed to 304 AISI stainless steel and shall be one “ear” type. This “ear” shall be capable of being pinched with a pinching tool to secure the tubing around the insert barbed fitting. Interior clamp wall shall be smooth to prevent crimping or pinching of tubing. Wall thickness of clamps shall be .0236 inches (0.6 mm) with an overall band width of 1/4 inch (7 mm).

O. Backflow Prevention Unit:
   1. Coordinate all backflow locations with Landscape Architect.
   2. Provide a Backflow Report Form completed by a Certified Backflow Tester. The test shall be done in the presence of the Water District Inspector.

P. Irrigation Booster Pump:
   1. Irrigation booster pumps shall be as specified on the plans.
   2. Coordinate location and installation of pump assemblies with the Landscape Architect.
   3. Coordinate electrical connections with Electrical contractor.

Q. Miscellaneous Irrigation Equipment:
   1. See Drawings for sizes and types of miscellaneous irrigation equipment such as:
      a. Hunter Solar Sync Weather/Rain Sensor.
      b. Wifi Connection for controller.
   2. All miscellaneous irrigation equipment shall be as specified or approved equal

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

A. Before work is commenced, hold a conference with Owner, General Contractor, and Landscape Architect to discuss general details of the work.

B. Verify dimensions and grades at job site before work is commenced.

C. During the progress of the work, an experienced superintendent and any assistants necessary shall be on site, all satisfactory to Owner. The superintendent shall not be changed, except with the written consent of Owner, unless that person proves unsatisfactory and ceases to be employed. The superintendent shall represent Contractor in its absence and all directions given to the superintendent shall be as binding as if given to Contractor.

D. All work indicated or noted on Drawings shall be provided whether or not specifically mentioned in these Specifications.

E. If there are ambiguities between Drawings and Specifications and specific interpretation or clarification is not issued prior to bidding, the interpretation or clarification will be made only by Landscape Architect. Contractor shall comply with Landscape Architect's interpretations. In the event the installation contradicts the directions given, the installation shall be corrected by Contractor at no additional cost to Owner.

F. Layout of sprinkler lines as indicated on Drawings is diagrammatic only. Location of sprinkler equipment is contingent upon and subject to integration with all other underground utilities. Contractor shall employ all data contained in the Contract Documents and shall verify this information at the construction site to confirm the manner by which it relates to the installation.

G. Coordinate the installation of all irrigation materials, including pipe with Landscape Planting Drawings to avoid conflict with the trees, shrubs or other planting.

H. Do not proceed with the installation of the irrigation system when it is apparent that obstructions or grade differences exist or if conflicts in construction details, legend, or specific notes are discovered. All such obstructions, conflicts, or discrepancies shall be brought to the attention of Landscape Architect.

I. Replace, or repair to the satisfaction of Landscape Architect, all existing paving disturbed during the course of this work. New paving shall be the same type, strength, texture, finish, and be equal in every way to the material removed.

J. Owner reserves the right to make temporary repairs as necessary to keep equipment in operating condition without voiding Contractor's guarantee or relieving Contractor of its responsibilities during the guarantee shall not be allowed.

K. In addition to any anti-drain devices specified on Drawings irrigation heads showing signs of drainage after the irrigation system has been operated from an on to off position will require installation of anti-drain devices to prevent low head drainage.

L. Prior to start of construction Contractor shall contact sub-surface representative for installation and operation instructions. Contractor shall pay any costs involved for this service.

3.2 OBSERVATION OF SITE CONDITIONS

A. All scaled dimensions are approximate. Contractor shall check and verify all size dimensions and receive approval from Landscape Architect prior to proceeding with work under this Section.

B. Exercise extreme care in excavating and working near existing utilities. Contractor shall be responsible for damages to utilities which are caused by his operations or neglect. Check existing utilities drawings and field as-builts for existing utility locations.

C. Coordinate installation of irrigation materials including pipe, so there shall be NO interference with utilities or other construction or difficulty in planting trees, shrubs, and ground covers.

D. Contractor shall carefully check all grades to confirm that he may safely proceed before starting work on the irrigation system.

3.3 PREPARATION

A. Physical Layout:
   1. Prior to installation Contractor shall stake out all pressure supply lines, routing and location of sprinkler heads.
   2. All layouts shall be reviewed by Landscape Architect prior to installation.
   3. Refer to plans for desired locations of irrigation control valve boxes.

B. Water Supply:
   1. The irrigation system shall be connected to water supply point(s) of connection as indicated on Drawings.
   2. Connections shall be made at the approximate location(s) as indicated on Drawings. Contractor is responsible for minor changes caused by actual site conditions.

C. Electrical Supply:
   1. Electrical connections for any and all automatic controllers shall be made to electrical point(s) of connection as indicated on Drawings.
   2. Connections shall be made at the approximate location(s) as indicated on Drawings. Contractor is responsible for minor changes caused by actual site conditions.

3.4 INSTALLATION

A. Trenching:
   1. Dig trenches straight and support pipe continuously on bottom of trench. Lay pipe to an even grade. Trenching excavation shall follow layout as indicated on Drawings and as noted.
   2. Provide for a minimum of 18 inches cover for all pressure supply lines of 2 1/2-inch nominal diameter or smaller.
   3. Provide for a minimum of 24 inches cover for all pressure supply lines of 3-inch nominal diameter or larger.
   4. Provide for a minimum of 12 inches for all non-pressure lines.
   5. Provide for a minimum cover of 18 inches for all control wiring.
   6. Provide for a minimum cover of 18 inches for all communication cable and flow sensor conduit.
   7. The maximum allowable trench depth shall be 42 inches for irrigation pressure main line piping and 24 inches for lateral line piping.

B. Backfilling:

1. The trenches shall not be backfilled until all required tests are performed. Trenches shall be carefully backfilled with the excavated materials approved for backfilling, consisting of earth, loam, sandy clay, sand, or other approved materials, free from large clods of earth or stones. Backfill shall be mechanically compacted in landscaped areas to a dry density equal to adjacent undisturbed soil in planting areas. Backfill will conform to adjacent grades without dips, sunken areas, humps or other surface irregularities.
2. For reclaimed water use, all certifications from water purveyor and Los Angeles County Health Department shall be obtained prior to backfilling.
3. A fine granular material backfill will be initially placed over, under and 4 inches around all lines. No foreign matter larger than a half- inch in size will be permitted in the initial backfill. If native soil is not suitable for backfill as outlined above, imported sand shall be used for the initial backfill.
4. Using manual or mechanical tamping devices, compact backfill in trenches to dry density equal to the adjacent undisturbed soil, and conform to adjacent grades without dips, sunken areas, humps, or other irregularities.
5. Do not, under any circumstances, use truck wheels for compacting soil.
6. If settlement occurs and necessitates adjustments in pipe, valves, irrgation heads, lawn, plantings, or other installed work, Contractor shall make all required adjustments without cost to Owner.

C. Trenching and Backfill Under Paving:

1. Trenches located under areas where paving, asphaltic concrete, or concrete will be installed, shall be backfilled with sand (a layer 6 inches below, over and around the pipe) and compacted in layers to 95% compaction, using manual or mechanical tamping devices. Trenches for piping shall be compacted to equal the compaction of the existing adjacent undisturbed soil and shall be left in a firm unyielding condition. All trenches shall be left flush with the adjoining grade. Contractor shall set in place, cap and pressure test all piping under paving prior to the paving work.
2. Generally, piping under existing walks is done by jacking, boring, or hydraulic driving, but where any cutting or breaking of sidewalks and/or concrete is necessary, it shall be done and replaced by Contractor as a part of the Contract cost. Permission to cut or break sidewalks and/or concrete shall be obtained from Landscape Architect.
   a. Hydraulic driving will not be permitted under concrete paving.
3. Provide for a minimum cover of 18 inches between the top of the pipe and the bottom of the aggregate base for all pressure and non-pressure piping installed under asphaltic concrete paving or 36 inches from top of paving whichever is greater.

D. Trenching and Backfill in On-Structure Planters:

1. Dig trenches straight and support pipe continuously on bottom of trench with a minimum of 2 inches of planter mix. Lay pipe to an even grade. Trenching excavation shall follow layout as indicated on Drawings wherever possible.
2. Where possible, provide for a minimum cover over all piping and control wiring as noted in Article 3.4 of this Specification. Where it is not possible to install the specified minimum cover, Contractor shall install irrigation piping and control wiring to provide

for the maximum cover that the on-structure planter will allow. Protect fabric with 2-inch layer of planting soil mix. Provide 2 inches of planter mix as bedding material for pipe. Note depth of pipe on "As Built" Record Drawings.

3. The trenches shall not be backfilled until waterproofing is completed and approved and all required tests are performed. Trenches shall be carefully backfilled with excavated planter mix. Backfill shall be mechanically compacted in on-structure planting areas to a dry density equal to adjacent planter mix within on-structure planter. Backfill shall conform to adjacent grades without dips, sunken areas, humps, or other surface irregularities.

E. Plastic Pipe and Fittings:
   1. Install PVC plastic pipe, PVC plastic fittings and solvent welded joints in accordance with manufacturer's recommendations and installation guidelines. When requested, Contractor shall show evidence that the field personnel have been trained in the method of solvent welding PVC plastic pipe.
   2. Install irrigation heads on plastic pipe as indicated on Drawings.
   3. Prepare all welded joints with manufacturer's primer prior to applying solvent.
      a. Allow welded joints at least 15 minutes set-up/curing time before moving or handling.
      b. Partially center load pipe in trenches to prevent arching and shifting when water pressure is on
      c. Do not permit water in pipe until a period of at least 4 hours has elapsed for solvent weld setting and curing, unless recommended otherwise by solvent manufacturer.
   4. Do backfilling when pipe is cool.
      a. Pipe can be cooled by operating the system for a short time before backfill, or by backfilling in the early part of the morning before the heat of the day.
   5. Curing:
      a. When the temperature is above 80 degrees F., allow soluble weld joints at least 24 hours during the time before water is introduced under pressure.
      b. When temperature is below 80 degrees F., follow manufacturer's recommendations.

F. Assemblies:
   1. Routing of irrigation lines as indicated on Drawings is diagrammatic. Install lines (and various assemblies) in such a manner that conforms to Drawings.
   2. Do not install multiple assemblies in plastic lines. Provide each assembly with its own outlet.
   3. Install all assemblies specified herein in accordance with respective detail. In absence of Detail Drawings or Specifications pertaining to specific items required to complete work, perform such work in accordance with best standard practice with prior approval of Landscape Architect.
   4. PVC pipe and fittings shall be thoroughly cleaned of dirt, dust, and moisture before installation. Installation and solvent welding methods shall be as recommended by the pipe and fitting manufacturer.

5. On PVC to metal connections Contractor shall work the metal connections first. Teflon tape or approved equal, shall be used on all threaded PVC to PVC, and on all threaded PVC to metal joints. Light wrench pressure is all that is required. Where threaded PVC connections are required, use threaded PVC adapters into which the pipe may be welded.

G. Conduit and Sleeves:
   1. Coordination: Sleeving will be existing only when installed under another contract. For all other installations, provide materials and coordinate conduit and sleeve installation with other trades as required to facilitate smooth construction sequence.
   2. Conduit: Furnish and install conduit where control wires pass under or through walls, footings, walks and paving. Conduits to be of adequate size to accommodate retrieval for repair of wiring and shall extend 12 inches beyond edges of walls and pavement.
   3. Sleeving: Install sleeves for all pipes passing through or under walks and paving as indicated on Drawings. Sleeving to be of adequate size to accommodate retrieval of wiring or piping for repair and shall extend 12 inches beyond edges of paving or other construction.

H. Line Clearance:
   1. All lines shall have a minimum clearance of 6 inches from each other and from lines of other trades. Parallel lines shall not be installed directly over one another.

I. Automatic Controller Assembly:
   1. Install as indicated on Drawings and manufacturer's installation instructions. Electric control valves shall be connected to controller in numerical sequence as indicated on Drawings.

J. High Voltage Wiring for Automatic Controller:
   1. 120-volt and higher power connections to the irrigation components shall be provided by Contractor licensed to perform this work.
   2. All electrical work shall conform to the Electrical Division 16 of these Specifications local codes, ordinances, and union authorities having jurisdiction.

K. Grounding:
   1. Automatic controllers and other devices requiring grounding shall be grounded in accordance with manufacturer's installation guide.
   2. Refer to manufacturer’s recommendations for 2-Wire grounding requirements.

L. Electric Control Valves:
   1. Install each electric control valve in a separate valve box.
   2. Install where as indicated on Drawings. Where grouped together, allow at least 12 inches between adjacent valve boxes and 18 inches from edge of pavement.
   3. Each valve number shall be heat branded on valve box lid with 2-inch tall letters. Branding unit available from Hydroscape Products, Inc., (714) 639-1850 or approved equal.
   4. Brand valve box lid of associated equipment as follows:

a. Electric control valve box lid with “Controller Letter and Station Number”.
b. Quick coupling valve box lid with “Controller Letter” and the letters “QC”.
c. Isolation gate valve box lid with “Controller Letter” and the letters “GV”.
d. Air relief valve box lid with “Controller Letter” and the letters “AR”.
e. Wire splice box lid with “Controller Letter” and the letters “WS”.
f. Manual drain valve box lid with “Controller Letter” and the letters “MDV”.

M. Flushing of System:
1. After all new irrigation pipe lines and risers are in place and connected, all necessary diversion work has been completed, and prior to installation of irrigation heads, the control valves shall be opened and full head of water used to flush out the system.
2. Irrigation heads shall be installed only after flushing of the system has been accomplished to the complete satisfaction of Landscape Architect.

N. Irrigation Heads:
1. Install the irrigation heads as designated on Drawings. Irrigation heads to be installed in this work shall be equivalent in all respects to those itemized.
2. Spacing of heads shall not exceed the maximum as indicated on Drawings. In no case shall the spacing exceed the maximum recommended by the manufacturer.
3. Unless otherwise indicated on Drawings, all irrigation heads shall be set perpendicular to ground plane of the area to be irrigated.

O. Sub-Surface Drip Irrigation System:
1. Verify existing field dimensions of the area to be irrigated with Drawings for accuracy. Begin dripper tubing layout 2 inches to 3 inches away from both hard surfaces, i.e. concrete sidewalks, curbs, asphalt, and/or undefined edges, i.e. shovel-cut edges. Mark tubing intervals on the ground with flags, paint, or other markings that can be maintained throughout the installation.
2. Dripper tubing can be installed in one of the 3 following methods:
a. Over-Excavation: In small areas, where it technically feasible, over-excavate the entire area to a depth of 4 inches below finish grade. Plant all specimen trees and shrubs, 15-gallon size and larger, then place tubing at the row spacing interval as indicated on Drawings.
b. Pipe Pulling: In larger areas, where ground disruption is to be minimized, pneumatic tire, pipe pulling machinery shall be used. Potholes shall be used at the ends of each run for making connection to supply and exhaust headers of rigid PVC pipe or poly pipe.
c. Trenching: Hand or mechanically trench to the pipe depth as indicated on Drawings or in these Specifications and backfill flush with finish grade. Avoid mechanically trenching within the drip line of existing trees. Hand-trench around existing tree roots when roots of 2 inches and larger are encountered. Remove all rock 1-1/2-inch and larger when excavating and remove from site. Do not backfill trenches with rock that will come in direct contact with tubing or rigid PVC piping.

3. Install underground piping horizontally and as level as possible to a minimum depth of 3inches and maximum depth of 5 inches unless otherwise specified. Optimum pipe depth is 4inches.
4. As much as possible, supply and exhaust headers shall be installed perpendicular to contours.
5. As much as possible, dripper tubing shall be installed parallel with contours.
6. Dripper tubing can be installed with the water outlets facing upward or downward. Place dripper outlets in such a manner as to form a triangular pattern between parallel tubing laterals. In irregular areas, some water outlets may end up too close to fix improvements and may have to be capped off with a dripper plug ring.
7. Connect dripper tubing to barbed fittings by pushing on and over both barbs until the tubing has seated against another piece of tubing or has butted against another portion of the barbed fitting. For water pressures in excess of the 45 psi, use stainless steel clamps on all barbed fittings as noted in Paragraph 8 below.
8. When design operating pressure exceeds 45 psi, stainless steel pipe clamps shall be used. Slip clamps over tubing before slipping tubing over insert barbed fitting. Place clamp between the first and second ridge of the barbed fittings and crimp the “ear” of the clamp tightly. Crimp the “ear” twice to ensure proper seating.
9. Install a pressure regulator below grade, downstream, and in line with the remote control valve. Whenever possible, place the pressure regulator in the same valve box to allow for periodic inspection. Place the regulator with the arrow (molded into the side of the body) pointing in the direction of the flow of water. Provide straight piping on the outlet side of regulator for a dimension not less than 3 lengths of the overall body dimension.
10. Install the disc filter, horizontally level, below grade and before or after the remote control valve as indicated on Drawings. The position of the disc filter in the valve box shall be off-center to allow for removal of the disc element for periodic servicing. See Drawings for the size of the valve box.
11. Install the air/vacuum relief valve below grade and at the highest elevation within each zone. Depending on the site conditions and tubing layout, more than one air/vacuum relief valve into a 1/2 inch x 3/4 inch SCH 40 PVC reduction bushing and thread this assembly into a 180-degree two-way adapter tee with a 3/4 inch (MPT) outlet. Place the valve within a round valve box with a locking cover and a 1 cu. ft., 3/4 inch gravel sump as noted on the details. Additional blank Techline tubing may be necessary when placing Techline dripper tubing on mounds or berms with more than a 3-foot elevation difference. Blank Techline tubing shall be connected perpendicular to the dripper tubing with barbed tees from the lowest elevation of dripper tubing to the highest point of the mound berm where the air/vacuum relief valve is located. This air/vacuum relief lateral serves to collect and transport trapped air bubbles or relieve vacuum in lower elevation dripper tubing parallel to the dripper tubing located at the highest point in the system. Locate an air/vacuum relief lateral for each berm within the system.
12. Prior to backfilling and before connection of the line-flushing valves, flush the entire system to remove any dirt or sediment that may have entered the system during the installation.

13. Install the line-flushing valve horizontally level and below grade at the hydraulic termination point(s) in each system. Locate in a valve box with the dome-shape of the valve facing upward. Include a minimum of 1 cu. ft. of 3/4-inch gravel in the bottom of the valve box per Detail.
14. Prior to backfilling, open the remote control valve and operate each circuit to check for leakage around both barbed and threaded PVC fittings. Make necessary corrections to stop leaks.
15. Re-test those systems where leaks were corrected before commencing backfilling operations.

3.5 TEMPORARY REPAIRS

A. Owner reserves the right to make temporary repairs as necessary to keep the irrigation system equipment in operating condition. The exercise of this right by Owner shall not relieve Contractor of his responsibilities under the terms of the guarantee as herein specified.

3.6 FIELD QUALITY CONTROL

A. Adjustment of the System:
   1. Contractor shall flush and adjust all irrigation heads for optimum performance and to prevent overspray upon walks, roadways, and buildings as much as possible.
   2. If it is determined that adjustment to the irrigation equipment will provide proper and more adequate coverage, Contractor shall make such adjustments prior to planting. Adjustments may also include changes in nozzle sizes and degrees of arc as required.
   3. Lowering raised irrigation heads by Contractor shall be accomplished within 10 working days after notification by Landscape Architect.
   4. All irrigation heads shall be set perpendicular to finished grades unless otherwise indicated on Drawings.

B. Testing of the Irrigation System:
   1. Contractor shall request the presence of Landscape Architect in writing at least 48 hours in advance of testing.
   2. Test all pressure lines under hydrostatic pressure of 150 pounds per square inch and prove watertight.
      a. Testing of pressure main lines shall occur prior to installation of the electric control valves.
   3. All piping under paved areas shall be tested under hydrostatic pressure of 150 pounds per square inch and proven watertight prior to paving.
   4. Sustain pressure in lines for not less than 2 hours. If leaks develop, replace joints and repeat test until entire system is proven watertight.
   5. All hydrostatic tests shall be made only in the presence of Landscape Architect. No pipe shall be backfilled until it has been observed, tested, and approved in writing.
   6. Furnish necessary force pump and all other test equipment.

7. When the irrigation system is completed, perform a coverage test in the presence of Landscape Architect to determine if the water coverage for planting areas is complete and adequate. Furnish all materials and perform all work required to correct any inadequacies of coverage due to deviations from Drawings, or where the system has been willfully installed as indicated on Drawings when it is obviously inadequate, without bringing this to the attention of Landscape Architect. This test shall be accomplished before any ground cover is planted.
8. Upon completion of each phase of work, the entire system shall be tested and adjusted to meet site requirements.
9. Coordinate with Calsense for final review of equipment and certification. Coordinate all data connections with the Expo Center for water management, if required.
10. Coordinate with booster pump manufacturer for final pump start up and certification. All warranty information shall be registered.

3.7 MAINTENANCE

A. The entire irrigation system shall be under full automatic operation for a period of 7 working days prior to any planting.

B. Landscape Architect reserves the right to waive or shorten the operation period.

3.8 CLEANUP

A. Cleanup shall be made as each portion of work progresses. Refuse and excess dirt shall be removed from the site, all walks and paving shall be broomed or washed down, and any damage occurring to the work of others shall be repaired to original conditions.

3.9 FINAL SITE OBSERVATION PRIOR TO ACCEPTANCE

A. Contractor shall operate each system in its entirety for Landscape Architect at the time of Final Observation. Any items deemed unacceptable by Landscape Architect shall be reworked to the complete satisfaction of Landscape Architect.

B. Contractor shall show evidence to Landscape Architect that Owner has received all accessories, Charts, Record Drawings, and equipment as required before Final Site Observation can occur.

3.10 SITE OBSERVATION SCHEDULE

A. Contractor shall be responsible for notifying Landscape Architect in advance for the following observation meetings, according to the time indicated:
   1. Pre-Job Conference - 7 working days
   2. Pressure Supply Line Installation and Testing - 48 hours
   3. Control wire installation and communication/flow sensor cable installation - 48 hours
   4. Lateral Line and Sprinkler Installation - 48 hours

5. Cross contamination testing – 48 hours.
6. Sub-Surface dripline Installation - 48 hours.
7. Coverage Test - 48 hours
8. Final Site Observation - 7 working days

B. When site observations have been conducted by a party other than Landscape Architect, show evidence in writing of when and by whom these observations were made.

C. Prior to reviewing the irrigation system with Landscape Architect, Contractor shall pre-walk the irrigation system with its own crew to ensure compliance with Drawings and Specifications. Contractor shall observe those items shown on the Construction Observation Check List below and initial and date that all items observed are in accordance with Drawings and Specifications. This list shall be presented to Landscape Architect prior to the Final Irrigation Walk-Through with Landscape Architect.

D. No site observations will commence without “As-Built” Record Drawings or the Construction Observation Check List. In the event that Contractor calls for a site visit without “As-Built” Record Drawings or the Construction Observation Check List, without completing previously noted corrections or without preparing the system for said visit, Contractor shall be responsible for reimbursing Landscape Architect at his current hourly billing rate, portal-to-portal (plus transportation costs), for the inconvenience. No further site observations will be scheduled until this charge has been paid and received

CONSTRUCTION OBSERVATION CHECK LIST

The following checklist and acceptance form shall be re-typed on Contractor's letterhead. The form shall be completed by Contractor and shall contain the all of the information shown on this sample checklist form:

PROJECT NAME: _____

PROJECT LOCATION: _____

DESCRIPTION:	Completed by Contractor	Date	Approved by Landscape Architect	Date
Irrigation Heads				
Heads plumb and straight				
Spacing per design intent				
Correct nozzles used				
Pressure set appropriately				
PCS Screens installed				
Non Potable Caps (when required)				
Heads at correct height				
Back-up heads properly located				
Turn down screws used only for minor adjustments only				
Nozzles are clean and unobstructed				
Pop-up heads retracting properly				
Heads adjacent to building/paving located correctly				
Head to head coverage ok				
Minimal overspray				
Swing joints installed				
No leaks observed				
Systems on slopes separated correctly				
Direction of spray appropriate				
No low head drainage				
Rotor are rotating				
Install van nozzles where necessary				
Proper arc patterns installed				

DESCRIPTION:	Completed by Contractor	Date	Approved by Landscape Architect	Date
Valves All Sizes And Types				
Correct size of boxes				
Correct color of boxes				
Heat branding complete				
Height of valves in boxes				
Gravel in boxes (2cu. ft.) installed				
Brick supports in boxes installed				
Valve I.D. tags installed				
Pressure setting on valve set properly				
PVC sleeve in box at gate valve				
Bolt downs on boxes provided				
No leaks observed				
Correct clearance from valve to gravel provided				
Brass hand wheel installed				
2-inch operating nuts installed				
Proper wire connectors installed				
Automatic Controllers				
Location set per plan				
Secured to wall properly				
Door opens and closes properly				
Copper ground rod installed				
Run shut-off installed				
Connections and wires verified				
Certification letter provided				
Power provided and controller operational				
Proper gauge and color of control and common wires.				
Sub-Surface Drip Installation				
Filter assembly is installed				
Pressure Regulator is installed				
Air/vacuum relief valve installed				
Flushing valve installed				
Additional Items				

Pressure test documentation complete				
Coverage test complete				

END OF SECTION

SECTION 32 91 00 - PLANTING SOIL

PART 1 – GENERAL

1.1 SUMMARY

A. The scope of work includes all labor, materials, tools, supplies, equipment, facilities, transportation and services necessary for, and incidental to performing all operations in connection with furnishing, delivery, and installation of Planting Soil and /or the modification of existing site soil for use as Planting Soil, complete as shown on the drawings and as specified herein.

B. The scope of work in this section includes, but is not limited to, the following:

1. Locate, purchase, deliver and install Imported Planting Soil and soil amendments.
2. Harvest and stockpile existing site soils suitable for Planting Soil.
3. Modify existing stockpiled site soil.
   a. Modify existing site soil in place for use as Planting Soil.
   b. Install existing or modified existing soil for use as Planting Soil.
4. Locate, purchase, deliver and install subsurface Drain Lines.
5. Fine grade Planting Soil.
6. Install Compost into Planting Soil.
7. Clean up and disposal of all excess and surplus material.

1.2 CONTRACT DOCUMENTS

A. Shall consist of specifications, general conditions, and the drawings. The intent of these documents is to include all labor, materials, and services necessary for the proper execution of the work. The documents are to be considered as one. Whatever is called for by any parts shall be as binding as if called for in all parts.

1.3 RELATED DOCUMENTS AND REFERENCES

A. Related Documents:

1. Drawings and general provisions of contract, including general and supplementary conditions and Division I specifications, apply to work of this section.
2. Related Specification Section
   a. Section 32 9300 - Planting
   b. Section 32 8400 - Irrigation
   c. Section 01 5639 -Tree and Plant Protection

B. References: The following specifications and standards of the organizations and documents listed in this paragraph form a part of the Specification to the extent required by the references thereto. In the event that the requirements of the following referenced standards and specification conflict with this specification section the requirements of this specification shall prevail. In the event that the requirements of any of the following referenced standards and specifications conflict with each other the more stringent requirement shall prevail.

1. ASTM: American Society of Testing Materials cited section numbers.
2. U.S. Department of Agriculture, Natural Resources Conservation Service, 2003. National Soil Survey Handbook, title 430-VI. Available Online.
3. US Composting Council *www.compostingcouncil.org and* http://compostingcouncil.org/admin/wp-content/plugins/wp-pdfupload/pdf/191/LandscapeArch_Specs.pdf.
4. *Methods of Soil Analysis*, as published by the Soil Science Society of America (http://www.soils.org/).
5. Up by Roots: healthy soils and trees in the built environment. 2008. J. Urban. International Society of Arboriculture, Champaign, IL.

1.4 VERIFICATION

A. All scaled dimensions on the drawings are approximate. Before proceeding with any work, the Contractor shall carefully check and verify all dimensions and quantities and shall immediately inform the Landscape Architect of any discrepancies between the information on the drawings and the actual conditions, refraining from doing any work in said areas until given approval to do so by the Landscape Architect.

1.5 PERMITS AND REGULATIONS

A. The Contractor shall obtain and pay for all permits related to this section of the work unless previously excluded under provision of the contract or general conditions. The Contractor shall comply with all laws and ordinances bearing on the operation or conduct of the work as drawn and specified. If the Contractor observes that a conflict exists between permit requirements and the work outlined in the contract documents, the Contractor shall promptly notify the Landscape Architect in writing including a description of any necessary changes and changes to the contract price resulting from changes in the work.

B. Wherever references are made to standards or codes in accordance with which work is to be performed or tested, the edition or revision of the standards and codes current on the effective date of this contract shall apply, unless otherwise expressly set forth.

C. In case of conflict among any referenced standards or codes or among any referenced standards and codes and the specifications, the more restrictive standard shall apply, or Landscape Architect shall determine which shall govern.

D. Comply with the requirements of the California code of regulation title 23 waters, division 2 department of water resources chapter 2.7 model water efficient landscape ordinance, 492.5 soil management report.

1. Where requirements of specification section Planting Soil are more stringent than the California code, the more stringent requirements shall prevail.

1.6 PROTECTION OF WORK, PROPERTY AND PERSON

A. The Contractor shall adequately protect the work, adjacent property, and the public, and shall be responsible for any damages or injury due to the Contractor's actions.

1.7 CHANGES IN WORK

A. The Landscape Architect may order changes in the work, and the contract sum adjusted accordingly. All such orders and adjustments plus claims by the Contractor for extra compensation must be made and approved in writing before executing the work involved.

B. All changes in the work, notifications and contractor's request for information (RFI) shall conform to the contract general condition requirements.

1.8 CORRECTION OF WORK

A. The Contractor shall re-execute any work that fails to conform to the requirements of the contract and shall remedy defects due to faulty materials or workmanship upon written notice from the Landscape Architect, at the soonest possible time that can be coordinated with other work and seasonal weather demands but not more than 180 (one hundred and eighty) days after notification**.**

1.9 DEFINITIONS

A. Acceptable drainage: Drainage rate is sufficient for the plants to be grown. Not too fast and not too slow. Typical rates for installed Planting Soil are between 1 - 5 inches per hour. Turf soils are often higher, but drainage rates above 2 - 3 inches per hour will dry out very fast. In natural undisturbed soil a much lower drainage rate, as low as 1/8th inch per hour can still support good plant growth. Wetland plants can grow on top of perched water layers or even within seasonal perched water layers, but could become unstable in high wind events.

B. Amendment: material added to Topsoil to produce Planting Soil Mix. Amendments are classified as general soil amendments, fertilizers, biological, and pH amendments.

C. Biological Amendment: Amendments such as Mycorrhizal additives, compost tea or other products intended to change the soil biology.

D. Compacted soil: soil where the density of the soil is greater that the threshold for root limiting, and further defined in this specification.

E. Compost: well decomposed stable organic material as defined by the US Composting Council and further defined in this specification.

F. Drainage: The rate at which soil water moves through the soil transitioning the soil from saturated condition to field capacity. Most often expressed as saturated hydraulic conductivity (Ksat; units are inches per hour).

G. End of Warranty Acceptance: The date when the Landscape Architect accepts that the plants and work in this section meet all the requirements of the warranty. It is intended that the materials and workmanship warranty for Planting, Planting Soil, and Irrigation (if applicable) work run concurrent with each other, and further defined in this specification.

H. Existing Soil: Mineral soil existing at the locations of proposed planting after the majority of the construction within and around the planting site is completed and just prior to the start of work to prepare the planting area for soil modification and/or planting, and further defined in this specification.

I. Fertilizer: amendment used for the purpose of adjusting soil nutrient composition and balance.

J. Fine grading: The final grading of the soil to achieve exact contours and positive drainage,

often accomplished by hand rakes or drag rakes other suitable devices, and further defined in this specification, and further defined in this specification.

K. Finished grade: surface or elevation of Planting Soil after final grading and 12 months of settlement of the soil, and further defined in this specification.

L. Graded soil: Soil where the A horizon has been stripped and relocated or re-spread; cuts and fills deeper than 12 inches, and further defined in this specification.

M. Installed soil: Planting soil and existing site soil that is spread and or graded to form a planting soil, and further defined in this specification.

N. Minor disturbance: Minor grading as part of agricultural work that only adjusts the A horizon soil, minor surface compaction in the top 6 inches of the soil, applications of fertilizers, installation of utility pipes smaller than 18 inches in diameter thru the soil zone.

O. Landscape Architect: The person or entity, appointed by the Owner to represent their interest in the review and approval of the work and to serve as the contracting authority with the Contractor. The Landscape Architect may appoint other persons to review and approve any aspects of the work.

P. Ped: a clump or clod of soil held together by a combination of clay, organic matter, and fungal hyphae, retaining the original structure of the harvested soil.

Q. Planting Soil: Topsoil, or Planting Soil Mixes which are imported or existing at the site, or made from components that exist at the site, or are imported to the site; and further defined in this specification.

R. Poor drainage: Soil drainage that is slower than that to which the plants can adapt. This is a wide range of metrics, but generally if the soil is turning grey in color it is reasonable preferable to either to plant moisture adaptive plants at smaller sizes that are young in age with shallow root balls or look at options to improve the drainage

S. Punch List: List of work within the Contract, generated by Architect that needs to be completed, repaired, replaced, or rectified by Contractor

T. Scarify: Loosening and roughening the surface of soil and sub soil prior to adding additional soil on top, and further defined in this specification.

U. Soil Fracturing: Deep loosening the soil to the depths specified by using a back hoe, and further defined in this specification.

V. Soil Horizons: as defined in the USDA National Soil Survey Handbook

http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/scientists/?cid=nrcs142p2_054242.

W. Soil Ripping: Loosening the soil by dragging a ripping shank or chisel thru the soil to the depths and spacing specified, and further defined in this specification.

X. Soil Tilling: Loosening the surface of the soil to the depths specified with a **rotary tine tilling machine, roto tiller, (or spade tiller)**, and further defined in this specification**.**

Y. Soil trenching: Cutting narrow trenches thru the soil at the depths and spacing specified to loosen the soil profile, and further defined in this specification.

Z. Subgrade: surface or elevation of subsoil remaining after completing excavation, or top surface of a fill or backfill, before placing Planting Soil.

AA. Substantial Completion Acceptance: The date at the end of the Planting, Planting Soil, and Irrigation installation (if applicable) where the Landscape Architect accepts that all work in these sections is complete, and the Warranty period has begun. This date may be different than the date of substantial completion for the other sections of the project, and further defined in this specification.

BB. Topsoil: naturally produced and harvested soil from the A horizon or upper layers or the soil as further defined in this specification.

CC. Undisturbed soil: Soils with the original A horizon intact that have not been graded or compacted. Soils that have been farmed, subjected to fire or logged but not graded, and natural forested land will be considered as undisturbed.

1.10 SUBMITTALS

A. See the contract General Conditions for policy and procedures related to submittals.

B. Submit all product submittals eight weeks prior to the start of the soil work.

C. Product data and certificates: For each type of manufactured product, submit data and certificates that the product meets the specification requirements, signed by the product manufacturer, and complying with the following:

1. Submit manufacturers or supplier's product data and literature certified analysis for standard products and bulk materials, complying with testing requirements and referenced standards and specific requested testing.

a. For each Compost product submit the following analysis by a recognized laboratory:
1.) pH
2.) Salt concentration (electrical conductivity)
3.) Moisture content %, wet weight basis
4.) Particle size % passing a selected mesh size, dry weight basis
5.) Stability carbon dioxide evolution rate mg CO2-C per g OM per day
6.) Solvita maturity test
7.) Physical contaminants (inerts) %, dry weight basis
8.) US EPA Class A standard, 40CFR § 503.13, Tables 1 and 3 levels Chemical Contaminants mg/kg (ppm)

b. For Coarse Sand product submit the following analysis by a recognized laboratory:
1.) pH
2.) Particle size distribution (percent passing the following sieve sizes):
3/8 inch (9.5 mm)
No 4 (4.75 mm)
No 8 (2.36 mm)
No 16(1.18 mm)
No 30 (.60 mm)
No 50 (.30 mm)
No 100 (.15 mm)
No 200 (.075 mm)

D. Samples: Submit samples of each product and material, where required by Part 2 of the specification, to the Landscape Architect for approval. Label samples to indicate product, characteristics, and locations in the work. Samples will be reviewed for appearance only.

1. Submit samples a minimum of 8 weeks prior to the anticipated date of the start of soil installation.
2. Samples of all Topsoil, Coarse Sand, Compost and Planting Soil shall be submitted at the same time as the particle size and physical analysis of that material.

E. Soil testing for Imported and Existing Topsoil, existing site soil to be modified as Planting Soil and Planting Soil Mixes.

1. Topsoil, existing site soil and Planting Soil Mix testing: Submit soil test analysis report for each sample of Topsoil, existing site soil and Planting Soil from an approved soil-testing laboratory and where indicated in Part 2 of the specification as follows:
   a. Submit Topsoil, Planting Soil, Compost, and Coarse Sand for testing at least 8 weeks before scheduled installation of Planting Soil Mixes. Submit Planting Soil Mix test no more than 2 weeks after the approval of the Topsoil, Compost and Coarse Sand. Do not submit to the testing laboratory, Planting Soil Mixes, for testing until all Topsoil, Compost and Coarse Sand have been approved.
   b. If tests fail to meet the specifications, obtain other sources of material, retest and resubmit until accepted by the Landscape Architect.
   c. All soil testing will be at the expense of the Contractor.
   d. Submit a copy of the Planting Plan and Plant Legend to the laboratory with the samples. Soil test of fertility, agricultural suitability, and appraisal by the following (or approved equal, see Quality Assurance section):
      1.) Wallace Laboratories (310) 615-0116, info@wlabs.com, wlabs.com.
2. Submit all testing required by California Code of regulation Title 23 waters, Division 2 Department of Water resources Chapter 2.7 Model Water Efficient Landscape Ordinance, 492.5 Soil Management Report.
3. Provide a particle size analysis (% dry weight) and USDA soil texture analysis. Soil testing of Planting Soil Mixes shall also include USDA gradation (percentage) of gravel, coarse sand, medium sand, and fine sand in addition to silt and clay.
4. Provide the following other soil properties:
   a. pH and buffer pH.
   b. Percent organic content by oven dried weight.
   c. Nutrient levels by parts per million including: boron, copper, molybdenum, sodium, sulfur, phosphorus, potassium, magnesium, manganese, iron, zinc and calcium. Nutrient test shall include the testing laboratory recommendations for supplemental additions to the soil for optimum growth of the plantings specified.
   d. Soluble salt by electrical conductivity of a 1:2 soil water sample measured in Milliohm per cm.
   e. Cation Exchange Capacity (CEC).
   f. Bulk Density
      1.) Dry Weight Basis (pounds per cubic foot)
      2.) At max. water holding capacity (pounds per cubic foot)

1.11 OBSERVATION OF THE WORK

A. The Landscape Architect may observe the work at any time. They may remove samples of materials for conformity to specifications. Rejected materials shall be immediately removed from the site and replaced at the Contractor's expense. The cost of testing materials not meeting specifications shall be paid by the Contractor.

1. The Landscape Architect may utilize the Contractor’s penetrometer and moisture meter at any time to check soil compaction and moisture.

B. The Landscape Architect shall be informed of the progress of the work so the work may be observed at the following key times in the construction process. The Landscape Architect shall be afforded sufficient time to schedule visit to the site if necessary. Failure of the Landscape Architect to make field observations shall not relieve the Contractor from meeting all the requirements of this specification.

1. COMPLETION OF FINE GRADING AND SURFACE SOIL MODIFICATIONS REVIEW: Upon completion of all surface soil modifications and fine grading but prior to the installation of shrubs, ground covers, or lawns.

1.12 QUALITY ASSURANCE

A. Installer Qualifications: The installer shall be a firm having at least 5 years of experience of a scope similar to that required for the work, including the preparation, mixing and installation of soil mixes to support planting. The installer of the work in Section: Planting, shall be the same firm installing the work in this section.

1. The bidders list for work under this section shall be approved by the Landscape Architect.

2. Installer Field Supervision: When any Planting Soil work is in progress, installer shall maintain, on site, an experienced full-time supervisor who can communicate in English with the Landscape Architect.

3. Installer’s field supervisor shall have a minimum of five year’s experience as a field supervisor installing soil, shall be trained and proficient in the use of field surveying equipment to establish grades and can communicate in English with the Landscape Architect.

4. The installer’s crew shall be experienced in the installation of Planting Soil, plantings, and irrigation (where applicable) and interpretation of planting plans, soil installation plans, and irrigation plans (where applicable).

5. Submit references of past projects and employee training certifications that support that the Contractors meet all of the above installer qualifications and applicable licensures.

B. Soil testing laboratory qualifications: an independent laboratory, with the experience and capability to conduct the testing indicated and that specializes in USDA agricultural soil testing, Planting Soil Mixes, and the types of tests to be performed. Geotechnical engineering testing labs shall not be used.

C. All delivered and installed Planting Soil shall conform to the approved submittals sample color, texture and approved test analysis.

1. The Landscape Architect may request samples of the delivered or installed soil be tested for analysis to confirm the Planting Soil conforms to the approved material.
2. All testing shall be performed by the same soil lab that performed the original Planting Soil testing.
3. Testing results shall be within 10% plus or minus of the values measured in the approved Planting Soil Mixes.
4. Any Planting Soil that fails to meet the above criteria, if requested by the Landscape Architect, shall be removed and new soil installed.

D. Soil compaction testing: following installation or modification of soil, test soil compaction with a penetrometer.

1. Maintain at the site at all times a soil cone penetrometer with pressure dial and a soil moisture meter to check soil compaction and soil moisture.
   a. Penetrometer shall be AgraTronix Soil Compaction Meter distributed by Ben Meadows, www.benmeadows.com or approved equal.
   b. Moisture meter shall be “general digital soil moisture meter” distributed by Ben Meadows, www.benmeadows.com or approved equal.
2. Prior to testing the soil with the penetrometer check the soil moisture and penetrometer readings in the mockup soils. Penetrometer readings are impacted by soil moisture and excessively wet or dry soils will read significantly lower or higher than soils at optimum moisture.
3. The penetrometer readings shall be within 20% plus or minus of the readings in the approved mockup when at similar moisture levels.

1.13 SITE CONDITIONS

A. It is the responsibility of the Contractor to be aware of all surface and subsurface conditions, and to notify the Landscape Architect, in writing, of any circumstances that would negatively impact the health of plantings. Do not proceed with work until unsatisfactory conditions have been corrected.

1. Should subsurface drainage or soil conditions be encountered which would be detrimental to growth or survival of plant material, the Contractor shall notify the Landscape Architect in writing, stating the conditions and submit a proposal covering cost of corrections. If the Contractor fails to notify the Landscape Architect of such conditions, they shall remain responsible for plant material under the warrantee clause of the specifications.
2. This specification requires that all Planting Soil and Irrigation (if applicable) work be completed and accepted prior to the installation of any plants.

1.14 SOIL COMPACTION – GENERAL REQUIREMENTS

A. Except where more stringent requirements are defined in this specification. The following parameters shall define the general description of the threshold points of soil compaction in existing, modified or installed soil and subsoil.

B. The following are threshold levels of compaction as determined by each method.

1. Acceptable Compaction: Good rooting anticipated, but increasing settlement expected as compaction is reduced and/or in soil with a high organic matter content.
   a. Bulk Density Method – Varies by soil type see Chart on page 32 in Up By Roots.
   b. Standard Proctor Method – 75-85%; soil below 75% is unstable and will settle excessively.
   c. Penetration Resistance Method – about 75-250 psi, below 75 psi soil becomes increasingly unstable and will settle excessively.
2. Root limiting Compaction: Root growth is limited with fewer, shorter and slower growing roots.
   a. Bulk Density Method – Varies by soil type see Chart on page 32 in Up By Roots.
   b. Standard Proctor Method – above approximately 85%.
   c. Penetration Resistance Method – about 300 psi.
3. Excessive Compaction: Roots not likely to grow but can penetrate soil when soil is above field capacity.
   a. Bulk Density Method – Varies by soil type see Chart on page 32 in Up By Roots.
   b. Standard Proctor Method – Above 90%.
   c. Penetration Resistance Method – Approximately above 400 psi

1.15 DELIVERY, STORAGE, AND HANDLING

A. Weather: Do not mix, deliver, place or grade soils when frozen or with moisture above field capacity.

B. Protect soil and soil stockpiles, including the stockpiles at the soil blender's yard, from wind, rain and washing that can erode soil or separate fines and coarse material, and contamination by chemicals, dust and debris that may be detrimental to plants or soil drainage. Cover stockpiles with plastic sheeting or fabric at the end of each workday.

C. All manufactured packaged products and material shall be delivered to the site in unopened containers and stored in a dry enclosed space suitable for the material and meeting all environmental regulations. Biological additives shall be protected from extreme cold and heat. All products shall be freshly manufactured and dated for the year in which the products are to be used.

D. Deliver all chemical amendments in original, unopened containers with original labels intact and legible, which state the guaranteed chemical analysis. Store all chemicals in a weather protected enclosure.

E. Bulk material: Coordinate delivery and storage with Landscape Architect and confine materials to neat piles in areas acceptable to Landscape Architect.

1.16 EXCAVATING AND GRADING AROUND UTILITIES

A. Contractor shall carefully examine the civil, record, and survey drawings to become familiar with the existing underground conditions before digging.

B. Determine location of underground utilities and perform work in a manner that will avoid damage. Hand excavation as required. Maintain grade stakes set by others until parties concerned mutually agree upon removal.

C. Notification of DigAlert, #811 is required for all planting areas. The Contractor is responsible

for knowing the location and avoiding utilities that are not covered by DigAlert.

PART 2 – PRODUCTS

2.1 IMPORTED TOPSOIL

A. Imported Topsoil definition: Fertile, friable soil containing less than 5% total volume of the combination of subsoil, refuse, roots larger than 1 inch diameter, heavy, sticky or stiff clay, stones larger than 2 inches in diameter, noxious seeds, sticks, brush, litter, or any substances deleterious to plant growth. It shall also be free from wire, plaster, construction debris, or similar objects that would be a hindrance to planting or maintenance. The percent (%) of the above objects shall be controlled by source selection not by screening the soil. Topsoil shall be suitable for the germination of seeds and the support of vegetative growth. Imported Topsoil shall not contain weed seeds in quantities that cause noticeable weed infestations in the final planting beds. It shall not be infested with nematodes or other undesirable disease-causing organisms such as insects and plant pathogens. Imported Topsoil shall meet the following physical and chemical criteria:

1. Soil texture: USDA loam, sandy clay loam or sandy loam with clay content between 15 and 25%. And a combined clay/silt content of no more than 50%.
   a. Particle Size and Composition
      1.) Coarse Sand (0.5 to 2.0mm), up to 15%
      2.) Silt plus clay (<0.05mm), 15% to 50%
      3.) Other Classes
         a.) Gravel (2 to 13mm), up to 15%
         b.) Rock (1/2-inch to 1 inch), up to 5%
         c.) Rock (greater than 1 inch), not allowed, 0%
2. pH value shall be between 5.5 and 7.8 without high lime content.
3. Percent organic matter (OM): 2.0-5.0%, by dry weight.
4. Soluble salt level: Less than 2 mmho/cm.
5. Soil chemistry suitable for growing the plants specified.
   a. Salinity: Saturation Extract Conductivity (ECe) - less than 3.0 sD/m @ 25° C
   b. Sodium: Sodium Absorption Ratio (SAR) - less than 6.0
   c. Boron: Saturation Extract Concentration - Less than 1.0 ppm
   d. Soil shall contain sufficient quantities of available nitrogen, phosphorus, potassium, calcium and magnesium to support normal plant grown. In the event of nutrient inadequacies, provisions shall be made to add required material prior to planting.

B. Imported Topsoil shall be a harvested soil from fields or development sites. The organic content and particle size distribution shall be the result of natural soil formation. Manufactured soils where Coarse Sand, composted organic material or chemical additives has been added to the soil to meet the requirements of this specification section shall not be acceptable. Retained soil peds shall be the same color on the inside as is visible on the outside.

C. Imported Topsoil for Planting Soil shall NOT have been screened and shall retain soil peds or clods larger than 2 inches in diameter throughout the stockpile after harvesting.

D. Stockpiled Existing Topsoil at the site meeting the above criteria may be acceptable.

E. Provide a two-gallon sample from each Imported Topsoil source with required soil testing results. The sample shall be a mixture of the random samples taken around the source stockpile or field. The soil sample shall be delivered with soil peds intact that represent the size and quantity of expected peds in the final delivered soil.

2.2 COMPOST

A. Compost: Blended and ground leaf, wood and other plant-based material, composted for a minimum of 9 months and at temperatures sufficient to break down all woody fibers, seeds and leaf structures, free of toxic material at levels that are harmful to plants or humans. Source material shall be yard waste trimmings blended with other plant or manure-based material designed to produce Compost high in fungal material.

1. Compost shall be commercially prepared Compost and meet US Compost Council STA/TMECC criteria or as modified in this section for “Compost as a Landscape Backfill Mix Component”.

   http://compostingcouncil.org/admin/wp-content/plugins/wp-pdfupload/pdf/191/LandscapeArch_Specs.pdf

2. High Value Compost shall comply with the following parameters:
   a. Composted aerobic humus compost without presence of decomposition products. The organic matter content shall be at least 50% on a dry weight basis. Humus material shall have an acid-soluble ash content of no less than 6% and no more than 20%.
   b. The pH of the material shall be between 6 and 7.5.
   c. The salt content shall be less than 6 millimho/cm @ 25° C. (ECe less than 6) in a saturated paste extract.
   d. Boron content of the saturated extract shall be less than 1.0 part per million.
   e. Silicon content (acid-insoluble ash) shall be less than 50%.
   f. Calcium carbonate shall not be present if to be applied on alkaline soils.
   g. Types of acceptable products are composts, manures, mushroom composts, straw, alfalfa, peat mosses etc. low in salts, low in heavy metals, free from weed seeds, free of pathogens and other deleterious materials.
   h. Composted wood products are conditionally acceptable [stable humus must be present]. Wood based products are not acceptable which are based on red wood or cedar.
   i. Sludge-based materials are not acceptable.
   j. Carbon:nitrogen ratio is between 8.0 and 20:1.
   k. SAR (sodium adsorption ratio) less than 5.
   l. Seed germination - over 80% germination in saturation extract diluted 1 to 3 in water compared to seeds germinated in deionized water.
   m. Germination vigor - equal to or better than seed length for seeds germinated in deionized water.
   n. Maturity and stability – Solvita 5 or higher.
   o. Molar ratio of ammoniacal nitrogen to nitrate nitrogen less than 2.
   p. The compost shall be aerobic without malodorous presence of decomposition products.

q. The maximum particle size shall be 0.5 inch, 80% or more shall pass a No. 4 screen.

3. Maximum total permissible pollutant concentrations in amendment in parts per million on a dry weight basis:
   a. arsenic 12
   b. cadmium 15
   c. chromium 100
   d. cobalt 50
   e. copper 100
   f. lead 100
   g. mercury 10
   h. molybdenum 20
   i. nickel 100
   j. selenium 20
   k. silver 10
   l. vanadium 50
   m. zinc 200
4. Regular Compost shall comply with the following parameters:
   a. Humus material shall have an acid-soluble ash content of no less than 5% and no more than 20%. Organic matter shall be at least 50% on a dry weight basis.
   b. The pH of the material shall be between 6 and 7.8.
   c. The salt content shall be less than 10 millimho/cm @ 25° C. in a saturated paste extract.
   d. Boron content of the saturated extract shall be less than 1.0 parts per million.
   e. Silicon content (acid-insoluble ash) shall be less than 50%.
   f. Organic matter shall be at least 50% on a dry weight basis.
   g. Calcium carbonate shall not be present if to be applied on alkaline soils.
   h. Types of acceptable products are composts, manures, mushroom composts, straw, alfalfa, peat mosses etc. low in salts, low in heavy metals, free from weed seeds, free of pathogens and other deleterious materials.
   i. Composted wood products are conditionally acceptable [stable humus must be present]. Wood based products are not acceptable which are based on red wood or cedar.
   j. Sludge-based materials are not acceptable.
   k. Carbon:nitrogen ratio is less than 25:1.
   l. The compost shall be aerobic without malodorous presence of decomposition products.
   m. The maximum particle size shall be 0.5 inch, 80% or more shall pass a No. 4 screen for soil amending. The maximum particle size shall be 0.25 inch for hydroseeding.
5. Maximum total permissible pollutant concentrations in amendment in parts per million on a dry weight basis:
   a. arsenic 12
   b. cadmium 15
   c. chromium 200
   d. cobalt 50
   e. copper 150

f. lead 200
g. mercury 10
h. molybdenum 20
i. nickel 100
j. selenium 30
k. silver5
l. vanadium 50
m. zinc 250
n. Higher amounts of salinity or boron may be present if the soils are to be preleached to reduce the excess or if the plant species will tolerate the salinity and/or boron.

6. Provide a two gallon sample with manufacturer's literature and material certification that the product meets the requirements.

2.3 COARSE SAND

A. Clean, washed, sand, free of toxic materials

1. Coarse concrete sand, ASTM C-33 Fine Aggregate, with a Fines Modulus Index of 2.8 and 3.2.

2. Coarse Sands shall be clean, sharp, natural Coarse Sands free of limestone, shale and slate particles. Manufactured Coarse Sand shall not be permitted.

3. pH shall be lower than 7.0.

4. Provide Coarse Sand with the following particle size distribution:

Sieve	Percent passing
3/8 inch (9.5 mm)	100
No 4 (4.75 mm)	95-100
No 8 (2.36 mm)	80-100
No 16 (1.18 mm)	50-85
No 30 (.60 mm)	25-60
No 50 (.30 mm)	10-30
No 100 (.15 mm)	2-10
No 200 (0.75 mm	2-5

B. Provide a two gallon sample with manufacturer's literature and material certification that the product meets the requirements.

C. Medium Coarse Sand shall be used as a backfill material for Palm Trees. Refer to the Section 32 93 00 – Planting.

2.4 FERTILIZER, BIOLOGICAL AND OTHER AMENDMENTS

A. Contractor shall provide amendments recommended by Soils Report at no additional cost to Owner, including recommendations for the quality of organic amendment.

B. Mycorrhizal fungi shall be added in all planting areas, regardless of Soils Report.

1. Mycorrhizal inoculum consists of a combination of :
a. Blend of eight top types of Endospores: Glomus aggregatum, G. clarum, G. deserticola, G. intraradices, G. monosporus, G. mosseae, Gigaspora margarita, and

Paraglomus brasilianum,
b. Blend of seven top types of Ecto fungi spores:Lacarria laccata, Pisolithus tinctorius, Rhizopogon amylpogon, R. fulvigleba, R. rubescens, R. villosuli, and Scleroderma spp.
c. The guaranteed Endo spore count shall be a minimum 50 spores/cc,
d. The Ecto spore count shall be a minimum 50,000 spores/cc

2. Manufacturers:
a. BioOrganics Mycorrhizae Inoculants, (888) 332-7676
b. Mycorrhizal Applications, Inc, (866) 476-7800
c. Fox Farm, (800) 436-9327
d. Or approved equal.

2.5 LIME

A. ASTM C 602, agricultural limestone containing a minimum 80 percent calcium carbonate equivalent and as follows:

1. Class: Class T, with a minimum 99 percent passing through No. 8 (2.36-mm) sieve and a minimum 75 percent passing through No. 60 (0.25-mm) sieve.

2. Provide lime in form of dolomitic limestone.

B. Provide manufacturer's literature and material certification that the product meets the requirements.

2.6 EXISTING SOIL (Site Soil Acceptable for planting with minimum modifications)

A. General definition of existing soil: Surface soil in the areas designated on the soils plan as existing soil, that is not altered, compacted to root limiting density, graded or contaminated before or during the construction process and considered acceptable for planting and long-term health of the plants specified either as it exists or with only minor modification.

1. The Landscape Architect shall verify that the soil in the designated areas is suitable at the beginning of planting bed preparation work in that area. In the event that the work of this project construction has damaged the existing soil in areas designated for use as Planting Soil to the point where the soil is no longer suitable to support the plants specified, the Landscape Architect may require modification of the damaged soil up to and including removal and replacement with soil of equal quality to the soil that existed prior to construction. Examples of damage include further compaction, contamination, grading, creation of hard pan or drainage problems, and loss of the O, and or A horizon.
a. Do not begin work on additional modifications until changes to the contract price are approved by Landscape Architect.

B. Protect existing soil from compaction, contamination, and degradation during the construction process.

C. Unless otherwise instructed, remove all existing plants, root thatch, and non-soil debris from the surface of the soil using equipment that does not increase compaction of soil to root limiting levels.

D. Modifications:

1. When results of soil tests recommend chemical adjustments, till surface soil to six inches or greater after chemical adjustments have been are applied.
2. Remove existing turf thatch, ground cover plants and weeds.
3. Provide pre-emergent weed control if indicated.
4. Make chemical adjustment as recommended by the soil test.

2.7 MODIFIED EXISTING SOIL (SITE SOIL SUITABLE FOR PLANTING WITH INDICATED MODIFICATION)

A. General definition: Surface soil in the areas designated on the soils plan or by the Landscape Architect as Modified Existing Soil has been altered and or graded before or during the construction process but is still considered acceptable for planting and long-term health of the plants specified with the proposed modifications. Modifications respond to the soil problems expected or encountered. The Landscape Architect shall verify that the soil in the designated areas is suitable for modification at the beginning of planting bed preparation work in that area.

1. The Landscape Architect shall verify that the soil in the designated areas is suitable for the specified modification at the beginning of planting bed preparation work in that area. In the event that the work of this project construction has damaged the existing soil in areas designated for modification to the point where the soil is no longer suitable to support the plants specified with the specified modification, the Landscape Architect may require further modification of the damaged soil up to an including removal and replacement with soil of equal quality to the soil that would have resulted from the modification. Damage may include further compaction, contamination, grading, creation of hard pan or drainage problem, and loss of the O, and or A horizon.
2. General requirements for all soil modifications:
   a. Take soil samples, test for chemical properties, and make appropriate adjustments.
   b. Unless otherwise instructed, remove all existing plants, root thatch, and non-soil debris from the surface of the soil using equipment that does not add to the compaction in the soil.
   c. All soil grading, tilling and loosening must be completed at times when the soil moisture is below field capacity. Allow soil to drain for at least two days after any rain event more than 1 inch in 24 hours, or long enough so that the soil does not make the hand muddy when squeezed.
   d. Provide pre-emergent weed control after the soil work is complete and plants planted but prior to adding mulch to the surface, if indicated by weed type and degree of threat.

B. Modified existing soil – soil removed, stockpiled, and spread

1. Existing soil that is suitable for reuse as Planting Soil but is in the wrong place of elevation or cannot be adequately protected during construction. Soil is to be harvested, stockpiled and re-spread with or without further modifications as indicated.
2. Modifications:
   a. Excavate existing soil from the areas and to depths designated on the drawings.

Stockpile in zones noted on the drawings or in areas proposed by the Contractor.
1.) Prepare a soil stockpile plan for approval.

b. Excavate soil using equipment and methods to preserve the clumps and peds in the soil. Generally, this means using the largest piece of equipment that is practical for the project size and scope.
c. Protect stockpiles from erosion by compacting or tracking the soil surface, covering with breathable fabric or planting with annual grasses as appropriate for the season, location, and length of expected time of storage.
d. Re-spread soil as required in Part 3 of this specification.

C. Modified existing soil – compacted surface soil (Tilling Option).

1. Description of condition to be modified: Surface soil compaction to a maximum of 6 inches deep from traffic or light grading. Original A horizon may be previously removed or graded but lower profile intact with acceptable compaction levels and limited grading. The soil organic matter, pH and chemistry in the A horizon may not be suitable for the proposed plants and may need to be modified as required.

2. Modifications:

a. Till top 6 inches or deeper of the soil surface, with a *roto tiller, spade tiller,* ripper or agricultural plow. Spread 2 - 3 inches of Compost on the surface of the tilled soil and make any chemical adjustment as recommended by the soil test.
b. Till or disk the Compost into the loosened soil. Smooth out grades with a drag rake or drag slip.

D. Modified existing soil – compacted surface soil (Radial Trenching Option)

1. Description of condition to be modified: Surface soil compaction to a maximum of 24 inches deep from traffic or light grading. Original A horizon may be previously removed or graded but lower profile below 24 inches intact with acceptable compaction levels and limited grading. The soil organic matter, pH and chemistry in the A horizon may not be suitable for the proposed plants and may need to be modified as required.

2. Modifications:
a. Using a trenching machine, dig trenches to the extent and depth shown on the plans and details.
b. Backfill the trench with the soil removed from the trench. Add additional site soil if needed to fill the trench to be flush to the existing grade after the soil settlement.

E. Modified existing soil – compacted subsoil

1. Description of condition to be modified: Deep soil compaction the result of previous grading, filling and dynamic or static compaction forces. Original A horizon likely removed or buried. The soil organic matter, pH and chemistry in the A horizon is likely not suitable for the proposed plants and should be modified as required.

2. Soil Ripping:
a. Step one: After grading and removing all plants and debris from the surface, using a tracked dozer or similar large grading equipment, loosen the soil by dragging a ripping shank or chisel thru the soil to depths of 24 inches with ripping shanks

spaced 18 inches or less apart in two directions. The number of shanks per pull is dependent on the degree of soil compaction and the size of the dozer.

b. Step 2: Spread 3-4 inches of Compost over the ripped area and till into the top 6 inches of the soil surface.

3. Soil Fracturing:
   a. Step one: After grading and removing all plants and debris from the surface, spread 2 – 3 inches of Compost over the surface of the soil. Loosen the soil to depth of 18 - 24 inches, using a backhoe to dig into the soil through the Compost. Lift and then drop the loosened soil immediately back into the hole. The bucket then moves to the adjacent soil and repeats the process until the entire area indicated has been loosened.
   b. Step 2: Spread 3-4 inches of Compost over the ripped area and till into the top 6 inches of the soil surface.
4. Trenching:
   a. Step one: After grading and removing all plants and debris from the surface using a chain trenching machine, dig 24 inch deep trenches, 24 inches apart across the entire area. Maintain an 18-inch standoff from the edges of all curbs, paving and structures. Backfill the trenches with Compost.
   b. Step 2: Spread 3-4 inches of Compost over the trenches area and till into the top 6 inches of the soil surface. Compost tilling treatment shall extend to the edges of curbs, paving and structures.
5. Following soil ripping or fracturing the average penetration resistance should be less than 250 psi to the depth of the ripping or fracturing.
6. Do not start planting into ripped or fractured soil until soil has been settled or leave grades sufficiently high to anticipate settlement of 10 – 15% of ripped soil depth.

F. Modified existing soil – low organic matter

1. Description of condition to be modified: Low soil organic matter and/or missing A horizon but soil is not compacted except for some minor surface compaction. The soil organic matter, pH and/or chemistry are likely not suitable for the proposed plants and should be modified as required.
2. Modifications:
   a. Spread 3 - 4 inches of Compost over the surface of the soil and make chemical adjustment as recommended by the soil test.
   b. Till Compost into the top 6 inches of the soil.

G. Modified existing soil – soil within the root zone of existing established trees

1. Description of condition to be modified: Surface compaction near or above root limited levels in the upper soil horizon the result of traffic or other mechanical compaction.
2. Modifications:
   a. Remove the tops of all plants to be removed from the root zone. Remove sod with a walk behind sod cutter. Do not grub out the roots of plats to be removed.
   b. Use a pneumatic air knife to loosen the top 9 – 12 inches of the soil. Surface roots may move and separate from soil during this process but the bark on roots should

not be broken

1.) Pneumatic air knife shall be as manufactured by:
Concept Engineering Group, Inc., Verona, PA (412) 826-8800
or
Supersonic Air Knife, Inc., Allison Park, PA (866) 328 5723

c. Make chemical adjustment as recommended by the soil test and add 2 - 3 inches of Compost over the soil.
d. Using the pneumatic air knife, mix the Compost into the top 6 – 8 inches of the loosened soil.
e. Work in sections such that the entire process - including irrigation - can be completed in one day. Apply approximately one inch of water over the loosened soil at the completion of each day's work. Apply mulch or turf as indicated on the drawings within one week of the completion of work.

H. Modified existing soil – soil within tree pits

1. Perform percolation tests in tree pits prior to bringing trees to site.
2. Once holes have been dug per the contract drawings, fill sand pit with water to a depth of twelve inches and report the time required for all water to drain from hole.
   a. If drainage requires more than 24 hours, contractor shall install, at no additional cost to owner, a six-inch diameter perforated PVC chimney drain, a minimum forty-eight inches dee, gravel filled, covered with geotextile, set vertically at the lowest point of the bottom of the tree pit with a minimum two percent slope away from the tree.

2.8 PLANTING SOIL MIXES

A. General definition: Mixes of Existing Soil or Imported Topsoil, Coarse Sand, and or Compost to make a new soil that meets the project goals for the indicated planting area. These may be mixed off site or onsite and will vary in Mix components and proportions as indicated.

B. Planting Mix - moderately slow draining soil for trees and shrub beds

1. A Mix of Imported Topsoil, Coarse Sand and Compost. The approximate Mix ratio shall be:

Mix component	% by moist volume
Imported Topsoil unscreened	45-50%
Coarse sand	40-45%
Compost	10%

2. Final tested organic matter between 2.75 and 4% (by dry weight).
3. Mix the Coarse Sand and Compost together first and then add to the Topsoil. Mix with a loader bucket to loosely incorporate the Topsoil into the Coarse Sand/Compost Mix. DO NOT OVER MIX! Do not mix with a soil blending machine. Do not screen the soil. Clumps of Soil, Compost and Coarse Sand will be permitted in the overall Mix.
4. At the time of final grading, add fertilizer if required to the Planting Soil at rates recommended by the testing results for the plants to be grown.
5. Provide a two-gallon sample with testing data that includes recommendations for

chemical additives for the types of plants to be grown. Samples and testing data shall be submitted at the same time.

2.9 HEAVY DUTY PIPE DRAIN PIPE

A. Drain pipe shall be 4 inch diameter, perforated, PVC, Schedule 40 pipe. Holes in the pipe shall only be on the bottom quadrant. All fittings, elbows, unions, T's and screw caps shall be the same material and from the same manufacturer as the pipe. "T" and elbow joints shall be sanitary type connections. All joints shall be solvent welded. Submit manufacturers product literature for approval by the Landscape Architect.

1. When pipe has perforations on all quadrants, drape a 12 inch wide 4 mil plastic sheet over the length of the pipe to force water to the bottom of the pipe.

B. Clean out: Clean out risers shall be 4 inch diameter Schedule 40 PVC solid pipe compatible with the bottom fitting and clean out screw cap. Elbow fitting at the bottom of the clean out riser. When the cleanout is in the middle of a pipe run the fitting shall be a sanitary T fitting. Screw cap FITTING shall be PVC Schedule 40.

2.10 MEDIUM DUTY PIPE DRAIN PIPE

A. Drain pipe shall be 4 inch diameter, perforated, PVC, double wall (smooth interior wall / corrugated exterior wall) pipe. Holes in the pipe shall only be on the bottom quadrant. All fittings, elbows, unions, T's and screw caps shall be the same material and from the same manufacturer as the pipe. "T" and elbow joints shall be sanitary type connections. All joints shall be gasketed bell and spigot. Example source A -2000 by Contech Construction Products or approved equal. Submit manufacturers product literature for approval by the Landscape Architect.

1. When pipe has perforations on all quadrants, drape a 12 inch wide 4 mil plastic sheet over the length of the pipe to force water to the bottom of the pipe.

B. Clean out: Clean out risers shall be 4 inch diameter Schedule 40 PVC solid pipe compatible with the bottom fitting and clean out screw cap. Elbow fitting at the bottom of the clean out riser. When the cleanout is in the middle of a pipe run the fitting shall be a sanitary T fitting. Screw cap FITTING shall be PVC Schedule 40.

2.11 LIGHT DUTY PIPE DRAIN PIPE

A. Drain pipe shall be 4 inch diameter, perforated, HDPE, single wall corrugated exterior pipe. ASTM F405. All fittings, elbows, unions, T's and screw caps shall be the same material and from the same manufacturer as the pipe. All joints shall be gasketed bell and spigot. Example source ADS Single Wall Pipe by Advance Drainage Systems or approved equal. Submit manufacturers product literature for approval by the Landscape Architect.

1. When pipe has perforations on all quadrants, drape a 12 inch wide 4 mil plastic sheet over the length of the pipe to force water to the bottom of the pipe.

B. Clean out: Clean out risers shall be 4 inch diameter Schedule 40 PVC solid pipe compatible with the bottom fitting and clean out screw cap. Elbow fitting at the bottom of the clean out

riser. When the cleanout is in the middle of a pipe run the fitting shall be a sanitary T fitting. Screw cap FITTING shall be PVC Schedule 40.

PART 3 – EXECUTION

3.1 SITE EXAMINATION

A. Prior to installation of Planting Soil, examine site to confirm that existing conditions are satisfactory for the work of this section to proceed.

1. Confirm that the subgrade is at the proper elevation and compacted as required. Subgrade elevations shall slope toward the under drain lines as shown on the drawings.
2. Confirm that surface all areas to be filled with Planting Soil are free of construction debris, refuse, compressible or biodegradable materials, stones greater than 2 inches diameter, soil crusting films of silt or clay that reduces or stops drainage from the Planting Soil into the subsoil; and/or standing water. Remove unsuitable material from the site.
3. Confirm that no adverse drainage conditions are present.
4. Confirm that no conditions are present which are detrimental to plant growth.
5. Confirm that utility work has been completed per the drawings.
6. Confirm that irrigation work, which is shown to be installed below prepared soil levels, has been completed.

B. If unsatisfactory conditions are encountered, notify the Landscape Architect immediately to determine corrective action before proceeding.

3.2 COORDINATION WITH PROJECT WORK

A. The Contractor shall coordinate with all other work that may impact the completion of the work.

B. Prior to the start of work, prepare a detailed schedule of the work for coordination with other trades.

C. Coordinate the relocation of any irrigation lines, heads or the conduits of other utility lines that are in conflict with tree locations. Root balls shall not be altered to fit around lines. Notify the Landscape Architect of any conflicts encountered.

3.3 GRADE AND ELEVATION CONTROL

A. Provide grade and elevation control during installation of Planting Soil. Utilize grade stakes, surveying equipment, and other means and methods to assure that grades and contours conform to the grades indicated on the plans.

3.4 SITE PREPARATION

A. Excavate to the proposed subgrade. Maintain all required angles of repose of the adjacent materials as shown on the drawings or as required by this specification. Do not over excavate compacted subgrades of adjacent pavement or structures. Maintain a supporting 1:1 side slope of compacted subgrade material along the edges of all paving and structures

where the bottom of the paving or structure is above the bottom elevation of the excavated planting area.

B. Remove all construction debris and material including any construction materials from the subgrade.

C. Confirm that the subgrade is at the proper elevation and compacted as required. Subgrade elevations shall slope approximately parallel to the finished grade and/or toward the subsurface drain lines as shown on the drawings.

D. In areas where Planting Soil is to be spread, confirm subgrade has been scarified.

E. Protect adjacent walls, walks and utilities from damage or staining by the soil. Use 1/2 inch plywood and or plastic sheeting as directed to cover existing concrete, metal and masonry work and other items as directed during the progress of the work.

1. At the end of each working day, clean up any soil or dirt spilled on any paved surface.
2. Any damage to the paving or site features or work shall be repaired at the Contractor's expense.

3.5 SOIL MOISTURE

A. Volumetric soil moisture level, in both the Planting Soil and the root balls of all plants, prior to, during and after planting shall be above permanent wilt point and below field capacity for each type of soil texture within the following ranges.

Soil texture	**Permanent wilting point**	**Field capacity**
Sand, Loamy sand, Sandy loam	5-8%	12-18%
Loam, Sandy clay, Sandy clay loam	14-25%	27-36%
Clay loam, Silt loam	11-22%	31-36%
Silty clay, Silty clay loam	22-27%	38-41%

B. The Contractor shall confirm the soil moisture levels with a moisture meter (Digital Soil Moisture Meter, DSMM500 by General Specialty Tools and Instruments, or approved equivalent). If moisture is found to be too low, the planting holes shall be filled with water and allowed to drain before starting any planting operations. If the moisture is too high, suspend planting operations until the soil moisture drains to below field capacity.

3.6 EXISTING SOIL MODIFICATION

A. Follow the requirements for modifying existing soil as indicated in the soils test.

3.7 DRAIN PIPE INSTALLATION

1. Trench lines to depths and widths shown on plans.
2. Place 2 – 3 inches Coarse Sand as bedding for pipes.
3. Place pipe (holes facing down) to invert elevations shown on the plan.
   a. If pipe with holes on all sides is used drape a piece of 4 mil plastic 12 inches wide over top of pipe.
   b. Cover sides and top of pipe with Coarse Sand with min 4 inches of Coarse Sand cover above top of pipe.
   c. Backfill trench with Planting Soil compacted to same level as Planting Soil requirements.
4. Add cleanout pipe reaching the surface at the uphill end of each pipe run as shown on drawings.
5. Connect pipes to manhole or daylight outfall as shown on the drawings.

3.8 PLANTING SOIL AND PLANTING SOIL MIX INSTALLATION ON GRADE

A. Prior to installing any Planting Soil from stockpiles or Planting Soil Mixes blended off site, the Landscape Architect shall approve the condition of the subgrade and the previously installed subgrade preparation and the installation of subsurface drainage.

B. All equipment utilized to install or grade Planting Soils shall be wide track or balloon tire machines rated with a ground pressure of 4 psi or less. All grading and soil delivery equipment shall have buckets equipped with 6 inch long teeth to scarify any soil that becomes compacted.

C. In areas of soil installation above existing subsoil, scarify the subgrade material prior to installing Planting Soil.

   1. Scarify the subsoil of the subgrade to a depth of 3 – 6 inches with the teeth of the back hoe or loader bucket, tiller or other suitable device.
   2. Immediately install the Planting Soil. Protect the loosened area from traffic. DO NOT allow the loosened subgrade to become compacted.
   3. In the event that the loosened area becomes overly compacted, loosen the area again prior to installing the Planting Soil.

D. Install the Planting Soil in 12 - 18 inch lifts to the required depths. Apply compacting forces to each lift as required to attain the required compaction. Scarify the top of each lift prior to adding more Planting Soil by dragging the teeth of a loader bucket or backhoe across the soil surface to roughen the surface.

E. Phase work such that equipment to deliver or grade soil does not have to operate over previously installed Planting Soil. Work in rows of lifts the width of the extension of the bucket on the loader. Install all lifts in one row before proceeding to the next. Work out from the furthest part of each bed from the soil delivery point to the edge of each bed area.

F. Where possible place large trees first and fill Planting Soil around the root ball.

G. Installing soil with soil or mulch blowers or soil slingers shall not be permitted due to the over mixing and soil ped breakdown cause by this type of equipment.

H. Where travel over installed soil is unavoidable, limit paths of traffic to reduce the impact of compaction in Planting Soil. Each time equipment passes over the installed soil it shall reverse out of the area along the same path with the teeth of the bucket dropped to scarify the soil. Comply with the paragraph “Compaction Reduction” (section 3.9) in the event that soil becomes over compacted.

I. The depths and grades shown on the drawings are the final grades after settlement and shrinkage of the compost material. The Contractor shall install the Planting Soil at a higher level to anticipate this reduction of Planting Soil volume. A minimum settlement of approximately 10 - 15% of the soil depth is expected. All grade increases are assumed to be as measured prior to addition of surface Compost till layer, mulch, or sod.

3.9 PLANTING SOIL AND PLANTING SOIL MIX INSTALLATION IN PLANTING AREAS OVER STRUCTURE

A. Protect Planting Soil Mix and Growing Media during storage to prevent drying or soil separation from rain and to prevent weed seed contamination. Pressure wash handling equipment prior to use to prevent contamination from weed seeds.

B. Install soil and drainage system after waterproofing by others according to manufacturer's written instructions and details. Install underlayment as specified. Install geotextile protection fabric and turn fabric up vertical flashing surfaces prior to placing Planting Soil Mix or Growing Media.

C. Drainage Layer: Place drainage layer parallel to slope. Abut sections of drainage layer. Overlap provided seams of attached filter fabric.

D. If required per structural weights, reduce soil depth as directed by Landscape Architect.

1. Geofoam Fill: Install geofoam-fill blocks in as few layers as possible with abutting edges and ends and with the long dimension of each block placed at right angles to blocks in each subsequent layer. Offset joints of blocks in successive layers.

2. Cover geofoam fill with separation geotextile before placing overlying growing medium.

E. Transport growing medium to structure or roof using stabilized hoisting equipment, blower truck, or cranes.

F. Remove all debris from container prior to installing growing medium.

G. Place planting soil mix or growing medium or temporary ballast immediately after layered system installation to prevent movement due to weather and construction activities.

1. After placing at specified depth, thoroughly water the entire planting area to preset and compact the growing media. Fill settled low areas with additional soil or medium. Repeat the compaction and filling process until area is of consistent thickness and settling no longer occurs.

H. Distribute growing medium evenly throughout the system or as shown on drawings, removing ay temporary ballast measures.

I. Access Boxes: Install access box at locations shown on Drawings. Install top of boxes level with the finish elevation of growing medium

3.10 COMPACTION REQUIREMENTS FOR INSTALLED OR MODIFIED PLANTING SOIL

A. Compact installed Planting Soil to the compaction rates indicated and using the methods approved for the soil mockup. Compact each soil lift as the soil is installed.

B. Existing soil that is modified by tilling, ripping or fracturing shall have a density to the depth of the modification, after completion of the loosening, such that the penetrometer reads approximately 75 to 250 psi at soil moisture approximately the mid-point between wilting point and field capacity. This will be approximately between 75 and 82% of maximum dry density standard proctor.

C. Installed Planting Soil Mix and re-spread existing soil shall have a soil density through the required depth of the installed layers of soil, such that the penetrometer reads approximately 75 to 250 psi at soil moisture approximately the mid-point between wilt point and field capacity. This will be approximately between 75 and 82% of maximum dry density standard proctor.

D. Planting Soil compaction shall be tested at each lift using a penetrometer calibrated to the mockup soil and its moisture level. The same penetrometer and moisture meter used for the testing of the mockup shall be used to test installed soil throughout the work.

E. Maintain moisture conditions within the Planting Soil during installation or modification to allow for satisfactory compaction. Suspend operations if the Planting Soil becomes wet. Apply water if the soil is overly dry.

F. Provide adequate equipment to achieve consistent and uniform compaction of the Planting Soils. Use the smallest equipment that can reasonably perform the task of spreading and compaction. Use the same equipment and methods of compaction used to construct the Planting Soil mockup.

G. Do not pass motorized equipment over previously installed and compacted soil except as authorized below.

1. Light weight equipment such as trenching machines or motorized wheel barrows is permitted to pass over finished soil work.

2. If work after the installation and compaction of soil compacts the soil to levels greater than the above requirements, follow the requirements of the paragraph "Over Compaction Reduction" below.

3.11 OVER COMPACTION REDUCTION

A. Any soil that becomes compacted to a density greater than the specified density and/or the density in the approved mockup shall be dug up and reinstalled. This requirement includes compaction caused by other sub-contractors after the Planting Soil is installed and approved.

B. Surface roto tilling shall not be considered adequate to reduce over compaction at levels 6 inches or greater below finished grade.

3.12 INSTALLATION OF CHEMICAL ADDITIVES

A. Following the installation of each soil and prior to fine grading and installation of the Compost till layer, apply chemical additives as recommended by the soil test, and

appropriate to the soil and specific plants to be installed.

B. Types, application rates and methods of application shall be approved by the Landscape Architect prior to any applications.

3.13 FINE GRADING

A. The Landscape Architect shall approve all rough grading prior to the installation of Compost, fine grading, planting, and mulching.

B. Grade the finish surface of all planted areas to meet the grades shown on the drawings, allowing the finished grades to remain higher (10 – 15% of depth of soil modification) than the grades on the grading plan, as defined in paragraph Planting Soil Installation, to anticipate settlement over the first year.

C. Utilize hand equipment, small garden tractors with rakes, or small garden tractors with buckets with teeth for fine grading to keep surface rough without further compaction. Do not use the flat bottom of a loader bucket to fine grade, as it will cause the finished grade to become overly smooth and or slightly compressed.

D. Provide for positive drainage from all areas toward the existing inlets, drainage structures and or the edges of planting beds. Adjust grades as directed to reflect actual constructed field conditions of paving, wall and inlet elevations. Notify the Landscape Architect in the event that conditions make it impossible to achieve positive drainage.

E. Provide smooth, rounded transitions between slopes of different gradients and direction. Modify the grade so that the finish grade before adding mulch and after settlement is one or two inches below all paving surfaces or as directed by the drawings.

F. Fill all dips and remove any bumps in the overall plane of the slope. The tolerance for dips and bumps in shrub and ground cover planting areas shall be a 2 inch deviation from the plane in 10 feet. The tolerance for dips and bumps in lawn areas shall be a 1 inch deviation from the plane in 10 feet.

3.14 INSTALLATION OF COMPOST TILL LAYER

A. After Planting Soil Mixes are installed in planting bed areas and just prior to the installation of shrub or groundcover plantings, spread 3 – 4 inches of Compost over the beds and roto till into the top 4 - 6 inches of the Planting Soil. This step will raise grades slightly above the grades required in paragraph “Fine Grading”. This specification anticipates that the raise in grade due to this tilling will settle within a few months after installation as Compost breaks down. Additional settlement as defined in paragraph “Planting Soil and Planting Soil Mix installation” must still be accounted for in the setting of final grades.

3.15 CLEAN-UP

A. During installation, keep the site free of trash, pavements reasonably clean and work area in an orderly condition at the end of each day. Remove trash and debris in containers from the site no less than once a week.

1. Immediately clean up any spilled or tracked soil, fuel, oil, trash or debris deposited by the Contractor from all surfaces within the project or on public right of ways and neighboring property.

B. Once installation is complete, wash all soil from pavements and other structures. Ensure that mulch is confined to planting beds and that all tags and flagging tape are removed from the site. The Landscape Architect seals are to remain on the trees and removed at the end of the warranty period.

1. Make all repairs to grades, ruts, and damage to the work or other work at the site.
2. Remove and dispose of all excess Planting Soil, subsoil, mulch, plants, packaging, and other material brought to the site by the Contractor.

3.16 PLANTING SOIL AND MODIFIED EXISTING SOIL PROTECTION

A. The Contractor shall protect installed and/or modified Planting Soil from damage including contamination and over compaction due to other soil installation, planting operations, and operations by other Contractors or trespassers. Maintain protection during installation until acceptance. Utilize fencing and matting as required or directed to protect the finished soil work. Treat, repair or replace damaged Planting Soil immediately.

B. Loosen compacted Planting Soil and replace Planting Soil that has become contaminated as determined by the Landscape Architect. Planting Soil shall be loosened or replaced at no expense to the Owner.
   a. Till and restore grades to all soil that has been driven over or compacted during the installation of plants.
   b. Where modified existing soil has become contaminated and needs to be replaced, provide imported soil that is of similar composition, depth and density as the soil that was removed.

3.17 PROTECTION DURING CONSTRUCTION

A. The Contractor shall protect planting and related work and other site work from damage due to planting operations, operations by other Contractors or trespassers.

1. Maintain protection during installation until the date of plant acceptance (see specifications section – Planting). Treat, repair or replace damaged work immediately.
2. Provide temporary erosion control as needed to stop soil erosion until the site is stabilized with mulch, plantings or turf.

B. Damage done by the Contractor, or any of their sub-contractors to existing or installed plants, or any other parts of the work or existing features to remain, including large existing trees, soil, paving, utilities, lighting, irrigation, other finished work and surfaces including those on adjacent property, shall be cleaned, repaired or replaced by the Contractor at no expense to the Owner. The Landscape Architect shall determine when such cleaning, replacement or repair is satisfactory. Damage to existing trees shall be assessed by a certified arborist.

3.18 SUBSTANTIAL COMPLETION ACCEPTANCE

A. Upon written notice from the Contractor, the Landscape Architect shall review the work and make a determination if the work is substantially complete.

B. The date of substantial completion of the planting soil shall be the date when the Landscape Architect accepts that all work in Planting, Planting Soil, and Irrigation installation sections is

complete.

3.19 FINAL ACCEPTANCE / SOIL SETTLEMENT

A. At the end of the plant warrantee and maintenance period, (see Specification section 32 93 00 - Planting) the Landscape Architect shall observe the soil installation work and establish that all provisions of the contract are complete, and the work is satisfactory.

1. Restore any soil settlement and or erosion areas to the grades shown on the drawings. When restoring soil grades remove plants and mulch and add soil before restoring the planting. Do not add soil over the root balls of plants or on top of mulch.

B. Failure to pass acceptance: If the work fails to pass final acceptance, any subsequent observations must be rescheduled as per above. The cost to the Owner for additional observations will be charged to the Contractor at the prevailing hourly rate of the Landscape Architect.

END OF SECTION

SECTION 32 93 00 – PLANTING

PART 1 – GENERAL

1.1 SUMMARY

A. The scope of work includes all labor, materials, appliances, tools, equipment, facilities, transportation and services necessary for, and incidental to performing all operations in connection with furnishing, delivery, and installation of plant (also known as "landscaping") complete as shown on the drawings and as specified herein.

B. The scope of work in this section includes, but is not limited to, the following:

1. Locate, purchase, deliver and install all specified plants.
2. Water all specified plants.
3. Mulch, fertilize, stake, and prune all specified plants.
4. Maintenance of all specified plants until the beginning of the warranty period.
5. Plant warranty.
6. Clean up and disposal of all excess and surplus material.
7. Maintenance of all specified plants during the warranty period.

1.2 CONTRACT DOCUMENTS

A. Shall consist of specifications and general conditions and the construction drawings. The intent of these documents is to include all labor, materials, and services necessary for the proper execution of the work. The documents are to be considered as one. Whatever is called for by any parts shall be as binding as if called for in all parts.

1.3 RELATED DOCUMENTS AND REFERENCES

A. Related Documents:
1. Drawings and general provisions of contract including general and supplementary conditions and Division I specifications apply to work of this section
2. Related Specification Sections
   a. Section 32 91 00 - Planting Soil
3. Section 32 84 00 - Irrigation
4. Section 01 56 39 - Tree Protection and Plant Protection

B. References: The following specifications and standards of the organizations and documents listed in this paragraph form a part of the specification to the extent required by the references thereto. In the event that the requirements of the following referenced standards and specification conflict with this specification section the requirements of this specification shall prevail. In the event that the requirements of any of the following referenced standards and specifications conflict with each other the more stringent requirement shall prevail or as determined by the Landscape Architect.

1. State of California, Department of Food and Agriculture, Regulations for Nursery Inspections, Rules and Grading.
2. ANSI Z60.1 American Standard for Nursery Stock, most current edition.

3. ANSI A 300 – Standard Practices for Tree, Shrub and other Woody Plant Maintenance, most current edition and parts.
4. Interpretation of plant names and descriptions shall reference the following documents. Where the names or plant descriptions disagree between the several documents, the most current document shall prevail.
   a. USDA - The Germplasm Resources Information Network (GRIN) http://www.ars-grin.gov/npgs/searchgrin.html
   b. Manual of Woody Landscape Plants; Michael Dirr; Stipes Publishing, Champaign, Illinois; Most Current Edition.
   c. The New Sunset Western Garden Book, Oxmoor House, most current edition.
5. Pruning practices shall conform to recommendations “Structural Pruning: A Guide For The Green Industry” most current edition; published by Urban Tree Foundation, Visalia, California.
6. Glossary of Arboricultural Terms, International Society of Arboriculture, Champaign IL, most current edition.

1.4 VERIFICATION

A. All scaled dimensions on the drawings are approximate and diagrammatic. Before proceeding with any work, the Contractor shall carefully check and verify all dimensions and quantities, and shall immediately inform the Landscape Architect of any discrepancies between the information on the drawings and the actual conditions, refraining from doing any work in said areas until given approval to do so by the Landscape Architect.

B. In the case of a discrepancy in the plant quantities between the plan drawings and the plant call outs, list or plant schedule, the number of plant symbols or square footage of the planting bed actually drawn on the plan drawings shall be deemed correct and prevail.

1.5 PERMITS AND REGULATIONS

A. The Contractor shall obtain and pay for all permits related to this section of the work unless previously excluded under provision of the contract or general conditions. The Contractor shall comply with all laws and ordinances bearing on the operation or conduct of the work as drawn and specified. If the Contractor observes that a conflict exists between permit requirements and the work outlined in the contract documents, the Contractor shall promptly notify the Landscape Architect in writing including a description of any necessary changes and changes to the contract price resulting from changes in the work.

B. Wherever references are made to standards or codes in accordance with which work is to be performed or tested, the edition or revision of the standards and codes current on the effective date of this contract shall apply, unless otherwise expressly set forth.

C. In case of conflict among any referenced standards or codes or between any referenced standards and codes and the specifications, the more restrictive standard shall apply or Landscape Architect shall determine which shall govern.

1.6 PROTECTION OF WORK, PROPERTY AND PERSON

A. The Contractor shall adequately protect the work, adjacent property, and the public, and shall be responsible for any damages or injury due to his/her actions.

1.7 CHANGES IN THE WORK

A. The Landscape Architect may order changes in the work, and the contract sum should be adjusted accordingly. All such orders and adjustments plus claims by the Contractor for extra compensation must be made and approved in writing before executing the work involved.

B. All changes in the work, notifications and contractor's request for information (RFI) shall conform to the contract general condition requirements.

1.8 CORRECTION OF WORK

A. The Contractor, at their own cost, shall re-execute any work that fails to conform to the requirements of the contract and shall remedy defects due to faulty materials or workmanship upon written notice from the Landscape Architect, at the soonest as possible time that can be coordinated with other work and seasonal weather demands.

1.9 DEFINITIONS

All terms in this specification shall be as defined in the "Glossary of Arboricultural Terms" or as modified below.

A. Boxed trees: A container root ball package made of wood in the shape of a four-sided box.

B. Container plant: Plants that are grown in and/or are currently in a container including boxed trees.

C. Defective plant: Any plant that fails to meet the plant quality requirement of this specification.

D. End of Warranty Final Acceptance: The date when the Landscape Architect accepts that the plants and work in this section meet all the requirements of the warranty. It is intended that the materials and workmanship warranty for Planting, Planting Soil, and Irrigation work run concurrent with each other.

E. Field grown trees (B&B): Trees growing in field soil for at least 12 months prior to harvest.

F. Healthy: Plants that are growing in a condition that expresses leaf size, crown density, color; and with annual growth rates typical of the species and cultivar's horticultural description, adjusted for the planting site soil, drainage and weather conditions.

G. Kinked root: A root within the root package that bends more than 90 degrees.

H. Maintenance: Actions that preserve the health of plants after installation and as defined in this specification.

I. Maintenance period: The time period, as defined in this specification, which the Contractor is to provide maintenance.

J. Normal: the prevailing protocol of industry standard(s).

K. Landscape Architect: The person appointed by the Owner to represent their interest in the review and approval of the work and to serve as the contracting authority with the Contractor. The Landscape Architect may appoint other persons to review and approve any aspects of the work.

L. Reasonable and reasonably: When used in this specification relative to plant quality, it is intended to mean that the conditions cited will not affect the establishment or long term

stability, health or growth of the plant. This specification recognizes that it is not possible to produce plants free of all defects, but that some accepted industry protocols and standards result in plants unacceptable to this project.

When reasonable or reasonably is used in relation to other issues such as weeds, diseased, insects, it shall mean at levels low enough that no treatment would be required when applying recognized Integrated Plant Management practices.

This specification recognizes that some decisions cannot be totally based on measured findings and that professional judgment is required. In cases of differing opinion, the Landscape Architect's expert shall determine when conditions are judged as reasonable.

M. Root ball: The mass of roots including any soil or substrate that is shipped with the tree within the root ball package.

N. Root ball package. The material that surrounds the root ball during shipping. The root package may include the material in which the plant was grown, or new packaging placed around the root ball for shipping.

O. Root collar (root crown, root flare, trunk flare, flare): The region at the base of the trunk where the majority of the structural roots join the plant stem, usually at or near ground level.

P. Shrub: Woody plants with mature height approximately less than 15 feet.

Q. Spade harvested and transplanted: Field grown trees that are mechanically harvested and immediately transplanted to the final growing site without being removed from the digging machine.

R. Stem: The trunk of the tree.

S. Substantial Completion Acceptance: The date at the end of the Planting, Planting Soil, and Irrigation installation where the Landscape Architect accepts that all work in these sections is complete and the Warranty period has begun. This date may be different than the date of substantial completion for the other sections of the project.

T. Stem girdling root: Any root more than ¼ inch diameter currently touching the trunk, or with the potential to touch the trunk, above the root collar approximately tangent to the trunk circumference or circling the trunk. Roots shall be considered as Stem Girdling that have, or are likely to have in the future, root to trunk bark contact.

U. Structural root: One of the largest roots emerging from the root collar.

V. Tree: Single and multi-stemmed plants with mature height approximately greater than 15 feet.

1.10 SUBMITTALS

A. See contract general conditions for policy and procedure related to submittals.

B. Submit all product submittals a minimum of 60 days prior to installation of plantings.

C. Shop drawings of root barrier layout.

D. Product data: Submit manufacturer product data and literature describing all products required by this section to the Landscape Architect for approval. Provide submittal eight weeks before the installation of plants.

E. Plant growers' certificates: Submit plant growers' certificates for all plants indicating that each meets the requirements of the specification, including the requirements of tree quality, to the Landscape Architect for approval. Provide submittal eight weeks before the installation of plants.

F. Samples: Submit samples of each product and material where required by the specification to the Landscape Architect for approval. Label samples to indicate product, characteristics, and locations in the work. Samples will be reviewed for appearance only. Compliance with all other requirements is the exclusive responsibility of the Contractor.

G. Plant sources: Submit sources of all plants as required by Article – "Selection of Plants" to the Landscape Architect for approval.
   1. Include each plant's botanical name, size and quantity.
      a. Requests for substitutions due to unavailability must be made in writing.
      b. Substitutions may not be made without approval of the Architect.
      c. Contractor shall notify Architect 24 hours in advance of delivery of plant materials and shall submit an itemized list of plants in each delivery.

H. Photographs of Trees: Submit photographs of 24-inch boxed and larger trees available for selection at the nursery(ies) a minimum of the seven days prior to the tree tagging scheduled at the nursery.
   1. Label each photo with nursery name, plant name and size.

I. Close out submittals: Submit to the Landscape Architect for approval.
   1. Plant maintenance data and requirements.

1.11 OBSERVATION OF THE WORK

A. The Landscape Architect may observe the work at any time. They may remove samples of materials for conformity to specifications. Rejected materials shall be immediately removed from the site and replaced at the Contractor's expense. The cost of testing materials not meeting specifications shall be paid by the Contractor.

B. The Landscape Architect shall be informed of the progress of the work so the work may be observed at the following key times in the construction process. The Landscape Architect shall be afforded sufficient time to schedule visit to the site. Failure of the Landscape Architect to make field observations shall not relieve the Contractor from meeting all the requirements of this specification.

   1. SITE CONDITIONS PRIOR TO THE START OF PLANTING: review the soil and drainage conditions.

   2. COMPLETION OF TREE LAYOUT. Review of the layout and facing of trees. Trees to be positioned in planting holes or pots and reviewed by Landscape Architect prior to backfill.

   3. COMPLETION OF THE PLANT LAYOUT STAKING OR CONTAINER PLACEMENT: Review of the plant layout.

   4. PLANT QUALITY: Review of plant quality at the time of delivery and prior to installation. Review tree quality prior to unloading where possible, but in all cases prior to planting.

5. COMPLETION OF THE PLANTING: Review the completed planting.

1.12 PRE-CONSTRUCTION CONFERENCE

A. Schedule a pre-construction meeting with the Landscape Architect at least seven (7) days before beginning work to review any questions the Contractor may have regarding the work, administrative procedures during construction and project work schedule.

B. Notify the Landscape Architect a minimum of 72 hours in advance of all observations of planting.

C. Notify the Landscape Architect a minimum of 72 hours in advance of nursery visits to select trees.

D. Notify the Landscape Architect a minimum of seven days prior to the completion of planting walkthrough.

1.13 QUALITY ASSURANCE

A. Substantial Completion Acceptance - Acceptance of the work prior to the start of the warranty period:

1. Once the Contractor completes the installation of all items in this section, the Landscape Architect will observe all work for Substantial Completion Acceptance upon written request of the Contractor. The request shall be received at least ten calendar days before the anticipated date of the observation.

2. Substantial Completion Acceptance by the Landscape Architect shall be for general conformance to specified size, character and quality and not relieve the Contractor of responsibility for full conformance to the contract documents, including correct species.

3. Any plants that are deemed defective as defined under the provisions below shall not be accepted.

B. The Landscape Architect will provide the Contractor with written acknowledgment of the date of Substantial Completion Acceptance and the beginning of the warranty period and plant maintenance period (if plant maintenance is included).

C. Contractor’s Quality Assurance Responsibilities: The Contractor is solely responsible for quality control of the work.

D. Installer Qualifications: The installer shall be a firm having at least 5 years of successful experience of a scope similar to that required for the work, including the handling and planting of large specimen trees in urban areas. The same firm shall install planting soil (where applicable) and plant material.

1. The bidders list for work under this section shall be approved by the Landscape Architect.

2. Installer Field Supervision: When any planting work is in progress, installer shall maintain, on site, a full-time supervisor who can communicate in English with the Landscape Architect.

3. Installer’s field supervisor shall have a minimum of five years experience as a field supervisor installing plants and trees of the quality and scale of the proposed project and can communicate in English with the Landscape Architect.

4. The installer's crew shall have a minimum of 3 years experienced in the installation of Planting Soil, Plantings, and Irrigation (where applicable) and interpretation of soil plans, planting plans and irrigation plans.
5. Submit references of past projects, employee training certifications that support that the Contractors meets all of the above installer qualifications and applicable licensures.

1.14 PLANT WARRANTY

A. Plant Warranty:

1. The Contractor agrees to replace poor, inadequate, defective materials and defective plants. The Landscape Architect shall make the final determination if plants meet these specifications or that plants are defective.

   Plants warranty shall begin on the date of Substantial Completion Acceptance and continue for the following periods, classed by plant type:
   a. Trees – One Year.
   b. Palm Trees – Two Years
   c. Shrubs – One Year
   d. Ground cover and perennial flower plants – One Year.
   e. Bulbs, annual flower and seasonal color plants – for the period of expected bloom or primary display.
2. When the work is accepted in parts, the warranty periods shall extend from each of the partial Substantial Completion Acceptances to the terminal date of the last warranty period. Thus, all warranty periods for each class of plant warranty, shall terminate at one time.
3. All plants shall be warrantied to meet all the requirements for plant quality at installation in this specification. Defective plants shall be defined as plants not meeting these requirements. The Landscape Architect shall make the final determination that plants are defective.
4. Plants determined to be defective shall be removed within fifteen days upon notification by the Landscape Architect and replaced without cost to the Owner, within fifteen days or as soon as weather conditions permit and within the specified planting period.
5. Any work required by this specification or the Landscape Architect during the progress of the work, to correct plant defects including the removal of roots or branches, or planting plants that have been bare rooted during installation to observe for or correct root defects shall not be considered as grounds to void any conditions of the warranty. In the event that the Contractor decides that such remediation work may compromise the future health of the plant, the plant or plants in question shall be rejected and replaced with plants that do not contain defects that require remediation or correction.
6. The Contractor is exempt from replacing plants, after Substantial Completion Acceptance and during the warranty period, that are removed by others, lost or damaged due to occupancy of project, lost or damaged by a third party, vandalism, or any natural disaster.
7. Replacements shall closely match adjacent specimens of the same species. Replacements shall be subject to all requirements stated in this specification. Make all

necessary repairs due to plant replacements. Such repairs shall be done at no extra cost to the Owner.

8. The warranty of all replacement plants shall extend for an additional one-year period from the date of their acceptance after replacement. In the event that a replacement plant is not acceptable during or at the end of the said extended warranty period, the Landscape Architect may elect one more replacement items or credit for each item. These tertiary replacement items are not protected under a warranty period.
9. During and by the end of the warranty period, remove all tree wrap, ties, and guying unless agreed to by the Landscape Architect to remain in place. All trees that do not have sufficient caliper to remain upright, or those requiring additional anchorage in windy locations, shall be staked or remain staked, if required by the Landscape Architect.

B. End of Warranty Final Acceptance - Acceptance of plants at the end of the warranty period.

1. At the end of the warranty period, the Landscape Architect shall observe all warranted work, upon written request of the Contractor. The request shall be received at least ten calendar days before the anticipated date for final observation.
2. End of Warranty Final Acceptance will be given only when all the requirements of the work under this specification and in specification sections Planting Soil and Irrigation have been met.

1.15 SELECTION AND OBSERVATION OF PLANTS

A. The Landscape Architect may review all plants subject to approval of size, health, quality, character, etc. Review or approval of any plant during the process of selection, delivery, installation and establishment period shall not prevent that plant from later rejection in the event that the plant quality changes or previously existing defects become apparent that were not observed.

B. Plant Selection: The Landscape Architect reserves the right to select and observe all plants at the nursery prior to delivery and to reject plants that do not meet specifications as set forth in this specification. If a particular defect or substandard element can be corrected at the nursery, as determined by the Landscape Architect, the agreed upon remedy may be applied by the nursery or the Contractor provided that the correction allows the plant to meet the requirements set forth in this specification. Any work to correct plant defects shall be at the contractor’s expense.
   1. The Landscape Architect may make invasive observation of the plant’s root system in the area of the root collar and the top of the root ball in general in order to determine that the plant meets the quality requirements for depth of the root collar and presence of roots above the root collar. Such observations will not harm the plant.
   2. Corrections are to be undertaken at the nursery prior to shipping.

C. The Contractor shall bear all cost related to plant corrections.

D. All plants that are rejected shall be immediately removed from the site and acceptable replacement plants provided at no cost to the Owner.

E. Submit to the Landscape Architect, for approval, plant sources including the names and locations of nurseries proposed as sources of acceptable plants, and a list of the plants they will provide. The plant list shall include the botanical and common name and the size at the

time of selection. Observe all nursery materials to determine that the materials meet the requirements of this section.

F. Trees shall be purchased from the growing nursery. Re-wholesale plant suppliers shall not be used as sources unless the Contractor can certify that the required trees are not directly available from a growing nursery. When Re-wholesale suppliers are utilized, the Contractor shall submit the name and location of the growing nursery from where the trees were obtained by the re-wholesale seller. The re-wholesale nursery shall be responsible for any required plant quality certifications.

G. The Contractor shall require the grower or re-wholesale supplier to permit the Landscape Architect to observe the root system of all plants at the nursery or job site prior to planting including random removal of soil or substrate around the base of the plant. Observation may be as frequent and as extensive as needed to verify that the plants meet the requirements of the specifications and conform to requirements.

H. Each tree shall have a numbered seal applied by the Contractor. The seal shall be placed on a lateral branch on the north side of the tree. The seal shall be a tamper proof plastic seal bearing the Contractors name and a unique seven-digit number embossed on the seal.
   1. Do not place seals on branches that are so large that there is not sufficient room for the branch growth over the period of the warranty.

I. The Landscape Architect may choose to attach their seal to each plant, or a representative sample. Viewing and/or sealing of plants by the Landscape Architect at the nursery does not preclude the Landscape Architect’s right to reject material while on site. The Contractor is responsible for paying any up charge for the Landscape Architect to attach their seal to specific plants.

J. The Contractor shall coordinate up to two tree selection visits with local nurseries for the Landscape Architect to select trees and attach their seal to each tree.
   1. Each tree selection visit shall be defined as the Landscape Architect traveling to a single nursery or a maximum of two nurseries within ten miles distance from one another.
   2. A local nursery shall be defined as a nursery within fifty miles of downtown Los Angeles, California.
   3. Nurseries selected by the contractor shall stock and have available for review and tagging 200 percent the quantity of the specified tree.
   4. No photographs will be accepted for the final selection of trees.
   5. Failure to comply with the tree selection visit requirements listed above shall make the Contractor responsible for reimbursing the Landscape Architect for the nursery visit(s) at their current hourly billing rate plus transportation costs. No further tree selection visits will be scheduled until this charge has been paid and received.

K. Where requested by the Landscape Architect, submit photographs of plants or representative samples of plants. Photographs shall be legible and clearly depict the plant specimen. Each submitted image shall contain a height reference, such as a measuring stick. The approval of plants by the Landscape Architect via photograph does not preclude the Landscape Architect's right to reject material while on site.

1.16 PLANT SUBSTITUTIONS FOR PLANTS NOT AVAILABLE

A. Submit all requests for substitutions of plant species, or size to the Landscape Architect, for approval, prior to purchasing the proposed substitution. Request for substitution shall be accompanied with a list of nurseries contacted in the search for the required plant and a record of other attempts to locate the required material. Requests shall also include sources of plants found that may be of a smaller or larger size, or a different shape or habit than specified, or plants of the same genus and species but different cultivar origin, or which may otherwise not meet the requirements of the specifications, but which may be available for substitution.

1.17 SITE CONDITIONS

A. It is the responsibility of the Contractor to be aware of all surface and sub-surface conditions, and to notify the Landscape Architect, in writing, of any circumstances that would negatively impact the health of plantings. Do not proceed with work until unsatisfactory conditions have been corrected.

1. Should subsurface drainage or soil conditions be encountered which would be detrimental to growth or survival of plant material, the Contractor shall notify the Landscape Architect in writing, stating the conditions and submit a proposal covering cost of corrections. If the Contractor fails to notify the Landscape Architect of such conditions, he/she shall remain responsible for plant material under the warranty clause of the specifications.

B. It is the responsibility of the Contractor to be familiar with the local growing conditions, and if any specified plants will be in conflict with these conditions. Report any potential conflicts, in writing, to the Landscape Architect.

C. This specification requires that all Planting Soil and Irrigation (if applicable) work be completed and accepted prior to the installation of any plants.

1. Planting operations shall not begin until such time that the irrigation system is completely operational for the area(s) to be planted, and the irrigation system for that area has been preliminarily observed and approved by the Landscape Architect.

D. Actual planting shall be performed during those periods when weather and soil conditions are suitable in accordance with locally accepted horticultural practices.

1. Do not install plants into saturated or frozen soils. Do not install plants during inclement weather, such as rain or snow or during extremely hot, cold or windy conditions.

1.18 PLANTING AROUND UTILITIES

A. Contractor shall carefully examine the civil, record, and survey drawings to become familiar with the existing underground conditions before digging.

B. Determine location of underground utilities and perform work in a manner that will avoid possible damage. Hand excavate, as required. Maintain grade stakes set by others until parties concerned mutually agree upon removal.

C. Notification of *DigAlert*, *811*, is required for all planting areas: The Contractor is responsible for knowing the location and avoiding utilities that are not covered by the *DigAlert*

PART 2 – PRODUCTS

2.1 PLANTS: GENERAL

A. Standards and measurement: Provide plants of quantity, size, genus, species, and variety or cultivars as shown and scheduled in contract documents.

1. All plants including the root ball dimensions or container size to trunk caliper ratio shall conform to ANSI Z60.1 “American Standard for Nursery Stock” latest edition, unless modified by provisions in this specification. When there is a conflict between this specification and ANSI Z60.1, this specification section shall be considered correct.
2. Plants larger than specified may be used if acceptable to the Landscape Architect. Use of such plants shall not increase the contract price. If larger plants are accepted the root ball size shall be in accordance with ANSI Z-60.1. Larger plants may not be acceptable if the resulting root ball cannot be fit into the required planting space.
3. If a range of size is given, no plant shall be less than the minimum size and not less than 50 percent of the plants shall be as large as the maximum size specified. The measurements specified are the minimum and maximum size acceptable and are the measurements after pruning, where pruning is required.

B. Proper Identification: All trees shall be true to name as ordered or shown on planting plans and shall be labeled individually or in groups by genus, species, variety and cultivar.

C. Compliance: All trees shall comply with federal and state laws and regulations requiring observation for plant disease, pests, and weeds. Observation certificates required by law shall accompany each shipment of plants.

D. All plants and planting materials that meet or exceed specifications of Federal, State, and County laws requiring inspection for plant disease or insect control.

E. Provide plants that are true to name. Tag one of each bundle or lot with the name and size of plants in accordance with the standards of practice the American Nursery & Landscape Association.

F. Botanical names shall take precedence over common names.

G. Plants shall be in conformance with the California State Department of Agriculture's regulation for nursery inspections, rules, and ratings. Plants shall be healthy, vigorous, and free of insect infestations, plant diseases, sunscalds, frost burns, abrasions, or other disfigurement. Plants shall be grown in climatic conditions similar to that of the planting site, and well hardened off. Plants shall have vigorous fibrous root systems which are not rootbound or pot bound. The Architect is the sole judge as to acceptability of plant material.

H. Plant Quality:

1. **General**: Provide healthy stock, grown in a nursery and reasonably free of die-back, disease, insects, eggs, bores, and larvae. At the time of planting all plants shall have a root system, stem, and branch form that will not restrict normal growth, stability and health for the expected life of the plant
2. **Plant quality above the soil line:**
   a. Plants shall be healthy with the color, shape, size and distribution of trunk, stems, branches, buds and leaves normal to the plant type specified. Tree quality be

accepted by the Landscape Architect:

1.) Crown: The form and density of the crown shall be typical for a young specimen of the species or cultivar pruned to a central and dominant leader.
   a.) Crown specifications do not apply to plants that have been specifically trained in the nursery as topiary, espalier, multi-stem, clump, or unique selections such as contorted or weeping cultivars.
2.) Leaves: The size, color, and appearance of leaves shall be typical for the time of year and stage of growth of the species or cultivar. Trees shall not show signs of prolonged moisture stress or over watering as indicated by wilted, shriveled, or dead leaves.
3.) Branches: Shoot growth (length and diameter) throughout the crown should be appropriate for the age and size of the species or cultivar. Trees shall not have dead, diseased, broken, distorted, or otherwise injured branches.
   a.) Main branches shall be distributed along the central leader not clustered together. They shall form a balanced crown appropriate for the cultivar/species.
   b.) Branch diameter shall be no larger than two-thirds (one-half is preferred) the diameter of the central leader measured 1 inch above the branch union.
   c.) The attachment of the largest branches (scaffold branches) shall be free of included bark.
4.) Trunk: The tree trunk shall be relatively straight, vertical, and free of wounds that penetrate to the wood (properly made pruning cuts, closed or not, are acceptable and are not considered wounds), sunburned areas, conks (fungal fruiting bodies), wood cracks, sap leakage, signs of boring insects, galls, cankers, girdling ties, or lesions (mechanical injury).
5.) Temporary branches, unless otherwise specified, can be present along the lower trunk below the lowest main (scaffold) branch, particularly for trees less than 1 inch in caliper. These branches should be no greater than 3/8-inch diameter. Clear trunk should be no more than 40% of the total height of the tree.

b. Trees shall have one central leader. If the leader was headed, a new leader (with a live terminal bud) at least one-half the diameter of the pruning cut shall be present.
   1.) All trees are assumed to have one central leader trees unless a different form is specified in the plant list or drawings.
c. All graft unions, where applicable, shall be completely closed without visible sign of graft rejection. All grafts shall be visible above the soil line.
d. Trunk caliper and taper shall be sufficient so that the lower five feet of the trunk remains vertical without a stake. Auxiliary stake may be used to maintain a straight leader in the upper half of the tree.

3. Plant quality at or below the soil line:

a. Plant roots shall be normal to the plant type specified. Root observations shall take place without impacting tree health. Root quality at or below the soil line shall comply with the project Root Acceptance details and the following:

   1.) The roots shall be reasonably free of scrapes, broken or split wood.
   2.) The root system shall be reasonably free of injury from biotic (e.g., insects and pathogens) and abiotic (e.g., herbicide toxicity and salt injury) agents. Wounds resulting from root pruning used to produce a high quality root system are not

considered injuries.

3.) A minimum of three structural roots reasonably distributed around the trunk (not clustered on one side) shall be found in each plant. Root distribution shall be uniform throughout the root ball, and growth shall be appropriate for the species.
    a.) Plants with structural roots on only one side of the trunk (J roots) shall be rejected.
4.) The root collar shall be within the upper 2 inches of the substrate/soil. Two structural roots shall reach the side of the root ball near the top surface of the root ball. The grower may request a modification to this requirement for species with roots that rapidly descend, provided that the grower removes all stem girdling roots above the structural roots across the top of the root ball.
5.) The root system shall be reasonably free of stem girdling roots over the root collar or kinked roots from nursery production practices.
    a.) Plant Grower Certification: The final plant grower shall be responsible to have determined that the plants have been root pruned at each step in the plant production process to remove stem girdling roots and kinked roots, or that the previous production system used practices that produce a root system throughout the root ball that meets these specifications. Regardless of the work of previous growers, the plant's root system shall be modified at the final production stage, if needed, to produce the required plant root quality. The final grower shall certify in writing that all plants are reasonably free of stem girdling and kinked roots as defined in this specification, and that the tree has been grown and harvested to produce a plant that meets these specifications.
6.) At time of observations and delivery, the root ball shall be moist throughout. Roots shall not show signs of excess soil moisture conditions as indicated by stunted, discolored, distorted, or dead roots.

I. Submittals: Submit for approval the required plant quality certifications from the grower where plants are to be purchased, for each plant type. The certification must state that each plant meets all the above plant quality requirements.
    1. The grower's certification of plant quality does not prohibit the Landscape Architect from observing any plant or rejecting the plant if it is found to not meet the specification requirements.

2.2 ROOT BALL PACKAGE OPTIONS: The following root ball packages are permitted. Specific root ball packages shall be required where indicated on the plant list or in this specification. Any type of root ball packages that is not specifically defined in this specification shall not be permitted.

A. BALLED AND BURLAPPED PLANTS

1. All Balled and Burlapped Plants shall be field grown, and the root ball packaged in a burlap and twine and/or burlap and wire basket package.

2. Plants shall be harvested with the following modifications to standard nursery practices.

a. Prior to digging any tree that fails to meet the requirement for maximum soil and roots above the root collar, carefully removed the soil from the top of the root ball of each plant, using hand tools, water or an air spade, to locate the root collar and attain the soil depth over the structural roots requirements. Remove all stem girdling roots above the root collar. Care must be exercised not to damage the surface of the root collar and the top of the structural roots.

b. Trees shall be dug for a minimum of 4 weeks and a maximum of 52 weeks prior to shipping. Trees dug 4 to 52 weeks prior to shipping are defined as hardened-off. Digging is defined as cutting all roots and lifting the tree out of the ground and either moving it to a new location in the nursery or placing it back into the same hole. Tress that are stored out of the ground shall be placed in a holding area protected from extremes of wind and sun with the root ball protected by covering with mulch or straw and irrigated sufficiently to keep moisture in the root ball above wilt point and below saturation

c. If wire baskets are used to support the root ball, a “low profile” basket shall be used. A low profile basket is defined as having the top of the highest loops on the basket no less than 4 inches and no greater than 8 inches below the shoulder of the root ball package.

   1.) At nurseries where sandy soils prevent the use of “low profile baskets”, baskets that support the entire root ball, including the top, are allowable.

d. Twine and burlap used for wrapping the root ball package shall be natural, biodegradable material. If the burlap decomposes after digging the tree then the root ball shall be re-wrapped prior to shipping if roots have not yet grown to keep root ball intact during shipping.

B. SPADE HARVESTED AND TRANSPLANTED
   1. Spade Harvested and Transplanted Plants shall meet all the requirements for field grown trees. Root ball diameters shall be of similar size as the ANSI Z60.1 requirements for Balled and Burlapped plants.
   2. Trees shall be harvested prior to leafing out (bud break) in the spring or during the fall planting period except for plants know to be considered as fall planting hazards. Plants that are fall planting hazards shall only be harvested prior to leafing out in the spring.
   3. Trees shall be moved and planted within 48 hours of the initial harvesting and shall remain in the spade machine until planted.

C. CONTAINER (INCLUDING ABOVE-GROUND FABRIC CONTAINERS AND BOXES) PLANTS
   1. Container plants may be permitted only when indicated on the drawing, in this specification, or approved by the Landscape Architect.
   2. Provide plants shall be established and well rooted in removable containers.
   3. Container class size shall conform to ANSI Z60.1 for container plants for each size and type of plant.
   4. Five gallon and larger container plants shall have been grown in containers for a minimum of six months and maximum of two years. Plants shall be furnished on site free of pests or diseases and exhibit healthy growth.

2.3 PALMS

A. Except as modified below or where the requirements are not appropriate to the specification of palms, palms shall meet all the requirements of the plant quality section above.

B. Defronding, tying, and hedging:
   1. In preparing palm trees for relocation, all dead fronds shall be removed.
   2. All remaining fronds above horizontal shall be lifted up and tied together around the crown in an upright position. Up to 2/3 of the oldest live fronds can be removed; all fronds can be removed on Sabal palms. Do not tie too tightly, bind or injure the bud. Jute binder twine shall be used in tying up the fronds; wire will not be permitted. Fronds shall be untied immediately after planting.

C. Digging the root ball:
   1. When digging out the root ball, no evacuation shall be done closer than six to thirty-six inches, dependent on the species, to the trunk at ground level and the excavation shall extend below the major root system to a minimum depth of 3.5 feet. The bottom of the root ball shall be cut off square and perpendicular to the trunk below the major root system.

D. The Contractor shall not free-fall, drag, roll or abuse the tree or put a strain on the crown (bud area) at any time. A protective device shall be used around the trunk of the tree while lifting and relocating so as not to injure the bud, or scar or skin the trunk in any way.

E. Palms shall be grown under climatic conditions similar to those in locality of project.

F. Unless otherwise stated on Plans, Washingtonia palms are to be skinned, with straight trunks.

G. Palms must be planted within 24 hours of digging.

2.4 PLANTING SOIL

A. Planting Soil as used in this specification means the soil at the planting site or imported as modified and defined in specification Section Planting Soil. If there is no Planting Soil specification, the term Planting Soil shall mean the soil at the planting site within the planting hole.

2.5 MULCH

A. Mulch shall be "Walk on" grade, coarse, ground, from tree and woody brush sources. The size range shall be a minimum (less than 25% or less of volume) fine particles 3/8 inch or less in size, and a maximum size of individual pieces (largest 20% or less of volume) shall be approximately 1 to 1-1/2 inch in diameter and maximum length approximately 4 to 8". Pieces larger than 8 inch long that are visible on the surface of the mulch after installation shall be removed.

   1. It is understood that mulch quality will vary significantly from supplier to supplier and region to region. The above requirements may be modified to conform to the source material from locally reliable suppliers as approved by the Landscape Architect.
   2. Shredded lumber products will not be accepted.

B. Subject to compliance with requirements, provide products by the following:
   1. Walk On Bark, Sequoia Horticultural Products, PO Box 963, Dinuba, CA 93618; 559-

591-1177.
1.) ¼ inch to 3 inches, fibrous, bark nuggets and cambium wood,
2.) Fir or Pine

2. Forest Floor Mulch, Aguinaga Green, 410 West Grove Avenue, Orange, CA 92865; 1877-OC-MULCH
3. Approved Equal

2.6 TREE STAKING AND GUYING MATERIAL

A. Tree guying
1. Flexible vinyl tree ties meeting ASTM-D-412 standards for tensile and elongation strength. Material shall be black.
2. Each tie shall be a single piece, not multiple ties joined together.
3. Subject to compliance with requirements, provide products by the following:
a. VIT Cinch Tie
b. VIT Cinch Belt (larger trees)
c. Villa Root Barrier E-Z Band
d. Approved Equal

B. Stakes shall be lodge pole pine stakes free of knots and of diameters and lengths appropriate to the size of plant as required to adequately support the plant.
1. Fully treated with CuNap, ACQ or other non-arsenic wood preservative.
2. Do not split stakes.
3. Sizes
1.) Two inch diameter (nom.) by 10 foot long for 24-inch box and smaller Trees
2.) Three inch diameter (nom.) by 12 foot long for 36-inch box trees

C. Guying Hardware:
1. Wire: Pliable 1/8” galvanized steel cable.
2. Hose: 1/2" new black rubber hose.
3. Turnbuckles: galvanized or dip-painted, size as required.
4. Cable clamps: galvanized, size as required.
5. Safety Sleeve: 1/2" white PVC full length of wire.
6. Steel Guy Anchor: Duckbill Anchor by Foresight Products (800) 325-5360; Platypus Tree Anchoring Systems (866) 752-8478, or equal. Size as needed.

D. Submit manufacturer’s product data for approval.

2.7 TREE BARK PROTECTOR

A. Tree Bark Protectors shall be gray, brown color extruded resin mesh, 4 inches in diameter, 5 feet long, 1.52 millimeters thick UV inhibited polyethylene.

B. Subject to compliance with requirements, provide products by the following:
1. Industrial Netting, Minneapolis, MN.
2. Approved Equal

C. Fasten the split side of the Tree Bark Protector together in three places with black plastic tape.

D. Submit manufacturers’ product data for approval.

2.8 WATERING BAGS

A. Plastic tree watering bags holding a minimum of 15 gallons of water and with a slow drip hole(s) water release system, specifically designed to water establishing trees. Water should release over a several day period, not within a few hours

B. Subject to compliance with requirements, provide products by the following:
   1. Treegator Irrigation Bags sized to the appropriate model for the requirements of the plant, manufactured by Spectrum Products, Inc., Youngsville, NC 27596.
   2. Ooze Tube sized to the appropriate model for the requirements of the plant, manufactured by Engineered Water Solutions, Atlanta, GA.
   3. Or approved equal.

C. Submit manufacturer's product data for approval.

2.9 CHEMICAL OR BIOLOGICAL ADDITIVES

A. PLANT TABLETS
   1. 7-gram planting tablet designed for 12 month slow release.
   2. 12-8-8 NPK, 20% humus, 4% humic acids, 3.5% sulfur, 2% iron, micronutrients.

B. Submit manufacturers' product data for approval.

2.10 WATER

A. Furnished Contractor if Owner is unable to furnish acceptable water.

B. Transport by Contractor as required.

2.11 METAL EDGING

A. Landscape edging
   1. Border King or Permaloc
   2. One-quarter inch by five inches.
   3. Black
   4. Anchor stake loops and fifteen-inch tapered metal anchoring stakes.

B. Subject to compliance with requirements, provide products by the following:
   1. Border Concepts (800) 845-3343
   2. Permaloc
   3. Approved Equal

2.12 DRAINAGE MATERIAL

A. 3/8" Crushed Angular Rock
   1. 95% -100% passing through a 3/8" screen.
   2. 0-5% passing through No. 8 mesh.
   3. 80-100# per cubic yard.

B. Submit manufacturers' product data for approval.

2.13 DRAIN PIPES (DRAINAGE SUMP)

A. Sub-Surface perforated or non-perforated as indicated on Plans, size and type noted, manufactured by Lasco, National Diversified Sales (NDS) or Advanced Drainage Systems, Inc. Perforated pipe shall be completely wrapped with a water permeable nylon screen that is lapped and welded around the pipe, and surrounded by minimum 4" thickness of coarse sand or gravel, unless otherwise noted on Plans.

B. Planter Area Drainpipe and Fixtures: National Diversified Sales (NDS) SDR 35 fittings and SDR 35 drainpipes with specified grates, color black, and size and type per plan. NDS, Newbury Park, California, telephone: (800) 726-1994.

2.14 PALM TREE VENT

A. 4” ID single-wall, corrugated, polyethylene, perforated (slots) drain pipe with soil separator sock. ADS-401 with sock, or equal.

B. 4” round PVC drain grate. Color: to be selected.

2.15 SOIL SEPARATOR

A. Nonwoven polypropylene fabric
   1. needle-punched
   2. UV Resistance of 70%
   3. AOS of 70 US Standard sieve
   4. Water flow rate of 110 gpm/ft2.

B. Subject to compliance with requirements, provide products by the following:
   1. Geotex 701, manufactured by Propex,
   2. Approved Equal

C. Submit manufacturers’ product data for approval.

2.16 WEED CONTROL FABRIC

A. Spun-bonded polypropylene with UV inhibitors, non-degrading geotextile fabric that blocks 95% of weed growth and is permeable to air, water, gasses and fertilizer. Typar 3301 or equal.
   a. Properties:
      1.) Unit Weight: 3.0 oz/yds2
      2.) Tensile Strength: 135 pounds
      3.) Puncture Strength: 35 pounds
      4.) Air Opening Size: 60/70 equivalent sieve
      5.) Elongation at Break: <70%
      6.) Trap Tear: 50 pounds
      7.) Flux: 70 gal/ft2/min
      8.) Permittivity: 1.2 sec-2
      9.) Color: Black

B. Submit manufacturers’ product data for approval.

2.17 ROOT BARRIER

A. A root barrier is required when the center of the trunk of the tree is within six feet of adjacent pavement, walls, curbs, building or other structure.

B. Polyethylene (0.08 inch thick) or polypropylene (2.032 - 2.16 mm thick) barrier
   1. Self-locking joiners
   2. ½” raised 90 degree molded root deflecting ribs
   3. Ground lock tabs
   4. Double top edge
   5. UV inhibitors.

6. Twenty-four inches tall by twelve feet long unless otherwise stated

C. Submit manufacturers' product data for approval.

PART 3 – EXECUTION

3.1 SITE EXAMINATION

A. Examine the surface grades and soil conditions to confirm that the requirements of the Specification Section – Planting Soil - and the soil and drainage modifications indicated on the Planting Soil Plan and Details (if applicable) have been completed. Notify the Landscape Architect in writing of any unsatisfactory conditions.

3.2 DELIVERY, STORAGE AND HANDLING

A. Protect materials from deterioration during delivery and storage. Adequately protect plants from drying out, exposure of roots to sun, wind or extremes of heat and cold temperatures. If planting is delayed more than 24 hours after delivery, set plants in a location protected from sun and wind. Provide adequate water to the root ball package during the shipping and storage period.

1. All plant materials must be available for observation prior to planting.

2. Using a soil moisture meter, periodically check the soil moisture in the root balls of all plants to assure that the plants are being adequately watered. Volumetric soil moisture shall be maintained above wilting point and below field capacity for the root ball substrate or soil.

B. Do not deliver more plants to the site than there is space with adequate storage conditions. Provide a suitable remote staging area for plants and other supplies.

1. The Landscape Architect or Contractor shall approve the duration, method and location of storage of plants.

C. Provide protective covering over all plants during transporting.

3.3 PLANTING SEASON

A. Planting shall only be performed when weather and soil conditions are suitable for planting the materials specified in accordance with locally accepted practice.

B. Install plants during the planting time as described below unless otherwise approved in writing by the Landscape Architect. In the event that the Contractor request planting outside the dates of the planting season, approval of the request does not change the requirements of the warranty.

1. Seeding and Hydro-seeding -- November to December

3.4 ADVERSE WEATHER CONDITIONS

A. No planting shall take place during extremely hot, dry, windy or freezing weather.

3.5 COORDINATION WITH PROJECT WORK

A. The Contractor shall coordinate with all other work that may impact the completion of the

work.

B. Prior to the start of work, prepare a detailed schedule of the work for coordination with other trades.

C. Coordinate the relocation of any irrigation lines, heads or the conduits of other utility lines that are in conflict with tree locations. Root balls shall not be altered to fit around lines. Notify the Landscape Architect of any conflicts encountered.

3.6 LAYOUT AND PLANTING SEQUENCE

A. Relative positions of all plants and trees are subject to approval of the Landscape Architect.

B. Notify the Landscape Architect, one (1) week prior to layout. Layout all individual tree and shrub locations. Place plants above surface at planting location or place a labeled stake at planting location. Layout bed lines with paint for the Landscape Architect's approval. Secure the Landscape Architect's acceptance before digging and start of planting work.

C. When applicable, plant trees before other plants are installed.

D. It is understood that plants are not precise objects and that minor adjustments in the layout will be required as the planting plan is constructed. These adjustments may not be apparent until some or all of the plants are installed. Make adjustments as required by the Landscape Architect including relocating previously installed plants.

3.7 SOIL PROTECTION DURING PLANT DELIVERY AND INSTALLATION

A. Protect soil from compaction during the delivery of plants to the planting locations, digging of planting holes and installing plants.

1. Where possible deliver and plant trees that require the use of heavy mechanized equipment prior to final soil preparation and tilling. Where possible, restrict the driving lanes to one area instead of driving over and compacting a large area of soil.

2. Till to a depth of 6 inches, all soil that has been driven over during the installation of plants.

3.8 SOIL MOISTURE

A. Volumetric soil moisture level, in both the planting soil and the root balls of all plants, prior to, during and after planting shall be above permanent wilting point and below field capacity for each type of soil texture within the following ranges.

Soil type	**Permanent wilting point**	**Field capacity**
Sand, Loamy sand, Sandy loam	5-8%	12-18%
Loam, Sandy clay, Sandy clay loam	14-25%	27-36%
Clay loam, Silt loam	11-22%	31-36%
Silty clay, Silty clay loam	22-27%	38-41%

1. Volumetric soil moisture shall be measured with a digital moisture meter. The meter shall be the Digital Soil Moisture Meter, DSMM500 by General Specialty Tools and

Instruments, or approved equivalent.

B. The Contractor shall confirm the soil moisture levels with a moisture meter. If the moisture is too high, suspend planting operations until the soil moisture drains to below field capacity.

3.9 INSTALLATION OF PLANTS: GENERAL

A. Observe each plant after delivery and prior to installation for damage of other characteristics that may cause rejection of the plant. Notify the Landscape Architect of any condition observed.

B. No more plants shall be distributed about the planting bed area than can be planted and watered on the same day.

C. The root system of each plant, regardless of root ball package type, shall be observed by the Contractor, at the time of planting to confirm that the roots meet the requirements for plant root quality in Part 2 Products: Plants General: Plant Quality. The Contractor shall undertake at the time of planting, all modifications to the root system required by the Landscape Architect to meet these quality standards.

1. Modifications, at the time of planting, to meet the specifications for the depth of the root collar and removal of stem girdling roots and circling roots may make the plant unstable or stress the plant to the point that the Landscape Architect may choose to reject the plant rather than permitting the modification.

2. Any modifications required by the Landscape Architect to make the root system conform to the plant quality standards outlined in Part 2 Products: Plants General: Quality, or other requirements related to the permitted root ball package, shall not be considered as grounds to modify or void the plant warranty.

3. The resulting root ball may need additional staking and water after planting. The Landscape Architect may reject the plant if the root modification process makes the tree unstable or if the tree is not healthy at the end of the warranty period. Such plants shall still be covered under the warranty

4. The Contractor remains responsible to confirm that the grower has made all required root modifications noted during any nursery observations.

D. Container and Boxed Root Ball Shaving: The outer surfaces of ALL plants in containers and boxes, including the top, sides and bottom of the root ball shall be shaved to remove all circling, descending, and matted roots. Shaving shall be performed using saws, knives, sharp shovels or other suitable equipment that is capable of making clean cuts on the roots. Shaving shall remove a minimum of one inch of root mat or up to 2 inches as required to remove all root segments that are not growing reasonably radial to the trunk.

E. Exposed Stem Tissue after Modification: The required root ball modifications may result in stem tissue that has not formed trunk bark being exposed above the soil line. If such condition occurs, wrap the exposed portion of the stem in a protective wrapping with a white filter fabric. Secure the fabric with biodegradable masking tape. DO NOT USE string, twine, green nursery ties or any other material that may girdle the trunk if not removed.

F. Excavation of the Planting Space: Using hand tools or tracked mini-excavator, excavate the planting hole into the Planting Soil to the depth of the root ball measured after any root ball modification to correct root problems, and wide enough for working room around the root

ball or to the size indicated on the drawing or as noted below.

1. For trees and shrubs planted in soil areas that are NOT tilled or otherwise modified to a depth of at least 12 inches over a distance of more than 10 feet radius from each tree, or 5 feet radius from each shrub, the soil around the root ball shall be loosened as defined below or as indicated on the drawings.
   a. The area of loosening shall be a minimum of 3 times the diameter of the root ball at the surface sloping to 2 times the diameter of the root ball at the depth of the root ball.
   b. Loosening is defined as digging into the soil and turning the soil to reduce the compaction. The soil does not have to be removed from the hole, just dug, lifted and turned. Lifting and turning may be accomplished with a tracked mini excavator, or hand shovels.
2. If an auger is used to dig the initial planting hole, the soil around the auger hole shall be loosened as defined above for trees and shrubs planted in soil areas that are NOT tilled or otherwise modified.
3. The measuring point for root ball depth shall be the average height of the outer edge of the root ball after any required root ball modification.
4. If motorized equipment is used to deliver plants to the planting area over exposed planting beds, or used to loosen the soil or dig the planting holes, all soil that has been driven over shall be tilled to a depth of 6 inches.

G. For trees to be planted in prepared Planting Soil that is deeper than the root ball depth, compact the soil under the root ball using a mechanical tamper to assure a firm bedding for the root ball. If there is more than 12 inches of planting soil under the root ball excavate and tamp the planting soil in lifts not to exceed 12 inches.

H. Set top outer edge of the root ball at the average elevation of the proposed finish. Set the plant plumb and upright in the center of the planting hole. The tree graft, if applicable, shall be visible above the grade. Do not place soil on top of the root ball.

I. The Landscape Architect may request that plants orientation be rotated when planted based on the form of the plant.

J. Backfill the space around the root ball with the same planting soil or existing soil that was excavated for the planting space. See Specification Section Planting Soil, for requirements to modify the soil within the planting bed.

K. Brace root ball by tamping Planting Soil around the lower portion of the root ball. Place additional Planting Soil around base and sides of ball in six-inch (6") lifts. Lightly tamp each lift using foot pressure or hand tools to settle backfill, support the tree and eliminate voids. DO NOT over compact the backfill or use mechanical or pneumatic tamping equipment. Over compaction shall be defined as greater than 85% of maximum dry density, standard proctor or greater than 250 psi as measured by a cone penetrometer when the volumetric soil moisture is lower than field capacity.

   1. When the planting hole has been backfilled to three quarters of its depth, water shall be poured around the root ball and allowed to soak into the soil to settle the soil. Do not flood the planting space. If the soil is above field capacity, allow the soil to drain to below field capacity before finishing the planting. Air pockets shall be eliminated and backfill

continued until the planting soil is brought to grade level.

L. Where indicated on the drawings, build a 4 inch high, level berm of Planting Soil around the outside of the root ball to retain water. Tamp the berm to reduce leaking and erosion of the saucer.

M. Thoroughly water the Planting Soil and root ball immediately after planting.

N. Remove all nursery plant identification tags and ribbons as per Landscape Architect instructions. The Landscape Architect's seals are to remain on plants until the end of the warranty period.

O. Remove corrugated cardboard trunk protection after planting.

P. Follow additional requirements for the permitted root ball packages.

3.10 PERMITTED ROOT BALL PACKAGES AND SPECIAL PLANTING REQUIREMENTS

A. The following are permitted root ball packages and special planting requirements that shall be followed during the planting process in addition to the above General planting requirements.

B. BALLED AND BURLAPPED PLANTS

1. After the root ball has been backfilled, remove all twine and burlap from the top of the root ball. Cut the burlap away; do not fold down onto the Planting Soil.

2. If the plant is shipped with a wire basket that does not meet the requirements of a "Low Rise" basket, remove the top 6 - 8 inches of the basket wires just before the final backfilling of the tree.

3. Earth root balls shall be kept intact except for any modifications required by the Landscape Architect to make root package comply with the requirement in Part 2 Products.

C. SPADE HARVESTED AND TRANSPLANTED PLANTS

1. After installing the tree, loosen the soil along the seam between the root ball and the surrounding soil out to a radius from the root ball edge equal to the diameter of the root ball to a depth of 8 - 10 inches by hand digging to disturb the soil interface.
2. Fill any gaps below this level with loose soil.

D. CONTAINER (INCLUDES BOXED AND ABOVE-GROUND FABRIC CONTAINERS) PLANTS

1. This specification assumes that most container plants have significant stem girdling and circling roots, and that the root collar is too low in the root ball.

2. Remove the container.

3. Perform root ball shaving as defined in Installation of Plants: General above.

4. Remove all roots and substrate above the root collar and the main structural roots according to root correction details so root system conforms to root observations detail.

5. Remove all substrate at the bottom of the root ball that does not contain roots.

6. Using a hose, power washer or air excavation device, wash out the substrate from

around the trunk and top of the remaining root ball and find and remove all stem girdling roots within the root ball above the top of the structural roots.

3.11 GROUND COVER, PERENNIAL AND ANNUAL PLANTS

A. Where ground cover is shown on plans, groundcover planting continues under shrubs and trees at specified spacing. Ground cover shall not be planted in the shrub or tree watering basins per the contract details.

B. Assure that soil moisture is within the required levels prior to planting. Irrigation, if required, shall be applied at least 12 hours prior to planting to avoid planting in muddy soils.

C. Assure that soil grades in the beds are smooth and as shown on the plans.

D. Plants shall be planted in even, triangularly spaced rows, at the intervals called out for on the drawings, unless otherwise noted. The first row of Annual flower plants shall be 6 inches from the bed edge unless otherwise directed.

E. Dig planting holes sufficiently large enough to insert the root system without deforming the roots. Set the top of the root system at the grade of the soil.

F. Schedule the planting to occur prior to application of the mulch. If the bed is already mulched, pull the mulch from around the hole and plant into the soil. Do not plant the root system in the mulch. Pull mulch back so it is not on the root ball surface.

G. Press soil to bring the root system in contact with the soil.

H. Spread any excess soil around in the spaces between plants.

I. Apply mulch to the bed being sure not to cover the tops of the plants with or the tops of the root ball with mulch.

J. Water each planting area as soon as the planting is completed. Apply additional water to keep the soil moisture at the required levels. Do not over water.

3.12 PALM PLANTING

A. Palm trees shall be placed at grade making sure not to plant the tree any deeper in the ground than the palm trees originally stood.

B. The trees shall be placed with their vertical axis in a plumb position.

C. All backfill shall be native soil except in cases where planting in rock. Water-settle the back fill.

D. Do not cover root ball with mulch or topsoil.

E. Provide a watering berm at each palm. Berms shall extend a minimum of 18 inches out from the trunk all around and shall be a minimum of (6) inches high.

F. Remove twine which ties fronds together after placing palm in planting hole and securing it in the upright position.

3.13 STAKING AND GUYING

A. Do not stake or guy trees unless specifically required by the Contract Documents, or in the event that the Contractor feels that staking is the only alternative way to keep particular trees plumb.

1. The Landscape Architect shall have the authority to require that trees are staked or to reject staking as an alternative way to stabilize the tree.
2. Trees that required heavily modified root balls to meet the root quality standards may become unstable. The Landscape Architect may choose to reject these trees rather than utilize staking to temporarily support the tree.

B. Trees that are guyed shall have their guys and stakes removed after one full growing season or at other times as required by the Landscape Architect.

C. Tree guying shall utilize the tree staking and guying materials specified. Guying to be tied in such a manner as to create a minimum 12-inch loop to prevent girdling. Refer to manufacturer's recommendations and the planting detail for installation.
1. Plants shall stand plumb after staking or guying.
2. Stakes shall be driven to sufficient depth to hold the tree rigid.

D. For trees planted in planting mix over waterproofed membrane, use dead men buried 24 inches to the top of the dead man, in the soil. Tie the guy to the dead man with a double wrap of line around the dead man followed by a double half hitch. When guys are removed, leave the dead men in place and cut the guy tape 12 inches above the ground, leaving the tape end covered in mulch.

3.14 TREE BARK PROTECTION

A. For all street trees in commercial areas where indicted on the drawings, apply a Tree Bark Protector to each tree.

3.15 STRAIGHTENING PLANTS

A. Maintain all plants in a plumb position throughout the warranty period. Straighten all trees that move out of plumb including those not staked. Plants to be straightened shall be excavated and the root ball moved to a plumb position, and then re-backfilled.

B. Do not straighten plants by pulling the trunk with guys.

3.16 INSTALLATION OF FERTILIZER AND OTHER CHEMICAL ADDITIVES

A. Do not apply any soluble fertilizer to plantings during the first year after transplanting unless soil test determines that fertilizer or other chemical additives is required. Apply chemical additives only upon the approval of the Landscape Architect.

B. Controlled release fertilizers shall be applied according to the manufacturer's instructions and standard horticultural practices.

3.17 PRUNING OF TREES AND SHRUBS

A. Prune plants as directed by the Landscape Architect. Pruning trees shall be limited to addressing structural defects as shown in details; follow recommendations in "Structural Pruning: A Guide For The Green Industry" published by Urban Tree Foundation, Visalia CA.

B. All pruning shall be performed by a person experienced in structural tree pruning.

C. Except for plants specified as multi-stemmed or as otherwise instructed by the Landscape Architect, preserve or create a central leader.

D. Pruning of large trees shall be done using pole pruners or if needed, from a ladder or

hydraulic lift to gain access to the top of the tree. Do not climb in newly planted trees. Small trees can be structurally pruned by laying them over before planting. Pruning may also be performed at the nursery prior to shipping.

E. Remove and replace excessively pruned or malformed stock resulting from improper pruning that occurred in the nursery or after.

F. Pruning shall be done with clean, sharp tools.

G. No tree paint or sealants shall be used.

3.18 MULCHING OF PLANTS

A. Apply three inches of mulch before settlement, covering the entire planting bed area. Install no more than 1 inch of mulch over the top of the root balls of all plants. Taper to 2 inches when abutting pavement.

B. For trees planted in lawn areas the mulch shall extend to a 5 foot radius around the tree or to the extent indicated on the plans.

C. Lift all leaves, low hanging stems and other green portions of small plants out of the mulch if covered.

3.19 PLANTING BED FINISHING

A. After planting, smooth out all grades between plants before mulching.

B. Separate the edges of planting beds and lawn areas with a smooth, formed edge cut into the turf with the bed mulch level slightly lower, 1 and 2 inches, than the adjacent turf sod or as directed by the Landscape Architect. Bed edge lines shall be a depicted on the drawings.

3.20 WATERING

A. The Contractor shall be fully responsible to ensure that adequate water is provided to all plants from the point of installation until the date of Substantial Completion Acceptance. The Contractor shall adjust the automatic irrigation system, if available, and apply additional or adjust for less water using hoses as required.

B. Hand water root balls of all plants to assure that the root balls have moisture above wilt point and below field capacity. Test the moisture content in each root ball and the soil outside the root ball to determine the water content.

3.21 CLEAN-UP

A. During installation, keep the site free of trash, pavements reasonably clean and work area in an orderly condition at the end of each day. Remove trash and debris in containers from the site no less than once a week.
   1. Immediately clean up any spilled or tracked soil, fuel, oil, trash or debris deposited by the Contractor from all surfaces within the project or on public right of ways and neighboring property.

B. Once installation is complete, wash all soil from pavements and other structures. Ensure that mulch is confined to planting beds and that all tags and flagging tape are removed from the site. The Landscape Architect’s seals are to remain on the trees and removed at the end of the warranty period.

C. Make all repairs to grades, ruts, and damage by the plant installer to the work or other work at the site.

D. Remove and dispose of all excess planting soil, subsoil, mulch, plants, packaging, and other material brought to the site by the Contractor.

3.22 PROTECTION DURING CONSTRUCTION

A. The Contractor shall protect planting and related work and other site work from damage due to planting operations, operations by other Contractors or trespassers. Maintain protection during installation until Substantial Completion Acceptance. Treat, repair or replace damaged work immediately.

B. Damage done by the Contractor, or any of their sub-contractors to existing or installed plants, or any other parts of the work or existing features to remain, including roots, trunk or branches of large existing trees, soil, paving, utilities, lighting, irrigation, other finished work and surfaces including those on adjacent property, shall be cleaned, repaired or replaced by the Contractor at no expense to the Owner. The Landscape Architect shall determine when such cleaning, replacement or repair is satisfactory.

3.23 PLANT MAINTENANCE PRIOR TO SUBSTANTIAL COMPLETION ACCEPTANCE

A. During the project work period and prior to Substantial Completion Acceptance, the Contractor shall maintain all plants.

B. Maintenance during the period prior to Substantial Completion Acceptance shall consist of pruning, watering, cultivating, weeding, mulching, removal of dead material, repairing and replacing of tree stakes, tightening and repairing of guys, repairing and replacing of damaged tree wrap material, resetting plants to proper grades and upright position, and furnishing and applying such sprays as are necessary to keep plantings reasonably free of damaging insects and disease, and in healthy condition. The threshold for applying insecticides and herbicide shall follow established Integrated Pest Management (IPM) procedures. Mulch areas shall be kept reasonably free of weeds, grass.

3.24 SUBSTANTIAL COMPLETION ACCEPTANCE

A. Upon written notice from the Contractor, the Landscape Architect shall review the work and make a determination if the work is substantially complete.
   1. Notification shall be at least 7 days prior to the date the contractor is requesting the review.

B. The date of substantial completion of the planting shall be the date when the Landscape Architect accepts that all work in Planting, Planting Soil, and Irrigation installation sections is complete.

C. The Plant Warranty period begins at date of written notification of substantial completion from the Landscape Architect. The date of substantial completion may be different than the date of substantial completion for the other sections of the project.

3.25 MAINTENANCE DURING THE WARRANTY PERIOD BY OTHERS

A. After Substantial Completion Acceptance, the Contractor shall make sufficient site visits to observe the Owner’s maintenance and become aware of problems with the maintenance in time to request changes, until the date of End of Warranty Final Acceptance.

1. Notify the Landscape Architect in writing if maintenance, including watering, is not sufficient to maintain plants in a healthy condition. Such notification must be made in a timely period so that the Landscape Architect may take corrective action.
    a. Notification must define the maintenance needs and describe any corrective action required.
2. In the event that the Contractor fails to visit the site and or notify, in writing, the Landscape Architect of maintenance needs, lack of maintenance shall not be used as grounds for voiding or modifying the provisions of the warranty.

3.26 MAINTENANCE DURING THE WARRANTY PERIOD BY THE PLANT INSTALLER

A. During the warranty period, provide all maintenance for all plantings to keep the plants in a healthy state and the planting areas clean and neat.

B. General requirements:
    1. All work shall be undertaken by trained planting crews under the supervision of a foreman with a minimum of 5 years experience supervising commercial plant maintenance crews.
    2. All chemical and fertilizer applications shall be made by licensed applicators for the type of chemicals to be used. All work and chemical use shall comply with all applicable local, provincial and federal requirements.
    3. Assure that hoses and watering equipment and other maintenance equipment does not block paths or be placed in a manner that may create tripping hazards. Use standard safety warning barriers and other procedures to maintain the site in a safe manner for visitors at all times.
    4. All workers shall wear required safety equipment and apparel appropriate for the tasks being undertaken.
    5. The Contractor shall not store maintenance equipment at the site at times when they are not in use unless authorized in writing by the Landscape Architect.
    6. Maintenance vehicles shall not park on the site including walks and lawn areas at any time without the Landscape Architect’s written permission.
    7. Maintain a detailed log of all maintenance activities including types of tasks, date of task, types and quantities of materials and products used, watering times and amounts, and number of each crew. Periodically review the logs with the Landscape Architect, and submit a copy of the logs at the end of each year of the maintenance agreement.
    8. Meet with the Landscape Architect a minimum of three times a year to review the progress and discuss any changes that are needed in the maintenance program. At the end of the warranty period attend a hand over meeting to formally transfer the responsibilities of maintenance to the Landscape Architect. Provide all information on past maintenance activities and provide a list of critical tasks that will be needed over the next 12 months. Provide all maintenance logs and soil test data. Make the Contractor’s supervisor available for a minimum of one year after the end of the warranty period to answer questions about past maintenance.

C. Provide the following maintenance tasks:
    1. Watering; Provide all water required to keep soil within and around the root balls at optimum moisture content for plant growth.
        a. Maintain all watering systems and equipment and keep them operational.

   b. Monitor soil moisture to provide sufficient water. Check soil moisture and root ball moisture with a soil moisture meter on a regular basis and record moisture readings. Do not over water.
2. Soil nutrient levels: Take a minimum of 4 soil samples from around the site in the spring and fall and have them tested by an accredited agricultural soil testing lab for chemical composition of plant required nutrients, pH, salt and % organic matter. Test results shall include laboratory recommendations for nutrient applications. Apply fertilizers at rates recommended by the soil test.
   a. Make any other soil test and/or plant tissue test that may be indicated by plant conditions that may not be related to soil nutrient levels such as soil contaminated by other chemicals or lack of chemical uptake by the plant.
3. Plant pruning: Remove cross over branching, shorten or remove developing co dominant leaders, dead wood and winter-damaged branches. Unless directed by the Landscape Architect, do not shear plants or make heading cuts.
4. Restore plants: Reset any plants that have settled or are leaning as soon as the condition is noticed.
5. Guying and staking: Maintain plant guys in a taught position. Remove tree guys and staking after the first full growing season unless directed by Landscape Architect.
6. Weed control: Keep all beds free of weeds. Hand-remove all weeds and any plants that do not appear on the planting plan. Chemical weed control is permitted only with the approval of the Landscape Architect. Schedule weeding as needed but not less *12 times per year*.
7. Trash removal: Remove all trash and debris from all planting beds and maintain the beds in a neat and tidy appearance. The number of trash and debris removal visits shall be no less than 12 times per year and may coincide with other maintenance visits.
8. Plant pest control: Maintain disease, insects and other pests at manageable levels. Manageable levels shall be defined as damage to plants that may be noticeable to a professional but not to the average person. Use least invasive methods to control plant disease and insect outbreaks.
   a. The Landscape Architect must approve in advance the use of all chemical pesticide applications.
9. Plant replacement: Replace all plants that are defective as defined in the warranty provisions, as soon as the plant decline is obvious and in suitable weather and season for planting as outlined in above sections. Plants that become defective during the maintenance period shall be covered and replaced under the warranty provisions.
10. Mulch: Refresh mulch once a year to maintain complete coverage but do not over mulch. At no time shall the overall mulch thickness be greater that three inches. Do not apply mulch within 6 inches of the trunks or stems of any plants. Replacement mulch shall meet the requirements of the original approved material. Mulch shall be no more than one inch on top of the root ball surface.
11. Bed edging: Check and maintain edges between mulch and lawn areas in smooth neat lines as originally shown on the drawings.
12. Leaf, fruit and other plant debris removal: Remove fall leaf, spent flowers, fruit and plant part accumulations from beds and paved surfaces. Maintain all surface water drains free of debris. Debris removal shall be undertaken at each visit to weed or pick up trash in beds.
13. Damage from site use: Repair of damage by site visitors and events, beyond normal

wear, are not part of this maintenance. The Landscape Architect may request that the Contractor repair damage beds or plantings for an additional cost. All additional work shall be approved in advance by the Landscape Architect.

3.27 END OF WARRANTY FINAL ACCEPTANCE / MAINTENANCE OBSERVATION

A. At the end of the Warranty and Maintenance period the Landscape Architect shall observe the work and establish that all provisions of the contract are complete and the work is satisfactory.
   1. If the work is satisfactory, the maintenance period will end on the date of the final observation.
   2. If the work is deemed unsatisfactory, the maintenance period will continue at no additional expense to the Owner until the work has been completed, observed, and approved by the Landscape Architect.

B. FAILURE TO PASS OBSERVATION: If the work fails to pass final observation, any subsequent observations must be rescheduled as per above. The cost to the Owner for additional observations will be charged to the Contractor at the prevailing hourly rate of the Landscape Architect.

END OF SECTION

SECTION 33 11 00 - SITE WATER DISTRIBUTION UTILITIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Site water distribution systems located outside the building perimeter, extending to an existing water line or meter.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Division 22 – Plumbing.
3. Section 31 2313 - Excavation and Fill.
4. Section 31 2323 - Excavation and Fill for Utilities.
5. Section 32 0117 - Pavement Repair.
6. Section 32 1313 - Site Concrete Work.
7. Section 33 3000 - Site Sanitary Sewer Utilities.

1.02 SUBMITTALS

A. Shop Drawings: Submit site plan indicating locations of lines, valves, and related appurtenances.

B. Product Data: Manufacturer’s catalog data for materials. Include technical data for accessories, gaskets, joints and couplings.

C. Certificates: Certificates attesting that tests set forth in referenced publications have been performed, and the performance requirements have been satisfied.

1.03 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement:

1. American National Standards Institute (ANSI):
   a. ANSI H23.1 - Seamless Copper Water Tube.
2. NSF International (NSF):
   a. ANSI/NSF 61 Drinking Water System Components – Health Effects.

b. ANSI/NSF 372 Drinking Water System Components – Lead Content.

3. American Society of Mechanical Engineers (ASME):

a. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.

b. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings.

c. ASME B16.26 - Cast Copper Alloy Fitting for Flared Copper Tubes.

d. ASME B16.51 - Copper and Copper Alloy Press-Connect Pressure Fittings.

4. American Society for Testing and Material (ASTM) International:

a. ASTM A36 – Standard Specification for Carbon Structural Steel.

b. ASTM A240 – Standard Specification for chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

c. ASTM A312 – Standard Specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipes.

d. ASTM A536 - Standard Specification for Ductile Iron Castings.

e. ASTM B61 - Standard Specification for Steam or Valve Bronze Castings.

f. ASTM B62 - Standard Specification for Composition Bronze or Ounce Metal Castings.

g. ASTM B75 - Standard Specification for Seamless Copper Tube.

h. ASTM B88 - Standard Specification for Seamless Copper Water Tube.

i. ASTM B152 – Standard Specification for Copper Sheet, Strip, Plate, and Rolled Bar.

j. ASTM 17 – Standard Specifications for Copper Alloy Sand Castings for General Applications.

k. ASTM D1784 – Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds.

l. ASTM D2683 - Standard Specification for Socket-Type Polyethylene Fittings for Outside Diameter-Controlled Polyethylene Pipe and Tubing.

m. ASTM D3035 - Standard Specification for Polyethylene (PE) Plastic Pipe (DR-PR) Based on Controlled Outside Diameter.

n. ASTM D3139 - Standard Specification for Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals.

o. ASTM D3261 - Standard Specification for Butt Heat Fusion Polyethylene (PE) Plastic Fittings for Polyethylene (PE) Plastic Pipe and Tubing.

p. ASTM D3350 - Standard Specification for Polyethylene Plastics and Fittings Materials.

q. ASTM F2620 - Standard Practice for Heat Fusion Joining of Polyethylene Pipe and Fittings.

r. ASTM F2206 - Standard Specification for Fabricated Fittings of Butt-Fused Polyethylene (PE).

s. ASTM F477 - Standard Specification for Elastomeric Seals for Joining Plastic Pipe.

t. ASTM F714 - Standard Specification for Polyethylene (PE) Plastic Pipe (DR-PR) Based on Outside Diameter.

5. American Water Works Association (AWWA):

a. AWWA C104/A21.4 - Cement-Mortar Lining For Ductile-Iron Pipe and Fittings.

b. AWWA C110/A21.10 - Ductile-Iron and Gray-Iron Fittings

c. AWWA C111/A21.11 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

d. AWWA C115/A21.15 - Standard for Flanged Ductile-Iron Pipe with Threaded Flanges.

e. AWWA C153/A21.53 – American National Standard for Ductile-Iron Compact Fittings for Water Service

f. AWWA C207 – Steel Pipe Flanges for Waterworks Service Sizes 4 In. Through 144 In.

g. AWWA C500 - Metal Seated Gate Valves for Water Supply Service.

h. AWWA C503 - Wet- Barrel Fire Hydrants.

i. AWWA C508 - Swing-Check Valves for Waterworks Service, 2 inches through 24 inches (50-mm through 600-mm) NPS.

j. AWWA C510-89 - Standard for Double Check Valve Backflow-Prevention Assembly.

k. AWWA C511 - Reduced-Pressure Principal Backflow-Prevention Assembly.

l. AWWA C600 - Installation of Ductile-Iron Water Mains and Their Appurtenances.

m. AWWA C800 - Underground Service Line valves and Fittings.

n. AWWA C900 – Polyvinyl Chloride (PVC) Pressure Pipe and Fabricated Fittings 4 In. Through 12 In., for Water Transmission and Distribution.

o. AWWA C901 – Polyethylene (PE) Pressure Pipe and Tubing, 3/4 In. Through 3 In., for Water Service.

p. AWWA M23 - PVC Pipe - Design and Installation.

q. AWWA M55 - PE Pipe - Design and Installation.

6. Manufacturers Standardization Society (MSS) of the Valve and Fittings Industry:

a. MSS SP-80 - Bronze Gate, Globe, Angle and Check Valves.

7. Uni-Bell PVC Pipe Association (UBPPA):

a. UBPPA UNI-PUB-09 - Installation Guide for Gasketed-Joint PVC Pressure Pipe (C900).

8. Underwriters Laboratories Inc. (UL):

a. UL 246 – Standard for Hydrants for Fire-Protection Service.

b. UL 262 – Standard for Gate Valves for Fire-Protection Service.

c. UL 312 – Standard for Check Valves for Fire-Protection Service.

9. National Pollutant Discharge Eliminations System (NPDES):

a. Comply with storm water requirements of general permit for storm water discharges when flushing pipe systems including storm drains and maintaining logs.

10. Plastic Pipe Institute (PPI):

a. TN-38 – Bolt Torque for Polyethylene Flanged Joints.

b. TR-4 – Technical Report requirements of Hydrostatic Design Basis (HDB), Hydrostatic Design Stress (HDS), Strength Design Basis (SDB), Pressure Design Basis (PDB) and Minimum Required Strength (MRS) Ratings for Thermoplastic Piping Materials or Pipes.

c. TR-33 – Technical Report for Generic Butt Fusion Joining Procedure for Field Joining of Polyethylene Pipe.

B. Provide valves from the same manufacturer.

C. Manufacturer of plumbing products must be third-party certified to ANSI/NSF Standard 61, Section 9 certification, and ANSI/NSF 372 to demonstrate compliance with the federal requirements for lead contribution to drinking water, the Safe Drinking Water Act SDWA, and the California Health and Safety Code Section 116875. No pipe, pipe fitting, or any other fitting or fixture intended to convey or dispose water for human consumption for drinking or cooking is allowed in the domestic plumbing system, if they do not meet the low lead definition of Health and Safety Code 116875. Weighted average lead content of the wetted surface area of pipes, fittings and fixtures may not exceed 0.25 percent.

D. Qualifications of Manufacturer: Products used in the Work of this Section shall be produced by manufacturers regularly engaged in manufacture of similar items and with a history of successful production as reviewed by the ARCHITECT.

1.04 PRODUCT HANDLING

A. Store items above ground on platforms, skids, or other required supports.

B. Protect materials from direct sunlight.

C. Protect coating and linings on piping, fittings, and accessories from damage. Repair and/or replace damaged coatings or linings.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Pipes, Fittings, and Joints:

P-3: Underground water service pipe sizes 4-inch and larger shall be C900 water service pipe material complying with AWWA C900, and ASTM D1784 Cell Class 12454B with tracer wire, NSF and UL listed. Piping shall be plain end or gasket bell end, pressure class 305 (DR14) with cast iron pipe equivalent outside diameter.

PF-3: Fire Water Service, Domestic Water and Irrigation Service Line Fittings, Joints and Jointing Materials shall be Ductile-iron with mechanical joints conforming to AWWA C110/A21.10 or AWWA C153/A21.53, C900 compatible, and shall have cement mortar lining conforming to AWWA C104/A21.4, standard thickness unless otherwise indicated on Drawings.

a. Pipe joints shall be push on as specified in ASTM D3139.

b. Joints between pipe and metal fittings, valves, and other accessories shall be mechanical joints as specified in AWWA C111/A21.11.

c. Provide each joint connection with an elastomeric gasket suitable for the bell or coupling installation.

d. Gaskets for push on joints for pipe shall conform to ASTM F477.

e. Gaskets for push on joints and compression type joints or mechanical joints for connections between pipes and metal fittings, valves, and other accessories shall be as specified in AWWA C111/A21.11.

f. Sleeve-type mechanically coupled joints may be provided instead of push-on joints on plain-end PVC plastic joints. Comply with requirements of ASTM D3139.

g. Comply with installation guide UBPPA UNI-PUB-09.

Manufacturer: JM Eagle, Diamond Plastics, North American Pipe, or equal.

P-4: Aboveground water service pipe shall be Type 316L Stainless Steel, Schedule 40 water pipe, marked with manufacturer's identification and fittings. Manufacturer's representative shall instruct installers and certify them for joint installation. Piping system shall be provided with a five-year manufacturer’s material warranty.

Manufacturer: Viega, or equal.

PF-4: Type 316L Stainless Steel, Schedule 40 Press Fittings. For water service piping systems, provide with EPDM seals. Manufacturer's representative shall instruct installers and certify them for joint installation.

Manufacturer: Viega, or equal.

B. Gates Valves for PVC:

1. Non-rising stem type with resilient wedge gates or iron body bronze wedge gates and mechanical joint ends conform to AWWA C500.

2. Non-rising stem type with mechanical joints ends shall conform to AWWA C509.

3. Valves designed for a working pressure of 175 PSI shall be inside-screw type with operating nut, and resilient wedge type gate. Valve shall be provided with mechanical joints as required for the pipe to which it is intended to connect.

4. Valves with UL listing of 262 shall conform to AWWA C500. Valves shall open by counter-clockwise rotation of valve stem.

5. Stuffing boxes shall be provided with O-ring stem seals and shall be bolted and constructed to permit easy removal of parts for repair.

6. Sleeve type mechanical couplings may be provided instead of mechanical and push on joint ends.

7. Valve ends and gaskets for connection to sleeve type mechanical couplings shall conform to specified requirements for the joint or coupling.

C. Gate Valves in Valve Pits:

1. Outside screw and yoke rising stem type valves with resilient wedge gates and flanged ends shall conform to AWWA C500.

2. Outside screw and yoke rising stem type valves with flanged ends shall conform to AWWA C509.

3. Outside screw and yoke type Valves with double disc gates or split-wedge type gate and flanged ended ends shall be designed for 175 psi and conform to UL 262.

4. Provide valves with hand wheels that open by counterclockwise rotation of the valve stem.

5. Stuffing boxes shall be provided with O-ring stem seals and shall be bolted and constructed to permit easy removal of parts for repair.

D. Check Valves for PVC:

1. Valves shall be swing-check type conforming to AWWA C508 or UL 312.

2. Valves shall be provided with cast iron or steel body and cover, flanged ends and clear port opening.

3. Valves shall be designed for a working pressure of 175 PSI.

E. Valve Boxes: 14 ¾-inch by 20-inch by 12-inch cast concrete with cast iron, traffic grade cover marked “WATER” (for use over water valves).

1. Brooks 36-H MB with No. 36-T cast iron cover EISEL 363.5, or equal.

F. Mechanical Thrust Restraint:

1. Restraint shall be incorporated into the follower gland.

2. Restraint shall consist of individually actuated wedges that increase resistance to pull out as internal pressure or external forces increase.

3. Gland shall be ductile iron conforming to ASTM A536.

4. Provide twist off nuts and tee-head bolts of the same size to ensure proper actuating of restraint devices.

5. Restraining device shall be provided with pressure rating equal to that of the pipe on which it is installed.

6. Restraining gland shall be UL listed.

7. Mechanical thrust restraint devices shall be EBAA Iron “Megalug” or equal.

G. Restraint Device Adapters:

1. Restrained flange adapters shall be provided instead of threaded or welded flange spool pieces on plain end of ductile iron or PVC pipe.

2. Flange adapters shall be manufactured of ductile iron conforming to ASTM A536 and be provided with flange bolt circles compatible with AWWA C115/A21.15.

3. Restraint of flange adapter shall consist of a multiple number of individually actuated gripping wedges to maximize restraint capability.

4. Torque limiting actuating screws shall be provided to insure proper initial set of gripping wedges.

5. Flange adapter shall be capable of deflection during assembly or permit lengths of pipe to be field cut to allow at least 0.6 inch of gap between end of pipe and mating flange without affecting integrity of seal.

6. Flange adapter shall be provided with a safety factor of at least 2:1 for rated pressure.

7. Restraint device adapters shall be EBAA Iron “Megaflange”, or equal.

H. Tracer Wire for Nonmetallic Pipes: Tracer wires shall be continuous solid copper wire type THWN, 12 AWG gauge, with heat and moisture resistance insulation. Blue plastic covered for domestic water and red for fire sprinkler. (Aluminum wire is prohibited). Provide in sufficient length to be continuous over each installed section of nonmetallic pipe.

I. Pipe markers shall be a concrete plaque inscribed with the word “WATER.”

J. Water Service Line Materials:

1. Water Service Line Piping Material: Refer to article 2.01.A within this section.

2. Water Service Line Appurtenances:

a. Corporation stops shall be ground key type; manufactured of bronze conforming to ASTM B61 or ASTM B62; and suitable for the working pressure of the system. Ends shall be suitable for solder-joint or flared tube compression type joint connection. Threaded ends for inlet and outlet of corporation stops shall conform to AWWA C800; coupling nut for connection to flared copper tubing and shall conform to ASME B16.26.

b. Goosenecks shall be type K copper tubing. Joint ends for goosenecks shall be as required for connecting to corporation stop and service line. Where multiple gooseneck connections are required for individual service, connect goosenecks to service line through brass or bronze branch connection; the total clear area of branches shall be at least equal to clear area of service line. Length of goosenecks shall be as indicated or required.

c. Curb or service stops shall be ground key, round way, inverted key type; bronze, conforming to ASTM B61 or ASTM B62; and rated at 150 psi. Ends shall be as required for connection to service piping. Arrow shall be cast into body of curb or service stop indicating direction of flow.

d. Gate valves 2.5-inch and larger shall be MSS SP-80, Class 150, solid wedge, or resilient wedge gate, and non-rising stem. Valves shall be provided with flanged end connections. Provide hand wheel operators if easily accessible. Provide operating nut if inside a vault, pit or valve box.

e. Gate valves in valve pits 2-inch, and smaller shall be MSS SP-80, Class 150, bronze, solid wedge, inside screw, rising stem. Valves shall be provided with flanged end connections or threaded end connections with union on one side of valve and hand wheel operator.

f. Valve boxes shall be provided at each gate valve installed underground. Valve boxes shall be a size suitable for valve on which it is installed.

K. Water meter will be installed by water purveyor for the area, unless noted otherwise.

L. Strainers:

STR-1 Description: Wye type with Monel or Stainless Steel strainer cylinder (manufacturer's standard mesh), and gasketed machine strainer cap. Where indicated on Drawings, provide with valved (globe valve) blow out piping, same size as blow out plug:

2-inch and smaller: C.M. Bailey #100-A, bronze, 250 pound, or ductile iron with fusion bonded epoxy coating.

2 ½-inch and larger: Watts 77F-DI-FDA-125 pound, or other ductile iron fusion bonded epoxy coated flanged strainer, conforming to ASTM A312 for the strainer body, and ASTM A240 for the stainless steel strainer element. (No iron body strainer shall be used on potable water that is not fusion bonded epoxy coated inside and out.)

C.M.Bailey, Armstrong, Wilkins, Watts, or equal.

STR-2 "Y" pattern, cast iron bodies, 125 psi, Monel screen 16 square. mesh. Open area at least twice the cross-sectional area of IPS pipe in which strainer is installed and may be woven wire or perforated type. Screwed ends for sizes up to 2-inch, flanged ends for 2 ½-inch and larger perforations, in accordance with the following:

Bailey #100, Armstrong, Rp & C , Keckley, or equal.

STR-3 Bucket type, flange, semi-steel body, 125 psi, stainless steel screen with 1/8 inch diameter perforations (mounted above grade for water service). All sizes, for lines serving fire sprinkler risers:

Bailey #1, Zurn 150 Series, Rp 7 C, Watts 97fb-Fsfe, or equal.

STR-42" and larger: Watts 077-F-SS Stainless steel flange type strainer, or equal conforming to ASTM A312 for strainer body, ASTM A240 for the SS strainer element and ASTM A36 for base flange material.

M. Backflow Preventer Assemblies:

1. Assembly shall be provided with flanged connections, ductile iron with fusion bonded epoxy coated construction, bronze, or stainless steel.

2. Backflow preventer shall be suitable for cold water working pressure of 175 psi.

3. Internal parts shall be designed for replacement without removing valves from line.

4. Double check backflow preventer assembly shall consist of two independently acting spring cam or poppet style check valves, 2 shut-off valves and 4 test cocks. Check valve shall be designed to provide drip tight closure against reverse flow, low pressure drop at maximum flow capacity. Spring-loaded checks shall cause valve to seal against a higher inlet pressure than outlet pressure when there is no flow.

5. Double check backflow preventer assembly shall meet AWWA Standard C510-89. Assembly shall be Ames 2000ss, Febco 850, Watts 709, Wilkins 350, or equal.

6. Reduced pressure backflow preventer assembly shall consist of two check valves located between two shut-off valves with an area of reduced pressure between two check valves and a relief device arranged to discharge to atmosphere.

   a. Comply with AWWA Standard C511.

   b. Fluctuation in piping pressure shall not cause cycling. Backflow preventer shall automatically maintain low pressure zone to positively prevent backflow of water into system. Assembly shall automatically indicated failure of any part vital to backflow prevention by the continuous discharge relief device.

   c. Reduced pressure backflow preventer assembly shall be Cla-Val Model RP-4, or equal.

7. Backflow prevention assemblies (devices), shall be tested and certified by a certified backflow tester, and a test report shall be provided to the water agency having jurisdiction. Testing shall be performed in the presence of the Project Inspector.

PART 3 - EXECUTION

3.01 EXCAVATION, BACKFILLING AND COMPACTING

A. Conform to requirements in Section 31 2323 - Excavation and Fill for Utilities or Section 31 2313 - Excavation and Fill.

3.02 PIPE INSTALLATION

A. Project site water lines shall terminate approximately 5 feet from buildings, unless otherwise indicated on Drawings. Temporarily cap or plug terminals for future connection to building.

3.03 CLEARANCES OF WATER LINE

A. Building or Structures: Two feet.

B. Parallel to Sewer Line:

1. Water line 4-inch or less in diameter shall not be installed in a common trench with the building sanitary drain unless the bottom of the water line is at least 12 inches above the top of the building sanitary drain or where the water line is installed on a solid shelf excavated on one side of the common trench with a minimum clear horizontal distance of 12 inches from the building sanitary drain.

2. Water lines 6-inch and larger in diameter shall be separated from the Project site sanitary sewer, receiving more than one building sanitary drain or acid pipeline, in accordance with the requirement of the State of California, Human and Welfare Agency, Department of Health Services.

C. Crossing Sewer Line:

1. A water line shall be separated from sanitary sewer in accordance with the requirements of the State of California Administrative Code, Title 22, Section 64630(e)(2).

2. Install water line a minimum of 12 inches clear, above or below a sanitary sewer.

3. A water line 6-inch or greater in diameter, crossing under a Project site sanitary sewer line, shall be installed with joints located at least 10 feet away from each side of the sanitary sewer line.

4. A water line 6-inch or greater in diameter, crossing over a Project site sanitary sewer line, shall be installed with joints located at least 4 feet away from each side of a purple pipe or sanitary sewer line.

D. Install water lines no closer than 10 feet horizontally clear from the edge of sewage leach fields, seepage pits, and septic tanks.

3.04 PIPE INSTALLATION AND JOINING

A. Install all piping and fitting systems according to the manufacturer requirement.

B. Remove fins and burrs from pipe and fittings.

C. Clean piping, fitting, valves, and accessories before installing. Maintain items in a clean condition.

D. Provide proper facilities for lowering sections of pipe into trenches. Do not drop into piping, fittings, or other materials into trenches. Accurately cut pipe and install without

springing or forcing. Replace any piping or fitting that does not provide sufficient space for proper installation of joining material.

E. Blocking or wedging between bells and spigots is not permitted. Install bell and spigot pipe with bell end pointing in the direction of flow.

F. Install piping to the lines and grades indicated or required. Low points and dips are not permitted. Support piping at proper elevation and grade with secure and uniform supports. Wood support blocking is not permitted. Where sand cement slurry will not be furnished for backfill, install piping so that full length of each section of pipe and each fitting will solidly rest on pipe bedding. Excavate recesses to accommodate bells, joints, and couplings. Provide anchors and supports where indicated or required for installation. Provide proper allowances and devices for expansion and contraction of piping and systems.

G. Maintain trenches free of standing water until pipe joints have been installed.

H. At the end of each day close open ends of pipe with temporary caps of the same material as the pipe.

I. Do not install piping when trench or weather conditions prevent proper installation.

3.05 INSTALLATION OF TRACER WIRE AND PIPE MARKERS

A. Tracer Wire: Install continuous length of tracer wire for full length of each run of nonmetallic pipe. Fasten wire to top of pipe in such a manner that it will not be displaced during construction operations. Wire shall be fastened to pipe at not greater than 20-foot intervals. Wire shall terminate above finished grade with a 12-inch lead taped around each riser. Provide a tracer wire to grade under a permanent marker where straight-line transitions of metallic to non-metallic pipe are installed.

B. Underground Pipe Markers: Provide markers at grade where non-metallic pipe is installed and for each horizontal change in direction.

3.06 CONNECTIONS TO EXISTING WATER LINES

A. After Project Inspector has inspected installation, perform connections to servicing water lines. Schedule service shutdown for connecting new system at a time causing minimum disruption.

3.07 INSTALLATION OF C900 PLASTIC WATER SERVICE LINE

A. Unless otherwise indicated, install pipe and fittings as specified and in accordance with UBPPA UNI-B-09 and AWWA M23, Chapter 7, “Installation”.

B. Jointing:

1. Provide push on joints with elastomeric gaskets specified for this type of joint, furnishing either elastomeric-gasket bell-end pipe or elastomeric-gasket

couplings. For pipe-to-pipe push on joint connections, provide pipe with push on joint ends furnished with factory installed bevel; for push on joint connections to metal fittings, valves and other accessories, square cut spigot end off pipe end.

2. Provide push on joint lubricant recommended by manufacturer.

3. Install push on joints for pipe-to-pipe connections in accordance with UBPPA UNI-PUB-09 and AWWA M23, Chapter 7, "Installation."

4. Install push on joints for connection to fittings, valves, and other accessories in accordance with requirements of UBPPA UNI-PUB-09 and with applicable requirements of AWWA C600.

5. Compression-type joints/mechanical-joints with gaskets, glands, bolts, nuts and internal stiffeners shall be installed in accordance with the requirements of UBPPA UNI-PUB-09 and AWWA C600 and Appendix A to AWWA C 111/A21.11.

   a. Square cut spigot off end of pipe for compression-type joint/mechanical-joint connections and do not re-bevel.

6. Sleeve-type mechanical couplings shall be provided in strict accordance with coupling manufacturer’s recommendations using internal stiffeners as specified for compression-type joints.

C. Provide mechanical thrust restraint devices for anchorage and piping unless thrust blocks are indicated on the Drawings. Thrust blocks shall be installed in accordance with the requirements of UBPPA UNI-PUB-09 except that size and location of blocks shall be as indicated. Thrust blocks shall be provided as specified in Section 32 1313 - Site Concrete Work.

3.08 INSTALLATION OF VALVES

B. Provide gate valves conforming to AWWA C500 and UL 262 in accordance with AWWA C600 for valve and fitting installation and with recommendations of AWWA C500 Appendix “Installation, Operation, and Maintenance of Gate Valves”.

C. Provide gate valves conforming to AWWA C600 in accordance with AWWA C509 for valve and fitting installation and with recommendations of AWWA C500 Appendix “Installation, Operation, and Maintenance of Gate Valves”.

D. Provide gate valves on PVC water service lines in accordance with AWWA M23 Chapter 7, “Installation.”

E. Provide check valves and fittings in accordance with applicable requirements of AWWA C600 unless noted otherwise on the Drawings.

F. Provide gate and check valve joints as specified for the type of joints between pipe and fittings.

3.09 INSTALLATION OF BACKFLOW PREVENTERS

A. Install reduced pressure backflow preventers to comply with RULE 16D of LADWP in the jurisdictional boundaries of Los Angeles Department of Water and Power.

3.10 INSTALLATION OF STRAINERS:

A. Strainers shall be installed on each water line downstream of the meter, above grade at the pressure regulating station. When a pressure regulating station (assembly) is not provided, “wye” type flange strainer shall be provided, with a shut off valve on the inlet and the outlet side.

B. If the water line is serving fire sprinkler risers or hydrants, then an approved fire service strainer shall be used: Watts 97DB-FSFE, or equal.

3.11 DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

A. For complete requirement and procedure refer to section 22 1000, article 3.12.

3.12 ELECTROLYSIS PREVENTION

A. A minimum 6-inch long brass nipple shall be installed at locations specified or as required. Flanges shall be provided with a complete insulating component consisting of; gasket bolt sleeves and bolt washers. Dielectric insulators shall be installed at locations indicated or as required. Dielectric fittings are prohibited.

B. Where steel or cast iron below grade connects to copper or brass piping above grade, the transition from steel or cast iron pipe to copper or brass pipe shall be installed in an above grade accessible location.

C. Underground connections between dissimilar metals shall be in accessible yard boxes.

D. Above ground dielectric connections shall be exposed.

3.13 ABANDONING WATER LINES AND STRUCTURES

A. Water lines and appurtenances to be abandoned in place shall be cut and removed from areas where new Work is being installed.

B. Cap or plug abandoned existing drain lines below grade in a yard box and according to CBC.

3.14 TESTS AND INSPECTIONS

A. Provide labor, equipment, materials, test equipment and incidentals required for performing required field tests.

B. Tests shall not be performed for five days after concrete thrust blocks have been installed.

C. Testing Procedure: Water service lines shall be tested in accordance with applicable specified standard.

1. Test water service lines in accordance with applicable requirements of AWWA C600. No leakage is permitted.

2. Pressure testing: Before pressure test, fill portion of piping being tested with water for a minimum of 24 hours. Provide hydrostatic pressure of at least 50 psi greater than the maximum working pressure of tested system, but no less than 200 psi hydrostatic test pressure for system piping of 2-inch in diameter and larger. Provide and maintain hydrostatic test pressure for at least two hours to ensure no leakage of any portion of piping or appurtenances under pressure test.

3.15 CLEANING

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.16 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 33 30 00 - SITE SANITARY SEWER UTILITIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Building Sanitary Sewer Lateral.

2. Closed-circuit television inspection of sewer laterals.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Division 22 – Plumbing.

3. Division 23 - Mechanical.

4. Section 31 2313 - Excavation and Fill.

5. Section 31 2323 - Excavation and Fill for Utilities.

6. Section 32 0117 - Pavement Repair.

7. Section 32 1313 - Site Concrete Work.

1.02 SUBMITTALS

A. Shop Drawings: Submit site plan denoting locations of lines, valves, and appurtenances.

B. Product Data: Manufacturer’s catalog data for materials. Include technical data for accessories, gaskets, joints and couplings.

C. Certificates: Certificates attesting that tests set forth in referenced publication have been performed and the results required by design have been met.

D. Closeout Submittal: Submit three DVD’s of Closed-circuit television inspections performed. Include the following information:

1. Electronic Media Recordings: Visual and audio record of the entire length of pipe. For existing laterals identify problem areas, such as roots, cracks, fractures, broken pipe, and other unusual conditions found.

2. Digital Photographs of the pipe condition, connections, points of interest and defects found. Indicate distance of defects to a point of reference such as face of building or mainline.

3. Inspection Log: Provide written report including:

   a. Date and time of inspection.

   b. Name of School, Project, CONTRACTOR, and operator name.

   c. Location, material and size of pipe.

   d. Description of defects found.

1.03 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement:

   1. Standard Specifications for Public Works construction, current edition.

   2. California Plumbing Code, CPC, current edition.

PART 2 – PRODUCTS

2.01 MATERIALS

A. Pipeline: Building or Project Site Sanitary Sewer and Vent: Minimum 5 feet away from building boundaries. For piping within 5 feet from building boundaries, and interior piping refer to Division 22 plumbing sections.

   1. Cast iron soil pipe: Hubless, service weight, ASTM A888, CISPI 301, conforming to CISPI 310 and installed in accordance to IAPMO IS 6. Manufacturer: American Foundry, Tyler, or AB&I, or equal.

      a. Cast iron soil coupling: Hubless, heavy-duty with neoprene gaskets, stainless steel corrugated shields, and 4 bands of stainless-steel clamps. IAPMO, ASTM C564 and CISPI 310. Manufacturer: American Foundry, Mission Rubber Company, Tyler, or equal.

   2. Vitrified clay extra strength piping with plain ends. Comply with ASTM C700. Install with mechanical compression couplings. Joints shall comply with ASTM C425. Installation shall be in accordance with ASTM C12.

      Manufacturer: Mission Clay Products, or equal.

   3. Acid waste and vent pipeline from building to Sampling Box: Refer to Division 22 for corrosive waste and vent piping.

B. Cleanout Assemblies: Cleanout plug shall be line size.

   1. In covered concrete-paved floors: Iron body with UPC recognized plug, top, and adjustable sleeve, cut-off ferrule, polished brass/nickel/bronze, and secured Scoriated cover:

a. Square:

J.R.SMITH	ZURN	JOSAM	OR EQUAL
4053	Z1400-SZ	57008-Z-1-SQ	

b. Round:

J.R.SMITH	ZURN	WADE	JOSAM	OR EQUAL
4033	Z1400-BZ	W-6000	57008-Z-1	

2. Outside covered concrete-paved floors: Secured cover, extra heavy-duty, adjustable sleeve, cut-off ferrule, UPC recognized brass type plug, scoriated tractor type cover:

J.R.SMITH	ZURN	OR EQUAL
4233	Z1402-HD	

3. In yard boxes: Raised threaded head brass plug and Cast Iron Body Cleanout.

J.R.SMITH	ZURN	WADE	JOSAM	OR EQUAL
		8590A		

C. Yard Boxes: 14 1/2-inch by 19 3/4-inch by 12-inch, cast concrete, with cast-iron hinged locking traffic cover with the word “SEWER,” embossed on the cover in one inch high upper case lettering.

BROOKS No. 36-HFL Assembly with cast iron hinged locking cover	OR EQUAL

D. Concrete, Mortar and Related Materials: Conform to Section 32 1313 - Site Concrete Work, unless noted otherwise.

E. Metal Covers, Frames and Accessories:

1. Conform to Section 206 – Miscellaneous Metal Items of the Standard Specifications for Public Works Construction.

2. Metal Covers and Frames: Vandal-resistant design and construction.

3. Hot-dip galvanize steel parts after fabrication and prior to assembly in accordance with Section 210 – Paint and Protective Coating of the Standard Specifications for Public Works Construction.

F. Bedding Materials: Conform to the requirements of Section 31 2313 - Excavation and Fill or Section 31 2323 - Excavation and Fill for Utilities, as required.

PART 3 – EXECUTION

3.01 SANITARY SEWER INSTALLATION

A. Install sanitary sewers in a uniform alignment and slope to the point of connection as indicated. Before trench excavation, verify size, material, depth, and location of the point of connection. Minimum depth of below grade sewer lines shall be 24 inches to centerline of pipe

B. Pipe slope shall not be less than ¼ inch per foot or 2 percent unless pipe inverts are indicated. Where invert elevations are indicated, install pipe at a uniform slope between inverts.

C. Join pipes and fittings as recommended by the manufacturer.

3.02 CLEARANCE OF SANITARY SEWERS

A. Buildings or Structures: Two feet.

B. Parallel to Water Line:

1. Building sanitary drain, is not permitted to be installed in a common trench with a potable water line unless the bottom of the water line is at least 12 inches above the top of the sanitary sewer.

2. In addition, the potable water line shall be installed on a solid shelf excavated on one side of the common trench with a minimum clear horizontal distance of 12 inches from the sanitary sewer or building sanitary drain.

3. Project site sanitary sewer, receiving more than one building sanitary drain or acid pipeline, shall be separated from a potable water line in accordance with the requirements of the California Health, and Human Services Agency: Department of Public Health.

4. Any new or existing domestic water line, reclaimed water line, and/or irrigation line shall have a minimum 10 feet clear horizontal distance from the new or existing onsite sanitary sewer lines.

C. Crossing Water Line:

1. Building sanitary drain shall be installed a minimum of 12 inches below the potable water line.

2. Project site sanitary sewer shall be separated from the potable water main in accordance with the requirements of the State of California Administrative Code, Title 22, Section 64630(e)(2).

3.03 MANHOLES

A. Provide manholes in accordance with the Standard Plans for Public Works Construction, unless otherwise indicated.

B. Adjust manholes in accordance with the sub-section 302-5.8 Manholes (and other structures) of the Standard Specifications for Public Works Construction.

3.04 CLEANOUTS

A. Provide cleanout at the upper terminal for each sanitary pipeline, at intervals not exceeding 100 feet in straight run and any fraction thereof and for each aggregate horizontal change in direction exceeding 135 degrees.

B. Install required cleanouts before back filling of horizontal pipelines.

C. In unpaved and asphalt-paved areas, install cleanouts in yard boxes 2 inches below the yard box cover.

D. In concrete-paved areas, extend cleanouts flush with finish grade.

E. In traffic areas, install countersunk cleanout plugs where raised heads protrude.

3.05 ABANDONED SEWERS AND STRUCTURES

A. Plug or cap every abandoned sanitary sewer within 5 feet of the property line in a code required manner.

B. Demolish abandoned sanitary structures such as cesspool, septic tank, sewage pit, and manholes to a minimum depth of 5 feet below the finish grade, including removal of sewage. Disconnect any piping. After inspection, completely fill with earth, sand, gravel, cement-sand slurry, or other required material.

3.06 TESTING

A. After installation, test each sanitary drain and/or sewer and each section between successive manholes for either infiltration or exfiltration. Test shall be conducted in accordance with Section 306 - Underground Conduit Construction of the Standard Specifications for Public Works Construction.

B. Where excessive ground water is encountered test the pipeline for infiltration.

C. When infiltration or exfiltration exceeds allowable amounts as set forth in the Section 306 formula, perform repairs or replacements as necessary to comply with the required limits.

3.07 CLOSED-CIRCUIT TELEVISION INSPECTION

A. Coordinate with OAR time and date of inspection. Project Inspector shall be present during the CCTV inspection.

B. Clean laterals by hydraulic jet.

C. Perform internal closed-circuit television inspection of lateral from the building to the public mainline. Record sewer in its entirety with no breaks or interruptions. Move camera at a speed no greater than 30 feet per minute, stopping for a minimum of ten seconds to record pipe connections, defects, and points of interest.

D. Maintain technical quality, sharp focus and distortion free picture. Pan, tilt, and rotate as necessary to best view and evaluate connections, defects and points of interest.

E. Closed-circuit Television Equipment: As a minimum equipment shall include:

1. Television camera specially designed for pipe inspections, and operative in 100 percent humidity conditions.

2. Camera and television monitor capable of producing minimum 470H-line resolution color video picture.

3. Camera capable to inspect laterals as small as three inches up to 70 feet from sewer mainline.

4. Camera lighting shall be suitable to allow clear picture of inner wall at least ten feet in front.

F. Defective Work:

1. New Laterals: Defective Work found shall be repaired at CONTRACTOR’s expense. Perform a new closed-circuit television inspection at no cost to OWNER.

2. Existing Laterals:

a. If roots, sludge, or sediment material or other defect not related to the Work of this project impedes inspection, withdraw camera, restart inspection from opposite end and notify OAR of defects found.

b. If obstruction or stoppage was caused by Work related to this project, remove obstruction at no cost to OWNER. Perform a new closed-circuit television inspection at CONTRACTOR’s expense.

3.08 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.09 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 33 40 00 - STORM DRAINAGE UTILITIES

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes storm drainage piping; sub-surface drains; metal covers, grates and frames; catch basins; box culverts; manholes, and BMPs.

1. Best Management Practices (BMPs):

a. Catch Basin Inserts.

b. Downspout Filters.

c. Stormwater Planter

2. Closed-circuit television inspection of storm drain lines.

1.02 RELATED REQUIREMENTS

A. Division 01 - General Requirements.

B. Section 01 7416 - Storm Water Pollution Prevention Plan.

C. Section 01 7417 – BMP Implementation Plan.

D. Section 01 7418 – Water Pollution Control.

E. Section 22 1000 - Plumbing.

F. Section 31 2313 - Excavation and Fill.

G. Section 31 2323 - Excavation and Fill for Utilities.

H. Section 32 0117 - Pavement Repair.

I. Section 32 1313 - Site Concrete Work.

1.03 DEFINITIONS

A. AASHTO: American Association of State Highway and Transportation Officials.

B. ASME: American Society of Mechanical Engineers.

C. ASTM: American Society for Testing and Materials.

D. BMP: Stormwater Best Management Practice.

E. CBC: California Building Code.

F. CCTV: Closed-Circuit Television.

G. DET: Detention BMP.

H. DWV: Drain, Waste, and Vent.

I. FILT: Filter BMP.

J. GS: Gravity Separator.

K. HDPE: High Density Polyethylene.

L. IAPMO: International Association of Plumbing and Mechanical Officials.

M. IOR: Inspector of Record.

N. NPS: Nominal Pipe Size.

O. OAR: OWNER's Authorized Representative.

P. PE: Polyethylene.

Q. Post Construction BMP: Devices installed by the CONTRACTOR for storm water management to be left on site after construction completion.

R. PP: Polypropylene.

S. PVC: Poly Vinyl Chloride.

T. RET: Retention.

U. SDR: Standard Dimensions Ratio.

V. VEG: Vegetative.

W. OWNER: El Monte Union High School District

X. SWPPP: Storm Water Pollution Prevention Plan.

1.05 SUBMITTALS

A. Shop Drawings: Submit site plan denoting locations of lines, valves, and appurtenances.

B. Product Data: Manufacturer's catalog data for all required materials. Include technical data for accessories, information concerning gaskets, joints and couplings.

C. Certificates: Certificates attesting that tests set forth in referenced publication have been performed and the results required by design have been met.

D. Closeout Documents: At Substantial Completion submit to the OAR two CD's and one hard copy of the documents indicated in paragraphs 1 through 5 below:

1. Maintenance Log: Provide Microsoft Excel Spreadsheet including the following information:

a. Maintenance log and upkeep records of the installed Post Construction BMPs. Include the following headers as a minimum: "Date of Service", "Location of BMP", "Type of Maintenance or Service", "Notes", "Next Scheduled Preventive Maintenance Due", and "Inspector Signature".

b. Maintenance Requirements: Include the following headers as a minimum: "BMP Description", "Location of BMP and Map Grid Location" and "Type of Maintenance or Service Needed", i.e.; weekly, monthly, quarterly, etcetera. "Stock No.", "Manufacturer Contact Information", along with "Frequency" namely: weekly, monthly, quarterly, etcetera and "Special Instructions".

2. Maintenance Manuals: Provide Maintenance Manual for storm drainage BMP components installed along with requirements, replacement or maintenance schedule and plans with the location of each BMP component. This manual shall include product information cut sheet, shop drawings, vendor information for each component and warranty.

3. Record drawings: 'As-Builts' site plan(s) showing Post Construction BMP. Provide a copy of marked record set with red pencil identifying any variations from design documents.

4. Training Documentation:

   a. OWNER attendees sign off training sheet.

   b. Two DVD's of materials covered in the training and components installed.

5. Post-Construction BMP Maintenance Plan: Submit complete Plan per Attachment "A", edit per As-Built conditions and provide missing information.

6. Records of Closed-Circuit Television Inspection: At Substantial Completion submit to the OAR three DVD's of Closed-circuit television inspections performed. Include the following information:

   a. Electronic Media Recordings: Visual and audio record of the entire length of pipe. For existing laterals identify problem areas, such as roots, cracks, fractures, broken pipe, and other unusual conditions found.

   b. Digital Photographs of the pipe condition, connections, points of interest and defects found. Indicate distance of defects to a point of reference such as face of building or mainline. Provide the Digital Photographs after fixing the defective pipes.

   c. Inspection Log: Provide written report including:

      1. Date and time of inspection.

      2. Name of School, Project, CONTRACTOR, and operator name.

      3. Location, material and size of pipe.

      4. Description of defects found and attempts to fix them.

1.06 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement: Standard Specifications for Public Works Construction, current edition.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic products, pipes, and fittings in direct sunlight.

B. Protect pipe, pipe fittings, and seals from dirt and damage.

C. Handle all products according to manufacturer's written rigging instructions.

1.08 TRAINING OF OWNER PERSONNEL

A. At Substantial Completion and when the storm drainage system is fully operational, knowledgeable representatives from the CONTRACTOR and manufacturer(s) of the components specified and installed at the site shall provide up to 8 hours of training. Date, time and location for the training shall be coordinated through the project OAR. Have OWNER attendees sign off training sheet and provide a copy to the OAR.

B. Training period shall cover but not be limited to the following:

1. Explain the operation of storm drainage system and its design intent.

2. Explain the maintenance requirements of every component of the system.

3. Provide recommendations of practices to minimize or eliminate negative impact on the system.

4. Provide maintenance schedule as recommended by the manufacturers for every component and review it with OWNER's Maintenance and Operations staff.

5. Conduct a site walk, identify every component of the system and demonstrate its operation.

6. Training shall be conducted with the use of Maintenance log and Maintenance manual.

1.09 SURPLUS MATERIALS

A. Provide enough additional materials for each component of BMP that requires replacement or service during the first year.

PART 2 – MATERIALS AND PRODUCTS

2.01 PIPING MATERIALS

A. General: Minimum 5 feet away from building boundaries. For piping within 5 feet from building boundaries, and interior piping refer to Division 22 plumbing sections. Provide piping system in conformance with Section 207 - Pipe and Section 208 - Pipe Joint Types and Materials of the Standard Specifications for Public Works Construction. All Soil-tight pipes shall be provided with joints that are function of opening size, channel length, and backfill particle size. A backfill material containing a high percentage of fine-graded soils requires investigation for the specific type of joint to be used to guard against soil infiltration, including the requirement for fabric-wrapped joints.

B. Nonreinforced Concrete Pipe (CP): ASTM C14, with bell-and-spigot ends and gasketed joints with ASTM C443 rubber gaskets.

C. PVC (Poly Vinyl Chloride) Schedule 40 DWV Pipe:

1. Conform to ASTM D2665, ASTM F794, and ASTM F1866.

2. Installer of PVC Schedule 40 DWV piping system shall carry ASTM D2855 and ASME B31.3 qualification. Installer shall provide proof of these qualifications to IOR prior to commencing work.

3. Containers for solvent and primer shall be clearly marked with manufacturer's data. Solvent and primer shall not be more than one year old. The safety placards must be visible.

4. Blue or red-hot glue shall not be used.

5. Approved manufacturers and products:

a. Pipe: Charlotte pipe and foundry, Harvel Plastics Inc., JM Eagle, Spears Manufacturing Company, or equal.

b. Primer: Weld-On P-70 by IPS, Conforming to ASTM F656.

c. Cement: Weld-On 711 (gray) by IPS, Conforming to ASTM D2564.

D. PVC (Poly Vinyl Chloride) SDR-35 Pipe, 6” through 15”:

1. Conform to ASTM D3034.

2. Gasketed Joints: Elastomeric gasket joints conforming to ASTM D3212.

3. Gaskets: Chloroprene conforming to ASTM F477.

4. Approved manufacturers: Charlotte pipe and foundry, Harvel Plastics Inc., JM Eagle, Spears Manufacturing Company, or equal.

1.02 BEDDING MATERIAL FOR PIPE

A. General: Conform to the requirements of Section 31 2313 - Excavation and Fill or Section 31 2323 - Excavation and Fill for Utilities, as required.

B. Approved manufacturers and products:

1. Propex Fabrics, Inc.: Geotex 451.

2. TenCate Geosynthetics Americas: Mirafi 140N.

3. US Fabrics, Inc.: 120NW.

4. Equal products.

1.03 PERFORATED SUBSURFACE DRAIN PIPE

A. Shop-perforated with perforations symmetrically located within a maximum arc of 160 degrees. Perforations shall provide a total open area of at least 0.3 square inches per linear foot of pipe, with a minimum of one perforation per linear foot, except for joint areas. Perforation shall be either holes or slots. Hole diameters of ¼ inch minimum to 3/8 inch maximum. Width of slots of 3/16 inch minimum to 5/16 inch maximum with slot length not exceeding 4 inches.

B. Aggregate Around Perforated Pipe shall be 6 inches of gravel containing no particles finer than a 3/8-inch to 1/2-inch sieve opening size.

1.04 STORMWATER TREATMENT SYSTEMS /BMPS

A. GS-2: Catch Basin Inserts, approved manufacturers and products:

1. AbTech Industries: UUF DI-DO.

2. ADS-FlexStorm: FlexStorm Pure or Catch-it.

3. Aquashield Inc.: Aqua-Guardian.

4. Ecosense International: EcoSense International’s Catch Basin Insert.

5. Oldcastle Precast Inc.: FLoGard, or GISB.

6. UltraTech International Inc.: Ultra-Drain Guard.

7. Equal products.

B. GS-3: Downspout Filters, approved manufacturers and products:

1. Oldcastle Precast Inc.: FLoGard +Plus.

2. Equal products.

C. VEG-2: Stormwater Planter

D. VEG-4: Vegetated Swales

1.05 MISCELLANEOUS MATERIALS

A. Metal Covers, Grates, Frames and Accessories:

1. Conform to Section 206 - Miscellaneous Metal Items of the Standard Specifications for Public Works Construction.

2. Hot-dip galvanize steel parts after fabrication in accordance with Section 210 - Paint and Protective Coatings of the Standard Specifications for Public Works Construction.

3. Grates and Frames:

a. Vandal-proof design and construction.

b. ADA compliant, in conformance to CBC 11B-302.3.

c. Rated for vehicular traffic on areas intended for use by motor vehicles.

d. Hot-dip galvanized.

B. Concrete, Mortar and Related Materials: Conform to Section 32 1313 - Site Concrete Work.

C. Manhole Brick Mortar, Grout, and Plaster: Conform to Standard Specifications for Public Works Construction, Section 202 - Masonry Materials.

D. Underground Concrete Structures: Shall be precast and rated for H-20 traffic loading and applicable soil loads. The materials and structural design of the devices shall be per ASTM C857 and ASTM C858.

1.06 NAMEPLATES

A. Stainless steel or aluminium nameplate permanently fastened to BMP showing the following information:

1. BMP ID number and BMP type.

2. Next service day followed by a 1-inch by 4-inch long blank space.

3. Manufacturer name, model number, telephone number and stock ID number.

4. Installation or production date.

5. 1-inch by 4-inch blank space for OWNER’s use.

PART 3 – EXECUTION

3.01 GENERAL INSTALLATION REQUIREMENTS

A. CONTRACTOR shall arrange for a preconstruction meeting with the manufacturer’s representative to review the basic principles for proper installation of Underground BMP type products prior to any installation.

B. Underground Concrete modules shall be installed in accordance with manufacturer's instructions and the current ASTM C891 procedures.

3.02 EXCAVATION, BACKFILLING AND COMPACTING

A. Conform to the requirements of Section 31 2313 - Excavation and Fill or Section 31 2323 - Excavation and Fill for Utilities, as required.

3.03 INSTALLATION OF PIPE

A. Conform to Section 306 - Underground Conduit Construction of the Standard Specifications for Public Works Construction.

B. Non-ferrous drainpipe installed with less than 12 inches of cover to finish grade shall be provided with a 4-inch thick concrete pipe encasement.

3.04 DRAINAGE APPURTENANCES

A. Catch basins, junction chambers, manholes, box culverts, outlet chambers and other drainage structures: Construct as indicated on Drawings and as specified in Section 32 1313 - Site Concrete Work, and in compliance with the Standard Specifications for Public Works Construction, Section 303 - Concrete and Masonry Construction.

B. Ensure that Post Construction BMP have a visible identifying manufacturer tag with product identification, manufacturer contact information, date of last service and date of next service due.

C. Provide storm drain stencil per City or County requirements as applicable.

3.05 STORMWATER TREATMENT SYSTEMS/BMPs

A. VEG-2: Stormwater Planter

1. Design storm rainfall depth: 85th Percentile

2. Planting mix: uniform mix of sand and organic material, minimum 24 inches soil depth.

3. Design Percolation rate: minimum infiltration rate of 12 inches per hour.

4. Ponding depth: maximum 12 inches. Includes 3 inches mulch well-aged, shredded or chipped woody debris or plant material.

5. Time to fill maximum ponding: 3 hours.

6. Provide splash block for downspout and inlet pipes.

7. Install waterproofing on inside surface area of the planter wall.

8. Install 1 foot gravel bed reservoir course washed gravel; approximately ¾" in diameter at the bottom with optional 3" of Choker ¼"- ½" washed P gravel.

9. Install non-woven geotextile filter fabric between soil planting mix and gravel bed.

10. Install longitudinal 6 inches diameter perforated pipe (PVC SDR 26 or PVC C9000) wrapped in non–woven geotextile membrane with gravel envelope of at least 3 feet wide and 6 inches deep. Underdrain minimum slope: 0.5%.

11. Install 6 inches diameter PVC (SDR 26) overflow pipe with atrium grate inlet at 12 inches above finish grade.

12. Provide non-perforate outflow pipe connected to storm drain line. Minimum 0.5% slope.

13. Typical 1 inch chamfer on planter wall edges.

14. Maximum height of stormwater planter box: 51 inches.

15. Minimum width of stormwater planter box: 30 inches.

16. Refer to Los Angeles County Low Impact Development Standards Manual for information not provided on this section.

B. VEG-4: Vegetated Swales

1. Design storm rainfall depth: 85th Percentile

2. Vegetated side slopes at 2H:1V maximum slope.

3. Install 1 foot gravel bed reservoir course washed gravel; approximately ¾" in diameter at the bottom.

4. Install 2 feet planting media with minimum infiltration rate of 5 in/hr.

5. Install non-woven geotextile filter fabric between soil planting mix and gravel bed.

6. Install longitudinal 6 inches diameter perforated pipe (PVC SDR 26 or PVC C9000) wrapped in non–woven geotextile membrane with gravel envelope of at least 3 feet wide and 6 inches deep. Underdrain minimum slope: 0.5%

7. Install 12 inches diameter PVC (SDR 26) overflow pipe with atrium grate inlet at 12 inches above finish grade.

8. Provide non-perforate outflow pipe connected to storm drain line. Minimum 0.5% slope.

9. Provide splash block for downspout and inlet pipes.

10. Install 45-mil impermeable liner: firestone pond line or equal wrapping the swales bottom and side surface to prevent infiltration of water to natural soil.

11. Refer to Civil Detail and Los Angeles County Low Impact Development Standards Manual for information not provided on this section.

3.06 ABANDONED DRAINAGE LINES AND STRUCTURES

A. Cap or plug existing drain lines that are cut and abandoned and remove existing drainage structures that are abandoned.

3.07 CLOSED-CIRCUIT TELEVISION INSPECTION

A. Coordinate with OAR time and date of inspection. Project Inspector shall be present during the CCTV inspection.

B. Clean laterals by hydraulic jet.

C. Perform internal closed-circuit television inspection of lateral from the building to the public mainline. Record drain line in its entirety with no breaks or interruptions. Move camera at a speed no greater than 30 feet per minute, stopping for a minimum of ten seconds to record pipe connections, defects, and points of interest.

D. Maintain technical quality, sharp focus and distortion free picture. Pan, tilt, and rotate as necessary to best view and evaluate connections, defects and points of interest.

E. Minimum Requirements for Closed-circuit Television Equipment:

1. Television camera specially designed for pipe inspections, and operative in 100 percent humidity conditions.

2. Camera and television monitor capable of producing minimum 470H-line resolution color video picture.

3. Camera capable to inspect lines as small as three inches up to 70 feet from storm drain mainline.

4. Camera lighting shall be suitable to allow clear picture of inner wall at least ten feet in front.

F. Defective Work:

1. New Lines: Defective Work found shall be repaired at CONTRACTOR’s expense. Perform a new closed-circuit television inspection at no cost to OWNER.

2. Existing Laterals:

a. If roots, sludge, or sediment material or other defect not related to the Work of this project impedes inspection, withdraw camera, restart inspection from opposite end and notify OAR of defects found.

b. If obstruction or stoppage was caused by Work related to this project, remove obstruction at no cost to OWNER. Perform a new closed-circuit television inspection at CONTRACTOR's expense.

3.08 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

B. Maintain Post Construction BMP after installation and keep a maintenance log to be turned over to OAR at Substantial Completion.

3.09 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION
